## Work Begins On Babies Hospital Extension And Doctors Offices

### DOCTORS

The deep rumble of excavating machinery at Fort Washington Avenue and 165th Street signaled the start of activity on a doctors office building that will rise at that craggy corner, between The Ophthalmological Institute and Harkness Hall.

Designed in the form of an H, the offices will have their main entrance and an automobile driveway on Fort Washington Avenue.

About 170 physicians will occupy the new building, moving their private practice offices there from the main and first floors of Harkness Pavilion, and the fourth floor of Presbyterian. When vacated, those areas will be available for additional patient care facilities. The approximately 80 other physicians with offices in Babies Hospital, and the Neurological and Ophthalmological Institutes, will remain where they are.

Ten services will be represented in the structure now building. They are Medicine, Surgery, Obstetrics and Gynecology, Orthopedic Surgery, Otolaryngology, Urology, Psychiatry, Dermatology, Physical Medicine and Dentistry.

The new quarters will provide about twice the amount of total floor space as the ones they replace, according to Dr. Henry Aranow, Jr., chairman of the Doctors' Offices Committee, "The more ample facilities should permit more extensive care of ambulatory patients, and will free space in the main buildings for urgently needed semi-private beds."

Dr. Aranow added, "The primary purpose of having private offices for Medical Center physicians and surgeons located within the Center itself is to permit them to utilize their time most effectively in patient care, research and teaching—the Medical Center's major functions." Also, such facilities assure

*Continued on page four*

**T**wo important strides forward in the Medical Center Development Program were taken recently with the start of construction on a four-story addition to Babies Hospital and a new, eight-story building to house offices for doctors' private practice.

The projects will cost a total of approximately \$10,000,000, about equally divided between the doctors' quarters and the Hospital addition, including renovation of the existing Babies building. The new structures are scheduled for completion in 1968, according to Eugene T. Cleary, administrative assistant in charge of projects.

### BABIES

Erecting an addition to Babies Hospital began with the temporary removal of trees and bushes that lined the north side of the Service Building. This was to clear the way for construction of a tunnel connecting that building with the Babies annex.

The trees—five European lindens—will stand temporarily near the Radiotherapy Building, which also is under construction. About 50 years old, the trees were dug from the earth with as much of their root systems as possible kept carefully intact.

The bushes were put in the Harkness Hall garden. All will be replanted in their original locations in a few months.

The new addition is step number two in a three-stage program to rehabilitate Babies. First was the dedication of the hospital's McAlister surgical suite and the creation in the William Black Research Building—dedicated last month—of a floor of laboratories where scientists will focus on disorders of childhood. Third will be the renovation of the existing Hospital.

The extension will increase the over-all size of Babies by about one-third. It will house clinical diagnostic and research laboratories, staff offices and conference areas—all of which are cramped in the present building—and permit improvement of the existing structure when space in the annex becomes available.

This will take the form of a floor-by-floor remodeling to enhance patient care. Better nurses' stations and new treatment areas are among the many anticipated additions.

All floors of the Babies addition will be connected by pneumatic tubes with the new office structure and the existing Hospital buildings. These are expected to speed the movement of materials between laboratories, X-ray, storage and

Framed by boom of power shovel, drillers attack rock to make way for new doctors office building at 165th Street and Fort Washington Avenue.

### List Nurse Scholarship Raffle Prizes

A color TV set, a mink stole and a vacation at Grossinger's are among the prizes to be raffled at the Benefit Party for the student nurse scholarship fund, April 20 at Maxwell Hall.

Prize books are now available from Mrs. Eleanor Hamilton, Judy McLaughlin and Muriel Hunter at Maxwell Hall, and at the Nursing Office on P.H. 4. Deadline for their return is April 12.

Holders of lucky coupons may win other attractive items: a \$100 B. Altman Gift Certificate, a two-piece matched set of men's luggage, Steuben glass, a transistor radio, a G. E. electric blanket, jewelry by Trifari and numerous other items.

Proceeds from the card party and raffle help finance the education of at least 20 young women each year, according to Mrs. Edward B. Self, chairman of the 1966 event. Assisting her on the committee are Mrs. R. H. E. Elliott, Mrs. George C. Hennig, Mrs. Robert C. Mackenzie, Mrs. Arthur Richardson. Also, Mrs. J. Ward McLaughlin, Mrs. Edwin B. Cox, Mrs. Frank E. Stinchfield, Miss Florence Vanderbilt, Miss Helen Anderson and Mrs. Rayner Hamilton. Faculty advisors are Miss Elizabeth Gill and Miss Helen Pettit.

Honorary sponsors include Mrs. W. Van Alan Clark, Mrs. H. Houston Merritt and Miss Helen Young.

## STETHOSCOPIA

### • BRIDAL

Miss Tod Dee Craig, daughter of Dr. and Mrs. Frederick S. Craig, and Mr. Peter Charles Macaulay of Wiltshire, England and Andros Island, Bahamas, were married in The Pauline A. Hartford Memorial Chapel on January 22.

### • ENGAGED

Frank Scorgie Rhame, third year student at P&S, and Miss Betsey Clark Ingraham of Delaware, Ohio, plan to be married in May.

### • WELCOME

Bonnie Green is newly employed in the Personnel Office. Miss Helen Blasdel has returned to the Volunteer office as secretary. She had worked there before. Mona Madis recently finished her clinical affiliation at the Hospital and is now a therapist in P.H. Occupational Therapy.

### • FAREWELL

Mrs. Mary Ryan has retired from the Housekeeping Department after 20 years at the Hospital. Mrs. Louise Fritzenschaft, optician, retired after five years in the Optical Department. She will go to Germany to visit her daughter and grandchildren, and then vacation on the Continent.

### • CONGRATULATIONS

Jeffrey Rubenstein, laboratory technician, Department of Neurology, and Mrs. Rubenstein, welcomed a son, David Lawrence, born January 16. Mrs. Dora Cole, Department of Neurology, is a proud grandma. She has a grandson, Ronald, born January 12.

### • VACATIONERS

Mrs. Sadie Cohen, Volunteer, and her husband, are on a world cruise. Mrs. Greta Cahn, Volunteer, is in Brazil visiting with her son.

### • NOTES OF INTEREST

Protective officers in the visitors' parking lot rescued a disabled pigeon recently, taped its broken wing, and fed and sheltered it in the toll booth. The bird recuperated quickly—but did not choose to leave its comfortable home. After some practice flying, it returned to the toll booth with a new tenant, a mate, and they set up housekeeping. She is now nesting, and the couple expects a family shortly.

Capping Exercises for Student Dental Hygienists of the School of Dental and Oral Surgery were held in The Pauline A. Hartford Memorial Chapel on Sunday, February 6.

## Physicians on Medical Programs

Two Medical Center physicians will appear on "Research Project," televised on WNBC, Channel 4, Saturdays at 1 p.m. Dr. Charles L. Fox, Jr., associate professor of Surgery (from Microbiology) at Bellevue, will discuss "Severe Burns" on the February 12th program.

Dr. William A. Silverman, associate attending pediatrician, will appear on the March 5th program. His topic will be "Keeping the Newborn Warm."

## DOINGS OF DOCTORS

DR. FRANK E. STINCHFIELD, Director of Orthopaedic Surgery, has been elected president of the American Board of Orthopaedic Surgery. The election took place at the January 24 meeting of the Board in Chicago. During the meeting Dr. Stinchfield gave an instructional course on "Arthroplasty of Hip."

DR. LANDRUM B. SHETTLES, assistant attending obstetrician and gynecologist, will receive an honorary degree of Doctor of Science from Mississippi College, Clinton, Miss. The award is made for his contributions as a practicing physician and an experimentalist.

DR. ARTHUR BUSHEL, adjunct associate professor of Dental Public Health, has been appointed First Deputy Commissioner of the Health Department. He is the first non-physician to become chief of the department. Since there has been no Health Commissioner since last October, Dr. Bushel will serve as Acting Commissioner.

DR. WILLIAM A. BLANC, associate professor of Pathology, presented a discussion on "Fetal Urological Problems" at Mount Sinai Hospital. He also delivered a paper at the recent Fourth Meeting of the Career Scientists of the Health Research Council of the City of New York Academy of Medicine, and directed a series of clinico-pathological conferences at the Alumni Day of the Children's Hospital, Pittsburgh.

Dr. William A. Blanc

DR. DAVID H. BAKER, associate attending radiologist, will speak at a postgraduate course in pediatric radiology at Tulane University, New Orleans, La., February 14-18.

DR. ROBERT HOEHN, assistant attending surgeon, reviewed the "Recent Progress in Tissue Transplantation" before the Bronx chapter of the American College of Surgeons at their recent visit to the Medical Center for scientific and operating room programs. He also presented a paper entitled "Causes of Operative Mortality in Cleft Lip and Cleft Palate Cases" at the Philadelphia meeting of the American Association of Plastic and Reconstructive Surgeons.

The Department of Surgery had physician-astronaut LT. CMDR. JOSEPH CURWEN, MC, USN, as guest speaker at their January staff conference. Dr. Curwen is stationed at the Manned Flight Space Center, Houston, Tex. His talk was on "Problems in Space Medicine."

## RECEIVED YOUR TAX FORM?

Employees who have not yet received a withholding tax statement (W-2 form) from the Hospital should check immediately with the payroll office on the second floor of the Service Building.

All W-2 forms were mailed in the middle of January, according to Hans Arntsen, payroll supervisor. Some have been returned because of incorrect address.

Dr. Gabriel G. Nahas

DR. GABRIEL G. NAHAS, professor of Anesthesiology, participated in a recent conference in Boston on "Energy Metabolism and Body Fuel Utilization" organized by the Committee on Metabolism in Trauma of the U. S. Army Medical Research and Development Command. He also presented

a paper on "Influence of Acid-Base Alterations on the Calorogenic and Metabolic Effects of Catecholamines."

Dr. Nahas lectured to the staff and medical students at the University of Rochester Medical School on "Sympatho-Adrenal Activation and Acid-Base Regulation." He is now in Paris to give a lecture at the Institute of Pharmacology at the University of Paris on "Acid Base Regulation" and will be chairman at a round table discussion on "Body Fluid Alkalization." He will then go to Nancy, France, to participate in the 2nd International Conference on THAM, which he helped organize.

DR. JOHN P. MALIA, who was assistant physician here in 1958, has been made Director of Medical Services for Standard Oil of Indiana.

DR. PHILIP KNAPP, associate attending ophthalmologist, presented "The A-V Syndrome" at the Section on Ophthalmology meeting of Current Concepts in the Clinical Management of Strabismus held at The New York Academy of Medicine recently.

DR. ALVIN J. B. TILLMAN, associate attending physician, Obstetrics and Gynecology, was a speaker on "Heart Disease and Pregnancy" at the January meeting of the Section on Obstetrics and Gynecology.

DRS. SIDNEY CARTER, attending neurologist JAMES F. HAMMILL, associate attending neurologist and ARNOLD P. GOLD, assistant attending neurologist, presented a program of seizure disorders on the Televised Clinical Science Seminars of The New York Academy of Medicine last week.

DR. JAMES A. WOLFF, associate attending pediatrician, will appear on the February 2 telecast, talking on "Blood dyscrasia in infant and adolescents."

DR. ARNOLD P. FRIEDMAN, associate attending neurologist, will present "Reflections on the problem of migraine" at the executive session of the American-Hungarian Medical Association, February 11 at The New York Academy of Medicine.

## UHF Reaches \$219,250

The direct benefit phase of the 1965-6 United Hospital Fund campaign has been extended until February 28th due to the transit strike. The six fund-raising teams at the Medical Center had raised \$219,250 as of January 31. This is an increase of \$7,041 over the amount raised last year at this stage.

The direct benefit quota for this year is \$119,960; all moneys above this amount raised before February 28 revert to the Hospital. This is in addition to the share the Hospital receives in the regular distribution by the UHF to its participating members.

## Set Rado Lectures For February 25th

The tenth annual Sandor Rado Lectures will be presented February 25 by Dr. I. Arthur Mirsky, Professor and Chairman, Department of Clinical Science, University of Pittsburgh School of Medicine.

Dr. Mirsky's lectures, entitled "Physiological, Psychological and Social Determinants of Disease," will be delivered at the New York Academy of Medicine Building, at 5 and 8:30 p.m.

Endowed by the Alumni Association of the Columbia University Psychoanalytic Clinic for Training and Research, the Sandor Rado Lectures honor a founder of the Psychoanalytic Clinic and its first director.

Previous recipients of the Lectureship were Drs. Franz Alexander, Michael Balint, John Bowlby, George E. Dancels, Thomas French, Abram Kardiner, David M. Levy, Gardner Murphy, and Edith Weigert.

Glad It's Over!

## But Grit-And Buses- Kept Us Rolling In

Franklin Roosevelt had his hundred days; John Kennedy, his thousand. The transit strike that ushered in the New Year may seem like a bad dream now, but it was a dozen days that once again tested our mettle—and found us not wanting!

Using almost every possible means of transportation except perhaps pogo stick or sampan, we got to and from our jobs with something very like our regular schedules, considering the problems involved.

Too numerous to recount are the personal stories of extraordinary and ingenious effort: individuals who walked many miles, waited many hours and endured many difficulties. As G. R. Masten, assistant vice president of nonprofessional services, put it: "The ability of our people to get around was phenomenal."

Fortunately, the Hospital had the foresight many years ago to prepare a detailed plan for providing emergency transportation. Ever since, this plan was reviewed each time the city's transit workers threatened a walkout, and any revisions thought advisable were made to keep it completely current.

So when the strike actually was called this time, chartered buses were waiting in reserve, and here they rolled at the word "Go!" from purchasing agent Peter R. Bozzo. As planned, there were six buses covering four major routes, with scheduled stops at various points in Manhattan and The Bronx. Three station wagons also were rented to fill in the gaps and, for example, bring home a nurse who had been kept in the operating room long past her usual departure time.

Ready to board "The Presbyterian Special."

At the peak of the emergency, about 800 employees a day were being driven to work while 1,000 were being taken to their home neighborhoods afterward. The difference is accounted for by those who found other ways to get here. Many new car pools were formed, for instance, and emergency permits issued for free parking.

Not everything went perfectly every time, as was to be expected, of course. Once the bus covering the north route along upper Broadway had some mechanical trouble, and there was a delay bringing people down from 242nd Street. Another time, the bus covering the lower Manhattan route got snarled in so much traffic it took almost two hours to reach the Hospital from 15th Street.

But there was a spirit of camaraderie that soothed such sore spots. And the time spent together led to the deepening of old acquaintanceships and the development of new ones.

"The absenteeism we suffered during the strike was minimal," according to C. Douglas Auty, assistant vice president for personnel. "Thanks to the great efforts made, the Hospital was able to go on caring for the sick with hardly any disruption."

After the day's work, most of us managed to get home some time somehow, but there were those who couldn't make it. They were given accommodations in various areas and made as comfortable as possible. Miss Lillian C. Brown, unit manager at Presbyterian, was arranging emergency shelter for about 50 such "guests" at the worst of the walkout.

Those who managed to get here, strike or not, included two physicians visiting the United States from Italy. A surgeon from Padua and the director of a hospital in Verona, they hailed a cab in midtown and started off on the prolonged trek through heavy traffic. Finally getting here, they told Hospital tour hostess, Mrs. Anne Lubrecht: "We didn't want to miss the chance to see your wonderful institution!"

### From the Mailbag

Many thanks for the bus service provided for medical center employees during the transit strike. This accommodation, as well as the spirit of the bus drivers and service employees, was very much appreciated. It was a heartening experience . . . from an employee.

### TO ALL HOSPITAL EMPLOYEES:

The recent transportation strike was another rigorous test of the ability of the hospital to carry on its essential functions under unusual, difficult and trying circumstances.

All of you rose to this occasion with ingenuity and with cheerful willingness to overcome the difficulties which arose. Your energy and devotion brought credit to the hospital and to yourselves. Many thanks to you all.

*A. J. Binkert*  
A. J. BINKERT  
Executive Vice President

## Medicare: What Lies Ahead?

July 1st will bring the beginning of Medicare, which has been described as "a revolution in the medical care practices of the United States."

The nature of all the diverse changes Medicare may bring cannot be gauged fully until after the plan has taken effect, of course. However, while much misunderstanding exists, certain facts are already clear.

Preparing for Medicare has been one of the special assignments given Dr. Douglas S. Damrosch since he was named assistant vice president of the Hospital last July. In the following Question-and-Answer interview, Dr. Damrosch replies to some of the questions about Medicare heard most commonly around the Medical Center. Additional queries may be sent to the Public Interest Department for possible reply in a future issue of THE STETHOSCOPE.

DR. DOUGLAS S. DAMROSCH

Q. Does Medicare mean there'll be a great many older patients in the hospital?

A. Probably not. It is likely that more older people will avail themselves of medical care but the provision for payment for outpatient services, nursing home care and home care should make it possible to provide good medical care without overburdening hospitals like Presbyterian.

Q. I've heard that under Medicare, the salaries of nurses, and some others, will be paid directly by the Government. Is this so?

A. No. Under Medicare, hospitals will be reimbursed for the cost of medical care much as they are now by Blue Cross and other insurance plans. Hospitals will continue to pay salaries as before.

Q. How will fees be collected by physicians seeing Medicare patients privately?

A. If the patient has not subscribed to the optional medical insurance

plan, the patient pays his doctor's bills himself, as in the past. If the patient has subscribed to the optional medical insurance plan, the patient may pay his doctor's fee and apply for reimbursement from the government to the extent allowable by law. By mutual agreement the patient may arrange to have the doctor's fee paid directly to the doctor by the Government or its designated representative.

Q. Will we have trouble finding enough patients for teaching purposes?

A. In one way or another, every patient in a hospital like Presbyterian contributes to the teaching of all of us. As more and more patients are insured under various plans, including Medicare, the details of how teaching is done will continue to change as they have changed in the past. However, we believe that our various educational programs will continue to thrive to the mutual advantage of everyone.

Q. Will Presbyterian Hospital provide nursing home care?

A. Various arrangements will undoubtedly be made for transferring those of our patients who might benefit by nursing home care. Details are not completely worked out at the present time.

Continued on page seven

# 25 Year Club Men Retire From Posts

Two long-time members of the 25 Year Club retired recently. Gothe P. Phillips, physical therapist in the Department of Physical Medicine and Rehabilitation, spent 38 years with the Hospital. His career at Presbyterian began downtown, where he completed his practice training. In 1928 he joined the staff at Neurological Institute on 67th Street and moved to the Medical Center with them a year later.

For a short time before World War II, the Swedish-born therapist again worked downtown, this time at the New York Orthopaedic Hospital on 59th Street. Then he joined the Navy as a Chief Pharmacist Mate, serving in the Pacific on the hospital ship "Tranquility," a sister ship of the well-known "Hope." On his return, Mr. Phillips came to work at the Harkness second floor Physical Therapy Unit, to stay until his retirement last month.

GOthe P. PHILLIPS

PETER KRESTNYCK

## Art Exhibit Opens May 2

A harbinger of spring has appeared—the Medical Center Art Show has been scheduled!

The 16th Annual Arts, Photography and Crafts Exhibition will be held May 2-13 in the Library Annex on the 20th floor of Presbyterian Hospital. This display is for staff, volunteers and other personnel at the Medical Center.

Former exhibitors, and those who have not yet shown their work here, are urged to participate. Chaplain Robert B. Reeves, Jr., chairman of the Medical Center Art Committee, hopes to have record-breaking participation in all categories this year. Entry forms will be available April 18.

Remarking on his experience in his field, he observed that great changes have taken place during the past 20 years due to the emphasis on physical rehabilitation which came about after the war. "Great opportunity exists for young people entering this field. It is a challenging and satisfying profession," he said.

Technicians in the pathology laboratories on P.H. 8 and 9 miss the familiar presence of Peter Krestnyck, their assistant for 22 years. When Mr. Krestnyck retired last month, he was as sorry to leave as his associates were to see him go. The laboratory assignment was his second job at the Hospital: He came here in 1938 and worked in Housekeeping for a five-year period.

Mr. Krestnyck said it was his privilege to watch young medical students become doctors—even specialists in their various fields—and to feel that he played some small part in their laboratory training. Now that he will have more free time, he hopes to increase his participation in church and civic organizations, and to pursue his hobby—servicing electrical equipment.

These dedicated members of the Hospital family are looking forward to meeting their friends again at the 25 Year Club dinner in the spring.

OFFICE BUILDING FOR DOCTORS ON WHICH WORK HAS NOW BEGUN.

## DOCTORS

*Continued from page one*

various scientific skills and knowledge.

Suites in the new building will include the physician's office, examining room and space for a secretary. The design of consultation and examining rooms will conform to the specific needs of the branch of medicine to be practiced in the particular area. Individual rooms are expected

to average 10 by 13 feet.

The doctors office building will have some X-ray facilities, treatment rooms and a suite where specimens will be taken for testing in the routine laboratories. Current patient records will be available on each floor with a central space for longer-term record storage. Each floor will have a central reception and administrative area.

Many of the offices will be assigned exclusively to indi-

vidual practitioners; others will be rented at an hourly rate. The quarters will be a self-supporting Medical Center activity, with the physicians meeting the direct operational costs of the facilities.

Doctors' offices were established at Presbyterian Hospital in 1924 when it still was located downtown, and similar space was provided when the Medical Center was built four years later. After World War II, additional offices were constructed at Harkness for what was hoped would be temporary use, but these are generally unsuited to installation of modern medical equipment. The number of physicians with private practice at the Medical Center has been stable for some years, and the new building is not intended to increase their total.

## Nurse Bazaar Earns \$2,158

The Annual Student Nurses' Bazaar held in Maxwell Hall December 9th brought in net proceeds of \$2,158, according to Elizabeth Cresson and Dean Muirhead, co-chairmen for the affair. Members of the committee express their appreciation to all those who helped make this event a success.

The bazaar, sponsored each year by the junior class of the Nursing School, helps support the nursing scholarships and the Development Fund of the Nursing School. \$750 has been donated to the Fund from this year's receipts.

THE ASSASSINATION OF ABRAHAM LINCOLN WHICH IS RECALLED THIS MONTH OF LINCOLN'S BIRTHDAY RAISES THE QUESTION: COULD TODAY'S NEUROSURGEONS SAVE THE CIVIL WAR PRESIDENT? DR. JOHN K. LATTIMER, DIRECTOR OF UROLOGY, THINKS NOT. THE .44 CALIBER DERRINGER FIRED BY JOHN WILKES BOOTH DELIVERED A "SLEDGEHAMMER BLOW," PROPELLING THE MISSILE FROM

THE LEFT-REAR OF THE SKULL TO ABOVE THE EYE. "DESPITE THE MARVELOUS ADVANCES MADE BY SURGERY," DR. LATTIMER, AN EXPERT ON THE RAILSPITTER, SAYS, "THERE APPEARS LITTLE DOUBT THAT LINCOLN WOULD HAVE DIED OF THIS WOUND EVEN WITH MODERN NEUROSURGICAL TECHNIQUES AND EVEN IF THE BRAIN HAD NOT BEEN PROBOD WITH UNSTERILE FINGERS."

CALIFORNIA BOUND: Dr. Grumbach, flanked by Drs. Morishima and Kaplan.

From Boas to Babies . . .

## Night Managers Face These Problems When Most Hospital Staff Is Off Duty

"If doctors were as smart, as they're supposed to be, they'd be able to cure this pain in my elbow . . .

"Can you please show me where I live? . . .

"I haven't had anything to eat for three days . . .

"Hurry, my wife's having the baby!"

When most of us are snug at home, such diverse problems as those represented above fall on the shoulders of four men who work in the Unit Manager's office on the main floor of Presbyterian Hospital. They bear operational responsibility for the entire Medical Center most of the time.

Monday to Friday, 9 A.M. to 5 P.M., is the only time these Night Managers are not in operational control. That leaves 128 hours a week when these four men keep everything moving along properly.

"On this job you never know what's going to happen next," they agree. "Through the revolving door may come the president of the United Nations General Assembly—or some poor, little kid who's been beaten up at home and needs attention."

Senior man is Aaron Hale who started in the Presbyterian admitting offices seven years ago while working his way through college. "The Night Managers see just about everything," he says. "We've had babies born at the entrance and even in front of the information desk; patients coming in toting guns; others who got out of bed in the middle of the night and decided to slip out while nobody was watching."

Mr. Hale also has had to: Stop photographers trying to sneak up stairways toward the rooms of movie stars; find rare drugs for emergency shipment overseas; explain why symptoms cannot be diagnosed over the telephone.

A part-time teacher of piano when off duty, Mr. Hale also writes some music and has sung baritone with the Roger Wagner Choral. He lives with his wife and two children in Forest Hills, and is descended from the same English family that produced the Revolutionary War hero Nathan Hale.

Bearer of another distinguished name is Night Manager John Adams, Marine Corps veteran of World War II, who refers to one of his most interesting Hospital experiences as "the case of the belly dancer and the boa-constrictor." It seems that an exotic dancer downtown lost her grasp on the reptile and was bitten while performing her act.

Is the bite of a boa poisonous, and what can be done about it? was the anxious query. Mr. Adams didn't think it was (he was right) but referred the problem to herpetologists at Bronx Zoo.

About a year ago, Mr. Adams was at work on a Sunday that looked like it would be nice and quiet. "Suddenly—bang—Malcolm X was shot in the Audubon Ballroom across the street and that was the end of the quiet Sunday!"

This manager doesn't find his weekend-and-nights schedule too disruptive. "Five or six hours rest are enough for me and I can go to sleep almost anywhere, any time. In the Summer, lots of time I go straight from work out to Jones Beach to spend the day with the family."

The Adamases have four children and live in Queens. A member of several amateur dramatic groups, Mr. Adams would like to form a theatrical group here to entertain patients and staff.

"Psychiatry and public relations come into play on this job," according to G. A. Roqueni, "we are always trying to cope with seemingly impossible problems. Situations arise that don't fit the rules and while we can call for advice if necessary, usually it's the Night Managers who have to make decisions in the name of the Hospital."

For instance, a child is badly hurt and needs to have some face cuts sutured. Her parents' permission is required, but they can't be located, and the sutures are going to leave scars on what was a pretty face. It's the Night Manager, in consultation with the surgeon, who gives the surgeon the go-ahead to do what seems necessary.

"Problems in Vanderbilt Clinic take up about a third of our time," says Mr. Roqueni. "One of the funniest incidents there was the time an orderly was walking through the admitting area carrying a pitcher of milk. Suddenly one of the patients jumped up from his bench, tackled the orderly, grabbed the milk and drank it down. As the patient explained to the psychiatrist, he had this consuming conviction that he had to have milk at all times to go on living."

Mr. Roqueni has been a lifelong resident of the Hospital neighborhood, so commuting is no problem, but he says working nights and weekends does limit a young man's social life. "We get two nights off a week, and we certainly look forward to them!"

Fourth in the row of Night Managers is Jaime Gill who has worked here since 1958. "The job is fascinating," he says, "if something interesting and unpredictable isn't going on, then it's going to start happening pretty soon!"

Late one night, a nurse phoned Gil to cry: "Quick, there's a vampire up here!" Racing to the floor, the Night Manager discovered that the intruder was a "garden variety" bat whose nocturnal fluttering had somehow brought it into Presbyterian. The case of the vampire on the ceiling was brought to a close inside the net of an A.S.P.C.A. man.

A native of Puerto Rico who was brought to this country at the age of two, Mr. Gill finds his knowledge of Spanish useful here. Mr. Roqueni also speaks Spanish and French.

But in any language, at any time of night, when most of us are "off," these young Managers are decidedly "on!"

Night Managers are, from right, Aaron Hale, G. A. Roqueni (standing), Jaime Gill and John Adams.

## Pediatricians Go to Coast

Dr. Melvin M. Grumbach, associate professor of Pediatrics and associate attending pediatrician, has been appointed professor of Pediatrics and chairman of the Department of Pediatrics at the University of California School of Medicine in San Francisco. He also has been named Director of Pediatric Services, University of California Hospitals, San Francisco.

A 1948 graduate of the College of Physicians and Surgeons, Dr. Grumbach was a resident in Pediatrics at Babies Hospital and a Post-doctoral Fellow at Johns Hopkins, where he worked under the late Dr. Lawson Wilkins, famed endocrinologist.

In 1955 he returned to Babies Hospital to establish the pediatric endocrinology laboratory. His research attracted an outstanding group of research fellows to this laboratory. Some of these joined the Babies Hospital staff; others organized pediatric endocrinology laboratories in other medical centers.

With his associates, Drs. Akira Morishima and Selma L. Kaplan—who are also going to California—Dr. Grumbach has studied the effects of hormones and genetic factors on the growth and maturation of children with special interest in abnormalities of sex determination and differentiation in man, and the function of the human X and Y chromosome. Also, they have studied the effects of human growth hormone and plasma growth hormone in children with growth disorders. Recently, their work has focused on a new placental hormone with certain growth hormone-like properties and its role in the metabolic changes of pregnancy.

Drs. Morishima and Kaplan will join Dr. Grumbach's staff in San Francisco to develop a pediatric endocrinology laboratory there.

Dr. Grumbach is married to the former Madeleine F. Butt, Class of 1951 at the College of Physicians and Surgeons. Mrs.

Grumbach is a member of the Board of Women Managers of Babies Hospital. The couple have three sons.

## Mrs. Leman's Farewell Tea Brings Out Pink

Mrs. Sylvia Leman, secretary in the Volunteer Department, was honored at a retirement tea on January 18 to which many guests wore "Volunteer pink." Others, friends from many departments in the Hospital, became acquainted with Mrs. Leman before she came to the Volunteer Department in 1963.

MRS. SYLVIA LEMAN

The first eight years of her 10-year-stay at the Medical Center were as a secretary in the Department of Obstetrics. From 1956 until 1963, she was the gracious lady at the reception desk on the 16th floor of Sloane Hospital.

Among Mrs. Leman's fondest recollections of this period are the daily visits she made to the newborn nursery. At times she had a personal interest in the occupants: three of her six grandchildren were born in Sloane. The mother of two of these babies, Mrs. Lois Leman Niero, was formerly a medical secretary at Neuro.

Mrs. Leman's plans call for a trip to Scandinavia with her husband. Upon their return, she plans to do some volunteer work.

# WHEN "T.R." FOUND ORTHOPAEDIC "BULLY"

The Kaiser's blimps were blasting England on the day—just 50 years ago—that New York Orthopaedic Hospital also made history.

Established in 1866, the hospital was marking its Golden Anniversary year by moving into new and enlarged quarters—dedicated with gusto by former President Theodore Roosevelt.

The dedication, reported by all major New York newspapers on February 1, 1916, was a true labor of love for the "rough rider." His father had been instrumental in founding the institution; a crippled sister and brother had been greatly helped by it.

The Orthopaedic Hospital may be said to have started in the Roosevelt home on 57th Street. Now, half-a-century and several moves later, it was being opened at 420 East 59th Street, in the shadow of the Queensboro Bridge.

To it on that day came a large number of friends whom both Roosevelts, father and son, had interested in orthopaedic medicine. "That far east section of 59th Street was made to look like a bit of fashionable Fifth Avenue," the *New York World* reported. "Even the trained lungs of the colonel could not carry and for the first time in his plat-

form career, he was repeatedly interrupted by cries of 'louder!'"

Those standing close enough to Roosevelt heard him say:

THEODORE ROOSEVELT

"The work of this institution is particularly satisfactory because it is about the only form of charitable or philanthropic work about which you do not have to use an if or a but. There are many forms of philanthropy in which one finds a by-product of evil, but there is no comeback in taking crippled girls and boys, who otherwise would live lives of misery and despair, and turning them back to enjoy themselves, to be useful citizens and to bear their part in the common burden of the Commonwealth."

The former President also declared, "There are certain dangers to which every institution is liable . . . Never let it think that mere machinery can do its proper work without the human touch. Bricks and mortar, surgeons and nurses, all of your equipment, are but a mere shell if the spirit of human sympathy is lacking."

Before accompanying Roosevelt as he set off down the corridors to pump the hand of each and every patient, the surgeon-in-chief, Dr. Russell A. Hibbs, declared, "General medicine has failed to give relief to the patient who suffers chronic, deforming diseases, and has by that failure done much to convince patients and their friends that they are incurable. They are not incurable, and orthopaedic surgery is giving abundant proof of that fact. We must no longer be bored by the chronically sick. We must stop sending them to someone else. We must give them hope. We urge you all to look at this new building with the cripple in mind, and remember that unless you cure the crippled child, you will be forced to take care of the handicapped adult."

Dr. Hibbs said in his Annual Report for that year, "If

Framed by arches of the Queensboro Bridge is the New York Orthopaedic Hospital dedicated just 50 years ago by President Roosevelt.

you will stand day by day in the dispensary, and see child after child brought to us suffering from crippling disease, whose lives we may transform, you will find there instead of fatigue an inspiration."

Orthopaedic's new hospital was six stories high, with an Italian Renaissance exterior and a capacity of 104 patients, in 10-bed wards, "quiet rooms" and isolation "suites." It was dedicated just in the nick of time:

That fateful summer of 1916, New York was struck by one of its worst outbreaks of polio until that time, and more than 500 crippled children came seeking help.

A pavilion was added, but the New York Orthopaedic Hospital remained on 59th Street until it came here to the Medical Center a generation after Teddy Roosevelt had inspected its facilities and found them "bully!"

patient care areas. In hailing the start of the new construction, Dr. Edward C. Curnen, Jr., director of pediatrics, said, "When the extension is available, all of us will be able to work with far greater efficiency."

Dr. Curnen declared, "It was a great forward step in 1929 when Babies Hospital moved uptown to a sparkling, new 12-story building. But there have been few major alterations since, with the result that today we are literally bursting at the seams!"

"As our responsibilities have grown over the years, our building has become crowded with new and expanded activities which were not anticipated or provided for when the present building was constructed. The hospital

was planned for 140 patients; now we have beds for 230. The few small laboratories which were originally provided have become jammed with doctors' assistants and their equipment. Sunrooms

and other areas designed for patients' recreation have been pressed into service for storage and other purposes."

Dr. Curnen noted that just as Babies was one of the first hospitals established for the

exclusive care of sick infants, it also was a pioneer in research on special health problems of youngsters. The investigations at this institution have resulted in many notable accomplishments, he said.

Among the most notable research achievements at Babies have been the development of a serum treatment of meningitis that saved thousands of young lives; the identification and improved treatment of pancreatic fibrosis, and numerous advances in pediatric surgery.

The Babies Hospital addition made it necessary to move the central oxygen and nitrous oxide supply tanks from their former location near the Staff Doctors' Parking area. They were placed between the Neurological Institute and Maxwell Hall with no disruption of supply to patient areas.

Annex to Babies Hospital will look like this.

## Salmon Medal To Dr. Kolb

A Thomas W. Salmon Medal for distinguished service to psychiatry has been awarded to Dr. Lawrence Kolb, former Assistant Surgeon General of the United States. He is the father of Dr. Lawrence C. Kolb, Director of the Psychiatric Service, and a 1911 alumnus of the New York State Psychiatric Institute.

Active in the planning and early development of the National Institute of Mental Health, the elder physician directed the U. S. Public Health Service's Division of Mental Hygiene when he retired in 1945. He was an early advocate of the medical treatment of drug addicts. The medal winner is 85 and lives in Washington, D. C.

PAGE SIX

MEDICARE

Continued from page three

Q. Will the Government have a voice in who is admitted to the hospital now?  
A. No. We will continue to exercise our own decisions as to our admitting policies. The Government, of course, will reimburse us and our patients only insofar as the law permits. In this respect, the Government's position is comparable to, for example, Blue Cross.

Q. Will there be a problem of people wanting to stay in the hospital longer, than really necessary?  
A. The law makes it necessary for doctors to certify to the medical necessity for continued stay. If a patient stays longer than is medically necessary, his bill will not be covered by his insurance under Medicare.

Q. Will outpatients be taken care of under this program, too?  
A. Part of the cost of outpatient diagnostic studies is covered by the basic Medicare Plan. The additional optional plan will add to outpatient coverage by providing for payment of doctors' fees and a number of other services.

Q. What sort of medical costs will not be covered?

A. Under the basic Medicare plan, the first \$40 of the hospital bill is to be paid by the patient and there are similar "deductibles" for outpatient diagnostic studies and for physicians' fees under the optional plan. Also, a patient who has to stay in hospital beyond 60 days will have to pay \$10 daily for the remaining 30 days allowed in his coverage. In a number of the other benefits the patient is required to pay a percentage of the costs. The basic Medicare plan does not include physicians' (including radiologists, anesthesiologists, etc.) fees, but these may be covered in part under the optional plan which has to be signed up for and for which the subscriber pays a premium of \$3 a month.

Among those things not covered at all are: routine checkups, eyeglasses, hearing aids, private duty nurses, drugs (except when given in a hospital). Custodial care in nursing homes is not provided, either.

This device regulates frigid nitrogen used to cool ophthalmologist's probe.

Patients' Library Services Varied--And Still Growing

Walking through the corridors of the Eye Institute, you're likely to hear snatches of "The Guns of August" or "Up The Down Staircase" coming from phonographs.

These aren't pop tunes, however, but books that have been put on records for patients whose poor sight hampers their reading. Loaned the Hospital by New York's Library for the Blind, the "talking books" are one of many services provided patients free by the Milbank Library.

The library attempts to have a well-rounded collection that will appeal to all types of readers. It contains some 500 foreign-language books in tongues ranging from Armenian to Ukrainian. Due to the large number of Spanish and Greek people in the neighborhood, books in these languages are most frequently requested.

Greek books are difficult to locate and Miss Barbara Mar-

most frequently in use by patients in Neurological and Orthopaedic.

Patients in Harkness Pavilion may telephone the library for books, and such requests are handled daily. Selecting works of interest on the basis of a brief telephone conversation is always a challenging job, according to the Librarian, because although some will ask for a specific title, many have no definite idea of what they want to read. Patients who have not visited the Library are unaware of its scope and assume it consists mainly of mysteries and "best sellers." They are always pleasantly surprised when they ask for and receive books on their favorite subject.

Twice a year, the Library holds a book sale for the staff of the Hospital, and more than 1,000 volumes that have been donated, but not added to the

tin, the Librarian, says donations in this language are always welcome. Magazines in various languages are also available.

In addition, the library provides patients with special materials such as prism glasses, books in large print, ceiling projectors and film, jigsaw puzzles, maps and Braille books. The prism glasses make it possible for patients who are unable to sit up to read books comfortably. They are

collection, are sold. These book sales, held before Christmas and in the Spring, are becoming more successful each year, says Miss Martin. The proceeds are used to purchase new books.

About \$150 was received from the most recent sale and now the Library is collecting books for the Spring event. Donations are welcome, particularly non-fiction, which Miss Martin says is in heavier demand than fiction.

"Freeze" Method Used In Fighting Glaucoma

Using the intense heat given off by various rays to repair disorders of the eyes has been well known for more than a generation. Comparatively young, however, is the opposite kind of bloodless eye surgery—by means of intense cold.

The Ophthalmological Institute is a pioneer in this method, called cryosurgery (from the Greek word *kryos*, meaning cold). For longer than two years, this "freeze" method has been used at the Institute to combat glaucoma—a leading cause of blindness—with encouraging results in advanced, chronic cases. Also under study is the value of cryosurgery in cataracts and detachments of the retina. Glaucoma is the result of insufficient drainage of fluids from the eye; this results in increased pressure inside the eye. This increased pressure inside the eye in turn will eventually damage the retina and the sight nerves. Until 1962 Dr. Andrew de Roeth, Jr., Assistant Attending Ophthalmologist, had used the heat of cyclodiathermy to fight it, in certain advanced cases. Then he decided to try cold, instead. (In both of these methods, the aim is to decrease production of the fluid in the eye.)

The physician employed a hand-tool shaped like the cone bakers used to squirt icing on cakes. The cone ended in a small, metal tip but was hollow. Into the hollow went a mixture of dry ice and alcohol that cooled the tip to minus 79 degrees centigrade, which is about 110 degrees below zero on our customary Fahrenheit thermometer.

The applications of cold to the eye—rendered painless with anesthetic—proved beneficial. By temporarily freezing some of the ciliary body, which produces the fluid inside the eye, its secretion was curbed and the glaucoma halted.

Still, the ophthalmologist could not feel certain that his make-shift combination of dry ice and alcohol was the best coolant, or that the minus 79 degrees temperature they yielded was the best for attacking glaucoma.

Reassurance came more recently in the form of a factory-made cryogenic unit cooled with liquid nitrogen. With this device, the temperature at the tip of the probe that touches the eye can be varied from minus 190 degrees to plus 37 degrees—that is, from intense cold all the way up to body temperature.

"Being able to try other temperatures was of course a great boon," says Dr. de Roeth, "I experimented for several months, but I was lucky enough to have hit on just

about the best temperature for controlling glaucoma with my first dry ice model. With the new unit, I found that the optimum temperature for glaucoma surgery is minus 80 degrees, which is practically the same temperature as I obtained initially with my crude hand-made metal cone containing the dry ice and alcohol cocktail."

In a typical treatment, the physician applies the extreme cold to a ring of six tiny spots circling the iris of the eye, one minute at each spot. Although the patient feels no discomfort, a kind of frozen doughnut is temporarily formed around the colored part of the eye partially inhibiting the fluid production

Cold probe is applied around iris.

and thereby lowering the intraocular pressure.

Dr. de Roeth, who reported his findings recently to the American Ophthalmological Society, says there is "considerable improvement" in some 70 percent of advanced cases of chronic simple glaucoma subjected to this freezing treatment. Some patients have enjoyed no further deterioration of sight for two years. The primary answers to glaucoma continue to be drugs and surgery, with the "deep-freeze" a reserve weapon when these others fail to stop the disorder from spreading.

"Cold is not nearly so destructive to human tissues as heat," says the scientist. "We may freeze a bit of the eye for a while, but no permanent damage is done and it can regenerate." An indication of the preferability of the new method is that while not long ago, heat was used at the Eye Institute on about 150 glaucoma victims annually, it is used on only a handful now.

No man is more worthy of esteem than a physician who, having studied nature from his youth, knows the properties of the human body, the diseases which assail it, and the remedies which will benefit it, who exercises his art with caution, and who gives equal attention to the rich and the poor.

VOLTAIRE (1694-1778)

Dr. Margaret M. G. Hoehn and her husband, Dr. Robert J. Hoehn. She is an assistant neurologist; he, an assistant attending surgeon.

Six years wed are Dr. Sherman Bull, an assistant surgical resident, and Dr. Martha Bull, a visiting fellow in Medicine.

## SOME VALENTINES OF OUR VERY OWN

Cupid's arrow is on its way in this illustration of a book published in Milan in 1500. Some consider it the world's oldest Valentine.

The Gardners, both in Psychiatry, are the couple here. Dr. Richard A. Gardner is an assistant attending; Dr. Lee R. Gardner, a resident.

Residents in Psychiatry are Dr. Robi-nette N. Bell and her husband, Dr. Donald Bell.

Dr. Donald L. Schotland is an associate in Neurology; his wife, Dr. Marilyn Schotland, an assistant in Pediatrics.

MARCH, 1966

## Charles P. Cooper Dead at 81, Former President of Hospital

Charles Proctor Cooper, President Emeritus and Honorary Trustee of The Presbyterian Hospital, died in Harkness Pavilion on February 5 at the age of 81.

President of the Hospital for 14 years, Mr. Cooper began his distinguished service to the Medical Center in 1930 when he became a Trustee of the Neurological Institute. In 1938 he joined the Board of Managers of Presbyterian Hospital.

Mr. Cooper's election as President in 1943 was evidence of the confidence in his qualities of leadership which were to be evidenced again and again during his stewardship. During the years he served as President, the Hospital grew in stature by all the standards by which excellence may be gauged. It was a growth largely attributable to his wise administration, patient understanding and keen sensitivity to the requirements of all.

"With all his realism and insistence on standards," declared the Board of Trustees in a resolution passed February 17, "Mr. Cooper recognized that efficient operations were only a means to an end—a means to give the doctor, the nurse, the teacher, the re-

CHARLES PROCTOR COOPER

search scientist the opportunity to do his best." Recording "with profound sorrow its loss" in Mr. Cooper's passing, the Board resolution said, "He was determined that The Presbyterian Hospital and the Medical Center should stand for the best in teaching, research and care of patients. He made a record of which we are all proud."

During his Presidency improved personnel benefits were instituted and the organization of the Hospital today and its sound fiscal policies are but a few of his accomplishments.

Mr. Cooper was largely responsible for bringing the New York Orthopaedic Hospital to the Medical Center.

Through his friend, John A. Hartford, The Pauline A. Hartford Memorial Chapel was made possible by a gift from The John A. Hartford Foundation, Inc. The completion of the chapel brought to the Medical Center an appropriate setting for prayer and meditation by patients, their families, staff and personnel.

Mr. Cooper's 14 years as President of the Hospital included the turbulent days of World War II. When hundreds of Presbyterian's physicians left for military service in the early 1940's, they left gaps in the professional staff. With the restoration of peace, Mr. Cooper did much to facilitate the resumption of professional activities of returning staff members.

As a mark of esteem, in 1952 the Trustees honored Mr. and Mrs. Cooper at a "Friendship Dinner." At that time, they presented to the Hospital a portrait of Mr. Cooper by Paul Trebilcock, a leading portrait painter, which may be seen in the Memorial Room.

In 1954, in grateful recognition of his interest in nursing, Mr. Cooper was unanimously elected an honorary member of the School of Nursing Alumnae Association.

"While serving Presbyterian Hospital, he also gave generously of his time, energy and wisdom to many health and welfare agencies," the Trustee resolution noted. "He was dedicated to the well-being of his fellow man without regard to race, creed, color or station in life."

He served the Department of Defense as Chairman of the Advisory Committee on Fiscal Organization and Procedures. Defense Secretary Forrestal chose him his deputy as Chairman of the Armed Forces Medical Advisory Committee. Ultimately Mr. Cooper received the Certificate of Appreciation, the Defense Depart-

## NYOH Marking 100th Birthday

The schedule for the celebration of the 100th Anniversary of The New York Orthopaedic Hospital has been announced by Dr. Robert E. Carroll, chairman of the Centennial Committee.

Prominent orthopedic surgeons from here and abroad, many of them alumni, will be among the participants. Scientific sessions will be held in the Alumni Auditorium, Wednesday through Friday, April 27-29. Meetings will be from 9 a.m. until 5 p.m. daily, with recess for lunch at the National Guard Armory on 168th Street.

Guest lecturers will be Mr. Joseph Trueta, Nuffield Professor Emeritus of Orthopaedic Surgery at Oxford Univer-

sity, who will speak on "The Role of the Vascular System in Osteogenesis" Thursday at 1:30 p.m.; Dr. Hans Selye, Director of the Institute of Medicine and Experimental Surgery at Montreal Univer-

MRS. JOHN V. LINDSAY, WIFE OF NEW YORK'S MAYOR, IS HONORARY CHAIRMAN OF THE 1966 BENEFIT PARTY FOR THE STUDENT NURSE SCHOLARSHIP FUND TO BE HELD IN MAXWELL HALL, APRIL 20th. SHOWN WITH MRS. LINDSAY IN HER APARTMENT AT THE HOTEL ROOSEVELT ARE STUDENT NURSES MURIEL HUNTER AND JUDY McLAUGHLIN AND MRS. B. DEWITT BLEEKER, A MEMBER OF THE BENEFIT COMMITTEE. PROCEEDS FROM THE EVENT HELP FINANCE THE EDUCATION OF AT LEAST 20 STUDENTS EACH YEAR.

## Alumni Reunion Set for April 28

The Third Alumni Reunion will be held April 28 to 30, concurrently with the 100th Anniversary Celebration of The New York Orthopaedic Hospital. Separate meetings are scheduled by 14 participating alumni groups.

Friday morning, April 29, there will be a joint session in the Alumni Auditorium, at which Dr. Grayson Kirk, Dean H. Houston Merritt and Mr. A. J. Binkert will address the alumni on "Present Status and Future Planning of the Columbia-Presbyterian Medical Center."

Also at the meeting will be Captain George Bond MC, USN. He will talk and show films about the Navy research

project "Manned Undersea Habitations," wherein aquanauts—plus one astronaut—lived for more than 30 days some 200 feet below the sur-

## STETHOSCOPIA

### ● CUPID HIT THEM

Paula Mallon, Medical Information, and Mr. Lance Darby were wed February 5th.

Barbara Henderson, Babies Hospital Clinical Pathology Lab., married Mr. William Alston recently. They made a wedding trip to Antigua.

Claudia Ann Gregg, School of Nursing, Class of '67, and Mr. Rajinder Mayor were married in The Pauline A. Hartford Chapel, February 18th.

Carol Geer, Neuro Clinical Pathology Lab., and Mr. Vincent DiFusco, are betrothed. He is an engineer at Gruman Aircraft.

Frank Scorgie Rhame, First Year Medical Student, and Miss Betsey Clark Ingraham, of Delaware, Ohio plan to be married in May.

Alice Bash, assistant medical record librarian, is engaged to Mr. John Weygandt, a student at the Columbia Law School. They plan a summer wedding.

Katherine Schurko, Medical Information, and Mr. William Schaffner plan to be married in June, 1967. He is stationed aboard the USS Glover with the Atlantic Fleet.

### ● ROCK A BYE BABY

Mrs. Blanche Lenser, Medical Information, and Mr. Lenser, are the parents of a baby girl, born February 2nd.

Jeffrey Rubenstein, technician in Neurology and Mrs. Rubenstein, welcomed a son, David Lawrence, recently.

Mrs. Dora Cole, Neurology, is a grandma. Her grandson is named Ronald.

### ● NEW FACES

Public Interest welcomes Mrs. Lourdes Waters and Alice Jarcho.

Katherine Spagnolo is new in Purchasing. She is the daughter of Mrs. Kay Rycault in Accounts Payable.

P.H. Occupational Therapy has a new member, Mona Madis, a graduate of Columbia University School of Occupational Therapy. She recently completed her clinical affiliation here.

### ● FAREWELL

Mrs. Helen Gosline, Nursing Staff at Mary Harkness Unit, retired last month.

Betty Schneider, Purchasing Department, switched to the role of housewife after 13½ years here.

Mrs. Louise Fritaenscraft, Optician, is leaving after 5½ years service. She will travel to Germany to visit with her daughter and grandchildren.

### ● CONDOLENCES

Al Saker, Vanderbilt Clinic, on the death of his father.

Mrs. Sylvia Hartstein, secretary at Mary Harkness, on the death of her father.

### ● NOTES OF INTEREST

Wednesday and Thursday, March 9th and 10th, are the dates for a Flea Market at the New York Psychiatric Institute, Main Lounge from 10:00 a.m. to 7:00 p.m. daily. The sale will feature antiques, prints, framed and unframed, and other small items. Mrs. Phillip Polatin is chairman.

## UHF BENEFIT TOPS \$100,000

The highest direct benefit ever returned to the Hospital was raised during this year's UHF campaign which ended February 28. \$104,950 above the direct benefit quota was brought in by the six Medical Center teams, an increase of \$12,405 above 1965. The direct benefit stage was extended an extra month this year because of the transit strike.

The Hospital also shares proportionately in the distribution of all funds raised by the United Hospital Fund for the 79 voluntary hospitals it aids.

## In Memoriam

### DR. ARMISTEAD C. CRUMP

Dr. Armistead C. Crump, an internist at The Presbyterian Hospital for more than 40 years, died in Harkness Pavilion February 15 at the age of 89. He was the last surviving founder of the New York Society for Thoracic Surgery.

A native of Richmond, Va., Dr. Crump was educated at Virginia Military Institute and at the Medical College of Virginia where he received his degree in 1903. He served The Presbyterian Hospital, starting as an interne and progressing to assistant attending physician, until he retired in 1948.

It was in his 48th Street basement workshop that the physician developed numerous tools for medical treatment. Dr. Crump invented instruments for surgical correction of vascular lesions and non-surgical instruments for treating disorders of the esophagus, in which he had special interest.

Descended from a family that had settled in Virginia in the 17th Century, the physician was a member of the Sons of the American Revolution. His survivors are his wife, Mrs. Jean B. Gannon Crump; a daughter, Mrs. Douglas D. Ballin, also of Greenwich, and two grandchildren.

\*

### FLORENCE PALMER

Florence Palmer, pensioner of the Presbyterian Hospital, died in Neurological Institute on February 7. A member of the 25 Year Club, she was employed as nurse-technician in Vanderbilt Clinic from 1921 until 1954. She is survived by a sister, Miss Beatrice E. Palmer of New York City.

\*

### HARRY DAVIS

Harry Davis, head porter at Harkness Hall, died suddenly on January 30. He had been employed for 14 years in housekeeping at Harkness.

Mr. Davis lived in St. Albans, L. I. His survivors are his wife, Mrs. Alberta Davis; a son, Harold; two daughters, Mrs. Anna Meyers and Mrs. Dorothy Fairconure, and four grandchildren.

\*

### HELEN B. HAINES

Helen B. Haines, retired member of the Social Service Staff, died December 21 at her home in New York City. At the time of her death, Miss Haines was working part-time at Cancer Care.

Miss Haines joined the Social Service Staff in 1924 at the downtown Hospital. She was in the Children's Service and transferred to the Fracture Service when the Hospital moved uptown. From 1950 until her retirement in 1957 she served on Urology.

## DOINGS OF DOCTORS

Dr. Hattie E. Alexander, attending pediatrician, is the recipient of the 1966 Great Heart Award by the Variety Club of Philadelphia. Presented to Dr. Alexander for "her untiring and devoted labors as a world-renowned scientist and physician" it was given at the 31st anniversary dinner of the Club in Philadelphia recently. Dr. Alexander has been awarded the E. Mead Johnson Award for Research in Pediatrics in 1942 and The Children's Hospital of Philadelphia Medal in 1965.

David E. Milgram and Harold H. Salkind of the Variety Club present the Medical award to Dr. Alexander and a theatrical award to actress Celeste Holm

Visiting Professor in the Department of Physical Medicine March 21 to 25, will be Sir Ludwig Guttman, Director, National Spinal Cord Injuries Center, Stoke-Mandeville Hospital Aylesbury, England. He will lecture and attend rounds and combined meetings with the departments of Neurology, Urology and Neurosurgery, and visit the Blythedale Children's Hospital in Valhalla.

Dr. Hans Selye, Director, Institut, de Medecine et de Chirurgie Experimentales, University of Montreal, will be giving the Pirquet Medal and Scroll for 30 years of Stress Research at the March 9 meeting of the Pirquet Society of Clinical Medicine, New York Academy of Medicine. Dr. Selye is to be a guest lecturer at the 100th Anniversary Scientific Sessions of the New York Orthopaedic Hospital, April 28 in the Alumni Auditorium.

Dr. Daniel C. Baker, Jr., Director of Otolaryngology, will lecture March 17th on "Headache-Evaluation and Management of the Patient" and on "Functional Surgery for Carcinoma of the Larynx" at the Sixteenth Annual Postgraduate Teaching Day in Otolaryngology sponsored jointly by the Department of Otolaryngology, Upstate Medical Center and the Central New York Eye, Ear, Nose and Throat Society. He will preside at the American Broncho-Esophagological Association in San Juan, P. R. April 17-24. Dr. Baker is president of this association. He will also attend the Postgraduate Otorhinolaryngology Conference at the University of Michigan, Ann Arbor, April 14-16.

Professor T. Cecil Gray, Professor of Anesthesia, University of Liverpool, will be a guest of the Department of Anesthesiology, and will speak at the March 17th Lecture in the BH 4 amphitheater, 7:30-9:30 p.m. His topic will be "Accidents in Surgery and Anesthesia."

Dr. Douglas C. Damrosch, assistant vice president of Presbyterian Hospital, has been named Consultant to the Department of Health, Education and Welfare, in the division of Medical Care Administration, Public Health Service. He expects to spend part of each week in Washington, D. C.

Medical Center physicians participating in the meeting of the American Heart Association, March 14 to 16 in the Alumni Auditorium are: Dean H. Houston Merritt, greeter; Drs. Alfred P. Fishman and Glenn A. Langer, course directors; Dr. Stanley E. Bradley, chairman of The Heart and Heart Failure session during which Drs. David Spiro, Langer, Arnold M. Katz, M. Irene Ferrer and John H. Laragh will present papers; Dr. Dickinson W. Richards, chairman of the session on Cor Pulmonale; Dr. Brian F. Hoffman, chairman of the session on Practical Electrophysiology, on which Drs. Hamilton Southworth, Richard J. Stock, Herbert Bartelstone and Donald H. Singer will talk; Dr. George A. Perera, chairman of the session on Special Clinical States, on which Drs. Paul J. Cannon, Harry W. Fritts, L. Stanley James and John C. Sinclair will lecture.

# All About Viruses: Fact Versus Fable

Headache? Runny nose? Feeling generally miserable lately, and figure you must have a virus?

"There are a lot of respiratory viruses around," you hear it said every day. Yet most of us have little accurate information about viruses — but lots of misinformation.

To help correct these misconceptions, THE STETHOSCOPE prepared this question and answer article with the cooperation of Dr. Katherine Sprunt, Assistant Attending Pediatrician. Under a grant from New York's Health Research Council, she studies these disease agents in investigating our defenses against infection.

## What are viruses?

They are tiny parasitic forms of life that need living tissue to grow in. If frozen or dried, they may appear to be lifeless chemicals, but when favorable conditions are provided, they become active again.

\*

## What do they look like?

They take many shapes: round, cubical cylindrical or many-sided; some have fantastic, geometric designs. All are very small — submicroscopic, in fact.

\*

## What are viruses made of and how do they work?

For the most part, they consist of outer shells of a protein substance enclosing cores of nucleic acid. Besides being protective, the outer shells help the viruses attach to cells and at least sometimes to break into the cells they are invading. When a cell is penetrated, the viral nucleic acid enters and forces the manufacture of hundreds of the same kind of virus. These pile up until the cell ruptures and the new viruses spill out to seek fresh victims. In this way, the number of viruses in your body may multiply tremendously with each cell burst.

\*

## What important advances recently were made in curing viral disease?

The first drugs ever developed specifically to cure a disease caused by a virus are now in use and others are being tested. Heretofore, we were able to prevent some viral ailments with vaccines, but had no drugs to combat them once they took root.

The first anti-virus drug proved effective against eye infections caused by herpes simplex virus. This infection strikes thousands of Americans a year and is a leading cause of blindness. In the last few years we have seen growing use of a drug against smallpox and the possible complications of smallpox vaccination.

## Have viruses been proved to cause cancer?

Yes, they have been shown to cause cancers in mice, chickens, hamsters and other small animals. The viruses used are usually not "natural" viruses for those species, however. And there are many other causes of cancer, as well.

\*

## What virus diseases may soon be preventable with vaccines?

The road ahead may lead toward a number of new preventives for viral diseases. There is progress toward vaccines against chicken pox, German measles, hepatitis, trachoma and some of the viruses causing respiratory ailments, from croup and bronchopneumonia to what we commonly call "colds."

\*

## Does this mean we'll be taking more and more "shots"?

Not exactly. Many inoculations now given separately may be combined so that we may be safeguarded against a number of diseases simultaneously. At present, infants get "three or four-in-one" inoculations; in the future, adults too may be offered "super vaccines" protecting them against a dozen or more illnesses all at once.

\*

## Why can't we vaccinate against colds?

To some extent, we can. But it's not yet practical. There are hundreds of different viruses causing the common cold, and each would need to be contained in any completely effective preventive. You might be successfully immunized against cold virus No. 37 this week, and come down with a beautiful case of No. 86 next week.

\*

## Are all viruses completely different from each other?

No, some resemble one another sufficiently so that the

These aren't cotton balls, but the viruses that cause Asian flu, magnified 27,000 times under an electron microscope.

body can be "tricked" into getting them confused. The 18th Century English scientist Dr. Edward Jenner, who perfected the first smallpox inoculations, discovered that the human body developed resistance to smallpox viruses when it was injected with the viruses that cause cowpox. More recently, research into "cross-immunization" provides one of the reasons for hope of attaining practical protection against some of the more common viruses causing "colds."

We are already protecting against serious, killing diseases (polio and measles) by use of vaccines containing comparatively harmless relations of the dangerous viruses. The relatives are naturally occurring, very close relatives selected deliberately from big populations of the dangerous virus and used because they themselves lack the ability to produce severe disease.

\*

## How may viruses be used to combat disease?

There is a group of viruses called "bacteriophages" that destroy bacteria. They were

used unsuccessfully in bacterial infections years ago, but it may be possible to learn to use them efficiently. Right now this is not a popular line of investigation, but it may become so. There is also the probability that benign viruses may be used to induce host cells to produce a non-specific protein called interferon which will protect the host against infection by harmful viruses.

\*

## Are viruses a discovery of 20th Century American research?

No, their existence was suggested by a Russian in 1892 and confirmed by a German in 1898. Scientists from The Netherlands, France and other countries also did important pioneer work on viruses. The first vaccine — against smallpox — was developed by an Englishman.

\*

## Why is it important to be vaccinated against virus diseases even after childhood?

Because vaccine-induced immunity doesn't last a lifetime and the disease viruses are always on the prowl somewhere. Smallpox inoculation is more than a century old, for example, but we still don't

## Art Committee Meets March 9

Plans for the 16th Annual Arts, Crafts and Photography Exhibit will be discussed at a meeting of the Medical Center Art Committee on March 9 at 4 p.m. in the Babies Hospital Board Room. Chaplain Robert B. Reeves, Jr., chairman, requests all committee members to be present, as this will be the only meeting before the show, May 2-13 in the Library Annex, PH 20.

Members of the committee are: Drs. Meyer M. Melicow, Jerome P. Webster and Carl R. Wise; Gladys Barrett, Dorothy Delamater and Agnes Dilworth. Also, Mrs. Rosemarie Glennon, Martha Haber, Helen Henry, Mrs. Patricia A. McLean, Mrs. Amarilius Otto, Harriet Phillips, Mary Ryan, Mrs. Pamela Seaman and James Sheridan.

know how long immunity lasts, and outbreaks of this potentially fatal infection continue to occur regularly in various parts of the world. We are even less sure of how long vaccines against other illnesses may be relied on.

## AUXILIARIES ELECT

New officers were elected at the recent annual meetings of the five auxiliaries at the Medical Center.

On The Board of Women Managers of the Babies Hospital, newly elected officers include: Mrs. Allen F. Maulsby, vice president; Mrs. Bayard Walker, recording secretary; Mrs. Grover O'Neill, Jr., assistant recording secretary; Mrs. Fred L. Heyes, assistant corresponding secretary; Mrs. Joseph R. Ramee, honorary chairman, Cribside Social Service Committee and Mrs. William E. Hill, chairman, Cribside Social Service Committee.

Mrs. Irving Kingsford, Jr.

is the new chairman of the Neurological Institute Auxiliary and Mrs. Carter L. Burgess is 1st vice chairman. Mrs. Edward B. Schlesinger has been elected secretary.

Mrs. David A. W. Wilson is the new chairman of the Mary Harkness Auxiliary and Mrs. George B. Gibbons, Jr. is vice chairman.

The officers of the Women's Auxiliary of the New York Orthopaedic Hospital remain the same.

Women's Auxiliary of The Presbyterian Hospital has a new treasurer, Mrs. John G. Leness.

Otherwise, the roster of officers is the same as in 1965.

An early vaccine against an illness caused by viruses was that developed by Dr. Edward Jenner to prevent smallpox.

# Name 22 Scholars In Weinberg Plan

Twenty-two Medical Center personnel are enrolled in job-related courses for the Spring session at 11 colleges and schools in the metropolitan area under the Sidney J. Weinberg Employees Educational Aid Reimbursement Plan.

The employee educational aid fund was established in 1962 by Sidney J. Weinberg, trustee of Presbyterian Hospital, to enable personnel to improve their effectiveness on the job and to prepare themselves for promotion opportunities. It refunds up to half the tuition for one to six credits per semester upon successful completion of courses.

Thirteen of these students are degree candidates; 4 for AAS degrees, 4 for Bachelors degrees; 4 for Masters and 1 for a Doctorate. Following is the list of approved applicants:

SIDNEY J. WEINBERG

Name	Position	School
George Burgess	Electrician, Maintenance Department	N. Y. Institute of Technology
Patrick Moohan	Storekeeper, Maintenance Department	N. Y. Institute of Technology
Michael Casali	Pharmacist, Pharmacy	Brooklyn College of Pharmacy
Robert Giuliano	Pharmacist, Pharmacy	Brooklyn College of Pharmacy
Patricia Ann Cassman	Laboratory Technician, Hematology	The City College
Elsa Rodriguez	Aide, Physical Therapy	The City College
Madeline Della-Volpe	Cashier-Admitting Clerk IOPH	Drake Business School
Catherine Finnerty	Receptionist, Nursing	Drake Business School
Kathleen Rennix	Secretary-Receptionist, Clinical Pathology	Drake Business School
Rose Rush	Clerk-Typist, Nursing	Drake Business School
Ruth Griffin	Dining Room Attendant, Food Service	Bronx Community College
Dorothy Jemmett	Nursing Aide, Nursing	Bronx Community College
Vincent Picarello	Multilith Operator, Print Shop	Bronx Community College
Jerome Heltzman	Data Processing Manager, Accounting	Rutgers University
Alfred Hernandez	Oxygen Technician, Oxygen Therapy	RCA Institute
Raymond Laureano	X-ray Clerk, Neuro X-ray	RCA Institute
Kathleen Kelly	Supervisor, Communications Center	New York University
Barbara Martin	Librarian, Milbank Library	New York University
Kenneth Konstalid	Console Operator, IBM	N. Y. C. Community College
William Moakler	X-Ray Technician, X-Ray	Fairleigh Dickinson Univ.
Letty Pogul	Psychometrist, Pediatric Psychiatry	Teachers College, Columbia
Ann Shockey	Physical Therapist, Physical Therapy	School of Gen'l Studies, Columbia

This lovely fishing stream is definitely NOT Duret's River.

## Planning for Vacation?

### Here Are Some Sightseeing Spots That Simply Aren't!

"Did I ever tell you about my vacation? Well, we were sailing down Alcock's Canal past McBurney's Point through the Tunnel of Corti. Then we got to the Circle of Willis and turned under Parker's Arches to visit the Pyramids of Malpighi."

It isn't too early to talk about holiday trips: Memorial Day will kick off the 1966 vacation season before you know it. But forget about the "vacation spots" mentioned above because they simply don't exist, at least not on any map.

You can sail the Grand Canal because it's in Venice, but Alcock's Canal is impossible to navigate because it's the medical name for a passage within a bone of the lower back. Similarly, Point Pleasant may be on the Jersey Shore, but McBurney's Point is near your appendix.

Your next vacation may take

you through the tunnel beneath the Alps, but the Tunnel of Corti is in your ear and the Circle of Willis at the base of your brain. The Arch of Constantine would be interesting to visit in Rome, but Parker's Arches are at the back of your skull. The Pyramids of Egypt would be a nice destination, but Malpighi's are in your kidneys. And while the Nile Delta may be thousands of miles away, Galton's Delta is close at hand—among your fingerprints, in fact.

The language used by physicians includes quite a few other terms that may sound geographical, but are really anatomical.

Take for example Haller's Isthmus. It doesn't connect two bodies of water the way any self-respecting isthmus should. Rather, it's a formation inside the heart of an infant.

Vacationing abroad, you may visit the crypt beneath many a famous church. Lieberkuhn's crypt is in your intestines, though, and Luschka's in your gallbladder.

The Rhine River may be fine; however, Duret's River is found in the membrane covering the brain. Who wouldn't want to vacation in the Islands of Hawaii? but the Islands of Langerhans are located in the pancreas.

And take it from me: don't plan any sightseeing at the Aqueduct of Sylvius, the Fissure of Rolando or Wernicke's Center. They're all parts of your brain.

## Manhattan to Moscow . . .

### Visitors From Far & Near Toured Hospital In 1965

Informational tours of The Presbyterian Hospital were taken last year by more than 900 persons from every part of the United States and countries around the world—including several behind the Iron Curtain.

According to Mrs. Anne Lubrecht, tour hostess, the busiest month for visitors was April. More than 200 persons came calling then, including over 100 students and foreign visitors from Canada, South Africa, Germany and Brazil.

Those who request tours of the Hospital include not only members of the general public, but physicians, nurses and other medical personnel, social workers and science students. Numerous hospital administrators and other aides also are frequent and welcome visitors.

"Everything's so nice and clean!" is one of the guests' most frequent comments, says Mrs. Lubrecht. Another observation they make commonly: "It's such a friendly place!"

Such widely-separated countries as Iran and Japan, Switzerland and Nepal, Ireland and Argentina, were represented

by those who came last year to observe our Hospital in action. From behind the Iron Curtain came travelers from the Soviet Union, Poland, Finland, Czechoslovakia and Yugoslavia.

The Russian was Dr. Daphne Poulanos, a Moscow surgeon; the Yugoslav, Dr. Mihailo Andrejevic, a professor at the University of Belgrade.

The secretary to the dean of a Japanese medical school also came on tour, wearing the lovely kimono and sandals of her native land. Others we welcomed included hospital administrators from Australia, England and Scotland; government health officials from Madagascar; a university professor from Vietnam, and missionaries from Mexico.

"Whatever their nationality, we all speak the same basic language when it comes to caring for the sick," says Mrs. Lubrecht, a member of the Department of Public Interest. "One thing some visitors ask is whether there is a charge for visiting. There isn't, of course. But we do need to have appointments made in advance, and 16 is the minimum age we accept for our tours."

## Progress Told At Babies Tea

The Babies Hospital Development Fund has reached \$2,741,105, according to Mrs. John S. Tilney, chairman of the Women's Committee for the \$5,000,000 drive. Making her report at a tea on March 2 at the home of Mrs. Henry C. Taylor, trustee of Presbyterian Hospital, Mrs. Tilney said that the Board of Women Managers was responsible for having raised \$1,028,508. Mem-

Mrs. John S. Tilney, chairman of the Women's Committee for the Babies Hospital Campaign.

bers of the Board and guest workers on the campaign were present at the affair.

# Miss Stilwell Joins Grandparent Program

"Operation Grandmother" is the fascinating name of a new project which Mildred L. Stilwell, Associate Director of Babies Hospital Social Service, will work with after her retirement March 4.

She is succeeded by Miss Agnes Dilworth (see story below). This pilot program, under the aegis of the U. S. Office of Economic Opportunity and the Department of Health, Education and Welfare, is involved with establishing a relationship between institutionalized children under six years of age without family ties, and older citizens of limited income who are fond of children. The goal is to match the social needs of both groups.

In the New York area, this non-sectarian "Project Foster Grandparents" is under the Counseling Service of Catholic Charities. Miss Stilwell will be associate director of this dual-purpose undertaking which will assign foster grandparents to lonely children and provide "over 60 citizens" with an opportunity to put their free time to good use. The plan calls for daily visits with the children—five days a week, four hours a day—to cuddle, read to, tell stories, take trips to the zoo, and contribute that important extra "tender, loving care" so important to their well-being. These senior citizens will receive moderate remuneration to aid them in raising their incomes above the subsistence level of many pensioners.

Miss Mildred L. Stilwell (right) and successor, Miss Agnes Dilworth.

After the selection and screening of the senior applicants, one of Miss Stilwell's first tasks will be to match each child with a compatible grandparent. There are 114 children in the study, staying at the Founding Home, the McMahon Shelter and the Cardinal McCloskey Home in New York City, and the orthopedic children's unit at St. Agnes Hospital, White Plains. The faculty of the Hunter College School of Social Work is participating in the project by operating a training period for "grandparents" before they are assigned to a child.

Developing new concepts is not strange to Miss Stilwell. In 1927, when she came to Babies Hospital downtown, she was employed by Dr. Herbert Wilcox, Sr. to develop a social service program there. Working with Drs. Rustin McIntosh

and Howard Craig (then attending pediatricians) who were pioneers in recognizing the importance of the family situation in treating ill children, she established a department with one worker and one secretary.

Among her recollections of those early days are the trips to and from the Babies Hospital summer home in Rumson, New Jersey, before the advent of tunnels and turnpikes. Then "each 60-mile trip with convalescing children was a major undertaking."

"It has been a long and most interesting period during which there have been great changes in Social Service and in the Hospital," she recalls.

"One of the gratifying factors has been the wonderful relationship I have enjoyed with the Cribside Social Service Committee. This Committee has never failed to cooperate in every way. Its efforts in our behalf are largely responsible for the many things Social Service has been able to provide for the children of Babies Hospital and the pediatric clinic."

The regret felt by her friends and associates as Miss Stilwell ends her 39-year stay at Babies Hospital is tempered with enthusiasm for the challenging job she is about to undertake. We bid her "bon voyage" as she sails forth into uncharted waters.

## Agnes Dilworth Succeeds to Post

Miss Agnes Dilworth, on the Staff of Presbyterian Hospital since 1958 as supervisor of the Adult Surgical Service, has been appointed Associate Director of Social Service, Babies Hospital, succeeding Miss Stilwell. She will assume her new responsibilities March 7th.

Miss Dilworth, who received a Master of Social Science degree from Fordham University in 1944, has served on the Social Service staffs of American Red Cross, New York Chapter, the National Foundation for Infantile Paralysis and the Catholic Home Bureau. In the latter agency, her responsibilities were primarily with supervision of the Foster Care Program, including the Refugee Program and Adoption Consultation Program.

## Grid Trophy Awarded Tot Out On Bench

Jimmy Williams is a smiling, winsome 13-year-old who has won the hearts of the staff on Babies Hospital 5th floor with his cheerful acceptance of prolonged hospitalization. Jimmy has a leg infection, which, to a youngster who takes his football very seriously, is a tough break.

Jim plays with the "Falcon Tots," a team under the auspices of the United Block Association. His group is a member of the Midget Football League which this organization sponsors in interblock competitions in Harlem to foster community spirit through sports programs. Trophies are given to participants who show team spirit.

As award time neared, in early January, Jim seemed especially depressed because he would not be present for the big event. However, his physician and good friend, Dr. Luther Strayer, assistant resident in orthopedics, took care of that symptom: He notified the United Block Association

The "big day" for Jimmy Williams came with the presentation of a trophy by UBA president Earl Lewis. Looking on are Dr. Luther Strayer (alongside balloons), members of the "Falcon Tots," directors of the Midget Football League and staff nurses, Sherry Burkholder (left) and Diane Cox.

of Jimmy's whereabouts—and they came through in great style.

Five of Jim's teammates, escorted by three officials of the UBA, arrived one afternoon recently with a special trophy for "the most valuable patient-player." The golden statuette now reposes at Jim's bedside, carefully wrapped in his bathrobe but enthusiastically displayed at every opportunity.

An eighth grade student at Eleanor Roosevelt Junior High School, where he is a good student—"I have to study hard, my mother is a school teacher"—Jim hopes to win a football scholarship to college. "Then I'm going to be an airline pilot," he confides.

With his confidence and enthusiasm, there's no doubt that James Williams is destined for All American, circa 1970—or the cockpit of a supersonic jet.

## COOPER

*Continued from page one*

ment's highest award for civilian service to the Armed Forces. The certificate declared, "The time and energy devoted by Mr. Cooper to directing this significant work represents a public service and a contribution to the national security deserving the highest praise."

Further public acknowledgment of his achievements was given by his alma mater, Ohio State University, and by Columbia University, both of which conferred Doctor of Science degrees on him.

In 1957 Mr. Cooper was named President Emeritus of the Hospital, but continued as a Trustee. In 1960 he was named Honorary Trustee.

Born in Caldwell, Ohio, he himself earned most of the money needed to attain a master's degree in electrical engineering at Ohio State. He was graduated with top honors in 1907 and, after a year of teaching at New Hampshire State College, joined the Bell System.

Mr. Cooper's progress was impressive. He rose rapidly through the ranks, becoming president of Ohio Bell Telephone by the age of 39 and vice president of the American Telephone and Telegraph Company three years later. He was vice chairman of the Board when he retired from the company in 1948.

For thirty years Mr. Cooper was also a director and member of the Executive

Committee of the Guaranty Trust Company of New York. When it merged with J. P. Morgan & Company in 1959, he was named a member of the Directors Advisory Council of Morgan Guaranty Trust Company of New York, a position he held at the time of his death.

The warmth and generosity of Mr. Cooper's spirit was and is very much a part of the personality of the Medical Center. He will long be remembered.

## ALUMNI

*Continued from page one*

face. Their habitat, named SEALAB II, was a self-contained metal cylinder constructed so that free access to the surrounding water was available.

Each team of ten men remained submerged for 15 days, while two Aquanauts spent a total of 30 days each under pressure. During this experiment all subjects engaged in regular outside diving activities, including marine biological and oceanographic observations, underwater construction, salvage operations, and performance of psychomotor test procedures. Results of this open-sea experiment, which Dr. Bond directed, together with documentary photography will be presented.

Luncheon for all alumni at Bard Hall will follow. This furnishes an opportunity for meeting old friends of interne and residency days, from all

the separate medical disciplines.

Saturday, April 30th, will be P&S Alumni Day. The traditional "coffee hour" for renewing old medical school friendships will be held in the lobby of the Alumni Auditorium, followed by a program on "Organ Transplantation" sponsored by the Departments of Medicine and Surgery. The Annual Business (and luncheon) Meeting of the Association of the Alumni of the College of Physicians and Surgeons will then take place in Bard Hall.

Climax of P&S Alumni Day, the cocktail party and dinner dance at the Waldorf-Astoria on Saturday evening, will honor the graduating class of 1966 and the 50-year graduates.

There are 16 independent alumni organizations at the Medical Center. To encourage unity, the key alumni associations initiated the first Joint Alumni Reunion in 1960.

The personnel capsule is raised from SEALAB II. This is a decompression chamber to which divers transfer underwater to avoid being subjected to normal atmosphere.

# April 27 Honor Tea Set For Volunteers

The 15th annual Awards Tea will take place in Maxwell Hall on April 27 from 4 to 6 p.m., according to Mrs. Marguerite Stein, director of the Volunteer Department. This event is the Hospital's tribute to the men and women who add that extra measure of friendliness and warmth which augments the work of staff and personnel to provide the best in patient care. Special guest at the tea will be Hugh Downs, the well-known TV performer and host of the "Today" show.

During 1965, 1,088 Volunteers gave 124,608 hours of dedicated service in many areas of the Medical Center. This year, their aid has been

extended to include patient escort service, a recreational program in Neurological Institute, workers in Nuclear Medicine X-ray and the Department of Physical Therapy.

Forty Red Cross Nursing Aides were trained in a concentrated three-week course conducted by Miss Rebecca Perkovich, nurse in the Eye Clinic. A new course began March 8th. Also, for the first time, the entire practical nursing class at the Grace Dodge Vocational High Schools are serving as Volunteers as part of their junior year curriculum. They were trained on the orthopedic and urological floors by Miss Donna Hoag and Miss Rose Mary Hoynak.

MRS. MARGUERITE STEIN

The additional help they provide is valuable to patients and staff alike.

Junior Volunteers continue to serve during after-school hours, Saturdays and holiday periods. Seventy-eight "Candy-strippers" provided 4,359 hours during July filling in for vacationing Volunteers.

This program for young people between 16 and 18 years old, is valuable educational and vocational training, as well as a constructive community service. Three Junior Volunteers are presently student nurses and a Grace Dodge graduate who volunteered here is a Practical Nurse in Neuro.

## NYOH

*Continued from page one*

sity, to discuss "The Development of the Stress Concept 1936-1966" Thursday at 3:15 p.m. and Mr. H. Osmond-Clarke, Professor of Orthopaedic Surgery, London Hospital, "Comments on the Treatment of Bone and Joint Injuries," Friday at 3:15 p.m.

The orthopaedic guests will join the Joint Alumni Meeting in the Auditorium on Friday morning.

## "It Almost Broke My Father's Heart..."

The influence of the Roosevelt family in the history of the New York Orthopaedic Hospital—now celebrating its 100th birthday—is well-known. Lesser-known, but interesting, reading is the recollections of the woman who was most instrumental in bringing about the founding of the institution.

In 1928 Mrs. Anna Roosevelt Cowles—sister of the President and daughter of Orthopaedic founder Theodore Roosevelt—wrote to the Hos-

pital director, Dr. Russell Hibbs:

"My sister, Mrs. Douglas Robinson, has asked me many times to write you a sketch of the beginning of the Orthopaedic Hospital in New York. "When I was three years old, my father was in perfect despair on account of my having Potts Disease of the spine. Our family physician had put me into the hands of I don't know whom. The treatment was terrible, as one had to wear day and night, a steel instrument that went up to your chin and up the back of your head. As I was really a baby of only two years and a half when this was being done to me, it almost broke my father's heart. He did everything that any human could to relieve my suffering and finally went to various places in the

country, where he heard rumors of anyone having a different treatment. "Through some source, of which I do not recollect the origin, he was told of a Dr. Charles Fayette Taylor, who had just come to New York and taken a room in the Cooper Institute for an office. My father went to see him and had the treatment explained to him. It appealed so intensely to his understanding that he decided, although Dr. Taylor had no backing, to have him see me. As soon as he did so, and Dr. Taylor explained his theory by pointing out what it would do for me, he immediately had the terrible brace taken off me and had me put under Dr. Taylor's care. This required enormous courage on his part, and I can remember perfectly well the marvelous feeling of Dr. Taylor's hands on my back as he explained to my father where the support was to come. As soon as the instrument was made, it was put on me.

"As I remember, Dr. Taylor came from Vermont or New Hampshire, and had felt sure that he could do something in the way of relief of bone complications. Whether he had had the experience of seeing someone who had suffered or not, I do not know. "I was his first patient, and I wore my instrument until I was fifteen, when it was taken off. In the meantime, when my brother Elliott was a young boy attending Mr. MacMullen's School (which was held on the floor above what was then Park and Tilford's grocery shop) at the corner of Broadway and 20th Street, there was a long, straight, rather steep staircase from the pavement to the floor on which the school was located. In the rush of the boys to get out of school, Elliott was knocked down and fell the whole flight

of stairs, hurting his hip.

"Dr. Metcalfe, who by that time was our family physician, attended him and finally one day said to my father with a perfectly whimsical look, 'Of course, Theodore, I suppose you will have to take the boy to your old quack doctor, because I should put him in a hospital where he would have to be put in bed with a weight on his foot for a year at least. Your doctor, I suppose, would have him walking tomorrow. "Which was perfectly true

DR. CHARLES F. TAYLOR

—for he was taken to Dr. Taylor, and in a week Elliott was walking, though wearing the instrument that was necessary. That time the instruments (Dr. Taylor's braces) were both considered mechanical devices. My father's one object was to persuade the Hospital for Ruptured and Crippled (I think it was called) to adopt this treatment, in which case he would have thrown in all his energy and work to help them. As they preferred not doing so, he then persuaded, I think it was St. Luke's Hospital, to put the treatment in use.

"In the meantime, he had interested two or three friends of my aunt, Mrs. Gracie (who had lived with us as Miss Bulloch) to visit some of the poor children who had begun coming to Dr. Taylor, and to try

and look after these children in their homes. I remember there was a Miss Mary King and Miss Lilly King, afterwards Mrs. Beverly Robinson. "They all raised money enough to pay for the instruments for the children and help give them food in their homes. But my father felt it was vitally important to have a dispensary where children could be properly treated and where help could be given them more successfully than by the occasional visit.

"We had just moved up to live on West 57th Street, where he had a number of these children brought to the house and had Dr. Taylor show and explain the cases to several ladies whom he wished to interest in the cause. "I can see the children now, standing on the library table while Dr. Taylor explained their needs to the various people. From that commenced the Orthopaedic Dispensary, and from the Dispensary grew the Hospital. At first on a very small scale.

"This Hospital came as the result of a personal act of my father's. He was driving one afternoon out where we were spending that summer, and saw a crippled child with its mother. He stopped to ask her what was being done for it. She said, 'nothing.' The doctors apparently could not relieve it, so he sent the child to the Dispensary in New York. But the mother was a working woman and could not afford to take the child there regularly, so that the first thing he felt was necessary was to have a few rooms where these children who could not come to the Dispensary could be kept.

"As I remember it, this was the beginning of the regular hospital. Probably from then on you have records that would be more accurate than any-

thing I could tell you. It is very vivid to me, and one of the philanthropic works that my father was most keen about. As I remember, Mr. Howard Potter, Mr. James M. Brown and Mr. John Aspinwall worked with him.

"Mrs. Robinson will be greatly relieved to know I have written you on the subject and if it is not what you want, just say so.

Sincerely yours,  
(signed)

Anna Roosevelt Cowles"

\* \* \* Supporting Mrs. Cowles' revealing letter telling of her father's deep concern with the plight of the crippled in New York City during the last quarter of the 19th century, is the response of Theodore Roosevelt to Dr. Taylor's request for help as reported in Dr. Alan DeForest Smith's history "The New York Orthopaedic Hospital 1866-1966." When asked by Taylor if he would provide a small room and a young man to assist in attending to patients, who would at the same time learn orthopedy,

"Will I!" said Roosevelt, "I have no choice. It is not a question of whether I would or not, I must."

## Tickets For Ballet Are Still Available

Seats are still available for the May 4th performance of The Bolshoi Ballet to be given at the Metropolitan Opera House under the auspices of the Women's Auxilliary of The New York Orthopaedic Hospital. They may be procured from Lenore Tobin, 246 West 44th Street, telephone LO 4-5180, ranging in price from \$30 to \$50.

# Saint Patrick's "Bad" Snakes —And Medicine's "Good" Ones

**W**E SING the praises of Saint Patrick this month for — among other things — driving all the snakes out of Ireland. Medically speaking, however, the snake has long been a welcome symbol, representing the art of healing illness. And snakes have even contributed certain drugs useful in treating the sick.

According to Chief Pharmacist John J. Rio, there are a number of valuable pharmaceutical products made from the venom of vipers. Most popular in Europe, but sometimes used here as well, these "snake medicines" are said to be fast-acting and long-lasting. Mr. Rio says the drugs contributed by snakes include pain-killers that act directly on the nerve endings.

Saint Patrick be praised! But here's just a word in behalf of the snakes, too.

The caduceus is an age-old symbol of the medical profession, a winged staff entwined with snakes—also representing the power to heal illness. Garlanded with flowers, this caduceus was one of the most elaborate ever conceived

Snake at left, wearing the crown of Upper and Lower Egypt, was respected therapy around 1500 B. C. Wrapped around a wand, the specimen on the right symbolized the safeguarding of health to the Romans about 2,800 years ago.

Among the blessed works of Saint Patrick that are recalled this month is his cleansing Ireland of its evil snakes.

Snakes were considered powerful medicine centuries ago. Here the gods of healing, Aesculapius and his daughter Hygeia, feed a pair of vipers.

# Here's How The Stethoscope Began

The Stethoscope you hold in your hands may go back only about 20 years, but this marks the 150th anniversary of the important medical instrument from which it got its name.

Interestingly, the diagnostic device now used by physicians everywhere is said to owe its birth to a children's game. The stethoscope was invented by a French physician who specialized in diseases of the chest, Rene T. H. Laennec. His biographers claim Laennec got the idea for the stethoscope in 1816 while watching some youngsters at play.

Although the words of the various writers vary, the gist of each story goes like this:

Laennec was going to visit a patient when, passing through the courtyard of the Louvre in Paris, he saw a group of boys playing with a long wooden beam. As a youngster scratched one end of the beam with a pin, a boy at the other end, ear pressed tightly to the wood, squealed with delight as he clearly heard the transmitted sound.

(American boys of a more recent vintage might recall a similar although more dangerous game: pressing their ear to a railroad track to hear the sound of an approaching train.)

Laennec himself does not cite this story in the classical paper he published in 1819, "De l'auscultation mediate." This translates to mediate auscultation, or indirect listening. More specifically it means the systematic exploration by the trained ear of the cardio-pulmonary system

A children's game using wooden sticks inspired invention of the stethoscope.

through an amplifying tube, the stethoscope.

What Laennec does say is that he was examining a young woman with general symptoms of heart disease, a woman so fat that the traditional method of listening to a heartbeat (applying the ear directly to the chest cavity) told him nothing.

However, Laennec went on: "I happened to recall a simple and well known fact of acoustics . . . I allude to the aug-

mented impression of sound when conveyed through certain solid bodies, as when one hears the scratch of a pin at one end of a piece of wood on applying his ear to the other.

"With this idea in mind, I

## Sacks Ahead In Bowling

At about the mid-point of its season, the Medical Center Bowling League reports in No. 1 position Sid's Sad Sacks. Second are the Finksters, and third Mona's Monkeys.

The honor of knocking down the most pins in a three-game match so far belongs to James Parry of Presbyterian X-ray, who felled 630. He has also scored the highest in a single game—253.

Paula's Poops grabbed the team record for top score in a three-game match when they downed 2,522 pins. The Poops also have the best single game record—940.

Bowling Friday evenings at Stadium Lanes in The Bronx, the league consists of 16 teams. Among the 64 players are about 25 women, and three husband-wife contestants.

Two of these couples work at the Medical Center. Robert Vazquez works in the Service Building and his wife Paula in Admitting. David MacDonnell is Chief Elevator Starter while his wife Anita works in Accounting.

Mrs. MacDonnell holds top place among the women, with a three-game tally of 568. She's also highest female scorer in a single game, with 225.

Edward C. Curnen, Jr., Robert C. Darling, Arthur Gerard DeVoe, Brian F. Hoffman, George H. Humphreys, II, Lawrence C. Kolb, John K. Lattimer, Donald G. McKay, H. Houston Merritt, J. George Moore, Carl T. Nelson, Emmanuel M. Papper, J. Lawrence Pool, William B. Seaman, Gilbert P. Smith, Frank E. Stinchfield, John V. Taggart and Ray E. Trussell.

Chairman for the reception is Mrs. Barbara P. Sciarra.

Two young students at the Medical Center Nursery School are Kathy Eisner, daughter of Dr. and Mrs. Eric Eisner, and Paul Magidson, son of Dr. and Mrs. James Magidson. Fathers are former Residents here.

## Grant Given For Urology Instruction

Dr. John K. Lattimer, Director of the Urology Service, has received a grant of \$128,000 from the Commonwealth Fund to develop improved techniques for instruction in that specialty.

One potential improvement would be a television camera connected to a cystoscope that could enable simultaneous group study of a patient's bladder during surgery.

The illumination for the TV camera adjacent to the cystoscope would be made possible by binding together about 200,000 fiberoptic rods. A light source would throw intense, but cold, illumination through the rods. The camera would transmit the picture to screens on which others could follow the urologist's procedure.

Though not useful in treatment, such a device is said to have great potential as a tool in demonstrating what is otherwise an obscure area of medical instruction. Color photographs and films have already been made through the cystoscope by members of Dr. Lattimer's department using this fiberoptic system.

"The field of urology has grown so rapidly as to make many existing teaching facilities out-dated," according to the physician. "We must organize a highly effective and compact body of course material in urology using advanced teaching techniques to make it possible for every medical school in the country to cover the core material in the specialty in the most efficient manner possible."

## ON THE SHELF

New Books in Milbank Library

### FICTION

**The Satyr and the Saint** by Leonardo Bercovici. The Italian movie world is the setting for this funny contemporary novel.

**The Woman in the Dunes** by Kobo Abe. A Japanese author uses the techniques of science fiction to probe fundamental questions of alienation and identity.

**The Defense** by Vladimir Nabokov. A tragic story of a man destroyed by his own genius.

**A Kind of Anger** by Eric Ambler. An English-educated Dutchman—a reporter for a New York newspaper—is sent on a special assignment to the French Riviera.

**The Brigadier and the Golf Widow** by John Cheever. A selection of bright, sophisticated short stories by one of America's outstanding contemporary writers.

### NON-FICTION

**Reminiscences** by Douglas MacArthur. Written in his own hand and finished only weeks before his death, "Reminiscences" spans more than half a century of modern history.

**Sixpence in Her Shoe** by Phyllis McGinley. The Pulitzer Prize-winning poet writes about woman's most honorable profession—homemaking.

## Plan Nursery School Fete.

The Medical Center Nursery School will break with tradition this year. Instead of the annual Mother Goose Ball, a reception for patrons and friends will be held in Harkness Hall Lounge, on March 31, 5:30 to 7:30 p.m.

This cooperative venture for the pre-school children of staff and personnel has always maintained the lowest possible tuition so as to be available to families of young physicians in training. Parents give generously of their time and talents. However, the financial demands of good personnel and equipment are greater than parents can carry alone. Therefore, it is necessary for the school to enlist the support of friends and patrons to enable the continuation of this service to the Medical Center Community. Patrons subscribe \$25 and friends \$15.

The Honorary Patron's Committee includes: Drs. Daniel C. Baker, Jr., Stanley E. Bradley, Wilfred M. Copenhagen,

APRIL, 1966

## NYOH'S 100TH

Almost a century ago, on May 16, 1866, founders Theodore Roosevelt, Howard Potter, James Brown and John L. Aspinwall proclaimed the purposes of the newly established three-room New York Orthopaedic Dispensary, opened at Broadway between 35th and 36th Streets "to alleviate the suffering of the large class of unfortunates therein referred to, an association has been formed to promote this object. No salaries are paid to any of the officers connected with the Institution, and every dollar contributed to its support is to be expended for the benefit of those who, it is hoped, may be saved from growing up deformed and wretched themselves, and a burden upon society."

What began that year as a

## Alumni Reunion

"Present Status and Future Planning for the Medical Center" will be the theme discussed at a Joint Session during the Third Alumni Reunion. It will be held in the Alumni Auditorium on April 29th from 10:30 to 12:30.

Discussing this subject will be Dr. Grayson Kirk, president of Columbia University, Dr. H. Houston Merritt, dean of the College of Physicians & Surgeons, and A. J. Binkert, executive vice president of The Presbyterian Hospital.

Also at this session, Captain George F. Bond, MC, USN, Director of Navy Project Sealab II, will talk on "Manned Undersea Habitations." His

MORE BUILDING PLANS!

An abstract painting by Picasso? A design by Chagall? No, they're pigeons who have commandeered space outside the toll booth at South Parking Lot and assembled materials for nesting. The feathered tenants moved in after one of their group suffered a broken wing last winter and was given succor by protective officers. Now, like baseball and green buds, they seem to say that frosty mornings notwithstanding, summer's just around the corner.

## Manager at Mary Harkness Is Retiring to Nova Scotia

Gladys Barrett is just moving from one scenic country spot to another! Retirement for the unit manager at Mary Harkness will entail a change of locale but the surroundings will be just as bucolic in Nova Scotia where she will make her home as they are in Port Chester. A bit more rugged, perhaps, than at the convalescent home but nonetheless lovely.

A graduate of the Presbyterian Hospital School of Nursing in 1924, Miss Barrett was trained as nurse-anesthetist under Miss Anne Penland at the Hospital downtown. When Presbyterian moved to the Medical Center she served in the same capacity until 1955. For the next three years she worked with Dr. Virginia Agar in the Department of Anesthesiology as nurse-supervisor. In 1958 she transferred to Mary Harkness and became unit manager there in 1962.

Next month Miss Barrett will bid goodbye to her many friends after 41 years service to the Presbyterian Hospital, and drive to Barrington, Nova Scotia, where she has an eight-room house on nine acres of woodland, heretofore a vacation retreat. She has ambitious plans for the house and for herself. During her

## Receive \$250,000 For Eye Addition

The Presbyterian Hospital has received \$250,000 from the Myron and Anabel Taylor Foundation for use at the Institute of Ophthalmology, where construction of an addition is planned.

The Taylor Foundation's gift is the third it has made toward improvements at the Medical Center. Previously it had given a total of \$100,000 to the Hospital and to the Medical Center Development Fund.

An executive of U. S. Steel and American Telephone and

Telegraph companies, the late Mr. Taylor became the President's personal diplomatic representative to The Vatican in 1939. He served in that capacity — with ambassadorial rank—for more than a decade.

Mr. Taylor also was an official advisor to the President and the Secretary of State on the problems of postwar planning after World War II. The Community Service Society of New York and the American Red Cross were among the many social organizations he served. *Continued on page four*

## Vanderbilt Starts New Psychiatric Home Care

Last September Vanderbilt Clinic and the Visiting Nurse Service of New York began a cooperative project that is helping both groups to better serve the needs of their patients in the Washington Heights Community. And like most cooperative ventures, this one grew out of the needs of both health services.

The Psychiatric Clinic needed to extend its clinic facilities in order to treat more patients, to treat patients more quickly, and to treat patients who needed home sup-

port. The visiting Nurse Service needed psychiatric consultation on both psychiatric patients and patients with general medical problems.

Personnel for the new program include one half-time physician, Dr. John A. Talbott, and one full-time psychiatric nurse, Miss Bette Holloway.

The program was formulated by Dr. Talbott in collaboration with Dr. Roger MacKinnon, Chief of Psychiatry, Vanderbilt Clinic, and Dr. Jo-

*Continued on page five*

## Grant to Develop Argon Laser Ray

The John A. Hartford Foundation, Inc., has granted to Presbyterian Hospital \$259,000 to develop an argon laser for treating vascular problems of the eye. This device would throw into the eye a ray of green light so intense that its heat could be used as a tool to correct blood vessel disorders.

The argon laser, to be added to the hospital's Institute of Ophthalmology, will be the first designed for use in the eye. Other such light amplification machines have been used recently to remove abnormalities from the skin.

## STETHOSCOPIA

### • IN THE CHAPEL

Two weddings in The Pauline A. Hartford Memorial Chapel took place March 26. *Doris Marie Kiely*, R.N., staff nurse PH, was married to Mr. Frank Charles Gussoni; *Mary Ruth Newman*, Class of '67, School of Nursing, was wed to Cornelius John Bozuyen. *Chaplain Reeves* officiated at both ceremonies.

### • SOON TO MARRY

*Lynn Puerschner*, PH Social Service, and Dr. David Hurst, Psychiatrist at Hillside Hospital, will marry April 16.

*Mary MacArthur*, BH Social Service, and Mr. Gary T. Walther, plan to be married July 2.

### • HELLO MR. STORK

*Mrs. Rosemary Arnold*, formerly in P&S Medicine Laboratory, has a baby boy.

*John J. Bolger*, chief engineer, Building & Grounds, is a proud grandpa! His first grandchild, John Paul Bolger, was born March 7. Another new member of the grandfather club is *Tom Adams*, Administrative Assistant, X-ray. He has a granddaughter.

### • NEWCOMER

*Alice Tahaney*, is new in the P&S Medicine lab.

### • CONGRATULATIONS

Kenneth Rothman, son of *Mrs. Dorothy Rothman*, Public Interest, will receive his Ph.D. from Harvard this spring. He has been appointed to the staff of the University of Chicago for a three year period beginning July 1.

### • GLAD YOU'RE FINE

*Mrs. Viola Grollmund*, Anesthesia Department, is recuperating at home after a stay at the Hospital.

### • FAREWELL

*Joseph E. Mandrew*, porter, retired recently after 7 years with the Hospital.

### • NURSING NOTES

Promotions to Supervisor include: *Mrs. Karen Wood* in Sloane Hospital, *Martha Zanichkowsky* in Babies Hospital.

New Head Nurses are: *Susan Taylor* in Babies and *Madalyn Mansfield* in Presbyterian.

### • NOTES OF INTEREST

*Hester Brown*, Senior Supervisor in The New York Orthopaedic Hospital, was honored recently at a surprise tea on her 30th anniversary with the Unit. She was given a silver plate inscribed for the occasion, and many other gifts from doctors on the staff and auxiliary members.

The Occupational Therapy School of P&S will hold an alumni reunion April 29 and 30. This is the School's 25th Anniversary. It began at Teacher's College as part of the War Emergency Program and moved to P&S in 1943. It is now occupying new quarters in the Black Building.

## Art Exhibit to Benefit Neuro

The art collection of Mr. and Mrs. Robert Lehman, at their home, 7 West 54th Street, will be shown afternoons and evenings of April 12th and 13th for the benefit of the Neurological Institute Social Service Department.

The Lehman Collection is considered one of the last privately owned collections of European art. The benefit showing is a rare opportunity to view these treasures in their beautiful setting.

Tickets and information may be obtained by telephoning EL 5-3300, according to Mrs. Hart Fessenden, chairman.

Honorary chairmen for the benefit, under the auspices of Neurological Institute Auxiliary, are Mrs. Roger Blough and Mrs. Donald David. Vice-chairmen are Mrs. John L. Weinberg and Mrs. Sidney J. Weinberg, Jr. Mrs. Carter L. Burgess and Mrs. Charles E. Saltzman are in charge of invitations and Mrs. Irving B. Kingsford, Jr. is treasurer.

## DOINGS OF DOCTORS

DR. OLE SIGGAARD-ANDERSEN, assistant professor of Pediatrics, is the recipient of The Pfizer Prize-1966, given by the Danish Pfizer Company and awarded by the Danish Medical Association "for scientific achievement, or a life-long work within a special field, or for valuable work of more administrative character."

DR. SIGGAARD-ANDERSEN

In announcing their choice, the Danish Medical Association said, "this year, the Board of Directors voted unanimously to give the prize to a young scientist, Dr. Ole Siggaard-Andersen. A greater and wealthier country has already called for him, it has not been possible for him to be present today.

"The Danish Pfizer Company and the Danish Medical Association have asked his father, Professor M. Siggaard-Andersen, to receive our salute and award on behalf of his son."

The prize carries an award of 10,000 kroner (approximately \$1,400).

Dr. Siggaard-Andersen came to Babies Hospital last summer to take over the directorship of the Clinical Chemistry Laboratory. He is noted for his unique scientific work on the electrolytes of the body and acid-base balance. He and DR. KNUD ENGEL, another Dane, now technical director of the acid-base laboratory on the second floor of Babies Hospital, initiated the use here of the micro-method of blood determinations. (see Stethoscope June, 1965).

DR. WILLIAM A. BAUMAN, assistant attending pediatrician, has been named Director of Medical Data Processing for the Medical Center. This computer-oriented program will be a long-term undertaking in conjunction with IBM. It will begin with the Outpatient Service.

On March 29th, Dr. Bauman addressed the Administrative Medicine Seminar of The American Management Association at the Americana.

DR. JOSEPH E. SNYDER, assistant vice president, spoke on "Cost-care analyses. An evaluation of study of effectiveness and efficiency of clinical services," at the session on Planning Computer Based Hospital Information Systems, sponsored by The American Management Association. Dr. Snyder also delivered the main address at the recent kick-off rally of the American Cancer Society Drive. He is presently giving a course to the State Department of Health Officers.

DR. JOSEPH E. SNYDER

THOMAS V. SANTULLI, attending surgeon, lectured recently before the Hudson County Medical Society at the Jersey City Medical Center. He presented "Intestinal Obstruction in the Newborn Infant" at the Morristown Memorial Hospital Staff Meeting.

GURSTON D. GOLDIN, Instructor in Psychiatry, has been made consultant to the Presi-

dent's Commission on Law Enforcement and the Administration of Justice.

DR. J. K. LATTIMER, Director of Urology, recently participated as: a member of the Long-Range Planning Committee of the American Urological Association in Baltimore; spoke on Conservative Treatment of Reflex Children at the N. Y. Academy of Medicine; represented Urology in a speech at the Annual Conference of the V.A. & Armed Forces on Renal Tuberculosis at Cincinnati; spoke at the New York State Medical Society Meeting Historical Section on John Wilkes Booth, and participated in the Annual Meeting of the Clinical Society of Genito-Urinary Surgeons in Louisville with DR. GEORGE FISH, Consultant, who was made president-elect of this organization. Dr. Lattimer is vice-president of the N. Y. Section of the American Urological Association.

DR. GEORGE K. SMELSER, Professor of Anatomy, assigned to Ophthalmology, began, with members of the eye research group in the Department of Ophthalmology, a series of basic science lectures to the residents and graduate students at the University of Puerto Rico recently. The classes, coupled with laboratory demonstrations on histology, embryology, bio-

DR. GEORGE K. SMELSER

chemistry, physiology and pharmacology of the eye, are of several weeks duration. With the group are DRs. KENNETH EATKINS, associate in Ophthalmology, PAUL WITKOVSKY, instructor in Ophthalmology, and ABRAHAM SPECTOR.

THE XVI GIBSON MEMORIAL LECTURE will be given in the Alumni Auditorium, Thursday, May 5th at 5:00 p.m. DR. GEORGE F. SPRINGER, Professor of Microbiology, Director of the Department of Immunochemistry Research at Evanston Hospital Association, Northwestern University, will deliver the address, "Human Blood Group Specificity in Relation to Microorganisms."

THE ANNUAL REUNION OF THE BABIES HOSPITAL ALUMNI ASSOCIATION will be held on Monday, April 25th, at Babies Hospital. The morning program will begin at 11:00 a.m. with Grand Rounds in the 4th floor Amphitheater. A buffet luncheon will be served in Harkness Hall at 12:15. Open House in Babies and a tour of new laboratories in the Black Building will follow.

ANNUAL ALUMNI DAY OF THE SCHOOL OF DENTAL AND ORAL SURGERY was held on April 1. ANNUAL STUDENT CLINIC DAY for DOS will be April 21.

# 25 YEAR CLUB ADMITTING 31

Thirty-one new members will be welcomed into the 25 Year Club at the annual banquet, to be held on May 4th in Bard Hall. With the addition of this 1966 roster, mem-

## Nurse Raffle Closing Date

If you would be eligible for the glamorous awards to be raffled at the Benefit Bridge for the student nurse scholarship fund, be sure to return all chance books by April 12. Returns should be made to the Nursing Office on PH 4 or to Maxwell Hall, according to raffle chairmen, Mrs. Eleanor Hamilton, Judy McLaughlin and Muriel Hunter.

Lucky winners will be chosen at the party on April 20 in Maxwell Hall. Prizes include a mink stole, a color TV set, a vacation for two at Grossingers and many other attractive items.

## From the Mailbag

Just a little appreciation to the sweet, kind and lovely nurses who took such good care of me during my stay.—From a former patient at Mary Harkness Unit.

bership in the quarter-century group will pass the 780 mark.

Making their debut into the Club will be auxiliary members Mrs. C. Redington Barrett and Mrs. David H. McAlpin from Presbyterian Hospital, and Mrs. Thomas Hitchcock and Mrs. Willis L. M. Reese from The New York Orthopaedic Hospital. Administration is represented by A. J. Binkert, executive vice president of the Hospital; new members from the medical staff include Drs. Franz Altmann, Henry Aranow, Roslyn Barbash, Hans Kaunitz, Frederick A. Mettler, Walter R. Mitchell, Jr., Frank Payne, Milton R. Porter, Thomas J. Sullivan, Shih-Chun Wang, Philip D. Wiedel and Agnes Wilson.

From P&S come William W. Walcott, Drs. Elvin A. Kabat, and Stephen Kmetz. Candidates from Nursing are: Mrs. Gladys T. Bolanz and Lelia Newbie from the Registry, Mary McManus and Delia Kirby; and from Food Service, Dorothy Kinnear, Daniel J. McGowan and E. Marion Mike.

Also, William A. Rosal from Sterile Supply; Elsie C. Sisson, Vanderbilt Clinic; Mildred Stein, Clinical Chemistry, and Thomas Miccio, Receiving.

# 1941 Events —Remember?

Nazi leader Rudolf Hess parachuted into Scotland back in 1941, the year our new 25 Year Club members went to work here. Mayor LaGuardia was reelected over rival candidate William O'Dwyer, and Franklin D. Roosevelt was sworn in to his third term as President.

Looking backward over the quarter-century that has passed, here are some of the other events that were on our minds—often on our nerves, too—when these people first came to the Hospital.

Do you remember when:

Broadway theater tickets cost from 55¢ to \$3.30.

\*

Congress passed the Lend-Lease bill and FDR called it a "new Magna Carta."

\*

Germany and Russia signed a peaceful trade agreement, but went to war six months later.

\*

For \$35 a man could buy a four-piece ensemble—trousers, jacket, vest and slacks—from a good Fifth Avenue store.

\*

The Four Freedoms were proclaimed—of speech and expression; of worship; from fear and from want.

## \$225,267 UHF RECORD

Final figures for the 1965-66 United Hospital Fund campaign show an increase of \$9,751 over last year. The overall amount raised by the six teams at the Medical Center is \$225,267 in gifts from 2,602 persons, the largest amount ever contributed to a UHF campaign.

Teams working included Trustees, under Chairman Mr. James W. Foley; Joint Professional under Dr. Frederic Herter; Presbyterian Hospital under Mrs. C. Redington Barrett and Mrs. Ralph Boots; Neurological Institute under Mrs. Charles E. Adams and Mrs. H. McLeod Riggin; New York Orthopaedic Hospital under Mrs. Robert E. Carroll, Mrs. Robert M. Day and Mrs. Caleb C. Whitaker and Babies Hospital under Mrs. Robert H. Burrows and Mrs. J. Taylor Howell.

The United Hospital Fund and Greater New York Fund return to Presbyterian Hospital more than \$300,000 annually.

Joe DiMaggio set a record by hitting safely in 56 consecutive baseball games.

\*

Pope Pius XII warned that a current of "black paganism" was menacing the world.

\*

Washington declared a state of national emergency and put the country on a virtual war footing.

\*

We placed Iceland in protective custody by landing troops there with the approval of the Reykjavik government.

\*

The Yankees took the World Series, defeating the Brooklyn Dodgers four games to one.

Columbia University revised its curricula so that students could complete their courses in shorter time.

\*

The use of tin foil for wrapping cigarettes and candy was prohibited.

\*

Joe Louis knocked out Billy Conn in 13 rounds; Lou Nova in six.

\*

Medical science welcomed new sulfa drugs, synthetic female hormone and dried blood plasma for use in transfusions.

\*

Hitler overran Hungary, Rumania, Bulgaria, Yugoslavia, Greece and Crete.

Here's how things look at the sites of two of the Hospital's current building projects. At left, power equipment begins excavation for the four-story Babies Hospital addition that will rise along Broadway just south of the existing building. Photograph at right shows the excavation for

the doctors office building, at 165th Street and Fort Washington Avenue, where work is now starting on the foundation. According to Eugene T. Cleary, administrative assistant in charge of projects, some 50,000 cubic yards of rock and earth were removed from this site.

# FUND DRIVE RALLY

The Kickoff Rally for the 1966 Greater New York Fund campaign will be held May 3rd at 10:00 a.m. in the amphitheater on Babies Hospital

fourth floor, according to Dr. C. R. Wise, chairman for the drive.

All representatives are urged to attend this meeting, which will be addressed by Mr. A. J. Binkert. A movie "This is New York," narrated by Ben Gazzara will be shown. At the close of the meeting, campaign materials and pledge cards will be distributed.

Greater New York Fund is the only solicitation allowed at the Hospital. It supports 425 essential health and welfare service in New York City. Last year Presbyterian Hospital contributed \$11,599, placing us in the lead among hospitals, with an average per capita gift of \$4.16.

DR. CARL R. WISE

## LASER RAY

*Continued from page one*

gist, will direct the project, which The John A. Hartford Foundation, Inc. is sponsoring for three years. For the past few years, he has been treating such eye disorders as tears in the retina and tumors with other types of lasers.

Lasers are "pumps" that take in energy, amplify and send it out again in narrow, concentrated beams. Some use a rod of ruby crystal as an energy "gun;" Dr. L'Esperance's model will employ a yard-long tube of the same argon gas used in green fluorescent signs. However, his green light will be of such uniform wave length that its heat may be applied more precisely to the area in need of treatment. Also, blood cells are affected more readily by green laser light than by the rays emitted from other types of lasers.

Since almost one-fifth of all

blindness is caused by vascular lesions of the eye, the ophthalmologist says the argon laser has "great promise." He notes that in diabetes, for example, many new blood vessels may be developed in the back of the eye. However, these young vessels are thin, weak, likely to hemorrhage and obstruct vision. The light beam could focus its heat on such vessels and destroy them by coagulation.

Similarly, it might make transplants of the cornea more successful by curbing blood vessels that threaten to penetrate them. Normally, these transparent covers are without blood. If invaded by vessels, the cornea may be attacked by antibodies in the patient's blood, and be rejected.

Angiomas, hemangiomas, microaneurysms, Coats' and Eales' diseases are among the other eye problems that the new kind of laser may be trained on.

"The argon laser may prove

THIS IS ARCHITECTS' SKETCH OF PROPOSED ADDITION TO THE INSTITUTE OF OPHTHALMOLOGY, TO BE ERECTED ALONG NORTH SIDE OF THE EXISTING BUILDING. VIEW IS EASTWARD ACROSS FORT WASHINGTON AVENUE.

itself better than any previous type for treating vascular lesions, one reason being that its heat can be placed more precisely where desired with much less dispersion to other areas," says Dr. L'Esperance. "Another reason is that the argon beam can be 'painted' over a target continuously, while others give brief, separated impulses. Once this laser has proved its basic value in the eye, perhaps we can explore its use for other purposes."

## EYE GRANT

*Continued from page one*

The Eye Institute extension, which will be added along the north side of the existing building, will cost about \$4,000,000. It will enable further research to be undertaken into various disorders of the eye.

The addition also will be used for treatment of clinic out-patients. Many more such patients may be helped with the enlarged facilities than can be seen at the offices now existing.

With eight stories containing 60,000 square feet of space, the extension will conform with the Eye Institute's height and design. It will have an out-patient entrance on Fort Washington Avenue at 165th Street, and its own elevators.

## Honorary Head Is Elected By Cribside Unit

Mrs. Joseph R. Ramee has been elected Honorary Chairman of the Cribside Social Service Committee of the Board of Women Managers after 44 years service to Babies Hospital. Elected to the Committee in 1922, she was vice-chairman from 1933 until 1936 and chairman from 1936 until 1948. Again in 1961 she became chairman and served until 1965.

Mrs. Ramee's first interest was in the Sewing Committee, later known as the Lenten Sew-

ing Class, of which she served as Chairman for many years—each year holding one of the classes at her home. This group sewed and knitted for needy children and raised money for social service work in Babies Hospital. Mrs. Ramee also was an ardent supporter of and worker for the Committee's Thrift Shop and the United Hospital Fund Campaigns. At her Easthampton, L. I. home, she is active in garden club.

One of the first auxiliaries to complete a quarter century of service to the Hospital, in 1947 Mrs. Ramee became a member of the Medical Center 25 Year Club.

## List Seminars At Psychiatric

J. P. Scott, Ph.D., will lead a research seminar titled "On the Theory of Aggression" at Columbia University's Psychoanalytic Clinic for Training and Research on April 16. He is research professor of psychiatry at Bowling Green State University.

On the 23rd, Kurt Salzinger, Ph.D., will lead a discussion on "Hidden Operant Conditioning in the Psychotherapeutic Process." He is an associate research scientist at the New York State Psychiatric Institute. The Saturday research seminars start at 9 a.m. in the Clinic.

## ENTER ART SHOW NOW!

The 16th Annual Arts, Crafts and Photography Exhibit in the Library Annex, PH 20th floor, will open May 3 and continue through May 13, daily from 12 a.m. until 6 p.m. On Saturday, May 7, the show will be open from 10 a.m. until 4 p.m.

Medical Center staff and personnel are invited to participate in this display of talents. It is not possible to accept work of relatives or friends because of space limitations.

Entry blanks will be avail-

able at Stethoscope distribution points on April 18. Entries should be delivered to the library annex on April 27th and 28th between 10 a.m. and 4 p.m.

Exhibitors and their friends are invited to a preview tea May 2, 4-6 p.m. in the Library foyer.

Mrs. Ruth Bogan, Blood Bank Supervisor, exhibits annually in the art show.

MRS. JOSEPH R. RAMEE

# New Rehabilitation Team At Vanderbilt

The Presbyterian Hospital has become one of five primary rehabilitation centers selected to serve the New York City Region as part of the New York State Plan for Comprehensive Medical Rehabilitation and Regional Coordination. One of the benefits is an enrichment of the rehabilitation team for the Department of Physical Medicine at Vanderbilt Clinic.

These additions will include a full-time physician, a speech therapist, an occupational therapist to handle prevocational activities, and a secretary-statistical clerk. They do not replace present staff or any of the varied services in rehabilitation now being given by The Presbyterian Hospital. Rather, they will supplement and extend such services.

Funds of \$40,000 annually are provided by the State Department of Health to pay the salaries of the new staff and the cost of statistical report-

terms of population, is by far the largest. Each region has primary and secondary rehabilitation centers to which state, county, city and community health agencies can refer patients who need rehabilitative treatment.

"The great hope for this coordinated program," Dr. Darling said, "is that every citizen of the state, regardless of age, location, or economic situation, can be found and referred to a rehabilitation center for treatment when it is needed."

As a primary center, The Presbyterian Hospital provides and maintains personnel, space and suitable equipment to give total rehabilitation treatment on both an inpatient and outpatient basis. Such treatment includes the services of qualified specialists in physical medicine and rehabilitation, psychology, social work, physical therapy, occupational therapy, speech therapy, and vocational testing.

Secondary centers, strategically located, screen and evaluate patients, treating those within the limits of their resources, and refer to primary centers those who need special services.

The Presbyterian Hospital is the first voluntary hospital to become a primary rehabilitation center in the city program.

DR. JOHN M. MILLER, III

MISS JANET EHRLICH

ing. However, the new medical team is an integral part of The Presbyterian Hospital staff and reports to Dr. Robert C. Darling, Chairman of the Department of Physical Medicine.

Dr. John M. Miller, III, at present a Visiting Fellow in Physical Medicine, has been appointed chief of the Physical Medicine Clinic of V.C., and will assume his duties on July 1st. Miss Janet Ehrlich has shifted from the Speech and Hearing Clinic and has been replaced in her old job.

An occupational therapist and secretary-clerk will be appointed soon.

Under the statewide medical rehabilitation program, New York is divided into 7 geographical regions. The New York City Region, in

are made to the nurse regarding treatment of the patient, and the treatment plan is stated formally in the patient's Presbyterian Hospital Unit Record.

The visiting nurse then sees the patient as often as twice weekly, but more often if indicated, for as long as necessary. If problems develop, she contacts Miss Holloway by telephone. Miss Holloway, who was a nurse at the Psychiatric Institute for seven years, and spent some weeks making home calls with various visiting nurses, can often handle the problem, but if she feels the situation calls for a physician, she immediately contacts Dr. Talbott. In many cases, he can handle the problem by telephone, but if an emergency exists he will visit the patient at home or have the patient brought to the hospital.

Referrals from the Visiting Nurse Service to Vanderbilt Clinic are made when a visiting nurse and her supervisor feel that a patient has psychiatric problems. Minor problems can be handled by telephone, but frequently a home visit is made by Dr. Talbott to determine if formal psychiatric treatment is needed. If so, the patient is admitted to Vanderbilt Clinic and a record of the home visit becomes the initial evaluation. Most often a plan for home treatment is made and the visiting nurse gives it under Dr. Talbott's consultation.

A 1½-hour case conference is held every other week, informal conferences with the visiting nurses are held on alternate weeks, and conferences in Vanderbilt Clinic with the treating resident, social worker and other clinical personnel are held as often as needed.

Dr. Talbott believes that these conferences are most helpful. The visiting nurse, often with little psychiatric training, learns to recognize and deal with psychiatric symptoms. The clinic staff gets an unbiased evaluation of the patient's home situation and problems that may have a bearing on treatment.

Dr. Talbott has found that the visiting nurse is most helpful in: (1) drug administration, supervision, and observation for side effects, and in urging patients to keep clinic appointments, (2) supportive treatment with the patient and family, including listening, encouraging, reassurance, and help with everyday problems, (3) evaluating the initial family situation and reporting changes that may develop, (4) general health care, and (5) seeing family while patient is hospitalized and preparing them for his return.

Dr. Talbott believes that Vanderbilt Clinic is most helpful to the Visiting Nurse Service in giving: (1) evaluations in the home, (2) clinic evalua-

Nurse Holloway discusses with Dr. Talbott a call for help.

Dr. Talbott and Miss Holloway join nurse Rita Pritchard in patient's home.

Dr. Talbott discusses case with Miss Pritchard and her supervisor, Miss Byrdie Wilson, at Vanderbilt Clinic.

tions, (3) treatment with drugs or psychotherapy, (4) case consultations with psychiatrist and psychiatric nurse, and (5) immediate psychiatric help when emergencies develop at home.

"Miss Holloway has been a key figure in making the program a success," Dr. Talbott said. "Her long experience as a psychiatric nurse, qualifies her to handle many of the problems that arise, saving the physician's time."

In addition to her duties connected with the Visiting Nurse Service, Miss Holloway sees selected patients whose visits are widely spaced and whose drug management she can direct. The nurse also takes telephone calls from patients who may contact the clinic for problems other than simple changes of appointment. She has been most helpful in reducing the number of interim patient visits to the clinic.

In summing up the program after the first six months, Dr. Talbott said, "This has been a learning period for all of us. Initially there was a great deal of confusion about what kind of patients should have home care and what kind of treatment the visiting nurse could give at home. Now we have a better understanding of the problems and all of us are enthusiastic about the value of this cooperative program."

## Withholding Change Hits Pay Envelope

You may notice a change in your salary check the first pay day in May.

The new Tax Adjustment Act (Public Law 89-368) will initiate a graduated withholding system for all taxes paid on or after May 1, 1966.

This will enable a more accurate withholding of taxes related to your salary, whereby the employee, at the end of the tax year, will have neither a large amount of additional tax to pay or a large refund due, according to J. G. McCullough, Comptroller.

There is no change in the basic tax rate in any income bracket.

All employees will be requested to furnish new form W-4's to re-establish their exemption for dependents.

In addition, those employees who claim fewer exemptions than they are actually entitled to, or who have agreements for additional withholding in effect, should reconsider their overall tax liability in the light of the new higher amounts to be withheld.

The W-4 forms will be distributed through your supervisor shortly.

## Volunteers of 1000 Hours In April 27 Honor Group

Pins will be awarded to 216 volunteers at the 15th Annual Awards Tea in Maxwell Hall, April 27, 4 to 6 p.m. Mrs. Marguerite Stein, Director of Volunteers, has announced that 56 Presbyterian Hospital pins will be given to Volunteers who have served 100 hours during last year; 153 United Hospital Fund Awards will be given to those serving 150 hours in one year and 7 UHF Awards will go to Volunteers who gave over 1,000 hours in 1965. The last cate-

gory includes: Mrs. Ida Rosch, 1,865 hours; Miss Maria Rincon, 1,768 hours; Mrs. Anne Kingsford, 1,222 hours; Mr. Fred Iradian, 1,200 hours; Mrs. Phyllis Wolfthal, 1,145 hours; Mrs. Sarah Bielawsky, 1,049 hours, and Miss Hattie H. Bruns, 1,007 hours.

The program for the tea will include a greeting from A. J. Binkert and presentation of awards by Dr. C. R. Wise. Guitar music and song selections will be provided by Douglas Greer, P&S '66.

## Always A Good Show At Orthopaedic Benefits

In 1878, when Dr. Charles Fayette Taylor, director of The New York Orthopaedic Hospital, called for "the support of charitable women to aid in this work" he set a veritable dynamo in operation. The ladies patterned their efforts to the mode of the day. Social they were—but raise money they surely could!

For the first decade they limited their efforts to annual receptions with tours of the hospital facilities to encourage support, but in the latter part of the 1800's they blossomed forth with theater parties, teas and art shows.

Around Christmas time in 1896, a theater benefit at Charles Frohman's Empire Theater presented Maude Adams, Ethel Barrymore and John Drew as the main attractions, in a program of three one-act plays. Reviewers were lavish in their praise, but it remained for a later benefit to really reap publicity.

A Lenten series of Dramatic Teas at the Waldorf Astoria was initiated that year. Although the name has a Victorian connotation, the programs were anything but staid. According to the "World" of March 19:

*"The New York Orthopaedic Hospital and Dispensary gave a Dramatic Tea at the Waldorf-Astoria yesterday afternoon, the management of which was exceedingly wise.*

*"First, it had popular prices, which, at the Waldorf-Astoria never means less than \$5 per capita. Then, it caused to be advertised far and near that Julie Opp, the 'Junoingene' would appear in tights. Any falling off that the tea might have suffered from the first condition was more than counterbalanced by the latter."*

Actually, the program for that afternoon comprised four numbers—a scene from Shakespeare's "Measure for Measure," starring Madame Mojaska, two one-act plays, and the "sensational" dialogue in which the daringly costumed Miss Opp appeared as a handsome wandering minstrel in a picturesque costume featuring a "plumed hat, a mantle falling from her shoulders, a jacket down to below her hips, boots up to her knee—and a small section of smooth stock-

ing between the jacket and the boots."

Art, too had its day during that banner benefit year. The Loan Exhibition of Portraits in December elicited this comment in the New York "Herald":

*"In all probability the parties (subscribers) got their money's worth (\$5 per ticket), for the fashionables turned out in full force and there could scarcely be a better opportunity to see New York women at an advantage than a visit to the Academy of Design (where the showing was held)."*

A more startling program was presented in 1902, preceding the annual meeting of the trustees. Dr. Adolf Lorenz, the great Vienna specialist, successfully performed an operation for double dislocation of the hip on a three-year old girl in the presence of some of the ladies of the Board.

The "bloodless surgeon" as he was known, later came to the meeting room where he received "gentle thunders of applause," according to the Globe of December 21, 1902. "Dr. Lorenz remaining on the platform was introduced personally to two hundred highly pleased women. He, like a knight of old, bent and kissed their hands."

Fashion changes—and the ladies of the New York Orthopaedic Auxiliary keep in tune.

This year "ballet is the thing" and the women are sponsoring a benefit performance of a hundred year old ballet having its premiere in America this season, performed by the sensational Bolshoi Troupe at one of the final performances to take place at the Metropolitan Opera House.

A block of seats for Petipa's "Don Quixote" on May 4th has

Dr. Mount checking Nicaraguan patients aboard the HOPE.

## Our Physicians Aid HOPE In Nicaragua

"New York certainly has its tensions, but even a relatively small place like Nicaragua also has its share of anxiety and psychosis. We saw there many cases of disorders that a doctor rarely encounters in this part of the world."

This is the report of Dr. Lester A. Mount, attending neurological surgeon, who returned last month from duty aboard the hospital ship HOPE anchored in Corinto, Nicaragua. A member of the famous mercy ship's medical advisory committee, he worked as chief neurosurgeon on it from January to March.

At the same time, Dr. Peggy Copple served the HOPE in adult and pediatric neurology.

Formerly a visiting fellow in pediatric neurology here, she went from Nicaragua to the University of Oregon Medical School, which she joined this month as Assistant Professor of Pediatrics (Neurology).

This was the fourth time Dr. Mount has gone abroad to serve Project Hope. Previously he served in Guinea, Peru and Ecuador.

"Teaching local doctors and other personnel was a most important part of our work," according to Dr. Mount, "especially students from the University of Nicaragua's medical school. There were films and lectures in both English and Spanish."

"The HOPE was welcomed

### ALUMNI

*Continued from page one*  
talk will be illustrated by color films.

Mr. Binkert, for the hospital, and Dr. Merritt, for the medical school, invite all alumni members to a luncheon at Bard Hall.

The Third Alumni Reunion will be held April 28 through 30, with meetings of 14 alumni groups taking place simultaneously at the Medical Center. Those participating include Anesthesiology, Nursing, Occupational Therapy, Orthopaedic Surgery, Physical Therapy, Presbyterian Hospital

been reserved for the benefit of The Women's Auxiliary of The New York Orthopaedic Hospital. Tickets are still available from Lenore Tobin, telephone LO 4-5180.

with open arms," Dr. Mount says. "The Nicaraguan Committee provided transportation to the ship from all parts of the country for patients who were referred to us after screening."

One of the unusual maladies encountered that sometimes required brain surgery was cysticercosis, a tapeworm infestation commonly caused by eating improperly cooked pork, contaminated vegetables, or polluted water. With symptoms resembling those of a brain tumor, cysticercosis also can cause blindness, brain adhesions and seizures.

Dr. Mount says malaria is at least latent in practically the entire population of the Corinto area, where two varieties of the disease are endemic. Especially threatening is the cerebral form, which causes thromboses in vessels of the brain.

In addition to giving instruction and treatment aboard ship, Dr. Mount taught at hospitals and outpatient facilities ashore. He also went to the university in Leon weekly to make neurology-neurosurgery rounds with the medical school faculty and students. The surgeon addressed the Nicaraguan Medical Society in Managua while serving on the HOPE and, en route home, spoke before the medical society of Merida in Mexico. Dr. Mount was accompanied to Latin America by his wife, who does public information work for Project Hope.

Dr. Melvin B. Watkins, Associate Attending Orthopaedic Surgeon, also has offered to serve aboard the ship at its next destination, Cartagena, Colombia. Dr. Mount hopes that others will volunteer to serve, so that some day there will be a rotation of Columbia-Presbyterian doctors aboard HOPE.

### BARRETT

*Continued from page one*

summer time stays in Barrington she has established many interests in the community and expects to do voluntary work in nursing and social work. She also hopes to make a world-tour in the near future.

The most enthusiastic promoter of the northward move is "Honey Bun," the blonde canine who rules Miss Barrett's heart and home. Though accustomed to country living, the wildlife of the Nova Scotia woodland offers new challenge to the perky cocker spaniel, who was whelped in that area.

A farewell tea for Miss Barrett was given by the Mary Harkness Auxiliary on March 9th at the home of Mrs. George Gibbons, Vice Chairman. She was also honored by a farewell tea on March 30th at the Hospital and by a Buffet Supper on March 31st by the Mary Harkness Staff at the Unit.

## NYOH

Continued from page one

local effort to assist the unfortunate, crippled poor of New York City, has since become an institution of fame and influence throughout the world.

Marking its Centennial, Dr. Alan DeForest Smith, Director of the Hospital from 1940 until 1956, has compiled a history, tracing "a century of progress in Orthopaedic Surgery." Entitled "The New York Orthopaedic Hospital, 1866-1966," the volume has just been published.

An Attending at The New York Orthopaedic Hospital for 39 years before his retirement in 1956, Dr. Smith has participated in much of its advancement. He continues to serve it as Consultant in Or-

thopaedic Surgery. During his tenure as Director, the Hospital made its move to the Medical Center.

Many alumni and friends named in the history will return to take part in the anniversary celebrations Wednesday, Thursday and Friday, April 27, 28 and 29. At the opening session of the scientific meetings, Wednesday morning, Dr. Smith will talk on "The First Hundred Years."

DR. ALAN DeFOREST SMITH

Prominent orthopedic surgeons from all over the world will participate in the scientific sessions in the Alumni Auditorium. Meetings will be from 9:00 a.m. until 5:00 p.m. Wednesday and Thursday, with luncheon at the Armory on 168th Street. Friday sessions will be from 1:30 until 5 p.m. Alumni of NYOH will join with the Joint Meeting of the Third Alumni Reunion

on Friday morning in the Auditorium.

Social events celebrating the anniversary will begin with a reception by the nurses of The New York Orthopaedic Hospital, Wednesday from 5 until 6 p.m. in the Doctors Dining Room.

A stag dinner for alumni and participants at the Harvard Club on Thursday evening will also be the occasion of the annual business meeting of The Alumni Association of The New York Orthopaedic Hospital.

Highlight of the Centennial will be a reception and dinner dance on Friday, April 29th, on the Starlight Roof of the Waldorf Astoria. Music will be provided by Lester Lanin and entertainment by the Yale Whiffenpoofs.

A benefit performance of the Bolshoi Ballet at the Metropolitan Opera House on May 4th, sponsored by the Women's Auxiliary of The New York Orthopaedic Hospital, will aid the Centennial Fund for a conference room for the orthopaedic service on the fifth floor of Presbyterian Hospital. Mrs. William L. Hutton and Mrs. Edward H. Gerry are co-chairmen.

Tickets for this, the last event to be staged at the old Metropolitan, are available from Lenore Tobin, 246 West 44th Street, telephone LO 4-5180.

## Miss Heany Going Home To Ireland

Nan Heany, nursing aide in Harkness 8 newborn nursery, is going home to Erin next month—too late to celebrate the "good Saint's" day, but in time to enjoy the lovely Gaelic springtime.

The little lass who came to work in the nursery when she came from Ireland in 1932, and stayed for 34 years, will retire on April 8th.

"Not seeing the little ones will be hard," she thinks. "I've

MISS NAN HEANY

cared for so many lovely babies, many of them children of doctors on our staff. I keep hearing about how they've grown and what they're doing—I'll sure miss that."

"Home" for Miss Heany is Clare Morris in County Mayo. Her brother and sister still live there and she plans to set up housekeeping in this small town in western Ireland—"provided I can stand the climate!"

Most houses in Ireland don't have central heating, and it's hard to get used to fireplace heating after living in a New York apartment, she's afraid. A farewell tea will be given for Miss Heany on April 7 and she will sail for Cobh on May 20th. This gives her another opportunity to meet with the members of the 25 Year Club at their dinner on May 4th.

## In Memoriam

DR. HEINRICH B. WAELSCH

Dr. Heinrich B. Waelsch, Professor of Biochemistry at Columbia University College of Physicians and Surgeons, died March 22 at his home, 90 Morningside Drive.

Dr. Waelsch was also Chief of Psychiatric Research (Pharmacology), New York State Psychiatric Institute, and Director, New York State Research Institute for Neurochemistry and Drug Addiction.

He is survived by his wife, Dr. Salome G. Waelsch, Professor of Genetics, Albert Einstein College of Medicine, and by a daughter, Naomi, and a son, Peter, both students at the University of Wisconsin.

DR. JOSEPH K. BRUDER

Dr. Joseph K. Bruder, 30, assistant resident in Anesthesiology, died suddenly at his home in Oceanside, L. I., on March 9th. An alumnus of Adelphi College, Dr. Bruder received the M.D. degree from New York Medical College in 1962. He served an internship at Mountainside Hospital, Montclair, N. J. and was with the U. S. Army Medical Corps as a Captain. He joined the staff at Presbyterian Hospital last October. Dr. Bruder is survived by his wife, Carol, and three children.

## "April Fools" of The Scriptures

Technically, this is the month of the year that belongs to the April fool. In reality, most of us don the dunce cap occasionally all through the year—and some of us act foolishly even more often than that.

There were fools' holidays long before the Christian era, according to Rev. Robert B. Reeves, Jr., Hospital Chaplain. He points to the Bible as a source of comment on what it is that makes one person foolish and another wise.

An especially rich source of these comments is the Book of Proverbs, which tradition says was compiled by the wise King Solomon. However, Chaplain Reeves says scholars believe the Proverbs are the work of sages of Solomon's time, and after, who compiled the folk wisdom of ancient days. The following Proverbs, selected by the Chaplain, colorfully describe the behavior of the foolish—and the wise.

For instance, the fool turns off his brain as he turns on his tongue. "A fool uttereth all his mind, but a wise man keepeth it in till afterward. . . . A foolish woman is clamorous. . . .

"A fool's mouth is his destruction and his lips are the snare of his soul. . . . He that shutteth his lips is esteemed a man of understanding."

The Scriptures also say: "A wise man feareth and departeth from evil: but the fool

rageth and is confident."

As for how to handle someone behaving foolishly, take your choice: "Answer a fool according to his folly, lest he be wise in his own conceit"—OR—"Answer not a fool according to his folly, lest thou also be like unto him."

Fundamentally, of course, "The fear of The Lord is the beginning of knowledge, but fools despise wisdom. . . . The wise in heart shall receive commandments: but a prating fool shall fall."

The Scriptures are filled

with examples of foolish people who gave way to greed, envy, lust and other sore temptations. Asked to name the biggest fools of the Bible, Chaplain Reeves nominates Esau, who sold his birthright to his twin brother, Jacob, for a dish of lentils.

Perhaps the most foolish woman of the Bible, he says, was Lot's wife, who defied the angelic warning not to look back toward Sodom and, instead of being allowed to reach safety with her husband and daughters, was turned to salt.

# When Breathing New York Air Was Thought Good for Health!

Patients quaffed health-restoring "sea breezes" aboard this vessel in East River.

Today we have powerful drugs to deal with the problem of tuberculosis. But it wasn't terribly long ago that good, fresh air was considered the prime weapon against the ailment. And imagine—if you possibly can!—a time when even the air of New York City was considered clean and pure enough to help overcome the disease.

Members of the Presbyterian Hospital Dispensary Auxiliary searched for a spot where children with tuberculosis could fill their lungs to bursting with Manhattan's sweet, healing air. The spot they chose was 91st Street at the East River.

There they created a floating "hospital" aboard a ferry that had plied between the Battery and Staten Island.

By 1908 scores of tubercular youngsters were spending from 8 A.M. to 6 P.M. aboard the boat, the "Middletown." A magazine of the day declared, "Anything less like a hospital and more thoroughly healthful in its whole plan than this hospital cannot be found in New York."

While taking deep breaths of the bracing air, the youngsters could watch the river traffic weaving around their anchorage. In those days, a

Nautical fresh-air enthusiasts at mess.

ferry service ran from 92nd Street, just one block away, over to Astoria on Long Island, and the Hospital was at 70th and Madison.

The Auxiliary ladies made sure the children had "kindergarten games, music, good reading, story-telling, and all sorts of amusement suitable to make the time pass pleasantly for people who are not invalids exactly—but who may be if they are not kept from think-

ing and worrying about themselves."

To the youngsters, the hours spent on the ferry seemed "a delightful holiday; the tots who spend happy days on the Hospital Boat have no idea that they are being treated."

A snug galley had been installed aboard to prepare three meals a day for the young tuberculars, who ate at long tables set up in what had been the passengers' sitting area. From a black, iron stove came dishes especially rich in milk

## Thrift Shop At New Site

The Presbyterian Hospital Women's Auxiliary and the five other units which belong to the Stuyvesant Square Thrift Shop hope that everyone, thrifty or not, will visit their new shop, 1430 Third Avenue, at 81st Street.

The old shop may have been crowded, confused and chock-a-block, but the new one is calm and inviting. Now, instead of having a separate furniture shop, everything is under one roof. Bargains are there as formerly, but now one can really examine them in roomy, pleasant surroundings.

Last year the Presbyterian Hospital unit cleared almost \$18,000. With the help of sales items donated by kind friends, it is hoped earnings will be even more this year.

Hours are 10 to 4:30 every day except Sunday. In summer the shop is closed Mondays.

## Milbank Served 14,000 in 1965

The Annual Report of the Milbank Library shows that more than 25,000 books and magazines were circulated among patients in 1965. More than 14,000 patients were served.

In addition, according to Miss Barbara Martin, Librarian, in excess of 11,000 books were circulated among members of the Hospital staff. During the year, over 1,000 books were acquired, making a total stock of 8,587.

From May 2 through 13, Milbank will hold its annual Spring Book Sale. It is hoped to have about 800 volumes for sale—both fiction and non-fiction—and donations for the event are welcome. Non-fiction is in most demand, according to Miss Martin.

She says that money earned from this sale will be used to purchase new books for Milbank Library.

# Babies Processing 90-Second X-rays

Babies Hospital is now processing X-ray films especially fast. The radiology department there recently acquired a new automatic processor that turns out finished pictures ready to read in just 90 seconds.

"This is a major boon for us," according to Dr. David H. Baker, Associate Attending Radiologist. "While a child is still being examined, we have his X-rays to check and help us make a decision. The mother who has left her responsibilities at home to come to the hospital can return to them with the least interruption possible."

Previously, it might have re-

quired about 20 minutes to send X-ray pictures to Presbyterian Hospital and have them processed and returned. The new equipment means doctors can see more young patients faster, and with less delay and discomfort for the children.

The automatic processor handles X-ray films without emulsion that takes higher temperatures. In the minute and a half, films are rolled through developing and fixing solutions of about 104 degrees, then air-dried at about 120.

According to Dr. Baker, the new kind of unit is one of very few in use in the metropolitan area.

## In Memoriam

A memorial service for Dr. Richard L. White, assistant attending surgeon, Presbyterian Hospital, and instructor in Surgery, College of Physicians and Surgeons, was held on March 28th in The Pauline A. Hartford Memorial Chapel. The service was conducted jointly by Rev. Robert B. Reeves, Jr. and Rev. Guy Vinci. Professional tribute was made by Dr. Frederic P. Herter.

Dr. White died on March 12th at the age of 37. He had

and eggs, which also were considered prime weapons against the disease.

But the best weapon of all against the tuberculosis germ was of course that marvelous air of Manhattan, bringing a magical healing balm, "perfectly pure at all times," as it wafted o'er the East River—which no doubt was equally pure.

worked at the Medical Center continuously since he entered the College of Physicians and Surgeons in 1954. During his residency he became interested in research on the use of miniature Geiger-Mueller tubes for detecting radioactive tracer material in a number of surgical problems. At the Delafield Hospital, with Dr. Frederic P. Herter, he was engaged in study of a method for determining response of tumors to endocrine and chemotherapy, using radioactive phosphorus as a tracer. This work was reported in preliminary form last October at the Forum of the American College of Surgeons meeting in Atlantic City, where it received wide notice.

He is survived by his wife, Margaret, three children, his parents and a brother.

Dr. White's many friends and colleagues at the Medical Center have established a fund in his name for cancer research in the department of Surgery at the College.

## ON THE SHELF New Books in Milbank Library

### FICTION

**The Magus** by John Fowles. A serious novel concerned with the theme of illusion and reality.

**The Schatten Affair** by Frederic Morton. The author of "The Rothschilds" writes of a Jew returning to modern Germany. **A Caribbean Mystery** by Agatha Christie. Miss Marple gets involved in a murder while vacationing on the island of St. Honoré.

**Lost Empires** by J. B. Priestley. The adventures, some amatory, some grotesque, of a 20-year old, English variety-stage actor.

**The Seat of Power** by James D. Horan. A fictional account of a crusading newspaper's investigation of city corruption.

### NON-FICTION

**The City in History** by Lewis Mumford. This important book traces the origins of the city, its transformations, and its prospects.

**Fred Allen's Letters** edited by Joe McCarthy. This collection of Fred Allen's letters recreates the funny and warm man who entertained millions during his long career.

**In Cold Blood** by Truman Capote. An absorbing, true story of a strange multiple murder.

**A Gift of Joy** by Helen Hayes. A collection of thoughts, reminiscences, and anecdotes by the first lady of the theater.

## Delafield Talk On Cell Change

Armin C. Braun, Ph.D., of Rockefeller University, will deliver the Delafield Saturday morning lecture April 23 on the topic, "The Hereditary Change Responsible for Autonomous Growth in Plant Cells."

Dr. Paul H. Black of the National Institute of Allergy and Infectious Diseases, National Institute of Health, will deliver the April 30 lecture on the topic, "Malignant Transformation in Vitro by the Oncogenic Virus SV40."

The lectures, which begin at 10 a.m., are held in the auditorium of Delafield Hospital, Ford Washington Avenue at 164th Street. Lectures were not scheduled for April 9 and 16 because of Easter and the Federation meetings.

## SELECT FOUR NEW TRUSTEES

Four prominent businessmen have been elected to the Board of Trustees of The Presbyterian Hospital in the City of New York.

Their election on April 21 was announced by Augustus C. Long, president of the Hospital's Board of Trustees.

HAROLD H. HELM

Chairman of the executive committee,  
Chemical Bank New York  
Trust Company

JAMES W. WALKER

Vice President  
Brady Security & Realty Corp.

ROBERT WINTHROP

Partner  
Wood, Struthers & Winthrop

The new Trustees are: Edward C. Brewster, a director of Stone & Webster, Inc.; Harold H. Helm, chairman of the executive committee of Chemical Bank New York Trust Company; James W. Walker, vice president of Brady Security & Realty Corp., and Robert Winthrop, partner in Wood, Struthers & Winthrop.

Mr. Long also announced the election of John S. Burke, Jr. as assistant secretary of the Board. President of B. Altman & Company, Mr. Burke has been a Trustee of the Hospital since 1955.

## Radiotherapy Center Building Completed

The new Radiotherapy Center has been completed. Located between Babies Hospital and Presbyterian Hospital near Broadway, it will triple the Medical Center's radiotherapy capacity and centralize treatment facilities now at five different locations.

Dr. William B. Seaman, Director of Radiology, calls completion of the installation "a major step forward." He says the new facility becomes "one of the nation's outstanding centers for the treatment of malignancies."

Its chief weapons are huge, super-voltage devices that focus X-rays on abnormal cells and destroy them. This high-energy radiation equipment will include a 24-million-volt Betatron, one of very few in the United States; a linear accelerator developing six to eight million volts, and two radioactive cobalt machines, the equivalent of two million volts each.

A formal dedication is planned for June 8, at which Fredrick M. Eaton, Vice President of the Board of Trustees, will be the speaker. The first patients are expected to undergo treatment at the new center about July 1.

In the weeks ahead, final installation work will be completed and delicate instruments calibrated, according to Eugene T. Cleary, Administrative Assistant, Projects. "Every effort will be made to insure there is no interruption in treatment of patients" as radiotherapy work is concentrated.

## ALUMNI RETURN — NYOH'S 100TH

Orthopaedic Alumni Return: Left to right, Dr. Halford Hallock, Dr. Alan DeForest Smith, Miss Theodora Root, Dr. Leonidas Lantzounis, Miss Elizabeth Ellwood, Miss Mary Sharpe, Dr. William Von Lackum and Dr. Richard S. Farr.

Alumni were seen all over the Medical Center last week—and for a good reason. The Third Alumni Reunion and the 100th Anniversary celebration of The New York Orthopaedic Hospital saw simultaneous meetings here.

Fourteen separate alumni groups met during the Reunion, Thursday, Friday and Saturday. A Joint Meeting was held in the Alumni Auditorium on Friday at which

## President Long Reports Record Operating Costs

In 1965 The Presbyterian Hospital in the City of New York had the highest operating cost in its history, \$36,853,000, of which \$21,000,000 went for wages. The resulting operating loss for the year was \$2,791,000, which was met by income from endowments and gifts.

These facts were reported recently by Augustus C. Long, president of the hospital's Board of Trustees. They are contained in the seventh combined Annual Report of The Columbia-Presbyterian Medical Center.

Just off the presses, the 304-page publication contains the annual reports of all the various heads of departments and services at The Presbyterian Hospital and at Columbia University's College of Physicians and Surgeons, and School of Dental and Oral Surgery.

AUGUSTUS C. LONG

## Nurses' Graduation In Garden June 2nd

DR. GEORGE H. HUMPHREYS, II

Graduation exercises for the 118 members of our School of Nursing's Class of 1966 will be held at 4 p.m., June 2 (Thursday) in the Medical Center Garden.

Presiding over the traditional ceremonies will be Augustus C. Long, President of The Presbyterian Hospital, and Director, Texaco Inc.

Dr. George H. Humphreys, II, Mott Professor of Surgery, Columbia University, and Director of Surgical Services,

*Please turn to page seven*

WHAT IS IT?

Nope, guess again. Most Medical Center people see it all the time, yet may never have taken a good, hard look at it. Hint—the 30th will be a holiday. For the answer, see page 3.

*Sandra Lade*, School of Nursing '63 will wed *Maynard Boynton Wheeler*, P&S '66, son of Dr. and Mrs. Maynard C. Wheeler.

### • STORK NEWS

Dr. and Mrs. Douglas A. S. Chalmers, have a baby daughter born April 11. Father is assistant Resident in Orthopaedic Surgery.

*Arnold Arroyo*, Maintenance & Construction, welcomed his sixth grandchild, Steve Arnold Gounelas, born March 31 in Sloane Hospital.

### • NEWCOMERS

Purchasing Department welcomes *Norma Dominguez*. Optical Department has a new Optician, *Frank Silvestro*. *Queenie Jehanshah* is the new receptionist in Admitting Doctor Area in Vanderbilt Clinic.

*Mrs. Judi Martin*, in Central Nursing Office.

### • LEAVING US

*Christine T. McDade*, receptionist in Basal Metabolism, has retired.

### • SORRY YOU'VE BEEN ILL

*Catherine Hayden*, Doctors Locker Room, is recovering after a hospital stay.

*Helen Solomon*, Optical Department, had an accident, and is now wearing a leg cast.

*Mrs. Susan Millman*, Occupational Therapist at Mary Harkness Unit, is recuperating from an accident.

### • CONDOLENCES

*Thomas Foley*, Mary Harkness Food Department, is greatly missed by his friends and associates. He died April 1.

### • VACATIONERS INCLUDE

*Mrs. May Udisky*, secretary in Maintenance & Construction, attended her nephew's wedding while vacationing in California.

*Frank Stingo*, Upholstery Foreman, and Mrs. Stingo vacationed in Florida and Nassau.

*Dr. John T. Beaty*, Mary Harkness Unit, has returned from a vacation in Barbados.

### • NURSING PROMOTIONS

To Head Nurse: *Kathleen Connolly* and *Helen Heard*, Operating Room. *Mary Seidel*, *Joan Dirkmaat* and *Mary Jo Van Winkle*, Babies Hospital; *Keville Conrad*, Eye Institute; *Mary Tilton*, Vanderbilt Clinic; *Anne Spencer* and *Sandra Kostenbauden*, Sloane Hospital; *Joan Wintermute*, Neurological; *Marinda Hariss*, Presbyterian, and *Joan Sedlatchek* and *Andrienne Kubik*, Medical and Surgical. To Assistant Head Nurse: *Lynn Chiocchio*, Neurological 9 W ICU Nursery

### • NOTES OF INTEREST

This year marks the 50th Anniversary of the initiation of the unit record system at Presbyterian Hospital.

*Mrs. Margaret Belais Salmon*, Research Dietitian, Babies Hospital, is the author of Food Facts for Teenagers, published by Charles C. Thomas, Springfield, Ill. This book of advice on proper nutrition gives professional hints for beauty and health.

*Elizabeth Wilcox*, the charming photographer who does picture-taking for Public Interest, is responsible for all the photography in the upcoming 12 volume edition of an encyclopedia on Child Guidance and Care in the Golden Book Series.

## DOINGS OF DOCTORS

Two Medical Center Consultants were honored by the New York Academy of Medicine recently, at its Annual Meeting. DR. RUSTIN MCINTOSH, Consultant in Pediatrics, formerly Director of Babies Hospital, is the recipient of the Academy Medal. Citation was given by DR. DOUGLAS S. DAMROSCH, assistant vice president of Presbyterian Hospital, who said in part:

"The influence of your wisdom has been wide, carried abroad by your many followers and through your own far-reaching activities in numerous societies and committees. Your hallmark is firmly stamped upon American medicine. Like those of all masters, your hallmark is unobtrusively placed.

"Rusty, the New York Academy of Medicine takes joy in this opportunity to express its admiration and its gratitude to you, its distinguished fellow and wise counselor. In recognition of your outstanding contribution to medicine and medical education it presents you with this medal."

DR. BENJAMIN P. WATSON, Consultant in Obstetrics and Gynecology, formerly Director of Sloane Hospital for Women, received the Academy Plaque for distinguished service to the Academy.

DR. FRANK W. MCCARTHY, P&S '42, formerly a resident in Babies Hospital, is this year's recipient of the Honorary Layman's Award by the Connecticut Association for Health, Physical Education and Recreation.

DR. CHARLES A. PERERA, attending ophthalmologist, presented "Surgery of Horizontal Rectus Muscles of the Eye" at the meeting of the Mexican Ophthalmologica Society recently. During his stay in Mexico, Dr. Perera represented the National Council of the Boy Scouts of America at meetings of the Girl Scouts and Guides, on the occasion of the 10th anniversary of the inauguration of Nuestra Cabana, the Western Hemisphere Girl Scout and Guide Training Center at Cuernavaca. Dr. Perera had been present at the inauguration of this project in 1956.

DR. ROSLYN BARBASH, assistant physician, Vanderbilt Clinic, who was received into 25 Year Club last week, calls attention to the fact that her daughter, DR. BABETTE BARBASH WEKSLER, P&S '63, married to DR. MARC WEKSLER, P&S '62, is the third generation of women physicians in their family.

DR. WILLIAM A. BLANC, associate attending Pathologist, presented a paper on "Necrosis in the Fetus and Congenital Malformations" at the Annual Meeting of the American Association of Pathologists and Bacteriologists in Cleveland, Ohio.

### DR. SCHVEY ON RADIO

DR. MALCOLM H. SCHVEY, assistant otolaryngologist, participated in a broadcast on Speech and Hearing on Station WEVD, April 27th, sponsored by the Public Health Committee of the Medical Society of the County of Kings. This broadcast was taped by the Voice of America and will be rebroadcast by them.

DR. RAFFAELE LATTES, attending surgical pathologist, conducted a short course on "Tumors and Tumor-like Lesions of the Soft Tissues" at the Annual Meeting of the International Academy of Pathology, held recently in Cleveland. He is now conducting a Seminar on "Tumors of the Thoracic Cavity" at the Spring Meeting of the Pennsylvania Association of Clinical Pathologists and Middle Eastern Region of the College of American Pathologists, in Hershey, Pa., May 6-8th.

DR. LATTES

DR. DEVOE

DR. ARTHUR GERARD DEVOE, Director, Institute of Ophthalmology, delivered papers on "Treatment of Herpes Simplex" and "Management of Acute Corneal Problems" at the Phoenix Ophthalmological Meeting, Phoenix, Arizona.

DRS. ANTHONY N. DOMONKOS, attending dermatologist, RAYMOND L. VANDE WIELE, associate attending obstetrician and gynecologist, participated in a panel discussion on "The Menopausal Woman" at the meeting of the American-Hungarian Medical Association last month.

DR. PHILLIP POLATIN, attending psychiatrist and Professor of Clinical Psychiatry, at P&S, has recently had a text-book published by J. B. Lippincott Co. entitled, "A Guide to Treatment in Psychiatry." He also participated in and led the discussion in a symposium on "Common and Uncommon Sexual Disorders" at the Barnert Memorial Hospital, Paterson, N. J. where he is consultant in psychiatry. Dr. Polatin was also secretary of the section on "Treatment of Phobic Reactions" at the annual convention of the American Psychiatric Association recently held in Atlantic City.

DR. DANIEL C. BAKER, JR., Director of Otolaryngology, presented "Injuries to the Larynx" at the May 3 meeting of the Arkansas State Medical Society, Hot Springs, Ark. He will deliver four lectures at the University of Kansas Post Graduate Assembly in Kansas City, May 9, 10.

DR. MAYNARD C. WHEELER, attending Ophthalmologist, delivered three lectures on "Strabismus" at the Memphis Eye, Ear, Nose & Throat Convention recently.

DR. GEORGE F. CRICKELAIR, attending Surgeon, discussed "Techniques for Correction of Protruding Ears" at the Sectional Meeting of the American College of Surgeons in Cleveland recently.

DR. ROBERT HOEHN, assistant attending surgeon, participated as a panel member in a symposium on "Homograft Prolongation" at the Plastic Surgery Research Council meeting in Rochester, N. Y. He discussed tolerance induction, immunosuppression, and heteroimmune anti-lymphocyte serum in homograft prolongation.

## NEW UNIT MANAGER AT MARY HARKNESS

A graduate of the School of Nursing here, Miss Margaret Del Mar, Class of '52, has been appointed Unit Manager at Mary Harkness. A Private Duty nurse in Harkness, she had worked as evening supervisor in Presbyterian for a seven-year span before taking special duty assignments.

Particularly interested in extended care programs, Miss Del Mar has made a study of the new concepts of patient rehabilitation which emphasize a more active role for the patient in the transition period between hospital and home.

"We are now promoting greater participation by the patient in his adjustment to his illness or disability. In preparing him to live as normal a life as possible, we believe that an extended care facility is helpful, often necessary, both for the patient and his family. Mary Harkness is particularly favored by location, equipment and staff to offer this interim program," she believes.

"Here, there is a continuity of medical services provided according to the charts and orders which accompany each patient. A staff of physicians, nurses and physical therapists is available and rehabilitative procedures are stressed to en-

MARGARET DEL MAR

attention, this lovely, colonial style building, located on a beautiful 80-acre estate in nearby Westchester County offers a friendly, informal environment for recuperation and rehabilitation.

The grounds were donated to the Presbyterian Hospital in 1930 by the late William C. Cook, lawyer and author. The main building, completed in 1937, was built with funds provided by Mrs. Mary Stillman Harkness, widow of Edward Harkness, and named for her. It is yet another example of the benefactions this family has made to the Medical Center.

Occupational therapy at Mary Harkness Unit

able him to lead a productive life upon his return home."

Designed for the care of ambulatory patients who do not require constant medical

# HOPE Volunteer Doctor Commends OUR Volunteers

"Your hearts, your hands, your sincere feelings for the needs of other people—these are what make your volunteer efforts so useful to the hospital," said Mrs. George A. Perera, Chairman, Volunteer Committee, to the 216 Volunteers of Presbyterian Hospital, honored at the Annual Awards Tea, held in Maxwell Hall April 27.

A. J. Binkert, Executive Vice President, greeted and commended the volunteers for their contributions to the hospital, noting especially the increased number of men now serving. Mr. Binkert also pointed out the hospital's increasing future need for volunteers and asked those present to encourage their friends to participate in our volunteer program.

Dr. C. R. Wise, Assistant Vice President at Presbyterian Hospital, and Mrs. Marguerite Stein, Director of Volunteers, also thanked the volunteers for their great contributions and continued loyalty. "We have no claim on you, but when you are not around, we miss you tremendously," Dr. Wise said.

Dr. Lester A. Mount, attending neurological surgeon, was the principal speaker. He told of life aboard the hospital ship S. S. HOPE, on which

Mrs. R. Peter Rose pours for Mrs. G. A. Perera, Mrs. R. E. Carroll and guests.

he recently served.

Dr. Mount quoted a taxi driver in Peru: "Until they came, we did not know they had that kind of people in North America."

"A 21-gun salute welcomed the HOPE as she entered Corinto Harbor in Nicaragua," Dr. Mount said, "the first time in history such an honor had been accorded any other than a visiting head of state."

Dr. Mount presented a color film showing intimate close-ups of HOPE patients and the staff attending them. The gratitude on the part of patients and the concern of staff members were so obvious that those seeing the film could never doubt that this "people-to-people" volunteer program is one of our greatest accomplishments in international good will.

"The present goal," Dr.

Mount said, "is that a second hospital ship, now in mothballs, can be converted into S. S. HOPE #2, because 42 countries have extended invitations for visits."

The program was concluded with the presentation of awards by Dr. Wise—Presbyterian Hospital Pins to 56 volunteers for 100 hours of service during the last year; United Hospital Fund Awards to 153 volunteers who served 150 hours and special UHF Awards to seven volunteers who served more than 1,000 hours in 1965. These seven were: Mrs. Ida Rosch, 1,865 hours; Miss Maria Rincon, 1,768 hours; Mrs. Anne Kingsford, 1,222 hours; Mr. Fred Iradian, 1,200 hours; Mrs. Phyllis Wolfthal, 1,145 hours; Mrs. Sarah Bielawsky, 1,049 hours, and Miss Hattie H. Bruns, 1,007 hours.

## Fire Safety Program Set

A fire safety program comprising a film and practice demonstrations will be offered members of the nursing, maintenance and housekeeping staffs from May 23 through 27. According to the Hospital Safety Committee, the program runs about two hours and will be presented three times daily to permit attendance of employees on various shifts. Supervisors will schedule employees for the 8:30 a.m., 9:30 a.m. or 2 p.m. sessions.

The program will start with a film to be shown in Sturges Auditorium at Maxwell Hall. Afterward, the classes will go to the South Property parking lot to witness, and take part in, a series of safety demonstrations.

This will include practice in: Evacuating patients by means of lifts or carriers; using fire extinguishers, and reviewing the reporting of fires and the protective measures to be taken until help arrives.

According to C. Douglas Auty, Vice President, Personnel, this will be the largest safety training program ever undertaken here.

## PRESIDENT'S REPORT

*Continued from page one*

vided at considerably less than cost.

"Despite management's efforts, hospital costs continue to rise," Mr. Long reported. "The increase in the cost of an average day's care, however, is offset to some degree by the fact that the average patient today spends only half as long in the hospital as he did 25 years ago. New medicines, new equipment, and improved treatment are restoring the ill to their homes and jobs quicker and more completely, to live longer, happier and more productive lives than ever before."

Turning to scientific research, the hospital president said, "The wide range of medical subjects under investigation at The Presbyterian Hospital continues to expand," and he called the scope of research activities here "impressive."

Mr. Long cited the new Radiotherapy Center and William Black Medical Research Building as examples of the

changes becoming evident in the Medical Center's profile. He called them "tangible evidence of the progress we are making in creating much needed new and improved facilities." The president added, however, that while "We do appreciate the efforts of those who have participated in the campaign funds, if we are to provide our dedicated doctors with their needs we must continue our financial efforts."

Referring to government health programs, Mr. Long said the hospital must be ready to make necessary adaptations. "Federal and State legislation with far reaching consequences was passed in 1965," he said, "bringing into focus many changes to which much serious thought must be devoted."

In conclusion, the president expressed "recognition and appreciation for the selfless efforts of thousands of good people who give of their energy and talent to our hospital."

It's one of the soldiers in the World War I military statue that stands on Broadway just across the street from the Medical Center. May 30th will be Memorial Day in honor of these—and all our—servicemen.

# 25 YEAR CLUB HAVING BANQUET

The Presbyterian Rooster will crow again on May 4, when 32 new members are inducted into the 25 Year Club. A. J. Binkert, after many years of being host to the Club, will become a member this year. He will also be spokesman for the new members, answering the greeting of trustee.

Dr. Daniel C. Baker, Jr., president of the Club, will be toastmaster at the dinner at Bard Hall, which will be preceded by a reception from 5 until 7 p.m. Invocation will be given by Rabbi Marvin J. Goldfine, and new members' certificates will be presented by Catherine Adair, secretary, and Hester Brown, assistant secretary.

Entertainment will be a piano duo, by Student Nurses Judith Barr and Carolyn Hames.

New members, in addition to those who submitted their pictures below, will include: auxiliary members, Mrs. C. Redington Barrett and Mrs. David H. McAlpin from Presbyterian Hospital; Mrs. Thomas Hitchcock and Mrs. Willis L. M. Reese from The New York Orthopaedic Hospital; Drs. Franz Altmann, Henry Aranow, Roslyn Barbash, Frederick A. Mettler, Albert Lamb, Jr., Frank Payne, Milton Porter, Thomas J. Sullivan, Shih-Chun Wang, Philip D. Wiedel and Agnes Wilson.

From P&S: William W. Walcott; from Nursing: Lelia Newbie, Mary McManus and Delia Kirby; from Food Service: Daniel J. McGowan, and from Clinical Chemistry: Mildred Stein.

Additional members this year will bring the roster of the 25 Year Club over the 800 mark.

## NO FRIDAY THE 13TH FEARS HERE - RIGHT?

This is the only month of 1966 that will have a Friday the 13th—but don't give it another thought.

After all, at a modern medical center like this, people are all scientific and objective and coolly rational. They don't believe in nonsense like the number 13 being unlucky.

Only don't—please don't—ask us why, then, most of our buildings carefully avoid having a floor 13 or a patient room number containing those figures!

Presbyterian Hospital, for example, makes a brave leap from the 12th floor to the 14th. So do Vanderbilt Clinic, the medical college and Black Buildings.

Harkness Pavilion and Babies Hospital skirt the question. Although the buildings rise a bit higher, the top floor with a number is called 12, and the levels above are simply called "machine rooms."

"The reason for number 13 being missed around here is a mystery," according to Daniel D. Stevens, Administrative Assistant, Buildings and Grounds. "Superstition may have had something to do with it, though personally I have no objection to the number and think the Friday the 13th idea is silly."

Mr. Stevens wouldn't condemn all superstitions, however, because he feels some have good reasons behind them. "Take the idea that it's bad luck for an actor to whistle in the dressing room. Whistling could disturb other performers and get them riled. Or walking under a lad-

der: something could fall on you."

You have to look pretty hard around here to find a room number containing the magic numerals 13, too. Most of the time, there's a skip from 12 to 14. But in some cases, something—could it possibly have been superstition?—dictated that the room numbers on a floor begin with 14!

"Superstition may be nonsense, but I guess I can understand there being no 13's around here," says Miss Lillian C. Brown, Unit Manager of Presbyterian. "After all, would you want to go into a room with the number 13 or be on the 13th floor?"

Both those things could happen at just one place in the Medical Center: The Neurological Institute. It has a 13th floor right there between numbers 12 and 14. It contains the Electroencephalography Department and on it there is even a room 1313, with a radioisotope laboratory. Neuro is the only unit where the room numbers go undisturbed, too, and 13 is right there where you might expect it to be.

"I hadn't realized we were unique about the number 13," according to a Neuro official. "In fact, we used to think that a certain room with the numerals 13 was the nicest one around, with the best view."

"This Friday the 13th stuff is all bunk," she says. "Superstitions like that make no difference to me at all—though I myself wouldn't walk under a ladder. Just a habit from childhood days."

# LOST CASE WITH A HAPPY ENDING

An interesting accolade was given Ralph McEndy, officer in the Protective Department, for service beyond the call of duty. Commending him for his alertness and helpfulness, a prominent lawyer in New York City wrote to Augustus C. Long as follows:

"A few days ago while riding on the subway, I carelessly left my brief case on the seat as I left the train. At that time Mr. Ralph McEndy, one of your officers, was sitting close to me and after I had left the train he found the bag and took it with him and telephoned my office immediately. On the morning of March 24 I went up to the hospital and retrieved the bag and wrote this letter to commend him for his alertness, his honesty and his good judgment. Had he turned the bag over to the trainman, it would have taken over a week to recover it, but he wisely held it and returned it to me. This good judgment of his saved me both time and anxiety, and inasmuch as I had valuable papers in the bag, I was more than pleased and gratified with Mr. McEndy's superb performance.

"Many years ago I was a patient at the Ophthalmology Institute and my wife was a patient at Harkness, and both of us remember the fine and efficient service which we received. Therefore, it is not surprising to find Mr. McEndy

RALPH McENDY

representing the same spirit and type of service for which the hospital is well known. For this reason I am more than pleased to commend Mr. McEndy and will always remain grateful to him and to your celebrated institution."

## THE MEDICAL CENTER ART SHOW

**WHEN:** May 3 - May 13

**WHERE:** Library Annex, P.H. 20th Floor

**TIME:** Daily — 10 a.m. - 6 p.m.  
Saturday — 10 a.m. - 4 p.m.

## Spouse Age 65? Better Review Health Policy

*Are you employed by the hospital?*

*Are you married?*

*Do you have Blue Shield and/or Blue Cross coverage for your spouse?*

*Is your spouse age 65 or older?*

If your answer to all of these questions is YES, please contact Mrs. Catherine Heckman in the Personnel Office, Extension 2331, before May 25 to arrange for continuation of coverage after the advent of Medicare on July 1, 1966.

## In Memoriam

DR. ERNST HERZ

Dr. Ernst Herz, Assistant Professor of Clinical Neurology at Columbia University's College of Physicians and Surgeons, and Associate Attending Neurologist at Presbyterian Hospital, died at his home in Manhattan on April 3rd. He was 65.

Dr. Herz, who was to retire from Columbia in June, is survived by his wife, Ilse, and a son, Roger. He was born in Offenbach, Germany, and received his M.D. from the University of Frankfurt in 1923.

CHECK SOO HOO

Check Soo Hoo, a laboratory technician in the Department of Medicine from 1940-1955, died on March 4th. Associated for many years with Dr. Michael Heidelberger in Immunology, he went to work at Rutgers with Dr. Heidelberger after they both retired from P&S.

## Sgt. Joe Gatins Retires After 38 Years Service

SGT. JOSEPH GATINS

On Thursday, May 5th, Sergeant Joseph Gatins will do his last round of duty at the South Property Parking Lot. This will mark the completion of a 38-year association with the Hospital that began when he came here "straight from Ireland" when the Medical Center was new.

In 1928, Mr. Gatins came to work in the Maintenance Department. Soon he rose to a supervisory position, then looked for new fields to conquer. In 1942 he transferred to Protective, where he was promoted to Sergeant in 1948.

A resident of Washington Heights, Mr. Gatins raised his family of four in the "neighborhood." Two of them are a part of the hospital family, too. His daughter, Dymna, worked here as a staff nurse and now is doing Private Duty. A younger son, James, works in the P&S Bookstore. Two older sons are

police officers, one on the Youth Squad of the New York City Police Department, the other a Sergeant with the New York State Police.

Friends will honor Mr. Gatins at a farewell reception in Harkness Hall, June 9th. He plans to travel back to his old home in Donegal for a visit with old friends.

## Joe Chairmonte Retires To Home In Warwick, N. Y.

Joseph P. Chairmonte, carpenter in Maintenance for the last ten years, retired March 25. He doesn't anticipate that he'll be bored with his free time as he has a few engrossing interests which now he'll be able to fully enjoy.

In anticipation of retirement, Mr. Chairmonte purchased a home in Warwick, N. Y. which he has remodeled and redecorated during weekends over the past two years. "There's still plenty of work to be done," he says, "and then I'm going to build an extension."

Photography is another hobby. Of course he has in-

stalled a dark room in the basement of his country house.

And, when he has accomplished these ambitious plans, he and his wife plan to take a series of trips through sections of this country which they have not yet visited.

## TIME WAS ...

From The New York Times of October 21, 1905:

### HELP WANTED

**WANTED**—At the Presbyterian Hospital, at once a telephone operator, a young woman who has had some experience; salary \$8 per week, with dinner; hours 7 a.m. to 3 p.m. one week and from 3 to 11 p.m. alternate week; reference will be investigated.

## LET'S ALL SEE YOUR VACATION PICTURES!

San Francisco is a photographer's dream.

What's *your* vacation goal this year—Florida ... France ... Forest Hills?

Wherever you may be planning to go, whatever you are hoping to do on your holiday, The Stethoscope will be interested in seeing some of the pictures you bring back.

Prizes will be given to all employee-photographers whose pictures are printed here. The photographs should be accompanied by the person's name, department and a description of the subject. A self-addressed envelope also is necessary for the picture's return through the Hospital mail service.

So oil up those shutters, dust off those light meters, and let us all see where you go—and what you do—on your vacation this year!

Paris is rich with picture possibilities.

Sketch shows linear accelerator to be used in new Radiotherapy Center.

## RADIOTHERAPY

*Continued from page one*

trated at the new site, he says.

The Betatron has been re-assembled in the new Radiotherapy Center. It was taken apart early last year when the old radiotherapy building was demolished to make way for the new.

The linear accelerator, which cost \$165,000, is new. One of the deep-therapy cobalt machines, costing \$70,000 each, is new; the other has been in use at The Neurological Institute.

Dr. Seaman says the versatility of these high-voltage units will enable physicians to better plan treatment around each patient's individual needs. The new linear accelerator has such a heavy energy output, for example, that it can give a patient in one minute the equivalent of 10 minutes with the Betatron. It also makes it possible to administer either an X-ray or electron beam. The latter is more suitable for use on tissue close to the skin surface since it does not penetrate as deeply as X-ray.

The Radiotherapy Center includes five treatment rooms, and rooms for waiting, reception, dressing and examining; offices, and storage facilities. All treatment rooms have high-pressure oxygen supplies.

"We were one of the very first institutions in the country to use radiotherapy in conjunction with high-pressure oxygen," according to Dr. Seaman, "and this method is winning increasing recognition." With this method, the patient receiving radiotherapy simultaneously breathes oxygen under increased tension. There is evidence that the high-pressure oxygen may make malig-

nant tissue more sensitive to radiation treatment.

The new center is on two levels, the lower one—containing the X-ray units—deep under ground and encased in 16-inch outer walls. Between the units, protective walls are as thick as 36 inches, including an inch of lead plate in the core. Over the high-voltage machinery lies 42 inches of

The Radiotherapy Center, which cost more than \$1½ million, is the fourth project in the Medical Center Development Program to be finished. Previously completed were the William Black Medical Research Building—dedicated early this year—the P&S Alumni Auditorium and the Service Building. A Federal grant of \$533,000 under the Hill-Burton Act aided in construction of the new Center.

concrete—plus several feet of earth.

Mr. Cleary notes several innovations in the new building: The main doors have power assists to make it easier for patients and staff to pass through. Patients undergoing treatment are under constant, but indirect, observation on television screens.

A new, hydraulically-operated elevator running from the third floor to the sub-basement level will serve the Radiotherapy Center. In-patients at Presbyterian, Babies and Harkness can take it directly from the X-ray areas on the third floors of those units. In-patients from the Neurological and Eye Institutes can enter the Center from the tun-

nel. Others may take this new elevator down from the first floor of Presbyterian, adjacent to Vanderbilt Clinic.

Designed by the firm of Rogers, Butler & Burgun, the building is completely equipped with automatic sprinklers in case of fire. There also is an alarm system that is triggered by smoke that might precede an outbreak of fire.

In addition to assuring better, more easily accessible facilities for patients, the new center will permit more economical, effective use of personnel time and skill. It also will greatly improve the facilities available for teaching radiotherapy to interns and residents.

The Radiology Department has received wide attention for the work it has done; its research attainments and its stimulating teaching. It has the largest staff of any hospital in the United States, and perhaps in the world—24 full-time radiologists, plus 15 residents.

This Medical Center was among the first to recognize the full potentialities of X-ray treatment. Last year alone, the diagnostic division of the Radiology Department made more than 153,000 patient examinations. The radiotherapists gave approximately 16,000 treatments to more than 1,100 patients. Over 500 of them received Betatron treatments before the machine had to be temporarily dismantled to make way for the new Center. This volume of work may be expected to multiply in the years ahead.

"Radiology is a specialty which has assumed tremendous importance in the advance of medical knowledge during recent decades," Dr. Seaman says. "Its significance

## GNYP KICK-OFF RALLY AT BABIES HOSPITAL

The 1966 campaign for the Greater New York Fund will begin on May 3 with a kick-off rally in the Babies Hospital 4th Floor Amphitheater at 10 a.m. A representative from the Fund will be present to answer questions. The campaign movie "This is New York" has sequences filmed in

Open Heart Surgery here.

Dr. C. R. Wise, chairman of the campaign, will review the results of the last campaign and encourage representatives to continue their all-out effort to keep Presbyterian Hospital at the top of the list in this year's solicitation.

## ALUMNI

*Continued from page one*

plans for the further development of the Medical Center were discussed by Dr. Grayson Kirk, president of Columbia, Dean H. Houston Merritt of P&S, and A. J. Binkert, executive vice president of the Hospital. A lecture and color film were presented by Dr. George Bond, MC, USN, director of the Navy's Sea-Lab II. A luncheon for all Alumni at Bard Hall followed.

The P&S Alumni held their traditional "coffee hour" and their Annual Meeting on Saturday and their dinner at the Waldorf-Astoria that evening.

More than 900 Alumni and guests of The New York Orthopaedic Alumni attended the three-day Scientific Sessions in the Alumni Auditorium, Wednesday, Thursday and Friday, April 27, 28, 29. Celebrating the Centennial of the Hospital, the lectures by prominent orthopaedic surgeons from here and abroad were so popular it was necessary to install a closed circuit television facility in the Armory to seat those who could not be accommodated in the Auditorium.

Gala social events marked the Anniversary. The Nurses of The New York Orthopaedic Hospital tendered a reception

on Wednesday. Many retired personnel and staff returned and the gathering seemed like "old home day". Thursday evening the Alumni Association of The New York Orthopaedic Hospital held their annual meeting at a dinner at the Harvard Club. Highlight of this golden jubilee was the dinner dance at the Waldorf-Astoria on Friday evening, where celebrants danced to the music of Lester Lanin and were entertained by the Yale Whiffenpoofs.

During this Centennial year, Alumni and friends of The New York Orthopaedic Hospital are raising a fund for the rehabilitation of an area on the fifth floor of Presbyterian for a conference room for the orthopaedic service and also for a residents' loan fund.

To date, Alumni have contributed \$32,000, according to Dr. Edward C. Wheeler, Chairman of the Fund Committee.

The Women's Auxiliary of The New York Orthopaedic Hospital has raised more than \$25,000 for the project through the benefit performance on May 4 of the Bolshoi Ballet at the Metropolitan Opera House and the sale of ads in a Souvenir Program for that event. Co-chairmen of the benefit were Mrs. William L. Hutton and Mrs. Edward H. Gerry.

as a diagnostic and treatment tool has been of incalculable importance, and increases constantly. It has become an indispensable therapeutic weapon in combatting malignant diseases."

Public health officers and other medical leaders are interested in the teaching program of the department here. It assumes increasing importance in view of the current shortage of radiotherapists in the United States.

The National Institutes of Health has established training grants to help develop more such specialists and this department has been awarded such a grant. First to be trained under this program will be Dr. John J. Senyszyn, who begins a three-year residence in radiotherapy on July first.

Radiology in its diagnostic and treatment aspects has made astonishing advances since the discovery of X-rays by Professor Wilhelm Roent-

gen some 70 years ago.

Used largely to detect foreign bodies and fractures, the first, small machines—powered by storage batteries and often requiring an hour or more exposure to produce a picture—have become the high-voltage giants of today, performing amazing feats in fractions of a second.

The more extensive use of X-rays during World War I gave the new science status within the U. S. Surgeon General's Office and, in 1921, radiology was recognized by the American Medical Association as a specialty apart from surgery and medicine, with which it had first been associated. Soon radiology became established as a separate department of health institutions throughout the nation.

It is a specialty that has been vital to the advance of medical knowledge and, more recently, to the treatment of diseases, particularly of malignant nature.

# Nurses' Nightingale Collection Priceless

May 12th marks the birthday of Florence Nightingale, First Lady of Nursing, Pioneer Crusader in Public Health and, by any standard, one of the remarkable women of all time. Her life and work, highlights of which are intimately reflected in her voluminous correspondence, make a fascinating story.

The world's second largest collection of her letters and memorabilia is the priceless possession of our School of Nursing. This collection, second only to that owned by St. Thomas Hospital, London, is permanently housed in a special room that adjoins the Student Nurses' Library in Maxwell Hall.

Here, catalogued by dates and kept in special cabinets, are about 200 original letters, her personal Bible, a thermometer carried by her during the Crimean War, family and personal scrapbooks, invaluable first editions of books about her, and many photographs, paintings and lithographs from various periods of her life.

Whether writing to leaders of government, friends, or casual acquaintances, Florence Nightingale comes vividly alive in her letters as a warm and forceful personality. She never forgot a friend, servant or co-worker, and she offered them counsel and money whenever they were in need.

Her good friend and personal physician, Dr. Philip Benson, was the recipient of dozens of letters like the following, written in 1891: "My Dear Sir: Yesterday Mrs. Broadhurst cut her finger and thumb badly. (I did not know it til tonight). Will you come to see her early tomorrow (Monday) morning, and charge her as a patient to me..." (see illustration)

Another letter, written in 1894, reflects her humor and deep understanding of the psychological approach to an uncooperative patient: "My Dear Sir: I am afraid that

*Rose Wren (silly girl) will never keep on the cold water bandage (or think it will do her any good),—unless you send the water in a bottle with "The Hydro-Fresco Lotion", to be applied with caution" written on it..."*

The nucleus of the collection was given to the School of Nursing in May, 1932, by Dr. Hugh Auchincloss, attending surgeon at the Presbyterian Hospital, and professor of clinical surgery at the College of Physicians and Surgeons, in memory of his mother, Maria Sloan Auchincloss, on the graduation of his daughter, Maria Sloan Auchincloss, from the Presbyterian Hospital School of Nursing.

From time to time since then, new additions have been made to the collection by Dr. Auchincloss and his brothers, Charles C. and Reginald Auchincloss. Perhaps the most unusual and interesting addition was material pertaining to the Nightingale Fund—letters, valuable papers and pamphlets. Included are original letters from more than 300 donors, among them the Archbishop of Canterbury, Lord Macaulay, James Buchanan and Jenny Lind. This fund, amounting to £50,000, was used to establish the first

school of nursing at St. Thomas Hospital in 1860.

Another large addition to the collection was the gift, in 1941, of 26 letters written by Miss Nightingale and acquired by Dr. Howard Kelly.

In 1953 the Mt. Sinai School of Nursing presented the Presbyterian Hospital School of Nursing 13 of Miss Nightingale's letters.

The Alumnae have contributed many books and pictures. A glass cabinet, especially designed for the room, was the gift of the class of 1912 on their 25th Anniversary. A corner cabinet, maple table and bench for the room were given by various classes.

Scholars and nurses from around the world have visited the Florence Nightingale Room throughout the years. Members of the staff and other employees interested in the collection may view it by arrangement with the School of Nursing.

## NURSES

*Continued from page one*

Presbyterian Hospital, will give the graduation address. Dr. H. Houston Merritt, Dean of the Faculty of Medicine, assisted by Miss Helen Pettit, Professor of Nursing, will present the University diplomas to the graduates. Miss Elizabeth Gill, Associate Dean (Nursing), will present to the graduates their pins, and Mrs. Frederic F. deRham, Trustee of Presbyterian Hospital and longtime friend and supporter of the Department of Nursing, will present the nursing certificates.

Other participants in the ceremonies will include the Rev. Robert B. Reeves, Jr., Rabbi Marvin J. Goldfine and Father Guy S. Vinci, all of the Hospital Chaplain's Department.

A reception for graduates and guests will be held in Maxwell Hall immediately following the ceremonies.

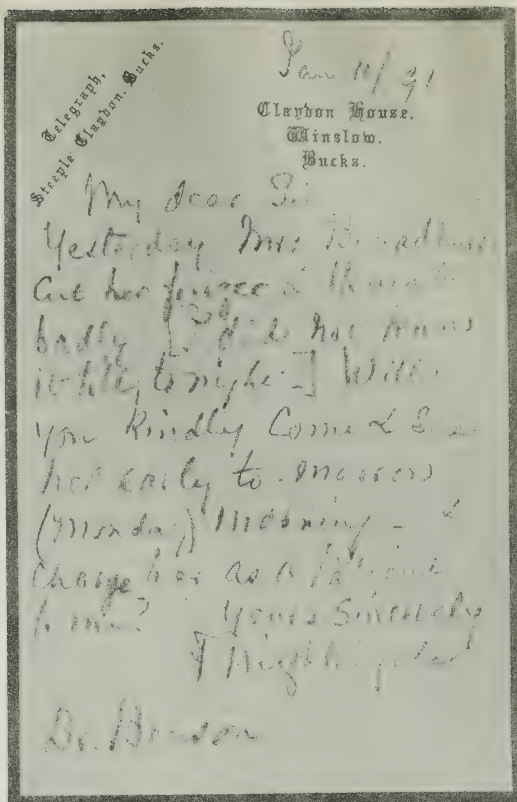

Should the weather prove uncooperative, the ceremonies will be held in the Alumni Auditorium of the College of Physicians and Surgeons.

On Sunday, May 29, at 4 p.m., the graduates will attend a Baccalaureate Service in St. Paul's Chapel.

Graduates receive a Bachelor of Science Degree from Columbia University, which will be conferred upon them at the University Campus on Wednesday, June 1, but presented at graduation exercises, and a certificate of Nursing from The Presbyterian Hospital.

## ALUMNAE DAY MAY 31st

Alumnae Day for returning graduates of the nursing school is set for May 31st. The program includes registration at 9 a.m. in Maxwell Hall; reunion luncheons at 12:30 p.m.; a program at 2:30; and a cocktail hour at 4 p.m. in Harkness Hall.

## FACTS TO KNOW ABOUT HOSPITALS

Each year, during the week of Florence Nightingale's Birthday, our nation observes National Hospital Week. Here are some pertinent facts about our hospital and hospitals in general:

A total of 4,456 babies were born at Presbyterian Hospital in 1965, a decline of 55 over 1964, when 4,511 were born here.

This is in keeping with the national pattern. Recent figures show a declining national birth rate, with 69,000 fewer births in 1964 than in 1963.

Male births in the U. S. continue to outnumber female births by about 105,000 a year. But mortality rates are higher among males, indicating that nature continues to keep the sexes in balance.

Registered hospitals in the U. S. have increased from 178 in 1876 to 7,127 in 1964, and on any given day there are about 1,420,000 patients in these hospitals.

Although people over 65 represent only 9.33 percent of our total population, they represent 14 percent of our hospital population on any given day. The ratio is expected to rise sharply with the advent of Medicare.

In 1934 the average stay of all patients in general hospitals was 14 days; today the average is 7.7 days.

Of 5,624 hospitals reporting out-patient visits, a total of 125 million visits were made in 1964, a substantial increase over the 118 million visits reported in 1963.

During this same period, Vanderbilt Clinic had 399,373 out-patient visits in 1964, and 397,373 in 1963.

In 1964 the nation's 7,127 hospitals employed 1,887,000 persons. This places hospitals third among the nation's largest employers.

A total of about 242 employees is required for every 100 patients hospitalized.

Of the nation's total of 1,701,839 hospital beds, 714,661 are used exclusively for the mentally ill.

The first hospital operation under anesthesia was performed in 1846 in Boston; and the first X-ray equipment was installed in hospitals in New York and Chicago in 1896.

The hospital of today plays the major role in disaster planning, and in the coordination of community health services.

The above lamp, carried by actress Anna Neagle in "The Lady With A Lamp" is part of the Nightingale collection at Maxwell Hall.

# Squier Circus Party All Set For May 7th

Eleven years ago this month, Miss Elsie Coffin, departmental secretary in Squier Clinic, originated an extra-curricular project in human kindness that has now become a tradition at Presbyterian Hospital—the Annual Circus Party for young patients of Squier Clinic.

The Circus Party, then as now, is a voluntary affair, organized and financed entirely through the efforts of Miss Coffin and her helpers. Four children attended the first party in 1955; this year about 50 will go to Madison Square Garden on May 7th.

Parents deliver their children to Vanderbilt Clinic at 11:30 a.m., Saturday morning. There, each child becomes the special charge of one adult who will pay his way to the circus and look after him until he is returned to his parents at about 5:30 p.m.

According to Miss Coffin, it is difficult to judge who gets the most fun out of the Circus Party, children who are often seeing their first circus or adults who become totally fascinated by the children's uninhibited delight.

"In early years," Miss Coffin said, "the Circus Party was an exclusive Squier Clinic affair, with employees and staff either taking a child personally or giving money to pay for the private subway car and the hot dog - orangeade - souvenir fund. But word-of-mouth publicity of a worthy project that is also fun soon spreads. Now, other departments and friends of employees call in and ask to join the Circus Party."

Other outsiders also come through each year to help make the party a success. The management of Madison Square Garden always re-

sionaire at Madison Square Garden and a former patient at Presbyterian Hospital, was a great friend of the Squier children. He sent a generous check each year; then, as shown in the photograph, personally delivered souvenirs and ice cream to each child at the circus.

The young man to the far left in the photograph of the first Circus Party is Roy Eberhardt, who last year repaid the compliment he received as a child by taking a

ELSIE COFFIN

FIRST CIRCUS GROUP

serves a group of seats near the front for the Squier Party, so that all can sit together and have a good view. The Transit Authority always comes through with a private car, chartered by the group to transport the Squier Clinic party to and from the Garden.

Until his death, Mr. Lawrence Neumann (shown in the photograph below), a conces-

sionaire to the circus. Roy, then working at Squier Clinic, is now taking a 24-month course at the School of Radiology of Mercy Hospital, Rockville Center, Hempstead. Roy's father, Roy, Sr., has been a hospital employee for the past 18 years and is now housekeeper for several floors of Presbyterian Hospital and Vanderbilt Clinic.

## Parkinson's Reports Indexing Is Planned

About 50 scientific journals that normally contain numerous articles about Parkinson's Disease and related research will be indexed by the Parkinson Information Center of Columbia University's library at P&S. The University has arranged to do this indexing for the National Institute of Neurological Disease and Blindness, and the Public Health Service's National Library of Medicine. The pilot project, to begin about June 1, will be the first any university has undertaken to compile a large-scale index of articles from medical publications expressly for the public health arm of the Federal Government.

## MAILBAG

Last year my wife became ill . . . My family doctor told me if she were his wife, he would send her to your hospital, which we did. . . . Today my wife is able to care for our four children and the house thanks to your wonderful doctors and nurses who cared for her beyond call. Thank God there is some place like your hospital to go to.

Mr. Lawrence Neumann personally delivering souvenirs to children in the Squier Circus Party.

# NURSES RAFFLE RECORD BREAKER

A record breaking \$19,500 was taken in receipts from the card party and raffle for the Student Nurse Scholarship Fund on April 20 in Maxwell Hall. More than 300 attended the annual benefit.

Lady Luck chose a familiar hospital figure to win the color TV set.

Eddie Staley, newsdealer who services the Medical Center, held the lucky ticket.

The mink stole was won by Mrs. Barbara Badger, an instructor in Public Health, and the trip to Grossinger's went to Inez Radell. Mrs. H. Houston Merritt had the winning ticket for a \$100 Gift Certificate from B. Altman.

Prizes were also won by

Mrs. Robert Lincoln, men's luggage; Dr. & Mrs. Thomas Bridges, Steuben Glass; Mrs. Russell Johnston, transistor radio; Mrs. Charles P. Williams, Salton hot tray; Mrs. Melvin E. Franks, electric blanket.

Also, Mrs. Ellen Youssef, pin and earring set; Susan Elliott, enamel dish; T. S. Taylor, toaster; Rose Wakshull, coffee percolator; H. J. Ayers, hair dryer; Violet Cunningham, blanket; Mrs. George Lindsay, needlepoint bag; Michael A. Tsi, Spode dishes and travel clock; Mrs. Edgar Leifer, table lighter; Robert Elliott, lemon dish and fork, and Annie Hanlon, crystal bird.

Enjoying tea at the Benefit Bridge for nursing scholarships, are Miss Cecile Cavell, Miss Elizabeth Gill and Mrs. John Lindsay, with Dr. Edward Self and Mrs. Stanley Bysshe in the background.

## JOINT SYMPOSIUM HERE ON MAY 26TH

A symposium under the joint auspices of the College of Physicians and Surgeons and Merck Sharp & Dohme Research Laboratories will take place in the Alumni Auditorium, May 26th. Honorary Chairman of the lectures, entitled "Reflections on Research and the Future of Medicine," will be Sir Henry H. Dale. Speakers will be Sir Macfarlane Burnet, University of Melbourne; Professor Francis O. Schmitt, Massachusetts Institute of Technology; Dr. Edward L. Tatum, Rockefeller University, and Sir George Pickering, Oxford University.

## ON THE SHELF New Books in Milbank Library

### FICTION

**The Embezzler** by Louis Auchincloss. The scandal of Guy Prime's embezzlement brings down the delicately balanced structure of the stock market.

**The Virgin of San Gil** by Paul Olsen. A statue disappears on the eve of a religious festival causing conflict among the villagers of San Gil.

**The Mandelbaum Gate** by Muriel Spark. A suspense-filled story of high adventure on the Israel-Jordan border.

### NON-FICTION

**When London Walked in Terror** by Tom A. Cullen. The greatest unsolved murder mystery of all time—the story of "Jack the Ripper."

**Of Time and Space and Other Things** by Isaac Asimov. Seventeen science essays from the pages of "The Magazine of Science Fiction."

**The Child Stars** by Norman J. Zierold. The story of the millionaire moppets in Hollywood—and what became of them.

JUNE, 1966

## NEW TRUSTEE IS SELECTED

J. Wilson Newman, Chairman of the Board of Dun & Bradstreet, Inc., has been named to the Board of Trustees of The Presbyterian Hospital. His election, at the Board's May meeting, was announced by hospital President, Augustus C. Long.

J. Wilson Newman

Educated at Clemson College and New York University Law School, Mr. Newman has spent virtually his entire working career with the well-known financial firm. He was elected Vice President in 1946, President in 1952 and chairman in 1960. A resident of Short Hills, N. J., Mr. Newman is also a trustee or director of Chemical Bank New York Trust Company, Consolidated Edison Company of New York, General Foods Corp., and the Mutual Life Insurance Company of New York. He is Chairman of the Board of Overseers at Sweet Briar College.

## NAME R. N. KERST TO GNYHA BOARD

Richard N. Kerst, Assistant Vice President and Assistant Secretary-Treasurer of the Hospital, has been named to the Board of Governors of the Greater New York Hospital Association.

He was installed at the association's annual dinner, given recently at The Waldorf-Astoria Hotel.

Others named to three-year terms as governors were Dr. Peter Rogatz, Executive Director of Long Island Jewish Hospital, and Dr. Arthur R. Walsh, Director of The Mount Vernon Hospital.

The Association is a non-profit organization incorporated to serve community health and welfare needs, with a membership that includes 83 voluntary non-profit hospi-

Richard N. Kerst

tals plus other institutions. It promotes the cooperative interests of these member organizations, interpreting their functions to the community and allied professional, governmental and other groups.

Mr. Kerst, a graduate of the University of Wisconsin, after employment at Haskins & Sells and Navy duty in W. W. II, joined the hospital as assistant comptroller in 1945. He became comptroller four years later, and an assistant vice president in 1953. In 1960 Mr. Kerst was named secretary of the Columbia-Presbyterian Medical Center Fund, and has been involved with many Development Program activities.

He has served on various committees of the American Hospital Association, Hospital Association of New York State, Greater New York Hos-

## They Looked Beautiful In Their White Uniforms

"To each of you, our admiration and congratulations! To your parents who have sustained you in your goals, and to your teachers who worked to instill in you the knowledge, skills and devotion to duty so essential to your chosen profession—our gratitude and congratulations!"

One hundred and eighteen members of the Nursing Class of 1966, dressed in white uniforms for the first time, were greeted by Augustus C. Long, President of Presbyterian, who presided over the beautiful commencement ceremonies in the Medical Center Garden on June 2nd.

Dr. George H. Humphreys, II, Mott Professor of Surgery, Columbia University College of Physicians and Surgeons, and Director of Surgery, Presbyterian Hospital, gave the commencement address.

After recalling the days of the respectful, stiffly-starched nurse, who, "no matter what she was doing, stood up when we entered the nurses station," Dr. Humphreys said, "Those of us who were brought up right by our nurses, wonder what nursing

## Our Homeliest Preemie Celebrates 1st Birthday

Nurses at The Presbyterian Hospital were generally agreed that Gwendolyn was the ugliest baby ever born here, and one of the most tragic. Her mother, desperately ill, expired only minutes after Gwendolyn was delivered prematurely.

Gwendolyn weighed less than a pound at birth, was only five inches long, and barely breathing. Much of her body was covered with a fine growth of hair and there was the suggestion

of an appendage growing from the end of her spine. Her arms were abnormally long, her legs flabby and bowed—to the point that doctors feared she might never walk normally in an upright position.

Her father was unknown and there were no relatives to claim Gwendolyn. Our floor nurses, to their ever-lasting credit, vowed that this unfortunate baby should never want for affection should she survive, and they formed the Aunts of Gwendolyn Association, which met on May 8th to celebrate Gwendolyn's first birthday.

Miss Lenore Cuomo, a practical nurse, adopted Gwendolyn and took her to the home of her parents at 207th Street and Broadway, where she was immediately accepted as a member of the family.

Gwendolyn was fed with an eye dropper every hour during

## STETHOSCOPIA

### • BRIDES AND GROOMS

The wedding, on May 27 in The Pauline A. Hartford Memorial Chapel, of *Pamela O'Brien*, receptionist in fourth floor Doctors' Private Offices, and Mr. Robert Bower, was a Hospital Family affair. *Hugh Ferguson*, Business Manager of DPO gave the bride away and witness was *Erika Hackenjos*, secretary in DPO. *Chaplain Robert B. Reeves, Jr.* officiated. Among the guests were many members of the DPO staff and other hospital friends and associates.

*Janet Allen*, Supervising Nurse on Presbyterian 10, will marry Mr. David Stevenson of Old Greenwich, Conn. The couple plans an August wedding.

*Jane D. Rilance*, Class of 1962, School of Nursing, and *Dr. Thomas A. Williams*, Resident in Psychiatry, were married on May 5 in The Pauline A. Hartford Memorial Chapel. *Chaplain Reeves* performed the ceremony.

*Dr. Richard Thurer*, Resident in Surgery, and Miss Priscilla Sue Arlen of White Plains, N. Y. were married recently.

### • WELCOME

*Susan N. Prentky* is now an Interviewer in Personnel.

*Mrs. Lourdes Waters*, formerly in Public Interest, is now Receptionist in Personnel.

### • FAREWELL

Retirees this month are: *Phoebe Jefferson*, PH X-ray; *Joseph E. Mandrew*, porter, Harkness Hall; *Mary O. Brennan*, cashier, Assistant Treasurer's Office; *Jack Pine*, mason, and *Callie Stephens*, maid. We wish them well.

### • CONDOLENCES

*Mrs. Elizabeth Gutierrez*, Eye Institute, on the loss of her husband, Peter.

### • VACATIONERS

*Chaplain Robert B. Reeves, Jr.* is spending two weeks working on the house he and Mrs. Reeves are building in New Preston, Conn. The first story is complete and they hope to frame in a second story this summer. The Reeves have been working on this project since 1947. Their son and two daughters have put in much time doing masonry and carpentry on their vacation retreat.

*Father Guy Vinci* will travel to Europe next month with his father, to visit England, France and Italy.

*Mrs. Marguerite Stein*, Director of Volunteers, has returned from a trip to California. On her way East she and Mr. Stein spent some time in Colorado Springs.

### • NOTES OF INTEREST

*Miss Jean Collard*, Associate Director of Social Service, Neurological Institute, was the social worker on an interdisciplinary panel consisting of a pediatrician, neurologist, psychologist and social worker at the "Institute on the Neurologically Impaired Child" held in Phoenix, Arizona last month. The Conference was sponsored by Arizona State Departments and Community Agencies, made possible by a grant from the Neurological and Sensory Disease Service of the United States Public Health Services.

## X-RAY CENTER TOURS

To acquaint personnel with the facilities of the new Radiotherapy Center, the Radiology Department is scheduling orientation tours for June 15 and 22, both beginning at 4 P.M.

Medical Center personnel interested in touring the new Center may arrange to do so by telephoning Ext. 2991.

The Radiotherapy Center will be dedicated on June 8. Treatment of patients will start about July 1.

## DOINGS OF DOCTORS

**DR. ELVIN A. KABAT**, Microbiologist, was elected to membership in the National Academy of Sciences at its annual meeting in April.

**DR. EMANUEL M. PAPPER**, Director of Anesthesiology, has returned from a six month assignment in Washington, D. C., where he was principal consultant at the Institute of General Medical Sciences of the National Institutes of Health, expanding and initiating research projects and research training programs in anesthesiology. Doing this work for the Institute, Dr. Papper traveled all over the country talking with anesthesiologists and scientists, explaining the type of support available from the Institute, the criteria for awards and the manner of preparation and presentation of proposals for grants. Dr. Papper believes his experience will enable him to be a much better interpreter of NIH generally and that it will result in concrete value to the field of anesthesiology.

Dr. Gellhorn

Dr. Papper

**DR. ALFRED GELLHORN**, Attending Physician, has been sent by the United States Government to Israel, India and Korea for discussions of medical and scientific communication with authorities in these countries. During his visits, he will give lectures and seminars at medical schools and research institutes.

**DR. JOHN K. LATTIMER**, Director of Service of Urology, has been elected President of the New York Section of the American Urological Association at its recent meeting.

Prize winners in the Prize Essay Contest at the New York Academy of Medicine under the auspices of the New York Section of the American Urological Association and the Section on Urology were the following members of the resident staff and Fellows in Urology: in the field of clinical research: 1st prize, *Dudley S. Danoff*; 2nd prize, *David T. Schwartz*; in the field of laboratory research: 1st prize, *John P. Grant*; 2nd prize, *Moshe Markewitz*.

**DR. JOSEPH E. SNYDER**, Assistant Vice President, presented a course on outpatient service and emergency room administration at Phelps Memorial Hospital recently. The course, one in a series, was given at the request of the State Department of Health to prepare officials and staff members to cope with expected new duties under Medicare.

**DR. HOWARD C. TAYLOR, JR.**, Consultant in Obstetrics and Gynecology, was installed as the 16th president of the American College of Obstetricians and Gynecologists at their recent meeting in Chicago.

**DR. EQUINN W. MUNNELL**, Associate Attending Obstetrician and Gynecologist, has returned from a visit to medical schools at the University of Istanbul, the American University of Beirut and the Shatby Maternity Hos-

pital in Alexandria, Egypt. He lectured at all these places.

**DR. JOHN M. SCUDDER**, Associate Professor of Surgery, received the Aesculapius Award for his scientific exhibit at the 112th annual session of the Medical Society of the State of North Carolina, in Asheville on May 4.

**DR. HARRY M. ROSE**, Attending Microbiologist, has been appointed co-editor of the Journal of Immunology at the annual meeting of the American Association of Immunologists.

**DR. EDWARD B. SELF**, Associate Attending Surgeon, has announced contributions to the Alumni Fund of P&S of \$134,000. This is the second consecutive year that subscriptions to the Fund have exceeded \$100,000. Dr. Self is treasurer of the P&S group.

**DR. LESTER A. MOUNT**, Attending Neurosurgeon, was recently visiting professor at the University of Cincinnati. While in Cincinnati he also gave three talks for Project Hope. In St. Louis he attended the meeting of the Harvey Cushing Society, where he delivered a paper based on material gathered from the Cooperative Study of Intracranial Aneurysms and Subarachnoid Hemorrhage. He is a member of the Editorial Committee of this study.

**DR. GEORGE H. HUMPHREYS, II**, Director of Surgery, has been elected president of the Allen O. Whipple Surgical Society. Other new officers elected at the recent annual meeting of the Society are: Secretary-Treasurer, *DR. EDWARD B. SELF*, Associate Attending Surgeon; Recorder, *DR. ROBERT B. HIATT*, Attending Surgeon. The Allen O. Whipple Surgical Society was founded in 1955 in honor of Dr. Whipple by his former residents. Its principal objective is "to make a continuing study of surgical education." To this end, many of the country's leading university medical centers have been visited.

At the recent meeting in Boston, programs relating to the teaching of surgery to medical students were presented by the staff members of the Peter Bent Brigham Hospital and the Massachusetts General Hospital.

*Dr. Humphreys* talked at the Charaka Club last month on "Reflections on Peru."

**DR. WILLIAM A. BLANC**, Associate Attending Pathologist, presented two lectures on "Aspects of lung pathology in cystic fibrosis" at the 3rd Annual Children's Memorial Conference on Respiratory Problems in Chicago recently.

**DR. JEROME P. WEBSTER**, Consultant in Surgery, recently exhibited his collection of literature on Embassies to the Chinese at the Grolier Club, a society of bibliophiles.

**DR. MILOVAN RAKIC**, Assistant Attending Physician, Physical Medicine and Rehabilitation, is spending his vacation working on a research project in France, Yugoslavia and Portugal. He will be guest of honor at the Portuguese Institute of Rheumatology where he is to lecture.

**DR. BENT FRIIS-HANSEN**, Professor of Pediatrics at Rigshospitalet, Copenhagen, Denmark, delivered a lecture in Babies Hospital Amphitheatre on May 5. His topic was "Measurement of Body Composition of Small Infants." The program was by courtesy of Ross Laboratories.

# MAKE-BELIEVE DISASTER FINDS P.H. STAFF READY

Dr. Richard Ball, Scout Leader, gives our doctors a hand.

A doctor decides where this patient should be sent.

"Amputee" receives emergency treatment.

Dr. Joseph E. Snyder returns the Scout Greeting as his young friends have refreshments in the Coffee Shop after exercise.

The bus was filled with Explorer Scouts when it was struck by a vehicle, out of control, that sent it tumbling over a steep embankment. There were 27 critically injured—all brought to Vanderbilt Clinic at 7 P.M., Thursday, May 26, all displaying their gory wounds, ranging from dangling arms and legs to open abdominal wounds and severed arteries that spurted geysers of red.

A member of housekeeping, coming unexpectedly upon the bloody scene, was observed reaching for support as his legs began to buckle and his eyes widened in horror. His recovery was instantaneous when he learned that it was all make-believe—an exercise planned by Dr. Joseph E. Snyder, Assistant Vice President and Director of Vanderbilt Clinic, to test our staff's ability to meet real disasters when they do occur.

Explorer Scout Troops 529, 727 and 780, all of upper Manhattan, under the direction of Dr. Richard Ball, who will begin his surgical internship at St. Vincent's Medical Center July 1st, and Mr. Richard Houseman, Scout Leader, who lives at 212th St. & Broadway, were delighted to participate in the exercises, because they have been training in ways to serve during disasters.

As shown in the photographs, it would be difficult to demonstrate casualties in a more realistic manner. Each victim was made up by Kevin Sweeney of the Simulaid Company, Woodstock, N. Y., whose business is making devices to simulate real wounds. Much of their work is for the military. The "blood" that gushed from open wounds even clotted upon exposure to air. Dirt and cinders were implanted in "massive abrasions." Even the pallor of hemorrhaging patients was realistically simulated.

From the moment the loudspeakers announced that Emergency Plan One was in effect, the reception center of Vanderbilt Clinic was a beehive of activity. Attendants

arrived with stretchers at the north entrance. Doctors, nurses, security and service personnel converged upon the clinic from all directions. Regular traffic was routed away from the clinic, and all elevators, except two, were reserved for the emergency.

"Casualties" compare wounds.

Patients were admitted, then tagged and transferred to the emergency examining areas, where first aid was given and injuries were evaluated. Patients were then sent on stretchers to surgery, x-ray and other floors, and then back to a ward that had been set up in the Doctors' Dining Room. Four "bodies" were sent to the morgue. One of the "corpses" opened his eyes, looked at the young doctor, grinned and said, "Don't take it too hard, Doc, you can't win them all."

When asked to comment on the exercise, Dr. Snyder said, "On the whole, our staff was equal to the challenge, but there were areas of weakness which we hope to correct. That is why such exercises are so valuable."

An indication of how realistic the simulated injuries were, was apparent to Dr. Snyder when, on the third floor of the clinic, he tried to urge one last Scout to take his shower. This youngster let him know that he wasn't playing games—he had just had some wounds sutured and was waiting to learn whether he was to go home or remain in the hospital overnight.

## 300 From Far & Near At 25 Year Banquet

Dr. Daniel C. Baker, Jr., outgoing president, served as toastmaster.

"You people at the Medical Center can be very proud; you have given Columbia-Presbyterian a reputation respected all around the world."

So said Augustus C. Long, President of Presbyterian Hospital, in recently addressing the annual dinner meeting of The 25-Year Club at Bard Hall. More than 300 members, returning here from as far away as California and Canada, attended the meeting at which 32 initiates received enrollment certificates.

"The Class of '66 is proud to join this distinguished group; at last we've come of age," said A. J. Binkert, Executive Vice President of the hospital, in responding to Mr. Long's greetings.

In his address, Mr. Binkert noted that daily patient care costs have risen from about \$11 to about \$60 since 1941; the number of hospital employees from 2,500 to more than 4,000. During this time, he also pointed out, there have been 58 improvements in wages and personnel benefits.

Identification cards for 32 new members.

## P&S Awards M.D. Degrees To 109 Grads

Columbia University's College of Physicians and Surgeons awarded the degree of Doctor of Medicine to 109 members of the Class of 1966 on June 1 in the garden. Graduates taking awards and prizes were:

Dr. H. Jack Myers, Joseph Garrison Parker Award;

Dr. Charles Ellis Poletti, Alumni Association Senior Student Award;

Dr. Richard Deren Penn, Borden Undergraduate Research Award;

Dr. Morton Lee Cohen, William P. Watson Prize in Pediatrics;

Dr. Poletti, Helen M. Sciarra Prize in Neurology;

Drs. Henry H. Balfour, Jr., Kenneth A. Popio and Harry B. Richardson, Jr., Merck Manual Awards;

Anna Yin-Chu Lo (second year), Medical Student Thesis Award in Psychiatry;

Drs. Popio, Wayne W. Ferguson, and Robert T. Donham, Prizes in Urology.

The names of the M.D. candidates were read by Associate Dean George A. Perera. Diplomas were awarded by Dean H. Houston Merritt.

The 109 graduates, includ-

ing eight women, will soon begin internships at 50 hospitals in 21 states. Forty-two of the graduating seniors were accepted for internship programs at their first hospital choice; 91 at one of their first three choices.

"This unusually high percentage of seniors accepted at one of their first three choices might be regarded as a measure of the excellence of their training," according to Dr. Perera. "But in reality it is an indication of the high quality of student attracted to P&S for his medical education."

Said Dr. Perera: "P&S has an obligation to the nation as well as to the New York City area. The wide geographical distribution of internship appointments is an indication of the fact that health is a nation-wide concern."

## MAILBAG

"My daughter was recently discharged from Babies Hospital after surgery. I felt impelled to inform you of the excellent care the nurses on the tenth floor gave her. She has been in several other hospitals during the course of her young life, and believe me when I tell you I have never come across more wonderful nurses in my life!"—from the mother of a patient in Urology.

Lenore Cuomo presents Gwendolyn in one of her first dresses.

Gwendolyn wore diapers until she was five months old, and was very fond of pacifier shown in her mouth here.

Pepper is one of Gwendolyn's special friends, and he is very gentle with her.

## Ethel Killeen Retires But Does Not Leave Us

"It just doesn't seem possible that I'll be here to see the School of Nursing celebrate its 75th Anniversary. I was a part of the 50th Year celebration, served through the wartime years and watched the expansion of the enrollment from 225 to its recent high of 417. During my stay at the Medical Center I've worked under five Directors of Nursing."

So saying, Mrs. Ethel Killeen reminisced about her 29 year stay at the Hospital and told of her plans for the future.

The pert, blue-eyed secretary in the office of the Assistant Director of Nursing, has had a varied career since she came here in 1937. From training floor clerks in the early years, to enlisting nursing staff in her last assignment, hers has been a busy schedule.

During the war, Mrs. Killeen was responsible for getting out the monthly "Bulletin" assembled by the Ladies Auxiliary of the Presbyterian Hospital Units for the Overseas Unit. It contained all the chit-chat about the hospital and "had a terrific response, and was a great morale builder." (This publication antici-

Mrs. Ethel Killeen

## PREEMIE

*Continued from page one*

the first few days of life, then adjusted to bottle feeding. She began drinking from a cup at five months. Miss Cuomo said that Gwendolyn has a cloth blanket that she sleeps with and becomes very insecure if this fetish is taken from her. She wore diapers until about 5 months, but is now toilet trained.

One of Gwendolyn's great friends is Pepper, the Cuomos' dog, and her favorite food is bananas. She demands and gets a bath daily, which she thoroughly enjoys.

Gwendolyn's several aunts, especially Melanie King, often take Gwendolyn to their homes on visits, where she adjusts quite well.

Gwendolyn has recently been living in the home of Joe Torres, who works on the 18th floor of P&S.

Gwendolyn, as you can see in her pictures, is now growing rapidly and has become quite attractive—at least to another Rhesus Monkey.

## New Epilepsy Laboratory Is Dedicated

A new laboratory to investigate biochemical and physiological problems of epilepsy has been dedicated at P&S, the gift of the late Carl Marks and the Carl Marks Foundation. Mr. Marks, who died in 1961, was a past president of the United Epilepsy Association, precursor of the Epilepsy Association of America.

"Throughout history there has been a taboo on epilepsy," said Dean H. Houston Merritt at the dedication of the new facility, "But owing to the work of Carl Marks and the Epilepsy Association, many of the myths have been destroyed." Directed by Dean Merritt and Assistant Dean Melvin D. Yahr, the laboratory's research efforts will be aided by the Epilepsy Association in addition to grants from other sources.

pated STETHOSCOPE by 3 years.)

Scheduling nursing personnel for the Emergency Unit was another of her wartime jobs. Fortunately, this was only a "rehearsal, we never had a real performance," Mrs. Killeen recalls.

The youthful looking retiree went on a Florida vacation following her retirement tea on May 6th. She has returned to serve as a secretary to the Nurses Alumnae Association, with offices in Maxwell Hall.

"I can't seem to break away from my hospital associations," she says. We're glad she's going to be around for a while.

## THESE NICE PEOPLE

From the moment you make application for a job at The Presbyterian Hospital until long after you have retired on pension, these hardworking people in Personnel, or their successors, will have had a far greater influence on your life and welfare than you might suppose.

C. Douglas Auty  
Assistant Vice President

Like Mrs. Marion Trimp, photographed as she went through Personnel before being hired to work in Food Service, most of you made formal application for a job here, were interviewed by several persons, had your references carefully checked. You were photographed, fingerprinted, had a thorough physical examination and, then, were added to the payroll.

Your fingerprints and photograph are taken for purposes of identification should the need arise. Your physical examination at the beginning of employment becomes the baseline of your medical history and will be of help to your doctors should you become ill in the future.

Your benefits and responsibilities as an employee were explained and you were given a copy of the employee handbook, "You and Your Job," then sent by Personnel to the

person who became your supervisor. Although you might have had little further direct contact with the people in Personnel, they were still deeply concerned with you and your future.

Did you know that in addition to seeing about 165 job applicants each week (500 weekly during college vacations), the Personnel Office, under the direction of C. Douglas Auty, Assistant Vice President, is responsible for the following functions which affect each employee:

*The formulation and administration of all personnel policies . . . employee training programs, employee benefit programs . . . wage and salary schedules.*

*The supervision of the Personnel Medical Service, where about 1500 employees are seen as patients each month.*

*The supervision of the Protective Services, which are responsible for the security of the medical center 24 hours a day, seven days a week.*

*The supervision of all housing facilities; they also serve as counselors to new employees who seek living quarters in the community.*

The staff of the Personnel office serve as a continuing personal link between the hospital and its pensioners (428 currently) who live in 18 states and four foreign countries. Should a pensioner need help or have medical problems, he knows he can obtain immediate assistance from his friends in Personnel.

The same holds true for any employee: if you have a grievance, are ill, need a place to live or park your car . . . if you need help with a personal problem, would like to transfer from one job to another . . . if you seek advice about your hospital life insurance, Blue Cross, Blue Shield, or Social Security status, there is someone in Personnel who is qualified and eager to help you, or any of the other 4,200 employees who make up our hospital family.

## NURSING AIDES WANTED— TRAINING CLASS PLANNED

Do you have friends who are looking for a rewarding future in hospital work . . . in the care of our patients?

If so, tell them that The Presbyterian Hospital is now planning an intensive four-week basic training program for nursing aides that will qualify them for a full-time job working with patients and the nursing staff at this hospital.

Those who qualify for this program will receive a good salary during the four weeks of classwork and supervised

practice. Upon successful completion of the course and assignment to a nursing unit, they will receive regular aide salary, which increases with length of service and demonstrated merit.

If you know of someone interested in such a career, ask her to call Miss Prentky at 579-2331.

It is anticipated that in the fall there will be classes in advanced procedures for aides and attendants now on the staff.

# HELP YOU MORE THAN YOU MIGHT SUSPECT

Miss Susan Prentky, Receptionist, welcomes Mrs. Marion Trimp who is applying for a job in Food Service.

Mrs. Pamela Seaman, Interviewer, discusses job with Mrs. Trimp.

Miss Lillian Oring, R.N., Personnel Assistant, explains Personnel policies.

## *Columbia-Presbyterian Medical Center Is People...*

Mr. George Cau, Personnel Assistant, and Mrs. Rita O'Brien, Wage and Salary Clerk, add Mrs. Trimp to our payroll.

Mrs. Catherine Heckman, Blue Cross Interviewer, explains health benefits.

Miss Bonnie Green, Processing Clerk, assists applicant with employment forms.

Mrs. Mary Murray, Medical Personnel Clerk, prepares applicant's chart.

Marion McDonald, R.N., routinely gives applicant tuberculin test. Winifred Flannery, Nursing Aide, sterilizes equipment.

William Quinn, Assistant Supervisor, Protective Department, takes Mrs. Trimp's fingerprints.

Mrs. Elizabeth Ryan, as Secretary to Mr. Auty, handles many special assignments for Personnel.

Mrs. Nancy Poulin, Secretary to Dr. Baldwin, arranges for Mrs. Trimp's physical and laboratory tests.

Dr. John Baldwin, Director of Personnel Health, reports about 15,000 employee medical visits each year.

## 25-YEAR CLUB

Continued from page three

Discussing Medicare, the executive vice president predicted a national health law that eventually will cover most of our population. The challenge of the future, he said, will be to maintain our standards of excellence in health care.

Special recognition at the meeting was given Miss Helen Young, director of the hospital's nursing service and nursing school until her retirement in 1942. At 91, she is the club's oldest member.

Others especially honored included Dr. John M. Hanford,

who served for 56 years; Anton Samuel, 55 years, and Dr. James W. Babcock, 52 years.

Nursing students Judith Barr and Carolyn Hames provided pleasant listening as a piano duo. Humorous monologues were given by Bette Springer, new president of Student Government.

Serving as toastmaster was Dr. Daniel C. Baker, Jr., outgoing club president. He conducted the election of officers for the coming year. They will be: President, Dr. Rudolph N. Schullinger; Vice Presidents, Miss Elizabeth S. Gill, Director of Nursing, and

Elizabeth Callahan, Unit Manager of Babies Hospital, helps Dr. Albert R. Lamb, Jr., with boutonniere.

## \$100,000 Fellowship Fund To Honor Dr. Auchincloss

Dr. Hugh Auchincloss, Jr., at the recent Alumni gathering, announced the establishment of a fund for Columbia University honoring his father, Dr. Hugh Auchincloss, who died in 1947, a year after his retirement from The Presbyterian Hospital.

The fund, to be known as The Hugh Auchincloss Fellowship Fund, now has slightly more than \$100,000 in capital. Its income is to be used at the discretion of the Chairman of the Department of Surgery for the support of a younger member, or members, of the surgical teaching staff. Such a staff member will be known as the Auchincloss Fellow.

"This fund," said Dr. Hugh Auchincloss, Jr., Associate Attending Surgeon and Assistant Professor of Clinical Surgery, "was established over the past five years in conjunction with the Columbia-Presbyterian Medical Center Fund through contributions from friends and members of my father's family who wished to honor him. It is hoped that the fund will continue to grow through future donations to the principal amount."

Dr. Hugh Auchincloss, Sr. joined the P&S staff in 1909, and in 1910 he helped create the surgical pathology laboratories. In 1921 Dr. Auchincloss was appointed Associate Professor of Surgery at the Columbia College of Physicians and Surgeons and chief of the Second Surgical Division under Dr. Allen O. Whipple. He retired in 1946 as Professor of Clinical Surgery.

Dr. Hugh Auchincloss, Sr.

In 1932, Dr. Auchincloss presented his collection of more than 200 letters and personal items of Florence Nightingale to the School of Nursing, in memory of his mother, on the occasion of his daughter's graduation from the School of Nursing.

## SPORTS EQUIPMENT NEEDED AT MARY HARKNESS UNIT

Mary Harkness Unit can use any outdoor sports equipment that is in good condition but not now in use.

If you wish to dispose of games that provide mildly active exercise, such as croquet, shuffleboard, quoits or miniature golf, they can provide an excellent outlet for convalescents, according to Miss Margaret Del Mar, Unit Manager.

"Because illness diminishes the patient's feeling of independence and competence, it is essential to guide him into

Mrs. C. Suydam Cutting, Women's Auxiliary, New York Orthopaedic Hospital; Treasurer, Charles Pope, manager of ophthalmic dispensing; Secretary, Miss Anne Walters, Secretary in Doctors Private Offices, and Assistant Secretary, Miss Marion Holland, Nursing.

The invocation was given by Rev. Guy S. Vinci and the benediction by Rev. Robert B. Reeves, Jr., hospital chaplains.

## WIDOW THANKS FRIENDS HERE FOR KINDNESS

Mrs. Elizabeth Gutierrez has had much sadness in her life, but she speaks only of the joys. Hers is such a wonderful philosophy that one who goes to console comes away uplifted.

Recently bereaved by the death of her husband, Peter, a familiar figure around the Medical Center where he repaired typewriters, she wrote a poignant letter to Mr. A. J. Binkert expressing gratitude for the care given her husband during his terminal illness: "I wanted to express my thanks to you, for all the many things done for Peter and me. My consolation now is in the knowledge he had the best of medical care; the flowers, mass cards and calls from more than 400 friends in the hospital, and in not being alone although he is gone.

"Fourteen years ago I married Peter Gutierrez who was

In his talk, Mr. Binkert also offered a prayer by the "Class of '66" which read in part:

"Lord, Thou knowest better than we know ourselves that we are growing older . . . Keep us from getting talkative . . . Teach us the glorious lesson that occasionally it is possible that we may be mistaken . . . Keep us reasonably sweet . . . We want a few friends at the end."

employed by Manhattan Typewriter Company, as a service repair man. Most of the employees knew him and very affectionately called him 'Pete the typewriter man.' You knew him, too, and he often commented on what a great man you were, kind and humble, always greeting him with a word of recognition or conversation as you passed him in the hallway."

Mr. Gutierrez died on April 20th in the Hospital. Appreciative of the wonderful attention he had received, his widow wrote:

"Universities and hospitals may give us knowledge and experience, but God puts the heart in the doctors and employees who treat a patient as their own."

She and Peter met 15 years ago in the laboratory in Eye Institute where the petite, vi-

## Jailer Memorial Lab Dedication Set For June 27

The Joseph W. Jailer Memorial Laboratory in the Department of Medicine will be dedicated Monday, June 27 at 2:30 P.M. A reception will be held in the Conference Room, 9th Floor Stem.

The laboratory has been made possible by a memorial fund given by friends and associates of Dr. Jailer, Associate Attending Physician until his death in 1960 at the age of 46.

Dr. Nicholas P. Christy, Associate Attending Physician, Vanderbilt Clinic, will deliver the dedicatory address. Dean H. Houston Merritt and Dr. Stanley E. Bradley, Director of Service for Medicine, will make acceptance speeches.

## GNYP REPORT

The Greater New York Fund 1966 Campaign report as of May 20th shows contributions of \$6,763, by 1,646 employees.

Many departments have not completed their solicitations and it is expected that the total will exceed last year's final figure, \$11,502. The drive continues through June 31.

vacious technician has worked for twenty years. They were married shortly thereafter.

Texas-born Elizabeth de Montmallin had had a troubled life. Widowed first at an early age, she taught school in Texas until her daughter was grown, then came on to New York.

After a trip to Valencia, Spain, to attend a memorial mass for her husband in the church where he was baptized and where they visited on two happy occasions, Mrs. Gutierrez will spend some time with friends in Torremolinos and then return to her work at Eye Institute.

## Irving Schneider Honored At Retirement Tea May 25

Irving Schneider, Interviewer in the Ward Admitting Office, will retire at the end of this month. He came to the Hospital in 1947 as reservation clerk in Harkness Pavilion. Seven years later he transferred to his present post where he is responsible for the transfer of patients for convalescent care to Mary Harkness Unit.

A resident of the Bronx, Mr. Schneider expects to spend a good deal of time in Florida where he has many interests. These include the usual outdoor hobbies in that warm clime, and four of his eight lively grandchildren, who make their home in

Irving Schneider

Venice, Fla. and look forward to Grandpa's visits.

A farewell reception was given for Mr. Schneider on May 25.

# P. H. Librarian Vacations On Pacific Dream Island

Barbara Martin, Librarian of the Milbank Library, has recently returned from a fabulous four-week vacation on the island of Maui, in Hawaii, where she was a guest of Monte Fletcher and her husband, both teachers in a girl's boarding school on Maui. Mrs. Fletcher, until two years ago, worked in our Public Interest Department.

"Maui is still unspoiled," Barbara said, "and must be one of the world's most beautiful islands, with clean beaches, whales swimming off shore, magnificent sunsets, frequent rainbows, exotic flowers, and near perfect climate. The 'aloha' spirit prevails and people are truly friendly and helpful. In addition to the pineapple, sugar and ranching enterprises on the island, many tourist hotels are now being planned, and a new jet airport will soon make this lovely island as accessible as Honolulu."

Barbara went with the Fletchers to Haleakala, the 10,000-foot dormant volcanic mountain on Maui, whose crater is large enough to hold all of Manhattan Island. They then made a trip around Haleakala, following the coast line. "The windward side of the mountain is lush and tropical," Barbara said, "with cascades flowing down to the sea. The leeward side is mainly desert and the only sights for miles around are cattle, Hawaiian cowboys and an occasional jeep."

Barbara and Mrs. Fletcher took a plane trip to Hawaii, the largest island in the Hawaiian chain and the only one that is still growing, because frequent volcanic eruptions add acres to the land area. They stayed overnight at Volcano House, on the rim of Mauna Kilauea crater—one of the two still live volcanoes on Hawaii. Lava flows and hissing steam banks give this area an eerie, prehistoric atmosphere, according to Barbara. Pele, the Goddess of the Volcanoes, was last heard from in December when she ordered an eruption in a vent of Mauna Kilauea.

"Hawaiians still fervently believe in Pele," Barbara said, "and she is said to appear in various forms before volcanic activity."

Hawaii is also the home of the Parker Ranch, second largest in the world, and there are huge fields of wild orchids and miles of black beaches.

If you are a golfer and find it difficult to play around here, you might take a hint from Barbara and try Maui, where there is a magnificent golf course, practically empty, and there are no green fees. Maui is only 5,000 miles away.

How about sharing your vacation adventures with THE STETHOSCOPE? (Send pictures and story to Department of Public Interest—PH-4)

Some of the world's most beautiful beaches are found in Hawaii.

## ART SHOW BIG SUCCESS

The 16th Annual Arts, Photography and Crafts Exhibit which closed May 13 was an outstanding success judging by the response of both exhibitors and visitors.

Entries, numbering 144, were attractive and diversified. There were more than 1600 visitors.

Chaplain Robert B. Reeves, Jr., Chairman of the Medical Center Art Committee, extends his appreciation to the members of the Committee who helped mount the show, and to the staff and personnel at the Medical Center whose interest and talents make this event popular.

Miss Patricia Parke with Dr. and Mrs. Alfred G. Langmann, admire a sculpture by Dr. Bard Cosman.

## 13 Auxilians On UHF's Latest Roll of Honor

13 Members of the Women's Auxiliary teams at the Medical Center are listed in the 1965 Campaign Honor Roll of the United Hospital Fund for having served in two or more campaigns and obtaining at least 30 gifts, including three new gifts. They include: Mrs. Robert Burrows and Miss Hope Kingsley, from Babies Hospital; Mrs. Charles E. Adams and Mrs. Donald K. David, Neurological Institute; Mrs. Edward H. Gerry, Mrs. Thomas Hitchcock and Mrs. William G. Maguire, New York Orthopaedic; Mrs. C. Redington Barrett, Mrs. Ralph H. Boots, Mrs. Walton P. Kingsley, Mrs. Rudolph Schullinger, Mrs. Herbert H. Schwamb and Mrs. Edgar Stillman, Presbyterian.

Honorable Mention is made of the following workers who obtained 4 or more new gifts and renewals of the donors on their 1964 lists: Mrs. John Sloane, Mrs. Catherine B. Van Bomel and Mrs. Sidney J. Weinberg, Neurological; Mrs. Willis L. M. Reese, Mrs. Prentice Talmage, Jr., and Mrs. Donald L. Wallace, New York Orthopaedic; Mrs. A. Gerard DeVoe, Mrs. R. H. E. Elliott, Mrs. Charles A. Flood, Mrs. Felix Mulgrew, Mrs. Richard J. Stock and Mrs. Frank Stinchfield.

Elizabeth S. Gill, Associate Dean (Nursing), prepares to award nursing pins and certificates as Dr. Merritt concludes his address.

## AMBULANCE DRIVERS SCHOOL PLANNED FOR JUNE 9 TO 11

Dr. Charles S. Neer, II, Associate Attending Orthopaedic Surgeon, will direct the first practical course on emergency aid and transportation of critically ill and injured persons to be held in New York City under sponsorship of the Committee on Injuries of the American Academy of Orthopaedic Surgeons, June 9, 10,

11, at the Police Academy, 235 East 20th Street.

Wide interest in the course has produced a capacity registration of 250 from this area and 123 other cities in 15 states and Canada.

Lectures and demonstrations on emergency care will be offered with the cooperation of the New York City Police Department for ambulance attendants, policemen, firemen, public health, civil defense and other officials, dealing with the initial handling of persons who are ill or hurt in accidents.

Mayor John V. Lindsay is honorary chairman of the advisory committee. Presiding will be Dr. Alexander Garcia, Assistant Attending Orthopaedic Surgeon. Among the lecturers will be Drs. Frederick O. Bowman, Jr., Assistant Attending Surgeon; John H. Laragh, Associate Attending Physician; Carl R. Feind, Assistant Attending Surgeon; George R. Merriam, Jr., Assistant Attending Ophthalmologist; James N. Worcester, Jr., and David L. Andrews, Assistant Attending Orthopaedic Surgeons, and Charles M. Steer, Associate Attending Obstetrician and Gynecologist.

ing its efforts from its Medical Center location. Funds for the extension and renovation of Babies Hospital, for construction of the Doctors' Office Building and to complete the financing for the Research Building and the Augustus Long Medical Library are still being sought.

## NURSES

*Continued from page one*  
is coming to . . ."

"Doctors, like spoiled husbands, now sit in their offices reading with incredulous eyes the nurse's 'Dear John' letter. The soothing hand on the fevered brow is as obsolete as the whale oil lamp in the Lady's other hand. The Lady With The Lamp is replaced by the professional woman with a searchlight, who scans the far horizons of professional opportunity."

In discussing the role of the medical profession in today's rapidly changing world, Dr. Humphreys said, "In the name of progress and improvement, the whole traditional structure of medical care is being reevaluated, rearranged and rebuilt on new foundations. To the older generation much of value seems, like the flowering cherry trees, destined for the dump, and we are frequently distressed and depressed by the apparent vista. But this is the penalty of age. For youth, change is a stimulus, an excitement, an inducement for constructive leadership. . . . Ladies, nursing is in your hands!"

Presenting the graduates their degree of Bachelor of Science was Dr. H. Houston Merritt, Dean of the Faculty of Medicine. Dr. Merritt was assisted by Miss Helen Pettit, Professor of Nursing.

Miss Elizabeth S. Gill, Director of Nursing and Associate Dean (Nursing), assisted by Mrs. Frederic F. deRham, a Trustee of the hospital, presented the nursing pins and certificates.

Recipients of special awards were: Martha Maria Marx, The Margaret Eliot Prize; Mary Elizabeth Glover, the Medal Award of the Alpha Zeta Chapter of Sigma Theta Tau, the Nursing Honor Society, and Ruby Ann Sherman, the society's Honorable Mention award.

Hospital chaplains participating were the Rev. Robert B. Reeves, Jr., Rabbi Marvin J. Goldfine and Father Guy S. Vinci.

Here are the nursing pins and special awards for the 118 graduates.

## Development Headquarters Moves Uptown

The Columbia-Presbyterian Medical Center Development Fund office is newly located on the fourth floor of Presbyterian Hospital. The staff moved up here in March from the quarters in the Graybar Building which they had occupied since the inception of the Development Campaign in 1960.

During the drive this office assisted with the research, presentations and solicitations of capital funds which raised more than \$50,000,000 for the building program at the Medical Center. Construction of the Service Building, the William Black Medical Research Building, the Alumni Auditorium and the Radiotherapy Center was made possible with these funds. The present renovation of the College of Physicians and Surgeons and the renovation to be done in Presbyterian Hospital are also part of the Development Program.

To meet the costs of an extended building program, the fund-raising office is continu-

## 5-Day Fire Safety Program Successful

From May 23 through 27, members of the nursing, housekeeping, and maintenance staffs were given one of the most intensive demonstrations of fire safety in the history of the hospital. The program opened with a film shown in Maxwell Hall, then moved to the South Property parking lot for practice in evacuating patients, the use of fire extinguishers, in reviewing the reporting of fires and the prospective measures to be taken until help arrives.

VOLUME XXI, NUMBER 7

JULY-AUGUST, 1966

## 12 Retired From Staff On June 30

Eleven Medical Center doctors and a dentist retired June 30. Nine held both hospital and medical school appointments; three were named Emeritus Professors and Hospital Consultants; all will continue in private practice.

Dr. Hattie E. Alexander, Professor of Pediatrics, has been at Babies Hospital since she came as an intern in 1931. After receiving the M.D. degree from Johns Hopkins in 1930 she first interned in Pediatrics there.

Recognized for the development of a serum for spinal meningitis, she has won international acclaim for her accomplishments as a researcher, teacher and physician. The Baltimore-born pediatrician is

Dr. Hattie E. Alexander

the recipient of many awards, among them the Columbia-Presbyterian Medical Center Distinguished Service Medal, presented at the 75th Anniversary celebration of Babies Hospital; the E. Mead Johnson Award for Research in Pediatrics; the Elizabeth Black-

## Dedicate Center For Radiotherapy

Dr. Harold W. Jacox, chief of Radiotherapy, tells guests at dedication ceremonies that Radiotherapy Center is a "dream come true."

"A magnificent dream come true!"

With those words, Dr. Harold W. Jacox, Attending Radiologist and chief of Radiotherapy, described the new Radiotherapy Center as it was formally dedicated in June. Located between Babies Hospital and Presbyterian Hospital near Broadway, the facility triples the Medical Center's capacity for radiotherapy and

centralizes treatment that has been given at five different locations.

Guests at the dedication included various department directors, many prominent radiotherapists, public officials and contributors to the Medical Center Development Program. They toured the building's bright, new, spacious treatment, waiting and recep-

## Public Interest Department Wins Two National Awards

Presbyterian Hospital's Department of Public Interest has won double recognition of merit in the annual Malcolm T. MacEachern Public Relations Competition. Sponsored by "Hospital Management" magazine, this contest is participated in by hospitals and medical centers throughout the United States and Canada.

The department received an award for the excellence of its overall public relations work. This includes preparing miscellaneous publications, conducting press relations, and other activities aimed at keep-

ing the Medical Center family—and the public—informed of events here.

After reviewing news publications submitted by hundreds of institutions, the contest judges also gave *The Stethoscope* an award for merit. This was in the contest category of hospital bulletins that have readers both in, and outside, the institution.

The two award plaques will be presented in Chicago on August 29 during the annual convention of the American Hospital Association.

## Senior Citizens Are Scarce On Opening Day of Medicare

Admission clerks, doctors, nurses, technicians and "the MAC unit" were fully mobilized on Friday morning, July 1, expecting an influx of elderly patients seeking medical treatment or hospitalization under Medicare. To the pleasant surprise of all, Friday turned out to be an average day, slower than usual, if anything.

Dr. Joseph E. Snyder, Assistant Vice President and Director of Vanderbilt Clinic, suggested two possible explanations: the extreme heat and the upcoming holiday weekend. But when

## STETHOSCOPIA

### • JUNE, JUNE, JUNE

Catherine Dunphy, R.N., in Sloane, and Dr. Robert P. White, P&S '66, were wed recently.

Cynthia Jane Davis, R.N., in Neuro, and Thomas Peter Sculco, first year medical student, were married June 4 in Rhode Island.

Virginia Whipple Hicks, R.N., School of Nursing, and Dr. Robert Edward Barrett, Assistant Neurologist, had a June 4 wedding.

Doreen Elizabeth Mulreany, R.N., School of Nursing, and Dr. John Justus Harris, P&S '66, were married on June 4.

Dr. Maynard Boynton Wheeler, P&S '66, and Miss Sandra Lade of Weston, Conn., had a June 4 wedding, too.

The Pauline A. Hartford Memorial Chapel was the scene of the recent wedding of *Siri Sophar*, secretary, and Mr. Kevin Lew-hanson, School of General Studies, Columbia.

Dr. Charles R. Feuer, Resident in Radiology, and Miss Judith Poussineau Bassin, Hamden, Conn., were married June 19.

### • BETROTHALS

Susan Prosser Bysshe, Class of '67, School of Nursing, and Mr. Stephen Brent Wells, a senior at Princeton, are engaged. Miss Bysshe is the daughter of Dr. and Mrs. Stanley M. Bysshe.

Karel Mortenson, R.N., at Neuro, married Mr. Neil N. Koenig, a student at Union Theological Seminary, on July 2.

Francine Levine, secretary in Occupational Therapy, and Dr. Frederick David Nisenholz will be married in August.

### • CONGRATULATIONS

Mr. and Mrs. Luis Villegas are the parents of a daughter, Helen. Father works in our Mail Room.

### • HELLO

Katherine Courchesne, formerly in the Alumnae Shop, is now on PH 10, and Mrs. Margaret Donovan, who worked there, too, is now at the Information Desk, in Vanderbilt Clinic.

### • VACATIONERS

Father Guy Vinci is enjoying a European tour.

Mrs. Anne Lubrecht, Tour Hostess, vacationed at her country home in Monticello, N. Y.

### • NEWS IN NURSING

New Supervisors in the Operating Room are Esther Turkington and Martha Zanichkowsky.

Promotions to Head Nurse include: Maryellen Walsh, Babies Hospital; Donna Smiley, Vanderbilt Clinic; Jeanette Knowlton, Presbyterian; Faith Johnson, Sloane, and Elizabeth Gawn, Harkness.

### • ITEMS OF INTEREST

Mrs. Earle Kress Williams, member of the Neurological Institute Auxiliary, has been honored by the Junior League of the City of New York, Inc. She received the 1966 Sustaining Members' Award "in recognition and appreciation of the outstanding use to which she has put her Junior League training in a distinguished career of volunteer service to the community."

A member of the Neurological Auxiliary for over thirty years, Mrs. Williams is active on the Neurological Women's Auxiliary Team for the United Hospital campaigns.

The Medical Center Nursery School is taking registrations for the 1966-67 season. Information may be obtained from Mrs. Shelia Srinivasian at SW 5-7187, or Mrs. Barbara Sciarra at SW 5-1558.

PAGE TWO

## DOINGS OF DOCTORS

DR. STEPHEN TROKEL, Assistant Resident in Ophthalmology, received the William Warner Hoppin Award for the best paper of the evening at Resident's Night, Academy of Medicine, Section on Ophthalmology.

DR. ANDREW DE ROETH, JR., Assistant Attending Ophthalmologist, lectured at a meeting of the Ophthalmological Society of the United Kingdom at Edinburgh, Scotland, recently.

DR. HUGH CHIOLDI, Assistant Professor of Physiology assigned to Physical Medicine and Rehabilitation, delivered a paper at the Arctic Aeromedical Laboratory Symposia at Fort Wainwright, Alaska last month.

DR. JAMES RYAN, of the Psychiatric Consultation Service, presented a paper at the meeting of the American College of Physicians at the Americana Hotel.

DR. HUGH AUCHINCLOSS, JR., Associate Attending Surgeon, was a panelist at the Spring Cancer Society in Las Vegas.

DRS. WALTER BERDON, Assistant Attending Radiologist, and DAVID H. BAKER, Associate Attending Radiologist, presented a paper at the London Meeting of European Society of Pediatric Radiology recently.

DR. GEORGE M. HOWARD, Assistant Ophthalmologist, presented papers at the Section in Ophthalmology, AMA, and the Association for Research in Ophthalmology, both in Chicago last month.

DR. KARLIS ADAMSONS, JR., Associate Attending Obstetrician and Gynecologist, DR. INGEMAR JOELSSON, Research Fellow in Obstetrics and Gynecology, DR. ALLEN I. HYMAN, Assistant Attending Anesthesiologist, and DR. SALHA DANIEL, Research Associate in Anesthesiology, served as Visiting Scientists at the NIH Laboratory of Perinatal Physiology in San Juan, P. R. Their work was chiefly concerned with the effects of high oxygen environment upon the cardiovascular system and the acid-base state of the fetal rhesus monkey.

Dr. Adamsons recently took part in the 3rd Annual Children's Memorial Conference on Respiratory Problems, the Annual Meeting of the Society for Gynecologic Investigation, the Tri-City Meeting of the Philadelphia, Boston and New York Obstetrical Societies and in a seminar at the Metabolic Research Center, University of California, San Francisco Medical Center.

DR. LEO SROLE, Professor of Psychiatry (Social Sciences) addressed two Regional Research Conferences of the American Psychiatric Association recently—one met at the University of Maryland, the other in Boston. The purpose was to focus attention on psychiatric epidemiological data, their significance and various applications in mental health planning.

DR. DAVID B. MOORE, Assistant Attending Obstetrician and Gynecologist, has been elected secretary of the New York Obstetrical Society.

DR. GEORGE ROSEN, Professor of Public Health Education, has received the first Hafner Award for his paper "Noah Webster—Historical Epidemiologist." The award was made at the 39th annual meeting of the American Association for the History of Medicine, held in Rochester, Minn. The \$200 prize is given annually for a meritorious article originally published in English during the calendar year.

DR. DANIEL C. BAKER, JR., Director of Otolaryngology, has been elected chairman for the coming year, and DR. FRANZ ALTMANN, Attending Otolaryngologist, is secretary of the Section on Otolaryngology of the New York Academy of Medicine.

DR. HELEN O. CURTH, Special Lecturer in Dermatology, is President of the Dermatologic Society of Greater New York for 1966-67.

DR. JOHN CONLEY, Consultant in Otolaryngology, has been elected President of the American Academy of Facial Plastic Surgery.

DRS. JOHN CONNELLY, Consultant in Otolaryngology, WILLIAM V. HEALY, Assistant Attending Surgeon, and ARTHUR PURDY STOUT, Consultant in Surgery, have authored a paper "Fibromatosis of the Head and Neck" which was presented by Dr. Healy at the Annual Meeting of the Head and Neck Society in Denver, Colo.

DR. HILAL

DR. STOUT

DR. SADEK K. HILAL, Assistant Attending Radiologist, received the degree of Ph.D. in Radiology from the University of Minnesota recently. Dr. Hilal is one of four who hold this degree in the United States.

At the 87th Annual Meeting of the American Society of G.U. Surgeons, May 25th to 27th, Dr. George W. Fish, as Chairman of Awards Committee of the G.U. Surgeons, made the presentation of the Barringer Medal to Dr. Reid Nesbit of Ann Arbor, Professor of Urology, University of Michigan.

At the A.U.A. Meeting in Chicago in June Dr. Fish presented a paper in the New Historical Forum entitled "Dr. George Goodfellow—America's First Prostatectomist—One of Urology's Most Colorful Characters" Dr. Goodfellow was Dr. Fish's uncle. Dr. Fish was elected to the Executive Committee of the American Section of the International Society of Urology. He was appointed Chairman of the Liaison Committee of the A.U.A. for the Army, Navy, Air Corps and Veterans Administration.

Dr. Fish was elected Chairman of the Veterans Administration National Consultant Group at the Washington meeting on June 13. He also attended the Second Reunion of World War I Overseas Flyers at Dayton Wright Air Force Base, Dayton, Ohio.

# Cardiac Monitor Unit Aids Sick Hearts "Too Good To Die"

The patient had suffered a closure of a large coronary artery. But that was three days earlier and now, at 4 A.M., she seemed to be out of further danger.

Her respiration was regular and her heart action seemed satisfactory—till suddenly she began gasping for breath. A red light went on and a warning buzzer sounded insistently.

Immediately, the nurse on duty was at the patient's side, watching the woman's cardiogram as it traced its path

the ninth floor of Presbyterian Hospital, where some 500 heart patients have received intensive care over the past 18 months. Thanks to the unique concentration of human and electronic resources, each of those months has seen restored to their families patients who might otherwise have succumbed to cardiovascular accident.

Coronary occlusions, which are America's No. 1 cause of death, are commonly followed by some sort of further heart

ous electrocardiogram recorded. One such screen is mounted near the patient's bed; a second, "slave" scope is in the monitoring annex across the hall where a permanent, continuous electrocardiogram also is automatically put on paper 24 hours a day for study.

"If we're lucky, we can see trouble coming on the graph and take steps to prevent it," according to the Cardiac Arrest Committee that directs this unit. "For instance, we may see some extra heartbeats coming at suspicious intervals in the normal rhythm. We can use certain drugs at that point to regularize the beat."

The monitor unit takes a three-way approach to the management of acute coronaries: (1) Patients are under constant observation by nurses, physicians and electronic instruments; (2) The instruments can provide electronic clues to changes in a patient's heart action and sound an alarm should a major change occur; (3) Trained people are always at hand, with equipment and supplies, to meet such emergencies.

Oxygen, respirators and resuscitation devices are among the items always available to meet possible threats. Also ready are defibrillators, used to control the ventricular fluttering responsible for so many of the deaths that follow coronary thromboses. Of monitored patients who have gone into ventricular fibrillation in the unit, about 35 percent have been rescued and released from the hospital in generally good condition—a record the Committee does not believe has been reported anywhere else.

Ventricular fibrillation once occurred in a 27-year-old woman on the maternity floor who had just borne a baby. Doctors

Miss Teresita Maxwell checks continuous electrocardiogram of patients.

answering the emergency summons found that she had gone into cardiac arrest, and it took two, long, dangerous minutes before they could even start resuscitation. The woman suffered two more heart stoppages after being brought into the monitoring unit, but there she was able to be revived in a few seconds. Eventually she underwent surgery to correct her problem and returned home, a healthy mother at last, to care for her family.

This woman had congenital heart disease, but electrical "accidents" can kill strong

unit since its inception in 1964. Specially-trained nurses, house staff and attending physicians all work in close harmony, watching patients for any tell-tale signs of trouble and then moving quickly to prevent it. "Preventing the complications that often follow heart attacks: That's the basic reason for the unit," says Miss Elizabeth Jackson, assistant head nurse.

Educationally, the unit enables physicians in training to relate cardiographic data to a patient's condition and treatment. The data being gath-

Medical students and physicians discuss intensive care at monitor unit.

across an electronic viewing screen. Quickly, she summoned an interne on duty across the hall and together they took steps that prevented the woman from suffering a possibly fatal heart stoppage.

"The patient is home with her husband and children again, carrying on her normal duties," the physician recalls. "Thanks to the unit, we were able to spot the trouble and take immediate corrective action."

First in New York, and first in the country for a teaching medical center, "the unit" is the Cardiac Monitor Unit on

disturbance. Abnormal rhythm may develop, for instance, including ventricular fibrillation, which is a convulsive contraction of the heart chambers that normally push blood into the arteries. The Cardiac Monitor Unit attempts to detect such troubles and prevent them; or once having occurred, it makes a quick and concentrated effort to treat the troubles before the damage done is irreparable.

Night and day, the watchful eyes of a doctor or nurse are seldom off the patient, or far from the oscilloscope screen where they may see a continu-

Cardiac patients are under virtually constant guard—human and mechanical.

hearts, too. A healthy, middle-aged man complained of distress after eating a heavy, holiday meal and collapsed. He appeared dead on arrival in the unit, but was defibrillated and returned home with all tests of his heart normal.

Actually, the milder the heart attack the greater the need for cardiac monitoring, as it was explained to the American Heart Association last Fall. Massive thromboses may destroy so much heart muscle it becomes impossible to restore the victims to anything resembling normal activity; monitoring aims at saving hearts that are "just too good to die."

"This is a really cooperative effort," says Miss Teresita Maxwell, floor supervisor who has worked on the monitoring

ered there are adding to our knowledge of how to overcome cardiovascular problems—and helping physicians learn how to predict and prevent them.

A medical interne is assigned to the unit each month and special rounds are held twice weekly. Nurses trained at the unit may now undertake resuscitation efforts by themselves when required. Some will receive instruction in defibrillating patients, in case a doctor is delayed in arriving.

"We are hard-pressed to meet the need for this kind of life-saving, intensive care," says the Cardiac Arrest Committee. "Hopefully, our present four-bed unit will grow in size and service, and be replaced by a larger one offering better facilities and greater privacy for patients."

Through the night, as through the day, the Cardiac Monitor Unit is on guard—and help is ready to meet emergencies.

A. J. Binkert, Executive Vice President, congratulates Fredrick M. Eaton, Hospital Vice President and Trustee, on his dedication speech.

Dr. William B. Seaman, Director of Radiology, describes the 24-million-volt Betatron to interested guests touring the new center.

Dr. H. Houston Merritt, Dean of P&S, listens attentively as Dr. Seaman explains features of new megavoltage linear accelerator.

## DEDICATION

*Continued from page one*

tion rooms, and saw some of the supervoltage devices that will focus radiation on malignant cells and destroy them. Among these are the hospital's 24-million-volt Betatron, radiocobalt machines and a new mega-voltage linear accelerator. Final adjustments are being completed now and the first patients admitted for treatment.

Last year the radiotherapists gave some 16,000 treatments to more than 1,100 patients. Over 500 of these received Betatron treatments before the machine was dismantled temporarily to make way for the new Center. The scope of this attack against malignant disorders is expected to increase considerably in the future.

Dedication guests also toured the offices and conference rooms that are on the upper floor of the new Center.

This is at the hospital's basement level. At the tunnel level, they viewed the X-ray devices shielded overhead by 3½ feet of concrete, and gathered in the panelled entrance lobby for the brief dedicatory program.

As master of ceremonies, A. J. Binkert, executive vice president of the hospital, expressed thanks to all those organizations and individuals whose efforts and generosity had helped the Radiotherapy Center become a reality.

The main speaker was vice president and hospital trustee Fredrick M. Eaton, a co-chairman of the Medical Center Development Fund. Noting that the Medical Center had always been a leader in the field of radiology, he pointed out that Columbia University had awarded a Barnard Medal to the father of the X-ray, Wilhelm Roentgen, in 1900—only four years after the German physicist had discovered the phenomenon.

Mr. Eaton outlined the development of X-ray therapy from early days when it was advised that patients be subjected to "no more than five hours' exposure at no shorter distance than six inches." Stating that the value of radiotherapy had been steadily increased until today there is a serious shortage of these specialists, he predicted that if present trends continue, by 1975 we will have only one-third the number required.

In his remarks, Dr. Jacob called the new installation "a colossal challenge," and himself "one of the world's luckiest and most grateful men" to see the realization of the Radiotherapy Center after years of hopeful effort. He said that while the physical resources of the new Center are impressive, even more important is the dedicated spirit of the people working in it. Acknowledging the pioneer radiotherapeutic work done here over the years, the chief of radiotherapy declared, "We have built on the shoulders of others, and those who come after us will go on from where we leave off."

Dr. Jacob further pointed out that while the prime purpose of the Radiotherapy Center will be to treat patients suffering malignant disease, "just as important will be radiotherapeutic research and the training of Radiotherapists." He expressed hope that some of these Radiotherapists will pursue academic careers to educate still more physicians in radiotherapy.

Also on this theme, Dr. William B. Seaman—Director of Radiology—said the growing importance of radiotherapy may be inferred from the fact that two-thirds of cancer victims require it at some time during their illnesses. This is an "imposing challenge," he declared, and "we will try our utmost to meet it."

Concluding the program, Dr. Seaman displayed an X-ray treatment record of World War I vintage presented him for the occasion by Miss Margaret F. Lawry, secretary to the first radiotherapist of Presbyterian Hospital, the late Dr. James A. Corscaden. The record from 1914 concerned irradiation of a uterine tumor with X-rays of 90,000-volt energy. Today's Betatron produces X-rays with 24 million volts.

## MAILBAG

"I wish to extend, though belated, my thanks and deep appreciation for the care and compassion shown my beloved husband, who was a patient in Harkness Pavilion during the past year. My sincere thanks to the nursing staff and the many doctors who gave him their assistance,"—from the wife of a deceased patient.

# The Stinging Insects Most Dangerous Now!

From now until first frost a lot of bad jokes will be told about people and their summer allergies, but they will not be funny to many of us, especially those who have severe allergic reactions to the stinging insects—bees, wasps, hornets and yellow jackets.

July and August, when more of us go into danger areas on weekends and on vacations, are the months when stinging insects are most prevalent and dangerous. What can we do to protect ourselves, and what should we do if we react allergically to a sting?

To learn some of the answers, *The Stethoscope* asked Dr. Walter R. Kessler, Associate Attending Pediatrician and Director of the Pediatric Allergy Clinic at Babies Hospital, the following questions:

*Is allergy to insect stings much of a problem today, particularly here at Presbyterian Hospital?*

Yes, and we are seeing more of it each year. Nationally, insect allergy is far more dangerous than snake bites. Over a 10 year period, death due to venomous snakes was 138; to the venom of stinging insects, 229. And for every death due to stings, there are numerous unreported serious systemic reactions.

*Are allergic reactions sudden or gradual?*

Reactions may be delayed, but usually are dramatically sudden in the more serious cases. The interval time between sting and death in 208 of the above 229 victims was less than one hour. Thus, immediate medical treatment is needed at the first sign of serious symptoms following a sting.

*What are the symptoms of an allergic reaction?*

In the non-allergic there is only pain and slight swelling at the site of the sting. Those

who are allergic may suffer hives, severe swelling, and itching. In serious systemic reactions, respiratory symptoms are warnings of extreme danger. The victim feels a constriction in his throat and chest and often has a feeling of impending doom as breathing is impaired. At first sign of respiratory symptoms, the victim should be rushed to a doctor because unconsciousness and death can follow.

*Can one tell in advance if he is allergic to insect venom?*

No. Skin tests are not usually done on individuals without a previous history of a severe reaction to an insect sting; but they do not help to differentiate those persons who will get into trouble from those who will simply be uncomfortable. A safe rule to observe is this: If you have had one severe reaction to a sting, specific hyposensitization treatment should be started because the next sting may be life threatening.

*If one knows he is vulnerable, what can he do to protect himself?*

Epinephrine (1:1000) by injection is the emergency treatment of choice in severe reactions. Highly vulnerable patients, or their parents, should be provided with epinephrine and a disposable syringe and needle, and be instructed in their use. They should keep the drug available wherever they may go.

Hyposensitization treatment (injection of an extract containing the antigens of the common stinging insects given regularly over a period of several years) provides immunity in about 85% of those so treated. The extract should contain antigens of all stinging insects because the victim, in a majority of sting reactions, is unable to identify

*Continue on page five*

Dr. Walter R. Kessler

## ALLERGY

*Continued from page four*

with certainty the insect that stung him. Some experts in this field, however, prefer the use of extracts prepared from the venom of a single insect.

Bright colors, rough, coarse fabrics, and the perfumes used in hair oils, skin lotions and most cosmetics are powerful attractants to the stinging insects. The vulnerable should avoid wearing them when in danger areas.

\*

*What should one do immediately following any sting?*

When the honey bee stings, and this is the most common stinging insect, its stinging apparatus is usually torn away and remains in the victim with its venom sac attached. Never rub or slap at the burning sting wound, because this will inject the venom still remaining in the sac. Lift the stinger out with tweezers if possible, but always try to avoid injecting more venom.

It is said that bees, when angered, deposit a substance at the site of the sting that will attract other bees to it. This may account for so many stings often found in a tiny area. Thus, when stung, get away quickly, inside if possible.

\*

*Isn't everyone vulnerable to stings if enough venom is injected into him?*

A small amount of venom can be very dangerous to the highly sensitive, but those who do not react allergically can tolerate a fantastic amount of insect venom.

Recently, the Pharmaceutical Manufacturers Association *Bulletin* quoted a medical report from South Africa that told of a 30-year-old Englishman who was attacked by a swarm of bees. Within seconds they were three inches thick from his waist upward. He dived into a river, but the bees continued to sting his head. He covered his head with his shorts, but they stung through the cloth. He then plastered the shorts with mud, leaving a hole for breathing. The victim endured this ordeal for five hours until rescued.

His face, scalp, trunk, and arms were black with stings. The drug hydrocortisone was injected, iodine was applied, aspirin was swallowed, adrenaline was injected, and within five days the man was discharged from the hospital. Doctors counted 2,243 individual stings. The previous maximum number of stings survived was reported as 600.

Therefore, unless you are allergic, it would seem that you have little to fear from stinging insects.

## Moses Awards In Neurology

The third annual Lucy Moses Prizes in Neurology, two \$500 awards, were presented by Mrs. Moses at a tea at the Neurological Institute June 10. They are awarded for work in basic science and for clinical studies done at the Medical Center.

Dr. Stanley M. Crain, formerly Assistant Professor of Anatomy (assigned to Neurology) received one of the prizes for "perfection of the technique for the growth of nerve cells in tissue culture and the demonstration of the development of electrical activity in the cells. This work is of great importance in the understanding of the functioning of the nervous system," the citation read.

Dr. Crain is now Assistant Professor of Physiology at the Albert Einstein College of Medicine.

The award for the best clinical study in Neurology was shared by Drs. Alan M. Aron and John M. Freeman, formerly Visiting Fellows at the Neurological Institute.

They were cited "for their studies of chorea (Sydenham's chorea) in childhood. They have carefully traced the natural history of this disease and have shown that the episode of chorea is only one incident in the course of the disease. They emphasized the importance of cardiac and psychological sequelae."

Dr. Aron is now Assistant Attending Pediatrician at Mt. Sinai Hospital in New York. Dr. Freeman is Captain, Medical Corps, U. S. Army, stationed at Walter Reed Hospital, Washington, D. C.

The donor of the awards, Mrs. Moses, and her late husband, Henry L. Moses, have contributed greatly to medical advancement, particularly in Neurology. The Henry and Lucy Moses Chair in Neurology in the College of Physicians and Surgeons was established in 1963 with a gift of \$500,000 by Mrs. Moses. The appointment is held by Dr. H. Houston Merritt, dean of the medical school.

## In Memoriam

T. DUANE PRICE, Ph.D.

A Memorial Service for T. Duane Price, Ph.D., Assistant Professor of Biochemistry, assigned to Urology, was held June 14 in The Pauline A. Hartford Memorial Chapel. He died May 29. Survivors are his wife, a son, his mother and two brothers.

MRS. GRACE A. GOETZ

Mrs. Grace A. Goetz, Volunteer in the Babies Hospital Playroom for nine years, died May 27 at the age of 95. Active at the Hospital until January, 1964, Mrs. Goetz had given a total of 6,711 hours of service.

MRS. ROBERT D. STERLING

Mrs. Robert D. Sterling, Honorary Member of the Board of Women Managers at Babies Hospital since 1954, died June 11, aged 90.

Mrs. Sterling joined the Cribside Social Service Committee at Babies Hospital in 1907 and served as treasurer from 1916 until 1937. For many years she was active in the Lenten Sewing Classes. She came on the Board in 1944. Survivors include her husband and two sons.

MRS. SIDNEY G. deKAY

Mrs. Sidney G. deKay, Associate Member of the Board of Woman Managers, died May 19, at her home, Indian Harbor, Greenwich, Conn.

Mrs. deKay became a member of the Cribside Social Service Committee of Babies Hospital in 1917. When the Committee amalgamated with the Women Managers, she became an associate member of that Board.

Mrs. deKay, the former Helen MacMurray, is survived by two cousins.

## NEW TRUSTEE

*Continued from page one*

also was Assistant Defense Secretary for Manpower, Personnel & Reserve, and Assistant to the President of the University of South Carolina.

A resident of Pelham Manor, N. Y., Mr. Burgess has received high civilian awards from the Army and the Defense Department, as well as the French Legion of Honor. He is a trustee or director of Morgan Guaranty Trust Company of New York, Ford Motor Company and the Boy Scouts of America.

Mr. Burgess' election to the hospital Board, at its June meeting, was announced by Augustus C. Long, hospital president.

## GREEK TREE

*Continued from page one*

preciation for the establishment by the College of Physicians and Surgeons of a clinic for the diagnosis and treatment of malignancies at the Evangelismos Hospital in Athens. This is the first such facility to be established abroad as a cooperative venture between an American medical school and a foreign hospital in which the staff is made up exclusively of native physicians.

The Evangelismos clinic, which opened in September 1965, was the inspiration of Dr. Cushman D. Haagensen, Professor of Clinical Surgery at P&S, and world authority on cancer. The concept of the clinic was revolutionary; instead of sending American doctors abroad to teach and practice in a strange culture, the Greek doctors were brought to Columbia-Presbyterian Medical Center for prolonged training, then were returned to Greece to operate an American-type clinic.

The four doctors who staff the Greek clinic are under the direction of Dr. Evangelos Papatradianos. All were trained here and, in turn, have trained Greek technicians in our methods. Two Greek nurses, soon to return home, are being trained here in our nursing methods, and other Greek doctors will continue to come for special training in the diagnosis and treatment of cancer.

The Evangelismos clinic is an exact model of ours, and the same types of anesthetics, operating rooms, surgical and medical procedures are being used by the doctors there.

Our doctors visit the Greek clinic regularly to keep its staff informed of our new developments, and Dr. Haagensen has just returned from a three-week visit there, where he lectured and helped with plans for expansion of the clinic.

Support for the Evangelismos clinic is raised in this country, chiefly among the "Friends of Greece," but grants have also been made by

the Matheson, Vivian Beaumont Allen, and Aeroflex Foundations.

The tree shoot planted here is of the genus *Platanus Orientalis*, which is closely related to our own hardy, long-lived sycamore. Although the original tree under which Hippocrates taught is now mostly decayed, its roots still live and they put up young, shoot sprouts like the one that was flown here for planting.

While visiting at our medical center, Dr. Dosiades also presented to Dr. Stanley E. Bradley, President of the Medical Board of Presbyterian Hospital, a gavel made from dead wood saved from the original Hippocrates tree.

## MEDICARE

*Continued from page one*

the mass influx failed to materialize on Tuesday, after the long weekend, it seemed likely that older people might not be as eager to enter hospitals as had been supposed, even though it would not be costly.

Many elderly outpatients of Vanderbilt Clinic and all elderly inpatients of the hospital were interviewed on the first day of Medicare and, when eligible, were asked to sign the forms necessary for them to collect benefits under both Medicare and Medicaid.

Only a small number of new elderly patients appeared at the Medical Center on opening day, and many of these believed, falsely of course, that under Medicare they must register in advance for treatment they might need later.

The MAC unit (Medical Assistance Clerks) includes 16 students, male and female, with one or more years of college, who will serve at the Medical Center this summer. They have had special training in the techniques of interviewing, given by the hospital, and will work mostly with Medicare and Medicaid patients. Watching them in action, one is impressed by their courtesy, kindness, and patience.

A. J. Binkert, Executive Vice President, accepts plaque from James E. Haldane, District Manager, Social Security Administration, Department of Health, Education, and Welfare, which certifies that The Presbyterian Hospital is qualified to accept patients under Medicare.

# Hospital Building Law Marking 20th Birthday

The history of hospitals in the United States has witnessed a transition from the almshouses of the 18th century that served as little more than shelters for the poor to the great medical centers of today which have made better medical care available to all.

This development was given special impetus by the passage of the Hospital Survey and Construction Act—whose 20th anniversary is August 13. This legislation, which became known as the Hill-Burton program, was a result of national concern over the shortage of hospitals and related medical facilities during the depression 30's and the war years of the 40's.

The Medical Center Development Program has received noteworthy assistance from the U. S. Public Health Service under the Hill-Burton Act. A grant of \$533,000 aided in construction of the new Radiotherapy Center.

Earlier, the law provided \$135,000 toward the Betatron used in radiotherapy, and \$75,000 to construct and equip the Premature Unit in Babies Hospital.

Prior to Hill-Burton, the growth of the hospital system in this country reached its peak in 1928 with 6,852 hospi-

tals. With the coming of the depression, new hospital construction practically ceased. Nearly 800 hospitals were unable to find operating funds and had to close. The massive public works program of the depression years included substantial grants for construction and remodeling of hospitals, and aided the general situation somewhat, but the emphasis was solely on the employment value of a public works program.

Hospital construction remained at a minimum during the subsequent years of World War II. However, growing demands and increasing shortages focused national attention on the need for hospital facilities as a major aspect of postwar planning.

In 1945, legislation was introduced by Senators Lister Hill and Harold Burton for a program of Federal assistance in hospital construction. The bill was endorsed by the American Hospital Association, the American Medical Association, labor organizations, farmers' groups, and many others. On August 13, 1946, President Truman signed it into law.

Progress over these past 20 years has been substantial. By March, 1966, a total of 8,109 projects had been approved—with voluntary, non-profit institutions such as this one, sponsoring half of all those approved and receiving 57 percent of all Federal funds awarded.

These projects involved:  
\$7.88 billion total costs . . .  
\$2.45 billion Federal share . . .  
\$5.43 billion State and local funds.

The original program was for construction of hospitals and public health centers. The program now also encompasses:

Construction of long-term care facilities (nursing homes and chronic disease facilities), diagnostic or treatment centers, and rehabilitation facilities. . .

Modernization grants for renovating or replacing obsolete facilities . . .

Areawide planning grants to bring about coordinated planning of health facilities on community-wide bases . . .

Research and demonstration program covering a wide array of subjects. Better patient care is the prime objective of these projects designed to develop more efficient and effective use of hospitals.

According to Dr. Harold M. Graning, Assistant Surgeon General, "Hill-Burton has been a prime example of effective cooperative effort among various governmental agencies working with voluntary agencies, hospitals and professional associations. It is unique in many respects; it is the first major Federal program in which states are given financial and technical assistance in meeting their health facility goals."

"Of growing interest in recent years have been studies in the computer field," Dr. Graning says, "and a high priority will continue to be given to such projects." The Hill-Burton administrator says such computer studies are aimed at improved patient care and better control of hospital costs through more efficient methods.

Other areas being given particular attention include progressive patient care, drug distribution systems, outpatient services, personnel needs, central medical and surgical supply services, bacterial contamination in various areas of surgical suites, toxic gases in building fires, and procedures for measuring hospital obsolescence.

Since its beginning, the Hill-Burton program has been administered by the Division of Hospital and Medical Facilities in the Public Health Service. First Chief of the Division was Dr. Vane M. Hoge, presently Assistant Director of the Washington, D. C. Bureau of the American Hospital Association and Director of the International Hospital Federation. He was followed by Dr. John W. Cronin, who died in 1958; Dr. Jack C. Haldeman, who in 1963 became president of the Hospital Review and Planning Council of Southern New York, and the present chief, Dr. Graning.

# Retiring Sally Dees Was Vaudeville Star

She slept in baggage cars, doing split weeks, five shows a day, on the vaudeville circuits. She played the Palace, hobnobbed with Sophie Tucker and Ruby Keeler; even played before the Prince of Wales while touring the music halls of Britain.

Not all her co-workers are

vaudeville all over the country, including appearances at the Hippodrome, and on the Keith and Pantages circuits. "We had some fun in those days!" she recalls, "And I think performers were more talented then. We really had to work—to foot it and brain it!"

Mrs. Dees remembers playing places in the south where "we colored folk had to be out of town when night came." The constant traveling was hard and "vaudeville actors weren't even allowed in some restaurants," but the pay was good and the life exciting.

Dixie Wood, Eddie Emerson, the Duncan Sisters and Leland Goldman are among the stars with whom she appeared. She was married to Mr. Goldman and they toured together as "Gold and Goudie."

At one time in her show business career, Mrs. Dees developed an act in which she lifted chairs with her teeth. "That's why I have none left today!" she says.

Mrs. Dees also lists several Broadway shows among her credits. As Holy Ruth, she was in "The Black Messiah" at the Nora Bayes Theater in 1939. She also was seen in a comedy revue called "Shake, Rattle and Roll."

The tour of British music halls was a highlight of the housekeeper's career.

Mrs. Dees says, "I've sure had my share of fun all my life." And she had more fun on July 7, when a tea was given in her honor. Music was provided and Sally Dees was a delight to all her many friends, who will miss her when she retires on August 1, but we feel sure she'll come back to visit us from time to time.

Mrs. Sally Dees

## In Memoriam

Miss Hester Holland (in private life Mrs. Irving Friedman), a member of the Social Service staff at the Neurological Institute since 1937, died on June 23, after a long illness.

She was a native of Michigan and began her career as a teacher, but found her true life's work in Social Service. Her greatest satisfactions came from helping others. She felt a special challenge in the problems of those suffering from convulsive disease. Her efforts on behalf of children suffering from epilepsy have been noteworthy.

Miss Holland took a deep personal interest in her patients and maintained contact with them. They will miss her sadly, as will her colleagues.

Miss Holland is survived by her brother William, of Michigan, and by her husband.

President Harry S. Truman as he signed the Hill-Burton Act on August 13, 1946.

## DOCTORS RETIRE . . .

*Continued from page one*

well Award for Women in Medicine, and, most recently, the first medal awarded by the Children's Hospital of Philadelphia on the bicentennial of the University of Pennsylvania.

One of the few women ever to head a major medical society, Dr. Alexander has been president of the American Pediatric Society. She is the author of many articles for medical journals here and abroad, including some 70 papers on meningitis, poliomyelitis, tuberculosis and other infectious diseases.

Dr. Alexander has been named Emeritus Professor of Pediatrics and Consultant in Pediatrics.

Dr. Cushman D. Haagensen, Professor of Clinical Surgery and Attending Surgeon, has been appointed Professor Emeritus of Clinical Surgery and Consultant in Surgery.

Dr. Franz Altmann, Professor of Clinical Otolaryngology and Attending Otolaryngologist, came to the Medical Center in 1948. A native of Austria, he received the M.D. degree from the University of Vienna and served an internship and residency at General Hospital, Vienna.

Dr. Franz Altmann

A pioneer in plastic rebuilding of certain parts of the hearing mechanism of the middle ear, called a tympanoplasty, he also worked on the team which developed the stapes mobilization technique for restoration of hearing.

Dr. Altmann has been named Clinical Professor Emeritus and Consultant in Otolaryngology.

Two Sloane staff members retired: Dr. William V. Cavanagh, Associate Attending Obstetrician and Gynecologist, Associate Clinical Professor of Obstetrics and Gynecology, has been associated with Sloane Hospital for 41 years. After being graduated from Syracuse University School of Medicine in 1924, he served his internship and residencies at Sloane, and was appointed

Assistant Attending Obstetrician and Gynecologist in 1931.

Dr. Marion D. Laird, Assistant Attending Obstetrician and Gynecologist, has been on the staff since 1930.

A Canadian by birth, she received the M.D. degree from the University of Toronto Faculty of Medicine. At Memorial Hospital, Worcester, Mass. she served a general rotating internship, was an intern and assistant resident at Sloane and resident at Maternity Center Clinic, where she has been a consultant since 1948.

Dr. Samuel Reback, Associate Attending Neurologist, was graduated from Yale University School of Medicine in 1925. He did his internship and residency here in 1927-29 and joined the staff as Assistant Attending Neurologist in 1938.

Dr. Raymond L. Pfeiffer, Attending Ophthalmologist, received the M.D. degree from Ohio State University School of Medicine in 1928, the M.Sc. in 1933 and the Med. Sc.D. degree in 1934 from Columbia University.

After an internship at Grant Hospital, Columbus, Ohio, he came to Presbyterian Hospital as resident Ophthalmologist in 1930 and has been on the staff since.

Dr. John Scudder, Associate Professor of Surgery and Associate Attending Surgeon, is a world-renowned authority on blood bank procedures.

An accident during his training years left him with a slight weakness in his right arm, ruling out the practice of surgery and directing him into the field to which he has contributed so much.

After graduation from Harvard Medical School in 1927, he interned at Presbyterian, then went to India to join the staff of Miraj Medical School where he later became Dean. In 1934 he became Acting Surgeon-in-Chief and Executive Officer at the Scudder Memorial Hospital in Ranipet (named in honor of his grandfather, a graduate of P&S in 1815, and the first medical missionary to India, going out there in 1819).

Returning here in 1936 as a Surgical Fellow, he became involved with research in shock and blood plasma, continued this work as a Commonwealth Fellow at the Rockefeller Institute and came back to Presbyterian in 1939 to establish the Blood Bank.

Having demonstrated the stability of plasma during his research, he was largely responsible for the Blood-for-Britain program, organized under Red Cross auspices. The first blood for this project was drawn at our Blood Bank on August 16, 1940, the day the first bombings of London took place in World War II.

Later, the program was con-

Dr. John Scudder

tinued here by request of the Army and Navy to supply dried plasma for the armed forces. This was the beginning of the massive Red Cross plasma program which saved the lives of thousands of Allied fighting men during World War II.

The success of these programs brought requests from all over the world for help in establishing blood banks. These were answered by Dr. Scudder and members of his staff. He served as consultant to the Government of Puerto Rico, the Chinese Army Blood Bank, and our War Department. For his aid, the Chinese awarded him the Cravat Order Brilliant Star in 1947.

For twenty-five years under his direction the Blood Bank maintained its leadership, devising and developing improved techniques for the collection and storage of blood.

Dr. and Mrs. Scudder will return to India this summer to attend the dedication of a building honoring his aunt, famed Dr. Ida Scudder, who established the first women's medical college in Vellore, now the coed Christian Medical College. Dr. Scudder's family have been medical missionaries to India for four generations. His father was a minister and his mother a medical missionary in Vellore, where he was born.

Three doctors retired from Vanderbilt Clinic:

Dr. Marie Karelitz-Karry, Assistant Dermatologist, on the staff since 1930, with a medical degree from the Petrograd Medical Institute in 1922; Dr. Samuel Lowy, Assistant Attending Psychiatrist, on the staff since 1958, received the M.D. degree in 1926 from the University of Prague, and Dr. Theodore Rosenthal, Assistant Attending Dermatologist, on the staff since 1950, graduated from P&S 1923.

A School of Dental and Oral Surgery retiree, Dr. Lester R. Cahn, Assistant Professor of Oral Pathology and Associate Attending Dental Surgeon, was graduated from the Dental College of New York University in 1918 and joined the staff here in 1932.

## Training Program Set For Student Chaplains

An extension of the student chaplains' training program at the hospital is planned for six weeks during July and August, Chaplain Robert B. Reeves, Jr., has announced. This experimental course will involve six ministers, now doing postgraduate work in Ministry and Counseling at Union Theological Seminary, who will work here part time doing clinical application of their studies. Each will have a regular ward assignment as a Protestant chaplain, meeting all religious needs of patients, including sacerdotal service. Conferences and weekly seminars will be held with members of the medical staff.

The regular chaplaincy training program for undergraduate seminary students takes place from September until May each year. Their service is in fulfillment of course credit requirements in Religion and Psychiatry at Union. They spend six week periods rotating among the different services, filling the religious duties for which they qualify. This year there were four students participating, including

one woman.

Since the inception of the program in 1950, 54 students have trained here. Among them have been seven women; Service Chaplains assigned to study at Union; some students from abroad, including visitors from Germany, Scotland, Canada, New Zealand, Colombia, the Argentine and the British West Indies. After leaving here, some of these have gone into parish ministry, several have become hospital chaplains and three have gone into teaching.

These programs are under the direction of Chaplain Reeves and Dr. Lloyd A. Hamilton, Jr., of the Department of Psychiatry.

Roman Catholic seminarians also take in-service training here.

Under the guidance of Rev. Guy S. Vinci, two students in their last year of seminary training assist on Sundays with the distribution of Communion throughout the Medical Center. The visiting assistants are rotated so that quite a few are introduced to hospital priestly practice.

## Mrs. Florence Forster Retires From Harkness

Mrs. Florence Forster

"It was wonderful to have an opportunity to meet with my friends from the New York Orthopaedic Hospital at the recent Centennial celebration," Mrs. Florence Forster remarked, as she reminisced about her early career at the 59th Street building before the unit moved up to the Medical Center.

Employed as a seamstress in 1948, Mrs. Forster came up here with New York Orthopaedic in 1950. Soon she transferred to the Information Desk of Presbyterian and then to Harkness Pavilion as a floor secretary in the Nursing Department. For the past 10 years she has been on the second floor of Harkness where her pleasant, smiling face has been remarked upon by many patients and visitors to that area.

"In my dealings with people over the years, I've found that most respond to a pleasant attitude out of all proportion to the actual service you render," she observed.

Now that Mrs. Forster will have leisure time, she hopes to pursue her hobbies, sewing and ceramics, and also to spend more time visiting with her daughter and her grandchildren.

## GNYP Report

Presbyterian Hospital employees have contributed \$11,392 to the Greater New York Fund, according to the July 1 report. Final figures for the 1966 campaign will be announced in September Stethoscope.

The Greater New York Fund is the only solicitation allowed among employees of the Hospital. It aids 425 health and welfare agencies. The Presbyterian Hospital receives support of more than \$300,000 annually from the Greater New York and United Hospital Fund campaigns.

# Now Let's See YOUR Photos — Even Aerials!

What's *your* vacation goal this year—Florida... France... Forest Hills?

Wherever you may be planning to go, whatever you are hoping to do on your holiday, *The Stethoscope* will be interested in seeing some of the pictures you bring back.

Prizes will be given to all employee-photographers whose pictures are printed here. The photographs should be accompanied by the person's name, department and a description of the subject. A self-addressed envelope also is necessary for the picture's return through the Hospital mail service.

So oil up those shutters, dust off those light meters, and let us all see where you go—and what you do—on your vacation this year!

## Bowling Title To Sad Sacks In A Squeaker

This year's Medical Center Bowling League contest was a squeaker! In the closest finish in league history, Sid's Sad Sacks held onto just  $\frac{1}{2}$  point of the  $3\frac{1}{2}$  point lead with which they entered the final series, and defeated the on-coming Mad Dogs, 81 to 80 $\frac{1}{2}$ . The Dynamics finished third, with 77, although they grabbed the team high average with a score of 760.

Highest game averages for men were set by Richard Salvatore, with 182; James Parry, 181, and Luis Villegas, 177. Highest game averages for women were: Mrs. Anita MacDonnell, 149; Miss Ann McElroy, 146, and Mrs. Burnett Brown, 138.

The men's prize for high series score was taken by Gil Melendez, a Storeroom employee who also walked away with the award for the most improved male bowler of the year. The women's prize for high series score was awarded Miss Eileen Clayton. Mrs. Paula Vazquez, of Presbyterian Admitting, was the most improved female bowler.

The league's annual buffet dinner dance was a happy affair, concluding the season at Harkness Hall. Bowlers looking forward to the September season should get in touch with David MacDonnell on Extension 3168.

## Transplanted *Tilia Europaea* Doing Well

Attention, all garden lovers: our *Tilia Europaea* HAVE survived!

Their survival looked chancy last January when they had to be uprooted from the north side of the Service Building to make way for the tunnel connection now under construction. Eugene T. Cleary, Administrative Assistant, Projects, had them dug from the frozen earth with as much of their roots as possible kept carefully intact.

The five *Tilia*—commonly known as European linden trees—were placed in new positions at the Radiotherapy Center. As spring came on, many an anxious glance and fervent hope were directed toward them. With the thaw, the soil was loosened around their bases and liberal watering began.

Success came the day recently when the lindens' creamy flowers appeared. And now the heart-shaped leaves are out, advertising with every passing breeze the triumph of rebirth.

The photographs above are striking aerial views taken from a helicopter skimming the skyscrapers of Manhattan by Eugene T. Cleary, Administrative Assistant, Projects. The top picture shows a section of the downtown financial district with the East River and Brooklyn at the right. The bottom picture shows the Medical Center with Harkness Pavilion, the Eye Institute and the doctors office building site in the foreground.

## Employees Invited To Share Weinberg Educational Plan

One young employee of the hospital attended school at night and advanced himself from a messenger's job to a laboratory technician's; another went from junior accountant to supervisor of receipts and disbursements.

"Education is a key to a better job," says C. Douglas Auty, Assistant Vice President, Personnel. And the hospital helps employees—like the two mentioned above—to help themselves through the Sidney J. Weinberg Employees Educational Aid Reimbursement Plan. This plan pays as much as half the student's tuition bill, up to six academic credits a semester, or the equivalent in courses that carry no college credit.

## Our Volunteers To Be Honored At Sept. 8 Tea

Invitations have been sent to the Junior, Evening and Weekend Volunteers of Presbyterian Hospital who will be honored at a tea on Thursday, September 8, at Harkness Hall, from 5 to 7 P.M.

An hilarious film entitled "Bloodfingers," produced and directed by Dr. Douglas Greer, a former P&S student, will be presented by him. This movie follows a young medical student on his first assignment to get a blood sample from a patient.

Awards will be given to the Volunteers at this time.

## BILLY SUNDAY PREACHED WHERE HOSPITAL STANDS

IN THE EARLY 1900's, American League baseball was played where the hospital now stands, for the site contained the stadium of the New York Highlanders, forerunners of the Yankees.

But in 1916 a former National leaguer named William Ashley Sunday came to Broadway and 168th Street and combined certain traits of the ball diamond with divinity.

A native of Iowa, this "Billy Graham" had played for Chicago, Pittsburgh and Philadelphia. Then he gave up baseball for religion, being ordained a minister by the Chicago Presbytery. For years he excited the country with col-

Billy Sunday

orful word-pictures of the hell into which sinners would be cast forever if they didn't abandon their evil ways.

Just 50 years ago, Sunday trained his tongue on the fleshpots of New York. Reactions were divided: a number of churchmen claimed Billy was a bombastic, money-mad blabbermouth; John D. Rockefeller, Jr. became one of the erstwhile ball player's most rabid religious fans.

The fire- and brimstone preacher who was one of the nation's outstanding evangelists chose the present location of the hospital to erect his tabernacle—described as the

## Homograft Valves Used To Repair Damaged Hearts

A team of surgeons here has successfully transplanted preserved, human heart-valves into patients with diseased aortic valves. The Presbyterian Hospital is one of several units in the United States to perform this recently developed technique, and the first to use human valves preserved by a special freezing and radiation process.

"Thousands of persons are living today with artificial heart-valves which substitute for their own diseased valves," says Dr. James R. Malm, Associate Attending Surgeon. "While these artificial valves function well in most cases, a continuing search for a better valve has been under way.

"The use of artificial heart substitutes under certain circumstances should be limited because of their long-term effects. Now medical science may be returning to the use of natural structures (homografts)—instead of manufactured ones—to replace certain valves damaged by disease."

One of the patients who recently received a homograft from Presbyterian Hospital's Valve Bank was Eugene Die-

trich of R.D. 3, Norwich, N. Y. Seven years ago, he had had an artificial ball-valve implanted in his descending aorta to improve symptoms resulting from rheumatic fever.

"For a couple of years, I was all right, but then the pain came back and got steadily worse," Mr. Dietrich said. "It got to the point where I was taking 15 or 20 nitroglycerin tablets a day, I couldn't even talk to anyone, I couldn't sleep, I had no social life and the slightest excitement made me sick.

"My employers were very good to me," said Mr. Dietrich, a teller at Shenango County National Bank & Trust Co. in Norwich, "but I felt I was going downhill, and my illness was making me snap at my

## Memorial Service Planned to Honor Robert M. Wilson

The many friends of Robert M. Wilson, Supervisor of Housekeeping Services, are invited to a service honoring his memory on September 16. The Rev. Robert B. Reeves, Jr., hospital Chaplain, will conduct the memorial service in The Pauline A. Hartford Memorial Chapel at 2:30 P.M.

Mr. Wilson died suddenly at his home in Manhattan on July 16. His age was 34.

Born and educated in St. Louis, Mr. Wilson attended the University of St. Louis, and served in the Marine Corps during the Korean War. An avid sports fan, he also worked for a time as a professional tennis instructor.

In 1958 he came to the hospital as a night manager, advancing to Superintendent of Services in 1960 and the housekeeping post last year. As buildings superintendent, Mr. Wilson was instrumental in establishing our Centrex telephone system. As house-

## STETHOSCOPIA

### • SUMMER WEDDINGS

*Judy Romano*, technician in Clinical Pathology, and *George Novalis*, 4th year medical student, were married recently. They are in Greece where Mr. Novalis is part of the surgery team at the Evangelismos Clinic, a prototype of clinics at Columbia-Presbyterian.

*Joanne Arkoulis*, technician in Clinical Pathology, will be wed to Mr. Peter Kokkaris on September 18th.

*Joan Westervelt*, secretary in the main floor Doctors' Private Offices, was married to Mr. J. Roger Bailey recently. Mr. Bailey is associated with Sports Network, Inc.

Miss Mitsu Marie Fujimoto and *James Papayocanou* of the Department of Anesthesiology, were wed in The Pauline A. Hartford Memorial Chapel, July 31st.

*Dr. Howard Gardner*, senior resident in Neurology, and Miss Naomi Albert were wed September 1.

*Lenore Cymes*, EMG technician, and Jacques Wolgelter were married recently. They are on a wedding trip to Europe.

*Sally Zink*, R.N. in Babies Hospital, was married to Mr. William Charleroy on August 12th. The couple will live in Pennsylvania.

*Sandra Parrott*, staff nurse on NI 9 W Intensive Care Unit, and *Dr. Charles Anderson*, resident in Neurosurgery, married recently.

*Janet I. Ehrlich*, Speech Therapist, was wed to Mr. Gilbert Sandler of Perth Amboy, New Jersey on August 21st. The bridegroom is practicing law.

*Sally Frankel*, Social Worker in ENT, and Mr. Jan Zarnett, were married August 28th.

### • CUPID'S TARGETS

*Carolyn Greta Cox*, School of Nursing Class of 1966, and *Douglas D. V. McKane*, P&S Class of 1967, will wed February 25, 1967. The couple plans to spend some time in Africa during next summer when Mr. McKane will be serving in Dr. Harold Brown's Tropical Medicine course.

Miss Barbara Ellen Papper, daughter of *Dr. and Mrs. Emanuel M. Papper*, is betrothed to Mr. William Lee Lupatkin of Riverdale.

### • NEW ARRIVALS

*Mrs. Ruth Kane*, Record Department, welcomed her first grandchild recently. The baby girl is named Barbara Ann.

Please turn to page six

## DOINGS OF DOCTORS

DR. ROBERT A. FISHMAN, Associate Attending Neurologist and Co-director of the Neurological Clinical Research Center, was honored

at the Annual Spring Dance of the Neurological Institute as he left the staff to become Professor and Chairman of the Department of Neurology at the University of California Medical Center, San Francisco. Dr. Fishman, who had been at the Medical Center since 1950, was given a painting and an inscribed book bearing the signatures of his colleagues. The Neurology resident staff gave him a desk set.

During his 13 year stay at Neurological Institute, Dr. Fishman rose to Associate Professor. He made numerous contributions to research in problems of clinical neurology and functioned on several hospital executive committees. From 1960 until 1965, he was a Markle Scholar in Medical Science at Columbia. He is now serving his third year as Secretary of the Section on Nervous and Mental Diseases of the American Medical Association.

DR. L. STANLEY JAMES, Associate Attending Pediatrician, recently returned from England where he delivered the Bicentennial Lecture of the British Pediatric Association, on "Scientific Base of Current Perinatal Care."

DR. WARREN M. SPERRY, Professor of Biochemistry, received an honorary Sc.D. degree conferred by the University of Rochester.

DR. ANDREW DEROETH, JR., Assistant Attending Ophthalmologist, participated in the recent Cryosurgical Conference at Wills Eye Hospital, Philadelphia.

DR. ERNEST M. GREENBERG, Attending Psychiatrist, delivered a paper at the annual meeting of the American Psychiatric Association, in Atlantic City. He also participated in the proceedings at the formal opening of the University of Toronto's Clarke Institute of Psychiatry, and the Colloquium on Health and Aging of Population, at Semmering, Austria.

DR. NATHAN KAPLAN, Assistant Attending Physician, delivered a paper at the meeting of the New Jersey Occupational Therapy Association, in Morris Plains, N. J. He also attended the 44th Annual Session of the American Congress/American Academy of Physical Medicine and Rehabilitation, San Francisco, where he delivered a paper on "Treatment of Lower Extremity Spastic Disability by Splinting Devices and Phenol Blocking Technic" and had a scientific exhibit entitled "Splinting Devices to Improve Ambulation in Lower Extremity Disability."

DR. DANIEL C. BAKER, JR., Director of Otolaryngology, attended the International Meeting of the American College of Chest Physicians in Copenhagen last month. He gave a paper on "Management of Esophageal Structure" in Munich, September 2, and is a panel member on "Surgical Management and Treatment of Diseases of the Esophagus" at the University of Amsterdam, September 12.

### NEW CHIEF, DEPARTMENT OF ANATOMY

Dr. Edward W. Dempsey has been appointed Professor and Chairman of the Department of Anatomy to succeed Dr. Wilfred Copenhaver who retired after being with the College since 1928, and chairman of his department since 1957.

Dr. Dempsey comes to P&S from the Department of Health, Education and Welfare where he has been Acting Assistant Secretary.

A graduate of Marietta College, he received his Ph.D. in biology from Brown University and was Associate Professor of Anatomy at Harvard Medical School until 1950 when he was made Professor and Head of the Department of Anatomy at the Wash-

ington University School of Medicine. From 1958 until 1964 he was also Dean of the School. He then took a leave of absence to become Special Assistant to the Secretary of Health, Education and Welfare for Health and Medical Affairs.

Dr. Dempsey's major scientific interests have been in the field of reproductive endocrinology. For 10 years he was associated with the Journal of Endocrinology and was managing editor from 1945 until 1952. In 1960 he was president of the American Association of Anatomists. Recently he was a member of the President's Commission on Heart Disease, Cancer and Stroke.

## Three Of Our Medical Staff Members Appear On CBS-TV

Dr. Walter R. Kessler (left) and Dr. William A. Silverman (center), Associate Attending Pediatricians, and Dr. Andrew DeRoeth, Jr., Assistant Attending Ophthalmologist, recently appeared on the CBS-TV program, "Two at One." Dr. Kessler discussed the dangers of insect stings

in the highly allergic. Films showed Dr. Silverman's neonatal nursery at Babies Hospital, and Dr. DeRoeth's work in glaucoma at the Eye Institute. Dr. Kessler was interviewed by science editor Earl Ubell, Dr. DeRoeth and Dr. Silverman by Joan Murry.

Nurse Deborah Astorjian, who is in charge of the homograft valve bank, talks with Mr. Eugene Dietrich just before his discharge from the hospital.

## HOMOGRAFT VALVES

*Continued from page one*

family—that helped me decide to have another heart operation, however dangerous it might be.” He and his wife, the former Veronica Hogan, have three children: Martin, 11; Patricia, 10, and Barbara, 9.

During the five-hour operation, her surgeons removed from within Mr. Dietrich's heart the diseased aortic valve. This was replaced with a human aortic valve that had been processed and frozen by the new technique.

“It was amazing,” Mr. Dietrich recalled, “but as soon as I woke up after the operation, I knew I was going to be well again. Even though I naturally felt a bit tired and sore, I immediately had the feeling that this time my heart was all right. I haven't had any more pain and I'm feeling fine.”

Dr. Malm calls the use of homografts “the most recent development in the replacement of diseased heart valves.”

The Presbyterian Hospital has a valve bank that was established through the efforts

of Dr. Paul Harris, Assistant Attending Surgeon, with the cooperation of the hospital administration and the laboratories of the College of Physicians and Surgeons.

The donated valves are carefully preserved by freezing at 30 degrees below zero. They are then irradiated to destroy any bacteria or cells.

Valves are graded as to size, and when a patient's heart is opened, it takes just a few minutes to determine the patient's requirements, reconstitute the homograft in warm, salt water and trim it to shape. The homograft is accepted by the patient's heart as an inert structure and is incorporated into it readily.

“The human heart valve has been designed for a particular stress, and has unique geometric relationships unequalled by any mechanical part yet made,” according to the surgeon. “As transplanted corneas have returned sight to the blind, so homograft valves may now bring added years of useful life to certain cardiac cripples.”

last term, 13 were candidates for various college degrees; others attended technical or business schools.

This educational aid plan owes its existence to Mr. Weinberg, a prominent stock broker and longtime hospital trustee. To honor his 70th birthday, in

Miss Oring points out that to be eligible for this aid, a person must have been working here full-time for at least the past six months. To qualify under the plan, the subjects to be studied also must be related to a person's work or to career development with future job responsibilities in the hospital.

Under the plan, students may take training at almost any kind of recognized educational institution, except correspondence schools. Of the 22 hospital employees enrolled

## NYC Income Tax Will Be Withheld After August 31st

Beginning September 1, the hospital must deduct the New York City Income Tax from all salary checks of employees. This is in accordance with the recently enacted City Income Tax Law.

As you have undoubtedly read, the rate of taxation is much higher for residents of New York City than for non-residents. For this reason, it was necessary for the payroll department to have your current address and the number of exemptions you wish to claim as a resident of New York City. That is why you were recently given an IBM card to check, fill in, sign and return to your supervisor.

Your tax will be abnormally high for the last four months of this year, because the tax law is retroactive to July 1. Thus, you will pay six months' tax in four months in 1966, but your rate of withholding will become normal starting January 1, 1967.

## Low-Cost Kidney To Be Developed By P&S Engineers

Chemical engineers at Columbia University have received a Federal contract to speed development of a low-cost, disposable artificial kidney. Existing kidney substitutes are large and complex, but the university engineers envisage one that could be used safely and easily by patients in their homes.

The life-saving treatment present kidney machines provide by cleansing the blood of impurities, costs from \$8,000 to \$12,000 per patient annually, the university estimates. But if successful, the disposable model would provide the same kind of treatment at much less cost.

1961 his friends presented \$70 each to the hospital in his name. To their total contributions of over \$45,000, Mr. Weinberg added enough to establish a \$70,000 fund for helping employees to help themselves. So far, well over 100 members of the hospital family have availed themselves of this assistance.

“We hope more of the staff will recognize this chance to improve their skills,” says Mr. Auty, “and recognize too that opportunity for greater job responsibility increases as a person proves he knows how to handle it.”

*My mind to me an empire is,  
While grace affordeth health.*  
ROBERT SOUTHWELL.

## Elsie Coffin Has Retired— But Circus Party Goes On!

Elsie Coffin, supervisor in the Department of Urology, retired last month, but her famous Squier Circus Party will continue to be a spring-time event for “her clinic children.”

Elsie has guaranteed this by establishing the Elsie Coffin-Squier Circus Fund here, to which all those interested friends who have helped make this annual event a success, and those who would like to join the sponsoring group, are invited to contribute. Please call Miss Elizabeth McCarthy at extension 1941, if you wish to sponsor a child.

“I'm most indebted to my friends at the Hospital, for their interest and support during the 11 years since my dream became a reality,” she told the guests at her farewell tea on August 18.

“I couldn't have attempted this project had it not been for the encouragement given me when I first presented the idea to my associates in Squier. They offered me their services, and their financial help, and promoted the idea throughout the Hospital. They have been responsible for the growth of this project from its small start in 1955, a pilot program with 7 youngsters, to this year's bumper crowd of 50 exuberant charges.”

The cheerful, little lady, who came to work at Squier more than 37 years ago, lights up when she speaks of the joy she gets from this extension of “tender loving care” she provides for her young charges in the Clinic.

“It gives me every bit as much pleasure as it does the children,” she claims.

The concept of the Circus trip was born of Miss Coffin's experience with two children she took to the circus as part of a community program at her church.

Elsie Coffin

“Seeing their delight, it occurred to me that this would be a wonderful treat for our clinic youngsters. Only, how would we arrange their transportation and chaperonage?”

Her problems were solved through the enthusiasm of her co-workers who helped her work out a plan.

Each child is escorted by an adult who buys his own and the child's admission. A block of tickets is reserved for the group and a subway car chartered to transport them. Many attending staff in Squier who can't go themselves provide a fund which takes care of candy and ice cream treats, too.

There's not much chance that Elsie Coffin will be forgotten by her children in Squier. But then, Elsie won't forget them.

Next years Circus Party, sometime in May, will see her back planning the 12th annual outing, every bit as thrilled as the children who'll benefit.

Meanwhile, she will enjoy her newfound leisure for a while. Then she plans to do volunteer work with blind children.

Lynn McCullough, Medical Assistant Clerk, interviews Miss Julia Smith, aged 109, our candidate for oldest Medicare beneficiary. Born in Cooksville, Texas, in 1857, Miss Smith worked as a practical nurse in Father Devine's New York Peace Mission for many years. She says she is in good health, except that she now needs to be fitted for glasses.

# Year-Long Celebration in 1967 To Mark The P&S Bicentennial

This is the famous "Palm Tree Print" of King's College, drawn in 1763 by Captain Thomas Howell of the Royal Artillery and engraved in London by P. Canot. When Mr. Canot made this engraving he was sure Captain Howell had made a mistake because everyone then knew that America was a tropical country, so he added the palm tree.

This rare engraving has since been known to collectors as the "Palm Tree Print." The view, looking southeast is taken from the west side of the City near Canal Street. In addition to King's College in the foreground, you see Trinity Church, the North River, Staten Island, City Hall, The Prison, and two students thought to be playing hooky.

A year-long celebration to mark the Bicentennial of the College of Physicians and Surgeons will take place in 1967, according to President Grayson Kirk of Columbia University.

The medical school, founded in 1767 as a part of King's College, was the second medical school in America (the first was started in Philadelphia in 1765). Its founder, Dr. Samuel Bard, was once physician to George Washington, upon whom he operated during the President's first year in office.

Before 1765, medical education was an unregulated system of apprenticeships. Young men associated themselves with doctors and learned through observing and participating in the daily routine of their chosen mentor. Those who

wished to continue their education went abroad to Edinburgh, Leyden or Paris to pursue a medical degree.

The first M.D. degrees awarded in America were granted by the fledgling college in 1770 to Robert Tucker and Samuel Kissam, pioneers in medical education in the New World.

During the Revolution King's College was forced to close but reopened in 1784 as Columbia College. The name Physicians and Surgeons was adapted in 1813 when the faculty of Columbia College merged with an independent medical school of that name in lower Manhattan.

Marking the two hundredth anniversary of P&S, a history of the medical school has been compiled by Thomas Gallagher, novelist and Columbia

College alumnus. It will be published by Harcourt Brace & World.

Highlight of the Bicentennial will take place on October 20, 1967 with a convocation held on the Morningside Heights campus of the University. Honorary degrees will be conferred on several of the country's most prominent leaders in medicine.

This will culminate a three-day scientific symposium on genetics to be held October 18 to 20th in the Alumni Audi-

## Malvina Hoffman Dies at 81 — Sculpted Bust of Harkness

Malvina Hoffman, the internationally-renowned sculptress who did the bust of Edward S. Harkness in the hospital's main lobby, died at her home in Manhattan on July 10th. Her age was 81.

One of the few women to reach top rank in sculpture, Miss Hoffman was the daughter of a celebrated pianist, Richard Hoffman, who first came to the United States as accompanist to "the Swedish nightingale," Jenny Lind. To Miss Hoffman's studio over the years came many of the great and near-great, to attend some of the lavish parties she gave, to admire her work or to pose.

In addition to the bust of Mr. Harkness, the sculptress also modeled such subjects as Ignace Paderewski, Wendell Willkie, Dean Virginia Gildersleeve of Barnard University, and Katharine Cornell.

Miss Hoffman was a student of the French artist, Auguste Rodin. When he urged her to study human anatomy, she did so at P&S.

torium at P&S. Authorities from all over the world will be present to hear papers by leading scientists, including several Nobel laureates.

## Lightning Bolt Hits Hospital During Storm

During the severe thunder storm that struck New York City on the evening of August 11th, a bolt of lightning forked out of a black cloud to strike the southeast corner of Presbyterian Hospital just above the 18th floor. The bolt knocked out several bricks, one of which fell to the garden, going through the roof of a construction shanty serving the new Babies Hospital addition.

Fortunately, there were no injuries, and most people in the hospital were not aware that we had been struck. The photograph shows workmen repairing the storm damage.

Most of us are familiar with the roles played by our surgeons, anesthetists, nurses, laboratory and x-ray technicians in creating our fine reputation for successful surgery, but did you know that the busy people shown here also play an important role in each operation and birth at Columbia-Presbyterian Medical Center?

These are the people responsible for all of the sterile gowns, gloves, drapes, dressings, special bandages, sponges and other linens used in our surgical suites and delivery rooms.

There are 19 full-time and 2 part-time employees in the Sterile Supplies Department, which is headed by Mary McAllister, R.N. That these people like their work and are very good at it is attested to by an over-all average length of service of more than 10 years.

Many of the items used in surgery are reused again and again. After a thorough laundering, they are delivered to Sterile Supplies, where they are refolded, then assembled into various types of kits and packages, many containing from 6 to 8 items. Once assembled, these packages are doubled-wrapped in muslin and placed in the vacuum sterilizer for 30 minutes.

In a single week, 8,000 pairs of sterile surgical gloves are required throughout the hospital. Gloves are thoroughly washed and air-tested for leaks after use, then wrapped and sterilized again. Each glove can be used about five times before it is discarded.

About 6,500 sterile surgical packages are delivered by Sterile Supply weekly, plus many other sterile items that come prepackaged from the supplier.

Located in the basement of Presbyterian Hospital, Sterile Supply is air-conditioned, brightly lighted and pleasant—very definitely a place where Mr. Clean could take lessons in immaculate, uncontaminated cleanliness.

## WILSON MEMORIAL

*Continued from page one*

keeping supervisor, he was in charge of all such activities at the various units of the hospital.

Well-read and well-liked, "Bob" showed that he was sincerely interested in, and concerned for, all the hospital family privileged to have known him.

He leaves his wife, Theresa, and three children, Stephanie, 11, Gregory, 7, and Pamela, 3½.

This prize-winning vacation picture was taken by Mrs. Elizabeth Gutierrez on her recent visit to Spain and surrounding areas. It shows The Rock Hotel, which is at the foot of the "Rock of Gibraltar," and a view of the beautiful beach that attracts many tourists to this British Crown Colony.

# PEOPLE PREPARE OUR STERILE SUPPLIES

Mrs. Mary McAllister, R.N., Supervisor of the Sterile Supplies Department, checks daily inventory report.

Mrs. Helena Sullivan is attaching metal to Lap Pack sponges.

Mrs. Mary Murray, Mrs. Margaret Russo, and Mrs. Lucy Gray prepare major surgical packs, containing up to eight items, for our operating rooms.

Ethel Breslin is making a special ear dressing used in the operating room. All of the special pieces have to be cut, assembled and packaged individually prior to sterilization. About 80 such dressings are required each week.

William Rosal adjusts new "Hi Vac" Autoclave.

Rodney Billetter wraps surgical gowns for use in surgery.

*Columbia-Presbyterian  
Medical Center  
Is People...*

Mrs. Margaret Corcoran and Mrs. Mary O'Connor prepare "Extra Muslin Wrapped" materials for our operating rooms.

Mrs. Julie Coffey prepares special materials for use in the Neurological Operating rooms.

Mrs. Catherine Quigley prepares basin set used in the operating room.

Mrs. Margaret Cleary and Mrs. Margaret King are packing surgical gloves that have been tested for leaks and are ready to be sterilized for further use.

Catherine McBrearty air-tests surgical gloves for leaks, discarding those unsuited for further use.

# Is It Now Safe For Everyone To Fly In Commercial Planes?

It takes a prolonged airline strike, like the one that ended last month, to let us know how dependent we have become on flying. Today, young children and very old people fly safely across nations and oceans without escorts; most of us have accepted the airplane as we once accepted the train and automobile, but is it now medically safe for everyone to fly?

The *Stethoscope* went to Dr. Alfred P. Fishman, Associate Attending Physician and Director of the Cardiopulmonary Laboratory, to learn some of the answers.

It seems that although flying is safer than riding trains, buses, or in private automobiles for most people, some people should never fly and others should not fly under certain circumstances.

"The medical dangers of flying are primarily those that result from the reduction of available oxygen that accompanies a reduction of air pressure at flight altitudes," Dr. Fishman said. "Although commercial jet planes usually fly above 30,000 feet, their cabins are regularly pressurized to the equivalents of much lower altitudes; consequently, they are quite safe for normal people and even for many with mild heart or lung disease. On the other hand, the small shuttle planes that fly from a large city to a small one may not be pressurized at all, even though it may fly at altitudes which may be hazardous for some people. Most private

DR. ALFRED P. FISHMAN

planes and many of those used in business do not have pressurized cabins and can therefore be dangerous.

"Breathing the rarified air of high altitudes causes a disproportionately great deficit in the pressure of oxygen deep within the lungs," Dr. Fishman explained, "because at high altitudes water vapor comprises an inordinately large percentage of the intrapulmonary (alveolar) gas mixture. As the mixture expands under reduced air pressure, the water pressure remains unchanged but the oxygen content of the total gas mixture is reduced."

Although most people are comfortable and safe at the altitudes of 5,000 to 6,000 feet, to which the large jets are pressurized, the alveolar oxygen content at this altitude is only 80% of that at sea level, a reduction that can cause distress in some people. At 10,000 feet altitude, however, the oxygen content is re-

duced even more, i.e. to only 60% of that at sea level. Activity, such as walking about the plane, exaggerates the effects of this low-oxygen environment. Therefore, persons in whom oxygenation of vital tissue is marginal—because of severe anemia, damaged heart or impaired circulation or pulmonary disease—should consult their doctor before flying.

People with a variety of medical conditions which would ordinarily prohibit flying, Dr. Fishman said, may be able to fly in pressurized planes in which supplemental oxygen is available. Nonetheless, each patient with severe anemia, heart disease or lung disease should be separately assessed by his physician before exposure to rarified atmospheres.

A second type of problem arises, Dr. Fishman explained, when gas expands within the body as air pressure is reduced. Gas is normally contained within the nasal sinuses, the middle ear, and parts of the intestinal tract. At 5,000 feet, trapped gas expands to 125% of its volume at sea level, and to 150% of its sea-level volume at 10,000 feet.

In most parts of the body, the expansion is inconsequential; the abdomen may distend slightly, and the person may feel bloated; most people will suffer some discomfort during rapid ascent to altitude if the opening of the middle ear into the upper throat is obstructed and pressure on the two sides of the ear drum become unequal. They have also learned the value of chewing or swallowing to equalize the pressure.

Abnormal gas pockets obviously create more serious difficulties. As examples of abnormal pockets, one may cite pneumothorax, perforated wounds which trap air within the skull, an unreduced hernia, and lung cavities of different kinds. During World War II, when many orthopedic patients were transported by air, we were well aware of the hazards of air sickness in a patient with a fractured jaw that had been clamped shut by pinning as part of the treatment.

People with stuffed noses and sinusitis are apt to become uncomfortable during flying, especially during the descent. A few develop achey teeth. These symptoms are not terribly common, and usually clear rapidly after the flight.

One hidden and major danger of flying is on the ground. For people with impaired hearts, lungs and circulations, the long, steep approaches to the planes may be more stressful than either the rarified air of the pressurized plane or the expansion of air within body cavities.

## THE GREEK TREE REPLIES TO DOUBTING THOMASES

Now 2700 years of age and still growing. The "Hippocrates Tree" on the island of Cos as it looks today—from a picture submitted by Dr. A. F. Coburn.

The "Hippocrates Tree," planted in the garden last June midst much fanfare and even some joshing from the "doubters" who raised eyebrows at the story of this offspring of a 2,700 year old tree, is thriving, thank you. And no wonder—coming from such a long-lived parent! (See *Stethoscope*, July-August)

As a matter of fact, apologies are due all around. The scoffers AND the promoters blush with embarrassment with the advent of this informative letter to *Stethoscope*.

"I have read with great interest your description of planting my progeny in your hospital grounds. But I must take exception to your pejorative remark on page five; i.e. 'Although the original tree under which Hippocrates taught is mostly decayed.' That naughty word, 'decayed,' was probably inspired by the youngster that you planted. I might also add that he is bragging because Hippocrates taught his students on Cos some miles away from where I have always maintained my roots. But it is true that I was around half a dozen centuries B.C.

"For your information, we members of the vegetable kingdom take great interest in longevity. Some of us have life unlimited. Unlike you humans, we have real patriarchs in our ranks. The ancient Cypress in Chapultepec, Mexico is about 6,000 years; the Baobab of the Cape Verde Islands preceded Noah's Ark; the *Dracaena* of Grotava in the Canary Islands has been around about 5,000 years. As for me, I am only 2,700 years young and produce thousands of seeds every summer. To document my heartiness I attach herewith two recent photographs of myself. In one you will note that I am no longer as high as the minaret but that my spread is great. In the other picture if you look closely at the middle you will note that my waist line is getting enormous (under magnification you may also detect

some of my seeds on the tips of branches). I am sure that you will realize that the man in the picture is not 'Ike', but an alumnus of your own Presbyterian Hospital.

"Incidentally, your statement that the gavel presented to the President of your Medical Board was made from my 'dead wood' raises the question of what is dead? Please tell Dr. Bradley that it came from one of my limbs. Unlike you humans, we always carry plenty of spares because we never know when we are going to lose a limb.

"Finally, you may want to know why we do not all die in infancy like you humans who rarely pass a single century. Well, the answer is simply this. Humans waste their energies trying to find the causes of diseases so that they can prevent them. That is what you higher primates call a 'rat race' . . . There are always new diseases ready to replace the older ones. On the other hand, we patriarchs of the vegetable kingdom concentrate on the etiology of good health. To do this we never run any races but just stay where we are born and read about Hippocrates teaching students on Cos under a tree 'now mostly decayed.'

"Hoping that your steel and concrete may last as long as I expect to and with best wishes to my prodigal son who has left his native soil, I am

"Faithfully yours, Platanu Orientales."

The spokesman for Platanu Orientales (the generic name of the famed tree) is Dr. Alvin F. Coburn, resident at Presbyterian Hospital at the time of the transfer of patients from the downtown hospital to the new building at the Medical Center in 1928, and Assistant Physician here until 1942. Dr. Coburn resides in Bedford, New York. We are indebted to him for this delightful note and for another interesting story—Presbyterian's move uptown. (*Stethoscope*, April, 1965).

## STETHOSCOPIA Continued from page two

### • WELCOME

Janet Licini, secretary in Public Interest; Kathleen Leyden, personnel receptionist; Mrs. Anne Dunn, Purchasing.

Four new members of the nursing staff at Mary Harkness Unit are: Theresa Brothers, Mrs. Nancy Thompson, Mrs. Angela Shea and the Nursing Supervisor, Hilde Verburg. Two cooks, Muriel Stewart and Anna McGovern, and a nursing aide, Charlotte Pirrie, are also newcomers. Ralph Ketting has been working on the grounds for the summer.

### • VACATIONERS

Amy Richardson, at Mary Harkness Unit, has just returned from a motor trip to Minnesota, and Nellie Klok, housekeeper at MHU, came back after an extended vacation visiting relatives in Holland.

John Rohrer, electrician foreman, and Mrs. Rohrer vacationed in Central America. In Guatemala Mr. Rohrer was reunited with his brother whom he hadn't seen in 32 years.

Gerry Walker, assistant Purchasing Agent, vacationed with his family at Virginia Beach. We hear he's quite a surfer.

### • CONDOLENCES

Mrs. Mary Hiller, Clinic Administration, on the death of her husband.

### • NOTES OF INTEREST

Barbara Benson, Medical Secretary in Medical Information, and her twin sister modelled for a recent Coca Cola ad, a bicycle-built-for-two advertisement, which appeared in many leading magazines.

Mrs. Blanche Anderson Stone, formerly supervisor of cafeteria cashiers, is recovering from a broken ankle.

Tony Fisher, supervisor of evening attendants, is recovering from surgery.

Mrs. Anna Weil, soda fountain cashier, is now on night duty in the coffee shop.

# GREAT REVIVALS HERE BEFORE WORLD WAR I

The Billy Sunday Tabernacle, photographed in 1917, at Broadway and 168th Street, was constructed at a cost of \$68,000.

*Continued from page one*

"largest structure ever built in the city." When it was completed, the dedication ceremonies were attended by many notables, including the state governor. "Recruiting stations" were set up nearby to sign citizens up to be better Christians.

"Specially designed so his voice might be heard in all parts of the building," the tabernacle had 20 entrances and could accommodate 20,000 faithful. A private bath for the evangelist was included because "the physical exertion of his speaking compels him to make an entire change of his clothing."

Indeed, Billy was a bundle of fireworks on the dais as well as the diamond. His arms

and legs thrashed out with equal energy in behalf of the Bible or of baseball.

While a youngster, our own Chaplain, Rev. Robert B. Reeves, Jr., saw the evangelist in action. "As a child, I saw Billy Sunday do his baseball bit, where he acted out the whole struggle of sin and salvation as if it were a ball game," the Chaplain says, "Billy took all the parts—pitcher, batter, catcher and fielder. I was pop-eyed!"

Billy Sunday was at the height of his career. His oratory frightened and cajoled;

rebuked and rewarded; damned and blessed. For months he played over people's emotions as though they were keys on a piano. He came out four-square in favor of the story of Jonah-and-the-whale—and equally dead-set against Darwin's theory of evolution. In his immense tabernacle, he got thousands of New Yorkers to "hit the trail" against such sins as drinking, dancing and playing cards.

Special subway trains and buses were chartered to bring the groups of faithful followers to the tabernacle, and special police were required to handle the crowds who came in private cars and carriages. Few attractions in New York drew consistently larger crowds.

Somehow, when the spring of 1917 came, public interest in Billy Sunday dwindled as America found itself in a world war. But something of medical interest had already happened where his tabernacle stood, and the hospital stands today:

A Boston physician, W. B. Swift, told the American Association for the Advancement of Science that from Billy Sunday's picturesque way of speech, he'd learned how to cure stuttering in children.

Dr. Swift offered no comment on Billy's taboos against drinking, dancing and playing cards.

## Alice Richardson Retires —Loved Premature Nursery

"The Premature Nursery is a delightful place to work. It is so gratifying to watch the tiny infants thrive, grow to the proper weight, and go home with their joyful parents. Then, too, we have a chance to see them grow up! When the mothers bring them to follow-up clinic they usually bring the children back to visit us. Some of them I've helped care for as "preemies" are now twelve years old."

Thus enthusing over her 12 year stay in the Neonatal Unit

on Babies floor, Mrs. Alice Richardson bade farewell to her associates on August 12.

A native of Henderson, North Carolina, she came to work in the nursery because she loves working with babies. Carrying on this interest in children, her hobby is mending dolls, dressing them and distributing them to needy children. Now she expects to extend the scope of this good work and supply many more small girls with samples of her handiwork.

Solicitations for the United Hospital Fund are made by the Men's Team, composed of Trustees under the leadership of James W. Foley, and Joint Professional Team under Dr. Frederic Herter, and Women's Teams from the auxiliaries.

Chairmen for the auxiliaries are: Mrs. C. Redington Barrett and Mrs. Ralph H. Boots for Presbyterian; Mrs. Charles E. Adams and Mrs. H. McLeod Riggins for Neurological Institute; Mrs. Robert E. Carroll, for New York Orthopaedic and Mrs. Robert H. Burrows and Mrs. J. Taylor Howell for Babies Hospital.

## Volunteers Are To Begin Red Cross Training School

A new class of volunteers will take the Red Cross Training Course for nurse's aides and orderlies, beginning early in September, according to Mrs. Marguerite Stein, Director of Volunteers.

The class is taught by Rebecca Perkovich, R.N., who was a nurse at the Eye Institute for several years and is now charge nurse at the Vanderbilt Clinic Eye Clinic. Miss Perkovich, an accredited Red Cross teacher, volunteers her services and has taught many classes throughout the years.

The class meets twice weekly for three weeks, and one Saturday at the hospital working under Nurses and caring for patients.

The volunteers must be 20 years of age or over, but they are both old and young, and come from all walks of life. Whatever their age or back-

Rebecca Perkovich

ground, all have at least one thing in common: a desire to serve their fellow man in a way that is personal and meaningful. Their contributions to our hospital are great.

Should you have friends interested in doing volunteer work, have them get in touch with Mrs. Marguerite Stein, extension 2543.

## Public Interest Director Named Aide to GNYHA

Jerome Klein, Director of Public Interest, has been named to a three-year term as a member of the Greater New York Hospital Association's advisory committee on public relations.

Comprising more than 80 voluntary non-profit hospitals and other institutions, the Association promotes the cooperative interests of these member organizations, interpreting their functions to community, government and other groups.

Richard N. Kerst, Assistant Vice President and Assistant Secretary-Treasurer of the hospital, recently was named to the GNYHA's Board of Governors for a three-year term. Among the Association's past presidents is A. J. Binkert, Executive Vice President of the hospital.

## In Memoriam

RUTH SIDELL HARTLEY

Mrs. Ruth Sidell Hartley, widow of Rev. Dr. Lyman R. Hartley—Chaplain of the Medical Center until his retirement in 1954—died on July 25 in Maine where she had a summer home. The former Chaplain died in 1963.

Mrs. Hartley, who was 77, worked almost 500 hours here as a Volunteer, winning both the Presbyterian Hospital and United Hospital Fund pins for her service. She lived in Westfield, N. J.

Surviving are a son, the Rev. Lyman R. Hartley, Jr.; a daughter, Mrs. John B. Snook; a brother, Scott Sidell, and a sister, Mrs. Esther Blauvelt.

## P. H. Intern Serving Army In Viet Nam

Dr. Isaac Goodrich, who was here as a 1964-65 intern in Surgery, is serving in the thick of the fighting in Viet Nam.

He was recently made commanding officer of the 1st Infantry Division's clearing medical station in Di An. Previously, he was 1st Battalion Surgeon with the 28th Infantry.

In that post, Capt. Goodrich went along on 23 helicopter assaults, treated more than 4,000 G.I. patients, plus more than 3,000 Vietnamese through the medical civic action program. Nominated for the Bronze Star medal, the surgeon already has received the Combat Medics' Badge and other decorations.

Capt. Goodrich is the husband of the former Dianne L. Brittain. She was graduated from our School of Nursing last year.

Capt. Isaac Goodrich

## UHF CAMPAIGN KICK-OFF DINNER ON OCTOBER 3

The 1966 campaign for the United Hospital Fund will open with a dinner at the Hotel Plaza on October 3. The goal for this, the 87th annual campaign, is \$3,000,000 to be used in support of 78 voluntary hospitals. The drive will run until the end of February.

Last year Presbyterian Hospital raised \$202,811, of which \$105,306 was returned in direct benefit. This year the direct benefit quota is \$119,470, which means that all money raised above this amount does not go into the general distribution but is returned directly to us in addition to our share of the funds.

## New Facility Begins X-Ray Therapy Work

The new Radiotherapy Center is now in use. It was dedicated in June, and over the summer, furnishings were completed and the first patients admitted for radiation treatment. With a Betatron, linear accelerator and cobalt machines, the Radiotherapy Center will enable the hospital to concentrate its various radiation facilities at one central location.

## RETIREMENTS

### MRS. BLANCHE E. STONE

"I really came to help out for a few days, but I stayed 30 years."

Mrs. Blanche E. Stone retired from her position as supervisor of Food Cashiers recently and reminisced about her long stay at Presbyterian Hospital which began as just a temporary job.

A resident of Washington Heights, Mrs. Stone came to New York from Presque Isle, Maine. Because the Medical Center was so convenient she thought she'd apply for part-time work here before Christmas, 1936. Her records show that she was employed on December 18 of that year—and liked the spot!

"Everyday was an outstanding experience, like a story unfolding. It is impossible to describe the speed with which those thirty years flew by. I love working with people and this was the perfect opportunity," she said.

Architect's sketch of a typical waiting room in the doctors office building now under construction at 165th Street and Fort Washington Avenue. The first concrete column forms recently were poured for the new structure, which will replace offices now located in Harkness. It also will help improve the efficiency of patient care and enable the eventual addition of more than 100 much needed beds to Presbyterian Hospital.

### MRS. CATHERINE C. SLACK

Mrs. Catherine C. Slack, a native of Scotland, came to the Hospital as Floor Control in 1947. On August 2 she retired and she expects to miss the bustle of the hospital and the many contacts with visitors and patients which her job entailed. "The Hospital has grown so since I came. It's wonderful to see this progress

and I'll come back to visit and admire the new buildings now under construction."

She's not going to be idle, however. She intends to join the New York Times Speakers' Bureau, to take occasional trips to Maine and Florida and increase her participation in church work. She's looking forward to much more leisure to spend with her family and friends.

## ON THE SHELF

### New Books in Milbank Library

#### FICTION

**Thomas** by Shelley Mydans. The brilliant life and notorious murder of Thomas Becket re-created in this distinguished novel.

**The Corinthian** by Georgette Heyer. One of the author's most delightful Regency romances whose cast of characters includes an elegant, bored young bachelor and a run-away heiress.

**The Monument** by Nathaniel Benchley. The plot of this humorous novel centers around a proposed monument honoring the town's only Korean War casualty.

**Slaves of the Lamp** by Pamela Frankau. This novel centers around young Thomas Weston, who works for an advertising agency and is plagued by the gift of extra-sensory perception.

**Going to Meet the Man** by James Baldwin. The first collection of short stories by the author of *The Fire Next Time*.

**The Makepeace Experiment** by Abram Tertz. An extraordinary novel by a Russian writer about a mechanic who learns the secret of "psychic magnetism."

**A Last Lamp Burning** by Gwyn Griffin. A compelling story of life, love, passion and death set in the colorful city of Naples.

**Indian Summer** by John Knowles. An unorthodox young man takes a summer job in the home of a very wealthy friend.

#### NON-FICTION

**Understanding Media** by Marshall McLuhan. Some revolutionary ideas about the process of communication from the invention of movable type through the electronic age.

**The Last Battle** by Cornelius Ryan. The suspenseful story of the battle of Berlin during the last three weeks of World War II.

**Now Wait a Minute, Casey** by Maury Allen. The inside story of baseball's wonderful, legendary New York Mets.

**Disinherited** by Dale Van Every. The events preceding the exile of the American Indians living in the Southeast to the plains of the far West.

**Papa Hemingway** by A. E. Hotchner. An extraordinary picture of the last fourteen years of Ernest Hemingway's life.

**Children of the Uprooted** by Oscar Handlin. A selection of writings by second generation Americans over the past hundred years.

This was the scene as the first steelwork was erected recently for the addition to Babies Hospital. A major project in the Medical Center Development Program, the addition will house laboratories, offices and conference areas. It will permit improvement of the existing hospital as space in the annex becomes available.

# The Stethoscope

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXI, NUMBER 9

OCTOBER, 1966

## Dr. Damrosch Has Accepted New Position

DR. DOUGLAS S. DAMROSCH

Dr. Douglas S. Damrosch, assistant vice president of the Presbyterian Hospital, associate attending pediatrician at Babies Hospital and associate clinical professor of pediatrics at the College of Physicians and Surgeons, has been named Director of the Mary Imogene Bassett Hospital, Cooperstown, New York.

Dr. Damrosch, who has been

## THE NEW STUDENTS CHECK IN

### DENTISTS

A freshman class of 35 males and one female have commenced their studies at Columbia's School of Dental and Oral Surgery.

The new students come from nine states, with 23 from New York, only nine of whom are from New York City. They are graduates of 28 different colleges and universities, and ten were either on the Dean's list or their school's honor roll.

Should the dentists choose to engage in athletics, their freshman class could provide letter men in track, baseball, squash, rugby, lacrosse, rowing and skiing. The skier, captain of his team at Middlebury College, was offered the job of skiing coach at West Point Military Academy, but chose instead to study dentistry.

The new class is also quite musical. Eight members play the guitar and their one distaff member, Sonya K. Simenauer, of New York City, a graduate of Columbia University, is a harpist with the New  
*Please turn to page seven*

### NURSES

Maxwell Hall was a busy place when 127 attractive young ladies arrived on September 13 to begin their first year at the School of Nursing.

It was an auspicious occasion, not only for the new students, but for the school. It marked a milestone—the 75th entering class for the school, which began in 1892 as the Presbyterian Hospital School of Nursing.

Freshman Susan Coddington, Hampton, N. Y., checks in.

In that first nursing class there were only 22 nursing aspirants, six of whom had been nursing at the Hospital. They were greeted by the directress, Miss Anna C. Maxwell, as they arrived at the Presbyterian Hospital, then on Madison Avenue at 70th Street.

In 1937 Columbia University assumed responsibility for the education program under the Department of Nursing, Faculty of Medicine, offering a course leading to a baccalaureate degree.  
*Please turn to page seven*

### DOCTORS

The College of Physicians and Surgeons, about to mark its 200th birthday in 1967, has admitted a freshman class slightly larger than before—126.

Applications for this year's class were up sharply, to more than 1,400, according to Dr. George A. Perera, Associate Dean.

Comprising 114 men and 12 women, the class comes from 27 states and four foreign countries. They prepared at more than 50 different colleges around the nation.

The vocational backgrounds of the freshmen's families also are noteworthy for their diversity. While 26 are the children of physicians, others are the offspring of engineers, musicians, accountants, letter carriers, architects, laborers, salesmen and tailors.

Dr. Perera noted the "serious involvement with national and international problems" many of the students have demonstrated. "More than the usual number have shown concern for the world about them," he said, by having served in American or foreign work camps, doing missionary work, enrolling in the Peace

Corps, or working in such educational programs as Headstart.

Many of the future physicians have especially interesting backgrounds. Two have served in Vietnam, one as leader of a Marine platoon, the other as an aircraft carrier-based pilot. One had an advertising business, another bred tropical fish, and still others worked as mineralogist, cook and archeologist.

Because of strikes by building unions at a time when some P&S facilities are being renovated, the new students

## Dr. Bauman Recalls War Father Waged on Obesity

New York, and the medical profession, knew him as an arch-foe of avoirdupois, who preached the gospel of staying slender to live a longer, healthier life.

His only son remembers him as a man too busy to spend much time at home, who always made him finish all his dinner, and who was himself partial to coffee ice cream smothered in nuts and caramel sauce!

In 1928, New York—and much of the nation—was aroused by word that Dr. Louis Bauman had established an Obesity Clinic at Presbyterian Hospital that was getting rid of virtually tons in the way of all flesh. The physician was claiming that overweight shortened life expectancy and predisposed one to disease.

At his home in Larchmont, meanwhile, the doctor's son, William, was too young to appreciate fully the inner war that was being waged. On one side was his father's sweet

"Your weight is about normal... for a man 8 feet tall!"

## THRIFT IS A GIFT

The Presbyterian Hospital Auxiliary's annual Thrift luncheon will take place on November 15 at 12 noon in the ballroom of the Colony Club. A fashion showing by Christian Dior of New York will follow a Dutch Treat luncheon. Featured will be Dior's holiday and resort collection, according to Mrs. George Wilkie, chairman for the event. Mrs. W. Duane Todd is vice chairman.

Tickets for the showing, which will begin at 1:30 p.m., are available to those who contribute \$25 in thrift to be sold at the auxiliary's Stuyvesant Square Thrift Shop, 1430 Third Avenue. Pickup may be arranged by calling SW 5-3638 or delivery may be made directly to the shop, plainly marked for Presbyterian Hospital (see enclosed flyer).

Each donation of thrift is a gift to the Hospital. Rummage is collected by three auxiliaries, Babies Hospital, Neurological Institute and Presbyterian Hospital, and sold at their thrift shops. Proceeds help to support many services at the Medical Center including the patient's library, the Volunteer Department, Social Service, Occupational Therapy and other special projects which add to the comfort and rehabilitation of patients.

## STETHOSCOPIA

### • WEDDING BELLS RANG

A real "Hospital Family" wedding took place this summer when Susan Frances Duffy and Dr. Donald Klein were married. The bride was graduated from Columbia School of Social Service and Dr. Klein finished his residency at Babies Hospital in June. Mrs. Klein's father, Dr. Edward Duffy had been a resident at Babies and her mother, nee Barbara Acker, was graduated from the School of Nursing in 1937.

Jeanne DePace, daughter of Mrs. Betty DePace in the Insurance Unit, married Mr. James Sullivan of Taunton, Mass., recently. Jeanne had worked for Dr. Lattimer.

Jane Mower, Hematology laboratory at P&S, was married recently to Mr. Robert Early.

Rachel Clark, Neurological Clinical Pathology, and Mr. Oscar Baptiste were wed September 30. The couple is on a wedding trip to Trinidad, W.I.

### • FUTURE BRIDES

Mary Ann Gogluicci, laboratory assistant in Blood Bank, is engaged to Mr. Joseph J. Silvestri.

### • LITTLE BUNDLES

Mrs. Charlotte Gold, formerly a nurse in Blood Bank, welcomed her first child, a boy named David Marc.

Dr. and Mrs. Harvey Hecht have a new baby boy. Father is Assistant Resident in Radiology, mother is Visiting Fellow in Neurology.

### • NEWCOMERS

Mrs. Bronnie Blaigrund, wife of 3rd year medical student, Allan Blaigrund, has joined the Babies Hospital Social Service Department, as has Mrs. Sara Fishman.

Anita Sullivan has joined the Blood Bank staff as nurse; Olga Tere is their new laboratory assistant.

Mrs. Arlene Abrass is new assistant in Babies Hospital Recreational Therapy.

### • LUCKY VACATIONERS

In the Blood Bank, tripsters include Mrs. Astrid Kaaling, who went to Denmark and Sweden; Nancy Treacy to England, Ireland and Scotland, and Dr. and Mrs. Fred Shean visited Spain.

Frank Furlan, draftsman in Projects Office, and Mrs. Furlan vacationed in Austria and Yugoslavia.

### • RETIREES

Mrs. Maxine Gottlieb, Harkness 9, retired after being with the Hospital nine years.

Alexander McGregor, laboratory assistant in the Department of Microbiology, retired June 30th after 43 years at P&S.

### • NURSING NOTES

Promotions to Supervisor-Instructor: Patricia Wigmore to Sloane Hospital.

Promotions to Head Nurse: Mary Monahan to Neuro; Mrs. Ilija Lebron, Josephine Harper and Anna Marie Sequin to Sloane Hospital; Ruth Korn to Eye Institute; Eileen Cherba, Frances White and Ruth Simmons to Babies; and Catherine Boyer and Barbara Rinker to Presbyterian.

## NURSES ENTERTAIN EDUCATORS

As a part of the celebration of its 75th Anniversary program, the School of Nursing will be host to the Conference of Deans and Directors of Education Units in Nursing in Senior Colleges and Universities in New York State at their fall meeting. They will meet in Harkness Hall on October 28. This is the first of a series of conferences, symposia, and other events to be held October, 1966 through June, 1967.

## DOINGS OF DOCTORS

DR. POUL KILDEBERG, Visiting Lecturer in the Department of Pediatrics, is the recipient of a 2 year award by the Health Research Council of the City of New York to work with the Acid-Base and Neonatal Research Groups here. Dr. Kildeberg, an authority in clinical investigations of acid-base disturbances in infants and children, comes to Babies Hospital from Denmark.

DR. KILDEBERG

DR. H. MCLEOD RIGGINS, Associate Clinical Professor of Medicine, and Dr. Frederick Becker of New York University School of Medicine, recently gave joint papers on "Primary Bronchogenic Carcinoma" at the All-England two day conference at the King Edward VII Hospital, Midhurst, England. Dr. Riggins also served as chairman of one of the four sessions. For the past 2 years Drs. Riggins, Becker and John Malcolm, all of Bellevue Hospital, have been engaged in an intensive study of 1,000 cases of lung cancer from the Bellevue Chest Service.

DR. ANTONIO COCCHIARELLA, Assistant Attending Physician, Physical Medicine & Rehabilitation, presented a paper at the 44th Annual Session of the American Congress/Academy of Physical Medicine and Rehabilitation, held recently in San Francisco.

DR. JOHN K. LATTIMER, Director of the Department of Urology, has returned from Africa where he gave lectures at medical schools in Capetown, Durban, Johannesburg and Praetoria. He combined the lecture tour with a safari through big game areas in Kenya, Kruger Park and other areas.

DR. LATTIMER

DR. BLUMENTHAL

DR. SIDNEY BLUMENTHAL, Attending Pediatrician, will speak at the Middlesex General Hospital, New Brunswick, N. J., on October 12. His topic will be "Recent Developments in Bacterial Endocarditis." On October 18 he will participate in a symposium at the Long Island Jewish Hospital on "Cardiac failure and its therapy during the first year of life." On October 29 he will speak at the Milwaukee Children's Hospital on "Infective Endocarditis in Childhood."

DR. ALFRED GALLINEK, Associate Attending Neurologist, read a paper before the IV World Congress of Psychiatry held in Madrid September 8. It was entitled "The Kleine-Levin Syndrome (Periodic Quantitative Dysregulation of Food Intake and Sleep, with Periodic Mental Aberration)."

DR. HANS KAUNITZ, Assistant Attending Physician, Vanderbilt Clinic, attended the recent VII International Congress on Nutrition, Hamburg, Germany. He participated in a symposium on "Recent Evidence of the Nutritive Role of Long-Chain Fatty Acids."

DRS. DAVID H. BAKER, Associate Attending Radiologist and WALTER E. BERDON, Assistant Attending Radiologist, presented papers at the recent meeting of the American Roentgen Ray Society, in San Francisco. Dr. Baker will speak at the Pediatric Symposium at Roger Williams General Hospital, Providence, Rhode Island on October 5. His topic will be "The Radiologic Diagnosis of Childhood Tuberculosis."

DR. BAKER

DR. ROBERT S. SAMPEL, Assistant Attending Ophthalmologist, gave a lecture course in neuro-ophthalmology recently at Colby College, Waterville, Me.

DR. GURSTON D. GOLDIN, Associate Attending Psychiatrist, has been appointed a member of the Committee on Mental Hygiene of the Medical Society of the State of New York.

DR. ROGER S. KAUFMAN, Resident in Otolaryngology, has been awarded Honorable Mention by the Committee on Awards for Original Investigation in Otolaryngology for his paper "Short Term Changes in Cochlear Microphonics after Rupture of the Sacculle in the Cat." There is a stipend of \$250 with the award.

DR. RUDOLPH H. FRIEDRICH, William Carr Professor of the Division of Oral Surgery, was interviewed recently by Hugh Downs on the Today show. The general topic discussed concerned new advances in dental education and what they mean to the patient.

DR. C. G. KING, Associate Director of the Institute of Nutrition Sciences in the School of Public Health, has been elected President of the International Union of Nutritional Sciences at the Seventh International Congress on Nutrition held in Hamburg, Germany recently.

DR. KARLIS ADAMSONS, JR., Associate Attending Obstetrician and Gynecologist, took part in a Symposium on Problems of Fetal Distress, in Siena, Italy, September 17 and 18.

DR. JOHN J. SCIARRA, Assistant Attending Obstetrician-Gynecologist, also presented a paper at this Symposium.

## XVII GIBSON LECTURE

The XVII John G. Gibson, II Lecture has been announced by the Department of Surgery. It will be delivered at 4:30 p.m. on November 18, in the Alumni Auditorium by Sir Peter Brian Medawar, M.A., D.Sc. (Oxon), F.R.S. A Nobel Laureate (1960, for Physiology and Medicine), Sir Peter will talk on "Recent Progress In Transplantation Research."

This 17th Gibson Lecturer is a Knight Bachelor (1965), Director of the National Institute For Medical Research, London (Medical Research Council) and Professor-at-Large at Cornell University.

The Gibson lectures are presented twice yearly at the College of Physicians and Surgeons by outstanding leaders in the field of blood transfusion, blood grouping, blood banking and preservation.

# Dr. Winters Is Winner Of Mead Johnson Award

Dr. Robert W. Winters, Professor of Pediatrics, College of Physicians and Surgeons and Attending Pediatrician in Babies Hospital and the Vanderbilt Clinic, has been named winner of the 1966 E. Mead Johnson Award in Pediatrics of the American Academy of Pediatrics.

Dr. Winters was selected for his original and unique contributions to the understanding of the biochemical and physiological mechanisms controlling acid-base equilibrium and electrolyte metabolism. His work was cited as having clarified both the basic concepts and the clinical aspects of these fields. In addition he has also contributed to the understanding of the mechanism and heredity of familial hypophosphatemia and vitamin D resistant rickets.

The award, to be presented at the Academy's Annual Meeting in October, includes an honorarium of \$3,000, a scroll and a certificate. At that time Dr. Winters will present an address summarizing his work in the acid-base field before one of the general sessions of the Academy.

Dr. Winters is the third member of the College of Physicians and Surgeons to be so honored. Previous recipients of the Mead Johnson Award are Drs. William B. Silverman, and L. Stanley James, both Associate Professors of Pediatrics.

A native of Evansville, Ind.

DR. ROBERT WINTERS

diana, Dr. Winters received the M.D. *cum laude* from Yale University School of Medicine in 1952. Before coming to P&S in 1961, he had been Assistant Professor of Physiology and Research Associate in Biochemistry as well as Director of the Medical Student Research Training Program at the University of Pennsylvania School of Medicine.

Dr. Winters is certified by the American Board of Pediatrics. He is a member of the American Society for Clinical Investigation, American Physiological Society, American Pediatric Society, the Society for Pediatric Research, the American Federation for Clinical Research, The Harvey Society, and the Marine Biological Laboratory. In 1963 Dr. Winters was awarded a Career Investigatorship from the Health Research Council of the City of New York. He is the author of more than 70 papers in his field.

sional and academic staffs. In 1962 he was president of the Babies Hospital Alumni Association.

His Columbia association goes back even farther. He received the A.B. degree from the college in 1937 and the M.D. degree from the medical school in 1940.

He is a frequent contributor to the P&S Quarterly and a member of the editorial board of that magazine and of the Sentinel, newspaper in his hometown, Sherman, Conn. He has written for the 12th and 13th editions of the text on pediatrics by Drs. Holt and McIntosh and for many professional journals.

Over the years, Dr. Damosch has been a popular speaker at many hospital gatherings; his citations at the Babies Hospital 75th Anniversary celebration were published in booklet form to satisfy the many requests for copies.

Dr. Damosch has been chairman of the Doctors' Committee for the Babies Hospital Campaign to raise \$5,000,000.

On October 20th the staff of Babies Hospital will honor him at a dinner in Bard Hall.

## Now You Can Plant A Hippocrates Tree In Your Own Yard!

Do you want a Hippocrates tree like the one in our garden? Now it's easy!—particularly if you have a green thumb.

The International Hippocratic Foundation in Athens, Greece, offers a viable seed from which one may grow his own Hippocratic tree—in return for a \$5 contribution to the building fund which the Foundation is raising to construct a modern conference center for international medical meetings on a hillside on the island of Cos, overlooking the Aegean Sea.

Instructions for caring for these offspring of this rallying place for medical men all over will be enclosed with the seeds, and, says the brochure, "action should be taken at once, since this year's crop is limited." To quote Hippocrates, "Life is short, the art long, opportunity fleeting!"

The address—International Hippocratic Foundation, Rue Scoufa 77, Athens, Greece.

## N.Y. Heart Fund Grant Made For Lung Study Here

Three physicians here are studying a method of detecting pulmonary edema in its early stage so as to help patients with heart trouble from "drowning" in lung fluids. In the past, physicians had no way of gauging this problem until the patient found himself in serious respiratory trouble.

The edematous lung is swollen and heavy, with decreased elasticity. Eventually its tiny air sacs become flooded, forcing each breath of air to come through a pool of liquid.

Drs. O. Robert Levine, and Robert B. Mellins of the Department of Pediatrics, and Drs. Robert M. Senior and Alfred P. Fishman of the Department of Medicine are studying, under a New York Heart Association grant, a way of measuring edema with tritium. This is a slightly radioactive form of hydrogen that, when combined with oxygen, forms water that also is slightly radioactive.

The investigators inject a mixture of tritiated water and blue dye into the pulmonary artery, which carries blood from the heart to the lungs. There the radioactive water passes through the walls of the smallest arteries and mixes with the water already in the lung tissues.

Then the now-diluted tritiated water returns to the aorta, from a branch of which serial blood samples are taken containing both the tritium

# Dr. Engel Named Head Of Microchemistry Lab

One of the pioneers in the use of ultra micro-methods in clinical chemistry, Dr. Knud Engel, Director of the Acid-Base Laboratory of Babies Hospital, has now taken over the direction of the Clinical Chemistry Laboratory in the Babies Hospital.

Dr. Engel came to Babies Hospital from Denmark in 1964, having previously worked with a well-known Danish professor in clinical chemistry, Dr. Poul Astrup. Asked about plans for the near future in the laboratory, Dr. Engel commented: "As I see it now there are several important problems which we can attack immediately. The change to ultra micro methods is virtually completed for the most important blood tests, and we are presently working on the remaining tests. Micro techniques are of course a necessity when dealing with small patients where the amounts of blood which can be taken are limited. Simultaneous with the setting up of new micro methods, we are also improving quality control to further reduce errors and to thereby increase the reliability of the results. An important advance in this connection is the use of data-processing computers which are already on hand in the hospital.

"The Acid-Base Laboratory of Babies Hospital has already adopted these modern means so that all calculations incident to the analyses are presently being done solely by the computer. This summer we have been very fortunate to have a computer programmer, Mr. Alan Zuckerman, working on this project with us. Mr. Zuckerman is an entering first

DR. KNUD ENGEL

year medical student at P&S. Through his work we anticipate that the computer will soon relieve us of tedious calculations of the analytical results, as well as taking over most of the bookkeeping of the laboratory and, in addition, offering us immediate retrieval of any of the approximately 35,000 tests now being performed by the laboratory every year."

According to Dr. Engel the Babies Hospital laboratory is now one of the few laboratories in the United States that is exclusively devoted to microchemistry.

## In Memoriam

MARIAN E. FITZHUGH

Marian E. Fitzhugh, member of the Women's Auxiliary of the Presbyterian Hospital and of the Corporation since 1964, died on September 21. She was a graduate of our School of Nursing, class of 1928, and is survived by an adopted son, J. Perry Fitzhugh, and a brother, Dr. William M. Fitzhugh.

## DR. DAMROSCH

Continued from page one

assistant vice president of the Hospital since July, 1965, has been dividing his time between here and Washington, D. C. where he has been Consultant to the Chief, Division of Medical Care Administration, Department of Health, Education and Welfare.

In his new post, Dr. Damosch will not break his long association with the Medical Center. Mary Imogene Bassett Hospital is affiliated with the College of Physicians and Surgeons through teaching appointments in medicine and surgery. At this 100-bed hospital fourth year medical students from P&S may elect to spend part of their training. The former director at the Cooperstown hospital, Dr. James Bordley, III, held an appointment at P&S.

Last year Dr. Damosch was received into the Twenty-Five Year Club. His tenure at the Hospital began in 1941 when he came to Babies Hospital as a resident. Interrupted by wartime service with the Navy, he returned to complete his residency in 1948 after which he joined the profes-

index of pulmonary edema can be made.

In another study, Dr. Levine and his co-workers have used this new method to examine the effects of low-oxygen content on the formation of pulmonary edema. Their findings, suggesting the absence of any direct effect until the air is almost entirely oxygen-free, throws doubt on the belief that the pulmonary edema that patients sometimes develop at high altitudes is due to the reduced oxygen content of the air.

This technique holds considerable clinical promise. For example, it is suspected that one reason patients suffering from bronchitis and emphysema have trouble breathing is the amount of water in their lung tissues. This new tool is being used by other investigators in the cardiorespiratory laboratory in an effort to discover if edema really is the culprit.

Dr. O. Robert Levine

# Dental School Develops Program In Oral Surgery

A new affiliation program between Columbia University School of Dentistry, The Long Island Jewish Hospital, and the Queens Hospital Center, leading to board certification in oral surgery, began recently. Plans for this affiliation were developed by Dr. Gilbert Smith, Dean of the Dental School, Dr. Rudolph Friedrich, William Carr Professor of Oral Surgery, Dr. Leon Eisenbud, Director of Dentistry at LIJH, and Dr. Seymour Roistacher, Director of Dentistry for LIJH/QHC affiliation.

The program provides a three-year postgraduate course of education and training in oral surgery to highly selected graduate dentists.

The program provides for academic training at the Columbia University School of Dentistry simultaneous with hospital training. Participating in the program will be oral surgery interns and first and second year oral surgery residents.

The academic program in

oral surgery at Columbia University includes, among other courses, surgical anatomy, surgical physiology, hematology, oral pathology, applied pharmacology, management of pain and neuro-anatomy. At the hospitals, the students receive supervised instruction in all aspects of oral surgery, which includes diagnosis and treatment of diseases and injuries of oral tissues, jaw bones and adjacent structures.

The formal affiliation agreement was signed by Dr. Grayson Kirk, President of Columbia University, Jack S. Liebowitz, President of The Long Island Jewish Hospital, and Dr. Alonzo Yerby, former Commissioner of Hospitals of the City of New York.

Dr. Eisenbud and Dr. Roistacher have both been appointed clinical professor of dentistry at Columbia University School of Dentistry. Both Dean Smith and Professor Friedrich have been appointed consultants in Prosthodontics and Oral Surgery, respectively, to LIJH and Queens Hospital.

From left to right: Dr. Rudolph Friedrich, Dean Gilbert Smith, Dr. Seymour Roistacher and Dr. Leon Eisenbud.

## Dr. George O'Grady Appointed Ass't. Dean of Dental School

Dr. George L. O'Grady has been appointed assistant dean for the School of Dental and Oral Surgery, it has been announced. He will be responsible for student activities, alumni affairs, public relations and the supervision of government grant detail.

A graduate of the Dental School, class of 1934, Dr. O'Grady joined the faculty in 1963 following his retirement from the U. S. Army Dental Corps, where he held the rank of colonel. He has recently been directing a training program concerned with teaching dental students to work with dental assistants.

DR. GEORGE L. O'GRADY

# OUR UNIT RECORD

The Unit Record System, originated by the Presbyterian Hospital medical staff and put into active operation January 1, 1916, is now well into its golden anniversary. From the beginning, other hospitals sent representatives here to study our new system, and it was demonstrated before the American Medical Association membership at its national meeting in New Orleans in 1920. Consequently, our unit system has been the model for many hospitals and institutions around the world.

The Records Department is located on the second floor of Vanderbilt Clinic and connected by conveyor with the various floors in the Clinic. A patient's record can be ordered by telephone and often delivered within a matter of minutes. Indeed, between 5,000 and 6,000 individual records must be pulled, delivered, then refiled daily.

The Records Department, under the direction of Dorothy Kurtz since the medical center was new, operates 24 hours a day and has a total of 64 full-time employees, and 54 part-time employees who do much of the work during the evening and night.

Dorothy Kurtz came to us directly from the statistical department of Metropolitan Life Insurance Company, highly recommended by their Dr. Louis I. Dublin, who knew that the job required a person to organize into a unified and workable system the diverse record files from separate hospitals then being welded into the world's first and largest medical center. Miss Kurtz initiated the terminal digit filing system, modern shelf filing, and other innovations in the medical record field. She has also published a book describing the Unit Record System.

Difficult as it is to imagine, the Records Department now has available to doctors and researchers the individual medical records of more than two million patients, all cross-indexed by name and by disease and operation. Consequently, our library of clinical material for medical research and teaching is second to none in the world.

When a new patient is first seen at any of the hospitals or clinics, his case is assigned a unit number. From that time forward, all medical data concerning him will be filed under that unit number, whenever or wherever he might be treated within the medical center. The first record often starts with birth at Sloane Hospital. Many of the records still active date back 50 years and contain the medical facts about many hospitalizations and outpatient visits.

Dorothy Kurtz

A color code system, introduced in 1960, greatly reduces the possibility of misfiled records. A distinct color is used for each digit, zero through nine, and the three color bands on each record jacket refer to key filing digits of that unit number. Thus, the unit number

150-42-97 would have a red-orange-blue color code band. When misfiled, the color bands will contrast sharply with the records filed on either side, permitting the file clerk to spot the error immediately.

Although thousands of individuals' records may be out of file at any given time, the control desk in the record room can locate them immediately provided they have not been moved by the users. They may then be picked up by messenger and delivered to the person or department whose need is most urgent.

The patient who is treated or hospitalized elsewhere can get copies or a summary of his medical records here on a request from his physician.

The photographs to the right show some of the day shift Records Department people in action. As you can see, the pace here is much like that in the dispatcher's office of a busy railroad, where there is little wasted motion and no madness in their methods.

## Columbia-Presbyterian Medical Center Is People...

Lillian (Austin) Penka, chief circulation clerk, is working with Bernadette Gorman, to run down a record that is out of file and urgently needed.

# STEM MARKS 50TH ANNIVERSARY

These telephone clerks have desks at the end of each bank of files and take requests for units within their area. The pulled unit is placed on the conveyor that runs above the telephone desks.

Row upon row of floor-to-ceiling shelves contain the histories of thousands of patients, all filed by color code and unit number. About 6,000 folders must be pulled and refilled daily.

This is the main circulation desk, where the clerks often use two phones, and where control of distribution of records is guided. These busy people can locate records out of file and have them delivered to another destination when needed.

Stella Vacirca, Name Index Clerk (left) has thousands of patient names at her fingertips, and Mary Rehill, Tracer (right) will be able to find the records of such patients, even though they may be out of file, when they are needed.

Catherine Montgomery (left) and Julia Supple (right) are messengers. You may see them hurrying through any part of the medical center, either to deliver or pick up needed records.

# "Bloodfinger" Movie Shown At Volunteer Awards Tea

Awards for evening, weekend and junior volunteers were presented on September 12 at the Third Annual Awards Tea in Harkness Hall. These included the Presbyterian Hospital Award for 100 hours or more and the United Hospital Fund Award for 150 hours or more. In addition, pins were presented to the junior volunteers who fulfilled their promise of service. These are Nightingale Lamps for the girls and Maltese Crosses for the boys.

Guests were welcomed by Mrs. Marguerite Stein, Director of Volunteers. Dr. Joseph E. Snyder, assistant vice president of Presbyterian Hospital, addressed the gathering. He remarked that the services rendered by volunteers were one facet of hospital care that couldn't be priced; its value is beyond calculation.

Entertainment was provided by a movie, "Blood Finger," shown by Dr. Douglas Greer, P&S '66, author of and actor in the production, which is a hospital satire in the format of a spy story.

Among the volunteers who received awards were Kiyoski Nakazawa, brother of Dr. Hiroshi Nakazawa of the Department of Pathology, who was assistant to the laboratory technicians on Harkness 2nd floor, and Lillian Tchong, a Candy-striper who worked as a feeder on the 5th floor of Babies Hospital. Pictured here with them on the way to the hospital garden is Mrs. Frances Miyahira, (center) a daytime volunteer who works in the recreational program on Neurological Institute's 4th floor.

Dr. Louis Bauman

Dr. William A. Bauman

## DR. BAUMAN

Continued from page one

tooth and his mother's delectable Viennese pastry; on the other side, the doctor's knowledge that calories *do* count and that one could hardly fail to do oneself what one was telling others to do.

"I must say that Dad never lectured to the family about overeating," recalls Dr. Bauman's son who, a physician himself, was recently appointed the hospital's Director of Medical Data Processing. "But he was one of the first in the United States to approach diet problems from a scientific viewpoint."

In the 1920's there was a vogue for blaming excess weight on "the glands" or on "nature," Dr. William Bauman declares. "But my father felt that most *avoiroduis* resulted simply from eating to excess, and he prescribed sensible, conservative menus rather than any of the crash, fad diets that are popular today."

A P&S graduate of 1901 and an assistant attending physician, the senior Dr. Bauman soon discovered that his Obesity Clinic would attract sizable attention. Besides saner eating habits, he prescribed 20 minutes of calisthenics and a two-mile walk daily. To Presbyterian's clinic the overweight came by the hundreds—and left thousands of pounds lighter.

One of Dr. Bauman's reports in the *Journal of The American Medical Association* noted that female fatties outnumbered males 10-to-1; the

average age of the paunchy patients was 43, and their average overweight, 54 pounds!

The Obesity Clinic was even attended by a circus fat lady. She was so heavy when she first came that the usual scales couldn't weigh her: some freight scales from the Receiving Department had to be used, instead.

Said the newspapers: "In New Jersey there's a clinic for fat people at the Presbyterian Hospital where all those towers and roofs and straight lines and right angles of the new hospital center make such a gorgeous pile high on the cliff against the skyline. Beauty of position or architecture has nothing to do with this, though women travel from long distances to find out how they can grow more slender and therefore more beautiful."

Of course, you can lead someone to cottage cheese, but you can't *make* him shrink. And so the nation's newspapers also reported one flat failure in our fight against fat:

He was a New Jersey boy, age 18, the son of a butcher, "used to choice steaks, chops and roasts." And it showed: the boy tipped the scales at 288.

He was in the hospital for a month, during which he shed 12 pounds, before deciding he couldn't diet any more. "He was determined to eat and at a moment when no nurse was present, he slipped out of bed, secured his clothing and dressed. The boy walked out of the hospital unnoticed and it was not until some time later that his absence was discovered. . . . He went home to three square meals a day."

"Dad used to be kidded a lot about his interest in obesity," it is recalled by the present Dr. Bauman, who was graduated from P&S in 1947. "The cocktail canape was a special hate of his and, in general, he thought it was ridiculous for us to eat today as our ancestors did in times when people exerted much more energy in daily living."

Among Dr. Bauman's mementoes of his father is a *Journal of The American Medical Association* report he titled "A High Protein Beverage," (A forerunner of to-

Dr. Seegal Offers Stun-

## NEW ME

### "Reward For Work: More Hard Work," Says Our Dr. Seegal

Dr. David Seegal, Consultant in Medicine, who also earned a reputation as a most able and popular teacher, has a message for all who serve the health professions—but especially those now advancing their educations at the Medical Center.

In a paper titled "The Parables of Horatio Alger and The Clinician's Life," Dr. Seegal says that things just don't work that way! Especially in medicine, you don't simply try hard while young and then coast comfortably all the rest of the way; students "will learn that this is just the beginning of the story" and that "the reward for work well done is more work. . . . The effective, successful professional will face greater demands on his time and talents at age 40 than at 30, at 50 than at 40, at 60 than at 50, and sometimes at 70 than at 60."

HORATIO ALGER

Dr. Seegal's comments, prepared for *Alpha Omega Alpha's* periodical, "The Pharos," are well-timed for recalling Horatio Alger: it was exactly a century ago, in 1866, that he came down from Massachu-

day's low-calory, diet drinks?).

The doctor says his father had suffered polio when younger, but recovered sufficiently to take up tennis at the age of 40, playing vigorously until he reached 70. "But not to keep slim, just for the exercise. He also liked to garden and to walk, four or five miles a day when on vacation."

Dr. Bauman's father retired in 1946 after 27 years at the Medical Center. He died in 1954 at the age of 74.

## DELAFIELD LECTURES TO BE RESUMED

The regular Saturday morning lectures at Francis Delafield Hospital have begun. The schedule of programs for this month follows:

SATURDAY, 9:30-10:30 A.M.

October 8	Strand Characterization of some Viral Nucleic Acids	Albrecht K. Kleinschmidt, M.D. New York University School of Medicine
October 15	Control of Protein Synthesis during Embryonic Development	Paul R. Gross, Ph.D. Massachusetts Institute of Technology
October 22	Genetic Aspects of the Immune Process	Oliver Smithies, Ph.D. University of Wisconsin
October 29	Biology of Creativity	Hudson Hoagland, Ph.D. Worcester Foundation for Experimental Biology

# AL, DENTAL AND NURSING CLASSES BEGIN

settles to settle in New York City. Alger had drifted from one job to another, but here his literary talent caught fire, fanned no doubt by "the experiences gained in his efforts to improve the condition of street boys." From his pen tumbled dozens of novels like "Ragged Dick" and "Tattered Tom" that—in Dr. Seegal's words—taught this lesson:

"He who worked diligently to attain . . . success in early adulthood could then settle into a comfortable, unchallenging existence, ruminate about his accomplishments, cash in on his meritorious labors, and spend his remaining years (the majority!) enjoying the benefits of the good life. . . . My fellow readers of Alger's books believed, as I did, that if we worked hard, did as we were told, obtained an appropriate training, and experienced a few deft assists from Lady Luck, we would make our place in the world and reach a soft plateau of complacency where we could call the shots about the disposition of our time and energies."

Says Dr. Seegal: "Those of us who were nourished on the stories of Horatio Alger would find it difficult to dissent from his parables concerning the rewards of honesty, honor, humility and heroism. Nevertheless, we might pick a spicule of bone with the author concerning the rosy promises implied in the denouements of his volumes. . . . Rarely is a hint offered that the dynamics of the life situation will ask for more and more effort by our

DR. DAVID SEEGAL

hero, who on the final page seems set to savor an overflowing bowl of cherries. Some cherries!"

An increasing work-load over the years is a challenge to excellence of performance, the physician points out, and "a guarantee" that you will be "tired a good portion" of the day. But would you really have it otherwise? he asks, and replies, "Probably not, for there is a special fascination in caring for the sick. It apparently is generated by a synthesis of intellectual and emotional factors which serves as a feedback system to call upon unexpected stores of energy."

Dr. Seegal takes note of this philosophy expressed by George Bernard Shaw: "This is the joy in life, the being used for a purpose recognized by yourself as a mighty one; the being thoroughly worn out before you are thrown on the scrap heap."

## DOCTORS

*Continued from page one*

will experience a brief period of inconvenience. The college faculty, on the other hand, are determined that the extent and quality of medical education shall not be diminished despite any temporary difficulty.

Discussing the problem of selecting applicants for admission to medical schools, Dr. Perera voiced reservations about raising requirements and putting undue emphasis on prerequisites, testing scores and preliminary applications. He wonders if medical schools should not instead seek students from diverse environments and backgrounds, taking into account the many areas that fall within the concern of the health professions.

"Scholarship cannot be decried," the Dean states, "in the selection of those to be provided an opportunity to embark upon a medical career. Nevertheless, we must respond

to current admission pressures with increasing regard for the qualities of the individual and for the role which he is to assume."

In appraising prior performance, Dr. Perera suggests that medical school admissions officers make appropriate corrections for background, environment, course difficulty, the interruptions of outside jobs and activities, and those individual mannerisms which provide misleading evaluations.

At Columbia's medical school, he explains, about ten per cent of those admitted to each year's class — selected with enthusiasm after receipt of letters of recommendation and personal interviews — might have been rejected promptly on the basis of grades and admission test scores had only preliminary screening been employed.

Although these students cannot be compared with those whose places they usurped, Dr. Perera notes that from their ranks have come deans,

## DENTISTS

*Continued from page one*

York Philharmonic Orchestra. Her father is a dentist.

The class has four other members whose fathers are dentists and two whose fathers are physicians. One member lists himself as a magician-prestidigitator, and one has his pilot's license.

MRS. SONYA SIMENAUER

departmental chairmen, scientific contributors, practitioners and specialists of outstanding merit. Many, late to develop purpose and direction, he says, have had excellent performance records and several were elected to honor societies. On more objective evidence, the percentage of students who withdrew from medical school as a result of scholastic failure, motivational or emotional problems over a period of a decade was no greater from this group than from the others in their classes.

Dr. Perera raises a "final and most important question" which is not always reflected on objective data:

"Is it not essential for medical schools to continue to search for those with integrity, manner and bearing, as well as those who are responsible, empathic and curious?"

"For those are among the qualities and attitudes which are so essential to the physician's continuing self-education and to his activity at the bedside, in the classroom or in the research laboratory. Without these, the physician cannot function effectively and ethically, and in keeping with the needs of man."

\* \* \*

*From the standpoint of medicine as an art for the prevention and cure of disease, the man who translates the hieroglyphics of science into the plain language of healing is certainly the more useful.*

Emily Sobol (left), of Somerville, N. J. and Sarah Craig of Amherst, Mass., arrive with luggage at Maxwell Hall.

## NURSES

*Continued from page one*

reate degree but until 1956, continued to graduate nurses who were not degree candidates.

This year's class, all of whom have had a minimum of two years of college, will receive the B.S. degree in 1968. The program has just broadened its basis of admission to include R.N.'s who wish to earn a B.S. degree. Miss Margherita Serafini, who has been a nurse at the Medical Center, is the first graduate nurse to avail herself of this

opportunity.

The class of 1968 includes students from fourteen states, Canada, the Canal Zone and Bolivia. One girl, Elizabeth MacLeod Towne, is the daughter of an alumna; Gail Ann Fleming, Bette Kathleen Johnson and Margaret Jo Werner are sisters of alumnae, and Laura Cutler Middleton and Linda Jane Moyse are nieces of alumnae. Jane Carroll Heroy and Mary Elma Barnett are daughters of P&S graduates and Carol Joan Pino is the daughter of Dr. Daniel M. Pino, assistant attending anesthesiologist.

## P. S. 401X BEGINS WITH 20 PUPILS

In the gaily decorated classroom on Babies Hospital 12th floor, school began on September 12. In this annex of the New York City School System, known as PS 401X, 20 child patients, grades one through eight, were enrolled for the first session. Children hospitalized two weeks or longer are eligible for enrollment; others are welcome to attend but are not officially registered.

Under the direction of Miss Rosalie Castagnetta, who was welcomed back this term after a six month leave of absence, during which she was acting principal at PS 401, Bronx. Classes take place daily between 10:15 and 11:30 a.m.

Those patients unable to come to the classroom are taught at the bedside during the afternoons by Miss Castagnetta and Mrs. Lillian Graham, who teaches on the Orthopedic floor. Patients requiring lessons at the high school level are taught by a special teacher sent in as needed by the Board of Education.

While the hospital version of "the little red schoolhouse" has only morning sessions, the facilities are put to full use during the rest of the day. Classes for recreational therapy, which include painting, sculpting, jewelry making and rhythm band are held there afternoons.

Mrs. Lillian Graham gives bedside instruction to young orthopedic patient.

## Our Lock-Picker Finds Keys To Unlatch Sticky Problems

Locksmith Daniel A. Kenny (right) checks a job with Oertel Van Horn, instrument repair supervisor.

A quiet-spoken, gray-haired gentleman has been picking locks around here for years—and hasn't gotten into any trouble about it. In fact, he's been paid to do it.

As head of our locksmith shop, Daniel A. Kenny has for eight years been responsible for maintaining all the thousands of pieces of security hardware around the Medical Center. Included are not just our door locks—and keys—but those on files, desks, supply cabinets, elevators, and even the electric ponies in the tunnels.

From his tidy shop in the Service Building come the

scores of different types of keys we use. To his shop go dozens of requests for help, please, and quickly!

"People lose their keys and lock themselves out every day," says Mr. Kenny. "Handbags are put into push-button drawers—with the keys locked safely inside where you can't get at them, of course!"

"There's never a dull moment," according to the locksmith. "Of course, anybody can solve a problem by breaking a lock and bulldozing his way. The trick is to open it up without doing serious damage."

Mr. Kenny claims that care-

lessness is the main cause of trouble; "people don't keep their wits about them when keys are concerned." More than once, he's been called to work at night or over a weekend because someone has accidentally locked himself in a room and can't get out.

Often a patient arrives at the hospital, but can't open his bags: "Calling Mr. Kenny!" He's also picked many a lock for a student nurse who's just arrived, but can't get her trunk open.

Knowing the locksmith's dexterity, Emergency often summons him to solve a puzzler the police have brought in. For example, he has solved the case of the boy who pushed his finger into the top of a sugar dispenser and couldn't get it out again, and the girl who put a pot on her head and thought she might have to wear it forever.

Before coming to work here, Mr. Kenny worked for manufacturers of delicate instruments, some of them for use in World War II. So he found "it was an easy transition to locksmithing."

He was introduced to the art by Oertel Van Horn, supervisor of instrument repair. About three years ago another locksmith was hired, Joseph McGovern.

Incidentally, one of Mr. Kenny's pet peeves is the spy—or prison escape—show where someone opens a lock with a key made from a wax mold. Says our locksmith of the whole wax impression bit: "Baloney!"

## VACATION PICTURE

Gerard J. Walker, Assistant Purchasing Agent, was riding the big waves at Virginia Beach this vacationtime. His son, Roddy, shown with him, is also a surfer.

## ON THE SHELF

New Books in Milbank Library

### FICTION

**The Crying of Lot 49** by Thomas Pynchon. A funny novel about the discovery of a secret postal system operating in competition with the state monopolies.

**Columbella** by Phyllis A. Whitney. Jessica Abbot finds herself the center of a whirlpool of conflict at Hampton House on a cliff in the Virgin Islands.

**No One Hears But Him** by Taylor Caldwell. The theme of this novel is man's eternal search for spiritual peace, compassion, love, and understanding.

**A Vision of Battlements** by Anthony Burgess. A hilarious novel about a Sergeant in the British army stationed in Gibraltar who has a flair for doing everything wrong.

**The Premier and the Train** by Simonen. The first of these two novels is about a formidable man who becomes a legend in his lifetime and the other tells of a timid man caught up in the pandemonium of war.

### NON-FICTION

**The Missile Crisis** by Elie Abel. A complete account of the Cuban missile crisis which brought us to the brink of war.

**The Diary of Anaïs Nin.** A fascinating record of the author's life in Paris in the 1930's.

**Lyndon B. Johnson and the World** by Philip L. Geyelin. How the President approaches foreign affairs and the making of foreign policy by the diplomatic correspondent of "The Wall Street Journal."

**Willie Mays: My Life In and Out of Baseball** by Willie Mays. The story of the heartaches, slow maturity, and growing greatness of one of baseball's all-time stars.

**Against Interpretation** by Susan Sontag. Essays by a young writer who has become one of the most exciting figures in contemporary letters.

**The Crusades** by Zoe Oldenbourg. A fascinating account of the complicated currents and ideas which motivated the crusades.

**Khrushchev: A Career** by Edward Crankshaw. How the peasant from Yuzovka became the ruler of Russia.

**Testaments of Time** by Leo Duell. The story of the scholar-adventurers who gave us vast new knowledge of ancient civilizations and of the origins of the Bible.

**How to be Rich** by J. Paul Getty. The wealthiest man in the world reveals the art of acquiring a fortune.

**The Beginners** by Dan Jacobson. A panoramic novel of a family—the Glickmans of Lithuania, South Africa, England and Israel.

**Too Far to Walk** by John Hersey. The rebellion of a group of bored undergraduates in a New England college.

## 1966 UHF DRIVE IS NOW IN FULL SWING

The United Hospital Fund began its 1966 campaign with a dinner at the Hotel Plaza on October 3. This drive for \$3,000,000 to aid 78 voluntary organizations in Greater New York will continue until February 1.

The Presbyterian Hospital receives more than \$300,000 yearly from the United Hospital Fund which has its drive now, and from the Greater New York Fund which solicits in the spring, for use in the wards and clinics. Contributions to the United Hospital Fund are sought among the professional staff and the trustees. Contributions to the Greater New York Fund are sought among other employees of the hospital.

Auxiliary members and trustees work among their friends and associates to raise the hospital's quota for the United Hospital Fund which this year is \$245,300, of which \$119,470 is direct benefit. Direct benefit means that this amount is returned directly to the hospital before the general distribution is made.

Group leaders for the teams are: James Foley, Trustees; Dr. Frederic Herter, Professional; Mrs. Charles A. Flood, Presbyterian Hospital; Mrs. Charles E. Adams and Mrs. H. McLeod Riggins, Neurological Institute; Mrs. Robert E. Carroll, New York Orthopaedic, and Mrs. Robert H. Burrows, Babies Hospital.

\* \* \*

## In Memoriam

**Dr. Harry Stoll Mustard**, formerly director of Columbia's De Lamar Institute of Public Health and professor of public health practice from 1940 until 1955, died in Camden, S. C. on August 4. He was 77 years old. Dr. Mustard had been New York's Commissioner of Health from 1947 until 1950.

NOVEMBER, 1966

## Parkinsonism Conference Set For November 28-29

The Third International Research Conference of the Parkinson Information Center will take place November 28th and 29th at the Alumni Auditorium. Sessions will be held daily, morning meetings will begin at 9 a.m. and afternoons at 2 p.m.

"Neurophysiological Basis of Normal and Abnormal Motor Activities" will be the general topic of the conference, an annual event sponsored jointly by the Parkinson Information Center and the National Institute of Neurological Diseases and Blindness, National Institutes of Health.

Speakers will include Sir John Eccles, Nobel Laureate, now at the Institute for Biomedical Research, Chicago, who will describe the most recent work from his laboratory dealing with the manner in which neurophysiological and neuroanatomical studies of the intrinsic organization of the cerebellum and its connections contribute to an understanding of motor control mechanisms.

## 27 Weinberg Candidates Will Attend 11 Schools

Lillian Oring of the Personnel Department has just announced that 27 applicants for the Sidney J. Weinberg Educational Aid Reimbursement Plan have been approved. Each candidate will receive as much as half of his tuition costs as he continues his education.

There are 19 degree candidates: six are studying for the A.A.S. degree, six for the

Bachelors, five for the Masters and two for the R.N. They will attend 11 different universities and schools.

The approved candidates are: Suzanne Bolger, Clerk-Typist, Harkness Hall; George Burgess, Electrician, Maintenance & Construction; Michael Casali, Pharmacist, Pharmacy; Lenore Cuomo, L.P.N., Nurs-

## HOSPITAL NEEDS BLOOD — \$10 PAID EACH DONOR

Dr. John G. Gorman, Director of our Blood Bank, and Mrs. Ruth Bogan, Blood Bank Supervisor, make an urgent appeal to all hospital and college personnel for donations of blood for our patients.

There is a nationwide shortage of blood at present and it is so great that our blood bank is unable to obtain from our usual outside sources enough of the lifesaving blood needed by our patients.

It takes only a little time for employees to go to the Blood Bank on the 20th floor of Presbyterian Hospital and make a donation of their blood. Mrs. Bogan will welcome donors between the hours of 1 p.m. and 6 p.m., Monday through Friday.

Our blood bank is presently not able to maintain its normal working inventory.

All types of blood are needed quickly, so won't you take the time to give a unit? Why not do it today?

An honorarium of \$10 will be paid to each donor.

## Nursing School Marks 75th Year of Service

Uniforms have certainly changed—but there's still quite a resemblance to the present day "stripes" in the dress of these nurses, graduates of the Class of 1896. This design was done by Miss Maxwell, who chose the striped gingham to be distinctive from the checks and plaids in use by earlier training schools. The material was bought from a Scottish firm of weavers who wove it especially for Presbyterian Hospital. Note that the wings of the unstarched cap were then pinned close to the head.

Student nurses on duty in the Intensive Care Unit. The "stripes" are the original blue and white, the cap is worn on the back of the head with points free, and the sleeves have been altered for practicality. The length of skirts, of course, have changed greatly since 1896.

## Our Nurses' Caps And Pins Have Interesting History

Caps and pins are the distinguishing features of a nurse's uniform. They indicate the school at which she was trained and mark her as a graduate nurse. Although she may change the style of her uniform after she leaves nursing school, her headgear and the pinned emblem of her alma mater are as much a part of her as is her dedication to

the welfare of the patients she serves.

The Presbyterian Hospital pin was first presented to the graduating classes of 1892, 1894 and 1896 at the latter's graduation ceremonies by Frederick Sturges, member of the Board and Chairman of the Training School Committee. During the quarter of a

Please turn to page seven

Uniforms as well as practices and responsibilities will change, but the unique role of the professional nurse remains constant as the "authority on basic nursing care."

A review of the 75 year history of nursing education at the Presbyterian Hospital emphasizes the truth of this observation.

When the Presbyterian Hospital School of Nursing formally opened in 1892, middle-aged women were employed as "nurses." Although loyal and hardworking, their training came mainly through experience. Oftentimes they were unable to cope with the needs of very ill patients.

Realizing the need for women with some training to improve the caliber of nursing care, the Hospital had earlier employed a few students and graduates of the New York Post-Graduate Training School for Nurses. These women—"ladies of refinement and unusually good looking," according to a historian of the day, spent much of their time mopping and dusting wards, bathing patients, bedmaking and performing simple care. As they advanced in their training course, they were relieved of some of the menial tasks and were able to devote more time to the patients.

Noting the value of the nurse with some training and determined to have the "best hospital in every respect in the city and country," John S. Kennedy, President of the Board of Managers in 1890, voiced the idea of establishing a school for nurses at Presbyterian Hospital. He was abetted in his plans by Frederick Sturges and with the support of superintendent Dr. C. Irving Fisher, the Training School for Nurses at the Presbyterian Hospital opened in 1892.

Miss Anna C. Maxwell, who had organized a training school at St. Luke's Hospital, based on her experiences at the Boston City and the Massachusetts General Hospitals,

## STETHOSCOPIA

### • WEDDING BELLS

*Susan Kinne*, R.N. on Presbyterian 12th floor, was wed to *Lt. Warren A. Johnson*, USA on September 15. *Lt. Johnson* will be stationed in Okinawa in January.

*William Martens Lee*, fourth year student at P&S, and *Miss Elizabeth L. Maxwell* will be married in December.

*Helen Kuntzig*, Secretary in the Department of Surgery, and *Fred Castiner*, Protective Department, were married recently.

*Arthur Dinkens, Jr.*, Orderly, was married to *Miss Eloise Douglas* in September.

*Mary Ellen Dooris*, R.N. in Harkness, and *Mr. Richard Wirin* were married recently in a ceremony at the King's Point Merchant Marine Academy. The couple took a wedding trip to Spain.

*Veronica Williams*, PH X-ray, and *Mr. Theodore Gordon* were wed on October 2. The couple went to California on a wedding trip.

*Verdell Washington*, Nursing Aide on PH 12, and *Mr. Frank Tatum* were married October 29. The couple is living in Los Angeles.

*Joy G. Sperry*, Clinical Pathology, will marry *Mr. Donald William Sowary*.

*Dorothy Fiore*, Medical Information, plans to marry *Mr. John Finamore* in June.

### • STORK NEWS

*Juan Valentin*, Supervisor in Oxygen Department, and *Mrs. Valentin* welcomed a baby, *John Anthony*, born recently at the Hospital.

*Frank Thyssen*, Maintenance and Construction, and *Mrs. Thyssen* have a third daughter, *Frances*, born here last month.

*Mrs. Rhoda Ulshoefer*, Communications Center, is a new grandmother.

### • WELCOME TO THE FOLD

*Betsy Sheffer* has joined the X-ray technicians at PH.

*Woodrow Robeson*, R.T., is new Chief Technician of the X-ray Department.

Social Service greets *Shirley Liss*, *Mary Palmer*, *Mrs. Ninon Blom*, *Genevieve Wilkins*, *Mrs. Diane McLaughlin*, *Barbara Volpin*, *Nancy Weston* and *Gail Foster*.

*Walter Liscombe*, Purchasing. Formerly in Communications, *Walter* is the son of *Harold Liscombe*, former supervisor of Housekeeping.

### • VACATIONERS

*John O'Connor*, Protective, enjoyed a cruise to Bermuda with *Mrs. O'Connor* and their two sons.

*Kathryn Hayden*, Doctors' Locker Room, visited the Amish Country on her vacation.

*Mrs. Mae Mahoney*, PH X-ray, visited Ireland for the first time since she left her homeland thirty-one years ago.

*Catherine Flynn*, PH X-ray, visited Ireland and Germany, and *Antoinette Millsapp* is now on a tour of Europe.

*Mrs. Carmen Fasanella*, Record Department, visited her new grandson in California. Also in that department, *Harriet Vardakis* took a tour of Europe and visited her 96 year old grandmother in Greece, and *Mrs. Gertrude Finn* will vacation in Jamaica.

*Elsie Mardigian*, secretary in Nursing, visited Vienna, Kiev and Armenia.

*Mary Donellan*, secretary, Communications Center, spent 6 weeks in Ireland.

### • FAREWELL

Retirees *Samuel Jenkins*, Head Porter, N.I., *Ann O'Rourke*, X-ray, and *Olive E. Hildebrand*, interviewer, Ward Admitting.

## DOINGS OF DOCTORS

The XVII Gibson Lecture will take place on next Tuesday, November 15, in the Alumni Auditorium at 4:30 p.m. Speaker will be Nobel Laureate *Sir Peter Brian Medawar*, Director of the National Institute for Medical Research, London (Medical Research Council). *Sir Peter's* topic will be "Recent Progress in Transplantation Research."

*Dr. Elvin A. Kabat*, Professor of Microbiology, is the recipient of the 1966 Karl Landsteiner Memorial Award of the American Association of Blood Banks given at the annual convention of the association last month. It honored him "for his pioneering work in immunochemistry, leading to greater understanding of basic mechanisms of immunohematology and blood banking, including the fundamental demonstration that antibodies are gamma globulins, that immunologic reactions may be studied quantitatively, and for the elucidation of the structure of specific antigenic determinants, particularly as related to A and B specificity, and for stimulating and training more than a generation of immunochemists," according to the citation. The award includes a scroll and \$1,000. It was accepted in behalf of *Dr. Kabat* by a colleague as the honoree is on sabbatical leave in Paris.

*Dr. Alan DeForest Smith*, Consultant in Orthopaedic Surgery, attended the meeting of the Pan-Pacific Surgical Association in Honolulu, September 20-28. He then went on to attend the extension of the meeting in Japan and Hong Kong, where he delivered a paper on spinal tuberculosis, and then attended the meeting of the American College of Surgeons in San Francisco. *Dr. Lester A. Mount*, Attending Neurosurgeon, also attended the Pan-Pacific meeting.

*Dr. Hans Kaunitz*, Assistant Attending Physician, delivered a paper on "Some Etiological Factors in Obesity" at the combined meeting of the Pirquet Society of Clinical Medicine with the Rudolf Virchow Medical Society, on November 7, at the Academy of Medicine.

*Dr. A. Gibson Packard*, who completed his residency here in 1959, has been named President of the Maryland Orthopaedic Society for 1966-67.

*Dr. Gabriel G. Nahas*, Professor of Anesthesiology, lectured at the Department of Physiology, Downstate Medical School, Brooklyn, on "Acid Base Balance and Lipid Metabolism." He also addressed the Surgical Staff of the Jewish Hospital, Brooklyn, on "The Use of Buffers in the Surgical Patient."

The award of a silver medal by the American Roentgen Ray Society to a scientific exhibit on Pulmonary Scanning was made to *Drs. Philip Johnson*, Assistant Attending Radiologist, *Kent Ellis*, Associate Attending Radiologist, *Bruce Parker*, Assistant Resident in Radiology and *Stuart W. Cosgriff*, Associate Attending Physician. The exhibit illustrates the clinical usefulness of a new technique of isotope scanning of the lungs which is particularly valuable in the diagnosis of pulmonary embolism.

A taped interview with *Drs. John G. Gorman*, Director of Blood Bank, and *Vincent J. Freda*, Assistant Attending Obstetrician, was made recently in the Blood Bank by the West German TV outlet. The subject was our project for prevention of hemolytic disease in the newborn (RH babies). The program will be part of a monthly news magazine's broadcast, highlighting medical developments all over the world.

*Dr. Arthur Purdy Stout*, Consultant in Surgery, entertained the staff of Surgical Pathology, by leading the singing at their bon voyage party for *Dr. Raffaele Lattes*, prior to his leaving for Japan.

*Doctor Ronald L. Katz*, Associate Attending Anesthesiologist, recently returned from a lecture tour of England and Scandinavia. Institutions visited included the Hammersmith Postgraduate Medical Institute and the Royal College of Surgeons, both in London; The University of Goteberg, University of Uppsala, Karolinska Institute (Stockholm) and the University of Helsinki.

*Dr. M. M. Melicow*, Consultant in Urology, participated in a panel presentation "Stump the Experts: Problems in Urology" during the 96th Annual Session of the Colorado Medical Society, held recently at the Broadmoor, Colorado Springs. He also addressed a combined meeting of the Colorado Society of Clinical Pathologists and Urologists on "The Prostatic Nodule."

*Dr. Paul J. Poppers*, Assistant Attending Anesthesiologist, attended the 2nd European Congress of Anesthesiology in Copenhagen recently. He was a member of the Panel on Obstetrical Anesthesia and presented a paper "Methemoglobinemia in Mother and Fetus." In addition, *Dr. Poppers* was Visiting Professor at the Medical School of the University of Belgrade where he lectured and did clinical teaching. While there he taught and introduced the first caudal anesthesia in Yugoslavia. He also visited the Universities of Amsterdam and Nijmegen, The Netherlands.

*Dr. E. M. Papper*, Director of Anesthesiology, has been elected president-elect of the American Society of Anesthesiologists at their recent annual meeting in Philadelphia, at which time he also delivered the Rovenstone Memorial Lecture. *Dr. Papper* has also been appointed Chairman of the Panel on Anesthesiology of the Drug Efficacy Study of the National Academy of Sciences.

## SANTA NEEDS HELPERS

The Babies Hospital Nursing Office will have Christmas Dolls available for dressing during the first week in November. These will be displayed at the Dolls' Tea Party on December 21, at which time child patients make their choices for delivery by Santa on Christmas morning.

If you are handy with knitting needles, crochet hook or sewing materials, won't you help to provide attractive dolls for our small patients? Probably you will get almost as much joy in designing and completing these outfits as do the recipients of these lovely gifts.

Dolls may be obtained at the Babies Hospital Nursing Office, Room 221, daily between 8:30 and 4 p.m. They should be returned there before December 20.

## Diabetes Week Recalls Great Medical Advance

November 13 begins Diabetes Week, dedicated to the detection and control of the ailment against which the hormone insulin is a prime weapon. Although 45 years have passed since insulin was clinically introduced, scientists still do not understand fully how the hormone works. The following article outlines some of the investigations made here and elsewhere.

The time was 1921; the place, Toronto General Hospital; the patient, Leonard Thompson, aged 14.

Leonard was well-known in the diabetes clinic where he had been followed for more than a year. He had severe diabetes which was poorly controlled, even though he had followed his prescribed starvation diet of 450 calories per day. At the time of admission, Leonard was emaciated, lethargic, with unquenchable thirst. His blood sugar was high and his prognosis with the treatment available was hopeless.

In 1922, however, Leonard received the first extracts of pancreas which had been made by F. G. Banting and C. H. Best. His sugar levels fell dramatically. Leonard became brighter, his appearance improved and his strength was clearly increasing.

Thus began one of the most dramatic reversals of a lethal disease in the annals of medicine. The story of diabetes and insulin, excitingly highlighted in 1922, has not passed into the realm of history, for new concepts of the disease and of the way insulin works have kept these still-unfinished facets of medical biology in the forefront of clinical medicine and research.

At the College of Physicians and Surgeons, clinical and laboratory research have contributed to exciting discoveries in the field of diabetes and insulin. In 1923 a patient being followed by Dr. Henry Marks in the Vanderbilt Diabetes Clinic was referred to Dr. Herbert Weiner at P&S affiliated Montefiore Hospital, who had the first supply of insulin in New York. In 1933

Drs. D. W. Atchley, Robert F. Loeb, Dickinson W. Richards, Ethel M. Benedict and Mary Driscoll reported a detailed study of patients with diabetic acidosis before and after the administration of insulin. This careful and precise clinical investigation has become a classic in the field and is as true and accurate today as it was 33 years ago.

Another important contribution to the understanding of diabetes and insulin was made by Drs. DeWitt Stetten and George Boxer of the Department of Biochemistry in 1940. They conclusively demonstrated that the major pathway for the conservation of carbohydrate was its conversion to fat. In diabetes, they noted, this pathway was interrupted, but the administration of insulin corrected the defect. Dr. Maurice Krah, at one time a member of the Department of Pharmacology at P&S, later showed that protein biosynthesis was also altered in diabetes.

How does insulin correct these many changes in metabolism? Once it was thought that insulin affected the enzymes directly. For a time, it was thought that in diabetes

## \$79,000 Grant For Radiology Training Here

The National Institutes of General Medical Sciences has just awarded a \$79,000 grant to our Department of Radiology for Research Training in Diagnostic Radiology.

Dr. William B. Seaman, Director of the Radiology Service, explained that in accordance with a Congressional mandate, the grant will support special research training in efforts to increase the skilled manpower needed to help conquer heart disease, cancer and stroke.

"This will be a special program in X-ray diagnosis only," Dr. Seaman said. "It is a special four year training course, including 18 months of research, to develop people interested in academic careers in X-ray diagnosis."

Two candidates, Drs. Edward J. Pollock and William J. Casarella, both graduates of Harvard Medical School, have received appointments for the program and will begin their training on July 1, 1967. There will eventually be eight candidates in training during the program.

the blood sugar cannot get into the cell and therefore it cannot be used for energy production, as a source of fat, or in other ways. It was thought that by facilitating the movement of glucose from the outside to the inside of the cell, insulin made sugar available to the enzyme machinery of the cell.

Attractive as this theory was, it was soon recognized that this was not a sufficient explanation of how insulin works. Search for the answer to this mystery therefore has continued in many laboratories throughout the world. At P&S Drs. Alfred Gellhorn and William Benjamin have presented evidence of a funda-

## ARTHRITIS GUIDE RESEARCHED HERE

Work being done here to combat arthritis was recently surveyed by the U. S. Public Health Service in connection with publication of two new Government documents on this inflammatory ailment.

Titled "Arthritis Source Book" and "Arthritis: Billion Dollar Crippler," the reports were issued by the Surgeon General and the P.H.S.'s chief of arthritis, Dr. Glen W. McDonald.

To spread word of the new publications, Dr. McDonald wrote a series of newspaper

articles on arthritis that were distributed to editors across the country by the Associated Press. These articles were illustrated by photographs such as the one that appears here.

The picture shows Dr. Charles L. Christian, Associate Attending Physician, who studies arthritis under a grant from The John A. Hartford Foundation. Dr. Christian also appeared on television recently, discussing the progress being made against this disease, which affects some 13 million Americans.

Dr. Charles L. Christian, Associate Attending Physician, examines patient.

## STETHOSCOPIA *Continued from page two*

### • CONDOLENCES

Mrs. *Leonor Reyes*, HP 10 Nursing Aide, on the death of her brother.

### • NOTES OF INTEREST

The Practical Nurses Class of the Grace Dodge Vocational High School (42 in number) are being trained as volunteers to work on the P.H. 5—Orthopedic and P.H. 10—Urological floors. They will each serve one afternoon or Saturday morning throughout the school year as part of their field work.

Several young ladies from the New York Junior League are working as volunteers on the "Art Cart," visiting in the Neurological Institute and Presbyterian Hospital once a week. Pictures, of many types, have been attractively framed and are offered for selection to the patients.

mental effect of insulin at the level of the gene, the biologic unit of heredity. They have shown that insulin induces the diabetic animal to synthesize afresh the enzymes depleted in diabetes.

When they asked the question of "How does insulin induce new enzyme synthesis?" their experiments pointed to an action of the hormone on the genetic apparatus which is now known to be the primary step in the formation of proteins. In this exciting research which relates insulin to the control of gene action. Drs. Benjamin and Gellhorn utilized experimental procedures and principles described by Drs. Philip Feigelson and Muriel Feigelson of the Department of Biochemistry who were the first to discover that a hormone, cortisone, induced enzyme synthesis. The work of Drs. Gellhorn and Benjamin on insulin has been greatly aided by Dr. Robert Canfield,

who has synthesized a radioactive form of insulin which makes it possible to study where in the body insulin concentrates.

Neither the end of the story of insulin, or of diabetes, is yet told. A complete understanding of how insulin acts will provide a penetrating insight into the most intimate mechanisms of cell function.

Diabetes is not only a metabolic disorder but also a disease with multiple manifestations: changes in blood vessels, lens metabolism and nerve function. How and if all these changes are related is still clouded.

On the 45th anniversary of the introduction of insulin into clinical medicine, we can look back with satisfaction and appreciation on the advances in knowledge which have been made, but the future is filled with anticipation of greater understanding to come.

## Your Christmas Windows Should Be Planned Now

It's time to think of Christmas and that typical, festive touch—Christmas Window Painting.

This year the Contest will open on December 1, with entry blanks and painting materials available at the Chaplains Office, off the Memorial Room on the first floor of Presbyterian Hospital. Entry blanks will also be distributed to nursing stations.

At a meeting of the Medical Center Art Committee on October 26, it was announced that the preliminary judging of the windows would take place on December 20, finals on December 21, and awards on the 22nd. Entry blanks must be returned to Public Interest by December 16, although paintings may be completed after that date.

Members of the Committee will serve as judges of the windows. They are: Chaplain Robert B. Reeves, Jr., Chairman, Drs. C. R. Wise, Jerome P. Webster, Bard Cosman and Meyer M. Melicow, Mrs. Pamela Seaman, Mrs. Mary Ryan, Margaret Del Mar, Helen Henry, Martha Haber, Agnes Dilworth, Mrs. Carol Stille, Mrs. Rosemarie Glennon, Mrs. Amarylius Otto, Harriet Phillips, Robert Demarest and James A. Sheridan.

# Some Interesting Highlights From A

Almost every statistic relating to the operation of Columbia-Presbyterian Medical Center is unique, because no other institution in the world is called upon to do things on such a large scale. And usually, the very size of an operation dictates the manner in which it can be done most efficiently.

Consider, for example, the challenge of our Food Service Department, which each year serves more than 1,300,000 patient meals, more than 2,500,000 meals for employees, students and visitors, and 600,000 prescribed formula mixtures for infants. In addition, the department does the catering for hundreds of teas, banquets, and the special affairs held each year.

Dean Calvert, Director of Food and Housekeeping Services, heads this important operation and is ably assisted by John Olden. Mr. Calvert is a graduate of Cornell University School of Hotel Management and came to the hospital 10 years ago, after serving as food and beverage manager at the famed St. Moritz Hotel. Mr. Olden is a graduate of Pratt Institute in Hotel Management and has been at the hospital two years. He previously worked in food services at Fordham University.

Although the idea for our Central Food Service Department—which is responsible for patient meals—was originated by Mr. D. K. Tuller, former Assistant Vice President, Mr. Calvert and his staff were responsible for all the planning and the installation of this unique system, which went into operation in November, 1960. The compact department occupies surprisingly little space, yet it is the largest hospital centralized food system in the world. Its installation permitted the closing of the Neurological Institute Kitchen and 24 serving pantries located throughout the Medical Center, making a great deal of space available for other hospital functions. Even more important, it greatly improved the quality of patient meals.

Three times daily, 365 days a year, Central Food Service prepares, assembles on trays,

Dean Calvert

then delivers between 1200 and 1300 patient meals that include 50 or more types of therapeutic diets, as ordered by physicians.

The heart of Central Food Service consists of two moving belt lines, each 38 feet long. The belts, manned by 24 employees, many wearing white gloves to protect against heat, complete ten meals per minute for delivery. From the time the assembly belts begin to move, it takes about 90 minutes to deliver all patient meals.

At the head of each belt are stacks of menus that have been supplied by dietitians who serve throughout the Medical Center. These menus accompany each tray to com-

pletion. First on the belt goes a stainless steel dish and its cover. A metal pellet, electrically heated to 450° F., is placed in the well of the dish and then a warmed plate goes over it. Reading each menu, the serving station employees put the proper meat and vegetables on the plate, which is then covered and placed on a tray. A bowl of one of the two or three soups available for lunch and dinner is added. Salads, breads, desserts and beverages are added as the belts continue to move. The salads, made continuously as the line runs, come through a two-way refrigerator from the salad room to be served crisp and fresh.

A dietitian or diet aide sits at the end of each line to check each tray against its menu. If the proper dishes have been included, the tray is loaded into a tray-truck which, as soon as its spaces are filled, is quickly delivered to the proper floor by express elevator.

One of the most popular features of Central Food Service, proved by hundreds of letters from patients, is that all private and semi-private patients who are not on special diets have printed menus from which they can choose a variety of dishes for any given meal. Perhaps a letter from one patient sums up what many feel: *"Throughout the day and sometimes the night, we have little choice about what the doctors, nurses and technicians must do to us to help us get well. What a great morale builder it is to have a fresh menu each meal from which we ourselves can choose our favorite dishes. . ."*

Simultaneously, as patient meals are being assembled, food for the three large cafe-

terias are delivered and replenished by special "dumb-waiters" between the two floors. Infant formulas are prepared in a specially-equipped room, where precautions are taken to guard against contamination.

The Food Service Department takes the greatest pride in one particular statistic: since the establishment of Central Food Service in 1960, not a single patient or employee meal has been missed—this in spite of electrical failures, great storms, and the famous blackout that put the department to its strongest test.

The "great blackout" struck in the evening, just after dinner had been served. There were tens of thousands of unwashed dishes, and the used kitchen equipment had not

There are 35 dietitians under the direction of Donna Lu Johnson, Chief Dietitian. They are responsible for all phases of patient feeding.

Richard Fernandez, now in his 18th year at the Medical Center, is commissary steward and responsible for food purchasing. Early each weekday morning, long before most of us are even up, Mr. Fernandez is at the wholesale market to personally select the fresh vegetables and fruits that are delivered daily. Meats and sea foods are also purchased daily and, like all foods served at the hospital, are only of top grade quality.

The busy people shown here are representatives of the many others who make such important contributions to maintain the high standards of our hospital.

## Columbia-Presbyterian Medical Center Is People . . .

been touched. All electrical machines, including the dishwasher, were useless. When the lights came on at 2:35 a.m., Food Service Personnel rose from their improvised beds without urging from anyone and went to work. When the breakfast shift arrived, every dish, tray and tray-truck was sparkling clean and in its proper place, and the kitchen was ready for normal operation.

Our Food Service Department requires 360 full-time employees, including between 30 and 40 cooks, who are closely supervised by Executive Chef Michael Widinich, and Assistant Chef, Peter Maristany.

Perhaps one of the best evaluations of the fine job being done by Food Service came from an elderly lady who recently moved into an apartment nearby. She was overheard talking to a friend, who asked her how she liked her new location. *"It's very nice,"* she replied, *"and there's a most wonderful cafeteria in the neighborhood. The food is excellent, well cooked and served, and the prices are so reasonable. It's strange, though, that they located it right in the middle of a big hospital."*

Therapeutic Dietitians who serve throughout the Medical Center. From left to right: Patricia Tong, Cecilia Herrera, Carole Naglak, Barbara Mohr, Lilian Yeu, Mary Sanders, Dorothy Kinneer, Emily Boesch, Anna Trimiar, Frances Seitzinger, Leticia Gordon, Mary Farley, Janis Smith.

Dietitians Carol Hamill, front, Elizabeth Plummer, center, and diet aide Thelma Bryan work in Central Food Service.

John Olden

# Day In The Food Service Department

These two moving belts permit 10 meals to be assembled each minute—between 1200 and 1300 meals three times each day.

Cook Johannes Byster, at left, prepares food for oven, and Eugenio Rivera, right, steam cleans one of the tray-trucks.

Mary Jackson and Carol Hamill

Chef Michael Widinich inspects a bird that most of us will be interested in this month.

Charles Young  
Central Food Service Supervisor

William Payne delivers the special silverware for a retirement party.

Bennie Mickens prepares fresh shrimp.

Robert Gibson, left, cleans one of the large cooking kettles, and Leonard Jarvis, right, operates a mixing machine.

Cook Manuel Ramirez, left, carves meat from turkey leg, and baker Tom Sakai, right, rolls pastry dough.

Richard Fernandez, Commissary Steward, at market to personally inspect the many fresh vegetables and fruits delivered daily.

Delio Colon oversees the vegetable steamers.

John Fogg is plugging in the cords of electric oven used to heat the metal pellets to 450° F.

These are some of the nice people who serve you in the Main Cafeteria.

## STUDENT NURSES BAZAAR TO BE HELD DECEMBER 8

The annual Student Nurses Bazaar will be held in Maxwell Hall, December 8, 4:30 until 7:30 p.m. This is the project of the junior class of the Nursing School to raise money for the 75th Anniversary Scholarship Fund as a class gift.

Preparations for the gala affair have been under way since January and it promises to be an outstanding presentation. As always it presents an opportunity for buying original and attractive gifts for Christmas.

The theme will be Mexican; it will be called the *Festival de Colore*, and items for sale come from all corners of the earth, donated by friends of the alumnae. Some handmade gifts were produced right here by the students.

A raffle will be held at the close of the evening.

## Parkinsonism Meeting

*Continued from page one*

Dr. Ragnar Granit, Director of the Nobel Institute for Neurophysiology of the Karolinska Institutet, Stockholm, a leading authority on the mode of regulation of reflex activities of muscle, will discuss studies on the integration of activity in spinal motor neurons.

Additional topics concerning the organization of central motor pathways and the effects of induced lesions in animals will be presented by Dr. Derek Denny-Brown, Neurological Unit, Boston City Hospital, and Dr. Fred Mettler, Departments of Anatomy and Neurology, College of Physicians and Surgeons.

Considerable emphasis will be placed during the symposium on electrophysiological studies which have provided important new clues to the functions of cerebellar neurons, the operation of synaptic pathways in the basal ganglia and the changes in motor activities during various states of sleep, induced tremor states and deficits of motor behavior.

According to Drs. Dominick P. Purpura and Melvin D. Yahr, the Organizing Committee for this event, the meeting promises to be one of the most important international symposia in the neurological sciences held in recent years. Its chief goal is to call the attention of both clinician and research worker to advances in the understanding of basic mechanisms underlying motor control systems and the factors responsible for their disorganization in different neurological conditions affecting motor performance.

Participants from this country, Europe and Asia will cover the field. Medical Center physicians on the panels include: Dr. Harry Grundfest, Professor of Neurology, Dr. Purpura, Associate Professor of Neurosurgery, Drs. Michael V. L. Bennett, Associate Professor of Neurology, Malcolm B. Carpenter, Professor of Anatomy and Dr. Yahr, Professor of Neurology.

Greetings will be extended by Dean H. Houston Merritt and Dr. Richard L. Masland, Director, National Institute of Neurological Diseases and Blindness.

## Social Service Students Take Training Here

For the 45th consecutive year, students from The Columbia University School of Social Work have been assigned to Presbyterian Hospital for field work training. During the academic year they spend three days a week in case assignments at the hospital, the other two days are spent in classes at the School. At the end of a two year course they will receive a Master's Degree in Social Work.

These students are: Judith Berry, Aurora Clark, Donna Cunningham, Mrs. Madelon Erlichman, Judith Frank, Andrea Grebien, Roxanne Kershaw, Patricia Kurtz and Mrs. Ernestine Stewart. Six of them are assigned to Medicine and Rehabilitation, four of this group have fellowships from the Office of Vocational Rehabilitation.

## In Memoriam

DR. HENRY ALSOP RILEY

Dr. Henry Alsop Riley, associated with the Neurological Institute for more than forty years before his retirement in 1962, died November 1. He was 79 years old.

A graduate of the College of Physicians and Surgeons in 1912, he joined the faculty of the medical school in 1915 as an instructor in pathology. Later he taught neurology and neuro-anatomy. In 1959 Columbia awarded him an honorary Doctor of Science degree in recognition of his achievements. At his retirement he was attending neurologist at the Neurological Institute and professor of neurology at the College.

A prominent authority on the anatomy of the nervous system, Dr. Riley was a former president of the American Neurological Association, a founder of the International Neurological Congress, former president of the New York Neurological Society and of the Association for Research in Nervous and Mental Diseases.

Dr. Riley was the co-author, with Dr. Frederick Tilney, of a text on the central nervous system and also wrote "The Atlas of the Basal Ganglia, Brain Stem and Spinal Cord." Survivors include his wife, Mrs. Margaret Hamilton Riley, a son, Dr. Edgar Alsop Riley, and a daughter, Mrs. Herbert Patton.

DR. BYRON STOOKEY

Dr. Byron Stookey, Professor Emeritus of Clinical Neurological Surgery at the College of Physicians and Surgeons and Consultant at The Presbyterian, died on October 20, at age 79.

Dr. Stookey, a graduate of Harvard Medical School in 1913, had a record of more than fifty years of service in

# New Nursing History Written By Miss Lee

Orders for early delivery of a new edition of the history of the Nursing School are being taken at the Alumnae Office in Maxwell Hall. It will be published in May, according to author Eleanor Lee. Marking the 75th Anniversary of the School, the new book emphasizes the progress in nursing education during the last 25 years and covers in detail the growth of the nursing service in the various units at the Medical Center.

Entitled "Neighbors 1892-1967" its subtitle explains that it covers the history of the Department of Nursing, Faculty of Medicine from 1892 until 1967, and of its predecessor, the School of Nursing of Presbyterian Hospital from 1892 until 1937.

Miss Lee, who also wrote the initial edition of the History of the School of Nursing, published in 1942 on the oc-

casion of the 50th anniversary, has reviewed the first half century in her latest book.

"It does not contain much of the detail which I incorporated in the first edition," she explains, "but touches on the highlights of the early years and treats in detail with developments in nursing since the war years."

An important addition to the history is a profile of the School's alumnae, including a summary of the study of 4,000 living graduates, done under the direction of Professor Dorothy E. Reilly.

The volume is illustrated with an extensive collection of pictures gathered from sources all over the Medical Center.

The reasonable price of \$3.00 per copy has been made possible by contributions towards the printing costs from friends of the School, in honor of its 75th Anniversary.

medicine. For most of his career he was associated with the Columbia-Presbyterian Medical Center.

At the twenty-fifth anniversary of the Medical Center in 1953, his service was recognized with the presentation to him of the Distinguished Service Award. At the 50th anniversary of Neurological Institute, in 1959 he received an honorary doctor of science degree from Columbia University.

Dr. Stookey was a past president of the New York Neurological Society, had served as chairman of the Section of Neurology and Psychiatry, New York Academy of Medicine; was a past president of the Society of Neurological Surgeons, the Clinical Research Society, the New York Clinical Society, the Society

of Neurological Surgeons, and a past vice-president of the American Neurological Association.

Born in Belleville, Illinois, Dr. Stookey had made his residence in New York City and Sharon, Conn. He is survived by his wife, Mrs. Helen Phelps Hoyt Stookey, a member of the Corporation of Presbyterian Hospital, and three sons, John Hoyt, Byron, Jr., and the Rev. Lyman B. Stookey, minister of the First Presbyterian Church in Brooklyn.

MARJORIE WIDALL

Marjorie Widall, formerly a housekeeper in Eye Institute, died September 23 in Neurological Institute. Miss Widall came to work at the hospital in 1955 and retired in 1963.

## THURSDAY EVENING LECTURES SCHEDULED

The Thursday Evening Lectures have been resumed for the 1966-1967 season. They are given at Babies Hospital Amphitheatre (Fourth Floor) and begin promptly at 7:30 p.m. The schedules for November and December are listed below:

### November

3	Eli Friedman, M.D. Downstate Medical Center	Kidney in Health — Nephron in Disease
10	J. P. Payne, MB, B. Ch. Research Department of Anesthetics Royal College of Surgeons, England	The Significance of Post-Operative Hypoxemia
17	Brian Hoffman, M.D. Department of Pharmacology College of Physicians and Surgeons	Vasodilators in Shock and Low Output States
24	Thanksgiving Holiday	

### December

1	M. T. Jenkins, M.D. University of Texas Southwestern Medical School	Fluid Problems of Interest to the Anesthesiologist
8	Hans Popper, M.D. Mount Sinai School of Medicine	Drug Induced Hepatic Injury
15	Post Graduate Assembly	
22	Christmas Holidays	
29	New Years' Holiday	

# NURSES PLAN MANY SPECIAL EVENTS

Miss Anna C. Maxwell, founder of our nursing school and superintendent from 1892 to 1921.

## 75th Anniversary

*Continued from page one*

accepted the appointment of superintendent of nurses and took over her duties on January 1, 1892. The school opened four months later with 21 students, 6 of whom had previously been employed as nurses at the hospital.

Miss Helen Young, Director of Nursing 1923-1946.

Miss Maxwell wrote, "the school opened in May, 1892, offering a two-year course of instruction and practice in medical, surgical and obstetrical nursing. Later on, experience in the nursing of contagious diseases was secured

Miss Margaret E. Conrad, Associate Dean for Nursing 1945-1950.

for the students. Graduate nurses to act as head nurses of wards were secured from this and other countries, and the work of teaching and administration varied as widely as the geographical distances from which these nurses came."

Later she said "everyone was looking to the new hospital for the latest improvements and immediate results."

Improvements continued to be the order of the day. Instruction was improved and increased to accomplish the ideal expressed by Miss Maxwell, bringing nursing to the level of a profession.

Miss Helen Young, who succeeded as Director in 1923, had long cherished the hope of providing opportunity for progressive educational growth

Miss Margaret Eliot, Acting Director of Nursing 1950-1955.

for the nurse. The dream became a reality in 1935 when the Presbyterian Hospital School of Nursing became the Department of Nursing of the Faculty of Medicine of Columbia University.

Miss Margaret E. Conrad was the first executive officer of the new Department of Nursing. Later she became Associate Dean. The first graduating class of 88 students participated in the Columbia University commencement exercises in 1937. Soon after, advanced nursing education was

A Symposium on "Newer Developments in Nursing Care for the Neurological Patient" chaired by Helen F. Pettit, Professor of Nursing, and Martha Haber, Constance Cleary, Nora Maliepaard, partially supported by the Neurological and Sensory Disease Service Bureau of State Services of USPHS will be held January 18, 19, 1967.

On March 31 and April 1, 1967, a symposium on "Multidisciplinary Group Teaching and Psychosocial Aspects of Patient Care" will be held under the chairmanship of Elizabeth S. Gill, Associate Dean (Nursing) and Dr. Lawrence C. Kolb, Professor of Psychiatry.

Attendance at these meetings will be by invitation, as space is limited.

recognized by the Master of Science degree.

Plans for the growth of the school have not ceased and each year brings innovations to improve the quality of nursing education. During this 75th year, the Department and the alumnae have scheduled many distinguished visitors to the school to lecture, conduct symposia and conferences. A special alumnae reunion will take place June 4-7, 1967.

An outstanding project for the celebration has been assembled by the alumnae. Called "Familiar Faces — Familiar Voices," it is a color slide presentation synchronized with the voices of many prominent nursing school associates. President Grayson Kirk, Dean H. Houston Merritt, Dean Elizabeth Gill, A. J. Binkert, Miss Young and many members of the faculty, nursing service directors and students are represented. It will be shown for the first time on November 17 on the occasion of the 92nd birthday party for Miss Young given by the School and Alumnae Association in Maxwell Hall.

A new Directory of Alumnae is being compiled under the chairmanship of Mrs. John M. Schullinger (Nancy Kiener '60).

Miss Eleanor Lee, Associate Dean for Nursing 1955-1961.

A scene photographed in the hospital superintendent's office at the turn of the century. Present, left to right, are Miss Maxwell, Dr. C. Irving Fisher and Mr. Frederick Sturges.

Educational, cultural and social areas are well covered and the homey touch has not been neglected either. The Columbia-Presbyterian Cook Book will make its appearance in time to delight gourmands among us. Its preparation and publication is being handled by "The Nutmeggers," alumnae living in Connecticut.

*Stethoscope* will carry announcements of further anniversary programs as they are scheduled each month, from now until June.

Miss Elizabeth S. Gill, present Associate Dean for Nursing.

ingful. Its connotation was explained by Mr. Sturges in his address at the early Commencement Exercise.

"We have resolved then to institute for you in our Hospital the 'Order of Neighbors,' 'Neighbors to them that fall among thieves,' and the pin bears upon the reverse the simple word 'Neighbors'.

"The Charter, Constitution and By-Laws of the order will be a constant study of the teachings of our Lord and Master in the Parable of the Good Samaritan. I think, without much explanation, you will see and feel the scope of this order. If you will always bear in mind that you can be a neighbor in every sphere of life, you will recognize the value of the training you have received here, and will give to us the happiness of feeling that in your hands our work is going forward with ever increasing results."

The Presbyterian nurse's cap was designed by Miss Anna Maxwell entirely in the American tradition, copied from the Puritan maiden's head-dress.

As the hair was worn in a pompadour and topknot at the time of the founding of the Nursing School, the cap was designed to fit over the topknot of hair and was worn forward on the pompadour.

Made of soft lawn, the caps were hand-sewn, unstarched, easily packable and *never laundered*. At the time of World War I, it was decided that the caps should be laundered instead of being discarded.

Today the Presbyterian nurse wears her cap stiffly starched, perched back on her head, with cuff points standing free. Nursing students are supplied their caps by the School. Graduates must obtain theirs through the school office. They are still sewn here at Maxwell Hall, where a busy mail order exchange accommodates the 4,000 graduates of the nursing school who need replacement caps.

## Caps and Pins

*Continued from page one*

century that Mr. Sturges kept this chairmanship the pins were his gift to all graduates. His son, Frederick Sturges, Jr. continues the family's interest in the Nursing School. He is the donor of nursing scholarships and an honorary member of the Alumnae Association.

The P.H. pin was designed by a London jeweler. It has a base of a white enamel Greek cross with equidistant arms, upon which is raised a red die with the letters P and H, encircled by a gold laurel wreath. Supporting the wreath is the insignia "Salus generis humani" (Health of Humanity). The inscription on the back face is especially mean-

# RECOGNIZE THESE VETERANS?

This photograph, taken at Fort Meade, Maryland in 1942, shows the officers of U. S. Army General Hospital No. 2, known here as the Presbyterian Hospital Overseas Unit. The hospital was stationed in England during the early years of the war, then moved to France following the Normandy invasion. More than 30 of these distinguished officers are presently serving on our medical staff. Although they have lost some of their military bearing, you should still recognize many of them.

seas Unit. The hospital was stationed in England during the early years of the war, then moved to France following the Normandy invasion. More than 30 of these dis-

tinguished officers are presently serving on our medical staff. Although they have lost some of their military bearing, you should still recognize many of them.

## Miss Mike Remembers Her War Years Here

November 11, Veteran's Day, is certain to revive memories of World War II for many who still work at the hospital — gas rationing, shoe and sugar stamps, war bonds and victory tax, the departure of loved ones for the various theatres of war. But what was it like working here at the hospital during those hectic, threatened days?

Marion Mike, Head Dietitian, Babies Hospital, had just finished her dietetic internship at the beginning of our entry into the war and was on her first staff job. Recently, she sat down and wrote some of her impressions of those days for *The Stethoscope*.

"I remember the shortages — in almost everything: the off-brand cigarettes we were glad to get at any price, the careful rationing of sugar, the patient's unacceptance of 'that other spread,' oleomargarine. New terms, like 'war-wound studies,' were heard on the wards and in the dining rooms. And the scheduled 48-hour week was never long enough to cover the many emergencies that were becoming a normal part of hospital life. Our windows were blackened, dim-outs were regular, and squares of cardboard were used inside to replace glass window panes—this for patient protection in case of bombing.

"All of us were deeply involved in Civil Defense. Preparedness was the motto, and our C. D. arm bands and identification cards were kept with us constantly so that we could get to the hospital, night or day, in case of an enemy attack on the city.

"Emergency coal stoves were housed in the unused area which was formerly the kit-

E. Marion Mike

chen for Babies Hospital, and where the Personnel Department is now located. Yes, coal was available in those days and delivered regularly to the hospital. The old brick building, known as the 'South Property' and now a parking lot, housed the bulk of our emergency food supplies, including paper dishes and cups. In addition, limited food supplies for emergency use were stored in each of the units. Our emergency rations were far from gourmet or the refined scientific foods used by present day astronauts; they were one-dish meals which were nutritious and filling for both adults and children. I recall how impressed I was with the canned cocoa, spaghetti and baked beans that were automatically heated when the can was punctured and turned upside down. Canned fruit, fruit juices and evaporated milk helped to round out the ration.

"Those were difficult days of labor, but I was greatly impressed by the unity within such a large hospital. Everyone pitched in—people from other departments volunteered many hours of their off-duty

## Christmas Book Sale At Library

The Christmas Book Sale at Milbank Library offers a double opportunity to practice the Christmas spirit.

If you have books at home that are not being used, the library would like you to donate them for this sale. They may regain their usefulness and spread their interest, meanwhile providing extra funds to the patient library for the purchase of new books, librarian Mrs. Nancy Buehler points out.

That extra Christmas gift you need to complete your shopping may be found among the collection that will be offered during this timely book bazaar.

Come to the Milbank Library with your donations and your gift list!

Sale will be held December 5th through 23rd on the 20th floor, Presbyterian Hospital.

time to help in the ward pantries and in the care of patients."

The feared bombs and submarine shells that were always a possibility never fell, but had such an emergency developed, *The Stethoscope* is sure that the staff and personnel of our hospital would have given their last ounce of strength to serve our patients and the casualties that would have surely come to the hospital.

Above is a picture of our staff members who served in the Presbyterian overseas unit, U. S. Army General Hospital No. 2, in the European Theatre of War.

## VACATION PICTURES

This is a view of Lake Lucerne as described in the letter from Seelisberg. In the distance can be seen the Jungfrau.

A scene from "William Tell" as it is enacted each summer in Interlaken. Here William is aiming to shoot the apple from the head of his son.

These attractive pictures of scenes in Switzerland were submitted by Otto Sonnenfeld, volunteer in Public Interest. Mr. Sonnenfeld and his sister spent the summer in Austria and Switzerland. His letters to friends in the Public Interest office are delightful examples of descriptive writing. The following excerpt is from one of his notes telling about their stay in Seelisberg, a small village overlooking the Lake of Lucerne.

"You could ask tourists returning from Switzerland which part of that country is the nicest and I would not be surprised if they said 'the Lake of Lucerne'. Seelisberg is situated on that lake, but about 1200 feet above it.

"We have a balcony facing south and consequently have a sweeping view of the lake's southern arm. Too, we can see with binoculars, every car and every train moving on the highway and track on the eastern shore. There is the so-called 'Orenstrasse', probably the oldest and most famous scenic highway in Switzerland.

"Seelisberg, though its location is splendid, has a great disadvantage—there are practically no walks here. Every time one wants to make an excursion one has to go down by a tiny bright red mountain railway to the lake's level."

## Christmas Will Mean More To This Family This Year

To Our Staff and Personnel:

*The gift of good health is one which we help make possible for those who seek our care and comfort. All of us at the Hospital are grateful for the opportunity to offer this assistance.*

*May the Christmas season bring great joy, and the New Year be filled with happiness.*

*A. J. Binkert*

A. J. Binkert  
Executive Vice President

THE WILLIAM BROOKS FAMILY, of Fishkill, N. Y., from left to right: Leonard, Joseph, Pamela, Debbie, Mr. and Mrs. Brooks, David, and Jimmy who was our guest for 116 days, on the fourth floor at Babies Hospital.

## Groundbreaking to Begin Soon For Eye Institute Addition

Groundbreaking for a new addition to the Institute of Ophthalmology will begin very soon.

The addition, costing \$4,600,000, will provide facilities for research into eye diseases and for an enlarged outpatient clinic, permitting a far greater number of patients to be treated than is possible at the present time.

An additional \$500,000 grant will help build and equip the ex-

tension to the Eye Institute has been made by The Commonwealth Fund, which earlier had made a similar appropriation toward construction of the addition, and a \$1,500,000 grant for endowments related to the Institute.

Presbyterian Hospital will receive \$1 million, the income of which endowment will help defray additional operating expenses; Columbia University's

*Please turn to page three*

At 2:15 p.m., April 12, 1966, disaster in the form of a freak accident suddenly struck the William Brooks family of Fishkill, N. Y., to challenge its total resources—spiritual and financial—and, for 116 days, the medical skills of Babies and Presbyterian Hospitals.

By any standard of comparison, the Brooks family rates high in those qualities that Americans admire most in each other. They are warm and friendly, proud, resourceful and responsible.

Mr. and Mrs. Brooks, Bill and Irene to their many friends, have always placed their family first, but they are also leaders in the important affairs of their community, and their children—David 16, Leonard 14, Joseph 13, Pamela 11, Debbie 9, and Jimmy, 8—are bright and self-reliant, popular at school and in their Girl and Boy Scout troops.

The Brooks home—Ridgefield Farm—is centered on 100 acres of wooded highlands and overlooks the beautiful Hudson Valley, near Beacon, N. Y. From here Mr. Brooks and his partner, James Hicks, operate their wholesale business in meats, restaurant and hotel supplies. Their blue trucks are familiar sights up and down both sides of the Hudson. Mrs. Brooks, who was a teacher before her marriage, is active in the business, as are the older children.

Mr. and Mrs. Brooks had always thought of themselves as being especially fortunate and blessed, because from birth each of their children had been ruggedly healthy, and until that fateful Tuesday afternoon—a school holiday—the family had suffered no major illnesses or accidents.

On this particular afternoon, the family, as usual, was busy at its jobs. Mr. Brooks was making deliveries near Poughkeepsie, Mrs. Brooks was taking David to a Boy Scout meeting, Pamela and Debbie were busy at tasks in the house, while Leonard, Joseph and Jimmy were raking

## HOSPITAL STILL NEEDS BLOOD —\$10 PAID EACH DONOR

Five days after last month's announcement of the hospital's urgent need of blood, 46 employees had called at the Blood Bank on the 20th floor of Presbyterian Hospital to make donations. This response has been greatly appreciated, but the shortage continues.

Other employees of the hospital, and students and personnel of the college are invited to make donations of their blood.

As explained last issue, it is not possible at present to maintain our Blood Bank's normal working inventory of blood from the usual outside sources.

Mrs. Ruth Bogan, supervisor of the Blood Bank, will welcome donors between 1 p.m. and 6 p.m., Monday through Friday.

An honorarium of \$10 will be paid to each donor.

One of Jimmy Brooks' great friends at the hospital is Dr. Lovic W. Hobby, Chief Resident in Plastic Surgery. Dr. Hobby, just out of the operating room, took a moment to visit with Jimmy on his recent visit to the hospital.

## JIMMY BROOKS

*Continued from page one*

and burning the winter's accumulation of leaves.

Their chore completed, the boys decided to have some fun. Expert at improvisation, they had made an unusual swing, using a discarded towline from a Hudson River barge. This three-stranded, creosoted rope, thick as a man's arm, had been tied to the high limb of a walnut tree in the yard. One of its thick strands had been unwound, then bunched and tied in a large knot to form a seat at the end of the one-rope swing. The seat had a tail of rope several yards long that dragged on the ground.

Jimmy had gripped his legs tightly about the seat of the swing, then as little boys are apt to do, tied himself in place, begging his brothers to give him a high ride, which they did.

The tail of the creosoted rope, dry and almost as combustible as gun powder, was dragged through the edge of the dying leaf fire. It ignited and flashed up to ignite the large rope seat to which Jimmy was tied, engulfing him in flames.

Pamela, watching from the house, grabbed a coat and ran out to throw it around Jimmy's upper body, holding it tightly about him until the main rope burned through

and Jimmy fell to the ground. This quick-thinking by his sister undoubtedly saved Jimmy's life.

James Hicks, Mr. Brooks' partner, was working on the loading platform of their refrigerated warehouse. Hearing the children's screams, he ran to investigate. His early training in the Navy permitted him to correctly evaluate the situation. He lifted Jimmy by his armpits, carrying him to a car, then speeded him to the Highland Hospital in Beacon, N. Y., where he was immediately treated for shock.

State police were asked to locate Mr. and Mrs. Brooks and hurry them to the hospital, where their son was thought to be near death from third-degree burns over half of his body.

Mrs. Brooks had arrived home and was already on her way. Mr. Brooks, located at a stop near Poughkeepsie, was police-escorted at 90 miles an hour over a shortcut through the valley. When Mr. Brooks came out of the hospital, he found a front tire flat; the others had been worn to the cord by the winding rough gravel roads over which he had sped.

Dr. Irving Mond, of the Highland Hospital, gave Jimmy all of the known emergency treatments, and five days later Jimmy was brought to the Medical Center by ambulance and admitted to the

Fran White, Head Nurse on Babies 4, always has an extra moment for Jimmy, who never fails to visit her when he finishes his check-ups at the Plastic Surgery outpatient clinic.

Plastic Surgery Service at Babies Hospital, where it was determined that he had suffered third-degree burns to 46% of his body—from his ankles to a line just above the umbilicus.

Jimmy remained with us for 116 days, during which period not a day passed that a member of his family was not with him.

Only by reading the two thick folders that contain Jimmy's complete medical history can one truly appreciate the ordeal to which this little boy, his family, and his doctors and nurses were subjected during the weeks when he remained on the critical list. And by reading this history one can truly appreciate the wonderful resources of our hospital and the dedication of its people.

Almost every department of the hospital, directly or indirectly, were participants in the successful battle to save Jimmy's life—Plastic Surgery, Pediatrics, Physical Medicine and Rehabilitation, Blood Bank, Anesthesiology, Social Service, Nursing, and all the many departments that plan meals and take care of maintenance and services for the hospital.

Jimmy underwent 29 surgical procedures under general anesthesia, including debridement of the burns and dressing changes; skin grafting operations, both autografts (from Jimmy to Jimmy) and homografts (grafts from other persons to Jimmy). He received literally dozens of transfusions of plasma and whole blood, donated by friends of the Brooks family who had to travel 70 miles to give it. Laboratory tests were daily requirements throughout most of his stay, and especially during the early weeks when maintaining the electrolyte balance of his body fluids was so important.

Three shifts of special nurses were required during

the early critical weeks of Jimmy's stay and later when he developed infections that became resistant to the usual antibiotics. One of the new antibiotics, then in the testing stage, finally checked them.

An unusual approach to surgery was taken in this case;

Little Jimmy Brooks required intensive nursing care during the critical weeks of his illness. The cost of these special nurses on 24 hour duty, added to the expenses of his long hospitalization, was an extra burden to the boy's family during this trying time.

To remove some of the financial burden, the Babies Hospital Emergency Nursing Fund paid more than half of the cost of the special nurses from funds contributed for this purpose by friends of the Hospital.

Jimmy is just one of many patients aided each year through the Emergency Nursing Funds. They are administered by the Unit Managers of Presbyterian, Babies and Neurological Institute to provide intensive nursing care for critically ill ward patients.

Gifts are needed to keep these funds supplied. Contributions may be made as remembrances or as memorials. Acknowledgments will be sent to the donor and to the person in whose honor the donation is made.

all of the operations were done late at night, between 10:30 and midnight, and it is believed that this has great advantage in treating burn victims. Patients like Jimmy need full nourishment, but when surgery or debridement of burns require general anesthesia every two or three days, nausea often interferes with the patient's nourishment. By eating a full meal late in the afternoon, the food is digested

before surgery late at night, following which the patient sleeps through the uncomfortable period.

Once Jimmy's burns had started to heal, it was necessary to stretch and reactivate muscles and joints that had been inactive for a long period. Through the department of Physical Medicine and Rehabilitation, Jimmy was given the exercises required in bed and in the Hubbard tank where he exercised under water: learning to walk and use his body again was essential before he could be sent home.

The cost of major hospital care and surgical treatment for 116 days is beyond the resources of most families. Although Mr. and Mrs. Brooks carried major medical insurance and an accident policy that provided several thousands of dollars, this and their savings were eventually exhausted. Friends in Fishkill also took up a sizeable collection of money which was presented to the family.

Jimmy Brooks was discharged on August 19, 1966, at which time he had regained all but approximately 5° to 10° of knee extension and 10° to 15° of hip extension. Dr. Mond is continuing his treatment daily at Highland Hospital, and Jimmy is expected to regain full use of his joints and muscles. He has a tutor seeing him at home now, but will return to public school at the beginning of the year.

This is only one of thousands of families who have received extended care here when struck by major illness—care made possible in part by those who respond to our annual appeal for contributions to help those less fortunate than themselves.

Jimmy Brooks now visits the Plastic Surgery Clinic at regular intervals for check-ups. To watch him run to greet his many friends throughout the hospital, but especially those on Babies 4, one can appreciate the sincerity of the tender loving care and affection that he received there for so many months. The photographs shown here were taken on one of his recent visits, and at his home in Fishkill.

William and Irene Brooks are filled with gratitude for

Another of Jimmy's special friends is Thelma King, clerk on Babies 4, who is always ready to play their special game when he visits her.

Jimmy, photographed at home with his favorite ship model.

Some day Jimmy will be helping Dad drive a delivery truck like this one.

this hospital and its people, and recently, when visited in their home, asked *The Stethoscope* to thank you all for your many skills, but especially for kindness and understanding beyond the call of duty in their time of greatest need.

## EYE INSTITUTE

*Continued from page one*

College of Physicians and Surgeons will receive \$500,000, the income to help meet costs of operating and staffing the new facility. These funds are payable when the new building is completed.

"The Fund's appropriation in support of the construction and maintenance of the new research facility reflects the crucial importance of the Eye Institute's continuing role in the prevention and cure of eye defects," said Quigg Newton, President of The Commonwealth Fund. "The grants are in memory of Edward S. Harkness, in recognition of his deep and abiding interest in the Institute's development and his wish to have it become and remain the outstanding institute of its kind in the country."

The gifts were accepted jointly by Augustus C. Long, President of The Presbyterian Hospital, and Dr. Grayson Kirk, President of Columbia University. Mr. Long, in accepting the additional grant, said that it would permit construction of the new facilities to start very soon.

## Mail Cards Early

All employees are urged to mail their Christmas Cards early this year.

The request comes from Mr. John Campbell, Mail Room Supervisor. Anticipating a great holiday rush mailing, he urges all possible cooperation from staff and personnel.

Mr. Campbell stressed that cards to Medical Center friends should be addressed to their homes.

"If you must use a hospital address," he said, "make certain you include the recipient's department in the address, and please mail such cards before December 16th."

What did Napoleon, Winston Churchill and Charles Darwin have in common? They were all undersized babies at birth, who aroused fears whether they would ever attain normal adulthood.

Such fears are easy to understand, even today. For it is such infants who eventually account for a disproportionate number of society's mental defectives, emotionally disturbed and neurologic abnormals.

Studies indicate, however, that the most frequent problem of many of these tiny babies isn't damage before birth, but complications after delivery, especially respiratory trouble, causing inadequate ventilation of the blood circulating through their little bodies. Without adequate oxygen, the newborns' tissues fail to function properly and become liable to permanent damage. Some of these infants are small because they have been inadequately nourished while in the uterus.

These and other special problems of the newborn are the concern of the Neonatal Intensive Care Unit at Babies Hospital. Its mission is to increase the number of "intact survivors"—undamaged children free of handicaps—and it is one of the country's very few such units for intensive care of the newly-born.

This nursery was previously reserved for small newborns, when small birth size and prematurity were considered to be synonymous. These concepts have changed and at present the unit cares for infants irrespective of birth size, experiencing problems most common among underweight newborns. These problems include respiratory distress, malformations requiring early surgery, and complications of extreme prematurity (less than 37 weeks gestation.)

"We are exploring neglected territory," says Dr. William A. Silverman, Associate Attending Pediatrician and director of the neonatal nursery. "In the past, there's been a negative, *laissez-faire* attitude towards infants who displayed serious problems at birth; a feeling that perhaps only those babies strong enough to make it on their own were intended to live. Intensive care may not drastically increase the number who survive, but we hope it will increase the number who survive without impairment."

Dr. Silverman says that too

*"I love these little people, and it is not a slight thing when they, who are so fresh from God, love and need us."*

*— Charles Dickens*

brought into the so-called growing section of the nursery just across the corridor. Special care continues there. Large infants return to normal infant nurseries in Sloane Hospital or to the pediatric surgical floor in Babies Hospital.

If the mother is able to come and breast feed her baby, she is encouraged to do so in the growing section. When the infant's condition is judged to be stable, weight gain is progressing satisfactorily, and the mother's care adequate, the baby is discharged home.

This division of care has been given during the past year—and with what results?

Dr. Silverman says it's still too soon to be conclusive, but we are encouraged to believe that this kind of care can significantly decrease the number of "high risk" infants who approach life with permanent damage. The United Cerebral Palsy Fund is sponsoring a longitudinal study of the results, says Dr. Silverman, but this takes time because the benefits can't be gauged until the children reach at least the age of four.

Many of the infants treated at the Babies unit are brought here from other hospitals that lack our facilities: New York City runs a Premature Infant Transport Service to bring them. However, the nursery's limitations forbid acceptance of all babies who might be benefited—forcing on doctors difficult decisions concerning the priority of problems for admission.

Dr. Silverman hopes that the average stay in the unit, now a week or more, will be shortened so that more young ones can be treated. He also hopes for more government aid so that this model center can be expanded, and emulated elsewhere.

few of medicine's recent advances have been scaled down and made available to the smallest and youngest patients. They need to be adapted, miniaturized, to help these babies who, however tiny, should nevertheless be regarded as individual patients.

Like other individuals, they are special. Treating them takes special tools, techniques and training. For example, within the unit:

- Each incubator is individually ventilated under pressure so that when the portal is opened, the air sweeps out and not in... the same principle is used to ventilate each room in the unit. . . .
- Special respirators offer either positive or negative pressure. . . .
- Cardiac monitors signal changes in normal heart action. . . .
- For minor surgery a special table is available which maintains the baby's temperature with heating pads and lamps. . . .
- Devices are provided for wetting the lungs with moistened oxygen. . . .
- Specially-made naso-tracheal tubes can be used to provide an airway to aid breathing. . . .
- Integrated X-ray laboratory facilities provide quick, easy diagnostic information. . . .

Such laboratory diagnostic aids are particularly important with the tiny babies, Dr. Silverman points out, because in them signs of disease are muted, easy to miss: "The newborn with pneumonia may not cough much; he may have an intestinal obstruction and still not vomit."

All small infants less than four pounds and larger infants with major problems qualify for admission to the new unit. It can accommodate six little ones, with two specially trained nurses working on each shift around the clock. More nurses are needed to staff this facility fully.

When apparently out of immediate danger, a small infant is released from the unit and

Dr. William A. Silverman, Director of the Neonatal Intensive Care Unit, discusses the condition of one of his tiny patients with Nurse Joan LeStrange.

# THINGS TO KNOW ABOUT CHRISTMAS

The lore of Christmas is fascinating. To better acquaint readers with some little-known facts about our most joyful holiday, *The Stethoscope* spoke with Chaplain Robert B. Reeves. His Christmas comments follow:

*How did Christmas get its name?*

From the old English "Christes Masse," which later became "Christ's Mass."

*Was Jesus really born on December 25th?*

Possibly, but the exact birthdate is not known for sure. The Bishop of Rome selected this date in the year 345, possibly because it was the date of the winter solstice, the time when the sun begins moving north again in the annual cycle of rebirth. In times past, Christmas has been celebrated in March, April, May and September.

*Did Jesus speak Hebrew?*

Probably not. Although He must have had a reading knowledge of Hebrew, He spoke Aramaic, which was then the vernacular of Palestine.

*Are Christmas cards an ancient custom?*

No, the first such card was printed in London back in 1842. However, for almost 150 years earlier there had been so-called "Christmas pieces," specimens of children's penmanship designed to show how they were progressing at school.

*Was Pontius Pilate the Roman Emperor who sent Jesus to the cross?*

No, Pilate was Rome's governor in Jerusalem. The emperor was Tiberius Caesar.

Many decorated windows will be painted by our staff to brighten hospital corridors during the holidays.

Entry blanks for the window painting contest are now available at Nursing Stations and at the Chaplains' Office.

Return the entry blanks to Public Interest before December 16 to enter the window painting contest.

Remember Santa Claus will visit all patients, young and adult, on Christmas morning to offer his greeting.

You will see the Hospital's outdoor Christmas trees lighted on December 19.

Caroling on the wards by doctors and nurses will begin at 7:30 Christmas Eve.

Housekeeping plans to distribute trees and wreaths on December 19.

Religious services will be held in the Chapel Christmas morning.

Interested friends of the Hospital have dressed dolls for the Dolls' Tea scheduled for 3:30 p.m. December 22.

Special broadcasts of Christmas music will be heard daily beginning December 15 on our own Channel 1.

Trays for patients will be decorated by Food Service for Christmas meals.

Mail Christmas cards to hospital friends at their homes.

Annual Candlelight vespers will be held in the Chapel December 14 at 5 p.m.

Send contributions to the Emergency Nursing Funds to help acutely ill patients.

The yard Christmas trees will be lighted December 19.

*Is Christmas ever celebrated more than once a year?*

Yes, the holiday is observed about a dozen times annually in Ethiopia, the belief being that Christ had so many virtues He must have been born more than once.

*What is frankincense?*

Resin from a crooked, almost leafless tree with a bark resembling a sycamore's. Slashed like a maple, the tree oozes a bitter sap that burns with a white flame and a sweet perfume that the Wise men thought pleasing to The Lord.

*How about myrrh?*

This is also a resin, from a shrub related to the frankincense. The ancient Egyptians used this resin in embalming—hence its connection with solemn occasions such as the Nativity.

*Who was Santa Claus?*

Saint Nicholas was the Bishop of Myra, a place between the islands of Cyprus and Rhodes. In recognition of his many good deeds, he became accepted as the patron of sailors, merchants, travelers—and, eventually, children.

*Was Christmas always a holiday in this country?*

No, Puritan Massachusetts in the 17th Century enacted a law fining anyone who took time off to celebrate His birth, and as recently as the 1930's in the highlands of Scotland the "Wee-Tree" Presbyterians frowned upon any festivities at this time.

*Why do people kiss under the mistletoe?*

This is a custom dating back to pre-Christian times in Britain when the pagans considered the plant to be sacred. If enemies met under it, they were expected to make a truce.

## CALENDAR OF CHRISTMAS EVENTS

### Christmas Parties:

ORTHOPEDIC Children's Party: BH-5, 2 p.m. Dec. 16.

P&S CLUB Party: Bard Hall, 7:30 p.m. Dec. 16.

DOLLS' TEA PARTY, with display of dolls to be given child patients on Christmas: BH Board Room, 3:30 p.m. Dec. 22.

### Special Religious Service:

CANDLELIGHT VESPER Service: The Pauline A. Hartford Memorial Chapel, 5:15 p.m. Dec. 14.

### In the Wards:

MELODY QUARTETTE, caroling on the wards: 2:30 p.m. Dec. 21.

VESPER CAROLERS, 5:00 p.m. Dec. 16.

BABIES HOSPITAL Children's Pageant on PH 5E 7 p.m., on PH 5C 7:30 p.m. Dec. 19.

PHYSICAL THERAPY Carolers, 5:30 p.m. Dec. 19.

DOCTORS AND NURSES in traditional caroling procession through the hospital: 7:30 p.m. Dec. 24.

SANTA CLAUS will visit patients, young and adult, on Christmas morning.

Special Christmas Music over Bedside Broadcasting System (Channel 1):

ORGAN MUSIC AND CHRISTMAS CAROLS: daily from Dec. 15, 11 a.m. to 1 p.m. and 3 to 4:30 p.m.

### Half-hour Broadcasts:

HOSPITAL MUSIC SERVICE: Broadcast from Studio, 3 p.m. Dec. 25.

ST. MATTHEW LUTHERAN CHORISTERS: Broadcast from Chapel: 4:30 p.m. Dec. 19.

SHELL CHORUS: Broadcast from Chapel: 7 p.m. Dec. 21.

### Christmas Day Religious Services in Chapel:

\*ROMAN CATHOLIC MASS, 7 a.m.

\*PROTESTANT WORSHIP SERVICE WITH HOLY COMMUNION, 10:30 a.m.

\*Broadcast over Channel 1.

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

FEB 14 1967

VOLUME XXII, NUMBER 1

JANUARY, 1967

## In Memoriam

### \$15,000 Grant Made To P&S By Runyon Fund

The Damon Runyon Memorial Fund for Cancer Research, Inc. has granted \$15,000 to Columbia's College of Physicians and Surgeons for a continuing study of the relationship between pituitary hormones and ovarian tumors.

The study is under the direction of Dr. Charles A. Ely, Associate Professor of Anatomy at the medical school. Dr. Ely has been involved with this research for more than 10 years, during which time his work has been supported in part by grants from the Fund.

Working with mice, Dr. Ely has pinpointed one of a half dozen pituitary hormones which, when present in excess, may be responsible for induction and growth of ovarian tumors.

Injection of this particular pituitary hormone into rabbits produces antibodies to the hormone. These, when administered to mice, block the action of excess hormones on the ovary, thereby preventing the

## \$2.09 Million Bequest to P&S In Mr. Bernard Baruch's Will

BERNARD BARUCH

Gifts from the estate of the late Bernard H. Baruch totaling \$2,089,984 have been received by Columbia University's College of Physicians and Surgeons.

These funds will support new development in the College's Department of Physical Medicine and Rehabilitation, which Mr. Baruch's philanthropy helped establish 14 years ago.

Part of the funds will endow an existing professorial chair in the name of Dr. Simon Baruch, Mr. Baruch's father, who was a pioneer in the field of physical medicine in this century. He was professor of hydrotherapy, the first in America, at the College of Physicians and Surgeons from 1907 to 1913.

Bernard Baruch, of course, was a noted financier, philanthropist and advisor to presidents. He died on June 20, 1965, at the age of 94. The provisions of his will were made public later, but the size was not. Columbia's share was listed as one-sixth of the remainder of the estate after specific initial bequests.

"Mr. Baruch's gifts will allow us to press ahead with needed work in research, teaching and patient care," said Dr. Robert C. Darling, who holds the Simon Baruch professorship, and who is chairman of the Department of Physical Medicine and Rehabilitation at the College and at Columbia-Presbyterian Medical Center. "It is fitting," Dr. Darling continued, "that Mr. Baruch's bequests should so strongly support the continuing effort of the department which he, in effect, founded."

Twenty-two years ago, in 1944, Mr. Baruch gave Columbia University's College of Physicians and Surgeons \$400,000 to advance teaching and research in physical medicine and reha-

### Employees Should File By Jan. 31 For Weinberg Aid

Personnel interested in pursuing job-related studies under the Sidney J. Weinberg Employees Educational Aid Reimbursement Plan, should make application during January for enrollment in the Spring Semester, 1967.

Applications will be received in the Personnel Office; the deadline is January 31. Application forms may be obtained from Miss Lillian Oring, Extension 2331, and any questions about the plan should be referred to her.

The educational aid plan pays up to 50 per cent of the tuition fee for one to six cred-

## Brodersen Appointed Director Department Of Public Interest

C. Frederick Brodersen, formerly associated with the Office of University Relations, University of Michigan, has been appointed Director, Department of Public Interest at Columbia-Presbyterian Medical Center, and Director of Public Relations for Columbia University's College of Physicians and Surgeons.

Mr. Brodersen, who began his new duties on December 5th, is a graduate of the Massachusetts Institute of Technology, majoring in the life sciences, where he received the bachelor's and master's degrees. His electives in accounting and industrial management were taken within MIT's Sloan School of Management. Mr. Brodersen served in Ordnance during the war and was discharged as a Captain in 1946. He is an amateur horseman, and rode in horse shows and with the Metamora Hunt in Michigan.

Mr. Brodersen was for several years in executive positions with prominent corpora-

tions. He was assistant to the President of the American Ship Building Company; assistant director of development of Schenley Laboratories, pharmaceutical manufacturers of antibiotics; manager of vitamin products for the International Division of Merck, Sharpe & Dohme, for whom he travelled extensively

## Radiation Safety Program Approved By Medical Board

Last year a study was made toward implementing an overall radiation safety program for the Columbia-Presbyterian Medical Center. Plans for a centralized Radiation Safety Office were developed and were approved by the Medical Board. As of July, this office was established with E. E. Stickley, Ph.D. as Radiation Safety Officer and Mr. David Claridge as his deputy.

The Medical Center community is represented on the Joint Radiation Safety Committee by Assistant Dean J. F. Eagle, M.D. (who was organizing chairman of the committee), Dr. Harold Rossi, Dr. W. B. Seaman, Mr. Daniel Stevens, and Dr. C. R. Wise. Chairmanship has now been assumed by Professor Rossi, who also holds the equivalent position in Columbia University, and who serves extra-curricularly as chairman of the Mayor's Advisory Committee on Radiation. Dr. Rossi is a member of the International Commission on Radiation Units and Measurements and the National Council on Radiation Protection.

The New York City statutes (Article 175 of the N. Y. C. Health Code) which relate to these matters require that there be an established pro-

## STETHOSCOPIA

### • WEDDING BELLS

*Dr. Robert Jon Neviaser*, Resident in Orthopaedic Surgery, and Miss Anne MacLean Shelden of Cobalt, Conn. were married last month.

*Dr. Ross Rudolph*, P&S '66, and Miss Nancy Mc. Taylor, senior Nursing Student, are planning a June wedding.

*Dr. John J. McGroarty*, Resident in Ophthalmology, and Lieut. (j.g.) Kathleen Mitchell, Nurse Corps, U.S.N.R. were wed December 31.

Miss Phyllis M. Wang, daughter of *Dr. and Mrs. S. C. Wang* will marry Mr. David H. Wise of Fairfax, Va. in June. Dr. Wang is Professor of Pharmacology at P&S.

*Ann Colman*, secretary in the Projects Office, is engaged to Mr. Herbert Bothner.

### • HELLO, BABY

*Mrs. Mary Trilivis*, former secretary to Mr. G. R. Masten, had a baby son, John Alexander, in the Hospital November 13.

*Carlos Alvarado*, Maintenance & Construction, welcomed his first grandchild, Lisa Marie Alvarado, born here recently.

### • WELCOME

*Betty Watson*, File Clerk in Personnel.

*Vesta Taylor*, R.N. and *Ruth Schlierer*, R.N. to the staff at Harkness.

*Anthony Bisordi* and *Melvine Duncan* have joined the X-ray technicians at Presbyterian.

### • CONDOLENCES

*James Sheridan*, Protective Department, has lost a brother, Tom, who died November 16.

### • VACATIONERS

In the Record Department, *Mrs. Catherine Hart* has vacationed in Hollywood, Fla. and *Mrs. Mary Rehill* has just returned from Puerto Rico.

### • FAREWELL

*George Cau*, Personnel Assistant, has accepted a position as Director of Personnel at a nearby hospital.

### • NURSING NOTES

Promotions to Supervisor: *Deborah Dingwall* PH 10; to Head Nurse, *Nancy Hecht* and *Mrs. Mary McElhinney* on PH 10E.

### • NOTES OF INTEREST

For the second successive year, an employee of the Maintenance and Construction Department has won a television set on a raffle ticket sold him by *Frank Stingo*, upholsterer foreman. Frank is the Commander of the Luke J. Lang Post, VFW, for whose benefit the raffle is held. Lucky winner this year is *Karl Stacker*.

*Mrs. Adelaide Vrooman*, Babies Hospital Social Service, participated as a panelist in a workshop for the New York State Teachers Association meeting in Bellemore, L. I. recently. The topic was "Preventive Mental Health Services for the Exceptional Child."

*Mrs. Patrick Hennelly*, P.N., on the staff at Neuro, recently received the State flag of New Jersey from State Senator Ned Parsekian, to send to her son Airman Joseph Hennelly in Viet Nam. He had requested the flag to be flown over to his outfit, the 2nd Platoon, Detachment G., 125th Air Transport Command Squadron.

A patient in Babies Hospital during a youthful bout with rheumatic fever, Joe insisted on serving in the Armed Forces despite physical setbacks. Senator Parsekian wrote to him "Your record of insistence on serving your country in the face of early illness as recently as last year, is an example of the strength of the youth of our State and Nation of which all of us are very proud!"

## DOINGS OF DOCTORS

**DR. DANIEL C. BAKER, JR.**, Director of Otolaryngological Service, has been elected First Vice President of the American Academy of Ophthalmology and Otolaryngology for 1967.

**DR. JOHN K. LATTIMER**, Director of Urology, has been elected Governor of the American College of Surgeons.

**DR. WILLIAM A. BLANC**, Associate Attending Pathologist, and **DR. H. JOACHIM WIGGER**, Associate in Pathology, participated in the first interim meeting of the Pediatric Pathology Club in Columbus, Ohio, recently. They are founding members of this new association created to promote developmental pathology, concerned with the study of diseases of the placenta, embryo, fetus, infants and children.

**DR. JOHN CONLEY**, Attending Otolaryngologist, delivered the Semon Lecture at the University of London, England. It was entitled "Melanomas of the Head and Neck." Dr. Conley has recently been appointed Consultant in Otolaryngology by the Surgeon General of the United States Army.

**DR. GEORGE K. SMELSER**, Professor of Anatomy, assigned to Ophthalmology, in collaboration with the Chairman of the Department of Anatomy, Kyushu University, organized a seminar on the structure of the retina, held recently in Fukuoka, Japan. It was a bi-national meeting held under the Japanese-U. S. cooperative science program and supported jointly by the National Science Foundation and the Japan Society for the Advancement of Science. Nine Americans and 16 Japanese scientists participated in an informal discussion of anatomical and physiological problems of the retina.

**DR. LESTER A. MOUNT**, Attending Neurosurgeon, has returned from the Far East. He gave lectures at the University of Tokyo and the University of Kyoto and also presented two papers at the Pan-Pacific Surgical Meeting in Hawaii.

DR. MOUNT

DR. KOLB

**DR. LAWRENCE C. KOLB**, Director of Psychiatry, and **DR. ROBERT CAMPBELL**, Associate in Psychiatry, participated in the International Post-Graduate Symposium on Psychiatry at the Hospital Central del Empleado, Lima, Peru. While there they were elected members of the Peruvian Psychiatric Association.

**DR. ARTHUR GERARD DeVoe**, Director of the Institute of Ophthalmology, presented "Present Status of Artificial Corneal Devices" at the dedication of the Jules Stein Institute of Ophthalmology, University of California, Los Angeles. Dr. DeVoe also delivered the deSchweinitz Lecture at the College of Physicians of Philadelphia.

**DR. ALFRED P. FISHMAN**, Associate Attending Physician, has been appointed Professor of Medicine at the University of Chicago and Director of the Cardiovascular Institute at Michael Reese Medical Center, Chicago, effective July 1, 1967.

**DR. ROBERT M. ELLSWORTH**, Assistant Ophthalmologist, participated in the Post Graduate Meeting at Emory University last month. He presented papers on "Diagnosis and Treatment of Choroidal Tumors," "Diagnosis of Intraocular Lesions in Children" and on "Treatment of Retinoblastoma."

**DR. IRA S. JONES**, Assistant Attending Ophthalmologist, also attended this meeting and presented papers on "Tumors of the Orbit" and "Surgery of Orbital Tumors."

**DR. NICHOLAS A. DISALVO**, Professor and Chairman of the Department of Orthodontics, represented the Department at a conference on "Education for Orthodontics in General Practice" held at the University of Kentucky. **DR. JULIUS TARSIS** representing the New York City area, was the discussor of a paper entitled "Continuing Education in Orthodontics for the General Practitioner."

**DR. YEN FEN PEI**, Fellow in Ophthalmology, participated in the U. S. - Japan Seminar on Fine Structure of Retina, in Fukuoka, Japan.

**DR. JOHN C. SINCLAIR**, Assistant Attending Pediatrician, presented a paper at the Neonatal Society, London. It was entitled "Metabolic Reference Standards for the Neonate."

**DR. EMANUEL M. PAPPER**, Director of Anesthesiology, appeared on television recently in NBC's series on "Research."

**DR. ROBERT J. HOEHN**, Assistant Attending Surgeon in Plastic Surgery presented a paper on "Immunosuppressive Drugs Combined with Heterologous Antilymphocyte Serum: A Clinical Model for Homograft Prolongation," at the Clinical Congress of the American College of Surgeons in San Francisco.

**DR. RUDOLPH H. FRIEDRICH**, William Carr Professor of Oral Surgery, has been elected President of the New York State Society of Oral Surgeons, at their annual meeting last month. Three members of the faculty of the School of Dental and Oral Surgery participated in the scientific session on "Dentistry's Future in the Hospitals: **DR. ARTHUR BUSHEL**, Adjunct Professor of Dental Public Health Practice, **DR. FRIEDRICH** and **DR. PETER B. TERENCE**, Adjunct Professor of Dentistry.

**DR. THOMAS V. SANTULLI**, Attending Surgeon, attended the Pan Pacific Surgical Association's Tenth Congress in Honolulu where he presented a paper on "Duplications of the Gastrointestinal Tract," and he was moderator at a meeting on "Gastrointestinal Bleeding" at the Post-graduate Course on Pediatric Surgery given at the meeting of the American College of Surgeons in San Francisco recently. He also was a panelist on Colon and Rectal Surgery at the annual meeting of the American Academy of Pediatrics in Chicago.

# OUR DOCTORS AND NURSES WIN HONORS IN VIETNAM

ANNE PIRNIE

LT. COMM. JAMES G. CHANDLER

CAPT. ROBERT E. REBER

Anne Pirnie, R.N., a graduate of the Department of Nursing, Columbia University, and a commissioned officer of the U. S. Public Health Service, but now on loan to the U. S. Agency For International Development, has just returned from Vietnam where she has been Assistant Chief Nurse in charge of USID personnel in field operations.

Miss Pirnie has been serving in Vietnam for the past eight months and is home at this time to accept, on behalf of all the volunteer nurses serving the U. S. Agency For International Development, a *Mademoiselle Magazine* "Merit Award of the Year for Women."

"The volunteer nurses serving with USID in Vietnam work with the civilian population in the provincial hospitals, helping them to adapt modern nursing methods and to upgrade general nursing care," Miss Pirnie said. "Another 150 general duty nurses are desperately needed there, as well as supervisors."

*Mademoiselle Magazine* held presentation ceremonies at the Gotham Hotel on December 27, at which time Miss Pirnie accepted the award on behalf of her colleagues in Vietnam. Four merit awards were presented to what *Mademoiselle* called "The Four Most Exciting Young Women of 1966."

The Navy surgeon, Lieutenant Commander James Chandler of San Francisco, who recently removed a M79 rifle grenade from the throat of a U. S. Marine in the Da Nang Charlie Medical Hospital, Vietnam, did his internship and surgical residence at Presbyterian Hospital. He left here in December, 1965, to join the Navy.

When interviewed on TV, Dr. Chandler said "I didn't know what it was." As he showed it around the operating room after removing it, his assistants recognized the loaded missile instantly — and hurriedly they assisted Dr. Chandler in removing it to a helicopter pad about 30 yards from the hospital. Here they put it down and "ran like hell," Dr. Chandler said. Demolition experts soon arrived and exploded the grenade.

Twenty-four years ago another Lieutenant Commander, Harold W. Jacox, Medical Center radiologist, was in the operating room on a South Pacific island when a live shell was removed from the hip of a sailor wounded in the Battle of the Coral Sea.

A Medical Center surgeon has been honored for heroism in Vietnam. Captain Robert E. Reber, with the 25th Infantry Division, has been awarded the Bronze Medal

with "V" Device for "aiding wounded personnel from the 2nd Battalion, 35th Infantry during a defensive operation against an estimated North Vietnamese Battalion size force."

Captain Reber accompanied a Medevac helicopter into a scene of bitter fighting, treated the wounded and directed evacuation procedures.

"In full view of the enemy, and without taking cover, Captain Reber continued to render medical care to the wounded. Without doubt Captain Reber's actions were responsible for the saving of the lives of at least two of the casualties, both of whom were suffering from chest wounds," continues the citation.

"Only after the last casualty had been evacuated did he leave the landing zone." His "determination, inspirational courage, complete disregard for his own personal safety, and compassion for his fellow men is in keeping with the highest traditions of the military service and reflects great credit upon himself, his unit, and the Armed Forces of the United States."

Captain Reber received the M.D. from P&S in 1962, did his internship and surgical residency here and left to join the Army in May.

Dr. Melvin D. Yahr, Professor of Neurology, was honored for his "dedicated efforts in implementing the affiliation between the Harlem Hospital Center and the Columbia College of Physicians and Surgeons" at a reception in his honor at Bard Hall recently. Shown presenting the plaque to Dr. Yahr is Dr. Vaughan Mason, president of the Medical Board of Harlem Hospital.

ment in 1921, Miss Young was appointed head of nursing service and education in the hospital. She ably carried on her predecessor's crusade to establish nursing as a socially respectable profession for young ladies.

It was under her direction in 1937 that the School of Nursing of Presbyterian Hospital became the Department of Nursing, Faculty of Medicine of Columbia University. Since then all graduates have received a degree of bachelor of science in nursing from Columbia, as well as nursing certificates from Presbyterian Hospital.

During her 21 years as director, she taught and inspired thousands of nurses who went on to care for sick persons all over the world. Among her students was Miss Elizabeth S. Gill, present director of the nursing school. Many hospitals in the United States and overseas countries sought and received her help in establishing or revising their own programs of nursing education.

Upon her retirement in 1942, Miss Young was named Director Emeritus of Nursing.

In 1937 Columbia presented her its Medal of Excellence.

On the 25th anniversary of the Columbia-Presbyterian Medical Center in 1953 she became the first woman to receive the Center's Distinguished Service Medal.

Miss Young served two terms as president of both the New York State and New York City Leagues of Nursing Education. In 1938 she was instrumental in the passage of the State's first Nurse Practice Act, which defined what duties a graduate nurse may and may not perform.

She was also originator and first editor of Lippincott's "Quick Reference Book for Nurses," first published in 1933. Now in its eighth printing, the book is used by some 100,000 graduate nurses throughout the English-speaking world.

Until the time of her death, Miss Young was still active in the Alumnae Association of the School of Nursing.

The Helen Young Memorial Fund has been established by the Alumnae Association to receive contributions in her memory. The money will be used as an unrestricted gift for the work of the Association of which she was treasurer since 1917.

## George Busch Will Retire Soon — Helped Build Medical Center

George Busch, more than most of us, is a part of this hospital. He helped build it.

As a mason with the construction firm of Marc Eidlitz, George worked on the original buildings raised at the Medical Center. After their completion he joined the hospital's Maintenance and Construction Department, where he has worked for the past thirty years.

When he retires in March, George and his wife plan to travel a bit, and then, don't be surprised to find him visiting here very often, watching the building progress as "his hospital" grows. Friends and co-workers will honor him at a

reception, January 12 in Harkness Hall.

GEORGE BUSCH

## MISS YOUNG

*Continued from page one*

teacher in public schools in Ontario for thirteen years until, at age 34, she entered the Presbyterian Hospital School of Nursing in 1909.

Because of her maturity and outstanding abilities as a nurse, she became a protegee of Anna C. Maxwell, first director of the nursing school, and upon her graduation in 1912 she was appointed head nurse on a woman's surgical ward of Presbyterian Hospital.

In 1915 she served as a nurse at Mrs. Harry Payne Whitney's hospital in Juilly, France, returning to become Miss Maxwell's assistant.

Upon Miss Maxwell's retire-

## BARUCH GIFT

Continued from page one

bilitation. These funds produced a rapid expansion of activity in the field and led directly to the establishment of a separate Department of Physical Medicine and Rehabilitation in 1952, prior to which this work had been a sub-specialty under the Department of Medicine.

Bernard Baruch's interest in this field of medicine was spurred by the great respect he had for his father. "I have been fortunate to know

DR. SIMON BARUCH

the great of the world in my lifetime," he once said, "but the greatest, most brilliant man I ever knew was my father."

Dr. Simon Baruch has been called the "pioneer who established the scientific foundation of physical medicine." In his original work in hydrotherapy at Columbia he developed a special type of treatment table which became known throughout the world as the Baruch Table. He was a prominent physician and surgeon in New York for many years. He died in 1921 at the age of 81.

Bernard Baruch was one of four sons, and he, too, thought seriously of a career in medicine when he graduated from City College of New York in 1889. He was on the verge of entering Columbia's College of Physicians and Surgeons when he decided to enter business instead. He became one of New York's distinguished citizens and a world leader in public affairs and in finance.

Mr. Baruch's interest in medicine remained lively, though, and in later years the memory of his father's pioneering achievements in physical medicine stimulated his contributions to the field. "I'm interested in physical medicine," he once said, "because my father was. I am interested in rehabilitation because I believe in it. I am interested in arthritis because I have it."

In 1944 he created the Baruch Committee on Physical Medicine to administer contributions to several leading institutions to establish and support research and study

## Hannukah Party For Children Held In Chapel

On Friday afternoon, December 9th, The Pauline A. Hartford Memorial Chapel was the scene of the annual Children's Hannukah party sponsored by Rabbi Marvin Goldfine, who was assisted by third year nursing student Karen Thorn. Attended by Babies Hospital patients and children of staff members, the youngsters and their parents joined in singing Hannukah songs lead by Dr. Meyer Alpert and Mrs. Joseph A. Silverman. They heard student nurse Natalie Zaslow tell the story of the holiday, and watched as the traditional Menorah was lit by Dr. Alpert's son, Robert.

## The Stethoscope Has Good Friend In Washington

Three years ago, while on vacation, Helen G. Warner, Supervisor in the Doctors Private Offices, met Miss Corine de Bois of Washington, D. C., who expressed great interest in Columbia-Presbyterian Medical Center, about which she had heard so much. Miss Warner answered her many questions, then, when she arrived back at work, she began to send Miss de Bois *The Stethoscope*, which she reads and enjoys, taking great interest in activities going on at the Medical Center.

A few days ago, Miss de Bois sent a check to the hospital, asking that it be used where it was needed. This welcome contribution will go to Babies Hospital.

The editors of *The Stethoscope* wish to add their thanks to Miss de Bois for her generous gift and for the kind things she had to say about *The Stethoscope*.

in physical medicine. The \$400,000 gift to Columbia was part of this effort.

This specialty of medicine is concerned with the adaptation to normal life of patients who have been disabled by injury or disease. Such patients are helped in their adjustment to activities of daily living through medical and nursing care, physical and occupational therapy, speech therapy, vocational evaluation and counseling, psychological services, social service and other aids. Patients most often served by the department are amputees, those with spinal cord injury, and victims of stroke and arthritis. Tools to achieve the goals of rehabilitation involve many physical agents, including hydrotherapy.

Our Occupational Therapy Department, with special treatment facilities strategically located throughout the Medical Center, is supervised by Mrs. Eleanor Shelly and is under the medical direction of Dr. Robert C. Darling, Director of the Department of Physical Medicine and Rehabilitation.

Therapists make tremendous contributions as members of their rehabilitation teams. Watching them work with their patients, one is convinced that they give of heart as well as of mind and muscle.

The therapists shown at the right were caught by *The Stethoscope* camera while working with actual patients. To learn more about these interesting people and the important work that they do, *The Stethoscope* asked Mrs. Shelly the following questions:

*What, specifically, is occupational therapy?*

It is the use of purposeful activity as treatment in the rehabilitation of persons with physical and/or emotional disabilities. The patient's functional status is evaluated to determine his needs and the performance level of his emotional, mental, physical, self-care, and social skills. A treatment program is then planned to achieve the maximum potential for the patient within these skill areas.

\* \* \*

*What types of patients do Occupational Therapists work with most often?*

They may be children or adults, with a wide range of disabilities. Common medical diagnoses include neurological impairment, arthritis, amputation, physical injuries, birth defects, mental retardation, emotional illness, and other medical dysfunctions.

\* \* \*

*What are the steps in treatment?*

We evaluate the patient's capabilities and limitations and determine the treatment goals. We then select appropriate treatment media to obtain these objectives.

\* \* \*

*What are some of the specific areas of evaluation and treatment?*

To maintain or increase joint range of motion; strengthen muscles to improve the patient's functional level; develop coordination through repetitive activities that help to establish or re-establish work patterns of muscle groups; ADL (activities of daily living) is also a function of Occupational Therapy to encourage independence in

# Our Occupational Therapists

MRS. ELEANOR SHELLEY

dressing, feeding, and grooming.

The therapist makes splints of plaster or synthetic material to prevent deformities, to aid in relieving pain, or to encourage motion of affected joints, and improvises adaptive devices to enable the patient to accomplish tasks he would otherwise find impossible.

Prevocational evaluation appraises the physically and/or emotionally ill person for his work skills and habits. This may be directed toward the skills of his previous job or a new work outlet, or home-maker skills.

The therapist helps the patient develop skills of comprehension, self-expression, and abstract reasoning through teaching, retraining and, when necessary, communicative adaptations.

In the area of psychiatry the therapist assists in the observation and evaluation of the patient. Through interpersonal relationships and the use of activities, the patient's overt behavioural symptoms are lessened and acceptable social behavior is strengthened.

\* \* \*

*What modes of treatment are used with your patients?*

Any activity in everyday life that would facilitate the type treatment needed and would be meaningful to the patient, is utilized, such as eating, dressing and other self care skills; job skills; home-making skills; selected crafts to obtain objectives of treatment goals; splints, and adaptive equipment for daily functioning.

\* \* \*

*What are the most important qualities required to become a good Occupational Therapist?*

A sincere interest in people and the science of medicine, the ability for creativity and ingenuity, and the patience

and perseverance that is often needed to help a handicapped person achieve maximum rehabilitation.

\* \* \*

*Would you encourage young people with these qualities to qualify as Registered Occupational Therapists?*

I most certainly would! The need for trained therapists is so great, and I know of few professions where the rewards in terms of satisfaction for services rendered are so great.

\* \* \*

*What are the scholastic requirements to become a Registered Occupational Therapist?*

A bachelor's degree in Occupational Therapy at an accredited school with an additional 6 to 9 months internship at approved hospitals, plus a national registration examination after the above requirements are completed.

\* \* \*

*If anyone is interested in getting more information about the educational requirements, what should she do?*

Columbia University has an accredited School of Occupational Therapy here at the Medical Center. Although the classes do not begin again until the fall semester, information can be had by contacting Miss M. L. Franciscus, director of the program.

Those interested in Occupational Therapy should also write to the American Occupational Therapy Association, 250 West 57th Street, New York, N. Y. 10019, and ask for a copy of their *Occupational Therapy Handbook*, which gives detailed information about occupational therapy, the educational requirements and costs, and sources of financial assistance that may be available to qualified students who might want to apply for them.

Kathleen Lynch, Therapist, directs bilateral sanding exercises to strengthen patient's arm.

# ay Many Vital Roles on The Rehabilitation Team

Mrs. Shelly, Miss Hogan (Student) and Linda Silver, Therapist, observing cerebral Palsy child engaged in creative activities to improve coordination.

Iiona Midas, Therapist, uses bilateral play activity to increase range of motion of a child's arms.

Lou Ann Durbin, Therapist, training amputee to use a prosthetic hand.

Winifred Harmon, Aide, assisting patient in activity to strengthen hand.

Susan Crosson, Therapist, directing exercises to improve finger dexterity.

Susan Clark, Therapist, directs exercises to improve coordination.

Pamela Armstrong, Therapist, does a homemaking evaluation, in the specially equipped kitchen on the eighth floor at the Neurological Institute.

Jacqueline Palmieri, Therapist, directs exercises of stroke victim, using suspension sling.

## Columbia-Presbyterian Medical Center Is People...

Dr. Robert C. Darling, Director of the Department of Physical Medicine and Rehabilitation, does a patient evaluation before a rehabilitation team conference.

## Ray Werden Bags Bear In Vermont

Raymond E. Werden, who retired from the Medical Center in 1963 after 20 years of service, has not been bored during his retirement. On Saturday, December 17, while hunting deer on Hawk Mountain in Pittsfield, Vt., Mr. Werden looked up suddenly and saw a bear looking down at him from the upper branches of a tree. He fired once, and now the Werden family are enjoying bear steak and have the makings of a rug. Mr. Werden's bear weighed 225 lbs. rough dressed.

If the pharmacy has any calls for bear grease these days, Mr. Werden is accepting orders.

## MR. BRODERSEN

*Continued from page one*

throughout Latin America. He introduced flour enrichment to Chile based on a nutritional survey made there under a Merck grant by the late Dr. Norman Joliffe, formerly director of New York's Bureau of Nutrition.

In recent years, Mr. Brodersen has applied his talents in the fields of health and education, with special emphasis on hospital public relations and development programs. He directed such programs in Detroit for Providence Hospital; Detroit Institute of Technology, and, most recently, was associated with the University of Michigan's \$55 million Development Program.

In his new position, Mr. Brodersen will consolidate all matters of Public Interest for Presbyterian Hospital and the College of Physicians and Surgeons. The two have functioned separately in the past.

When asked about his new program, Mr. Brodersen said, "Now, with its overall responsibility for reporting this

## RUNYON FUND

*Continued from page one*

formation of a tumor.

It is anticipated that the findings of this study may eventually help to explain the development of all tumors under endocrine control. This group would include mammary and uterine tumors which have a high incidence. At a future date, it is possible that immunological approach could be applied to control of these tumors.

This new grant will be directed toward a more specific identification of the particular hormone involved and further establish the relationship between it and tumor formation in the female reproductive system, according to Dr. Ely.

Medical Center's news, the Office of Public Interest can identify and describe accurately to the communications' media the mighty purpose and accomplishments of this Center's professional staff. News from here is of international importance and therefore must be properly publicized."

Mr. Brodersen pointed out that in the future many more activities of the College of Physicians and Surgeons will be reported in *The Stethoscope*, and he asks the cooperation of all employees in bringing to the attention of *Stethoscope* reporters unusual human interest stories and developments in research that can make timely and informative features in our monthly newspaper. When you know of such a story, please report it as soon as convenient to the Office of Public Interest. An inter-office telephone call to 1911, 1912 or 1913 will bring Mr. Brodersen, Fredrica Brooks or Winfred Van Atta, *Stethoscope* Reporters, on the run with a notebook and camera. These reporters are always available to you and, of course, stories involving personalities or scientific developments will always be sent to the people involved for final approval before publication.

## 100,000th Electroencephalogram Taken At Neurological Institute

The 100,000th electroencephalogram was made recently at the Neurological Institute. This recording of electrical activity in or near the surface of the brain is an important tool for diagnosis and evaluation of many neurological disorders.

The young girl upon whom the record-making test was made is an epileptic patient. Hers is an unusual case. The attack was precipitated by television, according to Dr. Paul F. A. Hoefer, director of the EEG department, who explained that this is a relatively recently recognized cause of such seizures. They are produced by visual stimuli consisting of flickering light.

The EEG, as the test is commonly called, was initially used in the diagnosis and treatment of epilepsy and related disorders. Soon it was developed to serve as a means of localizing brain tumors, abscesses and injuries sustained from blows on the head. It also helps in determining the effect on the brain of metabolic abnormalities, such as liver disorders and diabetes, and aids in screening patients with severe headaches and fainting spells in order to rule out more serious underlying diseases.

The electroencephalogram, after suitable amplification, shows a pattern of the oscillating brain waves picked up through the intact skull and scalp. It may also be used to make a recording from the exposed cortex during surgical operations or laboratory experiments. Ink-writing oscillographs are used for recording.

In 1939 Dr. Hoefer, then teaching Neurology at the Harvard Medical School, was invited by Dr. Tracy J. Putnam to establish an EEG laboratory at Neurological Institute. He accepted, planned a recording area on the 13th floor, set up 4 shielded rooms and opened the laboratory on January 15, 1940.

Patterns of amplified brain waves are printed continuously while the patient is being studied.

This facility, the first such laboratory for clinical purposes in a hospital, was dedicated by Dr. Nicholas Murray Butler, then President of Columbia University.

The tests are performed by a staff of technicians, then interpreted by the department neurologists, and typed by the secretaries for patient records. Assistant supervisors, in charge of the laboratory, are Carol Christensen and Mrs. Ethel Robertson. The administrative supervisor in charge of the laboratory and secretarial office, Mrs. Genevieve Covolo, also supervises other laboratories in the hospital.

Soon after the laboratory was established it became necessary to add an additional unit on the 3rd floor stem of Presbyterian Hospital. This unit now consists of 3 shielded rooms with recording equipment and serves the needs of Presbyterian, Babies, Harkness, the Eye Institute and Vanderbilt Clinic. Still another unit was opened on the 5th floor of Vanderbilt to serve the Seizure Clinic. Dr. M. H. Charlton is in charge of this laboratory, where clinical EEG's are done on Seizure Clinic patients, as well as investigation into epilepsy, especially Petit mal. All EEG rec-

ords are microfilmed after a six month period, except for cases of special interest which are kept in the active file.

Within the department one laboratory is devoted to the clinical application of electromyography and nerve conduction studies. Here Dr. Robert E. Lovelace and his technician perform diagnostic tests on patients with nerve and muscle disease, using electronic equipment including stimulators and cathode ray oscilloscopes. Research in peripheral neuritis and muscle disease is also being carried out by this laboratory, and neurologists are being trained in these techniques. Dr. Margaret Seiden is the senior member of the EEG department. Leonard Zablou is the physicist.

From the beginning the department has had its own workshop where new equipment is constructed and maintenance provided for complicated machines. Hilton Harris is in charge of this shop.

In this electroencephalography department, one of the largest in the country, are trained electroencephalographers and technicians, who then serve in hospitals throughout the country and in other parts of the world.

These are the people who write and produce *The Stethoscope*, and who will always be there when they hear of a story within the Medical Center. Left to right, Fred Brodersen, Winfred Van Atta and Fredrica Brooks.

### THURSDAY EVENING LECTURES, 1967

7:30 P.M.

Babies' Hospital Amphitheater — Fourth Floor  
167th Street and Broadway

5 January 1967	Louis R. Orkin, M.D. Department of Anesthesiology Albert Einstein College of Medicine	"The Microcirculation"
12 January 1967	Stuart L. Sullivan, M.D. Department of Anesthesiology Columbia University P&S	"Post Hyperventilation Hypoxia"
19 January 1967	Richard Beard, M.B., B.Ch. Department of Obstetrics and Gynecology, Columbia University P&S and Queen Charlotte Hospital, London	"Clinical Experiences with Fetal Scalp Blood Sampling"
26 January 1967	Leonard Brand, M.D. Department of Anesthesiology Columbia University P&S	"Measurement of Blood Flow in Brown Fat Using Radioisotopes"

## RADIATION SAFETY

*Continued from page one*

gram and a designated Radiation Safety Officer in full-time attendance at the institution. Under these regulations, the purpose of this activity is to assist and assure the safe and effective use of sources of ionizing radiation. These sources include in particular all X-ray machines and radioactive materials, but also any other device that might incidentally produce penetrating radiation, such as electron microscopes. All such devices and the persons working with them must be registered by the Radiation Safety Office.

Other matters handled by this office are film badge assignments and records, orders for radioactive materials, and the design of X-ray rooms and isotope laboratories. Licenses and registrations issued to the Medical Center by the N.Y.C. Office of Radiation Control require that routine surveillance and inspection be provided and records be kept with regard to any matter of radiation safety, from the special incinerator atop the Black Building to the cobalt teletherapy units in the sub-basement of the Radiotherapy Center. However, specific authorization for clinical and research uses of radioactive pharmaceuticals in humans has been and remains the responsibility of the long-standing Joint Radioisotope Committee, which is also under the chairmanship of Professor Rossi and to which the Radiation Safety Office also serves in a secretarial capacity. Clinical aspects of the use of radiation, as always, are necessarily reserved as the province of the responsible physicians and the radiological physicists on the hospital staff.

The committee recognizes that the elementary principles of safety with radioactive materials and standard procedures in their use are not universally understood. Since it is essential to remedy any lack of such information wherever it exists, a short course of expert instruction will soon be given for all persons who work with radioactivity, as is the custom in large institutions where their use ranges so widely.

Prior to consolidation of these activities, the post of Radiation Safety Officer for Presbyterian Hospital was held by Dr. Stickley, who has been the hospital's only radiological physicist (i.e. certified by the American Board of Radiology) until recently joined by Dr. Paul Goodwin. In the College of Physicians and Surgeons, the former Health Physics Office covered these duties under the similar program of Columbia University. The functions were first handled by Professor Emeritus Edith Quimby,

DR. HARALD H. ROSSI

who continues to be active in such matters for the A.E.C. and the professional societies. It is of interest to note that during the days of the Manhattan Project and the early years of nuclear energy development, the beginnings of radiation safety practice depended heavily on the few scientists who were acquainted with radiation sources and their effects on human beings—these were the hospital physicists, among whom two of the most prominent were Columbia-Presbyterian's Dr. Quimby and the late Professor G. Failla.

## Nurses Informed Of Our Future Building Plans

Approximately 200 private duty nurses were entertained at a party held at Harkness Hall on Tuesday evening, December 6.

A delicious buffet supper was served, following which Dr. C. R. Wise, Assistant Vice President, gave an informal, but detailed presentation of current and future building plans at the Medical Center.

Two choral groups of student nurses from Maxwell Hall entertained with several beautiful acapella selections appropriate to the season.

On the following Wednesday morning, another 200 Night Nurses were entertained at a buffet breakfast at Harkness Hall. Dr. Wise also explained current and future building plans to this interested group.

## WEINBERG AID

*Continued from page one*

its per semester, or the equivalent in non-credit courses, for any full-time employee with at least six months service at the hospital. All courses must be taken in a school of recognized standing and be related to a career at the hospital.

The fund was established in 1962 through a gift from Mr. Weinberg, a trustee of Presbyterian Hospital, and his friends.

During the Fall Semester, 1966, 27 employees were enrolled in 11 universities and schools under this plan, according to Miss Oring.

# Mrs. Lindsay Is Honorary Chairman Of Student Nurses' Benefit Party

Mrs. John V. Lindsay will be honorary chairman for the Ninth Annual Benefit Card Party for the Student Nurses' Scholarship Fund, according to Mrs. Robert H. E. Elliott, chairman. The event will be held in Maxwell Hall, April 19. Honorary sponsors are Mrs. W. Van Alan Clark, Mrs. Grayson L. Kirk and Mrs. H. Houston Merritt. Vice Chairmen include Mrs. George C. Hennig and Mrs. Edward B. Self, recording secretary is Mrs. Robert C. Mackenzie, corresponding secretary is Mrs. Arthur L. B. Richardson and treasurer is Mrs. J. Ward McLaughlin. Faculty of the Nursing School is represented by Elizabeth S. Gill and Helen F. Pettit.

The Scholarship Fund provides assistance for about twenty students annually, made possible by the proceeds from Benefits held the past eight years.

This year the committee is requesting contributions of trading stamps or stamp books to be used to furnish prizes for the raffle. They should be sent to Florence Vanderbilt, 179 Fort Washington Avenue, New York, N. Y. 10032.

Names of interested persons who would like invitations to the Benefit should be submitted to the committee. Mrs. Elliott is in charge of the mailing lists. Her address is 434 West 250th Street, New York, N. Y. 10471.

The various committee chairmen include: Mrs. Edwin B. Cox, prizes; Mrs. Alfred Steiner, sponsors; Florence Vanderbilt, hospitality; Louisa

Mrs. John V. Lindsay, shown at the 1966 Benefit with Marita Marx, Class of 1966 (left), Mrs. Lindsay's secretary, Mrs. Edward B. Self and Mrs. R. H. E. Elliott.

M. Kent, publicity; Mrs. Stanley M. Bysshe, printing. Also Mmes. B. DeWitt Bleecker, Frank Borelli, Everett C. Bragg, Walter N. Cantwell, Russell N. Carhart, James Coyne, Jack M. Davis, Raynor Hamilton, Robert H. Mulreany, Charles S. Neer, II, Milton B. Philips, William E.

Ranck, John B. Rearden, Edward V. Ryan, Ernest Satir, Anthony D. Serpe, Frank E. Stinchfield, A. J. B. Tillman and Robert Weeks, Jr. Student nurses serving on the committee are Linda Grossel-finger, J. Margaret MacKenzie, Polly Perkins and Elaine Turzan.

## ON THE SHELF

*New Books in Milbank Library*

### FICTION

**The Far Family** by Wilma Dykeman. The Thurstons, a Southern Appalachian family who have scattered North and South, are brought together when one of them is accused of murder.

**Greenstone** by Sylvia Ashton-Warner. A new novel by the author of *Spinster and Teacher*. An eccentric couple, their twelve children, and a Maori princess live in the midst of a New Zealand rain forest.

**The Mask of Apollo** by Mary Renault. Plato figures in this dramatic new novel of ancient Greece. Miss Renault, whose earlier books have been most popular, is a professional nurse.

**Killer Dolphin** by Ngaio Marsh. A bronze dolphin is the murder weapon in this latest case of Superintendent Alleyne of Scotland Yard.

**The Birds Fall Down** by Rebecca West. In her first novel in ten years, the author uses a framework of historical fact—two spies traveling in a European railway carriage have a conversation that changes the course of Russian history.

### GENERAL

**Gauguin in the South Seas** by Bengt Danielsson. Mr. Danielsson, a member of the famous Kon-Tiki expedition, has spent fifteen years in Tahiti. His well-illustrated book on Gauguin's last years will interest both art lovers and arm chair travelers.

**Winston S. Churchill** by Randolph S. Churchill. There is no attempt to sugar coat the facts in this frank, "warts and all" biography of a great man. In this first volume of five, Mr. Churchill does an excellent job of portraying his father's youth.

# CHRISTMAS WAS MERRY THIS YEAR

Some angels, some shepherds, assisted by friends, decided to pay a visit to some older patients in the hospital.

This Shepherd Is Tired

Picture Books Are Fun

The Tiniest Angel

And a get-acquainted journey was made around the floors to spread the Spirit of Christmas.

There was surprise, a little awe, followed by much joy when Santa Claus made his appearance at Babies Hospital.

## All Of Our Christmas Windows Deserved A Prize This Season

Prizes for the Christmas Window Painting Contest were awarded December 22 by Dr. Carl R. Wise, assistant vice president, and Chaplain Robert B. Reeves, Jr. chairman of the Medical Center Art Committee. Entries numbered over 100 and the judges claimed to have had a difficult time deciding the winning windows.

First prizes, a blue ribbon and a 2 lb. box of candy, were given to Olga Cheselka, PH 9 Nursing Station-Metabolism; Marlese Roehrig, DOS 7 Front Door of Department; Jane Mitchell, HP 10 Nursing Station Side Window; Mrs. Catherine Romain and Staff VC 1 Overnight Ward; Staff of Neuro 12 Nursing Station and a Children's Award to Michael Smith BH 9 Ward Doors.

Second Prizes, a red ribbon and a 1 lb. box of candy were awarded to: Dr. Bruce Goldreyer, PH 8 Ward Doors and Windows; Virginia Deery, BH 7 Nursing Station; Eileen Glaccum, HP 4 Service Elevator Door; Rebecca Perkowitz, VC 1 Eye Clinic Examining Room; Mrs. Margaret Darby, IOPH 3 Nursing Station.

Honorable Mention, a white ribbon, was presented to Wanda Johnson, BH 9 (children's division); Denise Bailey and Fay Laya, PH 12, Center Ward Nursing Station; Bar-

The caption for this prize-winning window in the overnight ward at Vanderbilt Clinic reads: "Christmas is a good day not to be in the hospital."

bara Gregory, Eileen Sullivan and Lois Husko, PH 18; P. E. Gould, BH 9 Operating Room; Judy Hogan, Ramp Room 530; Patients Christa Lochner and William Eddy, PH 5 West Ward; Kay Chu, HP 7 Nursing Station Side Window; Doreen Kelly, HP 2 Nursing Station; Claudia Mayor, VC 1 Right Window; Octavia Dudley, VC 1 Admitting Clinic and Patient Lorraine Shannon and her mother, Mrs. Ovin Shannon, NI 4, Room 402.

All windows entered in the Contest were seen by three judges during the preliminary judging and the finalists were viewed by a committee which included Drs. Carl R. Wise, Meyer M. Melicow, Bard Cosman and Jerome P. Webster.

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXII, NUMBER 2

FEBRUARY, 1967

## IMPORTANT NOTICE

Are you employed by The Presbyterian Hospital?

Are you married?

Do you have Blue Shield or Blue Cross Insurance for your spouse?

Is your spouse age 65 or older?

If your answer to all these questions is YES, and you have not recently changed your health insurance plan, it is imperative that you contact Mrs. Catherine Heckman in the Personnel Office at once—Extension 2331.

If you do not revise your health insurance to place your spouse in the proper group, you are now spending money needlessly on your health insurance coverage.

## P & S 200th Anniversary Is Celebrated In Miami

The first celebration in 1967 to commemorate the founding 200 years ago of Columbia University's College of Physicians and Surgeons was not held in New York but in Miami, Florida, January 5 to 8. Alumni and friends of P&S from the medical schools of the Universities of Miami and Florida and the Dade County Medical Society, dedicated their three-day symposium "Metabolic and Endocrine Disorders—Clinical Considerations" to the event. It was their fourth annual Miami program in postgraduate medicine. There are 115 P&S graduates living in Florida, of whom, 35 are in Miami.

Chairman of the four-day symposium was Dr. Frank Moya, formerly here as assistant attending anesthesiologist and now chairman of the department of anesthesiology at Miami's College of Medicine.

Appearing at the Miami program from P&S were: Dr. Emanuel M. Papper, chairman, department of anesthesiology; Dr. Shih-Hsun Ngai, attending anesthesiologist and Dr. Richard Kitz, associate attending anesthesiologist.

Thousands of Miamians also heard the bicentennial story when Dr. Papper was interviewed on the local Miami radio stations.

## Dean Merritt Recently Honored For Contributions In Neurology

Dr. H. Houston Merritt, Dean of the medical faculty, Columbia University, and chairman of the Department of Neurology of the College of Physicians and Surgeons, was recently honored in the "Awards" issue of *Modern Medicine* for his contributions in Neurology. He is author or co-author of seven neurological textbooks and 207 published papers in his fields of interest.

A native of Wilmington, N. C., Dr. Merritt resisted his family's ambitions to have him attend West Point Military Academy, and was graduated Phi Beta Kappa from Vanderbilt University. Dr. Merritt can't remember ever wanting to do anything but practice medicine.

Dr. H. Houston Merritt

Although he never intended to devote so much of his life to study of the nervous system.

## Vets of U.S. 2nd General Hospital To Celebrate 25th Anniversary

One of the distinguished medical units to be cited by the U. S. Surgeon General for "outstanding contributions to the successful prosecution of World War II under circumstances never before encountered in the history of military conflicts" was the 2nd General Hospital, U. S. Army, the nucleus of which was made up of volunteers from the medical and nursing staffs at Columbia-Presbyterian Medical Center. Activated on January 31, 1942, and demobilized almost four years later on October 12, 1945, the 2nd General Hospital was affectionately known here as "Our Overseas Unit," and all who remained behind took tremendous pride in its accomplishments.

This month, on February 18, the physicians who served in

### NURSES OFFER TRIP FOR TWO TO BARBADOS!

A trip for two from New York City to the Barbados, plus a week's stay at Hotel Benston-on-Sea is the top prize in this year's raffle for the Student Nurses' Scholarship Fund. Arrangements for these accommodations were made through the Barbados Tourist Board in association with the Barbados Hotel Association and Mr. J. L. Parris, Manager. Another trip for two, this one to Bermuda, for a long weekend at the Elbow Beach Surf Club has been given by Robert F. Warner, Inc.

Tickets will be available this month and the drawing for these trips and many other prizes will take place April 19 at the annual student nurses benefit card party in Maxwell Hall. The Scholarship Fund provides assistance for about twenty students annually and is made possible by the proceeds from Benefits held the past eight years.

Other prizes include a broad-tail jacket with mink collar donated by John F. Morris Furs and a mink gilet from Fredrica; a \$100 B. Altman

## Stereotaxic Brain Surgery At Neurological Institute

Stereotaxic surgery (*stereo*: three-dimensional, and *taxis*: arrangement), which has been very much in the news recently, is being acclaimed by the popular press as an important "breakthrough" in neurological surgery. To learn more about this surgical technique, *The Stethoscope* went to Dr. Edgar M. Housepian, Associate Attending Neurological Surgeon who, with Dr. Dominick P. Purpura, Associate Professor of Neurological Surgery, and others, has done considerable research in this area. Dr. Housepian answered the following questions:

**Q. How new is stereotaxic surgery?**

A. Zernov formulated the stereotaxic method almost a hundred years ago. Spiegel and Wycis first used it in neu-

Dr. Edgar M. Housepian

rological surgery on humans in 1947, when they used certain structures within the brain as landmarks for reaching specific tissue. Like most advances in medicine and surgery, this new concept began in the laboratory. Knowledge gained from animal experi-

## DOINGS OF DOCTORS

DR. RAFFAELE LATTES, Professor of Surgical Pathology, recently conducted a slide seminar at the fall meeting of the Ohio Society of Pathologists in Cincinnati, and delivered a lecture on Lymphoma of the Stomach at the University of Cincinnati Medical School.

At a "Cancer Teaching Day" in Glen Falls, N. Y., under the auspices of the American Cancer Society there, Drs. DAVID HABIF, Attending Surgeon, RUTH GUTTMAN, Professor of Radiology, and DR. LATTES, participated in a panel discussion on Breast Cancer. Dr. Lattes also participated, in Tokyo, in the World Health Meeting of the International Committee for Classification of Soft Tissue Tumors, and attended the Cancer Congress which was held there.

Dr. Lattes

Dr. Mark

Drs. LESTER C. MARK, Professor of Anesthesiology and JOANNES H. KARIS, Assistant Professor of Anesthesiology, participated in a symposium on Therapy of Drug Coma at the Hunterdon Medical Center, Flemington, N. J.

DR. MIECZYSLAW FINSTER, Assistant Attending Anesthesiologist, was guest lecturer at the Institute on Maternal and Child Health sponsored by the C. S. Mott Foundation at the Children's Health Center, Flint, Michigan. Dr. Finster, Dr. P. J. POPPERS, Assistant Attending Anesthesiologist and DR. ALLEN I. HYMAN, Assistant Anesthesiologist, presented papers at the Symposium on the Problems of Fetal Distress, Siena, Italy.

DR. RALPH J. VEENEMA, Associate Professor of Clinical Urology, participated on a panel on urinary incontinence at the recent meeting of the American College of Surgeons in San Francisco. He also presented papers at the American University of Beirut and before the Lebanese Urological and Medical Societies; at the Third All India Cancer Congress in Calcutta and at the New South Wales Urological Society and at the University of Sydney, Australia.

DR. DOMINICK P. PURPURA has assumed the position of Professor and Chairman of the Department of Anatomy at Albert Einstein College of Medicine. Formerly Associate Professor of Anatomy in Neurology, Dr. Purpura has been at the Medical Center since 1953 when he came to Presbyterian Hospital as an intern in Surgery.

DR. KARLIS ADAMSONS, Associate Attending Obstetrician and Gynecologist, presented "Factors that Determine Tolerance to Asphyxia" at the Ross Laboratories Conference on Brain Damage from Hypoxia or Asphyxia held last month. He also presented a paper at the Mexican Congress of Hematology and Blood Transfusion.

DR. GEORGE F. CRICKELAIR, Attending Surgeon, Presbyterian Hospital and Director, Plastic Surgery Service, was elected President of the New York Regional Society of Plastic and Reconstructive Surgery.

Dr. Crickelair was also executive committee chairman and was responsible for setting up a Conference on Burns and Flame Retardant Fabrics at the New York Academy of Medicine, December 2-3, 1966.

He delivered a paper entitled "Flame Retardant Clothing—Action and Program for the Future."

DR. WALTER E. BERDON, Assistant Attending Radiologist, has been elected a Fellow in the American Academy of Pediatrics. He presented papers at the recent meetings of the Radiological Society of North America, in Chicago, and at the California meeting of the Pediatric Radiology Society of North America.

DR. GORDON I. KAYE, Assistant Professor of Surgical Pathology, spoke on Localization of Sodium in Transport Systems, at a Symposium on Membrane Transport and the Eye, held at Yale Medical School.

DR. ALFRED GELHORN, Attending Physician, presented the 10th Maurice C. Pincoffs Memorial Lecture in Medicine at the University of Maryland, School of Medicine. Dr. Gellhorn and DR. JOHN ULTMANN, Assistant Attending Physician, were co-directors of a recent Post-Graduate Course entitled "What the Internist Should Know About Cancer," sponsored by the American College of Physicians and conducted by the Department of Medicine at the Delafield Hospital.

Lecturers from P&S included Drs. PHILIP FEIGELSON and ERICH HIRSCHBERG from Biochemistry; Drs. WILLIAM B. BENJAMIN, HENRY O. HEINEMANN, GEORGE A. HYMAN, FREDERICK KLIPSTEIN, PAUL A. MARKS, MANUEL M. OCHOA, JR., ELLIOT F. OSSERMAN and I. BERNARD WEINSTEIN from Medicine; Drs. PATRICIA TRETTER, ARNOLD BACHMAN, PHILLIP M. JOHNSON, RUTH GUTTMAN from Radiology and DR. RALPH VEENEMA from Urology.

Dr. Gellhorn

Dr. Patrick

DR. THOMAS W. PATRICK, JR., Assistant Pediatrician, spoke before the New York Chamber of Commerce. His topic was "What Harlem Wants, What Harlem Needs."

DR. PAUL D. ELLNER, co-director of the diagnostic service, microbiology, has been elected Chairman of the Clinical Section of the New York City Branch of the American Society for Microbiology.

DR. JOEL A. MOSKOWITZ, Resident in Psychiatry, was the discussant at the Liaison Psychiatry Conference at the invitation of Mount Sinai Hospital's Department of Psychiatry.

## STETHOSCOPIA

### • NEWLYWEDS

At a ceremony in The Pauline A. Hartford Memorial Chapel recently, Miss Jane Chang, graduate student in Pharmacology, P&S, and Dr. Daniel Cheng, intern at the Long Island College Hospital, were married.

Katherine Schurko, secretary in the Medical Information Department, married Mr. William Schaffer. The couple is living in Salisbury, Mass.

Carol Geer, of the Neurological Clinical Pathology laboratory became Mrs. Vincent Difusco recently. The couple spent their honeymoon in Mexico.

### • FAREWELL

Mrs. Mary Propst, secretary in Blood Bank (for Open Heart) has resigned. A farewell party was given by the department.

Alice Jarcho, Public Interest, who has become private secretary to Dr. Thomas J. Bridges, Jr., at Neurological Institute.

### • WELCOME

Mrs. June Rutkowski, to the Blood Bank.

William E. Duffy as Personnel Assistant and Barbara Paul as Personnel Interviewer.

### • NEWBORN

A baby daughter was born to Mrs. Ita Slattery, former EEG technician, in Harkness on January 15.

Baby boy, Eric Howard, born to Dr. and Mrs. Stephen J. Sill. Father is assistant resident in Eye Institute.

### • VACATIONERS

Johanna Nolan, Record Department, spent a winter vacation with her brother in Mobile, Ala.

Mrs. Catherine Finnerly, Nursing Department, recently visited Paris, Zurich, London and Rome. While in Rome she attended the ordination to the priesthood of her nephew.

### • NEWS OF INTEREST

Anthony Duran, volunteer on Babies 4th floor, played Santa at the Christmas party for the smallfolk there.

Karen Moran, social worker in Adult Psychiatry Clinic, has been selected to appear in the 1966 edition of Outstanding Young Women of America. A native of Waterbury, Conn. she was graduated from Annhurst College, received a Master's degree at the Fordham University School of Social Service on a fellowship from the National Institute of Mental Health. Miss Moran joined our staff in November, 1965.

Selections for the honor are made by the board members of the publication who include, Mrs. Lyndon B. Johnson, honorary chairman of the Board of Advisory Editors, Mrs. Dexter Otis Arnold, honorary president of the General Federation of Women's Clubs.

The Social Committee of the graduate nursing staff will sponsor a ski weekend the end of February. Cost and details may be obtained from Miss R. M. Angelo, chairman, 12th floor of Neuro, telephone number 2031.

## ART SHOW MAY 1-12

The 17th Annual Arts, Crafts and Photograph Exhibit will be held May 1-12 in the Library Annex, 20th floor of Presbyterian Hospital.

Chaplain Robert B. Reeves, Jr., chairman of the Medical Center Art Committee invites all Medical Center staff and personnel to participate. Entry blanks will be available April 17 in the Chaplain's office and at Stethoscope distribution points.

Left to right: Mrs. Edward B. Self, Miss Elizabeth S. Gill, Mrs. R. H. E. Elliott and Mrs. B. DeWitt Bleeker.

## NURSES RAFFLE

*Continued from page one*

gift certificate, courtesy of Mrs. Herbert O. Allen; two piece matched luggage (men's) and a black calf handbag by Rosenfeld, given by a Friend. A handcrafted dish from Mrs. George Hennig, a Steuben glass vase from Steuben, a Fieldcrest electric blanket and many other valuable prizes will be included in the drawing on April 19.

Honorary chairman for this year's benefit card party is Mrs. John V. Lindsay. Honorary sponsors are Mrs. W. Van-Alan Clark, Mrs. Grayson L. Kirk and Mrs. H. Houston Merritt. The chairman, Mrs. Robert H. E. Elliott is being assisted by Mrs. George C. Hennig and Mrs. Edward B.

Self, vice-chairmen. Committee chairman are Mrs. Edwin B. Cox, prizes; Mrs. Alfred Steiner, sponsors; Miss Florence Vanderbilt, hospitality; Miss Louisa M. Kent, publicity; Mrs. Stanley M. Bysse, printing. Also Meses. B. DeWitt Bleecker, Frank Borelli, Everett C. Bragg, Walter N. Cantwell, Russell N. Carhart, James Coyne, Jack M. Davis, Raynor Hamilton, Robert H. Mulreany, Charles S. Neer, II, Milton B. Philips, William E. Ranck, John B. Rearden, Edward V. Ryan, Ernest Satir, Anthony D. Serpe, Frank E. Stinchfield, A. J. B. Tillman and Robert Weeks, Jr. Student nurses serving on the committee are the Misses Linda Grosselfinger, J. Margaret MacKenzie, Polly Perkins and Elaine Turzan.

## \$150,606 Hartford Grant For New Cataract Study

Research on cataract formation and its relationship to the chemical changes that take place in the lens of the eye will be broadened at Columbia University's College of Physicians and Surgeons under a \$150,606 grant from The John A. Hartford Foundation, Inc., New York City.

The award was announced jointly by Ralph W. Burger, Foundation President, and Dr. H. Houston Merritt, Vice President in charge of medical affairs. The research team will be headed by Dr. Abraham Spector, Assistant Professor of Ophthalmology.

"The lens of the eye has a higher protein concentration than most other tissues of the body," Dr. Spector said. Nevertheless, the normal lens is not opaque, as are most body tissues, but is completely clear. This clarity suggests a highly sophisticated arrangement of the protein molecules within the lens. When this architecture is disrupted by disease, the lens becomes opaque. The development of this opacity is called cataract formation. The opaque lens prevents light from reaching the retina and loss of sight occurs. At present, this condition can only be cured by the surgical removal of the opaque lens.

Dr. Spector has been investigating the chemistry of the lens of the eye since 1958. He has found that its proteins ap-

Dr. Abraham Spector

pear to be large molecular aggregates. These macromolecules are made up of smaller units. One of the major lens proteins, alpha crystallin, contains 50 subunits in a macromolecule having a molecular weight of 1,000,000. Recent work by Dr. Spector and his group suggests that the subunits of alpha crystallin can

# NURSES TRAINED TO GIVE INFANTS INTENSIVE CARE

A program to develop nursing interest and expertise in intensive care of the newborn is in progress in the Neonatal Intensive Care Unit on the second floor in Babies Hospital with a grant from the Children's Bureau of the Department of Health, Education and Welfare. Under the direction of Dr. John Sinclair, assistant attending pediatrician, the project was set up two years ago to meet the special nursing needs of seriously ill newborn infants and to devise methods of applying new advances in medical science to their particular problems. The program provides in-service experience for nurses from this country and abroad who wish tiny-patient-care experience.

Because the problems in the neonatal unit are undergoing an evolutionary change, two types of care must now be offered — the traditional care of small infants until they reach normal weight, and the more complex care of the newborn with serious illnesses, regardless of their size. This latter group requires new and often complicated nursing procedures tailored to their special needs.

Presently there are nine nurses in our neonatal intensive care unit which consist of six isolettes. This staff, recruited among nurses with experience in intensive and in pediatric nursing, includes some from the Babies Hospital staff, others from university hospitals in this country, Canada, England and Switzerland. They attend lectures and discussions in neonatal medicine and physiology to enable them to function with understanding and to develop nursing procedures applicable to the treatment of life-threatening illnesses in the newborn. The unit is available to sick

have different packing arrangements in its aggregate macromolecule structure. The packing of the subunits appears to be influenced by their environment and this may be a factor in cataract development.

Professor Spector was graduated in 1947 from Bard College, Annandale-on-Hudson, New York. He earned his Ph.D. in Biochemistry in 1957 from New York University. In 1957-58 he was a postdoctoral fellow of the National Science Foundation during which time he worked with the late Professor K. Linderstrom-Land at the famous Carlsberg Laboratory in Copenhagen. He joined Harvard University's Howe Laboratory of Ophthalmology in 1958 and served there until 1965 when he joined the Columbia faculty.

This close-up of one section within the Neonatal Intensive Care Unit shows a nurse working with one of the tiny patients.

babies up to one month of age, regardless of their birth weight. It handles patients with medical and surgical (pre and postoperative) problems. Their goal, Dr. Sinclair says, is to produce intact survival of small infants, using methods to detect and prevent conditions which might lead to brain damage after birth. In many cases this result can be influenced by the manner of care, by clinical and biochemical supervision, by intensive observation and by the use of preventive and therapeutic treatment.

Among the nursing procedures improved by this study

are care of the baby with prolonged naso-tracheal intubation, monitoring of oxygenation and acid-base balance, and measures to prevent and treat broncho-pulmonary infections in infants whose ventilation is being mechanically assisted, according to Dr. Sinclair.

"The neonatal intensive care unit at Babies is the first demonstration facility focusing on this heretofore unmet need," he says. "Many of the staff being trained in this pilot project will put their knowledge to use in other pediatric units, disseminating the developments pioneered here."

## Nurses and Psychiatrists Hold Teaching Conference

A conference on MULTIDISCIPLINARY GROUP TEACHING OF PSYCHOSOCIAL ASPECTS OF PATIENT CARE is to be held at the Columbia-Presbyterian Medical Center on March 31-April 1, 1967, jointly sponsored by the Departments of Nursing and Psychiatry of the Faculty of Medicine, Columbia University. The purpose of the two day symposium and workshop is to provide an opportunity for those concerned with health practice and education to participate in a conference on developing methods of teaching behavioral science concepts to professional students. Presiding will be Professor Helen F. Pettit.

Videotapes illustrating multidisciplinary group teaching will be shown and discussed by a panel of nurses, psychiatrists and social scientists. Reports on some aspects of a ten year collaborative project to integrate behavioral science concepts into the nursing students' curriculum, supported in part by the National Institute of Mental Health, have been printed and will be distributed prior to the conference. They will serve as a starting point for discussion. The workshops will be based on the multidis-

ciplinary group teaching model, in which leadership is shared by a nursing faculty member, a nursing service representative, a psychiatrist and a social scientist. The symposium and publication of its proceedings have been approved by the National Institute of Mental Health.

Participants include: Dean Elizabeth S. Gill; Professor Lawrence C. Kolb; Elsa Poslusny, M.A., R.N., Associate Professor of Nursing, chairman; Constance Cleary, M.A., R.N., Associate Professor of Nursing; Dr. Stephen Feinstein, Instructor in Psychiatry; Dr. Ivan Goldberg, Instructor in Psychiatry; Dr. Frank Jewett, Instructor in Psychiatry; Edward Lehman, M.A., Research Fellow in Medicine, Cornell University Medical College; Rose Ann Naughton, M.A., R.N., Assistant Professor of Nursing; Hubert O'Gorman, Ph.D., Assistant Professor of Sociology, Hunter College; Dr. Winfred Overholser, Jr., Associate in Psychiatry; Jay Schulman, Ph.D., Assistant Professor of Industrial and Labor Relations, Cornell University; and Jane Traver, B.A., B.S., R.N., Instructor in Nursing.

## Five Employees To Retire Within The Next Few Weeks

Two members of the Protective Department are retiring soon.

John Burns, a familiar figure in Babies Hospital where he has been on duty evenings, will leave on February 8. He has been with the Hospital for seven years.

A native of Hartford, Conn., he makes his home in Brooklyn now.

Mr. Burns plans to devote much more time to following his favorite baseball and basketball teams. Between seasons he hopes to do some traveling across the country.

William J. Forkel, on evening duty in the Eye Institute, retires after 16 years service.

A resident of the White Plains section of the Bronx, he and his wife expect to move to Pennsylvania to spend their leisure time in this rural area.

Marie Christyne Dempsey, floor clerk on Sloane 15 rounded out ten years of service with the Hospital before she retired last month.

Miss Dempsey doesn't recall any special event that marks her stay—"just warm memories of interesting and pleasant daily experiences," she says.

She hopes to continue the many friendships she has made at the hospital now, when she has more leisure to enjoy them. Also, to expand her hobbies of needlework, which she has enjoyed doing for many years.

Mrs. Nancy Kamen, receptionist in Vanderbilt Clinic since 1957, will retire this month. She says she has enjoyed the busy atmosphere of the clinic, where she made many friends among the staff and "even some of the patients came by to say hello when they made return visits," she is delighted to remember. Mrs. Kamen hopes to do some travelling now that she has leisure time.

Oertel F. Van Horn, foreman in Maintenance and Construction, has been with the hospital since 1945.

A resident of Cresskill, N. J. where he is active in the Police Reserve and in civic groups, Mr. Van Horn anticipates no lack of activity.

His hobby, offshoot of his trade, is "repairing most anything," he says.

Can you imagine anyone more in demand?

## Here Are Some Of The Skille

It may come as a surprise to many, even some who have worked here for years, but 107 full-time employees—most of them skilled craftsmen and technicians—are required just to provide maintenance for Columbia-Presbyterian Medical Center's physical plant. This does not include regular services such as housekeeping, laundry, heating, air-conditioning and new construction—just maintenance.

Daniel Stevens

We keep large crews of painters, wall washers and masons busy year round.

The Maintenance Department is under the direction of Daniel Stevens, Administrative Assistant. Mr. Stevens is also director of Engineering and responsible for heating, air-conditioning and other engineering services.

Mr. Stevens is a native of Baltimore, Md., and received his engineering education at Johns Hopkins University. He is a Registered Professional Engineer in Pennsylvania and holds engineering licenses in Maryland, District of Columbia and Texas. Before coming to the Medical Center in February, 1959, as supervisor of plant engineering, Mr. Stevens worked for ten years as a mechanical engineer for the Hilton Hotel Corporation.

Mr. and Mrs. Stevens live in an apartment in Harkness Hall, where Mr. Stevens is readily available when trouble develops at the Medical Center. The Stevens have one son, who is now taking graduate work at the University of Wisconsin. Mr. Stevens is a golfer and shoots in the low 80's. A *Stethoscope* editor found this out after making a very stupid bet.

Working as assistant to Mr. Stevens, is Mr. William Fleck, supervisor of Maintenance, who came to the Medical Center in September of 1960, after serving as superintendent for Collision Electric Co., a firm specializing in institutional services.

Mr. Martin Petrucha, is chief electrician, working as assistant to Mr. Fleck. Mr. Petrucha was chief electrician for the May stores before coming to the Medical Center. He compares the electrical system here to a large tree with spreading roots seeking out new power sources, an ever-growing trunk of feeder lines, and new branches reaching out to service new power outlets.

Among some of the unusual maintenance jobs to be done at the Medical Center is repairing exterior brick walls and roofs after lightning strikes, opening doors, desks, trunks and suitcases for which keys cannot be found, repairing or improving special instrument, and answering almost any cry for help regarding anything that goes wrong with equipment or facilities. Four lampmen from the electrical shop spend their entire time replacing defective light bulbs. Beside their routine bulb replacements, they may receive as many as 35 calls in a single day for help with a bulb or lamp.

William Fleck

On these two pages are some of the busy scenes and busy people caught by *The Stethoscope* camera on a visit to the Service Building, where most of the maintenance shops are now located.

Martin Petrucha

Daniel Kenny, Foreman, Locksmith and Instrument Repair Department.

John McPhillips, Lampman

## Two Very Nice Letters Received From Good Friends In Scotland

Dear Sir:

I recently received a copy of your newspaper *The Stethoscope*. I was very interested in the story of Jimmy Brooks as I have nursed several such children. I have, however, never before given much thought to the experience of such operations in other countries.

I would like you to use the enclosed £5 for the nursing emergency fund.

I need no acknowledgement as the money belongs to God and it is His work you are doing.

Yours sincerely,

W. A. BROOKES

The Hospice, Spring Gardens, Abbyville, Edinburgh 8, Scotland

"I would like to correct what I hope was a misprint in the December issue of 'The Stethoscope,' Volume XXI, Number 11, on page 4. In the last column the question 'Was Christmas always a holiday in this country?' is replied to the effect that recently in the 1930's in the Highlands of Scotland 'wee-tree' Presbyterians frowned upon any festivities at this time. This 'wee-tree' should read 'wee-free' and refers to the Free Church of Scotland which broke away from the official Presbyterian Church in Scotland which was thought to be too lax!"

"I am uncertain why 'tree' should have been substituted for 'free' as there is always criticism as to the lack of trees we have in this country!"

"With very best wishes to you and to your readers."

EDITORS NOTE: We apologize, Dr. Robertson. The mistake was on the part of the editor, not of Chaplain Reeves.

Reason's whole pleasure, all the joys of sense, Lie in three words—health, peace and competence.

ALEXANDER POPE,  
Essay on Man

## In Memoriam

Miss Zdenka Wolf, Supervisor of the Babies Hospital Celiac Laboratory, died December 26, 1966, in Harkness Annex after a long illness.

Miss Wolf joined the Department of Pediatrics as a technician in the Babies Hospital Chemistry Laboratory in August, 1930, and, except for a period of six months beginning in September, 1947, when she left the Medical Center to work elsewhere, remained there until her transfer to the Celiac Laboratory on October 1, 1966. She was made Supervisor of the Chemistry Laboratory in 1959.

Miss Wolf is survived by a sister-in-law, Mrs. Violet B. Wolf, 19 Ivy Lane, Setauket, New York.

# Craftsmen Required To Maintain The Medical Center

William Heffner works at the paint spray booth to finish window shutters.

Joseph Gentile, Blacksmith

John Rohrer, Foreman Electrical Shop, observes Walter Rheene and Stefan Petrianyk, electricians, as they work at bench.

Thomas Duffy and George Busch, Masons, deliver bags of cement by lift truck.

John Herring, Foreman  
Carpenter Shop

Arthur Klingerberg and Joseph Gentile trim sheet metal at the machine shop.

The welding shop repairs all types of broken metal equipment, from laundry trucks to machine parts.

John Ansbro, Electrician, repairs all types of lamps at his bench.

Martin Ryan, Sign Painter

Frank Stingo, Foreman, Upholstery Shop, and Henry Robertson finish chair.

Nathan Schorr, Electrician

*Columbia-Presbyterian

This photograph of officers of the Presbyterian Hospital Overseas Unit taken at Fort George Meade, Maryland in 1942 includes twenty five doctors who are still serving on the Medical Center staff. They are:

Seated, Drs. (1) John E. Scarff, (2) Robert S. Grinnell, (3) Richmond L. Moore, (4) Lawrence W. Sloan, (5) Rudolph N. Schullinger and (6) William B. Parsons.  
Also, Drs. (7) Yale Kneeland, Jr., (8) Charles A. Flood, (9) Putnam C. Lloyd, (10) Henry P. Colmore,

(11) Rollo J. Masselink and (12) Paul B. Sheldon.

Second row includes: (13) Crawford D. Dunham, (14) Robert H. Wylie, (15) William B. Sherman, (16) Carl R. Wise, (17) Herbert B. Wilcox, Jr., (18) Shirley C. Fisk, (19) William J. Savoy and (20) Frank E. Stinchfield.

Third row shows: (21) William H. Stearns, (22) Robert A. Kritzier, (23) Albert R. Lamb, Jr., (24) Ferdinand C. McAllister and (25) David V. Habif.

## 2ND GENERAL

*Continued from page one*

Kneeland, Jr. was medical chief. First Lt. Marjorie Peto, was head of the nurses and was later to be discharged as a Lt. Colonel.

The Unit remained at Fort Meade for almost five months, where doctors and nurses learned to march, dig, improvise and tolerate an army that had only two sizes—"too large" and "too small"; that never acted logically when illogic would suffice; that did, however, reduce waistlines and toughen bodies in ways that none had before experienced.

At Ft. Meade, the original group from the Medical Center

was broken up and several of the doctors were selected to form the nucleus of the 23rd Station Hospital—Drs. Charles Flood, Dary Dunham, Shirley Fisk, William Sherman and Robert Wylie, to name only a few,—and this hospital distinguished itself in the Belgium Congo, along the Gold Coast, at Leopoldville, and later at Casa Blanca, Africa. The hospital was sent to France toward the end of the war.

After a final leave home, the staff of the 2nd General Hospital, on the evening of June 30, 1942, with the temperature 98°F., marched up the gangplank from a New York City pier into the *Duchess of Bedford*, bound for an unknown

destination. This British passenger ship built to accommodate 1,500 passengers, now carried more than 4,000 troops, so closely packed together that "it was barely possible to carry on the card and dice games." Within 12 days, however, the *Duchess of Bedford*, after several submarine scares at sea, delivered the 2nd General to Liverpool, England, where evidence of total war was visible at every hand. After stops at Lichfield, the Unit reached its destination—the Churchill Hospital, near Oxford — and within two days had taken charge. A short time later their 500 beds were filled, many with flying personnel who were then beginning their

mighty raids on the enemy. The 2nd General now had 500 enlisted men, 50 doctors, 105 nurses, 12 dietitians and Red Cross workers.

The Unit remained at Oxford for two years, making several original medical contributions, particularly in the treatment of frostbite and aerotitis, two maladies suffered by airmen who often fought at high altitudes without proper protection. Surgical techniques to deal with unusual types of wounds were developed, as was a new test to detect virus pneumonia.

During the years at Oxford, several marriages among nurses and doctors and among hospital personnel and natives were celebrated. The personnel learned the terrors of air raids, the boredom of routine and of a war that seemed to have no end. Then the tempo began to change and the expectancy of great events to come was in the air.

The 2nd General Hospital arrived in Normandy, France, in two contingents on July 24 and 25, 1944, just before the breakthrough at St. Lo; and the war was going on all around their first bivouac, near Carentan, which was only five miles behind the front lines.

The Unit's first tent hospital was in a great apple orchard, where stinging bees were almost as great a hazard as the

Germans. It grew in size until it covered almost 60 acres. At this time, many of the nurses and doctors were on detached duty with other hospitals, serving wherever needed. A common sight, reported later by many who had seen them, were hostage graveyards — where there would be one marker for a German, 20 markers for the hostages shot to avenge him. The French preserved these graves just as the Germans had left them.

On Thanksgiving Day, 1944, after many months in tents, the 2nd General was loaded into a train and transported to a new location in Revigny, then later to a permanent hospital in Nancy, where the Unit remained until near the end of the war. All who were

## DOINGS OF DOCTORS

*Continued from page two*

DR. GEORGE H. HUMPHREYS, II, Director of Surgical Service, will present two papers at the 17th Annual Meeting of the American College of Surgeons in San Juan, P. R. They are "Problems in Surgical Replacement of the Thoracic Esophagus" and "Operable Tumors of the Mediastinum." Dr. Humphreys will visit the University College of The West Indies Department of Surgery, will lecture for local doctors and students and before the Central Medical Association, Mandeville Mona, Kingston, Jamaica.

DR. PEDRO M. DIAZ, Research Fellow in Anesthesiology, presented a paper on the "Effects of Anesthetics on the Serotonin Concentration in Rat Brain" at the Postgraduate Assembly of the New York Society of Anesthesiologists.

DR. JOHN CAFFEY, Emeritus Professor of Pediatrics and Radiology, gave the Annual James M. Baty Lecture at the Alumni Day of New England Medical Center Hospital. His subject was "Infantile Cortical Hyperostosis—1930-1963."

DR. C. ANDREW L. BASSETT, Associate Professor of Orthopaedic Surgery, is the new President Elect of the Orthopaedic Research Society. He was elected on the 14th January.

## DENTISTS' ALUMNI DAY

Annual Alumni Day for the School of Dental and Oral Surgery will be held February 10.

Headquarters at Fort Meade

Who is that Goldbrick without a shovel?

Nurses learn about gas masks

Col. Rudolph Schullinger

This hospital in Nancy first served the French Army, then the German Army and finally the U. S. Army's Second General Hospital.

This is an aerial view of the Churchill Hospital near Oxford, England, where the 2nd General Hospital lived and worked for approximately two years. The Hospital personnel at this time included 50 physicians, 105 nurses, 12 dietitians and Red Cross workers and 500 enlisted men.

there will remember with deep affection this beautiful French City, once the capital of Lorraine, and hardly touched by the war. The buildings taken over by the 2nd General, had previously served as a French, then a German hospital. There was a park nearby, wonderful

museums and cathedrals. It was here at Nancy that most of the Columbia-Presbyterian Medical Center personnel were reunited after detached duty.

At the conclusion of the fighting, the 2nd General was sent to Marseilles. From here, they sailed for home on October 3,

1945, going to Camp Dix for discharge.

Shown on these pages are a few photographs from the war days of the 2nd General Hospital. Twenty-five doctors and six nurses from the Overseas Unit still serve at the Medical Center.

There comes a pause in the day's occupation known as "the-waiting-for-orders-to-move" hour . . .

On holidays one could think about taking trips to various places, or, if he preferred, he could stay home and get his teeth fixed . . .

There were moments when one could almost forget that he had come to Europe to fight a war . . .

## STEREOTAXIC BRAIN SURGERY

*Continued from page one*

ments are correlated with human findings that result from autopsies and from information learned in actual surgery on specific parts of the body.

For example, in almost every brain operation, whether for tumors, Parkinson's disease, or other causes, the surgeon gains new knowledge about the functions of specific tis-

sues and cells near the site of the operation.

**Q. Will you explain in lay terms the basic principles of stereotaxic surgery?**

A. The stereotaxic method permits us to make three-dimensional surveys of each patient's brain before actual surgery. We start by placing air or dye through a small hole made in the patient's skull, or by injecting air through a spinal tap. The patient's head is then securely fixed to a rigid frame. We

then take X-rays that show the frame and the ventricles—open spaces within the brain made visible by the air or dye—and these serve as related landmarks to guide us to specific tissues deep within the brain, particularly to the thalamus—the gateway through which most of the body's sensory nerve signals pass. Thalamic surgery was hit-or-miss before the use of the stereotaxic method, and the risk of destroying the patient's memory, paralyzing

him, or even killing him, was great.

**Q. Is stereotaxic surgery directed specifically at the thalamus?**

A. Much of it is at present. It should be remembered that neurological surgery is often performed to deliberately destroy specific brain tissues—cells or cell connections—that play a role in disease. Although the disease may not be seated in the brain tissue, the tissue and its cells may make improper transmissions as a result of it. By destroying or removing these tissues, the surgeon can halt such transmissions, so that pain, tremors and other harmful symptoms are often eliminated.

**Q. In what diseases has stereotaxic surgery proved most effective?**

A. It is being used with good results in selected cases of Parkinson's disease, a nerve ailment that afflicts at least a million Americans, causing extreme rigidity and tremors. There was no treatment for this crippling condition. Now we have one in selected cases.

Stereotaxic surgery has also been successful in easing chronic pain that is often so severe that a patient is driven to suicide. More recently, stereotaxic surgery has been used to treat certain behavioral disorders, particularly those found in disturbed children with destructive impulses.

**Q. How dangerous is stereotaxic surgery?**

A. The stereotaxic method has greatly reduced risk. The mortality rate has been less than 1% in stereotaxic surgery, compared to about 5% mortality in other types of brain surgery. Carefully charting, using the three-dimensional method, permits us to enter the brain at the most convenient point to get at specific tissues, and to avoid damage to other vital tissue in reaching the tissue to be dealt with.

**Q. How is the tissue treated once it is reached?**

A. A narrow probe is used to enter the brain. It has a device at its end that is either heated or cooled to destroy the tissue.

**Q. How can you be certain you have found the tissue to be destroyed?**

A. The patient is conscious during stereotaxic surgery be-

cause the brain does not feel pain. Thus he can cooperate with the surgeons. Only a minimal change in temperature is required at the end of the brain probe to temporarily interrupt the functioning of brain tissue. Thus, the surgeon uses minimal temperature changes to search out the exact tissue responsible for symptoms. When the probe is correctly placed in a patient with Parkinson's disease, for example, the tremors and rigidity will halt when nerve impulses are interrupted by minimal temperature changes. The surgeon will then ask the patient to flex his hand, and perform various actions to make certain that normal functions are not effected. After the exact tissue responsible for the abnormal symptoms is identified, it is then destroyed by a permanent lesion.

**Q. Are new applications for this type of surgery being found?**

A. Yes, stereotaxic surgery has been successful in treating the frustrating pain that often follows amputation of a limb, and in controlling pain resulting from cancers. Still highly experimental, but promising, is the use of stereotaxic surgery to treat impulsive behavior, abnormal fears, and various types of neurotic behavior.

We have now learned the functions of certain types of brain cells. When we know the exact functions of most cells and can determine the electrical pathways within the brain as well as those leading out of the brain, it may be possible to eliminate or control the harmful symptoms of many diseases, including those responsible for abnormal behavior.

Let me emphasize that we do not experiment on our patients to learn more about the brain and the functions of its various parts. Actually, we perform stereotaxic surgery only in those selected patients whose condition seems likely to be improved or controlled. However, in this and other types of brain surgery, which may be directed to almost any part of the brain because of tumors or other disorders, we try to learn as much as possible about the functions of surrounding tissues.

This photograph shows surgeon placing metal frame about patient's head. The frame will be rigidly stationary and will hold patient's head in a fixed position.

# Dept. of Public Interest Moves Into New Quarters

The Department of Public Interest, located for several years on the Fourth Floor of Presbyterian Hospital, has now moved into brand new offices on the sixth floor of the Service Building. Although things are still a bit confused after the big move, our friends are invited to stop in and see the new suite—especially those of you who have an unusual or interesting human interest story for *The Stethoscope*.

To reach the Department of Public Interest, take the garden walk from the ground level of the Chapel, or the Chapel elevator to the tunnel level, coming to the Service Building elevators. We are as far as you can go to the left as you come off the elevator on the sixth floor.

Our telephone numbers remain unchanged, so call 1911, 1912, 1913, or 1914 when you have a story for *The Stethoscope*. Your newspaper is particularly interested in learning about unusual things our employees are doing, human interest stories, and of progress being made in any and all areas of research.

A TELEPHONE CALL WILL BRING A REPORTER TO YOUR DESK!

## Hospital Friends Give Generously To Nursing Funds

In the December issue, *The Stethoscope* told the unusual story of Jimmy Brooks, the little boy who was so badly burned and who remained as our patient at Babies Hospital for several months. The story of this little boy, his nice family, and the assistance they received from our Emergency Nursing Fund when their own resources were exhausted, has appealed to many friends of the hospital, who have sent gifts specifically earmarked for the Emergency Nursing Fund. These funds are used to pay for round-the-clock nursing care for ward patients when need is apparent and the patient is unable to pay for such services. There are Emergency Nursing Funds at Babies Hospital, Presbyterian Hospital and the Neurological Institute, and each needs new gifts to continue their aid to deserving families. Contributions may be made as remembrances or as memorials. Acknowledgements will be sent to donors and, when possible, to the person in whose honor the gift is made.

If you should want to make a contribution to the Emergency Nursing Funds at any of the above hospitals, just send your check to the hospital of your choice, indicating that it is for the Nursing Fund.

## DEAN MERRITT

*Continued from page one*

tem, this area of research has remained his chief medical interest. Among the significant results—after 25 years of research, teaching and clinical practice—is his book, *A Textbook of Neurology*, published in 1955 and now regarded by many as the best neurology text in the English Language. Material for the fourth edition—"just bringing things up to date"—was completed only a few months ago.

Dr. Merritt and Dr. Tracy J. Putnam introduced diphenylhydantoin sodium to medicine as an anticonvulsant drug in 1945, a contribution that stands at or near the top of a long list of solid achievements. Most of Dr. Merritt's early investigations, however, centered on the relationship of spinal fluid to blood. His first book, *The Cerebral Spinal Fluid*, was a cooperative work with Dr. F. Fremont-Smith and was published in 1937. This was followed by *Neurosyphilis* in 1946 and *Fundamentals of Clinical Neurology* in 1947.

Administrative assignments have sharply curtailed Dr. Merritt's research activities, but he is currently leading a special National Institutes of Health committee in a study of epilepsy. "We are trying to interest manufacturers in developing new drugs for epi-

**DRAMA IN REAL LIFE:** On Saturday night, January 13, Dennis Dowling, aged 17, of Oakland, N. J., with three young friends, made the second trip of his life to New York City. Late that night Dennis and his friends had an argument with other boys they ran into on 41st Street at 7th Avenue. Everyone shook hands and appeared to be friends, but Dennis was cleverly separated from his buddies and pulled into an alley. There a knife was plunged into his heart. Dennis staggered into a nearby restaurant and collapsed.

At Polyclinic Hospital, where Dennis was taken by Police, blood was tapped from his chest cavity. Then an unusual heart murmur was detected. He was brought to Presby-

terian Hospital, where an emergency cardiac catheterization was done. The patient, near death, was suffering from a heart wound at the root of the aorta and the artery leading to the lung. His very life depended upon immediate open-heart surgery.

Although the call went out to Dr. James R. Malm, Associate Attending Surgeon, and his open-heart surgical team late Sunday, open-heart surgery was begun at 10:30 P.M., using the heart-lung machine.

Dennis made a remarkable recovery and was asking when he might go home only a few hours after surgery.

Shown with Dennis in the above picture are his parents, James and Eileen Dowling, and his older brother, James.

lepsy," Dr. Merritt explains. "More effort is being put into it now, and we have hopes of finding a better treatment. I think the prospects for help in a great many of the disabling neurological diseases are good; we're learning more about metabolic diseases, and it won't be long until we find out the causes of diseases such as muscular dystrophy. And multiple sclerosis is not hopeless; it is subject to spontaneous remissions, and the lesions in the early stages are not fixed. If the cause can be found, we can prevent relapses."

Dr. Merritt has been director of the Neurological Service since 1948.

## ON THE SHELF

*New Books in Milbank Library*

### FICTION

**Two Tales** by S. Y. Agnon. Mr. Agnon was the joint winner of this year's Nobel Prize.

**A Man of the People** by Chinua Achebe. A witty political satire about a mythical country very like Nigeria. Mr. Achebe is one of Nigeria's best young writers.

**Tremor of Intent** by Anthony Burgess. A new spy novel for those who enjoy a combination of far-out humor and serious thought with their entertainment.

**The Secret of Santa Vittoria** by Robert Crichton. An Italian town hides a cache of one million bottles of local wine from the German Army.

**Capable of Honor** by Allen Drury. The drama and scandal of Washington politics are exploited to the full in the new novel by the author of "Advise and Consent."

**The Zinzin Road** by Fletcher Knebel. The latest novel by the author of "Seven Days in May." This one is about the Peace Corps and political intrigue in Africa.

### NON-FICTION

**Battles Lost and Won** by Hanson W. Baldwin. Mr. Baldwin, military editor of The New York Times, covers eleven crucial battles of World War II—The Polish Campaign, The Battle of the Bulge, The Battle of Britain, Crete, Corrigidor, Stalingrad, Sicily, Tarawa, Normandy, Leyte Gulf, and Okinawa.

**The Unmaking of a Mayor** by William F. Buckley, Jr. TV's most entertaining candidate gives his thoughts on the campaign.

**Where the Sea Breaks Its Back** by Corey Ford. The title is a translation of the Aleut word, "Alaska." It is the story of Vitus Bering's last voyage in the Arctic and of Georg Steller's work with Alaskan wildlife.

**Shantung Compound** by Langdon Gilkey. Mr. Gilkey, a theologian who spent two years in a crowded Japanese internment camp, sees a parallel between his experience and the pressures and moral problems we all must face daily.

## THE DELAFIELD LECTURES FOR FEBRUARY

The Francis Delafield Hospital lectures are held each Saturday morning from 9:30 to 10:30 A.M., in the hospital auditorium, 99 Fort Washington Avenue at 164th Street. The lectures scheduled for the balance of February are:

February 11	"Structure and Function of a Nucleosome of S. Aureus"	Christian B. Anfinsen, Ph.D. National Institute of Arthritis and Metabolic Diseases NIH
February 18	"Remarks on the Genetics of Human IgG"	Arthur G. Steinberg, Ph.D. Western Reserve University
February 25	"Membrane Biogenesis"	Philip Siekevitz, Ph.D. Rockefeller University

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXII, NUMBER 3

MARCH, 1967

As you can see, the new office building on the west side of Fort Washington Avenue has now reached its planned height of 14 stories. The parapet walls are now being poured, and brick enclosure masonry will start early in March. This splendid new addition to the Medical Center will serve private ambulatory patients. Completion is planned for the Spring of 1968.

## Psychodelic Drug Research At Psychiatric Institute

Is LSD a blessing to humankind—or a threat? Is taking the drug a way to attain a fuller life—or to court disaster?

Most Americans never heard of "d-lysergic acid diethylamide" until it jumped into newspaper headlines recently. But it's been studied at the Medical Center for some years and its full potential for treating disease is still being measured. In the following interview, some questions about LSD are answered by Dr. Sidney Malitz, Associate Attending Psychiatrist and Chief of Experimental Psychiatry.

What is LSD like?  
It's a clear, odorless, tasteless liquid—relatively easy for a chemist to make—and tre-

Dr. Sidney Malitz

mendously potent. A quarter of a teaspoon is quite enough to "turn you on," as it's expressed by those who take drugs.

Please turn to page six

## The Medical Center's Profile Is Constantly Being Changed

Groundbreaking for the new addition to the Institute of Ophthalmology began on January 16 and, as all who use the garden walk know, is now progressing at a rapid pace. The excavation work is of great importance at this time so that the tunnel—now completed to the Service Building—can be extended to connect with the new medical facility for outpatients across Ft. Washington Ave.

The new Eye Institute addition will have ten stories that will join with the present building, as shown in the architect's drawing on page seven. The addition is expected to be completed by the Fall of 1968, at an estimated cost of \$4,600,000. Of this sum, approximately \$2,600,000 has been given or pledged by many foundations and individuals.

## Auxiliaries Have Elected New Officers

At their recent annual meetings, four hospital auxiliaries elected new officers:

Mrs. Allen F. Mautsby is newly-elected president of the Board of Women Managers of the Babies Hospital; Mrs. R. Peter Rose has become vice president and other officers remain the same: Mrs. Carl Tucker, honorary vice president; Mrs. Carl Tucker, Jr., vice president; Mrs. Bayard Walker, recording secretary; Mrs. Grover O'Neill, Jr., assistant recording secretary; Mrs. Leo Fennelly, corresponding secretary; Mrs. Fred L. Heyes, assistant corresponding secretary and Mrs. J. Taylor Howell, treasurer.

Mrs. Irving B. Kingsford, Jr. remains chairman of the Neurological Institute Auxiliary. Mrs. Alvin G. Brush is newly-elected 1st vice chairman; Mrs. Donald K. David remains 2nd vice chairman; Mrs. Carter L. Burgess is newly-elected secretary and Mrs. Hart Fessenden, newly-elected treasurer.

Please turn to page eight

This is little more than a hole in the ground at present, but above it will rise a 10-story addition to the Eye Institute. (See artist's sketch on page seven.)

The Commonwealth Fund has to date given a total of \$1,000,000 for construction and \$1,500,000 for endowment, the latter payable only after construction is completed. The U. S. Department of Public Health Service has given \$990,000; the Myron and Anabel Taylor Foundation \$250,000; Texaco Inc. \$200,000; the Alfred P. Sloan Foundation \$40,000; and Seeing Eye Inc. \$25,000. There

are many smaller gifts from various individuals and foundations.

An additional \$2,000,000 in construction money is now being sought.

The new addition will bring together in one area the now scattered clinical, clinical research, and basic research activities of the Department of Ophthalmology and permit broadened and intensified re-

Please turn to page seven

## Mary Harkness Unit Receives Extended Care Accreditation

The Mary Harkness Unit of Presbyterian Hospital in Port Chester, New York whose unit manager is Margaret Del Mar, has received accreditation under the Medicare Program as an extended care unit.

The term "extended care facility" is relatively new, according to Miss Del Mar, and is defined in Public Law 89-97, Social Security Administration of 1965, as "an institution . . . which is primarily engaged in providing (1) skilled nursing care and related services for patients who require medical or nursing care or (2) rehabilitation services for the rehabilitation of injured, disabled or sick persons." In adapting this definition, the Advisory Committee of the Mary Harkness Unit has developed its own policy of admission and discharge as follows:

Margaret Del Mar

Persons over the age of fifteen who no longer require the immediate full services of the general hospital but continue to require skilled nursing care under professional supervision subject to the approval of the Unit Manager may be admitted.

## STETHOSCOPIA

### • BRIDES AND BRIDEGROOMS

*Dr. Jerome Tepperberg*, Visiting Fellow in Pediatric Psychiatry, was married February 22 to Miss Susan Pozefsky. Mrs. Tepperberg works for the New York State Department of Employment.

*Lynne Lalor Johnson* and *Walter Woodhull Merriam*, second year students at P&S, have announced their engagement. They plan to wed in August.

*Maryann Theresa Cockshutt*, member of the cardiac surgery team at Bellevue, will wed John MacCrate 3d.

*Bruce Charles MacKinnon*, first year student at the College of Dental and Oral Surgery, and Miss Elizabeth Parish Eames are betrothed.

*Julia Supple*, Record Room Messenger, is engaged to Mr. William Rahilly.

*Luther Fiske Warren*, P&S Class of '68, and Miss Michelle Gabrielle Palmieri of New York are engaged.

*Carolyn Creta Coz*, former staff nurse, and *Douglas Denton Uhlig McKane*, fourth year medical student, were married February 25.

### • NEW ARRIVALS

*Mr. and Mrs. Roger DeAngelis* have a new baby girl, born February 2. Mother was a medical secretary in Medical Information and father is a fourth year medical student.

*Mrs. Anne Maxwell*, Record Department, was the honor guest at a baby shower given by her associates.

*Hans Frohlich*, plumber foreman in Maintenance & Construction, welcomed his first grandchild recently. The boy is named Richard John Frohlich.

### • WELCOME

*Myra Moynihan*, librarian in the Milbank Library.

*Mrs. Beverly Scullion*, secretary in Public Interest.

### • CONDOLENCES

Our sympathy goes out to Mrs. May Udisky, secretary in Maintenance & Construction, on the death of her mother.

### • NOTES OF INTEREST

The Bake Sale conducted by the Graduate Staff Nurses Social Committee netted \$400. Proceeds are used for the activities of this group and to finance sending representatives to the Biennial Nursing Convention in May.

The Committee wishes to express its appreciation for the support they received, both from donors of the baked goods and purchasers of the goodies.

## 23 WEINBERG CANDIDATES

Twenty-three applicants have been approved for tuition aid under the Sidney J. Weinberg Employees Educational Aid Reimbursement Plan. There are 20 degree candidates: for A. A. S. 6; for Bachelor's 11; for Master's 3. The candidates will attend 10 universities.

Those approved for aid are: George Burgess, Maintenance & Construction; Becky Carlton, Asst. Treasurers Dept.; Michael Casali, Pharmacy; Lenore Cuomo, Nursing; Luisa de la Campa, E.E.G.; Julia Fernandez, Accounting; Linda Gerson, Anesthesiology; Jaime

Gill, P.H. Unit Managers Office; Emily Grant, Nursing; Robert Giuliano, Pharmacy; Jerome Heltzman, Comptrollers; Dorothy Jemmot, Nursing; Frances Johnson, Medical Data Processing; Joseph Lyons, Nursing; Herbert Mason, Nursing; Patrick Moohan, Maintenance & Construction; Mary Neacy, Patients Accounts; Francis Regan, Nursing; Dorothy Rock, Nursing; Hyla Rosenkrantz, Nursing; Diane Senefelder, Physical Therapy; Vincent Vicidomini, Pharmacy and Margaret Williams, Nursing.

## DOINGS OF DOCTORS

DR. EDWARD C. CURNEN, JR., Director of Pediatric Service, recently participated as consultant at the NIH, Bethesda, on Program Development in Pediatrics and Obstetrics. Dr. Curnen also attended the annual meeting of the Association of Medical School Pediatric Department Chairmen, at Arden House, Harri-man, N. Y.; the Pediatric Advisory Committee, New York City Department of Health, and the Policy Advisory Board of the Kennedy Child Study Center, New York City.

Dr. Curnen

Dr. Melicow

DR. MEYER M. MELICOW, Emeritus Professor, Urological Pathology, was awarded first prize for his drawing entered in the New York Physicians Art Club Winter Exhibit.

DR. DAVID H. BAKER, Associate Attending Radiologist, presented a paper on "Medical and Surgical Respiratory Syndromes at Watts Hospital Medical & Surgical Symposium, Durham, N. C. He also attended the annual meeting of the "Children's Hospital Alumni Society," Quebec, Canada.

JOSEPH SANDLER, Ph.D., D. Sc., first John B. Turner Visiting Professor at the Psychoanalytic Clinic for Training and Research, will deliver a paper entitled "Some Theoretical and Clinical Aspects of Transference" on Wednesday, March 29, 8:30 p.m. at Hosack Hall, The New York Academy of Medicine, Two East 103rd Street.

DR. MIECZYLA W FINSTER, Assistant Professor of Anesthesiology, gave a paper entitled "Obstetrical Anesthesia and Depression of the Newborn" at a recent meeting of the Brooklyn Gynecological Society.

DRS. KARLIS ADAMSONS, Associate Attending Obstetrician and Gynecologist and RICHARD BEARD, Research Training Fellow, are serving as Visiting Professors at the University of Puerto Rico, Laboratory of Perinatal Physiology, March 4-13. Recently Dr. Adamsons delivered a paper "Factors that Determine Tolerance to Asphyxia" at the Ross Conference on Pediatric Research.

DR. INGEMAR JOELSSON, Fellow in Obstetrics and Gynecology, presented "The Response of the Cardiovascular System of the Fetal Rhesus Monkey to a Gradually Developing Oxygen Deprivation" at the meeting of the Society for Gynecologic Investigation, March 3.

DR. IRA S. JONES, Assistant Attending Ophthalmologist, presented a paper on "Ocular and Orbital Tumors" before the Reading, Pa., Eye, Ear, Nose and Throat Society and a paper on "Hamartomas and Choristomas" at the

meeting of the Eastern New York Eye and Ear Society, Troy, N. Y.

DR. LESTER C. MARK, Attending Anesthesiologist, has been awarded the Distinguished Service Award of the New York State Journal of Medicine for "his contribution as editor of the Clinical Anesthesia Conferences of the Study Committee of the New York State Society of Anesthesiologists, a regular section of the Journal for the past ten years. A member of the committee for nine years and chairman and editor of its reports for the past three years, Dr. Mark has added to the stature of the Journal among those concerned with anesthesia and surgery."

DR. J. LAWRENCE POOL, Director of Service of Neurological Surgery, attended the Moscow Neurosurgical Meeting recently. Dr. Pool observed that "the quality as well as quantity of neurosurgical procedures throughout the Soviet Union have shown considerable gains in the past seven years. It now remains for us on our part to be more conversant with Soviet Neurosurgical literature, just as they are with ours."

Dr. Pool

Dr. Tarshis

DR. JULIUS TARSHIS, Associate Clinical Professor of Orthodontics, has been invited to membership in the Dental Advisory Committee to serve in advisory function to the First Deputy Health Services Administrator.

DR. ARTHUR GERARD DEVOE, Director, Institute of Ophthalmology, was Moderator of Panel Discussion: Corneal Graft Complications, and a member of the panel discussion on Congenital Surgical Problems, at the New York Sectional Meeting of the American College of Surgeons, February 27, 28. Dr. DeVoe will attend the Memphis Eye, Ear, Nose & Throat Convention, March 11-13, where he will deliver papers on "Problems of the Edematous Cornea," "Management of Mycotic Keratitis" and "An Evaluation of Artificial Corneas."

DR. LEONARD J. GOLDWATER, Professor of Occupational Medicine, has been invited to serve as a member of the WHO Expert Advisory Panel on Occupational Health for a period of five years. Dr. Goldwater just completed a five year membership in July. He has also been elected an Honorary Fellow of the Royal Institute of Public Health and Hygiene.

DR. GEORGE W. FISH, Consultant in Urology at The Presbyterian Hospital, has been elected President of the Clinical Society of Genito-Urinary Surgeons, at the 46th annual meeting, which was held in St. Louis, Missouri, on February 15th.

# MARY HARKNESS UNIT

## HARKNESS UNIT ACCREDITED

*Continued from page one*

Certification and recertification of each patient's need for extended care will be the responsibility of the Medical Director of the Mary Harkness Unit. The professional Advisory Committee of the Medical Board of the Presbyterian Hospital will be the Utilization Review Committee of the Mary Harkness Unit and will be responsible for reviewing patient records and arriving at decisions affecting their continued stay or relocation.

Among patients who might appropriately be admitted to the unit are:

1. patients in the convalescent phase of severe congestive heart failure or post myocardial infarction whose tolerance, ability, and potential must be determined before discharge
2. post surgical patients following complicated surgery, especially those with draining

wounds or sutures or who require training in colostomy care or other such home care

3. orthopedic patients with fractures, amputations, or crippling arthritis who require rehabilitation to reach maximum potential in self care
4. patients with metabolic disorders such as diabetes, who require supervision of diet and/or medication and training in administering their own insulin, checking their own G.A.D., and observing for untoward signs
5. patients with neurological disorders such as a stroke who are in the rehabilitative process
6. ophthalmological patients requiring medications (for maximum surgical effect) which they cannot self administer.

Mary Harkness does not

provide custodial, long term, or terminal care.

Emphasis at the Mary Harkness Unit is placed on community living. Therefore, patients must be reasonably ambulatory and well motivated to achieve their potential. The atmosphere is home-like with comfortable public rooms provided with books, television, and games for self amusement. Sleeping quarters are located on three levels with elevator service between. The grounds are spacious and lovely.

A physical therapist is available to help patients develop, restore and maintain maximum performance through use of exercise, massage, water, heat, light and electricity. An occupational therapist guides the patient in therapeutic creative and self-care activities as well as diversional therapy. The dietary department provides for special diets. Under the direction of the Medical Director of the unit, the nursing department administers the medical needs of patients including dressings, medications, treatments and a teaching program designed to help the individual recognize his special needs and accept his limitations. In addition all the facilities of the general hospital are utilized to assure the patient adequate care. Above all, Mary Harkness like all the units of Presbyterian Hospital is PEOPLE; people who desire to help patients achieve maximum health and independency.

of the Ambassador Hotel, where he worked on the night shift, 11 p.m. to 7 a.m. He immediately entered evening classes at George Washington High School to learn English. A friend told him about the opportunities at Columbia-Presbyterian Medical Center, so, in 1954, he applied at our Personnel Department for a job and was immediately hired to work in Food Service, where he has since served, except for two short intervals spent in Peru.

During his recent visit home, Miquel met many old friends and spent several days with his father. He says that conditions have improved greatly in Peru since his leaving, especially in housing for lower-income groups, and much new industry is coming there, but he much prefers living here.

Miquel lives in the Bronx, is married, and has two children, Martin, who is four, and Rossanna, who is two. His four brothers and his mother live nearby.

# A CARIBBEAN VACATION

Sybil Donnelly (left) and Gloria Link, nurses on Harkness Six, recently spent a glorious 10 days of their vacation in the Caribbean, first in Puerto Rico, then on St. Thomas Island, where this photo was taken.

## Tour Hostess Was Busy During The Past Year

Anne Lubrecht, of the Department of Public Interest, who serves as Tour Hostess for the Columbia-Presbyterian Medical Center, reports another busy year.

During 1966, she entertained a total of 271 Foreign Visitors from the far corners of the world, taking them behind the scenes to show them some of the exciting events and routines that many of us take for granted. The groups were made up of physicians, nurses, hospital administrators, and others interested in health problems. Our foreign guests came from Argentina, Belgium, England, Egypt, Finland, France, Holland, Ireland, Israel, Italy, Japan, Korea, Malaysia, Norway, Poland, Russia, Scotland, Yugoslavia, and many African nations.

Among Mrs. Lubrecht's interesting guests were a brother of the Premier of Singapore; a woman physician from Russia; 21 internists and hospital directors from Japan; the Minister of Health of Uruguay; and a hospital architect from France.

Mrs. Anne Lubrecht

Many other local and out-of-state groups toured the Medical Center. In fact, a total of 912 persons were taken on formal tours, including 204 physicians, 70 nurses, 16 teachers, 462 students and 160 from various walks of life.

When asked what seems of greatest interest to most of her guests, Mrs. Lubrecht replied, "All are deeply interested in the various intensive care units, and in our new facilities, especially the new Radiotherapy Center."

## Miquel Camacho Visits Father And Many Old Friends In Peru

Miquel Camacho needs no introduction to those of us who use the west cafeteria line, because his warm smile, friendly greeting, and readiness with an extra saucer, when we spill some of the morning coffee he gives us, can make the difference between the beginning of a sour or pleasant day.

When *The Stethoscope* recently asked Miquel where he had spent his vacation, he replied, "In Lima, Peru." This seemed enough out of the ordinary to pursue the matter further. As so often happens when we take the time to seek it out, we find an interesting personal story in the backgrounds of those who come from many countries, for many reasons, to join our hospital family.

Miquel grew up in Lima with four brothers and a sister. He was in his fourth year of a five-year course at the National High School of Guadalupe, in Lima, when there was a change of government in Peru. "There was unbelievable poverty," Miquel said, "and greatest oppression of the poor people."

Miquel joined a group of demonstrating students. Soon he decided to leave the country. An older brother, seeking

Miquel Camacho

new opportunities, had come to New York City some time before, and he was able to sign papers that could gain Miquel entrance to the United States.

Miquel's first job was in the housekeeping department

## IS THIS FACE FAMILIAR?

Mr. George S. Squire, who lives in the Washington Heights community and recently made his first visit to Vanderbilt Clinic, is a member of the Hopi Indian Tribe, and was born 106 years ago (1860) in Tulsa, Oklahoma. He seems to be in a surprisingly good state of physical and mental health, and made the trip alone to Vanderbilt Clinic.

If Mr. Squire's face seems familiar to you, there is a good reason. Mr. Squire said, "I was one of the three models who posed for the artist who designed the Indian-Head nickel."

The Numismatic Society of New York City confirmed that

George S. Squire

three different Indians did pose for the artist, so we have no reason to doubt that Mr. Squire was one of the models.

# SOCIAL WORKERS BRIDGE GAP BETWEEN TH

The Social Service Department at Columbia-Presbyterian Medical Center has 51 professionally trained social workers, four case aides and 14 clerical workers who serve throughout the various hospital units and clinics. The department is under the direction of Elizabeth R. Prichard. Jean Collard, associate director, heads the department at Neurological Institute, and Agnes Dillworth, associate director, heads the department at Babies Hospital.

To learn at first hand exactly what roles the social service worker plays on the medical team, her educational requirements, and other facts about this important profession, *The Stethoscope* asked Miss Prichard the following questions:

**Q. What are the educational requirements?**

A. The professionally trained social worker is a graduate of an accredited school of social work. This is a two-year course in a graduate school leading to a master's degree.

A major part of the student's training is in practical field work. She is assigned to a social agency or hospital for training—one type of agency the first year and another type the second.

The case aide has a bachelor's degree and is usually someone with ambitions to become a social worker, but who wants some practical experience before embarking on professional training.

**Q. What are the job prospects for social workers?**

A. The demand far exceeds the supply and schools of social work are now able to take only about one in four of those who apply.

**Q. How old is this profession?**

A. Social work in hospitals began in 1904, in Massachusetts General Hospital, and at about the same time in Bellevue Hospital. Social service in Presbyterian Hospital developed from the Visiting Nursing Service, established in 1904 by the School of Nursing, and was made possible by a gift by Mrs. William K. Vanderbilt, Sr. This service eventually involved both nursing and counseling service for selected outpatients, and was known as the Visiting Nurse and Social Service Department.

In 1921, the Social Service Department became a separate service. In 1924, Janet Thornton was appointed Director of Social Service. Miss Thorn-

Elizabeth R. Prichard

ton, working closely with Dr. Hugh Auchincloss Sr., pioneered many of the innovations in patient care and in training social workers, so that students competed for an opportunity to take their training here.

**Q. What are the essential duties of a social service worker?**

A. The primary function of a social worker, and of the hospital's department of social service is to help patients with personal, family, social and economic problems that cause, affect and exacerbate illness, and that influence or impede the following of medical recommendations. The problems presented by patients are many and varied.

**Q. Can you give us a few examples?**

A. They range from environmental problems such as poor housing, inter-familial difficulties, intra-personality conflicts and a whole range of social maladjustments: the unwed girl of 15 who is pregnant; the young wife with multiple sclerosis who is fearful of meeting her responsibilities as wife and mother; the suddenly handicapped man who

is in the prime of life, and the so-called "battered," "abused" or neglected child. Many seriously ill patients and their families need guidance and information about nursing homes, chronic and terminal care facilities and counseling and direction when they must change patterns of living. The social worker gives them understanding, encouragement and professional counseling.

**Q. Hospital social workers play a somewhat different role than, for example, a caseworker in the Welfare Department. Would you explain this?**

A. Everyone in the hospital helps a patient directly or indirectly. We work within the framework of the physician's recommendations, and one aspect is to help interpret the patient to the physician in terms of his home, family and community. Primarily, we are counselors trained to understand behavior and influence attitude, particularly as these are related to illness.

At the hospital, social workers are assigned to the wards and clinics, and also serve private patients.

Patients are referred to us by physicians, nurses, community agencies and frequently patients seek aid directly.

Since it is important to start planning for patients as early as possible, weekly conferences are held on the wards, mainly with the house officers to review patients' needs.

Early referrals are encouraged in clinic. All unwed, pregnant adolescent girls are seen on their first visit by the social worker in the Ante-Partum Clinic so that effective planning can be started early for the well-being of the young mother and expected child. Efforts are also made to fully help the handicapped child and his parents through early planning. For instance, a weekly conference is held in the Cerebral Palsy Clinic, and in the Seizure Clinic the social worker is part of a well-structured team.

In carrying out our responsibilities, we work closely with the physician towards rehabilitation of the patient, to help patient return to functioning in his role in the community or to his fullest capacity within limits of a handicapping condition. This entails also working closely with the nurse and other professional disciplines.

We are very active in training Social Service students who are assigned to our various units for practical training. For the past five years there has been a special training unit in physical medicine

and rehabilitation under Mrs. Liselot Toby, Field Instructor from the Columbia University School of Social Work.

We are also active in the teaching of student nurses.

Our department also participates in the medical student program of the School of Public Health. Current emphasis is being placed on helping the medical students understand what is involved in planning for a patient's continued care following discharge from a hospital. Marjorie Kellogg is responsible for this program.

**Q. It seems likely that our Social Service department provides valuable services for Washington Heights and the other communities served by the Medical Center. Is this true?**

A. Yes, indeed. However, our patients come from many

Jean Collard

communities—some from outlying areas and other parts of the country. We work closely with, and are dependent upon community agencies to help us provide valuable services to many patients requiring continued care after discharge from the hospital. These agencies include the Community

Service Society, The American Cancer Society, Cancer Care. The Children's Aid Society, Adoption agencies, Division of Vocational Rehabilitation, and the Department of Welfare, to name a few, as well as chronic care institutions, old age homes, and nursing homes.

Interpretation to schools of special needs of the handicapped child is a very important service.

Social Service funds are often used to meet special needs which cannot be met by the patient or any community resource. For instance, when it is desirable to have a mother return home without undue delay, and a community agency cannot provide immediate homemaker service, Social Service funds are used during the interim period.

One of our great services is to refer patients to proper community agencies for specialized help for other problems which come to light—agencies that many patients do not know exist.

As we work with physicians and others in the hospital and our colleagues in the community, it is always with aim of adjustment of the individual and maintenance of the family unit within the community.

**Q. How many patients are served by our Social Service Department in a year?**

A. About 6,000-7,000 new cases are opened each year—patients or families within the hospital community for whom on-going plans must be made, goals set, and plans established. Another 6,000-7,000 are dealt with over shorter periods of time.

Shown on these pages are some of our Social Service workers as they go about their jobs.

## LSD RESEARCH

Continued from page one

Is LSD a new discovery?

No, it was synthesized in 1938 as a derivative of ergot, the fungus that attacks rye, and which incidentally has some valuable uses in medicine. But it has begun to attract major attention comparatively recently.

\* \* \*

What effects does it produce?

Predominantly, it produces visual hallucinations, but also changes in perception, blood pressure, pulse rate and mood, and distortion of body images. The user's sense of time also is upset; a minute may seem like an hour to him.

\* \* \*

Can one become addicted to LSD?

So far we have seen no evidence that it is addictive in the way that morphine or heroin are. If taken on several consecutive days, it tends to lose its effect. But frequent use over a number of months or years may cause changes in judgment and personality.

\* \* \*

Can it be fatal in itself?

So far no fatal dosage has been found in human beings. But oddly enough, an elephant at the St. Louis zoo given a slightly more than human dose went into seizures and died!

\* \* \*

Why shouldn't anyone take LSD if he wants to?

Because we know the drug can threaten the safety of that person and others. Some people become extremely depressed, careless about themselves, even suicidal and aggressive toward others. There have been cases of victims trying to jump out of windows or running into the street, not realizing the dangers. Some users have had to be hospitalized for weeks.

\* \* \*

What about claims that LSD improves mental health?

If the basic criteria for mental health are said to be the ability to work and to love, the opposite is true, for LSD damages those abilities. The person who's taken it is far too concerned with his own hallucinations and bodily sensations.

\* \* \*

Do you favor the present bans on LSD?

Yes. Until we know much more of its effects, it should be available only to skilled investigators working under strict control. We need to have great respect for such drugs and handle them extremely carefully.

\* \* \*

Should legal restrictions be placed on people taking it themselves?

*I want it known that I regard all I have said as trivial — except that (do I dare write now) if God of religion — it blasphemous perhaps — but it is within creation — my beliefs — essential legacies are not changes. The relations to people we love (and do not love) finds us — more than the external connective noises, more than the prospect of discussing this ad nauseum at Princeton cocktail parties — fidelity — human fidelity*

*The study of espionage suggests intriguing implications for the future growth of international law. We look towards the day when outer space can be used for territorial observation. Our Madas and Samos satellite programs seek this result in the decade ahead. We hope this to close the "intelligence gap" and to perfect the DEW-line system. The Soviet Union fears surprise attack and objects to our plans by insuring its sovereign control over territorial space.*

Handwriting samples of a subject after ingestion of 115 ug/kg Psilocybin (upper portion), an hallucinogen that causes reactions similar to LSD, as contrasted with control sample obtained the following day. (Writing samples used through courtesy of Mr. Roland Fischer and International Journal of Neuropsychiatry.)

I would not like to see the current excitement over LSD lead to this. Certainly, punishment has not helped much to curb narcotics addiction.

\* \* \*

Is it true that some who have taken LSD seem to be affected again long after the drug has supposedly worn off?

Yes, there have been instances of a "wave" effect in which people became abnormal again days, or weeks, after taking the drug. Perhaps latent psychoses were revived or enzyme systems disturbed. As yet, you see, we have no idea what LSD does in the body.

\* \* \*

Might the drug have value as a military weapon?

Perhaps. The Government once asked us to investigate the disorganizing effects of this drug on human behavior. The possibility of dropping LSD into the water supply of an enemy has been considered, but it has been found that the drug is blocked by chlorine, which is used for water purification by most of the major powers.

\* \* \*

What kind of LSD work has been done here?

We have studied it in relation to schizophrenia and toxic psychoses such as alcohol or lead poisoning. In the usual toxic psychoses, a person's consciousness is confused, but this is not so with LSD. Some aspects of the LSD reaction resemble schizophrenia, but others do not. We have used it in studying personality

changes and in helping to diagnose mental problems. So far we have not used the drug for treatment purposes here, although there have been a number of reports of possible therapeutic value from other sources which require very careful investigation in a controlled medical setting before they can be accepted.

\* \* \*

What further research is planned here?

We hope to study use of LSD as a possible weapon against alcoholism. According to some reports, some alcoholics have stopped drinking and shown a marked improvement in their pattern of living after only one dose of LSD. These claims also must be carefully investigated and reproduced by several investigators in different medical centers before they can be substantiated.

## VOLUNTEER AWARDS TEA ON APRIL 6

The 1966 Volunteer Awards Tea will be held April 6, in Maxwell Hall, 4-6 p.m. At this yearly tribute to the Hospital's voluntary workers, awards will be presented in recognition of those who have given 100, 150 and 1,000 hours of service.

During 1966, 953 Volunteer men and women gave 111,684 hours of service in many areas at the Medical Center, reports Mrs. Marguerite Stein, Director of Volunteers. Their dedicated efforts add that extra dimension which augments the

## Nurses Increase Prizes For Benefit Raffle

The list of prizes to be won at the drawing April 19 at the annual Student Nurses' Scholarship Fund Bridge Party has increased to fifty. As announced last month, the two top prizes are a week's stay for two at Hotel Benston-on-Sea in the Barbados, and a long week-end at the Elbow Beach Surf Club in Bermuda. Both prizes include transportation from New York. To name just a few of the other prizes: a \$100 gift certificate from both Altman and Lord and Taylor, three Andrew Geller gift certificates, a sterling silver necklace from Georg Jensen, Fieldcrest electric blanket, case of Scotch, electric carving knife, electric can opener, electric casserole skillet, four-slice toaster, Salton hot tray, four transistor radios, black broad-tail jacket with black mink collar, natural cerulean mink gilet, a Hawkeye Instamatic camera, two pieces of men's matched Samsonite Silhouette luggage, a pair of theatre tickets for "I Do I Do," dinner for two at Tappan Hill in Tarrytown, dinner for two at Schraffts', Steuben glass vase, and three bottles of champagne. Additional prizes, include attractive jewelry, useful articles for the house, and

some items of wearing apparel. The main drawing will include most of the top prizes and all who hold tickets are eligible. A special drawing will also be held for those who are present at the Benefit Bridge Party at Maxwell Hall.

The committee, headed by Mrs. Robert H. E. Elliott, wishes to express its thanks for the generous response of those who have donated stamp books and prizes. Prize books are now on sale and may be obtained from Miss Alberta Rayner, Presbyterian Hospital 4th floor Nursing Office, Miss Louisa Kent, Babies Hospital Nursing Office, Room 221, and at Maxwell Hall. Student nurses in Maxwell Hall in charge of prize books are Linda Grosselinger, J. Margaret MacKenzie, Polly Perkins and Elaine Turzan. A single chance on any one of these lovely prizes may be purchased for fifty cents with prize booklets of ten chances for \$5.

## In Memoriam

HELEN LIVINGSTON WEINBERG

The entire Columbia-Presbyterian Medical Center, and the Neurological Institute in particular, lost a valued friend in the death, in Phoenix, Arizona on February 2nd, of Mrs. Helen Livingston Weinberg, trustee of The Presbyterian Hospital.

Mrs. Weinberg, a member of the Corporation since 1955, gave unremitting effort to the Neurological Institute Auxiliary, which she joined in that year, serving terms as its Vice Chairman and Chairman from 1958 to 1965.

Her complete and selfless dedication to the needs of the sick and suffering was not only an inspiration to all who were privileged to work with her but was also the basis of her talent for enlisting the interest and support of many other women of like caliber in the work of the Auxiliary and the United Hospital Fund. Always unassuming, always alert to meet a need without any thought of personal recognition, always imaginative on the solution of problems and, above everything, always enriching the lives and spirits of those who were privileged to come into contact with her in any capacity.

Helen Livingston Weinberg will live on in the good she has done for the Hospital and as an abiding source of strength in the hearts of all who knew her.

Mrs. Weinberg is survived by her husband and two sons, John L. and Sidney J., Jr.

*Wherever the art of medicine is loved, there also is love of humanity.*

HIPPOCRATES (460-377 B.C.)

# EYE INSTITUTE...

Continued from page one

search in such areas as infectious diseases, biophysics, and physiology of vision, genetics, and congenital anomalies involving all tissue of the eye. (Included in the research activities sponsored by the U. S. Public Health Service Grant will be the design, construction and evaluation of lasers for specific ophthalmic conditions such as retinal detachment, tumors, and uveitis, an inflammatory eye disease sometimes leading to blindness. Laser research may be car-

ried out in another part of the Eye Institute.) This U. S. Public Health Grant brings to \$397,532,752 the amount awarded to date to 405 institutions under the health research construction program.

As you can see in the recently taken photograph shown below, the new addition to Babies Hospital is now taking shape. This new facility, which will be occupied by various laboratories and research teams, is expected to be completed early next year.

The new addition to Babies Hospital is now completely enclosed, as you can see. There was some delay because of the plumber strike, but completion is now planned for early 1968.

## George Longbottom Here 38 Years—After Hospital, Loves Opera Best

George Longbottom, after almost 38 years in the Housekeeping Department, is convinced that Presbyterian Hospital is one of the best places in the United States to work. "I have served under six department heads throughout the years," Mr. Longbottom said, "and all of them have been just wonderful to me. John Bush, Executive Vice President, Dean Sage, Dr. St. Johns and Dr. McCurdy were my friends."

Gerald Fife, Mr. Longbottom's present supervisor, who recently stopped by with him at *The Stethoscope* office, is convinced that Mr. Longbottom is not only one of the most loyal and efficient employees at the hospital but also one of its best informed authorities on the opera and classical music in general. He said that Mr. Longbottom was also a whiz in mathematics.

Mr. Longbottom has one of the best work records at the hospital. In all of his 38 years, he missed work only because of serious accidents—one in an automobile, which kept him out seven months, and once from serious burns. He had spilled boiling water over his feet but came to work in spite of it. His supervisor discovered the burns and took him to the doctor, who treated him and put him to bed, commenting that he had avoided gangrene by a miracle.

Mr. Longbottom was born in England, coming to the United States when he was four. He spent his early years in Plymouth, Massachusetts, but came to New York as a young man and immediately found his life's work at Presbyterian Hospital, only a few weeks after it became part of the Medical Center. He started at a salary of \$90 a month and got his evening meal free as a member of the 4 p.m. to midnight shift.

Mr. Longbottom remembers when his main job was chopping and delivering ice to the

This is an artist's rendering of the Eye Institute as it will look from the Fort Washington Avenue side when the new addition is completed. The broken line shows where the new addition will join the older building. All of the scattered research laboratories and clinics of the Eye Institute will eventually be centered within this new facility.

various floors and for the oxygen units. "The ice plant was one of the busiest places in the hospital in those days, with round-the-clock employees on duty."

Mr. Longbottom worked days for several years, then because of the great shortage of help during the war, volunteered to work his old 4 p.m. to midnight shift again, where he has served ever since. In his present job, he does cleaning in Vanderbilt Clinic, and also

delivers equipment and supplies when needed. He answers fire and flood calls and, according to Mr. Fife, is the first one there when any emergency develops.

Although he likes working the late shift best, Mr. Longbottom says that it interferes with his visits to the opera which he used to attend regularly. He also frequently attended concerts at Carnegie Hall. Now, with a fine collection of good records and a good FM radio, he enjoys his music mostly at home.

Mr. Longbottom says that he likes all operas, but if he had to choose the one he likes best of all it would probably be *La Traviata*, or one of the others by Giuseppe Verdi. Beethoven, he believes, is the greatest of all composers, and of his symphonies, Mr. Longbottom likes the Fifth and Ninth best. He also loves Schubert's music, and said that if Schubert had not died so young, he might have been the greatest of them all.

Mr. Longbottom will retire in 1968 and plans to return to Plymouth, Massachusetts, where he will live with his sister and, on sunny days, may even go over and sit on the famous "Rock" and watch the waves roll in.

In the meantime, Mr. Longbottom is much needed and appreciated here. One of these evenings soon, he may go down to Lincoln Center to see how the new Met compares with the old Met.

## MAILBAG

It is difficult for someone to put into words the thoughts and feelings of another, but being close to our son as we were and watching his reactions to your kindness, it was not hard to interpret his gestures of happiness and the full impact of their meaning. With this in mind may we express to you a sincere appreciation for what all of you did to make Lindsay's stay on earth, especially the trying period during his illness, so comforting and reassuring. . . . from the parents of a former patient in Babies Hospital to the nurses on BH 11.

We wish to extend to the doctors and all participating staff members of the 11th floor of the Babies Hospital, our grateful and heartfelt appreciation for all the constant, loving care and affectionate attention given to our beloved son, Alex. . . . from the parents of a former patient on Babies 11.

George Longbottom is admired and respected by all who have known and worked with him. He is shown here with Gerald Fife, Supervisor in the Housekeeping Department.

# PLAN ENTRIES NOW FOR ART SHOW

## Dr. Bard Cosman Is A Gifted Sculptor As Well As A Skilled Plastic Surgeon

Dr. Bard Cosman graduated from P&S in 1955. He is now an assistant attending surgeon at Presbyterian Hospital and an instructor in surgery at P&S. But long before he had chosen plastic surgery as his life's work, his sensitive fingers were shaping heads, faces, and bodies.

In fact, as a child Dr. Cosman was a weekly visitor at the American Museum of Natural History, where he modeled in clay many of the exotic animals on display. While in high school, he won a scholarship to the Brooklyn Museum, where he worked in sculpture under Chiam Gross. He also attended classes at Pratt Institute during this period. For a time, he seriously considered devoting the rest of his life to his art.

None of Dr. Cosman's enthusiasm for sculpture has dimin-

At the left, Dr. Cosman models his son's head in clay. At right, he has just removed the core from a mold.

ished, but now he works at it as an avocation, trying to create two major works a year. More than 50 examples of his work are on display in his spacious home in Tenafly, New Jersey. Those who saw his powerful "Tower Beyond Tragedy," which was exhibited at our recent Arts and Crafts Show, know that his art is of professional quality. A head done of Mrs. Cosman was awarded first prize at the American Medical Association's Art Show, during its national convention held at the Coliseum in 1961.

Dr. Cosman has a studio in his home, where he is currently at work on several projects, including a head of his son. He first models his subjects in clay, then casts them in plaster. "Tower Beyond Tragedy," for example, was cast in 87 different pieces. It was then assembled and given a patina that is difficult to distinguish from aged bronze.

Dr. Cosman, as shown in the photographs, personally performs every step in his sculpturing. He builds the screen cores about which larger pieces of sculpture are formed, models the subject in clay, casts the sculpture in plaster, and then does the finishing.

Dr. and Mrs. Cosman have two children, Marin, four and a half years old, and Bard Clifford, three. Both Dr. and Mrs. Cosman attended Erasmus Hall High School, in Brooklyn, but eight years apart. A science teacher who had been fond of both

Dr. Cosman and daughter pose before mantle that contains several examples of his work, including a head of his wife (far right) which won first prize at the AMA art show.

The Cosman Family

when they were her students decided that they should meet.

Mrs. Cosman is an Assistant Professor of Medieval Literature at City College, and her forthcoming book, "Education of the Hero in Arthurian Romance," will be published soon by the University of North Carolina Press.

Dr. Cosman prepares screen core for a large piece of sculpture.

Dr. Cosman says that sculpturing is a great antidote for the tensions and pressures of his professional life, and that his early enthusiasm for sculpture was a primary factor in his decision to specialize in plastic surgery.

He has entered many pieces of his work in the hospital's annual art show and says that he has always found it an exhilarating and exciting experience. Last year his entry, *Tower Beyond Tragedy* (shown in photograph to the right), created in memory of his father, became a conversation piece and won Dr. Cosman great respect for his talent.

To all of you who have talent in the arts, Dr. Cosman suggests that you broaden your horizons by displaying your work in our annual art show.

Those of you who plan to enter your works should bring them in frames or prepared for display.

## ENTRIES TO BE DISPLAYED BETWEEN MAY 1 AND MAY 12

The 17th Annual Arts, Crafts and Photography Exhibit will open on the 20th floor library annex of Presbyterian Hospital May 2 and continue through May 12. Hours are daily 10 a.m. until 6 p.m. and Saturday, May 7, from 10 a.m. until 4 p.m.

Chaplain Robert B. Reeves, Jr., chairman of the Medical Center Art Committee, requests that all exhibits be entered ready for hanging. Three entries are allowed each exhibitor and the work of relatives or friends cannot be accepted because of space limitations. Medical Center staff and personnel are invited to participate and they and their friends are invited to a preview tea May 1 from 4-6 p.m. in the Library Foyer.

Entry blanks will be available at Stethoscope distribution points and the Chaplain's Office April 17. They must be returned to Public Interest before April 24. Exhibits should be delivered to the Library Annex April 24 and 25.

The sculpture shown here was one of the high points of interest in last year's art show. Executed by Dr. Bard Cosman, in memory of his father, it was called "Tower Beyond Tragedy."

## AUXILIARIES

Continued from page one

The Auxiliary of The New York Orthopaedic Hospital elected Mrs. Jarvis J. Slade president; Mrs. William L. Hutton, 1st vice president, Mrs. Robert E. Carroll, 2nd vice president; Mrs. Thomas Hitchcock vice president; Mrs. John R. Stevenson, secretary and Mrs. Donald L. Wallace, treasurer.

The Women's Auxiliary of

The Presbyterian Hospital elected Mrs. Arthur Gerard DeVoe, president; Mrs. Hamilton Southworth, vice chairman; Mrs. Maynard C. Wheeler, recording secretary and Mrs. George H. Wilkie, corresponding secretary. Mrs. John G. Leness continues as treasurer and Mrs. Henry Clay Frick, II as a vice chairman.

The officers of the Mary Harkness Unit Auxiliary remain the same.

Mrs. Allen F. Maulsby, President, Board of Women Managers at Babies Hospital.

Mrs. Arthur Gerard DeVoe, Auxiliary President, The Presbyterian Hospital.

## MEDALLION TO COMMEMORATE 200TH ANNIVERSARY OF P&S

Medallion Front

Medallion Back

A commemorative medallion to mark the two hundredth anniversary of the Medical School has been struck by Columbia University. Celebrating the founding of the Medical School of King's College in 1767, the bronze medal will be presented to all alumni and faculty of the College of Physicians and Surgeons, in recognition of their achievements which have contributed to the stature of the University.

On the face of the medallion is Hygieia, Goddess of Health, holding the torch of knowledge which is encircled by a snake, one of the attributes of her

father, Aesculapius, God of Medicine. The facade of the College of Physicians and Surgeons is represented on the reverse side.

The medallion was designed by Abram Belskie, an artist whose work has been oriented toward medicine and science. He was born in London and trained in Glasgow, Paris, Florence and Rome. He has designed many medals for distinguished scientists in the field of medicine.

Silver medallions will be presented to certain alumni who have made outstanding contributions.

## P&S Alumni Homecoming Now Scheduled For April 22

The P&S Alumni Day is scheduled for April 22, according to Dr. Herbert B. Wilcox, Jr., secretary of the Association. Opening with registration and a coffee hour at 9 a.m. in the lobby of the Alumni Auditorium, the program will continue with a scientific exercise at 10:30. This will be a symposium on Portal Hypertension, presented by the Department of Surgery. Participants will be Drs. A. B. Voorhees, R. C. Britton and J. B. Price.

The Annual Business Meeting of the Association of the Alumni of the College of Physicians and Surgeons will be held in Bard Hall following luncheon there. The festive part of the program will be a reception and dinner dance at the Plaza Hotel, that evening.

The graduating class of 1967 and the Fifty Year Class will be guests of the Association. Dr. Charles Schetlen is chairman of the Entertainment Committee.

## Whipple Society Surgeons Meet Here To Discuss New Teaching Approaches

How will surgeons be trained in the future? Will the present residency system of training adjust to the new era of Medicare-Medicaid? Will computerized and mechanized developments offer shortcuts? Are governmental regulations hampering routine surgical education in the teaching hospitals?

These and related questions were faced by the members of the Allen O. Whipple Surgical Society who came together recently for their annual meeting.

The society was established in 1955 by the disciples of the late noted surgeon and teacher, Allen O. Whipple, to foster and preserve his ideals. Dr. Whipple was director of surgery at Presbyterian Hospital from 1921 to 1946. There are now 150 members of the society, 125 of whom are graduates of P & S. The others are prominent teachers of surgery from all parts of the world who have been invited to membership.

## Electric Eels Spark Advance In Nerve Study

Dr. David Nachmansohn and his research team at Columbia-Presbyterian Medical Center have been working with electric eels from the Amazon River for 30 years. A few weeks ago Dr. Walo Leuzinger, a member of the team, succeeded in crystallizing an enzyme vital to the production of electricity in all nerves and muscles. The work was supported with a grant from the National Science Foundation and National Institutes of Health.

This is the first nervous system enzyme ever to be obtained in crystal form, and one of universal importance. Its role in the body is as crucial to the eel, which can generate a 600-volt jolt, as it is to all human nerve cells. The enzyme is cholinesterase, and like all enzymes it is a protein which acts like a catalyst. An enzyme usually synthesizes or

## Nurses Plan A Joint Celebration For Anniversary and Alumnae Day

Celebration of the 75th Anniversary of the Department of Nursing will reach its culmination in June with a varied program for the reunion of alumnae.

The "Homecoming" functions will begin with Vesper Services in The Pauline A. Hartford Memorial Chapel, Sunday, June 4, at 4:30 p.m. The Reverend David H. C. Read, D.D., Pastor of the Madison Avenue Presbyterian Church, will officiate. Janet Baird Weisiger, Class of '59, will be soloist with the Student Vesper Choir.

Alumnae Day, June 5, will open with a Coffee at 9:00 in Maxwell Hall followed by a showing of the new student recruitment film in the Alumni Auditorium. Luncheons will be held in Maxwell Hall at 12:30 p.m. That afternoon there will again be the annual alumnae meetings in the Alumni Auditorium followed by a reception at 4:30 in Harkness Hall. Music will be the feature of the evening. A concert in the Alumni Auditorium will be provided by Peter Serkin, 19 year old pianist, son of Rudolph Serkin, with George Mester conducting the Beaux Arts Orchestra.

A program "Developments

in Nursing Care" will be offered June 6 at 10 a.m. in Maxwell Hall, then there will be conducted tours of the hospital. Commencement at Columbia will take place at 3 p.m.

Dr. Calvin H. Plimpton, president of Amherst College,

Mrs. Lucile Petry Leone

formerly on the staff at the Hospital, will be master of ceremonies at the anniversary banquet that evening at the Waldorf-Astoria. Dr. Plimpton became an honorary member of the nursing Class of 1956 during his tenure here as

## STETHOSCOPIA

### • BRIDES AND BRIDEGROOMS

Louise Ann Durbin and Dr. Oliver Quentin Hyder have announced their engagement. Miss Durbin is with the Columbia-Presbyterian Medical Center, and Dr. Hyder is a resident in psychiatry at the New York State Psychiatric Institute, Columbia-Presbyterian. The wedding is planned for May 6.

Candida Merrill Frazee and Peter Alan Moskovitz are engaged. The wedding will be in late August. Mr. Moskovitz is a student at P&S, and Miss Frazee is a senior at Swarthmore College.

L. Bonnie Geffen and James Andrew Reiffel were married March 19. The bride attends Teachers College of Columbia, and the groom is a student at P&S.

John E. Postley, Jr., a third year student at P&S, is engaged to Elaine Margaret McNicol, an alumna of Wellesley College. They will be married in June.

### • NEW ARRIVALS

Charles W. Pope of the Optical Shop at the Eye Institute, recently became grandfather to a little girl, Jacqueline Michelle Pope, daughter of son, Kenneth and Jan Pope.

### • WELCOME

Carol Davoudian, secretary in the EEG department, as of March 6.

Mrs. Susan Hughes, wife of Dr. Edward X. Hughes, intern in Surgical Service, has joined the Babies Hospital Social Service Staff.

### • CONDOLENCES

We extend our sympathy to Elizabeth Gievers, staff secretary at Neurological Institute, on the death of her mother, March 3.

### • NOTES OF INTEREST

Lillian Oring, Personnel, spent a week's vacation recently at West Palm Beach, Florida, aboard her brother's cruiser.

Glenda Pullen, head nurse in the Surgical Metabolism unit, P.H. 14, spoke in January at a two day nursing conference on Intensive Care at the University of Kansas Medical Center, Kansas City. Miss Pullen discussed and demonstrated nursing procedures, relating to respiratory care, that have been developed in the Surgical Metabolism Unit.

Priscilla Parke, supervisor of the Neo-natal Nursery, B.H., was a speaker at several workshops on the nursing care of "high risk" infants, sponsored by state health departments in Georgia, Alabama and Winnipeg, Canada.

Sally Moore, an Assistant in Ophthalmology and Orthoptist was guest speaker at the Hotel New Yorker on January 10, to the TV Square Club. This was in relation to the annual kick-off meeting of Fight for Sight's annual fund raising drive.

## P&S Club To Present Symposium

The P & S Club, College of Physicians and Surgeons, will present a symposium on "New Concepts of Medical Care: The Regional Medical Program," at the Alumni Auditorium, 630 West 168th Street, at 7:30 P.M., Monday, April 17.

Speakers and panelists will be: Howard J. Brown, M.D., Health Service Administrator for the City of New York; Michael E. DeBakey, M.D., Professor of Surgery and Chairman, Department of Surgery, Baylor University College of Medicine, and Chairman of National Advisory Council for Region Medical Programs; and Cecil G. Sheps, M.D., General Director of Beth Israel Medical Center.

Free tickets are available from: P & S Club—Bard Hall, 50 Haven Avenue, New York City—telephone: WA 3-6800, extension 69.

## DOINGS OF DOCTORS

DR. H. KEITH BRODIE, Resident in Psychiatry and Trainee in the Division of Community Psychiatry, has been named a Sol W. Ginsburg Fellow by the Group for the Advancement of Psychiatry, Inc. for 1967-1968.

DR. ABRAHAM SPECTOR, Assistant Professor in Ophthalmology, presented a paper on "The Isolation and Characterization of Cat Lens Crystallin" at the Eastern Section Meeting of the Association for Research in Ophthalmology, Washington, D. C., March 10.

DR. ARCHIBALD R. FOLEY, Assistant Clinical Professor of Psychiatry and Chief, Section on Training, Division of Community Psychiatry in the Department of Psychiatry and the School of Public Health and Administrative Medicine, served as a psychiatric consultant in the preparation of the film, "Bold New Approach." He also appeared in the film. This is the first definitive film dealing with the Comprehensive Community Mental Health Center concept. The film was made by the Mental Health Film Board, Inc. and was sponsored by the National Institute of Mental Health.

DR. RALPH J. VEENEMA, Associate Attending at Presbyterian Hospital and Chief of Urology at Delafield Hospital, participated in a panel discussion on "New Possibilities in Management of Genitourinary Cancer" at a meeting, March 2, of the American College of Surgeons.

DR. RONALD L. KATZ, Associate Attending Anesthesiologist, represented Columbia University at the meeting of the New Jersey Society of Anesthesiologists, Cherry Hill, New Jersey, the weekend of March 11. This meeting marked the 200th anniversary of the College. Dr. Katz's paper was "Pitfalls in Clinical Use of Muscle Relaxants." Dr. Katz also participated in the "Ask the Experts" panel.

DR. GORDON H. TAKAHASHI, Assistant in Ophthalmology, gave a paper in Washington, D. C., March 10, at the Eastern Section Meeting of the Association for Research in Ophthalmology. Presented in collaboration with Dr. Saiichi Mishima, the study was entitled, "The Effect of Corneal Anoxia to Corneal Hydration."

DR. WILLIAM A. BAUMAN, Director, Medical Data Processing at Presbyterian Hospital, participated in the Seminar, "How to Converse With a Computer: Medical Uses," March 17 and 18, at St. Luke's Hospital Center. Dr. Bauman spoke on "Medical Data Processing Education at Columbia-Presbyterian Medical Center." The Seminar was sponsored by grants

from the National Heart Institute of the National Institutes of Health.

Dr. Bauman

Dr. Snyder

DR. JOSEPH E. SNYDER, Assistant Vice President and Head of Service at Vanderbilt Clinic, spoke at the annual meeting of the Editorial Board of the *New York State Journal of Medicine* on December 22, 1966.

DR. SAICHI MISHIMA, Assistant Professor in Ophthalmology, presented two papers at the Eastern Section Meeting of the Association in Ophthalmology, March 10, in Washington, D. C. One of the studies, a collaboration with Dr. S. M. Trenberth, was "Permeability of Rabbit Corneal Endothelium to Non-Electrolytes." The other, with Dr. Gordon H. Takahashi, was "The Effect of Corneal Anoxia to Corneal Hydration."

DR. DAVID HENDELL, Assistant Clinical Professor, Division of Stomatology of the Dental School, attended an all day conference on interpretation of Panoramic Roentgenology at the Chicago Winter Meeting of the American Academy of Roentgenology.

DR. LESTER C. MARK, Professor of Anesthesiology, P&S, presented a paper, "Informed Consent in Clinical Research," at the Thursday Evening Lecture, March 2, at the Babies' Hospital Amphitheater.

DR. SOLOMON N. ROSENSTEIN, Professor of Dentistry and Director, Division of Pedodontics, in the School of Dental and Oral Surgery, was the speaker at the February Meeting of the Bergen County Dental Society, New Jersey, in observance of Children's Dental Health Week. He discussed important procedures for prevention of severe dental abnormalities and early loss of teeth in children.

DR. E. M. PAPPER, Director, Anesthesiology Service, was host for the Association of University Anesthetists, March 17 and 18, in New York City.

## P&S JUNIOR WINS AFRICAN FELLOWSHIP

RONALD LI, a junior in P&S, has been awarded a \$1,269 fellowship which will permit him to assist this summer at a remote medical outpost in Liberia.

Li is one of 31 American medical students selected by the Association of American Medical Colleges, Evanston, Illinois, to receive Smith Kline & French Laboratories Foreign Fellowships. The fellowships are supported by a grant

from the Philadelphia ethical drug firm.

Li will assist at Phebe Hospital at Zor Station in the West African republic. Under the supervision of staff physicians, he will care for patients in the wards, assist with surgery, and work in the outpatient clinic. He will also go on trips to neighboring villages to give inoculations and provide other medical services.

The hospital has 65 beds.

Each day 150 to 200 persons visit the out-patient clinic.

Li, the son of Dr. and Mrs. Lewis L. Y. Li, Lake Success, New York, is a graduate of Princeton.

The Smith Kline & French Foreign Fellowships program was established eight years ago to permit American medical students to widen their horizons. In the past seven years 215 Fellows have served in 49 countries.

# Myra Monahan Begins Duties As Librarian On 20th Floor

The tall, soft-spoken young lady in the Milbank Library is Miss Myra Monahan, the new librarian. In the company of 9,000 gleaming books on the twentieth floor of Columbia-Presbyterian, she is very much at home and very busy.

"We're getting ready for the book sale on May first," she explained, "and there'll also be an art show at the same time. If you care for some good bargains in books—"

Miss Monahan worked in the Columbia University library while studying for her library degree, and has since served as reference librarian at Fordham University until two months ago, when she learned there was an opening at Columbia-Presbyterian.

She loves her work here. She says that she is fortunate to have the good help of the women's auxiliary volunteers and a regular library staff—an assistant, Mrs. Flora Gordon, and a clerk-typist, Mrs. Sophia Katsaris. There is a regular monthly circulation of 2,000 books, including a few hundred to staff members, who pay a small charge. Books are of course free for the use of patients, and the various wards are served on a scheduled plan. Occasionally, an attended patient will visit the library.

Miss Monahan's library reading is not a chore for her, but a joy; reading widely is one of her favorite hobbies. Among other hobbies are sewing and tennis. And does she like New York? "I came, I liked it, I'm here," was her reply. "I love cities, the bigger

Myra Monahan

the better." Miss Monahan grew up in New Orleans, upon which she commented enigmatically, "I always say that New Orleans is a nice place to visit."

As an example of the value of Milbank Library, the following summary of library activities comes from Miss Monahan's report for the month of February, 1967:

Number of books circulated to patients	1,396
Number of books circulated to staff	793
Total book circulation, February, 1967	2,189
Total number of borrowers, patients and staff	1,411
Money received from rental charges to staff	\$101.30
Number of magazines circulated to patients	360
Eye Institute circulation of "Talking Books"	55
Additions to library:	
16 gifts, 6 purchases	22

## WHIPPLE MEETING

Continued from page one

The annual meeting was held at the College of Physicians and Surgeons, March 13 and 14. Dr. George H. Humphreys II, President of the Society, presided on the first day; Dr. David V. Habib, Professor of Surgery, P & S, was in charge on the second day. The topic was "The Training of Surgeons in the Future."

Certain principles were axiomatic: the aim is for the best possible teaching; surgeons with teaching skill are required. There must be incentives for the trainee, and his training time should not be expended in soul-destroying routines.

Through the two days of conferences, the addresses and discussions took cognizance of the fact that these times are new. Unsolved problems must be faced.

### Charity Patient Vanishes

In the past, the charity patient was always there, awaiting the services of the teacher and the trainee. Such a patient

did not expect to declare his choice of doctor or hospital. The arrangement did not work to his disadvantage; on the contrary he received excellent service in the teaching hospital; if there was an operation, it was performed by the resident doctor while the specialist assisted, stood by or was on call and was responsible.

Now that most patients are theoretically paying patients, how can the trainee gain the needed practice?

### A Backward Glance

Fortunately, the way has been paved for public acceptance in recent years for teams of surgeons. During the second half of last century young surgeons, both European and American, sought the great master surgeons of Europe, studied their skills in action, and emulated their successes.

### The Residency Plan

In America a change from this uncertain method came, toward the close of the century, when Dr. William Stewart Halsted of Johns Hopkins developed the residency system. This, in the opinion of

Dr. Humphreys, has been the basis of America's superiority in training surgeons. The plan of training usually consists of four years of medical school, one year of internship, and three to five years of residency within the hospital. The resident works not with one surgeon but with several specialists. In many teaching hospitals he eventually performs major operations independently, and the statistics attest to his high degree of success, comparable to that of the specialist.

### Teaching Ward Disappears

For the training of residents, the teaching ward has been the source of patients. Today, however, the expenses of the typical patient are paid by a third party, his private or federally provided insurance. The charity patient has become a paying patient with the full privilege of asking: Who is the greatest surgeon in the field of my need? Will I be under his personal care?

Charity patients have vanished. Where, then, shall the teacher-surgeon turn in his quest for patients?

### Teaching Area in Hospital

Over the past ten months, Columbia-Presbyterian's answer has been a separate section of the hospital which serves as a teaching area: two floors, 110 beds.

The patients who enter come voluntarily. Their choice is an evidence of the past and continuing public acceptance of the teaching situation.

For the future, such a teaching area may be the desirable answer to this need, not only within university hospitals, but also in community and private hospitals as well.

### Patient Looks to Institution

Dr. Robert B. Hiatt, Associate Professor of Surgery at P & S, noted that the patient can come to think in terms of care by an institution rather than by an individual doctor.

Canadian surgery, under governmental regulation, works smoothly. Here the small operating team of skilled surgeons is relied upon. The patient is informed; he knows what to expect.

The trend, then, is toward a public acceptance of the small, skilled surgical team.

### Do Regulations Penalize?

Back of the many salient questions discussed by the members of the Whipple Society were others, expressed or implied.

Serious questions concerned the workings of private and public insurance plans. Do the regulations impose penalties upon both the attending surgeon and the resident doctor?

The resident, through his months and years of training, is led to perform operations proficiently and independently—indeed, some authorities insist that such performance is

## UNITED HOSPITAL FUND SHOWS GAIN OF \$14,135

Final figures for the United Hospital Fund show an increase of \$14,135, in the total of \$239,400 subscribed by the Presbyterian Hospital teams. Of this amount \$120,000 will be returned directly to the Hospital in direct benefits; the balance goes into the general distribution among 78 voluntary agencies in New York City. Last year this hospital received more than \$300,000 from the United Hospital Fund and the Greater New York Fund. This latter drive takes place in the spring and contributions are sought among employees at the Medical Center.

The teams participating in the United Hospital Fund drive include the Trustees, headed by Chairman, Mr. James W. Foley; Joint Professional, Dr. Frederic Herter; Presbyterian Hospital, Mrs. Charles A. Flood; Neurological Institute, Mrs. Charles E. Adams and Mrs. H. McLeod Riggins; New York Orthopaedic, Mrs. Robert E. Carroll, and Babies Hospital, Mrs. Robert H. Burrows.

an essential part of his training. But the federal regulations prohibit this resident, who is salaried, from receiving an operating fee.

Nor will the federal rules permit payment to the attending surgeon unless he is present for the operation. It is not enough that he is on call, or that he is responsible.

When the professor of surgery, on full salary, is present for the operation, he is permitted to collect a surgical fee, the traditional use of which is to help defray the university or hospital's teaching costs. What concerns the surgeon-teacher is the insistence that he be present and scrubbed for the operation.

According to one of the speakers at the conference, federal regulations do serious violence to the teaching arrangement.

### Should insurance shoulder more of the costs?

New York Blue Shield has estimated that it would have to pay approximately three million dollars more in benefits if Blue Shield were to support surgery on a teaching basis, i.e., paying the attending surgeon who assists a resident during the operation on his private patient. At present

U.M.S. will pay no fee for this circumstance.

Various solutions have been offered. Medicare legislation might be devised to recognize the desirability of the surgeon team, with a plan to meet the cost. Institutions rather than individuals might charge the surgical fees.

Such solutions would not be without objections: surgeons not connected with teaching programs would be put at a disadvantage.

Meanwhile it can be said that the last law has not been written in this field of governmental regulation. There is a fear on the part of some doctors—it was expressed in the conference by Dr. David V. Habib, Professor of Surgery, P&S—that still stricter rules may be pressured by lawmakers who are not able to appreciate all of the factors involved in the teaching of surgery.

The need for the continued training of more competent surgeons is a fact of life not to be denied; and there must surely be incentives to make the course of learning attractive. The highest possible standards of teaching and learning will continue to be encouraged by such groups as the Allen O. Whipple Surgical Society.

## CAN SPRING BE FAR BEHIND?

This photograph, taken from a sixth floor window of the Service Building, shows the large linden trees that will soon be moved by crane back to their original location at the south end of the garden in front of the Service Building.

## 24 New Interns Begin Training Here July 1st

The Presbyterian Hospital obtained 24 of the 27 interns requested for the year beginning July 1, according to the recently announced results of hospital and intern choices from the National Intern Matching Program of Evanston, Illinois.

Last fall and winter senior medical students registered with the program and listed their hospital choices in order of preference. The hospitals then listed their own preferences. A computer was used to assign the students to the hospitals on the basis of mutual preference.

Students showed a preference for hospitals with strong teaching programs and medical school affiliations. For the first time since the beginning of the program in 1962, municipal hospitals scored slightly higher than private, voluntary hospitals, percentage-wise, in the fulfillment of their requests.

Bellevue Hospital obtained all 63 interns that it had sought. Harlem Hospital, which had only two interns last year, obtained 16; the Metropolitan Hospital, which previously had none, obtained 46. Twelve private, voluntary hospitals and three city hospitals in the New York area failed to obtain a single intern.

There are 7,753 seniors in American medical schools who will begin their internship July 1—slightly more than half enough for the nation's 14,148 internships. Some of the remaining posts will be filled by graduates of foreign medical schools; others will remain unfulfilled.

*Better use medicines at the outset than at the last moment.*

PUBLIUS SYRUS,  
Maxim 866

# THESE NICE PEOPLE HANDLE UP TO 35

The Department of Medical Information is located on the second floor of the Vanderbilt Clinic. It presently consists of twenty-four full-time employees and handles approximately 2500 to 3500 requests for medical information weekly.

This is a far cry from the formative days of the department. When the Presbyterian Hospital moved to 168 Street and Broadway in June of 1928, every effort was exerted to become an integral part of the medical community. With this in mind, local physicians in Washington Heights and Harlem were encouraged to refer patients to the hospital or clinic for work-up and/or treatment. Upon completion of either, the patient was returned to his own physician for follow-up care and an abstract of our findings was forwarded to this physician. In order to accomplish this, a doctor from each of the then six major services was assigned to dictate the necessary information on the clinic case. Medical, Surgical Diagnostic, Pediatrics, Neurology, Dermatology and Gynecology constituted our first efforts and correspondence averaged under ten pieces a week. This group was later joined by the remainder of the services. Miss Edna Wagner, assistant superintendent of Vanderbilt Clinic at that time, supervised this section with the assistance of one secretary, Miss Margaret Priddy. Even in those early days with so few letters, much scrambling was necessary to coordinate doctor, chart and time. The same policy was followed into the 1930's until eventually it became necessary to engage the services of a full-time physician, Doctor Samuel Cochran, with his own secretaries, to fulfill the steadily increasing responsibilities of this department. By the end of the depression, with greater emphasis on group insurance, the volume of correspondence rose

Janice M. Blauvelt

accordingly. For this reason the Presbyterian Hospital evolved its own insurance form and the Department of Medical Information was moved to its present location.

Miss O. Grace Haseltine had the responsibility of coordinating this intensified effort and held this position until her retirement on November 1, 1963. The Department of Medical Information is now under the direction of Janice M. Blauvelt. Miss Blauvelt came to the Presbyterian Hospital in October of 1943, following graduation from Syracuse University, and was named assistant to Miss Haseltine in 1958 after having worked with her for a number of years. At the present time the department is divided into three units. The Intake Unit is under the supervision of Mrs. Ethel Branca, the Dictation Unit under the supervision of Miss Blauvelt's assistant, Miss Margaret Priddy, and the Insurance and Welfare Units are supervised by Mrs. Virginia Lippe.

To illustrate the function of these sections, the Intake Unit is responsible for all requests presented personally by the patient, other authorized persons, i.e. lawyers and physicians or insurance agents, or those received by mail. The intake receptionists deal with 600 to 700 people weekly while answering an equal number of telephone inquiries. Mrs. Branca, supervisor of intake, is responsible for the distribution of incoming requests to the appropriate desk in the Dictation Unit. Personal review by authorized persons of hospital records is also under the personal control of Mrs. Branca.

The Dictation Unit consists of a secretarial pool assigned to the various clinics. Each clinic has a physician whose duty it is to dictate replies to those requests that the secretary herself cannot handle. Miss Margaret Priddy, supervisor of this unit, has the responsibility of providing a coordinated schedule resulting in physician, chart and secretary being in the same place at the same time. The supervisor

also dictates replies to inquiries which, while not requiring a physician's training, may require the abilities of someone with Miss Priddy's ample background. All correspondence leaving the Dictation Unit is checked by the supervisor for accuracy and content.

The Insurance Unit complies with all requests made by insurance companies which may be handled by a layman. This group would include the many group and individual insurance forms, daily telephone requests by the Associated Hospital Service of New York and the United Medical Service. This unit is also responsible for the processing of certain Department of Welfare requests. Since June of 1966 in accord with a requirement of The Department of Welfare of New York City, a program for the follow-up of out-patients receiving public assistance was initiated. This program requires that such patients found to have a chronic or serious ailment requiring prolonged treatment and follow-up, have a complete medical evaluation annually. In order to establish such a program, it was necessary to engage the services of two physicians. Dr. Arthur Bank was engaged to examine these patients and Dr. Frederick Flatow was engaged to dictate the medical summaries. Appointments for these examinations are arranged by the Department of Medical Information by letters to the patients. In those cases where the Social Service Department has been active a Social Service summary is secured and included. The advent of Medicare and Medicaid has brought with it added duties for this unit in the processing of the various forms required to confirm the medical services rendered. It is Mrs. Lippe's responsibility to assure the proper handling and planning of these various functions.

It is of particular interest to note that the Department of Medical Information is the only department within the institution provided to service the entire Vanderbilt Clinic, Presbyterian Hospital, and many requests of private physicians and private patients. The types of requests that appear daily truly stagger the imagination, ranging from the sublime to the ridiculous. It is a great source of pride to the department that in spite of the tremendous work load most of these requests are fully processed within a very few days.

A brief resume of the types of material processed by this department is as follows: notes presented to patients for work, school, applications for li-

censes, letters from attorneys, The Welfare Department, personal review of hospital records by authorized persons, autopsy inquiries, social security inquiries, requests from outside physicians and hospitals, federal and local government agencies, Blue Cross Blue Shield, group and individual insurance requests. This list daily becomes more extensive. One full-time employee alone handles 3,000 to 5,000 pieces of photocopying per week.

Over the years of change and improvement many requests have been made by hospitals within and without the city of New York to assist them in improving their Medical Information Departments.

Our Department of Medical Information has been a forerunner in the establishment of many new methods. The increase in population mobility creates new demands for rapid transfer of medical information from one community to another. This need, in turn, emphasizes the fact that the transfer of medical information is privileged by law. Only the patient can waive that privilege except by order of a court of law. Following this line, the progressive awareness of liability insurance advantages has greatly increased the need of medical records by the courts.

No matter what the future of this increasingly expanding department, its philosophy, as stated by Miss Blauvelt, is continued cooperation for all patients, physicians and other departments in the Presbyterian Hospital as well as for all outside physicians and appropriate agencies. The role of the Department of Medical Information may be compared to an umbilical cord representing the lifeline between the community and the hospital which, of necessity, requires an ever-expanding diversity of function. We are sure that this challenge will always be met with enthusiasm and dedication.

Dr. Albert Lamb dictates to Margaret Priddy.

## ACT NOW TO GET YOUR TICKETS FOR NURSES' PARTY AND RAFFLE

Tickets for tables are still available for the annual benefit card party for the Student Nurses' Scholarship Fund to be held in Maxwell Hall April 19. Anyone desiring a table should send \$15, plus name and address to the treasurer, Mrs. J. Ward McLaughlin, 304 Blauvelt Avenue, Ho-Ho-Kus, N. J. 07423, by April 12. The tickets will be sent promptly. Those present at the party will be eligible to purchase tickets for the special drawing to be held before the main drawing.

Tickets for the raffle are now on sale in all units at 50 cents a ticket, \$5 a book. Additional books may be obtained from Miss Alberta Raynor, Presbyterian Hospital Nursing Office or Miss Louisa Kent, Babies Hospital Room 221. Ticket holders for the main drawing need not be present to win a prize.

# REQUESTS WEEKLY FOR MEDICAL INFORMATION

Dr. Joseph E. Snyder, Assistant Vice President and Director of Service at Vanderbilt Clinic, and Janice M. Blauvelt discuss correspondence regarding a patient.

Dr. Michael Petti consults with Mary Ledwith, Secretary.

From left to right, Margaret Mullane, Lynn Lavore, Mrs. Roger DeAngelis, Mrs. Rose Feldman, Mrs. Frances Stringfield and Mrs. Ethel Branca admire Mrs. DeAngelis' recently-born daughter Lara.

This staff meeting, between supervisors and physicians, includes, left to right, Dr. Albert Lamb, Mrs. Ethel Branca, Margaret Priddy, Mrs. Virginia Lippe, Dr. Joseph E. Snyder and Janice M. Blauvelt.

Lydia Liguodi, seated, interviews patient.

*Columbia-Presbyterian  
Medical Center  
Is People...*

At left, Kenneth Tuxbury and Mrs. Ethel Branca confer on a legal matter. At right, Mrs. Christine Rusaky, Lillian Austin (Mrs. Penka), Mrs. Betty Lynch and Breda Cahalan, trying to locate medical chart for patient care.

Joseph Hughes, Margaret Crowley and Margaret Priddy discuss the records of a patient.

John Beveridge, William Robinson, Joseph Hughes, a Social Security representative, and Margaret Priddy in the Xerox room, where thousands of photocopies are made each week.

Margaret Priddy, Dr. Alice Baker and Janice M. Blauvelt discuss medical dictation.

Here is the entire office staff of the Department of Medical Information, which is located on the second floor of Vanderbilt Clinic.

Dr. Walo Leuzinger is shown here with his laboratory assistants, Marcia Yutman, and Evelyn Kissin of London, a recent graduate of Trinity College in Dublin.

## ELECTRIC EELS

*Continued from page one*

breaks down other molecules. Cholinesterase breaks down acetylcholine, (ACh). The enzyme is a complex protein molecule found in the membranes of nerve tissue.

A hunch that the bio-chemical behavior of ACh might be the basic "trigger" of all bio-electric currents led Dr. Nachmansohn to turn his attention to it some 30 years ago at the University of Paris. This research has recently led to a large scale purification and finally to the crystallization of the ACh-splitting enzyme by Dr. Leuzinger. He was helped by Dr. A. L. Baker of the Worthington Biochemical Corporation and had the use of large scale equipment available there.

The evidence from a mounting number of experiments with many animal species, Dr. Nachmansohn explained, suggests that whenever a nerve cell is excited, acetylcholine is activated in some way which then triggers a change in the permeability of the cell membrane. Charged particles (ions) of sodium flow into the cell while potassium ions flow out, carrying a current of electricity. The action is very fast and confined to an infinitesimal space. The membrane is about 1/100,000 of a millimeter thick, and the excitation takes only a few millionths of a second. What cholinesterase does is to strip down acetylcholine after its brief moment of glory, allowing the cell to recover to its previous resting state, ready to be excited again.

Electric eels are to nerve biochemistry what the fruitfly was to genetics or the squid to early nerve fiber research—creatures generously endowed with chemical materials specialists want to study. The eel (*Electrophorus electricus*) is a powerful bioelectric generator. Its electric organ is a set of five or six thousand cells arranged in series like in a Voltaic pile. Each cell is capable of generating 100 millivolts like every nerve cell. When all fire simultaneously the voltage

adds up, yielding a 600-volt shock.

Drs. Leuzinger and Baker performed a series of seven painstaking steps, checking the potency and purity of their extract at each step, finally arriving at a homogeneous solution consisting of enzyme protein only. It was this sample that crystallized, forming hexagonal rods. The first crystals, only 10 to 20 microns long, can be used to seed other samples to produce large quantities of crystals. Large amounts of protein are necessary for the analysis of the amino acid sequence, but large crystals are necessary for the X-ray crystallography work to determine the three-dimensional structure.

Such analyses will carry the work to the stage where the finer subtleties of the ACh cycle may be elucidated. They may also yield knowledge of what goes wrong in the system, not only when drugs are introduced, but in the slower more insidious processes underlying some of the degenerative neuro-muscular diseases. At the same time a detailed picture of the exact structure of the enzyme may suggest new and improved synthetic materials—drugs to cure or halt the progress of disease.

Dr. Nachmansohn is a Professor in the Departments of Bio-chemistry and Neurology of Columbia University, where he has been since 1942. He was born in Russia in 1899 and educated in Germany. He obtained a medical degree from the University of Berlin in 1926 and served the following years as a Fellow at the Kaiser-Wilhelm Institute in Berlin-Dahlem. He went to Paris in 1933, first as Fellow, and later as *maître de recherches* in the Laboratory of General Physiology at the Sorbonne, University of Paris. In 1939 he left France and came to Yale University where he was Research Fellow and Instructor in the Department of Physiology up until the time he came to Columbia.

Dr. Leuzinger has been a Research Associate in the De-

# Husband And Wife Research Team Discovers Biological Mechanism

Discovery of a previously unsuspected biological mechanism important in controlling the flow of oxygen from human red blood cells to body tissues has been made by a husband and wife team at Columbia Presbyterian Medical Center.

The finding, made by Professors Reinhold and Ruth E. Benesch, of the Department of Biochemistry at Columbia's College of Physicians and Surgeons, may well help solve medical questions concerning oxygen supply to the tissues, especially in conditions in which disease is involved. The mechanism also suggests an answer to the old problem of how oxygen is transferred from the blood of a mother to that of her unborn child, and explains how certain chemicals help preserve the viability of stored blood.

The research is supported by grants from the National Science Foundation and the National Institutes of Health.

The mechanism, say the Drs. Benesch, involves certain organic phosphate compounds that have a dramatic effect on how firmly the hemoglobin of red blood cells holds on to the oxygen it picks up in the lungs and carries throughout the body. The phosphate compounds (mostly diphosphoglyceric acid, or DPG, in man) are formed in the red blood cells from glucose and phosphate. Hemoglobin is the main oxygen carrier of such cells.

In the course of their studies of hemoglobin function and the binding of oxygen to hemoglobin the Benesch's found that the higher the concentration of DPG the more readily the hemoglobin gave up, or unloaded, its oxygen. Conversely, when the concentration of DPG was low the hemoglobin showed an affinity for oxygen, collecting it and refusing to give it up.

"In this way," said Dr. Reinhold Benesch, "fluctuations in the organic phosphate levels in the red cells can directly influence the quantities of oxygen which the blood can supply to the tissues."

In connection with blood transfusions, Dr. Benesch said, "It is well established that

partment of Biochemistry of Columbia University since 1964. He was born in Switzerland in 1935, attended Swiss schools, and shortly before coming to Columbia had obtained a doctorate in biochemistry from the Swiss Federal Institute of Technology. His thesis dealt with the metabolism of fat-soluble vitamins in bacteria, and the metabolism of the anticoagulant drug, dicumarol.

This recent photograph shows Drs. Reinhold and Ruth E. Benesch at work in their laboratory on the fifth floor of the Black Building.

these organic phosphates disappear quite rapidly when blood is stored under blood bank conditions. At the same time, the oxygen affinity of the blood increases and this effect persists for many hours even after transfusion into a patient. As a result, the oxygen supply to the patient from the newly acquired blood is diminished until the new organic phosphate is formed. Others have shown that certain chemicals such as inosine can prevent the loss of organic phosphate from stored blood and that this preserved the viability of the blood. In this way inosine would help to preserve the correct oxygen unloading properties of the blood."

Dr. Benesch said the same kind of mechanism is at work in other kinds of animals with some differences due to differing oxygen requirements. Birds, with their higher metabolism, for instance, have a much higher oxygen consumption than mammals and their blood is known to unload oxygen more readily than that of man. "The reason for this has now been traced," he said, "to

the greater effectiveness of the type of organic phosphate compound (phytic acid) present in the red cells of birds." In laboratory experiments the Benesch's found that the addition of phytic acid to human hemoglobin makes it release oxygen as readily as bird hemoglobin does.

Referring to the long-standing problem of how an unborn child, or fetus, gets oxygen from its mother, Dr. Benesch pointed out that fetal red blood cells have much lower concentration of organic phosphate than those of adult blood. This gives rise to a situation in which the red blood cells of the fetus have a high affinity for oxygen while those of the mother are unloading it. The evidence seems to suggest that this is the mechanism of transfer, Dr. Benesch indicated.

The British scientific publication *Nature* called the finding of the Benesch's "A most remarkable observation on the regulation of haemoglobin function . . ." and pointed out that "this will without doubt re-direct much of the current thinking in the field."

## Margaret Priddy To Retire After 40 Years of Service

An enthusiastic visitor at the recent Flower Show was Miss Margaret Priddy, assistant supervisor in Medical Information, who retires this month. A horticulturist herself, she enjoys viewing the displays of fellow gardeners.

Miss Priddy specializes in Bonsai, the art of dwarfing trees and coaxing them into a deformity which is pleasing to the eye, after the method devised by Japanese gardeners. She has exhibited her trees at the Bronx Botanical Gardens and the Coliseum, and won prizes for her exhibits.

After working at the Hospital for 40 years, Miss Priddy will miss her friends here, even though she has an engrossing hobby to occupy her newfound leisure. She was employed first at the Presby-

Margaret Priddy

rian Hospital downtown, came up here to work in Vanderbilt Clinic in 1928, where she was in at the beginning of the Medical Information department.

A resident of Washington Heights for many years, Miss Priddy will remain in this area and in all probability will make frequent visits here to meet with her fellow workers.

# Annual Mother Goose Ball Set For Saturday, May 13

The annual Mother Goose Ball for the benefit of the Medical Center Nursery School will be held Saturday, May 13th, at 9 p.m., in the Men's Faculty Club of Columbia University, 117th Street and Morningside Drive. This gala affair helps support the cooperative school run by the Medical Center residents and their wives for children of pre-school age.

Honorary Chairmen include: Mrs. Charles A. Flood, Mrs. H. Houston Merritt and Dr. Vir-

gil G. Damon. Guest of Honor will be Dr. Jerome P. Webster. Music will be supplied by Lester Lanin.

In order to maintain the tuition at reasonable levels, it is necessary to raise funds through contributions. Tickets to the spring benefit are tax deductible. For ticket information, please telephone Mrs. M. Richard Koenigsberger at 927-4972. Table reservations are being handled by Mrs. Laszlo Z. Bito at 928-0869.

## Ham Operators Aid Red Cross In Fund Drive

Ten ham operators of River Edge met recently to discuss plans for mobilizing as many as possible of the town's 54 amateur operators in a common cause—the first time they have been mobilized since the 1965 power blackout. A Red Cross emergency? Not in the usual sense. Not a flood, a fire, or a shipwreck—but a month-long Red Cross drive.

Dr. Joseph E. Snyder of Columbia-Presbyterian, spokesman for the group, said he was confident that at least 40 of the town's 54 local hams could be talked out of their radio shacks to help in the townwide canvass for funds.

Participation will be an "extracurricular" portion of the services which the local amateur radio operators stand ready to provide for the Red Cross, Dr. Snyder said.

## British Male Nurse Recommends Nursing Career For Young Men

Raymond J. Bridgen of Coventry, England, a registered nurse and editor of a journal "NATNEWS" for operating room nurses, visited Columbia-Presbyterian early this month while touring hospitals in the United States. He is the winner of the Johnson & Johnson annual travel award for operating room nurses in England. As a schoolboy he joined the British Red Cross and gave volunteer assistance to the accident department of his neighborhood hospital. He completed his registered nurse training at the age of 21. Now, at 35, he is the author of numerous publications on the improvement of operating room techniques in England, particularly in the area of packet sterilization. For the past 11 years he has been operating room supervisor at Coventry & Warwickshire Hospital. He notes a decided trend in England toward the employment of men

Raymond J. Bridgen

in nursing. "In the next decade," he states, "there could well be an equal proportion of men and women on the nursing staff in such areas as operating room, intensive care and accident units."

## P&S ALUMNI DAY

*Continued from page one*

This year the Society for Clinical Surgery will hold its annual meeting April 20-22 at the Medical Center to mark the bicentennial of P&S. As Alumni Day coincides with the last day of their meeting, plans have been made to have overlapping scientific programs.

P&S Alumni and all interested Medical Center personnel are invited to attend the Society's programs beginning at 10:30 a.m. Friday, April 21, in the Alumni Auditorium and continuing in the afternoon following lunch at Bard Hall. On Saturday morning, there will be a meeting from 8:30-9:30 in the Surgical Lecture Room on the 14th floor of the Clinic building.

*Health is the vital principle of bliss; And exercise, of health.*

JAMES THOMSON,  
The Castle of Indolence

## THIS "PATIENT" CHALLENGES STUDENTS

It breathes, it sighs, it's almost human! It has a name—"Sim One" and it SIM-ulates, unbelievably, the responses of a human patient on the operating table awaiting surgery.

It is a manikin, computer-controlled, for the use of training resident physicians in anesthesiology. A few days ago it was demonstrated for the first time by the University of Southern California's School of Medicine.

Co-directors of the manikin project are USC's Dr. Judson Samuel Denson and Dr. Stephen Abrahamson.

Dr. Denson, originally from Texas, received his B.A. degree from Columbia College in 1940. He enrolled that year in the wartime accelerated program of the College of Physicians and Surgeons and received his M.D. degree in December, 1943. The following year he interned at St. Luke's Hospital, New York City.

Sim One, described as the most complex medical teaching

tool ever devised, was developed by USC medical researchers in Los Angeles, working with the engineers of Aerojet-General Corporation under a \$272,130 grant from the U. S. Office of Education.

The manikin's mouth opens and closes in normal human fashion. Inside the mouth are all the structures found in the human patient; the manikin even has vocal cords, trachea, esophageal opening and bronchial tubes. It has a responsive heartbeat and pulse beats, eyes with pupils that dilate, movements of the diaphragm and chest to simulate breathing. It provides appropriate responses to the injection of four different drugs, as well as to the administration of both nitrous-oxide and oxygen.

Dr. Denson explained that Sim One is used in training resident anesthesiologists in endotracheal intubation . . . which involves passing a semi-rigid tube into the trachea . . .

Through this tube anesthesia gases are administered directly to the lungs while controlled artificial breathing is maintained. This technique is used frequently for major surgery and it demands a high degree of skill on the part of the anesthesiologist.

The instructor can monitor each step of the performance at the control console. He may stop the procedure for discussion at any point. He may also override the automatic responses and introduce problem situations. The entire process is recorded; by means of the print-out, the performance can be checked.

The demonstrators explain that a wide variety of medical skills can be taught effectively and perhaps more quickly with the use of simulators than by any other means. It is even possible that such use of simulators could shorten the period of residence presently prescribed.

## MEDALLION

*Continued from page one*

contributions to medicine or medical education. Twenty-one such presentations were made at scientific meetings last month. They included: in the Department of Anesthesiology, Doctors John Adriani, John W. Severinghaus, Virginia Apgar. In the Department of Surgery, Doctors Arthur H. Blakemore, Frank B. Berry, Edward J. Donovan, Virginia K. Frantz, Robert S. Grinnell, Cushman D. Haagenen, John M. Hanford, Harold D. Harvey, Richard L. Moore, William B. Parsons, Louis Rousselot, John Scudder, Rudolph N. Schullinger, Albert Starr, Fordyce B. St. John, Jerome P. Webster, Arthur P. Stout and Henry S. F. Cooper.

## PATTY GOULD ON SKIING HOLIDAY

The photo at the left, taken by a roving news photographer at Jimmy Peak's Ski Lodge in Hancock, Massachusetts, shows our operating room nurse, Patty Gould, enjoying a day on the slope. The photo on the left was taken in the operating room at Neurological Institute. Patty came to us from London six months ago. Despite her handicap, which resulted from an accident at the age of six, she enjoys a full and active life at work and play, an inspiration to the patients she serves so well. "I am not brave," Patty said, "just stubborn. I don't like there to be anything I can't do."

## ART ENTRIES APRIL 17-24

Entry blanks for the 17th Annual Arts, Crafts and Photography Exhibit will be available at *Stethoscope* distribution points and at the Chaplain's Office April 17.

Contestants should return one side of the blank to the Chaplain's Office before April 24. The other part must be attached to the art work which should be delivered to the Library Annex, PH 20, April 24 or 25.

Medical Center staff and personnel are urged to participate in this annual spring event, to take place May 2-12. Participants and their friends are invited to attend the Preview Tea, May 1, 4-6 p.m., in the Library foyer, Chaplain Robert B. Reeves has announced.

## A Message From The Past That Is Appropriate Today

*Whatever your hospital job may be, healing the sick is sacred work and should never be considered menial. . . . Don't gossip, especially about patients. . . . Guard your own health, take outdoor exercise and read good books. . . .*

Almost 100 years ago, such sound advice was given to Presbyterian Hospital employees by their general supervisor and "resident directress," Miss Jane Stuart Woolsey. "A woman of aristocratic background and temperament," she had served in the Civil War with a predecessor of the Red Cross, the Woman's Central Association of Relief, before coming to Presbyterian Hospital in its early days. Now, in 1876, she was leaving, but she wrote a farewell message that is still worth reading:

"My dear friends and fellow workers:

"I cannot leave the place in which we have lived and worked so long together without a word or two. . . . I thank you, from my heart, for your long, patient, loyal service to the Hospital, to the sick and helpless poor and to myself, as your friend and teacher. . . . I believe that our aim has been one and the same: to do our very best for those whom misfortunes have thrown into our care, and to do it heartily, and as to the Lord and not to men.

"In the name of these helpless ones, and for the sake of the great Friend and Healer, I thank you for your loyal service. . . .

"You are serving one Master who is always the same. Do not count any service in His household as 'menial service,' if it is only the sweeping of a room, or the cooking of a mess of broth, or the emptying of a refuse bucket.

"In foreign countries a Hospital is called 'Hotel Dieu,' God's Hotel. Remember those guests you are entertaining. Remember more than this: that a poor hod carrier is only the type of the King Himself, and that one of the

supreme tests will be: 'I was hungry; I was in prison; I was sick; and ye ministered—or ye ministered not—unto Me.'

"Keep the standard of your work very high. . . . Never give your countenance to anything like bad or deceitful conduct or the evasion of rules or of rightful authority. . . . Walk straight forward with your faces to the light. Try to make no mistakes, but if honest mistakes happen, as they sometimes will, bear the blame cheerfully; bear anything rather than the meanness of shifting the blame to someone else's shoulders. . . .

"Never allow yourselves to tattle about your patients or to listen to those who do. The involuntary confidence of the sick as to their diseases, their personal histories, their family life and troubles, are part of their misfortune. Respect them. If they come to your knowledge, hold them sacred.

"There is a large class of persons in the great public hospitals, some of whom find their way even here, whose sickness is the direct result, not of misfortune, but of vice and shameful living. You have sometimes found it hard to work for such persons. This is natural. Nurses and attendants whose lives are clean and whose standard is high often feel it hard. They feel as if their toil were thrown away.

"Do not feel so. Be even more patient and gentle with this class. While they are helpless in your hands you have nothing to do with their guiltiness, only with their suffering—and the word or two you may find a chance to drop, or the mere sight of your good will and faithful care, though you say nothing, may do them more good than you will ever know. . . .

"Avoid petty disputes and jealousies among yourselves. . . . Help each other. Pull together, not apart. Bickering and cross-purposes in a household like this hinder business and work downward into dis-

NURSING SCHOOL'S 75th ANNIVERSARY COMMITTEE

1st row seated: Misses Florence L. Vanderbilt, Phyllis Young, Cecile Covell and Mrs. Marsha Britten. 2nd row: Miss Eleanor Lee, the late Miss Helen Young, Misses Marjorie Peto, Margaret Conrad and Elizabeth Gill. Standing: Mmes. Mary Elliott, Roanne Dahlen, Harriet Deleuran, Maria Look; Misses Margaret Wells and Lillian Oring, Mmes. Dorothy Bruenn, Elizabeth Habif and Elise Fish, Misses Janet Alley and Dorothy Rogers. Committee members not shown include Mmes. Beatrice Self, Nancy Schullinger, Patricia Smith and Mary Ericson, Misses Marion Cleveland, Martha Haber, Helen Pettit, Alberta Raynor, Dorothy Reilly, Helen Scott and Cara Shaw.

## NURSES . . .

*Continued from page one*

assistant attending physician.

Among the distinguished guests invited to the affair are Mr. Bob Hope, comedian, and Miss Florence Henderson, soprano star of stage, screen and television. The "Cliff Dwellers," harmony group at the Nursing School, will present a program of songs. Music will be supplied by Ben Cutler.

Wednesday, June 7, a tour, limited to 100 persons, will take in the State and Vivien Beaumont theatres and the Metropolitan Opera House with a visit backstage. Then to Gracie Mansion where Mrs. John Lindsay has extended an invitation for coffee in the new Susan Wagner Memorial Wing.

There will be a choice of two museums to visit and a luncheon at the Fountain Pool of the Metropolitan Museum.

Graduation of the Class of 1967 will be held that after-

Dr. Calvin H. Plimpton, President  
Amherst College

noon. Speaker will be Mrs. Lucile Petry Leone, recently retired as Chief Nurse Officer, United States Public Health Service and Assistant Surgeon General. Mrs. Leone is the only woman in this country to hold rank equivalent to a rear admiral in the Navy.

Booklets containing reservation forms for all anniversary functions requiring tickets, will be mailed to alumnae this month, according to Alberta Raynor '55, reunion chairman.

Miss Eleanor Lee will have her updated history of School of Nursing, "Neighbors 1892-1967," on sale in May. The "Alumnae Cookbook," and the 1967 issue of the Alumnae Register will also be ready before the reunion, Miss Raynor reports.

comfort and suffering for the sick.

"Save your earnings and lay them by for a rainy day. Keep yourselves always neat and bright but spend the least possible sum upon your persons.

"Your business is a very wearing and exhausting one. . . . Save your health by prudent eating and by getting as much exercise in the open air as possible. Save your time. Spend none of it in idle company or worthless reading. Try to get half an hour a day—you can do it—to give to some good book. In this way you will lay by treasures which no broken bank can ever cheat you out of. . . .

"My remembrance will always follow you and I shall rejoice to hear of your welfare and your continued faithful service here—for which, once more, I thank you, with all my heart. And now, dear friends and fellow-workers, God bless you, and farewell."

Shown here are the 1967 winners of the Louise Wise Awards given by the National Women's Division of the American Jewish Congress. Left to right, Dr. Viola W. Bernard, director of community psychiatry at Columbia University's College of Physicians and Surgeons, who will be cited for "Distinguished service to children;" Dorothy Maynor, the noted concert singer and founder of School of the Arts at St. James Presbyterian Church in Harlem, will be honored for "service to young people through the arts;" Mrs. I. W. Kahn, chairman of the campaign cabinet of the Congress women with responsibility for awards and luncheon committees; and Mrs. Burt J. Siris, chairman of the Dimona School Project of the United Jewish Appeal of Greater New York, to be honored for "service to Israel."

## Mr. Long Makes Annual Report For Year 1966

Augustus C. Long, President of the Presbyterian Hospital.

In 1966 The Presbyterian Hospital in the City of New York had the highest operating cost in its history, \$41,535,000, an increase of \$4,682,000 over 1965. Of this total expenditure \$25,924,000 was for wages paid to employees.

During 1966 the Hospital admitted 39,254 patients for a total of 462,605 patient-care days. In addition, there were 597,285 outpatient visits to Vanderbilt Clinic and to Doctors' Offices, of which 124,570 clinic visits were free.

## 25-YEAR-CLUB DINNER MAY 4

Fifty new members have now qualified for the 25-Year-Club of Columbia-Presbyterian Medical Center, bringing the total membership to 787. New members are up from 32 last year, which represents more than a 60 per cent increase, and the rate of increase is certain to be accelerated in the years just ahead, when more and more staff and personnel who came to work at the Hospital following World War II qualify. This speaks highly of our Medical Center as a good place to work and of the loyalty of all who serve it so well.

The Club will honor its new members at its annual dinner, to be held at Bard Hall on Thursday, May 4, starting with cocktails at 6:00 P.M.

The *Stethoscope* will cover these festivities and report them to you next month.

Dr. Rudolph N. Schullinger is President of the Club, Miss Elizabeth Gill and Mrs. C. Suydam Cutting are Vice Presidents, Miss Anne Walters is Secretary, assisted by Miss Marion Holland, and Charles Pope is Treasurer.

Miss E. Marion Mike and Dr. Grant Sanger head the Reception Committee this year; Dr. Thomas J. Sullivan is Chairman of the Nominating Committee; Mrs. Marion K. Thatcher and Miss Dorothy Kurtz of the Arrangement Committee; Miss Marjorie Peto of the Entertainment Committee; and Mr. August Leona of the Publicity Committee.

## Homecoming Days Celebrated By Alumni At Babies And P&S

### BABIES ALUMNI HONORS ELEVEN

The awarding of medallions to eleven persons at Babies Hospital on Friday afternoon, April 21, was one of the highlights of a weekend crowded with many interesting and significant Alumni Day events.

The program took place in the Amphitheatre of Babies Hospital and was attended by approximately 125 persons. Dr. Edward C. Curnen Jr., Professor of Pediatrics and Director of Service, Babies Hospital, gave the occasion the benefit of his gracious humor in his tributes to the recipients of the awards.

The following paragraphs tell something of the achievements of each of the eleven persons who were honored.

DR. AUDREY K. BROWN, P&S 1950, a former resident at Babies Hospital, is now Professor of Pediatrics.

*Please turn to page three*

### Hartford Grant To Develop New Diagnostic Tool

Research to design and build equipment which will scan an organ of the body for radioactivity and then draw a contour line map of the various levels of radiation—like the equal pressure lines (isobars) of a weather map—will be undertaken at the Presbyterian Hospital in New York City under a three-year \$126,424 grant from The John A. Hartford Foundation Inc., New York City.

The award was announced jointly by Ralph W. Burger, Foundation President, and Augustus C. Long, President of the Hospital. The design project will be headed by Dr. Philip M. Johnson, Director of the Division of Nuclear Medicine of the Department of Radiology. His group will include staff from Columbia University's Electronics Research Laboratories.

Radioisotope scanning has become an increasingly important diagnostic tool.

*Please turn to page six*

Here are three generations of a family dedicated to the service of humanity. In the center is Dr. Charles Hendee Smith, graduate of P&S, Class of 1901, his son, Dr. Dewitt Hendee Smith (Class of 1931) and his granddaughter, Audrey Hendee Smith, a graduate of our school of nursing.

### 325 AT P&S ALUMNI DINNER

On Saturday forenoon, April 22, the activities of the P&S Alumni Day began with a Coffee Hour and Registration, sponsored by the P&S Alumni Association, followed by a combined clinic symposium in the Alumni Auditorium on the subject, "Portal Hypertension."

The Alumni Association luncheon with a short Business meeting was then held at Bard Hall, at which the officers of the Association for 1967-68 were elected. Dr. H. Houston Merritt, Dean of the Faculty of Medicine, greeted the group.

DR. HUGH AUCHINCLOSS, JR., Associate Attending Surgeon, PH, was the luncheon speaker. He talked about his recent trip to Viet Nam, where he performed surgery in civilian hospitals.

In the evening, the cocktail party, dinner and dance were held at the P&S Club.

*Please turn to page three*

## Milton C. Mumford Elected To P. H. Board of Trustees

Milton C. Mumford, Chairman of the Board of Lever Brothers Company, has been named to the Board of Trustees of The Presbyterian Hospital.

A native of Marissa, Illinois, Mr. Mumford is a graduate of the University of Illinois. He joined Lever Brothers Company as a Vice President in 1954, and was elected director and executive vice president the following year. He became president and chief executive officer in 1959, and has served as chairman of the Board since 1964.

Mr. Mumford is presently a director of the Equitable Life Assurance Society of the United States, Crown Zellerbach Corporation and the Federal Reserve Bank of New York, and is a trustee of The Consolidated Edison Company of New York, Inc. He is also

a regular member of the corporation, National Industrial Conference Board.

Previously, Mr. Mumford was a vice president of Marshall Field and Company in Chicago and general manager of Fieldcrest Mills, Marshall.

## • WEDDING BELLS

Mrs. Margaret Reynolds, laboratory assistant in the Blood Bank, and her husband, flew to England recently to be present at the wedding of their daughter, Sheila. The newlyweds, Mr. and Mrs. James Munnely, will make their home in Ireland.

Carol Adeline Kaiser and Frank Alfred Petitto, Jr., were married on April 1 in the Trinity Lutheran Church, Glen Cove, L. I. The couple are in their final year at the College of Physicians and Surgeons.

## • FUTURE BRIDES

Elaine Judith Melnick and Dr. Ronald H. Koenig have announced their engagement. Miss Melnick, a candidate for a master's degree at New York University, was graduated from the School of Physical Therapy, P&S. Dr. Koenig will begin a residency this summer at the Albert Einstein Medical Center. A July wedding is planned.

Virginia Ann Kidd, a graduate of Columbia-Presbyterian Medical Center School of Nursing, and Albert Stuart Pasternak are engaged and are planning a wedding for August. Mr. Pasternak, who received a master's degree from Columbia University, is a teacher of science.

Alice Ruth Philips and Marvin Master have announced their engagement. Miss Philips is a graduate of the School of Nursing of Columbia-Presbyterian and is studying for a master's degree at Teacher's College of Columbia University. Mr. Master received a degree in business administration from the University of Kansas.

## • NEWBORN

Dr. and Mrs. Joel Moskowitz announce the arrival of Michelle Shari, March 19. Dr. Moskowitz is a resident in psychiatry at the New York Psychiatric Institute.

A baby girl was born to Mr. and Mrs. James Maguire on March 27. Mrs. Maguire was formerly a secretary in the EEG Department.

Mrs. June Rutkowsky, Open Heart secretary in the Blood Bank, welcomed her first grandchild March 23rd, Richard Michael, son of Kenneth and Stephanie Rutkowsky.

## • VACATIONERS

It's a continent-wide vacation tour for Mr. William Fleck, Supervisor of Maintenance and Construction, and Mrs. Fleck, to California, the State of Washington, and Montreal.

## • NOTES OF INTEREST

Mr. William Quinn's sons Richard and Billy have each received honors in the service. Richard has been awarded the Silver Star in Vietnam. Billy, who has served two years in Vietnam, has been promoted to Captain and has been transferred to England. Mr. Quinn is Assistant Supervisor, Protective Department, Presbyterian Hospital.

The Library's Spring Book Sale begins May 2. The Library is still accepting contributions of used books for the Sale and will be grateful for any books that staff members are willing to give. The Sale will be held during the Library's regular hours, from 9 to 5:30.

## NURSERY TEACHER WANTED

The Medical Center Nursery School is looking for a qualified teacher to fill the position of teacher-director as of September, 1967.

The school has morning and afternoon sessions daily five days a week. For further information, call Mrs. Roberta Rosen, LO 8-3023.

## DOINGS OF DOCTORS

DR. ANTHONY DONN, Attending Physician, Department of Ophthalmology, spoke on the "Pros and Cons of Contact Lenses" before the National Society for the Prevention of Blindness Annual Conference held in Columbus, Ohio, April 12.

DR. O. ROBERT LEVINE, Assistant Professor of Pediatrics, P&S, participated in an American Physiological Society symposium on April 17 and presented a paper, "Interstitial Pressure in the Lungs."

DR. WALTER R. KESSLER, Associate Attending Pediatrician, attended the meeting of the Nassau County Pediatric Society on April 10 and delivered a paper, "Current Concepts on the Etiology and Management of Asthma in Children."

Dr. Walter R. Kessler

Dr. David H. Baker

Dr. William A. Blanc

DR. ARTHUR GERARD DEVOE, Director of Service, Institute of Ophthalmology, presented a paper, "Management of the Edematous Cornea," at the Twelfth Annual Albert C. Snell Memorial Lecture, Rochester Ophthalmological Society, on April 6 at Rochester, New York.

DR. LAWRENCE C. KOLB, Professor and Chairman of the Department of Psychiatry, was elected Chairman of the American Association Residency Review Committee for Psychiatry and Neurology on April 8.

DR. WALTER E. BERDON, Assistant Attending Radiologist, Babies Hospital, will present two courses on Uro-Radiology, one on Ureteroceles and the other on Osseous Changes, for the Postgraduate Course of the New York Hospital, Cornell Medical Center, on April 21 and 22.

DR. DANA W. ATCHLEY, Consultant in Medicine and Emeritus Officer, P&S, is the recipient of a Mastership, conferred upon him by The American College of Physicians at its Annual Meeting in San Francisco on April 6.

DR. RAFFAELE LATTES, Professor of Surgical Pathology, has returned from Dallas, Texas, where he was a Guest Speaker at the Thirty-Sixth Annual Spring Conference of the Dallas Southern Clinical Society. As Visiting Professor, Dr. Lattes recently conducted a Seminar and lectures on "Thoracic Tumors" at the University of Montreal, Montreal, Canada.

DR. HAROLD F. SPALTER, Assistant in Ophthalmology, was a guest lecturer at the meeting of the New England Ophthalmological Society on April 3 and 4, and spoke on "Photocoagulation Therapy of Retinal Inflammatory Disease."

DR. WILLIAM A. BLANC, Director, Department of Pathology at Babies Hospital, Pro-

fessor of Pathology and Head of Division of Developmental Pathology, presented a paper at the Pediatric Pathology Club on March 9 of a new form of fetal vascular disease: "Calcified Thromboemboli Portal Vein." Other papers were presented by members of the same team including one by DR. H. JOACHIM WIGGER, Associate in Pathology, on "Carcinoma of the Liver in Giant Cell Hepatitis"; and, presented at the American Association of Pathologists and Bacteriologists, a paper by DR. RALPH A. FRANCIOSI, RITA M. FOJACQ, PETER H. TANG, and WILLIAM A. BLANC on "Myocardial Infarction in Infants." It has been found that infarction of the heart is very common in children with congenital heart disease and not associated with coronary lesions as in the adult.

Dr. Blanc was also invited as a visiting Scientist at the Laboratory of Perinatal Physiology in Puerto Rico where he operated on monkey fetuses in an attempt to study the development of some intestinal malformations.

DR. DAVID H. BAKER, Associate Professor, Director of Radiology, Babies Hospital, gave a paper, "Surgical Conditions in the Newborn Chest," on March 14 at the Charleston County Medical Society Meeting, Charleston County, South Carolina. He is participating in the 113th Annual Session of the Medical Association of Georgia, April 30 to May 2, in Atlanta, Georgia, where he is presenting a talk on "Abdominal Tumors in Childhood." He is also giving a course at the Pediatric Uro-Radiology Post Graduate Session at Cornell Medical Center, April 20-22.

DR. RUTH C. HARRIS, Assistant Professor of Pediatrics and Assistant Attending Pediatrician, gave lectures in March at three hospitals: Hartford Hospital, Hartford, Connecticut; Beth Israel Hospital; and L. I. Jewish Hospital. The three lectures were "Evaluation of Galactose Metabolism in the Neonate," "Newer Causes for Hyperbilirubinemia," and "Discussion of a Case of General Glycogenesis."

Two TV programs were taped at the Medical Center for presentation on the "Research Project" programs on NBC, Channel 4, Sunday afternoons, April 23 and April 30, at 3 p.m.

Entitled "New Hope for RH Babies," the first program included DR. KARLIS ADAMSONS, Jr., Associate Attending Obstetrician and Gynecologist, and DR. VINCENT J. FRED, Assistant Attending Obstetrician and Gynecologist. They discussed surgical procedures in utero. The April 30 program includes DR. VINCENT J. FRED and JOHN G. GORMAN, Director of Blood Bank, who discussed "Prevention of RH Disease."

Left, Dr. Hugh Auchincloss, Jr. (Class of 1942) who was speaker at the P&S Alumni luncheon April 22, and Dr. Charles A. Flood (Class of 1928) currently president of the P & S Alumni Association.

## P & S ALUMNI

*Continued from page one*

attended by approximately 325 persons—the 1967 graduates, Alumni and guests. At the dinner, the Association of Alumni of the College of Physicians and Surgeons awarded three medals, two to P&S alumni, and one to a member of the 1967 graduating class.

DR. JOHN ADRIANI, P&S 1934, Professor of Surgery at Tulane University School of Medicine, Professor of General Anesthesia at Loyola School of Dentistry, and Senior Visiting Surgeon in Anesthesiology at Charity Hospital, New Orleans, Louisiana, received the Gold Medal for distinguished service. Dr. Charles A. Flood of the faculty of Columbia University made the award. The Gold Medal is the highest award the Alumni of the College of Physicians and Surgeons can bestow upon one of its graduates.

At left, Dr. John Adriani (Class of 1934), who was awarded the P&S Gold Medal for "Distinguished Service to Medicine," at the P&S Alumni Dinner, held at the Plaza Hotel April 22, 1967.

Left to right: Dr. Edward B. Self (Class of 1936), Treasurer of the P & S Alumni Association; Dr. Frode Jensen (Class of 1937), P & S Alumni Trustee; and Mr. Morris W. Watkins, Executive Secretary of the Columbia University Alumni Federation.

MR. DAVID C. BREWSTER, a native of New York City, who will graduate with the class of 1967 of the College of Physicians and Surgeons, was awarded the Bronze Medal and a check for \$100 in recognition of his leadership and

Dr. Rudolf N. Schullinger (Class of 1923), and Dr. Girard F. Oberrender (Class of 1919), Trustees of the P&S Alumni Association.

demonstrated interest in his medical school. After graduation, he will serve his internship at Massachusetts General Hospital, Boston, Massachusetts. Dr. Flood made the award.

DR. CHARLES A. FLOOD, Professor of Clinical Medicine, Associate Attending Physician, Presbyterian Hospital, received the Silver Medal, which is presented each year to an alumnus who has rendered meritorious service to the College of Physicians and Surgeons. The award was made by Dr. Frode Jensen, Alumni Trustee and Chairman of the Awards Committee of the Alumni Association, which made the selections.

Dr. Flood, since receiving

## BABIES ALUMNI

*Continued from page one*

fessor of Pediatrics at the Medical School of Georgia. She has contributed to the knowledge of the physiologic mechanisms related to jaundice and anemia in the newborn full-term and premature infant. She is an editor of one of the leading journals in her field.

DR. HARRY BAKWIN, P&S '17, now Professor of Clinical Pediatrics at New York University, was unable to be present. He is well known for his studies on behavior disorders of childhood.

DR. MELVIN M. GRUMBACH, a graduate of P&S in 1948, was a member of the faculty for many years. As told by Dr. Curnen, "he migrated to Johns Hopkins for a lively, larval interlude under the magic influences which abound there and returned to Babies Hospital fully metamorphosed as an all-purpose endocrinologist. Like the piper of old, he attracted a large following of students, fellows and fellowettes. Patients flocked to him from far and wide, eager for analysis or adjustment of their size or sex." Dr. Grumbach is now head of the Department of Pediatrics at the University of California.

DR. J. TAYLOR HOWELL graduated from P&S in 1919. He was first appointed to the Children's Service of Presbyterian in 1926 and became a member of the present Babies Hospital and Vanderbilt Clinic in 1929. Thus his association here has extended over a span of approximately 40 years. Dr. Curnen said, "He is a senior member of that loyal and devoted band of practicing pediatricians who, over the years, have contributed so much to the teaching of Pediatrics at P&S and to the clinical reputation of Babies Hospital. Both for his own efforts and as a representative of the practitioners group we honor him today."

DR. WILLIAM L. NYHAN graduated from P&S in 1949. Going from Yale to Chicago to Johns Hopkins, where he became Associate Professor of Pediatrics, he is now in Miami, Professor and Chairman of the University Department of Pediatrics. He maintains an interest in the genetic aspects of amino acid

his medical degree in 1928, has served as an Assistant Dean, Professor of Medicine, and a member of many committees of the University. During the past two years he has been President of the Association of the Alumni of P&S. In World War II, he served as a consultant in gastroenterology to the staff of General Eisenhower. Both his father and his maternal grandfather graduated from P&S.

Dr. Edward C. Curnen, Jr., Director of Service at Babies Hospital welcomes Dr. Melvin N. Grumbach, Professor of Pediatrics, University of California.

metabolism, the chemotherapy of tumors and research on mental retardation, and is doing editing in Pediatrics.

DR. JAMES B. SIDBURY, JR., P&S 1947, followed the precedent of his father, who also graduated from P&S. He is now Professor of Pediatrics and Director of the Clinical Research Center at the Medical School of Duke University. "He has been a pioneer in research on genetic aspects of molecular biology and has used fresh approaches to elucidate the biochemical basis of inborn errors of carbohydrate metabolism."

DR. CHARLES HENDEE SMITH graduated from P&S in the class of 1901 and he must therefore surely qualify. Dr. Curnen said, "as our most hardy perennial . . . He had an important role in the planning of the present Babies Hospital and currently holds the title of Professor Emeritus of Pediatrics at New York University. In practice he was noted for outstanding clinical judgment . . . In his teaching he encouraged self-sufficiency. He even emphasized what the pediatrician's bag should contain . . . He characteristically occupied a seat in the front row at Pediatric meetings . . . We are delighted and privileged to have him in the front row at our meeting today."

DR. BENJAMIN SPOCK, who was unable to be present, received his M.D. from P&S in 1929, and had a medical internship at Presbyterian before embarking on a career which, in the words of Dr. Curnen, "brought instant pediatrics to anxious mothers throughout the world . . . His interests have by no means been confined to pediatrics but it is for his contributions to the comfort of mothers and welfare of children that we honor him today."

DR. EDWARDS A. PARK graduated from P&S in 1905 and was a member of the faculty in Internal Medicine and Pediatrics from 1909 to 1912. He then went to work under Dr. John Howland at Johns Hopkins, was called to the chair of Pediatrics at Yale in 1921, and returned to Johns Hopkins in 1927 as successor to Dr. Howland. "Although he now holds an appointment as Professor Emeritus," Dr. Curnen said, "he has continued

to be active ever since. Dr. Park's publications range over a wide variety of subjects . . . careful and scholarly studies on the growth and diseases of the bone are chiefly responsible for his world-wide reputation as a clinically oriented scientist. He is probably best known, however, especially to successive generations of students and associates, for his human qualities, his personal integrity and warmth, his delightful sense of humor . . . He has been the recipient of many honors and awards including the Kober Medal of the American Association of Physicians and the first Howland Medal of the American Pediatric Society . . . We have been informed that Dr. Park, who is an ardent fisherman, was tying his own flies one morning in his office when his secretary Miss Richards placed upon his desk a sports magazine. Shortly thereafter, he called her back. When she entered his office he said, 'Miss Richards, of all the honors that have come to me I have just received the greatest of my life.' 'Why Dr. Park, how wonderful! What is it?' she asked. 'They have just named a fly after me.'

"The next two recipients," said Dr. Curnen, "need no introduction to this gathering nor is a review of their accomplishments necessary. The names of HATTIE ALEXANDER and RUSTIN MCINTOSH will always be synonymous with Pediatrics at P&S and Babies Hospital. We rejoice that these two stars of the McIntosh era are brightly shining and clearly visible today."

Dr. Edwards A. Park

## Continued Educational Program For Doctors At Harlem Hospital

Physicians practicing in Harlem are being invited to attend a series of postgraduate lectures in medicine to be given on four Wednesdays in May by staff members of the Harlem Hospital Center. The lectures, sponsored by The College of Physicians and Surgeons of Columbia University and Harlem Hospital Center, will focus on the kinds of problems family doctors everywhere face in today's complex world: how to handle patients with psychiatric problems; birth control information; what are some of the newer techniques of treating acute surgical emergencies in older people; and, finally, how can physicians cope with complications in a patient's condition that arise out of the course of treatment? The rapid advances in drugs and other medications have made it difficult for physicians to stay abreast of unusual types of reactions which may occur in their use. Instances where "the cure may be worse than the disease" are sufficiently well-known in medical history to merit a name: "iatrogenic."

The lectures, which are open

to all physicians without fee, will be given each Wednesday at 1:00 P.M. in the auditorium of the Central Harlem Health Department, 2238 Fifth Avenue.

Dr. Theophilus W. Roberts, Director of the Pathology Department at Harlem Hospital will concentrate on such complications in the first lecture of the series, "Iatrogenic Diseases from the Pathologist's Standpoint," scheduled for May 3.

The second lecture, May 10th, will be on "Acute Surgical Emergencies in the Aged" presented by Dr. Aubrey L. Maynard, Director of Surgery and Dr. Theodore R. Stent, Director of Radiology at Harlem Hospital.

On May 17th Dr. Donald P. Swartz, Director of Obstetrics-Gynecology at the Hospital will discuss "Contraception," and on May 24th, Dr. Elizabeth Davis, Director of Psychiatry, will talk on "The Emergency Management of Psychiatric Problems by the Family Physician."

Continuing education for practicing physicians is not a new idea in medicine, but

## Harlem Hospital Blood Bank Named For Dr. Charles Drew

New York City has officially named the blood bank at Harlem Hospital Center for the late Dr. Charles Richard Drew, a Negro physician who did pioneering work in blood research at Presbyterian Hospital. Speakers at the dedication ceremonies held April 14 at the Health Department Auditorium, 2238 Fifth Ave., included Hospitals Commissioner Joseph V. Terenzio; William C. Booth, Chairman, New York

City's Commission on Human Rights; Dr. Vaughn Mason, President of the Harlem Hospital Medical Board; Dr. H. Houston Merritt, Dean of the College of Physicians and Surgeons of Columbia University; and Dr. August H. Groeschel, President of the Community Blood Council of Greater New York. The Council, along with the city and Harlem Hospital had sponsored Dr. Charles Richard

Dr. H. Houston Merritt, Dean of the College of Physicians and Surgeons, speaks at dedication ceremonies. The enlarged photograph is of Dr. Charles Richard Drew, who served with great distinction at Presbyterian Hospital.

## Radiotherapists Hold Meeting At Medical Center

Forty of the leading radiotherapists from the Greater New York area were guests of the Department of Radiology on Saturday, April 22nd.

Scientific meetings were held in the morning, and then the guests were given a personally guided tour of our new Radiotherapy Center by our radiotherapy staff.

According to Dr. Jacox, Attending Radiotherapist, this group of specialists meet twice yearly, with a different hospital serving as host. Dr. Jacox reported that this was an exceptionally interesting meeting, beneficial to our staff and to our guests.

standard procedure for most doctors throughout their lifetime. Dr. Melvin D. Yahr, Assistant Dean at the College of Physicians and Surgeons, and coordinator of the affiliation contract between the University and Harlem Hospital comments: "Medicine is undergoing such rapid changes regarding concepts of diagnosis and treatment of disease that we must use every channel of communication to keep everyone aware of these advances. The lecture series is one such channel."

Drew Week which began April 9 and culminated in the dedication ceremonies.

Dean Merritt spoke of Dr. Drew's significant contribution to research, recalling his years at Columbia where he had obtained a doctorate in medical science in 1940. He emphasized that Columbia, through its affiliation contact with Harlem Hospital, would redouble its efforts to improve the health and well-being of the Harlem community.

Dr. Drew had worked under Dr. John Scudder when he was a resident in surgery at Presbyterian Hospital. He developed large-scale methods for separating red blood cells from plasma and for storing and preserving blood. During World War II, he served as medical supervisor of the "Blood for Britain" project. He was appointed Director of the first American Red Cross Blood Bank at Presbyterian Hospital, and later became Assistant Director of Blood Procurement for the National Research Council in charge of blood for use by the United States Army and Navy.

Commissioner Booth presented a plaque to Mrs. Lenore Drew, the physician's widow, which she in turn presented to Drs. Theophilus W. Roberts and Elly Moschides, Directors respectively of the Department of Pathology and of the blood bank at Harlem Hospital.

## SQUIER CIRCUS PARTY NEEDS ADULT SPONSORS

This photograph shows Elsie Coffin and a young friend. Elsie personally began the Squier Circus Party 12 years ago. Some of her first guests now return to sponsor another child for the event that they enjoyed so much.

The Squier Circus Party will again this year provide great adventure, excitement and fun to young patients of Squier Clinic—about 55 of them—when they travel on their special subway car to the circus at Madison Square Garden on Saturday, May 6. Much of the same circus fever is certain to rub off on the adults who accompany them.

An old friend, Elsie Coffin, who retired last August, will be present to help make the party complete. Elsie, departmental secretary at Squier Clinic for much of her long career here, using her own funds and sharing her warmth of heart for the Clinic's young patients, initiated the first circus party 12 years ago, and continued it each year, until now it has become an annual tradition.

Betty McCarthy, medical secretary in Squier Clinic, is carrying on the tradition in cooperation with Elsie, and is handling the arrangements for this year's party, which promises to equal those in the past. Her most urgent need at present is to find more adults who will sponsor a child and accompany him to the party.

The circus party, you see, is a voluntary affair, organized and financed entirely by employees. Parents deliver

their children to Vanderbilt Clinic at 11:30 A.M. Saturday morning. There, each child becomes the personal charge of an adult who will pay his way into the circus and look after him until he is returned to his parents at about 5:30 P.M. Physicians, nurses and other employees who cannot personally attend the party, make up a cash fund each year that is divided among the children for spending money after they reach the circus. Elsie Coffin donated \$100 at the time of her retirement to keep this fund in existence.

IF YOU WOULD LIKE TO TAKE A CHILD TO THIS YEAR'S CIRCUS PARTY—please telephone Betty McCarthy—1941 or 1942—at once. Thirty children now have adult sponsors assured, but other children are available who would like to attend. All that is needed to give them one of the thrills of their young lives is one adult sponsor for each child. The cost of your ticket and the child's ticket will be \$4.50 each, and, this year, you'll have reserved seats.

The private subway car provided each year is arranged for by Mr. Pat Hurley, of the Transit Authority, who has been a friend of the Squier Circus Party for many years.

## GNYF KICK-OFF RALLY MAY 4

The 1967 Campaign for the Greater New York Fund will begin on May 4, at 10:00 A.M. with a kick-off rally in the 4th floor amphitheater at Babies Hospital.

Dr. C. R. Wise, chairman of the campaign at the Medical Center, will review the results of the G.N.Y.F. Campaign for 1966, and discuss goals for this year.

Mr. A. J. Binkert will be present to address the rally and to encourage our workers to continue their all-out efforts to keep Presbyterian Hospital at the top in this year's campaign.

A representative from the Fund will be present to answer questions, and to present a most interesting film, "Time For Children," which will be narrated by Lorne Green.

## 200 Guests at Bridge Party —Nurses Cleared \$13,000

An estimated \$13,000 for nursing education was realized from the ninth annual card party and raffle for the benefit of the Student Nurse Scholarship Fund.

The party, held April 19 in Maxwell Hall, was attended by more than 200 persons. Winning raffle tickets were drawn at this time.

Top prizes, first a trip to Barbados for two, went to Mrs. Russell Ulen of Manhattan, and the second trip, to Bermuda, was won by Mrs. Betty Curry, who works in the Presbyterian admitting office. Other winners: Miss Helen Hayes, Nyack, N. Y., broadtail jacket with pink collar; G. McKay, nurse in Neurological Institute, pink gilet; Miss Helen Pettit, Altman gift certificate; Miss C. Healy, nurse in Vanderbilt Clinic, Samsonite men's luggage; Dr. Harold Brown, pair of handmade needlepoint pillows; Mrs. Stephen Poch, Wycoff, N. J., Rosenfeld calf handbag; Miss Lillian Vahey, nurse in Vanderbilt Clinic, hand-crafted dish; Eileen Wiener, the Bronx, Steuben glass; Leora Williams, Englewood, N. J., Salton hot tray; Lynn Chiosichie, New York,

Fieldcrest electric blanket; Mrs. Ralph Olsen, Brightwater, N. Y., sterling necklace; Dr. Jerome Webster, electric casserole skillet; B. Ely, Babies Information Desk, four slice toaster.

Also taking prizes were Hilda Larson, Lord and Taylor gift certificate; E. S. Mills, case of Scotch; Mildred Baehr, Andrew Geller gift certificate; Lee Sinn, Andrew Geller gift certificate; Mrs. Harold Crepou, pair of theatre tickets for "I Do I Do"; Mrs. Lawrence Smith, photo portrait; Mrs. W. Rockwood, instamatic Hawkeye camera; Mrs. Barbieri, chafing dish; Mrs. Edward Self, Mrs. Sinn, and Mrs. Topken each won a transistor radio; Jean Wetzel, Italian pottery dessert set.

Prizes to student nurses for selling raffle books went to J. Margaret MacKenzie, Andrew Geller gift certificate; Priscilla Wheeler, dinner for two at Tappan Hill, Tarrytown; Polly Perkins, lounge robe; and Linda Grosselfinger, transistor radio.

The committee wishes to thank all who helped to make this event such a splendid success.

The photograph at left shows refreshments being served at individual tables, and the photograph at the right is of the tumbling container from which the prize-winning raffle tickets were drawn.

## Peter Serkin To Be Soloist At Nurses' Concert June 5

As part of the 75th Anniversary of the School of Nursing, the program of Monday evening, June 5, is of particular interest because the soloist engaged for the concert is Peter Serkin.

Proclaimed as "one of the foremost pianists of the immediate future," Peter Serkin is a tall, nice looking teenager, not quite 20 years old, who, according to *Time Magazine*, is totally indifferent to audiences. Son of Rudolf Serkin, one of the world's most respected musicians, this untraditional young artist believes that "listening to music should be the most intimate personal experience."

With Peter Serkin is the Beaux Arts Orchestra, George Mester conducting. The time:

8:00 p.m., Monday, June 5. The place: The Alumni Auditorium.

Other Anniversary events announced by Miss Cecile Covell, Chairman, were reported in the April issue of *The Stethoscope*.

## MAILBAG

We are especially grateful to you and the nurses in the Intensive Care Unit for their attention and kindness and for the devotion with which you do your work. Please accept our sincere thanks and appreciation. It is most reassuring to know that there is a place such as Babies Hospital—from the parents of a former patient at Babies Hospital.

# NURSES HOSTS TO 172 GUESTS AT SYMPOSIUM AND WORKSHOP

One of the educational programs offered by the Department of Nursing as part of its 75th Anniversary celebration was presented on March 31 and April 1, 1967. Dr. Lawrence C. Kolb, Professor of Psychiatry and Director of New York State Psychiatric Institute, and Miss Elizabeth S. Gill, Associate Dean for Nursing, and Director of Nursing, Presbyterian Hospital, were co-chairmen for the symposium and workshop on the "Multidisciplinary Group Teaching of Psycho-Social Aspects of Patient Care" sponsored by the School of Nursing and the Department of Psychiatry.

Participants in the conference were nurse educators in baccalaureate nursing pro-

Dr. Bernard Schoenberg, Assistant Clinical Professor of Psychiatry, Columbia University.

grams; medical educators, including those in psychiatric education; sociologists, psychologists, anthropologists and other social scientists interested in teaching for health care. The Columbia-Presbyterian Medical Center staff was well represented by members of many health disciplines, as were other groups within New York City community. Nationally, the group represented almost all sections of the United States. Total registration was 172.

The program described and opened for criticism some of the efforts made by a multidisciplinary faculty under the Department of Nursing to evolve new methods of teach-

Elizabeth S. Gill, Associate Dean, School of Nursing, and Dr. Lawrence C. Kolb, Professor of Psychiatry, Columbia University.

ing to improve mental health and psychiatric nursing practices within all nursing practices. This study, covering the last twelve years, has been supported in part by the Division of Undergraduate Psychiatric Training Grants, National Institutes of Health of the United States Public Health Service.

Faculty who have been teaching in the program prepared twenty papers on different aspects of the program which were distributed to participants in advance. Video tapes depicting group teaching in action, developed, were shown and discussed by a group of the faculty. The papers and tapes formed the basis for formal discussion and discussion within workshop groups.

Discussants of the papers were Arthur Carr, Ph.D., Associate Professor of Medical Psychology; Hubert O'Gorman, Ph.D., Associate Professor of Sociology, Hunter College of the City University of New York; Stanley Budner, Ph.D., director of Behavioral Research, Mental Retardation Center, New York Medical College; Mary Liston, Ed.D., Dean, School of Nursing, Catholic University of America; Sidney Berengarten, Ph.D., Associate Dean, School of Social Work, Columbia University, and Jane A. Schmahl,

M.A., formerly director of Psychiatric Mental Health Nursing Project, Department of Nursing, Skidmore College.

Miss Helen Pettit, Professor of Nursing, and Dr. Bernard Schoenberg, Assistant Clinical Professor of Psychiatry, Senior Psychiatrist in Mental Health Project, were program co-chairmen. Miss Elsa Poslusny, Associate Professor of Nursing, Director of the Mental Health Project, was chairman of the Conference Committee. Dr. Frank Jewett, Instructor in Psychiatry, was chairman of the

At left, Jane A. Schmahl, former Director for Nursing Integration Project, Skidmore College.

Rose Ann Naughton, Assistant Professor of Nursing, Columbia University.

Committee on Video Tapes, and Mrs. Elizabeth Pearson, Associate in Nursing, the Committee on Arrangements. The chairmen gratefully acknowledge the cooperation of the many patients, students, faculty members and the Mental Health Project staff whose participation in the Mental Health Project activities made this symposium possible. Gracious hospitality and comfortable arrangements were greatly appreciated by the participants.

Dr. Mary F. Liston, Dean, School of Nursing, The Catholic University of America.

Dr. Seymour Perlin, Professor of Psychiatry, Johns Hopkins University School of Medicine, and Dr. Edward W. Lehman, Research Fellow in Medicine, Cornell University Medical College, discuss a paper with one of the participants.

## NURSING ALUMNAE ARE INVITED TO VISIT GIFT SHOP WHEN HERE

When you drink a toast to the 75th Anniversary of the Columbia University School of Nursing, be sure to drink from an anniversary cup with the PH pin emblem. Or with the blue and white stripe.

When you write your friends, "Having wonderful time attending Alumnae Association events," be sure to write on anniversary note paper with the etching of the Presbyterian Hospital doorway or the view of the Medical Center from the Bridge. The stationery was designed especially for this occasion by Bob Barton, artist with Rothchild Printing Company.

To celebrate the 75th Anniversary all year 'round, buy anniversary pin trays, ash trays, hot-plate tiles and playing cards. The playing cards bear the design of the 75th Anniversary seal, devised by Miss Cecile Covell, class of '26, Chairman of the event; the tiles are reproductions of the 1962 Medical Center Christmas card, executed by Waldimar Neufeld.

The several souvenir items offered for sale by the School of Nursing Alumnae Association are:

Playing cards, double deck \$3.75; Cup and saucer with pin emblem \$1.50; Cup and saucer with blue and white stripe \$1.25; Box of note paper with etchings of PH doorway and Bridge view of Medical Center \$2.75; Ash tray \$1.00; Pin tray \$0.75; Hot-plate tile with painting of Medical Center and Bridge \$0.75.

By the first of April more than \$5,000 worth of these

souvenir items had been sold. Items are on display in the main PH corridor, and may be purchased at any of the various nursing offices or the bookstore of the Medical Center.

Alumnae are sure to notice a certain detail in the drawing on the ash trays—the little lighthouse under the bridge. "We who grew up in the PH family have a very warm spot in our hearts for the little red lighthouse," said Mrs. Mary H. Ericson, Senior Supervisor, Research and Development, who is in charge of sales for the Alumnae Association.

There has recently been a very gratifying rise in Alumnae Association membership, undoubtedly due to the activities of the 75th Anniversary Committee. Of the 4,000 living alumnae, nearly 2,800 are active members, a rise of about 5 percent since 1964.

Reunion events for the first week in June were described in detail in the April issue of the *Stethoscope*.

A visitor inspects Anniversary souvenir display in P.H. lobby.

## Our Nurses' Recent Bake Sale Raised A Great Deal Of Dough

Graduate and Student Nurses, and their friends in many other departments of the Hospital, realized \$760.00 at a Bake Sale on Friday, April 14. The money raised will be used toward expenses for the 75th Anniversary Celebration of the School of Nursing

in June, and the Nursing Department wishes to thank all who contributed or purchased the cakes and other goodies.

While the Bake Sale was organized and executed by a committee of the Nursing Department under the direction

As you can see, there were many busy hands employed to make the bake sale such a great success.

It was a happy morning for boys and girls at Babies Hospital when Dick Van Arsdale, defensive ace of the New York Knickerbockers basketball team visited them. And Dick seemed to enjoy the experience almost as much as the children. His visit to the hospital was sponsored by the New York Heart Association.

## HARTFORD GRANT

Continued from page one

tant diagnostic tool in medicine. The principle is simple: Radioisotopes of chemicals are administered to a patient and their uptake in various organs is monitored by scanning equipment. The isotopes "broadcast" their distribution and concentration, just as the radium dial on a wrist watch hidden in a drawer can make a Geiger count buzz when it's held nearby.

What makes the isotopes interesting diagnostically is that their behavior in the body is selective. They tend to concentrate where there is a high level of cellular activity—rapidly growing or actively metabolizing cells. They can indicate when an organ is growing or has been pushed out of place by a tumor. They can indicate abnormalities in the uterus of a pregnant woman, or show a blood clot forming near the heart. They can, by their absence, indicate particular areas of an organ which may be poorly nourished due to a restricted blood flow.

The information sensed by the scanners currently available may be displayed in a number of ways, ranging from

a lifesize photograph to a set of numbers generated by a digital computer. According to the investigators, the defect of the first, and by far the most popular method, is that the photo lacks quantitative information. It is a two-dimensional scene, easily recognized but essentially hazy, not able to tell you all you would like to know. The numbers can, but for many diagnosticians the analysis of this fine mesh of non-visual information may be too laborious or time-consuming.

Dr. Johnson and his group propose to make use of currently available scanning machinery, but to build into it a system of magnetic recorders, filters, and play-back equipment that will preserve both picture and information. The tape will record the pulse activity as the scanner moves back and forth across the body surface over the organ. The filter will process these signals to smooth the data and suppress artifacts. The playback equipment will then draw the

## NEW TRUSTEE

Field's textile manufacturing division.

During World War II, he served as a commander in the U. S. Navy, acting as a special assistant to the Chief of Naval Personnel on Management and Organization Problems. He was awarded the Legion of Merit.

Mr. Mumford's interests other than business are largely concerned with education. He is chairman of the Ford Foundation's Educational Facilities Laboratories, Inc.; a director of the National Merit Scholarship Corporation and National Educational Television; a trustee of The Nutrition Foundation and a member of the National Advisory Council of International Social Service—American Branch. He is also a member of the Board of Overseers of the Center for the Study of Violence, Brandeis University, and a member of the National Council of the Foreign Policy Association.

Mr. Mumford is a resident of Darien, Conn., and is a former chairman of the Board of Education there. He and Mrs. Mumford, the former Dorothea Greene, have three children.

Mr. Mumford's election to the hospital Board at its April meeting, was announced by Augustus C. Long, hospital president.

map: As the processed tape whirls through at high speed, each segment of it representing a linear scan of the organ, a recording pen will draw a line if and only if the level of radioactivity falls within fixed limits. Repeated playbacks of the tape with different limits will then gradually fill in a contour map of the organ, each contour line representing all those points where the radioactivity level is the same. Dr. Johnson envisages a system in which only three playbacks using three pens filled with differently colored inks will be sufficient to draw a ten-contour-level map of the organ.

This is a facsimile of an isotope photo of the lungs, seen from the front. Absence of lower part of left lung indicates poor circulation in that area. Little or no isotope is concentrated there, so picture is blank.

# 1967 VOLUNTEERS TEA BEST EVER

Once a year the Presbyterian Hospital pauses to say Thank You to its several hundred Volunteers. This is the official expression of gratitude that is felt throughout the Medical Center every day of the year.

The Annual Awards Tea for Volunteers was held at Maxwell Hall on Thursday afternoon, April 6, and in spite of rainy weather approximately three hundred Volunteers and one hundred other guests attended.

Mrs. Marguerite Stein, Director of Volunteers, introduced Mrs. Howard G. Bruenn, Chairman of the Library Committee, member of the P.H. Auxiliary and an in-service Volunteer, who presided during the program.

Dr. Carl R. Wise, Assistant Vice President of Presbyterian Hospital, in his Presentation of Volunteers, told of the unique role which the Volunteer workers play. The regularly employed workers consider that they are assigned to specific work,

Dr. Carl R. Wise

Mrs. Howard Bruenn

Mrs. George Damansky

In giving awards for volunteer service, Mrs. Howard Bruenn and Mrs. Marguerite Stein expressed appreciation of the Presbyterian Hospital to the many Volunteers of 1966.

whereas, in contrast, the Volunteers offer services which are flexible. They are ready to apply their energies wherever they are most needed.

There were 1,088 Volunteers in 1966, who gave a total of 124,609 hours of service, the equivalent of the yearly work of 57 full time employees.

"We feel that our Volunteers at the Hospital really offer service that we can't get any other way," Dr. Wise said. "There's practically no area of the Hospital that the Volunteers don't serve." As an indication of the breadth of their abilities, he had filled two pages with the lists of separate types of work they perform.

Mrs. Bruenn stated that this was the fourteenth annual tea for Volunteers. She asked whether any persons were present who had attended the first tea, and several hands were raised in response.

The entertainment of the afternoon was an abbreviated presentation of "H.M.S. Pinafore" by members of the P&S Club. It was directed by Mr. Jerome Liebowitz, with Mr. Allen Steer at the piano. The production had been given last November in Bard Hall, and warmly received. With cleverly written transitions, the streamlined version came through in a way that would have delighted Gilbert and Sullivan—animation, voices, audience response and all.

At the Volunteers' Tea a gay capsulized version of H.M.S. Pinafore was presented by members of the P & S Club, directed by Mr. Jerome Liebowitz.

The awards to Volunteers were distributed by Mrs. Breunn and Mrs. Stein, following the program. Presbyterian Hospital Award Pins were presented to 66 Volunteers who completed their first 100 hours of service.

Honor Volunteers of 1966 were Mrs. Stella Brown, who has served 10,317 hours, and the following six Volunteers who gave more than 1,000 hours each during 1966: Mrs. Ida Rosch, 1,858; Mrs. Oscar Ayala, 1,856; Miss Gloria Jimenez, 1,515; Miss Helen Harris, 1,410; Miss Esther Pardo, 1,403; Mrs. Fred Iradian, 1,166.

## PRESIDENT'S REPORT

*Continued from page one*

and many others paid less than cost for clinic visits.

To meet these and other costs, the hospital required a daily average of \$3,200 in gifts and income from endowment to cover the year's operating loss of \$1,173,000.

Mr. Long stated that every effort was being made to hold costs at a minimum compatible with efficient operation and general excellence. As a result, many of our rates for services are considerably below those for comparable hospitals in New York City. For example, our room rates are about 15 per cent below the average for these hospitals.

Employees increased by 257 during 1966, raising our employee roster to 4,430. Much of the increased operating cost was due both to increased personnel and to increased benefits for employees.

Mr. Long reported that the new addition to Babies Hospital is expected to be completed early in 1968, and that the new Physicians' Office Building for Ambulatory Outpatients will be completed late in 1968. At year's end \$4.8 million had been given or pledged for these two buildings, and an additional \$8.8 million in gifts are needed. The financing of these two projects are now our most important capital goal.

Four Volunteers have given more than twenty consecutive years of service: Mrs. Ethel Herrmann, Miss Eva Woythal, Mrs. Ralph H. Boots, and Mrs. George A. Perera.

One hundred fifty-nine Volunteers have given five or more consecutive years of service.

Tea was served before and after the program. Those who served were: Mrs. DeWitt Bleeker, Mrs. Howard Bruenn, Mrs. Arthur DeVoe, Mrs. Jose Ferrer, Mrs. Lawrence Kolb, Mrs. John Schullinger, Mrs. George Damasky, Miss Milda Garner, Miss Eugenia Halm, Miss Sally Haz-

Dick Deadeye and Captain

Little Buttercup

ard, Miss Dorothy McCann, Miss Rita McDonald, Miss Diane Pollard.

## CORNERSTONE

*Continued from page one*

to make the new addition possible will be present to participate in this significant event, which marks another step forward in the growth of Babies Hospital.

There will be a short ceremony outside to commemorate the placement of the cornerstone, then hosts and guests will go to the Doctors' Dining Room where a tea has been planned.

The Cornerstone Placement Ceremonies are to begin at 3:30 p.m.

The new addition to Babies Hospital will be used primarily for the many sophisticated laboratories and equipment now needed in pediatric patient care, and for the tremendous amount of pediatric research that is now being carried out at Babies Hospital which, as most of you know, has become a complete medical center for children.

## In Memoriam

Mrs. Arlene Daniel Myers

Mrs. Arlene Daniel Myers, Staff Nurse in Sloane Hospital, New Jersey, died on Saturday, April 8. She was Head Nurse in Labor and Delivery Area, in Sloane, a position which she has held since July 2, 1965.

Mrs. Myers graduated from Somerset Hospital School of Nursing, New Jersey, in 1962 and obtained her B.S. degree from Teachers College, Columbia University, in 1965. Her husband, Dr. Jack Myers, presently a Resident Doctor in Roosevelt Hospital, New York City, is a recent graduate of P&S. Her parents live in Raritan, New Jersey. Funeral services were held on April 12 at Somerville, New Jersey.

Dr. Joseph J. McDonald

Dr. Joseph J. McDonald, Dean of the Medical School of the American University of Beirut, Lebanon, died on April 11 in Beirut. Dr. McDonald received his M.D. from Northwestern University in 1940, and in 1947 received a Doctor of Medical Science degree from Columbia University. After serving as Professor of Clinical Surgery and Attending Surgeon at Presbyterian Hospital, and Visiting Surgeon at Delafield, he left New York in September, 1953, to accept his position in Lebanon.

August Belmont

# OUR FLAG

MANY people will be flying flags on Tuesday, May 30—Memorial Day. Flags will rise over business buildings, flags will appear from the porches of private homes, at the entrances of parks, and in the windows of automobiles.

But the flag of the Columbia-Presbyterian Medical Center flies every day, as proudly as on May 30.

Shown in action in the accompanying photos is the keeper of the flag at the Medical Center—Woodrow Scott. Every day the flag which “Scottie” (as he is affectionately known by his many friends) cares for is seen by thousands of people for miles around.

Scottie came to New York from his native South Carolina in 1947 and began working that summer for the Presbyterian Hospital. He was born on Johns Island, just south of Charleston, S. C. In a few weeks Scottie will complete twenty years of service for Presbyterian, and during sixteen of those years he has been in charge of raising the flag daily.

In order to accomplish this early morning ritual, he takes the main Presbyterian elevator all the way to the 22nd floor, then walks three flights up the spiral stairs to the roof.

During his early years of flag raising it is possible that Scottie sometimes wondered whether the people twenty-five stories below paid any attention to whether the flag was hung properly. If so, his doubts were dispelled quite suddenly on a certain cold and stormy morning, a few years ago, when he inadvertently raised the Stars and Stripes upsidedown. Scottie recalls:

“Before I even tied the rope in place, the switchboard had received three telephone calls from the Jersey people across the river.”

In the summertime, he says it’s “a nice job.” But in the winter, the winds nip his ears and chill his hands. “Sometimes the snaps that hold the flag are frozen and I use my

## Mrs. Esther D. Kralick To Retire – Farewell Tea Planned For May 24

Mrs. Esther D. Kralick, who has been active in the Columbia-Presbyterian Development Fund Program since January, 1963, will retire on May 31. Mrs. Kralick started her duties as a list supervisor, but is now a research secretary, working in the Columbia-Presbyterian Medical Center Fund office, on the fourth floor of Babies Hospital.

Mrs. Esther D. Kralick

Mrs. Kralick has had an unusually interesting life, having lived for 12 years in Prague, Czechoslovakia, where, until

the war, her husband was a commercial aide in the office of the American Consulate General. Much of her early life was spent in St. Louis, where she was born.

One of the high points of Mrs. Kralick’s career were the years she spent as secretary to Theodore Dreiser, and she is mentioned frequently in the biography, *Dreiser*, written by W. A. Swanberg and published by Charles Scribner’s Sons in 1965. Mrs. Kralick furnished some of the pictures used in this definitive biography of Mr. Dreiser.

Besides her great interest in traveling, current events and “people in all their phases,” Mrs. Kralick writes a column for her church’s newspaper, and she also takes an active interest in politics.

When asked what she plans to do after retirement, Mrs. Kralick said she just might write the story of her life. It will make a fascinating book, and *The Stethoscope* wishes her well in this project.

A tea will be given for Mrs. Kralick on May 24.

## Becky Carlton Makes A Record “Organ Melodies”

Becky Carlton

Becky Carlton, secretary in the office of the assistant treasurer, has busy agile fingers. She applies them not only to her secretarial duties but also to making lovely music on piano and organ as well.

Miss Carlton’s music is available on a new record called “Organ Melodies,” cut by the Gospel Recording Company of Brooklyn, N. Y.

In fact, the appearance of this disc brought her accomplishments to the notice of her coworkers who hadn’t realized that her talents were so widely recognized.

As a child, Miss Carlton studied music in North Carolina. At an early age she became pianist with a children’s choir in her hometown church and later became organist there. Advancing in her studies, she came to New York to continue music lessons and to do concert work.

Currently, she is extremely busy in many directions. Playing background organ music for gospel recordings occupies her Saturdays and she has returned to City College in the evening to take courses toward a B.S. degree in psychology under the Weinberg Plan.

One of the greatly loved people in our hospital family is Margaret Priddy, and one of her great admirers is Dr. Joseph E. Snyder, Assistant Vice President and Director of Services at Vanderbilt Clinic. This photograph shows them together at the retirement tea given for Miss Priddy recently.

## SEE ART SHOW MAY 2-12

Employees are invited to attend the 17th Annual Arts, Crafts and Photography Exhibit at the Library Annex, P.H. 20. This promises to be an exceptionally fine display of talent from the Medical Center, and the many fine works of art will be on display from May 2 through May 12.

## P&S Awards The M. D. Degree To 116 Members Class Of '67

"In our profession it is a custom, established more than 2000 years ago, that no one may be admitted to its honors, who has not first expressly taken upon himself its obligations. Now, therefore, in behalf of your elders, I call upon you to take, as we have taken before you, the oath which bears the name of Hippocrates. The language in which our predecessors first pronounced it is no longer spoken; the very gods whom they called to witness have been discarded, but

still we can find no nobler words than the most ancient in which to hand down the tradition of our calling:

*"You do solemnly swear, each man by whatever he holds most sacred, that you will be loyal to the Profession of Medicine and just and generous to its members; that you will lead your lives and practice your art in uprightness and honor; that into whatsoever house you shall enter; it shall be for the good"*

## RICHARD K. PAYNTER, JR. IS ELECTED P. H. TRUSTEE

Richard K. Paynter, Jr., Chairman of the Board of New York Life Insurance Co., has been elected to the Board of Trustees at Presbyterian Hospital, it was recently announced by Augustus C. Long, Hospital President.

A native of Washington, D. C., Mr. Paynter is a graduate of Princeton University. He joined New York Life Insurance Co. in 1934, and was elected financial vice president in 1949. He became executive vice president in 1954; a director in 1958 and chairman and chief executive officer in 1962.

Mr. Paynter is a trustee of Consolidated Edison Company of New York, Inc., and a director of The Chemical Bank New York Trust Company, Otis Elevator Company, Pennsylvania-Reading Seashore Lines, and Delaware and Bound Brook Railroad Company.

He is a director of the Com-

merce and Industry Association of New York, the Economic Development Council of New York City, Inc., the Josiah Macy, Jr. Foundation, Princeton Inn, and the Life Insurance Association of America.

Mr. Paynter is a resident of Princeton, New Jersey. He and Mrs. Paynter, the former Mary Jane Howard, have two children.

Richard K. Paynter, Jr.

## In Memoriam

ELEANOR LEE

Miss Eleanor Lee, Professor Emeritus of Nursing and until her retirement in June, 1961, Associate Dean for Nursing, Faculty of Medicine, Columbia University and Director of Nursing at the Presbyterian Hospital, died suddenly on May 31, while visiting at Maxwell Hall.

Miss Lee, 71, was born in Jamaica Plain, Mass., and was graduated from Radcliffe College in 1918. During the summer of that year, she attended

## Nursing School Graduates 92 In Colorful Garden Exercise

"We are gathered here today to honor ninety-two members of this graduating class as they take leave of their teachers and college to embark on their careers in one of the most worthy professions serving mankind."

In rapt attention, the ninety-two members of the 1967 class, Department of Nursing, Faculty of Medicine, Columbia University, listened to the words of Augustus C. Long, President of The Presbyterian Hospital, at the graduation

exercises.

The grassy court with beautiful floral decorations provided the ideal setting for the memorable occasion on this afternoon of June 7.

The commencement address was given by Mrs. Lucile Petry Leone, who was introduced by Mr. Long as "this most distinguished Nurse, teacher and leader in the field of health, whose accomplishments should be an inspiration to all." A Professor of Nursing at Texas

## More Than 200 Friends Of B. H. Attend Cornerstone Ceremonies

Mrs. John V. Lindsay, wife of the Mayor of New York, honored the Columbia-Presbyterian Medical Center on the afternoon of May 18 by laying the cornerstone for the new addition to Babies Hospital.

Mr. Augustus C. Long, President of the Presbyterian Hospital, presided over the outdoor ceremony in which General Lucius D. Clay, Dr. George A. Perera and Mrs. Lindsay participated. Several trustees of the Medical Center were present among the crowd of more than 200 persons.

The new addition is a two-story wing adjoining Babies Hospital on the south and extending along the Broadway block toward 165th Street. It will be used primarily for laboratories and equipment now needed in pediatric patient care and research.

"When we look at this great medical center for children of all ages," Mr. Long said, "it

Mrs. John V. Lindsay, wife of the Mayor of New York City, long a friend of Babies Hospital and Columbia-Presbyterian Medical Center, placed the cornerstone in the new addition to Babies Hospital.

is difficult to believe that it all began almost a hundred years ago, when five dedicated women, Mrs. Andrew H. Smith, Mrs. Thomas E. Satterthwaite, Mrs. James Lenox Banks, Dr.

Sara J. McNutt and Dr. Julia G. McNutt, met to sign papers of incorporation for Babies Hospital of the City of New York. Their purpose was to

## • NEWLYWEDS

Mary Elizabeth Nolte and Dr. Robert Montague Wein were married on May 7 at Garden City, L. I. The bridegroom was graduated from the Columbia University School of Oral and Dental Surgery and is on the staff of the Columbia Dental Faculty.

Louise Ann Durbin, a graduate of Columbia University School of Occupational Therapy, and Dr. Oliver Quentin Hyder, resident in psychiatry at the New York State Psychiatric Institute at Columbia-Presbyterian, were married in Larchmont, New York, on May 7.

Kathleen P. Corcoran, R. N., Harkness Pavilion, and Andrew Farrelly were married on April 22.

Martha Zanickowsky, Supervisor at Babies Hospital, and Robert E. Burns were married on June 3.

Barbara Baker, Head Nurse at Presbyterian Hospital, was married on June 10 to William Happer, Jr., Assistant Professor of Physics at Columbia University, at Broadway Presbyterian Church.

Sharon Smith, R.N. of Babies Hospital, was married on June 10 to Dr. Mohammad Marashi, Pediatric Resident, Flower & Fifth Avenue Hospital.

## • FUTURE BRIDES

Celia Jane Eliot and Richard Peter Fried are planning a summer wedding. Both attend the College of Physicians and Surgeons of Columbia University.

Diane Joan Eder and Dr. Theodore Pincus will be married on July 2. Miss Eder attends the College of Physicians and Surgeons, and Dr. Pincus, who graduated from Columbia College and the Harvard Medical School, is an intern in surgery at Massachusetts General Hospital in Boston.

Susan Parker of the Social Service Department is engaged to Frank Proietti, a Systems Engineer with IBM. The wedding is planned for early fall.

Ann Preston Matheson and Thomas V. Santulli, Jr. are engaged and will be married September 9. Mr. Santulli is the son of Dr. Thomas Santulli, Associate Professor of Surgery of P&S.

Judith Swann Sullivan and John Gorham Palfrey, Jr. are planning a wedding for September. The bride-to-be will attend the Columbia College of Physicians and Surgeons in the fall. Mr. Palfrey will study biology at Rockefeller University.

## • NEW ARRIVALS

Their first child, Dawn Marie, was born May 13 in Sloane Hospital to Mr. and Mrs. Ralph Durso. Mr. Durso is in the Maintenance and Construction Department.

The arrival of a baby boy Jeffery Lance was announced by Lance Darby and Paula Darby on May 18. Mrs. Darby is a Medical Secretary at the Medical Information Department.

## • NOTES OF INTEREST

The staff of the Milbank Library would like to thank everyone who helped to make our annual Spring Book Sale such a success. We were able to make over \$200, in slightly less than two weeks.

Theresa A. Mahoney, daughter of Mrs. Honora Mahoney, secretary to Dr. Carl R. Wise, graduated from New Rochelle Hospital School of Nursing on June 9.

Some recent promotions: Lillian Vahey to Senior Supervisor, Vanderbilt Clinic; Catherine Boyer to Evening Supervisor, Medical-Surgical Unit; Christine Clark, Head Nurse, Medical Surgical; Mary D'Agostino, Head Nurse Obstetrics; Mary Whelan, Evening Head Nurse, Obstetrics.

Barbara Little, Supervisor in Vanderbilt Clinic, has been in the Hospital since February 27, 1967. All her friends especially from the Clinic, wish her well.

# DOINGS OF DOCTORS

DR. EDWARD BOWE, 5th year Resident in Obstetrics and Gynecology, was invited to appear with Dr. Karlis Adamsons on a TV Network Program on "Sampling Fetal Blood to Assess the Conditions of the Fetus," at the Annual Meeting of the American College of Obstetricians and Gynecologists in Washington, D. C., April 15-20.

DR. ANTHONY DONN, Attending Physician, Institute of Ophthalmology, participated in a panel discussion, "Corneal Edema—Medical and Surgical Aspects," at the May 1st meeting of the New York Society for Clinical Ophthalmology, New York, N. Y.

DOCTOR VIOLA W. BERNARD, Director, Division of Community Psychiatry, gave a series of guest lectures, during recent weeks. She was guest lecturer on *Social and Community Psychiatry* in Los Angeles, California, at the Cedars-Sinai Medical Center, at the School of Public Health of the University of California, and in the Department of Psychiatry, U. of C. Throughout the week of April 24 she lectured in the teaching program of the Preventive Psychiatry Division of the Menninger Foundation Clinic. On May 4 she conducted a workshop on "Adoption" at the Annual Meeting of the American Psychoanalytic Association in Detroit.

DR. SAICHI MISHIMA, Assistant Professor in Ophthalmology, presented a paper, "A Study of Corneal Endothelium," on May 10 at the Fourth International Corneal Biophysics Workshop, Los Angeles, California.

At the Annual Meeting of the Surgical Alumni of Presbyterian Hospital on April 28, DR. ERLE PEACOCK, Professor of Surgery, University of North Carolina School of Medicine, delivered the 9th annual Stevenson Memorial Lecture. The lecture was entitled "A Biological Approach to the Control of Scar Tissue." The Stevenson Memorial Lecture was started after the untimely death of Dr. Thomas W. Stevenson, Jr. in 1958.

The list of speakers has included: Dr. Sumner Koch, Dr. Alan Wakefield, Dr. Paul Weiss, Dr. Alexander Bearn, Dr. George Palade, Dr. Joseph Murray, Dr. J. William Littler, and Dr. Ivan W. Brown.

DR. ROBERT S. JAMPEL, Assistant Attending Ophthalmologist, lectured on *Pupillary Abnormalities Associated with Extraocular Muscle Paralysis of Midbrain Origin* at the University of Pennsylvania Fifth Colloquium on the Pupil on May 1.

DR. HIRAM HOUSTON MERRITT, Dean of the Faculty of Medicine, Columbia University College of Physicians and Surgeons and Vice President in charge of Medical Affairs at Columbia University, who is a native of North Carolina, was awarded, on May 16, by North Carolina's Governor Moore, the North Carolina Award, the highest honor the State can bestow on a private citizen, made for distinguished achievements by North Carolinians living and working out of the State.

Dr. Merritt serves on the Visiting Committee of the medical schools at Duke University and the University of North Carolina.

His citation stated, "His prestige as a consummate man of medicine has brought honor to his native North Carolina."

Dr. Merritt has won international fame as a neurologist. He undertook much of the clinical investigation which resulted in the development of dilantin, for the past 25 years

considered one of the most valuable drugs for the control of epilepsy. He and his colleagues have also done successful research on many other diseases of the nervous system.

Dr. Merritt was one of five North Carolinians to receive the North Carolina Award this year.

DR. PAUL J. POPPERS, Assistant Attending Anesthesiologist, addressed the first combined staff meeting of the Departments of Anesthesiology, Pediatrics, and Obstetrics & Gynecology of the Hadassah University Hospital and affiliated hospitals at the Hebrew University Medical School in Jerusalem, Israel. The title of his paper was "The Effect upon Fetus and Newborn of Drugs Administered During Labor." He also lectured at Tel-Aviv University Medical School, and visited the Weizmann Institute of Science at Rehovoth.

DR. GORDON I. KAYE, Assistant Professor of Pathology, presented a paper, "Effects of Perfusion with  $Ca^{++}$ —Free Medium on the Corneal Mesothelium," at the Association for Research in Ophthalmology Annual Meeting, Clearwater, Florida, May 1 and 2.

DR. GEORGE F. CRICKLAIR, Professor of Surgery and Director of the Plastic Surgery Service, was chairman of two sessions for the New England Plastic Surgery Society in Worcester, Mass., in April; one panel on cosmetic rhinoplasty and one on the problem of the outstanding ear. He presented a paper on "Why Repair a Cleft Lip" at the American Cleft Palate Association meeting in Chicago in April. He also presented a paper on "Malignant Benign Lesions of the Head and Neck" at the Society of Head and Neck Surgeons in New York in April.

DR. WALTER R. KESSLER, Associate Attending Pediatrician, gave a lecture, "Atopic Dermatitis in Children," at the Postgraduate Course in Allergy, Institute of Allergy, Roosevelt Hospital, May 11.

DR. DAVID M. KOZART, Post Doctoral Fellow, Department of Ophthalmology, delivered a paper at the Association for Research in Ophthalmology Annual Meeting in Clearwater, Florida, entitled "Regional Morphologic Differences of the Ciliary Epithelium in the Adult Albino Rabbit: An Electron Microscopic Study."

DR. PHILIP FELDMAN, Resident in Dermatology, received first prize for his case presentation at the Resident's Night meeting of the Dermatology Section of the New York Academy of Medicine on May 2.

DR. FRANK M. POLACK, Corneal Center, Department of Ophthalmology, gave a paper, "Bacteriological Study of Eye Bank Eyes," at the meeting of the Ocular Microbiology Group at Gainesville, Florida, April 27-28.

DR. WILLIAM B. SEAMAN, Director of Service, Radiology Department, has been made president of the Society of Chairmen of the Academy of Radiology Departments.

A paper by four members of the Department of Obstetrics and Gynecology, DRs. MICHAEL LEVI, INES MANDL, MARY PARSHLEY and DONALD P. SWARTZ, entitled "Antibody to Papillary Cystadenocarcinoma of the Ovary" presented at the III Panamerican Cancer Cytology Congress received the "Award for Best Scientific Paper presented at the Congress." The paper was given by Dr. Levi.

Left to right, Dr. George R. Perera, Associate Dean, Faculty of Medicine, Columbia University College of Physicians and Surgeons; A. J. Binkert, Executive Vice President, and Augustus C. Long, President, The Presbyterian Hospital of the City of New York.

## CORNERSTONE CEREMONIES

*Continued from page one*

provide medical and surgical aid to infants of the poor families of New York."

Mr. Long referred to former years when more than one-fourth of all recorded deaths in the city were babies under the age of one year, and more than one half were of children under three.

General Clay, Chairman of the Columbia-Presbyterian Medical Center Development Committee, stressed the great

August Belmont, Chairman of Babies Hospital Fund.

importance of advancing the work of Babies Hospital and expressed his confidence that the fund drive will be successful.

For the completion of the ceremony, Mr. Long requested the help of Mr. August Belmont, Chairman of Babies Hospital Fund; Mrs. Allen F. Maubly, President of the Board of Women Managers of Babies Hospital; Dr. Edward C. Curnen, Jr., Director of Service, Babies Hospital; and Mr. A. J. Binkert, Executive Vice President, The Presby-

Refreshments were served in the Doctors Dining Room.

terian Hospital. At this point the audience was pleased to witness the official act of dedication, the laying of the cornerstone, performed by Mrs. Lindsay.

Each of the many persons present no doubt had a personal interest in this ever-expanding Medical Center. Near the front of the audience was a sharply dressed gentleman "91 years young," J. W. Horner, who has been a trustee from the days before the

Dr. Edward C. Curnen, Professor of Pediatrics, College of Physicians and Surgeons, and Director of Pediatric Services at Presbyterian Hospital, Mrs. Allen F. Maubly, President of the Board of Women Managers of Babies Hospital, and General Lucius D. Clay, Chairman of the Columbia-Presbyterian Medical Center Development Committee.

## P&S Awards Medallions On May 16

In recognition of their achievements in the field of neurosurgery, three persons were awarded silver medallions by the College of P&S at the 17th Annual Charles A. Elsberg Lecture on the evening of May 16 at the Alumni Auditorium. Dr. J. Lawrence Pool, Professor of Neurological Surgery, P&S, made the awards. The recipients were Dr. F. John Gillingham, Professor of Neurological Surgery, Royal Infirmary, University of Edinburgh; Dr. John E. Scarff, Professor Emeritus, Neurological Surgery, P&S; Dr. Fritz Cramer, Consultant to Vocational Rehabilitation Administration, Washington, D. C.

In addition, eight bronze medals were awarded to alumni of P&S, who are either former faculty members or former residents at P&S, and who are now professors of neurosurgery: Dr. Leo M. Davidoff, New York, New York; Dr. James G. Galbraith, Birmingham, Alabama; Dr. Manuel Guzman-Lopez, Santurce, Puerto Rico; Dr. Charles E. Brackett, Kansas City, Kansas; Dr. William Kemp Clark, Dallas, Texas; Dr. Robert C. L. Robertson, Houston, Texas; Dr. Joseph Ransohoff, New York, New York; Dr. Hubert L. Rosomoff, New York, New York.

Following the awarding of the medallions, Dr. Pool, in turn, was awarded a distinguished service plaque by the College and Staff of The Neurological Institute, presented by Dr. E. B. Schlesinger for Neurological Surgery and Dr. Rollo Masselink for Neurology.

Hospital moved to its present location. At the rear of the crowd, stationed between the dedication scene and the passing traffic, was a tall young Patrolman, E. J. Regan, 34th Precinct, who commented, "I know this hospital well. Two of my children were born here."

Dr. George A. Perera, Associate Dean of the Faculty of Medicine of the College of Physicians and Surgeons, spoke on the topic of "shoes." He noted that any growing child occasionally needs a larger pair of shoes. "The child is Babies Hospital," he said, "and the proud parents are P&S, P.H., donors and friends, the faculty and staff and other interested groups. And the new shoes are this new addition."

Following the cornerstone ceremony, Mr. Long invited everyone to come inside for refreshments in the Doctors' Dining Room. Coffee, punch and cookies were served.

## Dr. Kolb New President-Elect American Psychiatric Assoc.

Dr. Lawrence C. Kolb, Chairman of the Department of Psychiatry at Columbia University and Director of the Psychiatric Institute at Columbia-Presbyterian Medical Center is the new President-elect of the American Psychiatric Association. He will succeed Dr. Henry W. Brosin, of Pittsburgh, in May 1968.

Dr. Kolb received his M.D. at Johns Hopkins in 1934. His fellowship in Neurology was taken at the National Hospital in London. He served in the U. S. Naval Reserve from 1941-46 and was discharged with the rank of Commander.

Dr. Kolb has had an extensive academic career. He was instructor in Neurology at Johns Hopkins, 1939-41; a research associate at Washington School of Psychiatry, 1946-49; associate professor of Psychiatry at the University of Minnesota, 1950-54,

Dr. Lawrence C. Kolb

following which he became professor of Psychiatry at Columbia University's College of Physicians and Surgeons, and chairman of the department. Dr. Kolb was president of the medical board of the Presbyterian Hospital from 1962-64.

## Dr. Samuel M. Wishik Chosen To Head Family Planning Unit

Dr. Howard C. Taylor, Jr., Director of Columbia University's International Institute for Human Reproduction, recently announced the appointment of Dr. Samuel M. Wishik as Director of the Division for Program Development and Evaluation.

Dr. Wishik is presently Associate Dean for Academic Affairs and Director of the Population Unit in the Graduate School of Public Health of the University of Pittsburgh, where he has been Professor of Maternal and Child Health since 1951.

Prior to that time he had been Director of the Bureau of Child Health for the New York City Department of Health and Chief of Program Planning for the U. S. Children's Bureau in Washington.

The new Institute at Columbia, originally established with a \$8.5 million grant from the Ford Foundation, later supplemented by a further grant from the Rockefeller Foundation, was announced last year.

Dr. Wishik will organize a professional group to develop new methods for prompt evaluation of family planning and population control programs. The methods will be tested in this country and other places in the world in cooperation with governments and other universities. Dr. Wishik also will hold the title of Professor of Public Health Practice in the School of Public Health and Administrative Medicine of Columbia University. He assumed his new duties early in May.

## TRANSPLANT TAKES

The photograph on the left shows one of the large Linden trees in the garden being moved by crane to a new location in front of the Service Building in April. A trip through the garden in June will show that this budding transplant has taken well, because the tree is now hale and healthy, full of leaves.

# 320 Attend P. H. 25 Year Club —49 New Members Were Admitted

The 25-Year Club of the Columbia-Presbyterian Medical Center held its Annual Dinner on Thursday evening, May 4, at Bard Hall, with 320 persons present. The Club is composed of all persons who have worked 25 years or more at the Medical Center. This year there are 784 members, including the 49 who received membership certificates on this occasion.

It was like a big happy family reunion. Some Club members, living in other cities and other states, made the trip to New York especially to attend this event. Following the reception at 6:00, dinner was served in the Bard Hall dining room—and the place hummed with conversations in a spirit of youth. "John, you're looking simply wonderful!" "You want to know something? I'm younger than my son!"

Dr. Rudolph N. Schullinger, Professor Emeritus of Clinical Surgery, P&S, President of the 25-Year Club, was Master of Ceremonies. The invocation was read by Rabbi Martin J. Goldfine, Chaplain at the Medical Center (see end of this

Dr. Rudolph N. Schullinger

Husband and Mrs. Dankwerth are from the staff of Babies Hospital.

## New Officers Elected

Dr. Thomas J. Sullivan, Assistant Professor of Clinical Urology, Chairman of the Nominating Committee, presented the slate of new officers for the ensuing year, and the nominees were elected by a unanimous vote.

President — Dr. Hamilton Southworth. Vice Presidents — Mrs. Ralph Boots and Miss Beatrice Langmuir. Secretary — Mrs. Dorothy Barry. Assistant Secretary — Mr. Frederick Pheulpin. Treasurer — Mr. John Bolger.

Special recognition was given to Dr. John M. Hanford, Consultant, Surgery, who has given 57 years of service to Presbyterian Hospital.

The dinner of delicious steaks, Spring salad, and Nesselrode pie was prepared by Mrs. Charlotte Borresen and her staff of the Bard Hall dining room.

All who were present must have been deeply impressed by the flashback to the world scene of twenty-five years ago which Dr. Schullinger presented during the course of the evening. Here are a few of the items from his remarks.

## Twenty-Five Years Ago (1942)

The enemy was spreading into the South Pacific. . . . Submarines were taking a heavy toll of Atlantic shipping. . . . Supplies and troops were routed all the way around Africa in support of Montgomery at Allemein. Rationing of sugar in this country

Many old friends met to exchange experiences.

had begun on May 4—also autos, tires, gasoline, oil and bicycles.

And as to the Presbyterian Hospital: The main theme in Dean Sage's annual report of 25 years ago was the shortage of doctors and personnel. The total number of attending doctors, residents and intern staff—which had been 800 two years earlier—was reduced to 559. And in 1942 Miss Eleanor Lee, Dean of the School of Nursing, wrote a book on the 50-year history of the School of Nursing. Miss Helen Young submitted her resignation as Director of the School of Nursing in November after 33 years of dedicated service.

Such were some of the salient features of the scene of 25 years ago. And now—

## Slow Our Hurried Pace

It was an unusual evening, filled with the joy of the present, recollections from the past, and a realization that mountains of obstacles have been surmounted. It was an evening of good stories and laughter and music—an evening that was thoughtful and

A carnation was pinned on each arriving guest.

unhurried. All of which recalls the invocation which Chaplain Goldfine read at the start of the program—a poem which began—

"Slow us down, Lord! Ease the pounding of our hearts by the quieting of our minds. Steady our hurried pace with a vision of the eternal reach of time. Give us, amid the confusion of the day, the calmness of the everlasting hills. Break the tensions of our nerves and muscles with the soothing music of the singing streams. . . ."

The meeting closed by unanimous expression of appreciation to the committee members and their associates for their efforts in the preparation of this occasion and particularly to Mr. C. Douglas Auty, assistant Vice President, who provided the spade work and overall plans for this distinguished gathering.

Reverend Robert B. Reeves, Jr., Chaplain at the Medical Center, pronounced the benediction.

# New Mycology Lab Dedicated Here May 8

"We dedicate this new laboratory in the memory of Dr. Hopkins and Dr. Benham in the hope that we shall be able to continue its work in the Hopkins-Benham tradition of meticulous research in the service of mankind."

So spoke Dr. Carl T. Nelson, Chairman of the Department of Dermatology, P&S, on the afternoon of May 8 to approximately 70 persons who were gathered for the dedication and tea. The scene was the fifteenth floor of Vanderbilt Clinic, Rooms 206-210, and on this day there was a new bronze plaque beside the door:

"The Hopkins-Benham Laboratory for Medical Mycology, a gift from the Brown-Hazen Fund of Research Corporation, Dedicated in May, 1967."

Dr. Nelson stated that when Dr. Joseph Gardner Hopkins became head of the Department of Dermatology in 1926, one of the first things he did was to establish a laboratory for medical mycology, "and put a young Ph.D. in Botany from Barnard, Dr. Rhoda Williams Benham, in charge of it. In 1929 the Rockefeller Foundation gave \$50,000 . . . and for the next 20 years or so Dr. Hopkins and Dr. Benham had a hand in the training of almost all the medical mycologists in America."

One of the earliest of these trainees, Dr. Arturo L. Carrion, currently of the San Patricio Veterans Hospital in San Juan, Puerto Rico, flew here especially for the occasion and was one of the speakers. He recalled his meeting with Dr. Hopkins in 1926, after which, "he was not only my friend, but also my teacher and counsellor, almost a father. . . . He was a superior character, a many-sided man. . . . Rhoda W. Benham devoted the best years of her life to the investigation of some of the fundamental problems of medical mycology, especially those related to the yeast-like pathogens."

Another speaker was Dr. Gilbert Daldorf, member of the Brown-Hazen Fund Committee and Former Director, Division of Laboratories and Research, New York State Health Department. He noted that one of the two women investigators who made this

Refreshments were served after the dedication ceremonies.

Benedetto Vasi, Laboratory Assistant with Dr. Margarita Silva, Director of the new laboratory.

gift possible, Dr. Elizabeth L. Hazen, received her training from Drs. Benham and Hopkins here. With Dr. Benham as consultant for a number of years, Dr. Hazen organized and directed the diagnostic and serologic services in mycology at the New York State Health Department's Division of Laboratories and Research in Albany. She now occupies the position of full-time volunteer Guest Investigator in the laboratory for Medical Mycology at P&S.

"It was only natural," Dr. Daldorf said, "that when the search for an antifungal antibiotic was indicated, it was

Many guests and members of the hospital staff attended the ceremonies.

Dr. Hazen whom we should enlist in the search that resulted in the discovery of nystatin. This antibiotic, isolated and identified chemically by Dr. Rachel Brown in the New York State laboratory, gave us the patent assigned for administration to Research Corporation. It was royalties from this patent that made possible this gift to the mycology laboratory . . . named for the two pioneers we are honoring today."

Following in the footsteps of Dr. Benham, Dr. Margarita Silva-Hutner became the director of the Mycology Laboratory in 1956. She had joined Dr. Benham's staff as research associate in 1950 after working for several years with Dr. Carrion at Columbia's School of Tropical Medicine in Puerto Rico and completing her graduate studies at Harvard.

The present research and teaching staff also includes Dr. Irene Weitzman, research associate, who completed her graduate work in the Botany Department of Columbia University.

A social hour was enjoyed before dinner.

article). Dr. H. Houston Merritt, Dean of the Faculty of Medicine, P&S, extended greetings to the Club. Miss Elizabeth S. Gill, Vice President of the Club, and Miss Anne Walters, Club Secretary, presented the Certificates of Membership to incoming members.

Dr. Hugh Auchincloss, Jr., Associate Attending Surgeon, PH, and Assistant Clinical Professor of Surgery, representing the new Club members, responded with an address in which he recalled visiting the buildings of the Medical Center when they were in construction. To the delight of his audience, he recounted the story, well remembered by his father, of an earlier day when certain curious circumstances influenced the College of Physicians and Surgeons toward a merger with Presbyterian Hospital.

Music was provided by The Cliff Dwellers, a chorus of student nurses with piano and instrumental accompaniment. Three numbers were given by Mrs. Edna Husband, vocalist, and Mrs. Frieda Dankwerth, pianist and composer. Mrs.

# The Medical Center Print Shop Provides Many Needed Services

The Medical Center Printing Department is located on the first floor of the Service Building and operates under the Purchasing Department, headed by Peter R. Bozzo. Ralph Samuels is the Print Shop supervisor.

With only four full-time employees, millions of pieces of printing are produced by our shop each year, requiring many carloads of paper.

The Print Shop prints and keeps in inventory more than 1,000 different forms, and a combined total of about 750,000 of these are used

Robert McCool, Senior Printer.

them repeated daily, are menus for inpatients and for the Harkness Pavilion Restaurant; the daily accounting and statistical reports; standardized labels for the pharmacy; billboards and announcement cards heralding special events, and the programs used at such events. In addition, they print the Chaplain's *Weekly Messenger*, and they cut the "Cottonoid" strips used at the Neurological Institute in brain surgery.

"Our machines are small, but very versatile," Ralph Samuels said, "and we can turn out a first class job of reproducing anything that can be typed, written, or drawn. We have plenty of headaches,

Ralph Samuels, Supervisor Medical Center Print Shop.

monthly throughout the Medical Center. When a department, or a doctor or nurse, needs a new type of record form, Ralph Samuels sits down with the proper person and helps to design the most efficient form for the job. The

James Gatins, Offset Multiith Operator.

Print Shop, for example, designed and printed original record forms used at the new Radiotherapy Center.

Among the many special jobs printed here, some of

Lennie Conforti and employees asking for printing. Lennie, who has been with the National Guard, at Fort Jackson, S. C., for the past six months, returns to duty here in June.

## RETIREMENTS

MRS. ALICE TIAM

Mrs. Alice Tiam, who had been a member of the Medical Center family since 1929, retired in May. A tea, attended by her many friends was given for her late in April.

Mrs. Tiam started in the laboratory of the OBS-GYN service and served there for many years, then joined the Surgical Pathology laboratory, which served floors from five through 17 for Presbyterian Hospital.

Mrs. Tiam is planning to remain in New York City and looks forward to continuing activity with her extensive stamp collection, painting, jewelry making and other hobbies for which there has never been enough time in the past. All of her friends wish her well and know that she will return frequently to see them.

MARION S. HOLLAND

Marion S. Holland began work at Presbyterian Hospital in June, 1926, the day after her graduation from our School of Nursing, and retired this June 14, after 41 years service. A tea was given on that date so that her many friends could wish her well.

Miss Holland's first position was Surgical Head Nurse, under the late Dr. Hugh Auchincloss, Sr. For the past several years, she has been Night Supervisor for the Admitting and Emergency Services.

During her years at the Medical Center, Miss Holland served as Head Nurse under several great physicians and surgeons who have been associated with our hospital—Drs. Wilder Penfield, Allen O. Whipple, John M. Hanford, George W. Fish, to name a few. She served as an Assistant to Miss Margaret Eliot, Director of Nursing, and was an instructor of Anatomy, Drugs and Solutions, and Materia Medica.

Miss Holland is a member of the New York Women's University Club and of the Pembroke College Club. Her hobbies are travel, architecture and lettering, activities she will pursue more actively in the future.

Frank O'Frontani, Mimeograph Operator.

you can be sure of that, but the people we work for here are just terrific—always appreciative when you do them a good job that is a rush." Mr. Samuels thought a minute, then added, "There never was a print job, of course, that wasn't rush!"

# Philip F. Hannum Appointed Manager Of All Dining Rooms

Philip F. Hannum

It was recently announced that Mr. Philip F. Hannum was appointed Dining Rooms Manager for the Columbia-Presbyterian Medical Center. His responsibilities include the supervision of the Main Cafeterias, Doctors' Dining Room, Harkness Pavilion Dining Room, Soda Fountain and all catering.

Mr. Hannum has been employed as Assistant Dining Rooms Manager since October, 1961. Originally from Cape Cod, he holds a Bachelor of Science Degree from Tufts University. Mr. Hannum has also attended the Culinary Institute of America in New Haven, Conn.

During World War II, Mr. Hannum served as a navigator in the Air Transport Command of the Army Air Corps.

Before coming to Columbia-Presbyterian, he was supervisor of cafeterias at the Wayne County Memorial Hospital in North Carolina.

## Squier Circus Party Great Fun For Children and Adults Alike

The 12th Squier Clinic Circus Party, under the guidance of Betty McCarthy, secretary in the Squier Urological Service on the 10th floor of P.H., got off to a good start at noon, May 6, when parents delivered their children to Vanderbilt Clinic, turning them over to adult sponsors, who assumed responsibility for them until their return.

Forty-five children attended this year and, as usual, went to Madison Square Garden in a special subway car, provided through Mr. Pat Hurley of the Transit Authority.

In attendance also was Elsie Coffin, who retired last year, and who, using her own funds, arranged the first Circus party—a voluntary affair on the part of employees—which has now become an annual tradition.

Those doctors, nurses and other employees who could not attend, donated funds so that

There was great interest in a man on the flying trapeze.

each child had about \$5 to spend. Sponsors paid for their own admission and for admission of the child. The seats were in the reserved section this year—the best ever.

Miss McCarthy wishes to thank the physicians, nurses, and all other employees and sponsors who did so much to make this year's Circus Party a success.

## From The Mailbag

"I have, very recently, spent a three week period in Neuro 12 and would like to, through you, express my appreciation to the staff, resident physicians, nurses, orderlies, etc. I found the competence of each and every one of them surpassed only by their desire to lend every possible assistance to me during a rather trying period." — from a former patient.

The camera caught children as they were leaving Madison Square Garden with their souvenirs.

Mrs. Lucile Petry Leone, photographed while making the commencement address.

## GRADUATING CLASS

*Continued from page one*

Women's University in Houston, Mrs. Leone has won degrees from three universities—her M.A. from Columbia University—and has also been awarded five honorary degrees. In 1943 she became head of the division of Nurse Education and Director of the U. S. Cadet Corps through which 160,000 students of nursing were found and trained within two years. Because of her splendid war record, she was promoted in 1949 to the rank of Assistant Surgeon General in the Public Health Service Commissioned Corps with the rank, uniform and privileges of Rear Admiral, and to the Position of Chief Nurse Officer. She has received many honors including selection as one of twenty-five Women of Achievement in 1951 and Distinguished Service Award of the Public Health Service, 1965.

In opening her address, Mrs. Leone referred to commencement as "your lift off into the worldwide community of scholars and of professionals in health."

She spoke of the accelerating pace of science and asked that her listeners draw a trend line into the future of scientific discovery projecting the rate of advance from that of the past.

"It is said that more advances have been made in the last three decades than in all previous centuries, and that of all the scientists who have ever contributed to health research, 90% of them are now at work. Advances will be even more rapid in the future."

Referring to the poet Robert Frost's statement that science is plunging us deeper into the bigness of space and the smallness of particles, but not without daring the loss of hu-

man spirit, Mrs. Leone said, "Nursing is one of the essential forces which guarantees that human values and spirit are not lost in the progress science makes."

"Nurses compensate for the sensory, social and emotional deprivations of patients whose care involves the use of machines and instrumentation—electronic, radioactive or pressurized . . . Nurses are prime perceivers of human need. Much of the meeting of that need is within the province of the nurse. And these meetings of need serve their primary purpose for the patient; but also these meetings of need themselves become advances in scientific practice."

Mrs. Leone stressed the fact that the application of new knowledge lags behind discovery. "Our job as health workers is to push the frontiers of science ahead and at the same time to reduce the lag in application in the practices of new knowledge . . .

"To facilitate the application of health knowledge will require more and better nurses. All of you will exemplify the better nursing the nation needs. All of you will work to recruit desirable youth to increase the number of nurses. And some of you will multiply your contribution by being

Augustus C. Long

teachers in schools of nursing where you will help educate the dynamic nurses of the next decade.

"We are only beginning to learn about what motivates people to seek health actively or to be indifferent to health for themselves and their families."

One of the trends which Mrs. Leone observed was that of placing services nearer people and combining them especially for people hard to reach. "Thus, we may find that a mother in one trip to one spot can bring her baby to a well-baby clinic, have Susie's dental needs met, and receive advice on Johnny's threat to drop out of school. A nurse in that spot sees the interrelationship of problems in a family and the other people who work together to help solve them and how one service can reinforce another . . . We cannot break the care of patients into little pieces."

"Some of you will be careerists in health; some of you will be wives and mothers. Some of you will be all three. You may engage in nursing as a volunteer, as a member of the health committee of the PTA or of the Board of the Visiting Nurse Association, as an advisor to a research project or a state recruiting committee. Nursing gives you something extra from which to draw you when you think as a world citizen."

"Some among you may become the visible statesmen of nursing, deciding its direction in the decades of rapid movement ahead. As members of a vital health profession, you will be making, in an addition to the service you give, a contribution to our civilization as it faces the dilemma of maintaining human values in a time of rapid scientific advance . . .

"As you move toward the constantly extending horizons of health endeavors always growing in science and the reverence for life, may I wish you Godspeed."

Presenting the graduates their degree of Bachelor of Science was Dr. H. Houston Merritt, Dean of the Faculty of Medicine. Dr. Merritt was assisted by Miss Helen Pettit, Professor of Nursing.

Miss Elizabeth S. Gill, Director of Nursing and Associate Dean (Nursing), assisted by Mrs. Frederic F. deRham, a Trustee of the Hospital, presented the nursing pins and certificates.

Hospital Chaplains who participated were the Reverend Robert B. Reeves, Jr., Rabbi Marvin J. Goldfine, and Father George Gilligan.

Following the exercises, graduates, faculty, alumnae, relatives and friends enjoyed a tea in Maxwell Hall and were served the traditional giant strawberries, picked two days before in California and flown to New York for the occasion.

## Nurses' 75th Anniversary Peaks Week Of June 4th

Sunday, June 4, was the first of four memorable days during which the celebration of the 75th Anniversary of the School of Nursing reached its peak. On Sunday morning a Vesper Service was held in the Pauline A. Hartford Memorial Chapel, conducted by Chaplain Robert B. Reeves, Jr. The sermon was delivered by Reverend David H. C. Read, D. D., Litt., minister of the Madison Avenue Presbyterian Church.

The pace quickened on Monday morning when alumnae registration began. The entrance to Maxwell Hall had been miraculously transformed through the heroic efforts of the hospital's maintenance department. Dust ridden craters became a beautifully "coiffed" lawn and a navigable driveway. A blue and white canopy covered the doorway, through which hundreds of alumnae entered to be registered and directed by the staff of Lillian Oring '31. Coffee, danish pastry and the opportunity to meet long unseen classmates awaited each alumna in the lobby of Maxwell Hall. Exhibit areas displayed new hospital equipment and memorabilia set up by Elizabeth Zimmers '31 and Dorothy Reilly '42. In room 116, Mrs. Mary Holden Ericson '35 and D. Rogers '25 and their "salesladies" manned the tables selling Alumnae Cookbooks and Directories.

Dean Elizabeth Gill of the Department of Nursing gave the welcoming remarks of the educational session, in the Alumni Auditorium. Jane Traver '60 was chairman of the event and Miss Helen Pettit '36, Professor of Nursing, presided. A recruitment film, *Come to Columbia*, was shown and was followed by a panel discussion composed of faculty and students of the school. The topics of discussion and their discussions were:

*Current Issues In Nursing*  
"What Are The Issues?"—Dorothy Reilly '42 R.N., Ed. D.

Cecile Covell '26, General Chairman 75th Anniversary

"The Baccalaureate Nurse"—Lucy Kennedy, R.N., M.A.  
"The Student Viewpoint"—Janet Mellinger '67  
Bettie Springer '67  
"The Expert Practitioner"—Ann Earle, R.N., B.S.

After lunch, the Annual Alumnae Meeting was called to order by the Association's President Mary Wasson Britten '59. Mary Lyon '62, chairman of membership, read the roll call and the Tenth Year Reunion Class tipped the scales with 57 "reunioneers." Another highlight was the reception into the Association of the ninety-two members of the graduating class of 1967.

Cocktails followed at the Harkness Hall recreation room. Alumnae and their guests then proceeded to the anniversary concert, held in the Alumni Auditorium, featuring the Beaux Arts Chamber Orchestra and the talented young pianist Peter Serkin.

Tuesday, January 6th, brought the arrival of a second educational session, held in Sturges Auditorium with Mary Windrow '40, R.N., M.A., Assistant Professor of Nursing and Assistant Director of Nursing Service, presiding. The program was devoted to a discussion of "New Trends In Nursing" and had as its participants:

*Please turn to page seven*

Left to right, Mrs. Mary Britten '59, Bob Hope, Mrs. W. S. Glazier II (Jean Monahan '60). As you can see, Mr. Hope was presented with a special nursing pin and a necktie with the nursing colors.

## NURSES' 75TH ANNIVERSARY

Continued from page six

"Patterns in Nursing Practice"—Yvonne Trebilcock '48, R.N., M.A., Senior supervisor of Medicine & Surgery

"Newer Trends in the Care of High Risk Infants"—Priscilla Parke, R.N., M.N., supervisor, Neonatal Special Care Nurseries

"A Developing Nurse Practice Role"—Bette Halloway, R.N. Nurse Specialist, Psychiatric Clinic-Vanderbilt Clinic.

Tuesday's events were capped by the anniversary banquet which was held at the Waldorf Astoria's grand ballroom and which saw some 600-700 alumnae, their families and friends in attendance as well as all ninety-two members of this year's graduating class. As if good fellowship, food and music were not enough, the addition of such personages as Mayor and Mrs. John Lindsay; Dr. Calvin H. Plimpton, President of Amherst College and honorary member of the class of 1956 who served as Master of Ceremonies; Mr. Augustus C. Long, President of the Presbyterian Hospital and Mrs. Long; Elizabeth S. Gill, Dean of the Depart-

ment of Nursing; Mrs. Lucille Petry Leone, commencement speaker for the Department of Nursing; Mr. and Mrs. Bob Hope made the evening a most memorable one. Mr. Hope was caught between quips by Mrs. Mary Wasson Britten '59, president of the Alumnae Association and was presented with a medal resembling the school's pin while being installed as an honorary member of the Alumnae Association in appreciation for the longstanding interest that he and his family have shown in the health matters of our country.

Wednesday morning arrived all too quickly, bringing with it the last day of anniversary activities. For a number of alumnae, the morning was spent touring Lincoln Center and lunching at the Fountain Pool of the Metropolitan Museum. For those alumnae not on tour, an anniversary film, *Familial Faces, Familiar Voices* was shown in Sturges auditorium.

Anniversary events came to a close with the graduation exercises for the class of nineteen sixty-seven.

Thus ended the commemoration of the 75th anniversary of the School of Nursing, one enthusiastically attended and enjoyed by hundreds of alumnae from all over the globe.

## P&S Graduation

Continued from page one

*of the sick to the utmost of your power, your holding yourselves far aloof from wrong, from corruption, from tempting of others to vice; that you will exercise your art solely for the cure of your patients, and will give no drug, perform no operation, for a criminal purpose, even if solicited; far less suggest it; that whatsoever you shall see or hear of the lives of men which is not fitting to be spoken, you will keep inviolably secret. These things do you swear. Let each man bow the head in sign of acquiescence. And now, if you will be true to this, your oath, may prosperity and good repute be ever yours; the opposite, if you shall prove yourselves forsworn."*

Thus did Dr. H. Houston Merritt, Vice President in Charge of Medical Affairs and Dean of the Faculty of Medi-

Dean H. Houston Merritt addressing graduating class.

cine, College of Physicians and Surgeons, Columbia University, give the oath of Hippocrates to 116 members of the graduating Class of '67, during graduation ceremonies at the Morningside Campus, on Tuesday, June 6, where the degree of M.D. was conferred on the graduates.

The graduation exercises then moved to the Medical Center garden, where the Invocation was given by Rev. Edwin M. Barton, B.D., Director of Student Activities, College of Physicians and Surgeons. The class greeting was given by Dr. George A. Perera, Associate Dean, Faculty of Medicine. The commencement address was given by Dean Merritt, as retiring Henry and Lucy Moses Professor of Neurology, who also awarded prizes and diplomas.

In his address, Dr. Merritt gave a brief history of the College of Physicians and Surgeons, and extended congratulation on behalf of the medical staff to the graduates, their parents and wives for the achievement of this milestone.

The bronze medallion, struck to commemorate the 200th Anniversary of the medical college was presented to the graduates by Dr. Frederick J. Eagle, Assistant Dean, Faculty of Medicine.

The prize winners were:

*Joseph Garrison Parker Award:* John Seymour Howland, Amherst, Mass.

## In Memoriam

Continued from page one

the Vassar College Training Camp for Nurses, and in 1920 she was graduated from the Presbyterian Hospital School of Nursing.

In 1926, after having taught at Peter Bent Brigham Hospital in Boston and Columbia University Teachers College in New York, she was named educational director of the Presbyterian Hospital School of Nursing.

Under her direction, the school was affiliated in 1937 with Columbia University as the department of nursing, faculty of medicine.

In 1943 and 1944, Miss Lee took a leave of absence from the Columbia faculty, where she was then an assistant professor of nursing, to direct the nurse recruiting program of the Army and Navy Nurse Corps for the New York Chapter of the American Red Cross. She also directed the college recruitment program of the National Nursing Council during that period.

On the 25th anniversary of her graduation from Radcliffe, she was elected to membership in Phi Beta Kappa in recognition of her high attainments in liberal scholarship.

She retired in June, 1961, as Columbia's associate dean for nursing and as director of

*Walter Winchester Prize:* Alexander McFarlan Akeley, Jr., Madison, New Jersey.

*Alumni Association Senior Student Award:* David Charles Brewster, New York, New York.

*Borden Undergraduate Research Award:* Richard Alan Albanese, Nutley, New Jersey.

*William Perry Watson Prize in Pediatrics:* John Marshall Briley, Jr., Perrysburg, Ohio.

*Helen M. Sciarra Prize in Neurology:* Frank Alfred Pettito, Jr., Princeton, New Jersey.

*Thomas F. Cock Memorial Award in Obstetrics and Gynecology:* H. Ascher Sellner, New York, New York.

*Alvin Behrens Memorial Prize in Ophthalmology:* Richard David Banyard, Trenton, New Jersey.

*Urology Prize:* Nile Ludlow Albright, Newton Centre, Massachusetts; Richard Alan Albanese, Nutley, New Jersey; Anthony Louis Imbeno, New York, New York; Cornelius Olcott, IV, Harlingen, Texas.

*Merck Manual Award:* Robert A. Grossman, Trenton, New Jersey; Kate Killebrew, Des Moines, Iowa; Samuel Wesley Perry, III, New Castle, Pennsylvania.

Many parents, wives and guests attended the P&S graduating ceremonies.

## Don Wilcox Joins Writing Staff—Department of Public Interest

Don Wilcox

Don Wilcox came to the Department of Public Interest in March and is greatly enjoying his new association with Columbia-Presbyterian. His previous work has been teaching and writing. He taught English and journalism in high schools, and sociology at the University of Kansas. From his free-lance writing efforts have come three teenage books and quantities of science fiction stories.

One of his well remembered experiences was the long drive which he and his wife made down the length of Mexico into Central America. In Guatemala, he spent six years editing a small Spanish-English scholastic magazine "Camino" which was used in many Spanish classes in the United States.

Returning to the States two years ago, he edited a weekly

nursing at Presbyterian Hospital. She was given the title professor emeritus of nursing.

Late in May Miss Lee came to New York to attend the June ceremonies marking the 75th anniversary of the Columbia University-Presbyterian Hospital School of Nursing. She was staying at Maxwell Hall, 179 Fort Washington Avenue.

Miss Lee was the author of "History of the School of Nursing of the Presbyterian Hospital," which was published by the Columbia University Press in 1942. A second volume of the work was published during the week of June 4, and Miss Lee had intended to autograph copies for returning alumnae, many of them former students.

She also edited several textbooks in nursing and was co-author, with Helen Young, who preceded her as director of nursing at Presbyterian, of the 1948 edition of "Essentials of Nursing," a standard text in the field.

Miss Lee is survived by two sisters, Mrs. Henry Taggard of Marblehead, Mass., and Rosamond Lee of Boston.

### MRS. MARION C. CURNEN

Mrs. Marion Clement Curnen died May 28, 1967, at Harkness Pavilion, Columbia-Presbyterian Medical Center.

She is survived by her husband, Dr. Edward C. Curnen, Jr., Professor and Chairman, Department of Pediatrics, Columbia University College of Physicians and Surgeons, and Director of Pediatric Service, Columbia-Presbyterian Medical Center; and three children, Sheila Curnen, Edward C. Curnen, 3rd, and Constance Avery Curnen.

She was the daughter of Mr. and Mrs. Harold T. Clement, Buffalo, New York, where

Spanish-English newspaper for the migratory workers of the harvest streams along the western coast, a project sponsored by the national poverty program.

He is interested in music, art, theater, and hospitals.

she was born on April 10, 1920.

Mrs. Curnen formerly resided in New Haven, Connecticut, and Chapel Hill, N. Carolina, when her husband was a member of the medical faculties at Yale and the University of North Carolina.

Mrs. Curnen was a member of The Cosmopolitan Club, New York. One of her major interests was music, and at one time she wrote program notes for the Buffalo Symphony Orchestra. For several years in Chapel Hill, she was President of the Board of Trustees of the North Carolina Symphony Society.

A Memorial Service was held for Mrs. Curnen in the Pauline A. Hartford Memorial Chapel on Thursday, June 1st.

### MRS. JOSEPH R. RAMEE

Mrs. Joseph R. Ramee, Honorary Chairman of the Crib-side Social Service Committee of the Women Board of Managers of Babies Hospital, died on May 13, 1967.

Mrs. Ramee served continuously on this committee for 45 years. Elected to it in 1922, she was vice-chairman from 1933 until 1936 and active chairman from 1936 to 1938.

Mrs. Ramee's first interest was in the Sewing Committee, later known as the Lenten Sewing Class, of which she served as chairman for many years. She was also an ardent supporter of and worker for the Committee's Thrift Shop and the United Hospital Fund campaigns.

One of the first auxiliaries to complete a quarter century of service to Babies Hospital and the Medical Center, Mrs. Ramee, in 1947, became a member of the Medical Center 25-Year-Club.

Mrs. Ramee is survived by a brother and many nieces and nephews.

# 123 ENTRIES IN 17TH ANNUAL ART SHOW

Oil paintings, water colors, crafts, photos—123 items of art were assembled for the recent Medical Center Art Show. Handsome young faces in sculpture, model planes, a crocheted bathroom set, bold poster-style paintings, an intricate woodwork reproduction of a Florentine 15th century chest, Haifa Harbor in pen-and-ink, paintings of sea and sky and snow and the Adirondack Mountains, a driftwood bird flying in panic—the show was alive with delights for every taste.

This was the 17th Annual Arts, Photography and Crafts Exhibition of the Columbia-Presbyterian Medical Center; a show which invites entries from all personnel. It was held

in the east wing of the Milbank Library on the 20th floor of Presbyterian Hospital. During the 10 days of the showing May 2-12, an estimated 1,200 visitors attended. Their repeated comment was, "Excellent."

Who were the artists? Thirteen of the 59 exhibitors were

doctors; 6 were secretaries; 5, nurses; 4 were in work related to dentistry; 3, obstetrics and gynecology; 2 each in X-ray, foods, bookstore and volunteer work.

As to the number of entries in the various categories, there were 48 oil paintings; 30 entries in photography; 14 various types of crafts; 13 water colors; 11 pen and ink and other drawings; 4 sculptures; 1 collage.

Not listed on the program was one creative work known to Chaplain Robert B. Reeves and his associates of the Art Show committee: that of arranging the pictures so that the dancing figures, hillbillies, babies and nudes were quite at ease in each other's company.

## SANDOZ FOUNDATION, INC. MAKES FELLOWSHIP GRANT

A fellowship in memory of the late Dr. Rudolf P. Bircher has been established in the Department of Pharmacology, College of Physicians and Surgeons.

Dr. Bircher, while medical director of Sandoz Pharmaceuticals, Inc., came to P&S in 1961 as a lecturer in pharmacology, a position he held until his untimely death in October last year.

The first contribution for the fellowship fund was made to Dr. H. Houston Merritt by Mrs. Bircher and Dr. Carlo Henze, Director of the Sandoz Foundation, Inc.

The \$7,000 check was contributed by Dr. Bircher's friends and the Sandoz Foundation, Inc. Future awards to the fund, for the purpose of training promising pharmacologists, will be made by the Sandoz Foundation, Inc.

## Reception For New P. H. Nurses Held At Harkness Hall May 2nd

The reception for new nurses, a happy informal occasion, was held in the lounge of Harkness Hall on the first Tuesday afternoon in May. "It was really a reception picnic," said Miss Margaret Wells, Nursing Personnel Officer. "It was planned as a welcoming party for all the new nurses who have come to the staff during the winter months, including some who have arrived quite recently. If all could have been present, there would have been 165."

The attendance was approximately 100, guests included. Many of the nurses have come from foreign shores. At least ten countries were represented: England, Ireland,

Guests were given name plates when they arrived.

Philippines, Guyana, Jamaica, Scotland, Korea, Germany, United States—and there was one gentleman from Nigeria who came in his native party clothes. Nurses from various states of the United States were present, including even a few native New Yorkers.

The nurses were greeted by supervisors, head nurses, and

some assistant directors, Miss Elizabeth S. Gill, Professor of Nursing and Chairman of the Department, and Miss Marion D. Cleveland, Assistant Professor of Nursing, and also representatives of the administrative staff.

Quantities of sandwiches, cakes and coffee added to the pleasure of informal visiting.

A sumptuous picnic table amply spread.

Groups congregated in corners and at tables to trade experiences.

## 2 Trustees Elected To P.H. Board

Two chief executive officers of major corporations have been elected to the Board of Trustees of The Presbyterian Hospital, it was announced June 21 by Augustus C. Long, hospital president.

They are Birny Mason, Jr., chairman of the board of Union Carbide Corporation, and H. I. Romnes, chairman and chief executive officer of American Telephone & Telegraph Company.

### BIRNY MASON, JR.

Mr. Mason is a public governor of the New York Stock Exchange (1966-1969) and is a member of the board of directors of Manufacturers Hanover Trust Company and Metropolitan Life Insurance Com-

Birny Mason, Jr.

pany. He was graduated from Cornell as a chemical engineer and began his career with the Union Carbide Corporation. He is a trustee of Cornell University and of the National Industrial Conference Board and director of the Economic Club of New York. He lives in Larchmont, New York.

### H. I. ROMNES

Mr. Romnes, a native of Stoughton, Wisconsin, was graduated from the University of Wisconsin as an electrical engineer and started his career with the Bell Telephone Laboratories in 1928. He has since held positions in engineering and management with A. T. & T. and other companies in the Bell System. He became president of Western Electric Company in 1959, and

H. I. Romnes

President of A. T. & T. in 1965 and took his present position in February of this year. He is a director of Chemical Bank New York Trust Company, the Goodyear Tire and Rubber Company and U. S. Steel Corporation. He lives in Chatham, New Jersey.

## 8 Doctors Retire On June 30th

*Eight staff physicians retired on June 30. Each held Hospital and Medical School appointments. Four of the eight were named Emeritus Professors and Hospital Consultants.*

DR. MARY ADAMS, assistant instructor in pediatrics and assistant attending pediatrician, had been at the Medical Center for 3½ years, working in the Child Development Program, but she has had a long association with Babies Hospital, having interned there after receiving the M.D. degree from Johns Hopkins University.

## College of Physicians and Surgeons Marks 200th Anniversary Aug. 14

It is well known that Benjamin Franklin was an advocate of the advancement of medicine in the Colonies and that he played a major role in bringing into existence the Academy of Philadelphia which became the University of Pennsylvania. It is less well known that he was also effective in laying the groundwork for the creation of the King's College medical school, which was to become Columbia University College of Physicians and Surgeons.

Franklin and two doctors, Cadwallader Colden of New York and John Fothergill of London, envisioned the establishment of a non-proprietary medical school affiliated with King's College of New York, patterned after Edinburgh's Town College, the leading medical school of that time.

In 1745, when Franklin introduced a 30-year-old physician John Bard of Philadelphia to the New York medical

This is the famous "Palm Tree" print of the original King's College, sketched by a British army officer. The engraver in London, convinced that America was a tropical country, erased the oak tree in the original sketch and had another artist add the palm tree you see here.

community, he was already setting in motion forces which would lead to the creation of such a school.

"I have a friend gone to New York," Franklin wrote to Cadwallader Colden, "with view of settling there if he can meet with encouragement. It is Dr. John Bard, whom I esteem an ingenious physician and surgeon..."

Within a few years, Dr. Bard gained recognition as one of New York's foremost

physicians. In 1749 he established a "Weekly Society of Gentlemen," the forerunner of the New York County Medical Society. His success in performing a difficult operation was reported to Fothergill, and the report was publicized in London.

### Young Bard Studied Abroad

By the time John Bard's son Samuel entered King's College, the stage was set for

## Columbia U. Acquires Rights For Improved Smoking Filter

The rights to an improved cigarette filter, which reduces inhaled tar and nicotine to one-third, or less, of the levels attained by conventional filters, have been acquired by Columbia University.

This announcement was made on July 13, by Dr. Grayson Kirk, President of the University, and by Dr. H. Houston Merritt, Dean of the College of Physicians and Surgeons, at one of the best-attended press conferences ever held at the Alumni Auditori-

um. Representatives from all the major TV and radio networks, news magazines, newspapers and wire services were present, assuring international coverage of this announcement, which, of course, is of great interest to every person who smokes.

President Kirk announced that the University will make the new filter available in the United States and throughout the world. He expressed the hope that its use might lead

## DOINGS OF DOCTORS

DR. ROBERT L. WALDRON II, Assistant Resident in Radiology, has been named an Advanced Fellow in Radiology by the National Research Council. The announcement was made on behalf of the James Picker Foundation, which supports the annual awards program.

DR. ANTHONY N. DOMONKOS, Associate Clinical Professor of Dermatology, P&S, was elected Treasurer of the American Dermatological Association at its 87th annual meeting in Colorado Springs, Colo., in June. DR. CARL T. NELSON, Professor of Dermatology, P&S, was elected a Director.

DR. WILLIAM A. BLANC, Department of Pathology and Director of Babies Hospital pathology laboratory, was elected to membership in the American Pediatric Society. The team of pediatric pathologists presented several papers at the national pediatric meetings which were held in Atlantic City. Dr. Martinez-Tello, Fellow of the National Cystic Fibrosis Research Foundation, and Dr. Blanc presented a paper on the "Production of Immunoglobulins in the Bronchial Mucosa and Regional Lymph Nodes in Cystic Fibrosis, an Immunofluorescent Study," Dr. Paul Symchych, a former fellow of the National Cystic Fibrosis Research Foundation, and Dr. Blanc on "Morphometry of Pulmonary Arterial Tree and Cor Pulmonale in Cystic Fibrosis," Drs. Symchych, Cadotte, Rita Pojaco (trainee in pediatric pathology research) and Dr. Blanc on "Squamous Metaplasia and Necrosis of Trachea and Larynx after Nasotracheal Intubation of Premature Infants," and Dr. Blanc on "Experimental Fetal Growth Retardation."

DR. RUTH C. HARRIS, Assistant Professor of Pediatrics, recently gave a lecture, "Differential Diagnosis of Hepatosplenomegaly," at the Department of Pediatrics, The Long Island College Hospital.

DR. ANTHONY DONN, Attending Physician, Department of Ophthalmology, participated in a seminar on the cornea at a June 8-9 meeting in Ottawa, Canada, sponsored by the Graduate Training Program of the Department of Ophthalmology of the University of Ottawa Medical School. The meeting was attended by ophthalmologists from Ottawa, Montreal, and Queens University, Kingston.

DR. ANDREW DE ROETH, JR., Assistant Attending Ophthalmologist, P.H., presented a paper on "Cryosurgery for Glaucoma" at the Wills Eye Hospital Conference in Cryosurgery in Ophthalmology, Philadelphia, Pa., June 10, and at the A.M.A. meeting at Atlantic City, New Jersey, June 20.

DR. J. K. LATTIMER, Professor of Urology, P&S, and Director of Service, Urology, P.H., DR. M. M. MELICOW, Given Professor of Uro-pathology, DR. S. PULRANG, Assistant Urologist, and DR. G. W. FISH, Consultant, Urology, presented an exhibit entitled "200 Years of Urology at Columbia University" at the 62nd American Urological Association Meeting at Hotel Hilton, New York City, May 29-June 1, and at the 117th Convention of the American

Medical Association, Atlantic City, New Jersey, June 18-22.

DR. ARTHUR GERARD DEVOE, Director, Institute of Ophthalmology, participated in the Keratoplasty Course at Southampton, L. I., July 10-12, and presented a paper on "The Cornea in Systemic Disease." In London, England, he attended the Second International Corneo-Plastic Conference, July 17-20, and gave a paper entitled "Corneal Transparency—Clinical Assessment."

DR. KARLIS ADAMSONS, JR., Associate Attending Obstetrician and Gynecologist, P.H., presented several papers at medical society meetings in May: "Prophylaxis and Treatment of Erythroblastosis Fetalis" at Louisiana State Medical Society, May 2; "Fetal Surgery" at the Ontario Medical Society, May 11; "Management of Rh Sensitized Patient" and "Diagnosis and Treatment of Prenatal Disorders," at the New Mexico Obstetrical and Gynecological Society, May 19 and 20.

DR. HAROLD F. SPALTER, Instructor in Ophthalmology, P&S, gave a paper entitled "Photocoagulation of Central Serous Retinopathy: A Preliminary Report," on June 19 at the meeting of the American Medical Association Section on Ophthalmology.

DRS. MYRON TANNEBAUM, J. K. LATTIMER, AND M. M. MELICOW, Urology, P&S, were the authors of a motion picture called "Time Lapse Photography—A Tool for Studying Human Prostate," which won the first prize at the May-June meeting of the American Urological Association in New York City.

DR. DONALD P. SWARTZ, Clinical Professor, P&S, Director, Obstetrics and Gynecology at Harlem Hospital, served on a panel of Family Planning Consultants at a Community Action Program meeting in Washington, D. C. on June 26. The purpose of the panel was to provide guidance to the Family Planning Branch of the Office of Economic Opportunity.

DR. GEORGE F. CRKELAIR, Professor of Clinical Surgery, P&S, and Attending Surgeon, Presbyterian Hospital, was elected secretary of the Board at a recent meeting of the American Board of Plastic Surgery in Rochester, New York. He also attended the American Association of Plastic Surgeons meeting in Toronto, Canada.

DR. THOMAS V. SANTULLI, Attending Surgeon, Presbyterian Hospital Chief, Pediatric Surgical Service, was recently Visiting Professor at the Children's Hospital of Pittsburgh, Pa., where he presented several papers to the staff, conducted rounds, and participated in the seminars on pediatric surgery.

DR. ROBERT RUGH, Associate Professor of Radiology, P&S, gave the Annual Lecture before the Association of Science Teachers of the New York Area at the Americana Hotel. His lecture, "Radiation and the Embryo or Fetus," was illustrated by lantern slides and demonstrations. A short time later, he lectured at the Bank Street College of Education on "Embryology and the Modern Curriculum."

## STETHOSCOPIA

### • WEDDING BELLS

Anita Guerra, office of Assistant Secretary, Presbyterian Hospital, and Robert Melamede were married at the Central Synagogue, New York City, on June 17.

Martha Spencer Lee and Richard A. Winfield were married on June 24. The bride was graduated from the Columbia University Department of Nursing on June 7.

Phyllis Mary Wang was married to David Haynes Wise on June 17. The bride's father is a professor of pharmacology at Columbia University's College of Physicians and Surgeons.

Barbara Jeanne Lawrence and Torsten Bertil Torstenson were married at The Pauline A. Hartford Memorial Chapel of The Columbia Presbyterian Medical Center on June 17. The bride is an administrative assistant in staff development, Department of Nursing, Presbyterian Hospital. The couple will reside in Edgewater, New Jersey, after their wedding trip to England.

Sonya Karen Flack and Thomas Haworth Bonnell were married in June. The bride's maternal grandmother, Dr. Sonya Weber, was a physician at the Columbia-Presbyterian Medical Center before her retirement.

Michelle Gabrielle Palmieri, an alumna of Cornell University Medical College, was married in June to Luther Fiske Warren, who is attending Columbia University's College of Physicians and Surgeons.

Debbie Chorney and Charles Leonard, a 4th year student at P&S, were married on July 23 and are honeymooning in Germany.

### • FUTURE BRIDES

Susan Anne Weis and Dr. Joel Sidney Mindel plan to be married on August 20. Dr. Mindel was a fellow in neuro-ophthalmology at the Columbia-Presbyterian Medical Center.

Susan Levinsohn and Dr. Stanley M. Steiner have announced their engagement. Miss Levinsohn is an assistant editor with Crowell-Collier Publishing Company, and Dr. Steiner is a graduate of Columbia University School of Dental and Oral Surgery. A fall wedding is planned.

### • CONDOLENCES

Priscilla Parke, Head Nurse, Premature B, on the death of her mother, Mrs. Ethel Parke, June 5.

Friends and family of Mrs. Annie Robillard, retired, who died on July 1.

### • NOTES OF INTEREST

Mrs. Ethel Robertson, Assistant Supervisor, and Alberta Domalakes of the EEG Department attended the American Society of EEG Technicians meeting in Atlantic City, New Jersey, on June 8 and 9.

Mrs. Katrina de Hirsch, director of the Pediatric Language Disorder Clinic, Dr. William S. Langford, director of Child Psychiatric Services, and Jeannette Jefferson Jansky, Language Disorder Clinic, have devised and tested a new index which makes it possible to predict whether kindergarten age children will fail by the time they reach the third grade. Their study, "Predicting Reading Failure," has recently been published by Harper and Row.

John L. Campion, Head Cashier, received a happy surprise a few weeks ago when he won a nice round sum of money in a lottery at St. Elizabeth's Church.

Charles F. Lubrecht, son of Mrs. Anne M. Lubrecht of the Department of Public Interest, graduated from New York University on June 13.

# 2nd General Hospital Nurses Hold Anniversary Party

Thirty nurses, nine husbands, one Red Cross worker and one friend, attended the 2nd General Hospital dinner on Monday night, June 5, 1967. Twenty-five years previously the nurses left the Medical Center to enter the Army Nurse Corps and were stationed at Fort George G. Meade, Maryland, as part of the U. S. Army's 2nd General Hospital.

Eighty-three of the one hundred and five nurses in the 2nd General Hospital worked and lived together from February 1942 until discharge from the Army October 12, 1945. Thirty of these nurses met at the Cocktail Party given for the 75th Anniversary of our Nursing School. Some had not seen each other since the day of discharge from the Army and the shrieks emitted were as loud as the blasting that has been going on around the Medical Center the past few years. With difficulty, a picture was taken, and the group transferred to Luigi's Restaurant for dinner. Most of the nurses were stouter and all were 25 years older, but their enthusiasm was just as great as it was in 1942.

The nurses surprised the Chief Nurse, Marjorie Peto, who was discharged with the rank of Lt. Colonel, by presenting her with crazy gifts depicting some incidents reminiscent of the army days. One gift was a small doll dressed in "fatigues" much too large for her, and she had flowers in her helmet. (One day during a hike, while in a staging

area, the nurses were bored with their looks in army fatigues so they decorated themselves with red poppies.) Another gift was a rubber rat, all too realistic looking, chewing on a piece of bread. (The rats in Nancy, France, were numerous, and one night a rat was seen trying to steal a loaf of bread. Ella Kauffman was hungry and decided to take it away from him. She was the donor of this gift.) There were many other ingenious gifts but the prettiest was a fresh flower lei brought from Hawaii by Meg Raz. Colonel Peto wore the lei to the 75th Anniversary dinner at the Waldorf the next night.

It was a gay evening, all too short in time. Those who came, and those who couldn't, sent a picture with a message. These were entered in a book to be given to Colonel Peto as soon as completed. Anyone visiting Babies Hospital will be able to read about their friends who served in the 2nd General Hospital. The book will be in the Nursing Office.

There are eight nurses from the 2nd General Hospital still working at the Medical Center: Colonel Peto, Assistant Director of Nurses at Babies Hospital; Dorothy Hagner, Supervisor N & T Service; Louisa Kent, Associate Instructor Pediatrics; Dorothy Robinson, Supervisor of Delivery Rooms at Sloane Hospital; Norine Webster, Anesthesia Department; Florence West, Alice Lundin and Naomi Waldvogel, all at D.P.O.

This photo, taken at the news conference held in Alumni Auditorium on July 13, shows, LEFT TO RIGHT: Mr. Robert Strickman, inventor of the new filter, Dr. Grayson Kirk, President of Columbia University, and Dr. H. Houston Merritt, Dean of the College of Physicians and Surgeons.

## CIGARETTE FILTER

Continued from page one

to a significant lessening of one of the world's major health problems.

University spokesmen pointed out that despite the report of the Surgeon General's Advisory Committee in 1964, "cigarette smoking is a health hazard of sufficient importance in the U. S. to warrant remedial action," cigarette consumption has actually increased. They further noted that public health officials believe it may be impossible to convince people to stop smoking. For this reason the gov-

ernment has called for a major effort to make cigarette smoking less hazardous.

The new filter was developed by Mr. Robert Strickman, an industrial and consulting chemist, who seven years ago began his search for a filtration medium that would selectively filter out tar, nicotine and other particulate matter while leaving the full flavor of the tobacco.

He described the filter as a new polymeric substance. It is nontoxic and made of materials readily available at low cost. It can be adapted to meet the needs of any particular brand of cigarette now on the market, and can also be used with cigars, and pipes.

University spokesmen stated that the new filter would be offered by license arrangement to the tobacco industry here and abroad. The only restriction on its use will be that no licensee may use the filter if the filtered smoke has a tar content in excess of 10 mg. by use of the Strickman filter.

The University acquired rights to the filter at no costs. Mr. Strickman will retain, over the life of the patent, only a minority interest for himself. Any revenue realized by Columbia University will be used to support education and research. At Mr. Strickman's request, particular emphasis will be placed on medical and cancer research.

# HOSPITAL NEWS IN 1947

The *Stethoscope* has now reached full maturity, having passed its 21st birthday. Volume I, No. 1, was issued in January, 1946. Publication has been continuous since then, and a glance at the mast-

head of this issue will show that your newspaper is now into Vol. XXII, No. 7.

A reading through back issues is interesting and educational, revealing many historical insights into our hospital's past and the people who have established many of the traditions and customs we follow today. A surprisingly large number of these people are still active at the hospital.

Because your editors feel that many would also enjoy reading the Medical Center news of 20 years ago, this column will appear as a now-and-then feature in future issues.

## 20 YEARS AGO THIS MONTH

John Steinbeck, the novelist, has prepared the text of a pictorial report on Vanderbilt Clinic. Illustrated with pictures made by the nationally famous photographer, Victor Kepler, this pamphlet tells in dramatic fashion the inspiring story of our great Clinic.

Mr. Steinbeck has a close association with our hospital, both as a patient and as the father of two children born here.

A tennis ladder, rating the playing ability of various employees for the hospital tennis tournament has just been prepared by Dr. Camille K. Cay-

ley. The top ten men, rated in the order listed are: Ken Burke, James McDonald, D. F. Morss, Jr., Dr. David Greeley, Richard Kerst, A. J. Binkert, R. Q. McKenna, Dr. Kenneth Hui, Dr. Rene Wegria, and H. I. Scheiner. The top ten women: Mrs. Bert Girdany, Dr. Camille Cayley, Miss Janice Blawvelt, Mrs. David Greeley, Miss Mildred Daniels, Miss Eurydeci Dasconlias, Miss Doris Goddard, Miss E. F. Saum, Mrs. John M. Brush, and Miss Helen Williams.

New Staff Appointments: Dr. Robert F. Loeb, Director of Medical Service to succeed Dr. Walter W. Palmer . . . Dr. Councilman Morgan, junior assistant pathologist . . . Dr. Harold W. Jacor, chief of radiotherapy and attending radiologist . . . Drs. Thomas J. Bridges, Jr. and John L. Poole as assistant attending surgeons at Vanderbilt Clinic.

This editorial on Courtesy is as timely today as it was in 1947:

It is the little things that count. Little courtesies—a pleasant smile at the proper moment, when you may feel like a "sour puss"; an appropriate "thank you"; a helpful

These are nurses from the 2nd General Hospital who returned for the 25th Anniversary Dinner. TOP ROW LEFT TO RIGHT: Dorothy Hastings Bartlett, E. Virginia Smith Miller, Constance Gough Bloom, Norine Webster, Elizabeth V. Baker, Clara Darling Carmichael, Louisa Kent, Mildred C. Hallock, Margaret Armstrong Brown, Margaret Raz, Florence West, Gladys Schroeder, Margaret Mearns Klette; MIDDLE ROW LEFT TO RIGHT: Mary Witt Turner, Edna Daniels, Charlotte Y. Ives, Marjorie Peto, J. M. Ada Mutch, Reba Rush Pratesi, Caroline Renski Twardowski, Ruth Page Brown, Frances Cuerier Hilger; BOTTOM ROW LEFT TO RIGHT: Angela Strambi Welk, Dorothy Hagner, Mary Ellen VanHorn Calhoun, Rose Barrett Levy, Evelyn Bedard, Alice Lundin, Ella Kauffman, Kathryn Ives.

## P&S HISTORY

*Continued from page one*

the young man to receive the best possible medical education. After being apprenticed to his father during his first two years of college, he was sent to London as an apprentice pupil, attending lectures, studying anatomy, and witnessing operations. Before his studies began in Edinburgh in the fall of 1762, he took the precaution of familiarizing himself with the Scottish pronunciation of Latin to be better able to follow the lectures. While studying in Edinburgh, he competed for the botanical prize for collecting and cataloguing plants, and won the prize medal.

As examination time approached for young Samuel Bard, Benjamin Franklin extended a gesture from across the sea. He wrote a personal letter to the president of the College in Edinburgh. "There is now in Edinburgh a young gentleman of America, Mr. Samuel Bard, son of a friend of mine . . . I have known him from a child . . . I beg that you occasionally favor him with your advice in his studies . . ."

### Act to Found College

Samuel Bard returned to New York in 1765, and helped with the formation, in 1767, of the school of medicine of which Franklin, Colden and Fothergill had dreamed. On August 14, 1767, by an act of the Governors of King's College, King's College Medical School was founded; in a later year, after a merger, it was to be called College of Physicians and Surgeons.

Although it was not the first medical school to be established in the colonies—the College of Philadelphia (University of Pennsylvania) antedated it by two years—it was the first with a complete faculty of six professors giving instruction in all branches of medicine, and the first to award the degree of Doctor of Medicine.

The proposal to the Governors of King's College for the establishment of this school had been made four years earlier by James Jay, a graduate of Edinburgh, who had solicited funds in England. In appreciation of Jay's efforts to improve educational facilities in New York, King George III conferred knighthood upon him.

### School Opened, 1767

The school opened on Monday, November 2, 1767. Samuel Clossy was Professor of Anatomy; Peter Middleton, Professor of Surgery; James Smith, Professor of Chymistry and Materia Medica; John Tennet, Professor of Midwifery; and Samuel Bard, Professor of the Practice of Physik. The first lecture was given by the foremost surgeon

Dr. Samuel Bard

in the American colonies, Dr. John Jones.

Dr. Samuel Bard spoke at the first medical commencement at King's College in 1769, and his address was the first medical paper to be published in the Colonies on medical ethics.

The first degree of doctor of medicine was given in May, 1770, to Dr. Robert Tucker.

### Revolutionary War Hurtful

The history of the college from that year forward is not one of uninterrupted progress. Medical activities were dealt a serious setback by the Revolutionary War, which dispersed the faculty, destroyed the library, and left the college buildings in disrepair and the college without financial support. Only Dr. Bard remained on the faculty.

In 1784 King's College came under the board of regents of the University of the State of New York, and changed its name to Columbia College.

In 1813 the entire faculty went over to a new rival medical school, the College of Physicians and Surgeons, which had started six years earlier. Forty-seven years later the breach was healed, and the College of Physicians and Surgeons was taken over, in 1860, by Columbia as the medical department of Columbia College. This added strength helped to transform the institution into Columbia University in 1896.

### School Wedded to Hospital

Columbia's medical school and the Presbyterian Hospital were formally joined in 1921; the first units of the Columbia-Presbyterian Medical Center opened in 1928.

In the 200-year history of the school, 13,310 degrees have been granted. The present enrollment is 467 students—417 men and 50 women—engaged in the four-year course of study. These students come from 39 states, 6 foreign countries and 95 different undergraduate colleges.

In the graduate program there are approximately 390 residents, 30 interns, 380 trainees and fellows and 140 visiting fellows.

In the Postgraduate Program, approximately 1,500 physicians are enrolled in 44 courses.

### Two Centuries of Growth

The school which began with a "complete" medical faculty of six teachers now has a total medical faculty of 1,684, of which 709 are assistant, associates or full professors.

Through its two-century history the school moved from Barclay Street to 23rd, then to larger buildings at 59th Street and Tenth Avenue, and finally to Washington Heights—630 West 168th Street.

Three Nobel Prize winners are alumni of P&S. Drs. Andre F. Cournand and Dickinson W. Richards shared the 1956 Nobel Prize in Medicine and Physiology for their studies on the physiology of the heart and lungs, entailing the catheterization of the heart. Dr. Richards graduated from P&S in 1903. Joshua S. Lederberg, Ph.D., received the prize in 1958 for work in genetics. He graduated from Columbia College in 1944 and attended P&S for two years. Konrad Block, 1964 Nobel laureate for his work on cholesterol metabolism, earned his Ph.D. at the medical school in 1938.

A history of the medical school, written by Thomas Gallagher, novelist and Columbia College alumnus, will be published this year by Harcourt, Brace and World.

## RETIREMENTS

*Continued from page one*

Dr. Adams was in private practice in Connecticut for 14 years, following which she obtained her Master of Public Health degree from Harvard University School of Public Health. She worked for several years in the New York City Department of Health, as School Physician and then as Public Health Pediatrician in the School Health Service of Dr. Robert Culbert, also of Babies Hospital.

DR. LESLIE PAXTON BARKER, clinical professor of dermatology and attending dermatologist, is a graduate of Columbia College and received the M.D. degree from the College of Physicians and Surgeons in 1927. He is a former Chairman of the Dermatology Section of the New York Academy of Medicine, and was co-founder of the Metropolitan Dermatological Society.

Dr. Barker is a member of many honorary and professional medical organizations, and has published extensively in his specialty. He will continue at the Medical Center as emeritus professor and consultant in dermatology.

DR. EDWIN B. BILCHICK, assistant clinical professor of otolaryngology and assistant attending otolaryngologist, is a graduate of Columbia College and received the M.D. degree from the College of Physicians and Surgeons in 1924. He interned at Bellevue Hospital and was a resident in

Ear, Nose and Throat at Presbyterian Hospital. He has taught his specialty at P&S since 1928.

Dr. Bilchick served in the U. S. Army Medical Corps from 1943 to 1946, and was discharged with the rank of Lt. Colonel. In 1946 he was awarded the Army Certificate of Commendation for outstanding performance of duty as chief of the Ear, Nose and Throat Section of the Station Hospital at Aberdeen Proving Grounds.

Dr. Bilchick is a member of many honorary and professional medical organizations. He will continue his private practice in New York and Long Island.

DR. GORDON M. BRUCE, professor of clinical ophthalmology and attending ophthalmologist, is a native of Canada. He received the M.D. degree from Dalhousie University in 1925; D. Ophth. from Oxford University in 1928; Sc.D. in Medicine from Columbia University in 1934, and has been associated with the Medical Center since 1929.

Dr. Bruce served in the USNR, MC, from 1942 to 1945, and was promoted from Lt. Commander to Captain. He retired from the USNR in 1948 with the rank of Rear Admiral. He was twice decorated with the Silver Star medal.

A member of many professional and honorary medical organizations, Dr. Bruce is currently President of the American Ophthalmological Society. He has published extensively in his specialty. He will continue at the Medical Center as emeritus professor, consultant and special lecturer in Ophthalmology.

DR. ALFRED GALLINEK, assistant clinical professor of neurology and associate attending neurologist, is a native of Berlin. He received the M.D. degree from the University of Berlin in 1923. He had published 16 research papers in German before coming to the USA in 1936.

Dr. Gallinek has been associated with the Medical Center since his arrival in this country, and has published 20 scientific papers based on research in neurology and psychiatry. He will continue his private practice in New York City.

DR. YALE KNEELAND, JR., professor of medicine and attending physician, is a graduate of Yale University and

Dr. Yale Kneeland, Jr.

received the M.D. degree from the College of Physicians and Surgeons in 1926.

Except for military leave, Dr. Kneeland has been continuously associated with the Medical Center throughout his medical career. He served as Chief of Medicine of the U. S. Army Second General Hospital (Columbia-Presbyterian Unit) from 1942 to 1944, and was Senior Consultant in Infectious Diseases for the European Theatre of War. He was twice awarded the Bronze Star medal, and was promoted to the rank of Colonel in 1945.

Dr. Kneeland is a member of many honorary and professional medical organizations, and is a world authority of infectious diseases, having published many scientific papers based on his original research, particularly research related to the common cold.

Dr. Kneeland will continue at the Medical Center as emeritus professor and consultant in medicine.

DR. BELA MARQUIT, assistant clinical professor of otolaryngology and associate attending otolaryngologist, is a native of Hungary. He received the M.D. degree from the University of Giessen, Germany, in 1925. He came to the USA in 1938 and began his association with the Medical Center in 1940.

Dr. Marquit served with the USA Medical Corps from 1943 to 1946, and was discharged with the rank of Major.

Dr. Marquit will continue his private practice in New York City.

DR. ARNER WOLF, professor of neuropathology and attending neuropathologist, is a graduate of Columbia College and received the M.D. degree from the College of Physicians and Surgeons in 1926. He did postgraduate work in pathology in Berlin and in neuropathology in Hamburg, Germany. He was a Rockefeller Foundation Fellow at Queens Square Hospital, London, in 1939.

Dr. Wolf has been associated with the Medical Center for most of his medical career. He is a member of many honorary and professional medical organizations and has published many scientific papers based on original research in his specialty.

Dr. Wolf will continue at the Medical Center as emeritus professor and consultant in neuropathology.

Dr. Edwin B. Bilchick

## Dept. of Physical Medicine Honors O. T. and P. T. Grads

While the campus of Columbia University teemed with graduation day activity, Tuesday, June 6, a quiet happy luncheon was held in the South Dining Room of the University Men's Faculty Club.

This was the P&S Bicentenary Occupational and Physical Therapy Luncheon, attended by approximately 100 graduates, parents, faculty and guests. It was an occasion to honor the graduates and also to give special recognition to three persons—one who had much to do with the establishment of this department, and two who were formerly leaders of the department.

To each of these three was given a medallion—the silver medallion of the 200th Anniversary of the College of Physicians and Surgeons, awarded for outstanding contributions.

The three recipients were:

**Dr. William Benham Snow**, Emeritus Professor of Physical Medicine and Consultant, Presbyterian Hospital. Dr. Snow, who was graduated from Columbia College and Long Island College of Medicine, was leader and innovator of Physical Medicine at the Columbia Presbyterian Medical Center, a developer of courses at Columbia from 1945 to 1960, a leader in combining therapy and education for

cerebral palsy patients in New York City. Until recently, he has pursued a new and productive career in the Veteran's Administration.

**Dr. Josephine Rathbone Karpovitch**, Director, Courses in Physical Therapy from 1943 to 1949. Dr. Rathbone was graduated from Wellesley College and received the degree of Doctor of Philosophy from Columbia University. A distinguished scholar, teacher, and writer in the field of Physical Education and Recreation, she continues to contribute to the field of Rehabilitation, although presently retired.

**Miss Marjorie Fish**, Director, Courses in Occupational Therapy, 1941–1951. Miss Fish, a graduate of Swarthmore College, the Boston School of Occupational Therapy, and Columbia University, has served as an administrator, educator, and counsellor. She was Executive Director of the American Occupational Therapy Association, 1951–1953, and Alternate United States Delegate to the Council of the World Federation of Occupational Therapists. She is presently Occupational Therapy Consultant of the Vocational Rehabilitation Administration, of the United States Department of Health, Education and Welfare.

To Dr. Snow the medallion was awarded by Dr. Robert C. Darling, Director of Service, Rehabilitation Medicine, Faculty of Medicine, P&S, and Baruch Professor and Chairman, Department of Rehabilitation Medicine.

To Dr. Rathbone the medallion was presented by Miss Mary E. Callahan, Associate Professor of Physical Therapy, Director of Physical Therapy Courses, P&S.

To Miss Fish, in absentia, the award of the medallion was made by Miss Marie Louise Franciscus, Associate Professor of O.T., Director of Occupational Therapy Courses, P&S.

Front row, left to right: Drs. Josephine Rathbone Karpovitch, William B. Snow, Robert C. Darling, Morton Hoberman. Back row: Mary E. Callahan, Dr. A. David Gurewitsch, Mrs. Robert C. Darling, Marie Louise Franciscus.

## Physical Therapy Teachers Have Meeting At Auditorium

Approximately one hundred physical therapy teachers and staff members assembled at the P&S auditorium on Thursday, June 22, to participate in the afternoon and evening conference on the teaching of physical therapy. This was the Joint Clinical Educators' Conference sponsored by the Schools of Physical Therapy of Columbia University, Downstate Medical Center, Ithaca College and New York University. Persons attending were

teachers from 60 clinical facilities—general and specialized hospitals, public health facilities, schools for handicapped children—and teachers from the four physical therapy schools.

In their presentations the speakers, advocating effective teaching methods, practiced what they preached. It was not a conference of passive listening but one of lively audience participation. Questions, discussion, the use of

## Emergency Test Finds Our Staff Alert and Ready

It began with an announcement over the speaker system.

"Attention, please! This is a test drill. Emergency plan number one is in effect. Assigned doctors take their stations. Unassigned doctors report to admitting emergency clinic..."

A few moments later, stretcher bearers began to arrive at the emergency clinic, bringing in the victims of a disaster. Fortunately it was all imaginary. Although the patients on stretchers were quite invisible, the tags gave their names and the nature of their injuries. Doctors, nurses, interns and students stood by to observe and to assist when needed.

"Bringing admitting cards and have one for each patient," came the amplified order from the desk.

More stretchers were borne in. Admitting cards were filled out for each patient. Of the 25 casualties, 13 were admitted to various in-patient locations and registered in the admitting office.

One of these was a casualty with "fractured pelvis with urinary retention." He was admitted and borne to the elevator by two first year P&S students, and taken to fifth floor, P.H. There a nurse checked the papers, made the necessary notations, and said, "All right, the patient is now in bed and resting comfortably." Mission accomplished, the two students returned to the first floor with the "empty" stretcher.

Following the test drill, Mr. G. A. Roqueni, P.H. Admitting Office, assembled the admittance sheets and prepared a typed report for Dr. Joseph E. Snyder, Assistant Vice President and Head of Service at Vanderbilt Clinic, to indicate the disposition of each of the 25 casualties.

mimeographed materials and taped TV added depth to the flow of ideas. The TV tapes illustrated some of the kinds of learning experiences teachers plan for students in their work with patients. Conferees participated by giving a critique of the tape skits and suggesting methods for improving the "plan for learning." "Planning for learning in Clinical Education" was the theme of the conference. General chairman was Miss Barbara Cossoy, assistant supervisor, physical therapy dept., Institute of Rehabilitation Medicine, N. Y. University Medical Center.

## One-Man Art Show In Venice For Nurse Joan Fairservice

Joan Fairservice with one of her modern paintings to be shown in Venice at her one-man art show.

A young American artist, Joan Fairservice, who was born in New York City and who received her Bachelor of Science degree from Columbia University, is presenting a one-man art show at the Galleria D'Arte "Il Canale," Venice, Italy, this summer.

Miss Fairservice, known professionally as Giovanna, was graduated in 1957 from the School of Nursing of the Presbyterian Hospital, and

served as a Nurse at Presbyterian from 1957 to 1960. While here, she participated in the Medical Center art shows, and her works have appeared at the Art Institute of the Museum of Modern Art.

Giovanna's mother, Mrs. Mildred Fairservice, works here as a Special Duty Nurse. Within a few weeks Giovanna is expected to return to her studio at 70 Haven Avenue, New York City.

## 20 YEARS AGO

*Continued from page three*

suggestion to a visitor. Small things add up. They make a happy hospital.

Being sick is a frightening experience. The parents and family of the patient are under emotional strain, too. Nervous and unhappy, they need one thing badly—courteous understanding. Surly-ness, lack of sympathy and rudeness give the patient or visitor a poor picture of Presbyterian Hospital.

As a whole we think of ourselves as a kind, understanding, courteous hospital, equipped to give the patient the best of medical care. But the finest medical equipment and staff, the best of food and service, are all lost on the patient who has been slighted through plain bad manners. Bear this in mind the next time a patient or visitor seems exceptionally difficult. Good manners make hospitals as

well as men.

A good hospital worker must have a great heart. He must appreciate the value of the little things of everyday life that add to the comfort of the patients and visitors whom we are proud to serve.

\* \* \*

## OTHER SAGE ADVICE

Remember your Dickens? In David Copperfield, old Micawber's wise words to David were: "Annual income 20 pounds, annual expenditure 19.96; result happiness. Annual income 20 pounds, annual expenditure 20.06; result misery."

\* \* \*

During June there were 66 accidents at the Medical Center, 17 of which caused injuries resulting in lost time, a sharp increase over last month. Remember that the best safety device is located directly between your ears. Use it always—at work, at home, and on the street.

## GREATER NEW YORK FUND OFF TO BEST START EVER

The Greater New York Fund got off to a tremendous start during the first week of the 1967 Campaign. A total of \$10,169.00 was given or pledged during this period, an amount almost equal to total collections for 1966. As most employees were informed when contacted for giving to this fund, this is the only solicitation allowed among employees of the Hospital. It aids 425 health and welfare agencies. The Presbyterian Hospital receives support of more than \$300,000 annually from The Greater New York Fund and United Fund campaigns.

A report of final figures for the 1967 campaign will be announced in the September issue.

## Unveil Memorial Plaque For Dr. F. J. Kallmann

One of the world's great authorities on genetics was the late Dr. Franz J. Kallmann, who served as Chief of the Department of Medical Genetics at New York State Psychiatric Institute and as Professor of Psychiatry at Columbia University's College of Physicians and Surgeons. Dr. Kallmann died on May 12, 1965.

There was an unveiling of a memorial plaque for Dr. Kallmann on June 23, 1967, at 4:00 P.M., on the eighth floor of the Psychiatric Institute.

The plaque, incorporating a bas-relief of Dr. Kallmann and an inscription, was designed by the well-known sculptor, Adolph Block. Dr. Lawrence C. Kolb, Director of the New York Psychiatric Institute and President-elect of the American Psychiatric Association, presided at the dedication ceremonies.

Dr. Kallmann founded the Department of Medical Genetics at the Columbia-Presbyterian Medical Center in 1936, and for almost 30 years continued his pioneer work in genetics as applied to Psychiatry. The successful establishment of this department was directly responsible for the rapid development of medical genetics in the years that followed. His teaching and personal counseling and encouragement influenced many young physicians at a crucial stage of their development.

Aimed at establishing modes of susceptibility and reactive

patterns in psychiatric and neurological disease, Dr. Kallmann's work encompassed many areas of normal and abnormal behavior in man, including schizophrenia and manic-depressive psychosis, homosexuality, various forms of mental deficiency, aging and longevity, tuberculosis, and early deafness. He was an author of over 175 papers and much of his work was summarized in two books, *Heredity and Health and Mental Disorder* 1954, and *Expanding Goals of Genetics in Psychiatry*, 1962. He had devoted much special attention to the problems of marriage and parenthood counseling in the presence of known familial disorders.

Dr. Kallmann had been President of the American Society of Human Genetics, the American Psychopathological Association, and the Eastern Psychiatric Research Association.

## Dr. M. M. Melicow Portrays Urology As Viewed Through Eyes of Modern Artist

At recent meetings of urologists in New York and Atlantic City, an unusual perspective on present day urology was provided by Dr. M. M. Melicow, Given Professor of Uropathology, who presented slides on famous people with urological diseases. An artist as well as a urologist, Dr. Melicow included in the series examples of impressionist, expressionist and cubist paintings and a mobile.

One of these is reproduced here with the explanation which Dr. Melicow has written for the readers of *The Stethoscope*:

"With the advent of the camera, realism, which had stifled creativity in Art, was no longer the latter's essential ingredient. The revolution among artists which followed, led to the evolution of 'creative' movements—some logical, some baffling and a few quite confusing.

"The photograph presented here reveals an attempt by a uropathologist to interpret and implement, from his point of view, a well known example of Modern Art: 'Nude Kidney Rushing Down the Stairs Hoping to Make it in Time,' with apologies to Marcel Duchamp (1912). His painting, 'Nude Descending a Staircase,' combined radiographic dissection of human anatomy with the progression of stills which comprise a motion picture. In fact, he called his picture 'chronophotography.' The painting created a sensation in the world of art."

Another slide was a graphic

"Nude kidney rushing down stairway," with apologies to Marcel Duchamp.

representation of a "Urologic Mobile," with apologies to Calder. "Suspended from the ceiling are some fixed specimens of small, large and cystic kidneys; in a balanced rotation with calculi of various sizes and shapes. Sculptures are static—Calder gave to sculpture what Duchamp did for painting. He added motion."

Among other slides by Dr. Melicow was "A Hemi-Kidney

Admiring Itself in the Mirror," with apologies to Picasso's "Girl Before a Mirror" (1932). "Like the girl, the kidney too has a right to admire itself. Packed in this organ are over two million tiny units which, working continuously and collectively, filter daily from the blood over 170 quarts of fluid, and then selectively reabsorb 169 quarts, yielding one quart of urine per day!"

## 3rd Annual Grant Is Made In Memory of Dr. Jolliffe

The third annual grant in memory of the late Dr. Norman Jolliffe, renowned nutritionist, has been awarded by the Research Corporation to Dr. Esteban Mezey of New York City. By the terms of the grant, Dr. Mezey will pursue clinical research studies at the Institute of Nutrition Sciences, Columbia-Presbyterian Medical Center.

Dr. Jolliffe, well known for his outstanding achievements in clinical nutrition, including the formation of the Anti-Coronary Club, was director of the Bureau of Nutrition of the New York City Department of Health. He died in 1961.

Because Dr. Jolliffe's widow felt very strongly about his convictions, she wrote into her will a bequest of \$100,000 to the Research Corporation to support an annual fellowship award for advanced training in clinical nutrition and meta-

Dr. Norman Jolliffe

bolic diseases in man. This was the "Columbia Fellowship Memorial to Dr. Norman Jolliffe."

In order to see the work begun, Mrs. Jolliffe advanced over \$10,000 in 1965, thus setting the program in motion that year.

The awardee in 1965 was

Dr. Robert G. Campbell; in 1966, Dr. F. X. Pi-Sunyer.

Dr. Mezey, the currently announced third winner of the Jolliffe Fellowship, received his M.D. degree at Harvard Medical School in 1962. Born in Vienna, he spent his boyhood days in Bogota, Colombia. At Yale University he earned a B.A. degree in zoology prior to entering Harvard.

Mrs. Jolliffe died in 1966. Recently funds were transferred from her estate to complete her \$100,000 bequest.

The bequest was made to Research Corporation, a foundation which supports research in the natural sciences and human nutrition. Grants for nutrition are made from its Williams-Waterman Fund for the combat of Dietary Diseases. In addition to the three \$8,500 awards for the Jolliffe Fellowships, this Fund has made other grants to the Institute of Nutrition Sciences totalling well over \$100,000. Dr. Jolliffe served as a member of the Williams-Waterman Fund Committee for 20 years.

## M. S. GRANT

*Continued from page one*

much closer to an explanation of the mystery of multiple sclerosis.

The National Multiple Sclerosis Society is the only nationwide health agency devoted to finding the cause and cure of MS. Since its inception in 1946, the organization has financed approximately \$7 million in scientific research projects. It is estimated that 500,000 Americans suffer from multiple sclerosis and related disorders.

"A Hemi-Kidney admiring itself in the mirror," with apologies to Picasso.

## Six Psychiatrists Are Awarded Silver Medallion

On the occasion of the celebration of the Bicentenary of the College of Physicians and Surgeons, Columbia University, at the faculty meeting of the Department of Psychiatry, six alumni, distinguished through their work in the specialty, were honored by presentations of a silver medal commemorating the event. They were:

*Dr. Howard Potter*, Class of 1913, the most senior member of the group and former Dean and Professor of Psychiatry at the Downstate Medical Center.

*Dr. Bernard Bandler*, Class of 1938, Professor and Chairman of the Department of Psychiatry Boston University—Past President of the American Psychoanalytic Association.

*Dr. Albert Stunkard*, Class of 1948, Professor and Chairman of the Department of Psychiatry, University of Pennsylvania.

*Dr. Seymour Perlin*, Class of 1950, Professor of Psychiatry and Director of Training, Johns Hopkins Hospital.

*Dr. Robert Weiss*, Class of 1951, Professor and Chairman Department of Psychiatry, Dartmouth Medical School.

*Dr. Judd Marmor*, Class of 1933, Director of Psychiatry of the Cedars of Lebanon-Mt.

Sinai Medical Center, Los Angeles, and President of the Academy of Psychoanalysis, was given his medal and certificate at the Annual Meeting of the Alumni of Columbia Presbyterian which was held during the annual Psychiatric Association meeting in Detroit on May 6, 1967.

## P&S Medallions Are Awarded to Dermatologists

Recently a special program was arranged by the Department of Dermatology as part of the Bicentennial celebration of the College of P&S. A large group of alumni of the Department and dermatologists from the local area assembled in the Alumni Auditorium to hear the guest lecturer, Dr. Richard K. Winkelmann, Professor of Dermatology of the Mayo Foundation, discuss "New Approaches in Scleroderma." The Department had chosen this occasion for the awarding of silver medallions to two alumni, Dr. George C. Andrews and Dr. Anthony C. Cipollaro, who were guests of honor on this occasion. Immediately preceding the lecture, Dr. Carl T. Nelson, Professor and Chairman of the Department, paid tribute to the recipients for their outstanding contributions to dermatology and presented each with a citation and medallion from the College.

## In Memoriam

### DR. WINIFRED HOPE FRANKLIN

A Memorial Service was held in The Pauline A. Hartford Memorial Chapel on Thursday afternoon, June 29, for Dr. Winifred Hope Franklin, Assistant Physician, Department of Medicine, P.H., Assistant Instructor in Medicine, P&S. Chaplain Robert B. Reeves conducted the services.

Dr. Franklin, 64, was fatally shot on June 7 when she was trying to prevent a young servant girl from committing suicide. At the time of her death she was planning her retirement within a few weeks. She had spent 38 years in the practice of medicine.

Her husband, Dr. Ray Clyde Franklin, a direct descendant of Benjamin Franklin, is an ophthalmologist with a private practice in New York City. The Doctors Franklin drove daily from their home in Lake Lincolndale, New York. Both had served on the schoolboard of Somers Township.

The two children of the Doctors Franklin are Mrs. Elizabeth Franklin Nicklin and Clyde Ray Franklin, Jr.

### MRS. GERTRUDE RATOFF

Mrs. Gertrude Ratoff, secretary in the Urology Clinic, Vanderbilt Clinic, for the past seven years, died suddenly on May 5. Mrs. Ratoff was admired and loved for her cheerfulness and leaves many friends in the Department of Urology and throughout the Medical Center. She is survived by two daughters, Mrs. Barbara Hartston of Hartsdale, N. Y., and Mrs. Sheila Jacobson of Jacksonville, Fla.

## Nurses Offer Big Bargains on Leftovers

The Nurses report an overage on several items sold during their 75th Anniversary. Hospital employees can have them at discount. The best bargain: a double-deck of washable, plastic-coated playing cards. Yours now for only \$1.50 a set; at \$1.25 a set if you buy 12 sets.

Other bargains: cups, saucers, ashtrays, tiles and notepaper.

Available at Book Store, Black Building 1, Nursing Alumni Office, Maxwell Hall 2, and the Nursing Office P.H. 4.

*Good health and good sense are two of life's greatest blessings.*

PUBLIUS SYRUS,  
Maxim 827

## Memorial Plaque At Nursery For Mrs. Emily B. R. Webster

Shown here are Dr. J. P. Webster, Professor Emeritus of Clinical Surgery, his grandsons and Daughter-in-Law Mrs. Robert J. Dellenback, wife of Dr. R. J. Dellenback, Assistant Professor of Physiology. On his left is Robert McA. Dellenback, on the right Ian McA. Dellenback.

The Medical Center Nursery School occupies a first floor apartment near the Service Building on 165th Street. Here are rooms with attractive things for children of pre-school age—bright work tables, a piano, scissors and colored paper, cases for each student's wraps. On the walls are decorations, finger paintings, and charts to show which students washed the tables and passed the cookies.

Recently a new adornment was added to the corridor wall—a commemorative plaque of the late Mrs. Emily Brune Randall Webster, wife of Dr. Jerome P. Webster, Emeritus Officer, Surgery, P&S. It was Mrs. Webster whose ideas and energies brought this nursery school into existence.

The unveiling took place on May 23 and was attended by approximately 50 persons. The speakers were Mrs. Arthur Gerard DeVoe, President of the Presbyterian Hospital Women's Auxiliary; Mrs. Peter Rosen, teacher and President of the Parents' Association for the Medical Center Nursery; and Mr. Frederick A. O. Schwarz, Vice President, Presbyterian Hospital Board of Trustees.

Mrs. DeVoe extended the

welcome to the group: "As a great admirer of Emily Randall Webster, I welcome you here today. With warm affection we are dedicating a plaque placed here in the Medical Center Nursery School which was started while she was Chairman of the Auxiliary."

Mrs. Rosen, stressing the importance of education, said, "We realize that nursery school is not a baby sitting service but the first important step in a journey of many years, through many institutions. . . . For giving our children this chance, we are deeply indebted to Mrs. Webster."

Mr. Schwarz spoke of Mrs. Webster's deep interest in the work of the Hospital, the difficulties of founding a nursery, the fun and benefits of the Mother Goose Ball which she initiated in its support. He concluded, "This bronze plaque will be a constant source of strength, a reminder that the school can live on."

The Medical Center Nursery School functions for the children of medical students, housestaff, attending nurses and the hospital community. It is cooperatively governed by the parents, and is not planned, operated, or financed through the Hospital.

## DR. SCHULLINGER HONORED

Dr. Rudolph N. Schullinger, Professor Emeritus of Clinical Surgery at Presbyterian Hospital, New York City, and a Charter Trustee Emeritus of Princeton University, was honored in June on the occasion of his 50th Princeton Reunion with the establishment of a Library Book Fund named in his honor.

Announcement of the Rudolph N. Schullinger Book Fund was made by Dr. William S. Dix, University Librarian, at a reception given

for Dr. Schullinger, Princeton 1917, by Provost and Mrs. J. Douglas Brown and Professor and Mrs. Alpheus T. Mason at The Dean's House on the Princeton campus.

"As a dedicated and devoted Chairman of the Trustee Committee on the Library, Dr. Schullinger has for many years been of immense assistance to Princeton University, and it is thus particularly appropriate that he should be honored by a book fund," Dr. Dix said to the assembled guests.

## ON THE SHELF

### New Books in Milbank Library

#### FICTION

**The Man Who Knew Kennedy**, by Vance Bourjaily. The smaller-scale tragedy of a member of the late President's own generation.

**More Lives Than One**, by Charles Bracelen Flood. Several lives are complicated by one young man's experiences in the Korean War.

**The Eighth Day**, by Thornton Wilder. The author's first novel in 19 years—of life in Coalstown, U.S.A., from 1902 to the present.

**Washington, D. C.**, by Gore Vidal. Gains and losses, political and personal, of two potential Presidential candidates.

**A Dandy in Aspic** by Derek Marlowe. In this spy novel a British double agent gets an impossible assignment—to find and kill—himself.

**The Notebooks of Captain Georges** by Jean Renoir. A French love story—written as a novel but said to be biographical.

**The Wedding Bargain** by Agnes Sligh Turnbull. The perfect secretary marries her millionaire boss and finds herself trapped in a situation she had not bargained for.

#### NON-FICTION

**Hell in a Very Small Place**, by Bernard Fall. One of the decisive battles of the 20th century—Dien Bien Phu, and its place in the continuing struggle for Viet Nam.

**Inside South America**, by John Gunther. A good reporter's wide-lens look at our near neighbors.

**I'll Come Back in the Springtime**, by Maurice Hennessy. The Ireland of John F. Kennedy, as it was seen by him during the Presidential visit in 1963.

**Vessel of Wrath**, by Robert Lewis Taylor. A biography of America's most uninhibited crusader, Carry Nation.

**The Thin Book by a Formerly Fat Psychiatrist** by Theodore Isaac Rubin. Dr. Rubin treats a subject of all too lasting interest by telling us how to change our attitude—then our diets.

### 3 Employees Retired In Recent Weeks

#### A. HENRY ANDERSON

A. Henry Anderson came to the Presbyterian Hospital as a physical therapist in 1945. After twenty-two years in this position, he retired on July 14. His associates gave a party for him a few days before he left.

Mr. Anderson was born in Millerton, New Brunswick, Canada and spent his boyhood in Sweden. Boating and fishing are two of his hobbies. He is also a painter of marine pictures and a collector of minerals, and he enjoys working at home improvement. His address is 20 Flower Avenue, Hastings-on-Hudson, New York, and he also has a home at Cobbosconnet, Maine. He is looking forward to spending more time with his wife, to visiting with his grandchildren in Texas, and to working on his Maine home. He also plans to continue his profession as physical therapist.

Of his work at the Medical Center, Mr. Anderson said, "Each day has been an adventure in relation with my patients and the satisfaction the work has brought me—also the pleasant association with my fellow workers and Doctors of Physical Medicine Neurologists and Neurosurgeons. My association with Presbyterian Hospital has been most rewarding and satisfying."

#### WILLIAM HOWARD

William Howard, born in Dublin, Ireland, who had worked continuously in the Food Service Department since 1948, retired on June 9. He is a great fisherman and expects to spend much of his future engaged in this activity. All of his many friends wish him well and invite him back to see them from time to time.

#### MRS. ELIZABETH STANLEY

Mrs. Elizabeth Stanley, who lives at 275 W. 238th Street, retired from her position in the 18th Floor Recovery Room on June 5. Born in Clearfield, Pa., Mrs. Stanley began her work here in Maxwell Hall, in 1954.

In parting, Mrs. Stanley said, "I have been looking forward to free time, but I have loved every minute of it here and I have loved all the people with whom I have worked. I will go to Florida next winter, where I have many friends."

Mrs. Stanley has one son and four grandchildren, three girls and a boy. She expects to make her permanent home in New York for at least the next two years, although she intends to do some traveling.

## Expert Medical Advice For Sailors

This is a picture of "Patrician" taken under full sail, with Dr. DeSanctis in control.

Three categories of medical problems for boatmen were described recently by a Medical Center doctor who has been a boating enthusiast for twenty-two years.

Dr. Peter N. DeSanctis, Chief Resident in pediatric urology at Columbia-Presbyterian, who is owner of an Atlantic class boat named "Patrician," stated that a few common sense precautions, a medical kit and a knowledge of first-aid can greatly enhance the enjoyment of boating and sailing.

The first category relates to the boatman's pre-existing conditions. If, for example, the person has diabetes, skin diseases, heart disease or seizure disorders, he should take these conditions into consideration before going afloat, and should consult his physician.

"Jibbing a spinnaker is no job for a man with angina or with a seizure disorder," the doctor said.

It is especially important for a crewman with medical limitations to inform the skipper, who is legally responsible for the craft and the welfare of his men.

The second category of problems arises specifically from being afloat: sunstroke, exposure to sun and wind, im-

mersion, motion sickness and fatigue. To counter exposure, one should use skin lotion, wear a wide-brimmed hat, and perhaps employ a sun screen.

"Sun glasses are absolutely essential to offset the glare from the water," he said. "And everyone who sails, of course, should know the techniques of resuscitation, either the mouth-to-mouth or the mouth-to-nose."

To ward off motion sickness, he suggested antiontation pills, obtainable on prescription. "Once sick, stay in the fresh air, keep your eyes fixed on

something relatively stable, take deep breaths and keep your fluid intake adequate."

He said that fatigue is a dangerous menace which can cause loss of judgment, and suggested mild sedatives and rest as antidotes.

Boat operators should carry aspirin, antiontation pills, a roll of one-inch tape, 4-by-4 gauze pads, gauze rolls, sun lotion and sun screen, Band-Aids, butterfly dressings, a small bottle of antiseptic, and a plastic airway for use in resuscitation.

The third group of prob-

lems includes burns, lacerations, fractures, dislocations and head injuries. The application of ice water is helpful for minor burns, but blisters should be left intact. In cases of head or eye injuries and fractures, if there is any question, the boatman should be returned to shore for expert medical help.

For boats sailing into the Atlantic, Dr. DeSanctis suggested that the medical kit include hemostats, surgical silk, catgut sutures and a needle, scissors, a needle holder, forceps, sterile gloves, a local anesthetic, a syringe and needle, antibiotic sedatives, a laxative, an antispasmodic, antacids and Ace bandages.

Dr. DeSanctis, a graduate of New York University, received his M.D. degree in 1962 at Boston University Medical School. He and his wife Claire have two sons, Andrew and Paul, and a daughter, Nicole.

### Dr. A. Gutman Is Awarded The P&S Medallion

Dr. Alexander B. Gutman, Professor of Medicine at Columbia University and Chief of Medicine at Mt. Sinai Hospital, recently received a Columbia University Bicentennial Medallion for his discovery of the only existing reliable chemical test for cancer.

The medallion, one of a group issued in honor of the 200th Anniversary of the founding of Columbia's College of Physicians and Surgeons, was awarded during the 62nd Annual Meeting of the American Urological Association.

Dr. Gutman's test, called the acid-phosphatase test, has proved particularly useful in diagnosis and treatment of cancer of the prostate.

In a guest lecture delivered at the opening of the four-day A.U.A. meeting, Dr. Gutman described how he surmised that acid-phosphatase might be in the blood, as well as in the cancer, if the cancer had exposed itself to the tissues by breaking out of its capsule.

Laboratory tests established that Dr. Gutman's theory was correct, and, furthermore, that the amount of acid-phosphatase in the blood would decrease if treatment is successful, increase if it is not. The test has thus become a valuable aid in both treatment and research, and, in fact, played a key role in the work which won Dr. Charles Huggins, of Chicago, a Nobel Prize for medicine.

### Neuroradiology Course Given Here Recently

The VIII Postgraduate Course in Neuroradiology, under the direction of Dr. Ernest H. Wood, Professor and Director of Radiology, Neurological Institute, was held recently as a part of the Bicentennial Celebration of P&S. It marked an important "first" in the field of Radiology—the First C. G. Dyke Memorial Lecture. The address was delivered by Dr. Leó M. David-

off, Emeritus Professor, formerly Associate Dean and Chairman of the Department of Neurological Surgery, Albert Einstein College of Medicine, Yeshiva University. The lecture honored Dr. Cornelius G. Dyke, an outstanding pioneer in the subspecialty of Neuroradiology, who had been Director of the Neurological Institute of New York until his death in 1943, at the age of 42. Guests of Honor were Mrs. Cornelius (Doris) Dyke, and brother Dr. Lester Dyke, Dr. Dyke's son Gysbert Dyke, Director of the Health Service at the University of Maryland.

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXII, NUMBER 8

SEPTEMBER, 1967

## A REPORT ON THE BUILDING PROGRAM

When future generations look back to mark important milestones in the continuing growth of Columbia-Presbyterian Medical Center, the 1960's will be remembered as a time of swinging crane booms, blasting powder explosions, partially blocked streets, and magnificent new buildings rising out of rocky caverns to alter the imposing skyline above Washington Heights. Or it could be remembered as the decade when more millions were spent for renewal and expansion than were spent to build the original Medical Center during the 1920's.

The *Stethoscope* takes this opportunity to bring its read-

ers up-to-date on the Development Program launched in 1960, under the chairmanship of General Lucius D. Clay.

### Past and Present

To understand present events one must know some of the past history. When Columbia-Presbyterian Medical Center first opened its doors on Washington Heights in 1928, it was acclaimed throughout the medical world as the most modern and complete medical facility yet conceived by physicians and hospital architects.

In a magnificent complex of efficient new buildings, containing the most modern equipment then available, were

joined a great medical college and a group of long-established voluntary hospitals, each with unique traditions of service dating back to the early origins of New York City. The Presbyterian Hospital, one of the nation's great general hospitals, became the nucleus for the affiliation of several specialty hospitals. It is a tribute to the trustees, managers, staffs and supporters of the individual hospitals that they could merge their skills and resources into one great treatment, teaching and research facility that was far more efficient than the sum total of its parts. To this day each institution retains its proud identity, but now all hospitals are combined in a single non-profit corporation known as The Presbyterian Hospital in the City of New York, and all operate under uniform policies.

These basic policies have remained constant throughout the years: (1) to provide the finest patient care for all who enter for treatment, regardless of race, creed, color, or ability to pay, (2) to attract and retain an eminent clinical and teaching staff for the training of future physicians and other medical workers, and (3) to encourage medical research and provide the best possible facilities for carrying it out.

These policies have proved their value in many ways. Our hospital has earned an international reputation for excellence, and patients come to us from all parts of the world. Physicians and other medical workers trained here are now serving in medical schools, teaching hospitals and research centers at home and abroad, bringing to others the skills and knowledge acquired at Columbia-Presbyterian Medical Center. Year after year, members of our staff publish the results of their research, and many have been awarded the highest honors of their professions, including the Nobel Prize. Medical textbooks, edited by members of our staff, are today used wherever modern medicine is practiced and taught.

The greatest testimony to

**A MODERN FACILITY FOR AMBULATORY-PATIENT CARE.** This splendid new building, started in February, 1966, is now being rushed to completion as you can see, to meet the needs of ambulatory out-patients, who are increasing monthly under the government's broadened health programs. About \$7,000,000 is needed to complete financing of this essential project, which is planned for occupancy by June, 1968.

### Quality, Not Size

Although Columbia-Presbyterian Medical Center was the largest medical facility of its kind when founded, its administrators and staff have always stressed quality rather than size.

As a voluntary institution, the Hospital is able to control admissions so that quality of care is never sacrificed in order to serve more patients. Annual Reports show that the number of days of patient care given within the hospital has remained fairly constant, averaging about 450,000 days a year for the past decade.

### ENROLL FOR WEINBERG AID NOW

From nursing attendant to a degree in business administration; from clerk to clerk-typist, clerk-typist to secretary; from laboratory messenger to laboratory technician, laboratory technician to supervisor. These are just a few of the promotions earned by hospital personnel who have continued their educations under the Sidney J. Weinberg

Educational Aid Reimbursement Program.

Since its inception in 1962, a total of 252 applications have been approved for such aid. Personnel are currently working toward degrees in nursing, business administration, pharmacy, medical laboratory technology, engineering and other professions, while many others

# STETHOSCOPIA

## • WEDDINGS

*Dorothy Fiore*, medical secretary in the Medical Information Department, was married on June 17 to *Jack Finamore*. Mr. Finamore will be attending the New York Law School this fall.

*Jane Kathryn Nugent* was married on July 8 to *William Lawrence Hazard*. Mrs. Hazard is in her fourth year, and Mr. Hazard in his second year, at P&S. She is an honors graduate of Wellesley College and he is an alumnus of Yale University.

*Edith B. Humphreys* and *José Mas Jordan* were married on July 8. The bride is a graduate of the Radcliffe-Massachusetts General Hospital School of Nursing and attended the Columbia University School of Social Work. Her father is Dr. George H. Humphreys II, Director of Service, Surgery, Columbia-Presbyterian. Mr. Mas directs a community development project in Caracas, Venezuela.

*Theresa M. Curry, R.N.*, was married to *Daniel E. Meyer* on August 19. They will live in Philadelphia, where he will study at Temple University Graduate School.

*Doris Eleanor Miller, R.N.*, and *Robert Christian Kiess* were married on August 26. Mrs. Kiess, a graduate of Columbia University School of Nursing, is employed in the Exchange Visitor-Nurse Program here at the Medical Center. Mr. Kiess is a third year student at P&S.

*Dianne Shuster, R.N.*, and *Lieut. B. S. Pankey* were married June 10 at the Post Chapel at Fort Hamilton, Brooklyn. They will be living in San Francisco, California.

*Virginia Ann Kidd* and *Albert Stuart Pasternak* were married on August 5. The bride received her bachelor's and nursing degree from the Department of Nursing, Columbia University, and is a member of the medical team working on cardiac research at this Medical Center. Mr. Pasternak received his master's degree from Columbia.

*Ann Colman*, secretary in the Projects Office, was married to *Herbert G. Bothner* on August 12.

*Josephine Naa-Djama Altokro, R.N.*, staff nurse in the Eye Institute, and *Olufemi Daito Ogundipe*, medical student at P&S, were married on August 26 at The Pauline A. Hartford Memorial Chapel. Chaplain Robert B. Reeves conducted the ceremony.

*Joan LeStrange, R.N.*, Neonatal Unit, was married to *Robert Moyle* of Newark, N. J., on August 26, in Towanda, Pa.

*Mary Bozzo, R.N.*, was married to *David J. Allen* on September 9 in Our Lady of Solace Church in the Bronx. Mr. Allen is a graduate student at Johns Hopkins School of Advanced International Studies. Miss Bozzo is the daughter of Mr. Peter R. Bozzo, Purchasing Agent.

*Helen Barbara Cohen* and *A. Roger Wiederhorn* were married on August 27 at White Plains, N. Y. The bride plans to enter Teacher's College, Columbia University. The bridegroom is entering his third year at P&S.

## • NEW ARRIVALS

Congratulations to *Mrs. Margaret Sughrue*, in the Compensation-Liability Department, on the birth of a grandson. Mrs. Sughrue's daughter *Mardie*, a former head nurse in the operating room at Presbyterian Hospital, had a baby boy on July 31 in Honolulu where she resides with her husband Dr. Edward Jim. Mr. and Mrs. Sughrue plan to visit their daughter in November.

*Mrs. Gertrude Hopper*, who is a receptionist in Vanderbilt Clinic, recently became a proud grandmother. She has a grandson.

## DOINGS OF DOCTORS

DR. RONALD L. KATZ, Associate Professor of Anesthesiology, P&S, and Associate Attending Anesthesiologist, P.H., presented a paper, "Comparisons of Mechanisms of Action of *Germine Diacetate* and *Neostigmine Antagonism of Neuromuscular Blocking Agents in Man*," on August 29 at the American Society for Pharmacology and Experimental Therapeutics, Washington, D. C.

DR. ELLIOTT F. OSSERMAN, Associate Professor of Medicine, P&S, and Associate Attending Physician, P.H., participated in the Nobel Symposium on Gamma Globulins in Stockholm June 12-17. Dr. Osserman's presentation was entitled "The Association between Plasmacytic and Monocytic Dyscrasias in Man. Clinical and Biochemical Studies."

DR. EMANUEL M. PAPPER, Director, Anesthesiology Service, was Visiting Professor at the University of Turin, Italy, and Foreign Lecturer at the meeting of the Italian Society of Anesthesiologists at Trieste, Italy, during the month of July.

DR. GEORGE F. CRICKLAIR, Professor of Clinical Surgery, P&S, and Attending Surgeon, P.H., appeared on NBC television on the program called *Research*, and discussed cleft lips and cleft palates.

DR. JOSEPH E. SNYDER, Assistant Vice President, P.H., conducted a one-day meeting on the comparisons of staff organizations and reimbursement to meet today's changing health challenges at the annual Cooperstown Conference. This conference is sponsored by the Hospital Association of New York State and was attended by nearly one hundred doctors, hospital administrators and trustees.

DR. SAMUEL FEDER, Lecturer in Psychiatry, represented the Psychoanalytic Clinic for Training and Research, Department of Psychiatry, P&S, at the Pre-Congress Conference on Selection of the International Psycho-Analytical Congress in Copenhagen, July 22-24.

DR. THOMAS V. SANTULLI, Professor of Surgery, P&S, Attending Surgeon, P.H., participated in a postgraduate course in *Pediatrics* in Peru, June 16-29, as a part of a teaching team of eleven pediatricians and surgeons from the United States. The mission was sponsored by the Unitarian Universalist Service Committee in conjunction with the North American Peruvian Pediatric Society. Approximately 280 physicians were registered in the course. The surgical team, consisting of DR. SANTULLI and DR. ARTHUR B. VOORHEES, JR. of the Department of Surgery, and DR. HERBERT RACKOW of the Department of Anesthesiology, performed surgical operations, gave lectures, conducted round-table conferences and rounds in Arequipa and in Lima, Peru.

DR. ZACHARIAS DISCHE, Professor Emeritus of Biochemistry and Special Lecturer in Biochemistry, attended the Sixth Congress of the

International Diabetes Federation in Stockholm, Sweden, July 30-August 4. He served as Moderator for Panel 7B on the *Chemistry and Metabolism of Basement Membranes* at this meeting in Stockholm.

DR. GEORGE W. FISH, Consultant in Urology, and DR. MEYER M. MELICOW, Given Professor of Urology, distinguished for their work in the specialty, were honored by the presentation of P&S Bicentennial Silver Medals at the Squier Urological Alumni Luncheon during the meeting, a few weeks ago, of the American Urological Association held at the New York Hilton Hotel.

DR. LEON BERNSTEIN-HAHN, who was a Visiting Fellow at P.H. in 1959-1960, wrote from Buenos Aires, Argentina: "Thank you very much for sending *The Stethoscope* that makes me feel in touch with the Medical Center in spite of the distance." Dr. Bernstein-Hahn is co-organizer of the First Post-Graduate Course on Pediatric Urology, University of Buenos Aires. For this event, he writes, he was lucky to secure as Visiting Professors DR. RALPH VEENEMA, Associate Professor of Clinical Urology, P&S, and DR. SAM KNAPPENBERGER, who was a resident at P.H., 1957-1960. The staff includes DR. RAUL CARREA, Associate Professor of Neurology, a former resident at the Neurological Institute. "As you can see, Columbia Alumni are well represented."

DR. FRANK M. POLACK, Assistant in Ophthalmology, has left the staff of Columbia-Presbyterian. He joined the Department of Ophthalmology at the University of Florida, Gainesville, on July 1.

DR. GORDON H. TAKAHASHI, Assistant in Ophthalmology, left the Corneal Center to join the U. S. Air Force July 1. He will be engaged in corneal research at the Aerospace Medical School, Brooks Air Force Base, near San Antonio, Texas.

DR. LAWRENCE C. KOLB, Professor and Chairman of Psychiatry, P&S, and Director of Service, Psychiatry, P.H., has been elected President-Elect of the American Psychiatric Association.

DR. GEORGE S. GOLDMAN, Professor of Clinical Psychiatry and Director of the Psychoanalytic Clinic for Training and Research, Department of Psychiatry, P&S, was elected to Life Membership in the American Psychoanalytic Association at the annual meeting held in Detroit during May.

DR. WILLIAM A. BLANC, Professor of Pathology and Director of Babies Hospital Pathology Laboratory, attended a Workshop of the National Institute of Child Health and Human Development on *Current Developments on Gestational Differences in Low Birth Weight Infants*, June 19-21, at Allenberry Inn, Boiling Springs, Pennsylvania.

## STETHOSCOPIA, Continued

### • NOTES OF INTEREST

*Mrs. L. Fitzpatrick* has been transferred from the job of receptionist in Vanderbilt Clinic to the staff of the Medical Information Department.

*Sally Moore*, Supervising Orthoptist in the Institute of Ophthalmology and the Chil-

dren's Eye Clinic, spoke at the First International Congress of Orthoptists in London on July 3. The Congress was held at the Royal College of Surgeons of England. Miss Moore spoke on "The Use of *Miotics in the Management of Strabismus*."

### • CONDOLENCES

To *Mrs. Mary L. Corey*, nurses' aide, P.H. 10, for her husband, John P. Corey, who died on June 14.

\* \* \*

To the family and friends of *Dennis Corcoran*, deceased, July 20.

## Radio Operator is Friend in Need Says Rios, Employee From Caracas

The recent earthquake in Venezuela brought alarm to Mr. and Mrs. Gustavo Rios, a young couple from Caracas who are employed as IBM clerks in Babies Hospital. Learning of death and destruction in the capital city, they needed to communicate at once with their families living there, but normal communications were disrupted.

Through a friend, Mr. Rios learned about Mr. George Sinclair, who works in the Medical Center and who has an amateur radio station.

As Mr. Rios related afterward, "I tried for three hours that night (July 31) and finally I got Mr. Sinclair on the phone about nine. Without hesitation he said he would be glad to help me. I went directly to his station. Within ten minutes he made contact with an operator in Caracas who was transmitting to Washington. We stood by—then Mr. Sinclair identified me and turned the microphone over to me. I asked the Caracas operator 'Luis' if he would do me a favor and call my family."

Luis, station YV5-ALC, was glad to accommodate and with-

George Sinclair, Hospital employee, has 1000 watt amateur radio station near Medical Center.

in a few minutes Mr. Rios learned some details of the disaster—the worst in a hundred years. The operator conversed by phone with Mr. Rios' mother and repeated her messages. The mother was very nervous, for the city was in a panic of

fear, but she gave her assurance that the families of Mr. Rios and his wife were all right.

Commenting on the keenness of Mr. Sinclair in making contact with the earthquake-torn city, Mr. Rios said that it was something marvelous.

Mr. Sinclair's 1,000 watt station is located at 508 West 166th Street—the large antenna is quite visible from the Medical Center. He has been radioing for twenty-five years, and on his walls surrounding

Yolanda and Gustavo Rios and 2 month old Gustavo Alfonso. Mr. and Mrs. Rios, employees at Babies Hospital, tried to communicate with families in Caracas when earthquake struck.

the neatly assembled equipment are rows of cards from stations he has contacted all over the world. He is familiar with hundreds of voices and personalities in many countries. A New Yorker by birth, he grew up in the West Indies; he seems a well attuned citizen of the world.

In addition to his work for Dr. Robert DeBellis, Department of Medicine, at the Medical Center, he teaches communications on certain evenings each week. In his spare time he pursues many hobbies—painting, photography, boating, music, carpentry and woodworking.

For the magnificent favor from Mr. Sinclair, Mr. Rios was extremely grateful. "I never realized before," he said, "how helpful the amateur radio operators are."

## GALLAGHER BOOK

*Continued from page one*

harbor. The usual fireworks, twenty-one gun salutes, and toasts rang forth in honor of King George III's birthday. Up on Bowery Lane, the same cattle dealers met at the same Bull's Head Tavern to do business with their colleagues in the meat and tallow trades. The average household still burned about fifteen pounds of candles a month (or pine knots, if the family was poor).

Trees grew out of the middle of sidewalks, which were often no more than hard-packed dirt lanes, slightly raised, or planked with oak. Pump handles, hitching posts, bay windows, pitched roofs, stairs, stoops, and open gates obtruded into the walking areas. . . .

Even the trained and educated physician was limited in his efforts to heal the sick . . .

## WEINBERG AID

*Continued from page one*

are taking vocational training and special courses to improve themselves in their present jobs.

"Education is a key to a better job," says C. Douglas Auty, assistant vice president, Personnel, "and the hospital is anxious to help qualified employees who wish to take advantage of this Program."

The Weinberg Reimbursement Plan pays 50% of the tuition fee for one to six credits per semester, or the equivalent in courses that carry no college credit.

*Employees interested in furthering their educations this fall with help of the Weinberg Plan should apply now. The closing date for applications is September 30. Forms are available from Miss Lillian Oring in the Personnel Office.*

To be eligible for this aid, a person must have been working at the hospital full-time for at least six months; the subjects to be studied must be related to a person's work or to career development with future job responsibilities in the hospital.

Under the Plan, students must take training at an approved educational institution. Correspondence schools are not approved.

This educational aid plan owes its existence to Mr. Sidney J. Weinberg, a prominent stock broker and longtime hospital trustee. To honor his 70th birthday, in 1961 his friends presented \$70 each to the hospital in his name. To their contributions of over \$45,000, Mr. Weinberg added enough to establish a fund of \$70,000, the income from which is to help employees help themselves.

"We hope more personnel will take advantage of this splendid opportunity to increase their education and improve their skills," Mr. Auty said.

for the medicinal properties of ergot, iodine, cinchona bark, morphia, and strychnine were still to be discovered. . . . Diphtheria was invariably diagnosed as croup and treated as such. The diagnosis was not that important anyway, though, since calomel, jalap, rhubarb, and mercury were administered no matter what the disease might be. By far the oldest and most common treatment, however, and the favorite among doctors and laymen alike, was bloodletting, which was recommended for fever, pulmonary consumption, diabetes, gout, asthma, idiocy, hysteria, madness, and even injuries in which the victim had already bled from cuts and lacerations. — Thomas Gallagher: *The Doctor's Story, In Commemoration of the Two-Hundredth Anniversary of the Columbia University College of Physicians and Surgeons.*

## JAMES BROWN WINS RIBBON IN NATIONAL X-RAY CONTEST

The white ribbon which James H. Brown is holding in the photo represents a national honor for himself, his department and The Presbyterian Hospital. He is Assistant Chief X-ray Technician, Department of Radiology, P.H. Attending the 39th Annual Convention of the Society of Radiologic Technicians which was held this summer at St. Louis, Mo., he entered the X-ray photo contest and won third place. Fifteen hundred persons attended the convention and there were more than 200 entries in the contest.

"Dr. Seaman, our big boss, gave me the idea of submitting a picture for the competition," Mr. Brown said, referring to Dr. William B. Seaman, Director of Service, Department of Radiology. "He made it possible for us to have the equipment for this type of technique."

The equipment, Mr. Brown explained, provides consistently high quality chest films and it also reduces the radiation dose to the patients to less than one-fourth of that of an earlier technique.

James Brown credits his honor to a boss who gave him the idea and to superior X-ray equipment.

Mr. Brown, who was born in Orlando, Florida, received X-ray training during his three years in the U. S. Army. He has been employed at P.H. since 1958 and was advanced to his present position in 1963. He is married and has two children.

## PREDICTIONS ARE COMING TRUE FOR DR. FRANKLIN S. MUSGRAVE

Something funny happened to Dr. Franklin S. Musgrave on his way to becoming an earthbound neurosurgeon or physiologist. He took a sudden thrust toward outer space.

A few days ago he was chosen as one of a new team of eleven astronauts.

It will be recalled by some persons at the Medical Center that when Dr. Musgrave was a student at the College of Physicians and Surgeons, there were predictions that he had the qualities of an astronaut because of his remarkable stability and warm, unruffled manners. Now it has happened. While doing post-

doctoral work in physiology at the University of Kentucky, he was selected for such a career—one of the first doctors to be so chosen.

Dr. Musgrave of Marietta, Ohio, came to P & S, after training in business administration and experience as a Marine Aviator, starting medical school as a married man of 25. He received his M.D. from Columbia in 1964, having participated extensively in neurosurgical and neurophysiological research projects.

It should be noted that this may be the first product of our Medical Center unable to keep his feet on the ground.

## 'Prize Will Buy Wheelchair' Says Kouman

The skies have rained gold dust for Mr. Thomas Kouman, a multiple sclerosis patient in Presbyterian Hospital. He was one of ten winners who shared the \$10,000 prize money for the Smirnoff Skyball Balloon Race Contest. The ten were named for guessing that the Smirnoff Skyball, a 55-foot hot air racing balloon, would win first place and would travel fourteen miles in the annual "500" Hot Air Balloon Race held at the Indianapolis Speedway.

Mr. Kouman had a big smile for friends and fellow patients on the 12th floor of Presbyterian recently when he was handed the check. Trying out one of the hospital's motorized wheel chairs, he said that

Thomas Kouman, multiple sclerosis patient, accepts prize check from Smirnoff Co. and contemplates the purchase of pushbutton transportation.

he was considering buying one soon with his prize money.

# NEW APPROACH TO MICRO-CHEMICAL

Evaluation and treatment of patients have become increasingly dependent on reliable laboratory measurements. This increasing demand for laboratory work-up has, especially in pediatrics, caused a demand for a special type of analysis. While the doctor treating an adult patient can collect relatively large and frequent samples of blood, the same procedure applied to babies and infants is not feasible and may be potentially harmful.

The Clinical Chemistry Laboratory in Babies Hospital in realizing this problem has now changed virtually all the tests it performs in such a way that only very small amounts of blood are needed

for the analyses. For the patients it means that only a few drops of blood have to be collected from the fingertip; for the doctor it means that he can order these tests more frequently without risking side effects, thus enabling him to follow his patients much more intensively.

The Chemical Laboratory in Babies Hospital is at the present processing more than 40,000 samples per year, a number which is rapidly increasing. In order to gain the most benefit from the results generated, another modern tool has been explored, namely the computer. A program has been written for the IBM computer, located in the Service Building, with the help of Drs. Ralph B. Dell, Assistant Attending Pediatrician, and Fred Wiener. This program automatically calculates all the laboratory results, and replaces the difficult-to-read handwritten reports with reports printed on selfsticking slips. In addition the computer stores all of the data in its memory for use in the future.

All these changes could not have been carried out without the cooperation and understanding of a number of people in and outside Babies Hospital. The laboratory staff has accepted all the new changes with the enthusiasm required for a successful outcome; mention should also be made of the cooperation of the personnel of the Data Processing Center.

The pictures which follow

Dr. Knud Engel

were arranged by Dr. Knud Engel, Assistant Professor of Pediatrics, the director of this laboratory, to give the readers of *The Stethoscope* a glimpse of some of the progress which has been made in ultramicro chemistry. The story begins with the doctor's preliminary examination of one of his small patients. He finds that certain tests are needed and consequently requests these from the laboratory.

Unless the test is an emergency procedure the blood specimens will be routinely collected by the technicians twice a day. In the next series of pictures the technician prepares for the blood collection,

and assisted by someone who holds the baby, she collects the blood in small glass tubes from a fingertip.

When the samples arrive in the laboratory, they are identified and sorted for the number of tests which have to be done on each of them. At the same time, one punch card is made up for each test. This card contains, in addition to information on the test, the patient's name, date of birth, unit number, etc.

Each test sample, together with the test punch card, is distributed to the location in the laboratory where the specific test is performed. The results obtained are immediately punched on the punch card with a special stylus. The cards from all the different tests are finally put together in a deck and taken to the computer center where they are processed.

As soon as the cards are processed, the resulting outputs are immediately taken to the ward where they are pasted directly into the patient's chart. One of the accompanying pictures shows a doctor discussing the latest results with a nurse.

The last picture in the story shows the laboratory staff on one of its weekly "rounds" in the hospital. On these rounds the resident in charge discusses a patient's problems and brings a little more perspective to the numerous nameless samples which the technicians have to deal with every day.

The laboratory with its sophisticated electronic equipment will soon be located on the second floor of the new addition to Babies Hospital. The estimated cost of the new facility is \$750,000 and it will include a flame photometry laboratory, a spectrophotometric laboratory, a separation and distribution center, a titration laboratory, a workshop where new equipment can be designed and built, and facilities for a computer terminal and data processing equipment. Supporting areas will include an office for the director and his secretary, and facilities for a night technician.

## MAILBAG

I can't begin to express the gratitude felt by our family for the wonderful care given to Jimmie while he was a patient at Babies Hospital. The doctors, nurses and all those who had a hand in his recovery were just wonderful to him and to members of his family during a most trying period. We shall always feel indebted to your wonderful hospital and its people — from the mother of a former patient.

# THESE EMPLOYEES RETIRED IN AUGUST

## EDWIN BEHLMER

Sgt. Edwin Behlmer

## JOHN J. O'NEILL

John J. O'Neill

After 29 years of service at Presbyterian Hospital, Sergeant Edwin H. Behlmer retired at the end of August. As an officer of the Protective Service he has held down the busy basement office in the east wing of Vanderbilt Clinic, surrounded by a battery of telephones, a television view of part of the hospital, and voluminous records. Hundreds of Hospital employees came and went past his desk daily.

One of the phones was ringing when the reporter from *The Stethoscope* dropped in to see him recently. Over the phone the Sergeant asked, "What color was the wallet? Did you have your name and address in it? Are you an outpatient? . . ."

Following the conversation, Sergeant Behlmer paused to relate some experiences associated with the "LOST" and "FOUND" books on his desk. He recalled the case of a valuable ring that was lost and found twice, and the incident of a man who lost \$29,000 and recovered it through the Sergeant's office.

Sergeant Behlmer was educated in New York's schools and universities, including C.C.N.Y. where he studied real estate, and New York University where he took journalism. He has been a professional artist, photographer, actor and musician. He invented and copyrighted a New York City traffic system ten years before the city adopted a similar pattern.

He introduced fingerprinting for the personnel of Presbyterian Hospital in 1945. He took the first movies of cerebral palsy for this Hospital, and he organized a camera club which evolved into the Annual Art Show. Many of his photos appeared in the early issues of *The Stethoscope*. He has done much personal, confidential work with employees. He declares that the personnel here are "decent people, interested in working for a living—they don't want something for nothing."

Sergeant Behlmer and Mrs. Behlmer, who is a registered nurse, are planning a trip to Expo '67 in the near future.

John J. O'Neill, a member of the Protective Department and chauffeur since 1955, retired at the end of August. A tea, attended by his many hospital friends, was given in his honor on August 17.

Here, Mr. O'Neill said, he has been privileged to drive many distinguished people in the health field and he remembers them all with affection. "I have worked for most of my life," Mr. O'Neill said, "but my job here has been the most enjoyable and satisfying and I will miss my friends."

Always agreeable and willing to help, and with a wealth of information at his fingertips, "John" will likewise be missed by his many friends at the Hospital.

Joan O'Neill, Mr. O'Neill's daughter, a registered nurse, worked on the maternity service on the 17th floor of Presbyterian Hospital before her marriage. His son, John J. O'Neill, Jr., is secretary-treasurer of Consolidated-Freight Handling Corporation of New York City.

Mr. O'Neill's plans for the future are indefinite, but he intends to find another job after taking a long vacation.

Mr. and Mrs. O'Neill will continue to live at 609 West 186th Street. "I wouldn't think of leaving New York City," he said. "I was born here and have worked here all my life."

A. Henry Anderson, Physical Therapist, retiring from service at Columbia Presbyterian, has received a special award from the A. D. Gurewitsch Foundation, 121 E. 60th Street, New York. The letter of award reads:

"Dear Mr. Anderson: It is a pleasure indeed to inform you that the directors of this foundation have decided, in recognition of your excellence as a physical therapist and as an example for other physical therapists for so many years, on the occasion of your retirement, to grant you a prize of \$500. We wish you success and happiness in whatever you may undertake. —A. David Gurewitsch, President."

## MRS. ERNESTINE YTTEROCK

Mrs. Ernestine Ytterock retired on September 1, after 20 years of continuous service at the Medical Center.

Mrs. Ytterock began her work here in the Food Service Department, "because I then thought that I would like to go into the restaurant business." Intrigued with hospital work, however, she decided her future was at the Medical Center. For the past several years she has served in the Admitting Office at P.H., where she worked in the machine room processing admissions.

"I have enjoyed my 20 years here. There were many eventful and interesting experiences — some humorous, some revealing basic facts of life — but there was never a dull moment. One rainy day I went

Mrs. Ernestine Ytterock

to lunch, and when I returned they had moved my office, machines, and everything, but where? After much searching, I found my new office in the cool I.B.M. room. . . I've often wondered if I would ever meet any of the hundreds of new babies I have admitted. . . I am sorry to leave all my good friends here, who were always helpful and kind."

Mrs. Ytterock will spend the future working, traveling and spending time with her two grandchildren.

Her friends hope she will find time to return for occasional visits.

## ANDERSON LEWIS

In April, 1943, Babies Hospital was fortunate to secure the services of Anderson Lewis, a warm and gentle man, who has served continuously in the Housekeeping Department since that time.

A measure of the respect and affection held for Mr. Lewis by all who have worked with him during his 24½ years at the Medical Center was reflected at a retirement party held in his honor, in the Doctors' dining room, on August 24. Dozens of his friends came to wish him well and to hear the wonderful musical program.

Mr. Lewis has been interested in music most of his life, but five years ago he began the formal study of piano under Mrs. M. Margulus, a concert pianist and teacher who has performed here and in Europe.

Anderson Lewis has been a good friend of many physicians, nurses and other employees at Babies Hospital. "They have all been wonderful to me," he said, "and I will treasure their friendship and my memories of them always."

While working for Babies Hospital, Mr. Lewis has also held a part-time job with the College of Physicians and Sur-

Anderson Lewis

geons, taking care of the laboratory glassware at Babies Hospital.

Except for a well-earned vacation in California, Mr. Lewis' future plans are indefinite, but he will continue his part-time job with the College after he returns from vacation.

Mr. Lewis has only one regret, that his tenure here before retirement was only a few months short of qualifying him for the Medical Center's 25-Year Club. Nonetheless, he will be in often to visit his friends, and he will always be welcome at the hospital he has served so well.

## FAREWELL TEA AT NEURO FOR MAURINE MCCONNELL

A farewell tea was held in Neurological Institute for Maurine McConnell, Assistant Head Nurse, 9-E, a few days before her marriage, on August 14, to James Jordan. Friends presented a gift to her, sterling silver candlesticks, and bestowed upon her words of high praise for her splendid work in Neuro.

The wedding was held at the Church of Notre Dame, New York. The Jordans will make their home in Santa Fe, New

Mexico, where Mr. Jordan is a teacher of biology.

Maurine McConnell Jordan

## OTHER RETIREMENTS

On the retirement of Mrs. Lillian Tames as secretary in the Volunteer Department, Mrs. Jo Anne Duggan has taken over her duties. We miss Mrs. Tames but wish Mrs. Duggan success.

Mrs. Anna Gallagher, who is a receptionist in Vanderbilt Clinic, is leaving at the end of August as her husband is retiring, and they will be traveling together for awhile. Mrs. Gallagher will be sorely missed at the Information Desk in the clinic as she has been with us since 1958.

Among other retirements are Gerda Levy, Seamstress, Laundry; Mrs. Elizabeth Stanley, Clerk, Nursing; Mrs. Helen E. Tully, Clerk, Nurs-

ing. To these and several others whose names are not listed here, our best wishes for years of happiness and good living.

## Former Employee Praises Hospital

A note from Mrs. Betty Brockington to *The Stethoscope* reads: "I have given the Hospital my service for twenty years." After retiring from employment in October of last year, Mrs. Brockington was at times a patient in the Hospital, suffering from a heart condition. Now she comes to the Vanderbilt Clinic Drug Store periodically for her medicines: During her years

of employment she worked as a maid in various departments, in the eye clinic, the market room and the food service areas. With deep loyalty to the Hospital she spoke her special praise for all the doctors and the nurses who have stood by her.

Betty Brockington

## New Department Chairmen

Grayson Kirk, President of Columbia University, and Augustus C. Long, President of The Presbyterian Hospital, announce appointments, for Pathology and for Neurology, of new Department Chairmen and Directors of Service.

Dr. Donald West King has been appointed Professor of Pathology and Chairman of the Department of Pathology, P&S, and Director of Service, Pathology, in The Presbyterian Hospital, succeeding Dr. Donald G. McKay.

Dr. King comes to Columbia-Presbyterian from the University of Colorado Medical Center where he has been Professor and Chairman of Pathology since 1961. From 1956 to 1961 he was Assistant Professor of Pathology at Yale University School of Medicine and Senior Public Health Fellow.

A native of Pennsylvania, Dr. King was graduated from Syracuse University and received his M.D. degree from the College of Medicine of Syracuse U. in 1949. He is a member of many professional organizations, a Diplomate of the American Board of Pathology and a member of the Committee of Pathology, National Research Council.

Dr. and Mrs. King, the former Mary Elizabeth Dickson, have three children.

Dr. G. Milton Shy has been appointed Professor of Neurology and Chairman of the Department of Neurology, P&S, and Director of Service, Neurology, The Presbyterian Hospital. He succeeds Dr. H. Houston Merritt, who continues as Dean of the College of P&S.

Dr. Shy, a native of Colorado, received his B.S. degree from Oregon State College in 1940, his M.D. degree from the University of Oregon Medical School in 1943, and his M.Sc. degree from McGill University, Canada, in 1949.

From 1949 to 1950 he was Senior Resident and Demonstrator (Neurology and Neurosurgery), Montreal Neurological Institute and McGill University, Canada. From 1955 to 1962 he was Consulting Neurologist, U. S. Naval Medical Center; and since 1962 he has been Professor and Chairman of the Department of Neurology, Schools of Medicine, University of Pennsylvania.

Dr. and Mrs. Shy have two children.

## Hartford Grant to P&S Doctors For Study of Respiratory Burns

Research on respiratory burns and smoke poisoning has been undertaken at the Harlem Hospital and the College of Physicians and Surgeons of Columbia University in New York City under a three year grant of \$62,678 from the John A. Hartford Foundation, Inc., operative since July 1.

The award was announced jointly by Ralph W. Burger, Foundation President, and Dr. H. Houston Merritt, Dean of the College of P&S. The new project is under the direction of Dr. Jose M. Ferrer, Jr., Professor of Surgery, College of Physicians and Surgeons of Columbia University and Director, Surgical Service, Harlem Hospital, New York City. The research will be done by Dr. Hashir A. Zikria, Assistant Professor of Surgery, College of P&S of Columbia University.

Studies of respiratory burns

Dr. Jose M. Ferrer, Jr.

and smoke poisoning, it is hoped, will reveal the role which smoke and heat play in such injuries; the research will gather additional data on changes in the lungs, such as surface tensions, and will seek to develop the possible optimal therapy for such injuries with intermittent positive pressure, pulmonary hypothermia, massive antibiotics, cortisone or their various combinations.

### Eleanor Lee's Book is Available

A History of the Hospital and the Columbia University-Presbyterian Hospital School of Nursing written by Miss Eleanor Lee, a former director of nursing, is now on sale at the Nursing Office P.H. 4 and also the Alumnae office, Room 208, Maxwell Hall. The book is entitled "Neighbors

1892-1967." The price is \$3.00. Not only will friends of Miss Lee wish to have a copy of this book; all who are interested in our Hospital, the School of Nursing and the history of the Columbia-Presbyterian Medical Center will find "Neighbors 1892-1967" a valuable book to possess.

## In Memoriam

Dr. Virginia Kneeland Frantz

Dr. Virginia Kneeland Frantz, Professor Emeritus of Surgery at Columbia University, died on August 23 after a long illness. She was in her seventy-first year.

Dr. Frantz was born in New York City and attended Brearley School and Bryn Mawr College. While at Bryn Mawr she was encouraged to take up a career in medicine. She was graduated from P&S in 1922 and became the first woman to be appointed as intern on the surgical house staff of the Presbyterian Hospital.

In collaboration with Dr. Allen O. Whipple, Dr. Frantz made early studies of insulin-secreting tumors of the pancreas and subsequently published a book on pancreatic tumors for the Armed Forces Institute of Pathology which has become a standard refer-

Dr. Virginia Kneeland Frantz

ence work in its field. Her interest in problems of wound healing led to the development of oxidized cellulose, effective in controlling bleeding at the time of surgery. She was one of the first to use radioactive iodine in the treatment of thyroid cancer.

Her later career was closely identified with the departments of surgery and surgical pathology at the Columbia-Presbyterian Medical Center, where she taught in these two subjects until her retirement as Professor of Surgery in 1962.

She is survived by three children, Mrs. Virginia Hathaway Moriconi of Rome, Italy, Mr. Angus Macdonald Frantz, Jr., of Princeton, New Jersey, and Dr. Andrew Gibson Frantz of New York City; a brother, Dr. Yale Kneeland, Jr., of New York City, Emeritus Professor of Medicine, College of P&S; and four grandchildren.

Dr. Philip Kilbourne

Dr. Philip Kilbourne, 45, died on August 4 at his home, 297 Highwood Avenue, Ridgewood, New Jersey.

Dr. Kilbourne was a resident in pediatrics at Babies Hospital from 1949 to 1951, after which he began his practice in Ridgewood. In recent years he has been a writer for

## Columbia Cerebral Palsy Research Continues Through Renewed Grant

Dr. Sidney Carter, Chief of Pediatric Neurology, College of Physicians and Surgeons of Columbia University, has received a five-year renewal of the Dwight D. Eisenhower Fund Grant, which he has held for the past five years. This grant from the United Cerebral Palsy Research and Educational Foundation provides support for clinical professorships in medical schools.

Dr. Carter's primary interest is neurological disorders of childhood. "We have a training program here in the field of child neurology. Our graduates have gone to medical schools all over the country."

At the San Francisco meeting of the American Academy of Neurology last April, Dr. Carter became President-Elect, and will take office in 1969.

Dr. Carter came to Columbia-Presbyterian in 1948. He is a graduate of Dartmouth College and Boston Univer-

Dr. Sidney Carter and patient.

sity School of Medicine and received his training in neurology at the Boston City Hospital. He and Mrs. Carter have three sons, the oldest of whom has just finished college and joined the Navy. Boating and fishing at Cape Cod are favorite pastimes for Dr. Carter and the family.

### Employees Increase Gifts to GNYF

Employees of Presbyterian Hospital made a total contribution of \$12,959.50 to the Greater New York Fund in 1967, an increase of \$1,736.48 over 1966. The average size of all gifts for 1967 was \$4.55, compared to \$4.17 in 1966. This year 65% of all employees made a contribution, compared to 64% in 1966.

The Greater New York Fund is the only solicitation allowed among hospital employees. It adds 425 health and welfare agencies. Our hospital receives more than \$300,000 annually from G.N.Y.F. and U.H.F.

such publications as *Medical World News* and *Medical Economics*.

Dr. Kilbourne was a graduate of Cornell University Medical School and served his internship at Massachusetts Memorial Hospital in Boston. He served two years in the U. S. Army and then was associated with the United States Public Health Service, division of tuberculosis control.

He is survived by his wife, Phyllis Chamberlain Kilbourne; three sons, two daughters, a brother, a sister, and his mother.

Ruth B. Wood

Ruth B. Wood, a graduate of Presbyterian Hospital School of Nursing, 1911, and a Volunteer in the Department of Nursing, died June 5, 1967. She was 80 years old.

Active and interested in the Hospital, the School of Nursing, and her Alumnae Association, she was to have attended the graduation and anniversary events of the first week of June.

Miss Wood contributed in many areas of nursing—as Assistant Superintendent, New York Nursery and Children's Hospital, 1915-1918; American Red Cross Commission to Russia, 1919-1920; New York State Department of Health; teaching at the

Ruth B. Wood

University of Nebraska Hospital; Director of Nurses at the Methodist Hospital, Brooklyn; Public Health Nursing in New Jersey.

When retirement left time on her hands, she volunteered her services. In 1959, she became a Volunteer at Columbia-Presbyterian. Working with Eleanor Lee, then Director of Nursing, she thoroughly reviewed and revised the permanent records of graduates of the School of Nursing, and streamlined files of materials dating back to 1892. In seven years she gave nearly eight-hundred hours of volunteer work to the Department of Nursing. To quote from this Department: "We will certainly miss this active little lady, who seems to have become a part of our office staff, as she has worked with so many of us on these various projects through the years."

# THE DEVELOPMENT PROGRAM

*Continued from page one*

A logical question to be raised by such a statistic might be, "Why are so many millions of dollars required for development, if the number of days of patient care remains constant?"

This question requires two answers: (1) Actually, the total number of patients being treated has increased more sharply than the above statistic indicates. In 1945, for example, the average hospital stay for a patient was 15 days; in 1966, it was 12 days. Thus, advancements in medical knowledge and treatment methods permit the hospital to serve many more patients in the same number of beds. (2) Modern medicine, much of which has been pioneered at Columbia-Presbyterian Medical Center, requires more people, more sophisticated tools and equipment, and much more space in which to house them.

## The Challenge

Our great medical center, once the most modern in the world, has become obsolete in many areas—partly as a result of time and use, but mostly because of unprecedented advances in medical technology.

It may be difficult for many of us to comprehend, but more knowledge about the nature of disease and its cure or control has been learned during the past 30 years than in all the preceding centuries of civilization. And the promise of even greater progress lies in the immediate years ahead.

To meet this challenge and continue the Medical Center's position of leadership in advancing the frontiers of medicine, the trustees of both the Hospital and Columbia University launched a Development Program in 1960, making a joint public appeal for funds to rehabilitate old facilities and provide new buildings where needed. Two years of study and planning indicated that the following projects were essential:

(1) a separate and enlarged research building, equipped

**THE MCALISTER SUITE**, costing \$400,000, was dedicated in February, 1965, and has been in full use since that time. It includes a suite of operating rooms, recovery room and an intensive care unit, and is located on the ninth floor of Babies Hospital.

**REHABILITATION OF THE COLLEGE OF PHYSICIANS AND SURGEONS**, costing \$2,400,000, is now almost complete. The new laboratories and teaching areas will be in use during the present school year.

with modern tools and laboratories, (2) a new and larger medical library building, (3) a new building to house service and maintenance departments, (4) a new auditorium, (5) a new radiotherapy center, (6) funds to rehabilitate classrooms, laboratories and teaching areas within the College, (7) funds to rehabilitate Babies Hospital and build a new addition, (8) a new building for ambulatory patient care, necessary to meet the demands imposed by broadened government health programs and by an enlightened public seeking to take advantage of today's preventive medicine, (9) funds to rehabilitate two floors within Presbyterian Hospital, (10) a new residence building to house married medical students, interns and

residents, and (11) endowment funds to increase teaching staff salaries. Subsequently, it was decided to add an addition to the Institute of Ophthalmology.

Preliminary estimates in 1960 indicated that the Development Program would cost \$50 million—\$35 million for construction, and \$15 million for endowment. Subsequent changes in concept and increased costs have made it necessary to raise this figure by \$12 million.

## A Gratifying Public Response

All staff and personnel who have helped the Medical Center achieve its reputation for excellence, and all trustees, alumni, alumnae, auxiliaries and "Friends of the Hospital" who have worked to help raise the needed funds for the Development Program can take great pride in the progress made to date, because public response to our Medical Center's needs has been most gratifying.

To date, a total of \$54,770,000 has been received for the Development Program Fund, including \$18,190,000 in endowments. These gifts have been made by individuals and families, by business and industry, by great and small foundations, by Federal grants, by alumni and alumnae groups, and by grateful patients who have chosen this means of expressing gratitude for the care received at the Medical Center.

Response to early appeals for funds was so prompt that construction could begin as early as December 1960. Priority of need determined the starting date of each project.

A stroll through the Medical Center today will reveal just how much progress has been made to date. The accompanying photographs show the six projects which have been completed and are now in full use, and the present status of those projects that are being rushed to completion.

Groundbreaking for the Augustus Long Medical Library Building, to be located at the intersections of Haven Avenue, 168th Street and Fort Washington Avenue, will begin as soon as the site can be cleared.

About ten million dollars are still needed to complete the Development Program. Every effort will be made in the months ahead to raise this amount.

All who have given to the Columbia-Presbyterian Medical Center Development Fund in the past, and all who help complete the remaining projects can take great satisfaction in knowing that they have made an important contribution to the health needs of this and future generations.

**THE WILLIAM BLACK MEDICAL RESEARCH BUILDING**, costing \$14,500,000, was started in February, 1962, and dedicated in January, 1966. Its 20 floors of laboratories now hum with activity, where more than 600 individual projects are being carried out, in almost every area of medical research.

**THE SERVICE BUILDING**, costing \$4,900,000, was started in 1960 and completed in 1963. It now houses one of the world's largest hospital laundries, most of the service and maintenance departments, and several business offices.

**THE RADIO THERAPY CENTER**, costing \$1,500,000, was dedicated in May, 1966. It is one of the world's largest and most modern treatment centers of its kind and a major training center for urgently-needed radiologists.

**THE ALUMNI AUDITORIUM**, costing \$1,100,000, was dedicated in May, 1965, and is now in almost constant use for medical meetings, symposia and large Medical Center functions. This photo shows the 1965 graduation ceremonies of the School of Nursing.

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXII, NUMBER 9

OCTOBER, 1967

## SCHOOL YEAR BEGINS

### DENTISTS

The largest class in recent years of Columbia University's School of Dental and Oral Surgery began their studies in September. There are 44 members in the new freshman class, 43 young men and one young woman, Miss Aukse Trojanas, who was born in Lithuania, but who is now an American citizen; her mother is a physician.

The new students come from many states and many areas of the country. They graduated from 26 different universities and Colleges. Seventeen were on the Dean's List or their school's honor roll.

The new class could muster a fine orchestra, because its members play a wide variety of musical instruments.

This class could also field a team in many sports—football, basketball, tennis, golf, swimming, LaCrosse and Katarate, many having been on the varsity teams of their previous schools. There is one

### NURSES

"Here I am—but where am I?" asks newly arrived nursing student Wendy Earl, after unloading luggage at Maxwell Hall. See page 3.

Maxwell Hall was a beehive of activity on Tuesday, September 12, when 131 new nursing students of the Class of 1969 arrived with parents and piles of luggage to begin their formal school year at

*Please turn to page three*

### DOCTORS

Early in September the new class of freshmen at the College of Physicians and Surgeons moved into Bard Hall, and after a 4-day period of orientation began the routine of studies.

It's a large class—133 in all—slightly above last year's 126. The number of applicants was substantially larger than in any previous year, according to information from the office of Dr. George A. Perera, Associate Dean; last year there were approximately 1,400 applicants; this year, 1,600. Sixty-one colleges are represented in this year's selection—more than usual. The students come from 32 different states, and two were born outside the United States, one in Hong Kong, one in Nigeria. Eleven of the 133 students are women.

Of necessity, the entering students were selected in part for their excellent scholastic and scientific abilities, but in addition, Dr. Perera has noted, they gave evidence of the personal qualities so important to

## DR. DUBOS WILL GIVE LECTURE

Dr. Rene J. Dubos, professor of Environmental Biomedicine at the Rockefeller University, has been designated Bicentennial Lecturer on the occasion of the 200th Anniversary of the College of Physicians and Surgeons of Columbia University. He will give a series of four lectures, November 6-9, on "Science in Human Affairs."

The lecture series was arranged by Dr. Dickinson W. Richards, Lambert Professor Emeritus of Medicine at Columbia, in association with Dr. Andre F. Cournand, Professor Emeritus of Medicine at Columbia. Dr. Richards and Dr. Cournand shared the 1956 Nobel Prize in Medicine and Physiology for their studies at Columbia of the physiology of the heart and lungs. Dr. Richards is director of the medical history program of Columbia Institute for the Study of Science in Human Affairs, which is sponsoring Dr. Dubos' lectures with the support of the Josiah Macy, Jr., Foundation.

Dr. Dubos is the author of several books, including "Pastor and Modern Medicine," "The Unseen World," and "The Torch of Life," and more recently, "Dreams of Reason," and "Man Adapting." He has

Dr. Rene J. Dubos, Rockefeller University, will discuss the role of Science in Human Affairs in a series of four lectures in November, a P&S Bicentennial event.

received numerous awards. Two of the most recent are the Howard Taylor Ricketts award of the University of Chicago and the Science Achievement Award of the American Medical Association.

The lectures will be given in the Alumni Auditorium at 4:30 each afternoon. The specific titles and dates are: November 6, "The New Pessimism"; November 7, "Science and Social Evolution"; November 8, "Teleology and the Direction of Science"; and November 9, "Science as Knowledge of Consequence."

The lectures will be open to all.

"Enjoy your lunch," quips one of the doctors of the School of Dentistry as new dental students pass along the line at the Dentists' Luncheon and Reception. "It's the last free thing you'll get for four years." Students smile and take an extra helping. There are 44 in the new class.

## Geneticists Hold Symposium As P&S Bicentennial Event

In celebration of the 200th Anniversary of the founding of the College of Physicians and Surgeons, Columbia University will hold a Symposium on Genetics and Development on October 18, 19, and 20, Wednesday through Friday.

Geneticists from many universities of the world will attend and participate in this three-day program. Sessions will begin at 9:00 each morning. The program will be held in the Armory, 168th Street and Broadway, New York City.

Future doctors and surgeons become acquainted with the P&S Club through its president, 4th year student Jack Spitzberg. Jack wins a smile from his audience including dignitaries on the front row (left to right) Dr. Lowdy Ballantyne, Associate Professor of Surgery; Dr. George A. Perera, Associate Dean, P&S; Dr. Robert H. E. Elliott, Jr., Associate Dean, P&S; and administrative head of the P&S Club Edwin M. Barton.

# Foreign Nurses Complete 'Exchange-Visitor' Year

The first year of the Exchange Visitor Program of the Nursing Department ends this month. Just a year ago the first seven foreign nurses arrived under the sponsorship of this new Program. Already their twelve months of hospital experience in the United States has passed, and a few days ago they were given a farewell tea.

Six of the first group were from the Philippines: Elisa Amurao, Marina Baisas, Virginia Clemente, Fe Laya, Milagros Raguindin and Corazon Reyes. And one, Denise Bailey, was from Australia.

As planned, a second group came six months later, in April, 1967, and they will be here until next April. Two of these are from England: Elizabeth Burton and Diane Cranley. One is from Australia: Robin Kerr. And one from each of seven other countries: Philippines, Elenita Cruz; Norway, Karen Elide; Sierra Leone, Mrs. Daphne Momoh; Yugoslavia, Marija Plavetic; India, Annamma Verghese; Japan, Nobuko Yamahata; Korea, Young Ja Lee.

These seventeen young ladies are all graduate nurses who have already worked for a year or more in hospitals in their own countries. They came in response to Exchange-Visitor announcements which described the nature of the program and the philosophy underlying it:

"Primarily two experiences are being offered—living in an American community and

becoming a participant-observer of American nursing practices. . . . A variety of guided clinical experiences, coordinated with classroom sessions on theory, will provide a comprehensive picture of health patterns and practices in the United States."

What is the philosophy underlying the program?

"An ever contracting world compels an interdependence of nations which makes it imperative that each country explore all possible approaches to cross-cultural understanding, including the cultivation of bonds other than the traditional ethnic and religious. . . .

"The values inherent in the face to face confrontation of an interested, alert group, bound by common professional interests, cannot be overstated. . . . American and foreign nurses can build a relationship grounded in mutual appreciation and understanding."

Each visiting nurse in the Program has been accredited by her own country as a suitable representative of its professional nursing group; and each, in keeping with the intent of the purpose of the Program, brings "her unique personality, capabilities and cultural perspective. . . . It is not the intention of the Program to make her into an American nurse. . . . Each nurse has an obligation to her own country and to the furthering of the nursing profession in that country." The curriculum is designed to be flexible enough to allow for a

variety of interests and educational backgrounds.

What sort of adjustment have these first seventeen Exchange Visitors made to the Hospital, to the city of New York, and to the United States?

Their Coordinator, Ruth Alberta Rayner of the Nursing Department, praises them enthusiastically for their personal and professional adjustments to the requirements of the Program. They live at Maxwell Hall, and they receive a monthly stipend to help them meet the costs of living. All are required to be able to speak English; some take lessons to improve their language skills.

And how do they like living in New York City? This "concrete jungle"—as one of the nurses called it—is swift and interesting, sometimes dangerous, but abounding in tourist delights. Some of the music is "awful"—but it's rewarding if one listens to FM. The styles? Not quite up to the minute, say the girls from England and Australia. And the subways? The question brings laughter from a trio whose trip ended in Brooklyn by mistake. They found themselves in a tight spot and had to smile their way back to Manhattan. However, the nurse from Japan says that the subways are good.

They have enjoyed a number of excursions, such as a boat trip around Manhattan Island. Visits to private homes outside the city have been a special treat, where they found quiet neighborhoods with yards and gardens. Travels across the breadth of the country for some have assured them that New York City is not all of the United States. The nurse from Korea sketches a map of the United States and compares her own country, in size and shape, to Florida. Some of the nurses have taken trips to Washington, D. C., Boston, and even Expo '67.

Surprise was expressed over finding the people of the United States generally friendly. One of the girls from the Philippines declared emphatically that everyone here is nice. Many patients at the Hospital have become interested in the cultures of new lands through their contact with these nurses.

Significant differences between Presbyterian Hospital and the hospitals back home have been noted by these Exchange Visitors. For instance, in some foreign countries the nurses do a share of the work that is done here by the doctors.

Now the Program begins its second year, and the nurses who came last October prepare to leave. It is time for a new October group to arrive. Last

These are some of the first year's Exchange Visitors. (See text for full names and identification of countries.) Top row, left to right: Plavetic, Raguindin, Elide, Clemente. Bottom row, left to right: Cruz, Yamhata, Verghese, Lee, Reyes.

Exchange visitors are nurses with hospital experience in their own countries. (See text for full names and identification of countries.) Top row, left to right: Baisas, Burton, Kerr, Momoh, Bailey, Laya. Bottom row, left to right: Amurao, Cranley, Plavetic; and Doreen Runnalls, visiting nurse from Australia.

Elisa Amurao (left) points to the flag locating her country, the Philippine Islands, on world map. Miss Amurao is one of seven foreign nurses—"exchange visitors"—who have completed their year of study and participation at Presbyterian Hospital. Mrs. Doris M. Kiess (center) is a member of the Exchange Visitor staff; Annamma Verghese is an exchange nurse from India.

Ruth Alberta Rayner (left) is coordinator of the Exchange Visitor Program. Her secretary is Mrs. Betty Malagon (center). Through most of this year Miss Rayner has had the assistance of Mrs. Sandra L. Wheeler (right). Recently Mrs. Wheeler and her husband went to South America as Peace Corps volunteers.

spring's group, however, will be here for another six months. Eventually the number of nurses in each group, fall and spring, will be increased to twenty-five.

The Program carries such benefits for the Exchange Visitor as health insurance, sick leave, travel bonus upon completion of the year, and four weeks of vacation. The Hospital experiences extend only to Medical and Surgical nursing, but because of the wide resources of a 1600 bed Medical Center, these include Medical and Surgical specialties such as Urology, Otolaryngology, Neurology, Ophthalmol-

ogy and Orthopedics.

As to the success of the Program's first year, Miss Rayner speaks of commendations from head nurses and the staff with whom these seventeen foreign nurses have been associated; she states that patients have often expressed their interest and appreciation.

As the Exchange Visitor Program grows, one of the needs noted by Miss Rayner is for friendly Medical Center families to invite the new nurses to their homes, especially during their first week after arrival. Miss Rayner may be contacted at Ext. 1929.

# School Year Opens For Dentists, Doctors, Nurses

Luncheon and Reception for new freshmen class, School of Dental and Oral Surgery, brought graduates of 26 different universities and colleges into a group.

## DENTISTS

Continued from page one

Marathon runner, one scuba diver, and several expert rifle-men.

A large number in this class have demonstrated their deep interest in the welfare of others. They have spent their vacations working with brain-damaged children, in the Head Start Program, in the Boy Scouts, as camp counselors and tutors for underprivileged children.

Six are the sons of dentists; two of oral surgeons, and three of physicians.

Members of the new class

At Dentists' Luncheon and Reception Aukse Trojanas, the only woman student in the entering class, converses with Dr. Alexander B. Smith, Dean of the School of Dentistry.

are now settled and well into their study programs. *The Stethoscope* congratulates them and welcomes them to the Medical Center.

## ATTRACTIVE 12th FLOOR SCHOOL P.S. 401X BEGINS ON SCHEDULE

Rosalie Castagnetta, who teaches PS 401X in bright schoolroom on twelfth floor, Babies Hospital, has everything a teacher could ask except a regular enrollment. The daily attendance varies from day to day because the pupils are patients.

Many of the public schools of New York City were in turmoil on September 11, opening day of the new school year. However, at P.S. 401X, Presbyterian Hospital's public school, on the 12th floor of Babies Hospital, began the school year without incident. Twenty-two patient-students, grades one through eight, were in attendance.

Children hospitalized two weeks or longer are eligible to enroll; others are welcome to attend but are not officially registered.

The school, which holds classes only in the morning, is under the direction of Rosalie Castagnetta. A second teacher, Mrs. Lillian Graham, is located on the orthopedic floor of Babies Hospital, and

her full-time activities are to give bedside instructions to those young patients unable to attend classes. Miss Castagnetta also gives bedside instruction during the afternoons.

Both teachers are part of the New York City school system, and each puts in a full school day.

Patients requiring lessons at the high school level are taught by special teachers sent in as needed by the Board of Education.

Although our school has only morning sessions, the classroom facilities are put to full use during the rest of the day for recreational therapy, which includes painting, sculpting, jewelry making and other activities.

## DOCTORS

Continued from page one

a physician—such qualities as dedication and concern for others. Their ability to meet the high costs of a medical education was not a factor in choosing them, and about two-thirds will receive some form of financial aid through scholarships and loans. Although 29 are sons and daughters of physicians, it is interesting to note that the children of parents in occupations as varied as postmaster and roofer, farmer and furrier, automobile salesman and school teacher, butcher and airline pilot will be among the nation's physicians of tomorrow.

From Thursday to Monday, September 7—11, these future physicians and surgeons underwent orientation, largely directed by a committee of 30 upperclassmen. In charge was Jack Spitzberg, a 4th year student, who is president of the P&S Club as well as a former class officer. His sub-chairmen were Peter Moyer, president of the 2nd year class, and Danne Lorieo. The P&S Club is the student activities organization of the College of Physicians and Surgeons, largely financed by the contributions of faculty, alumni and parents. Mr. Edwin M. Barton, administrative head of the P&S Club, praised Spitzberg and his helpers for effective handling of all phases of the orientation program.

Guided tours of the Medical Center began on Thursday morning. That evening a session of information and discussion provided help on such matters as the purchase of textbooks and microscopes, study habits, and eating places.

A Student-Faculty Tea on Friday afternoon gave the new students an opportunity to become acquainted with the Dean, Associate Dean, and members of the faculty. And on Saturday the freshmen came together with second year students for an afternoon picnic at Columbia University's Nevis Estate in Irving-

## NURSES

Continued from page one

Columbia University, Department of Nursing, Faculty of Medicine. This was the 76th entering class for the school, which began in 1892 as the Presbyterian Hospital School of Nursing.

These enthusiastic young women came to the Medical Center from 17 states and had their preliminary college work in 82 different schools. There were 62 students from New York, 22 from New Jersey, 11 from Massachusetts, and 9 from Pennsylvania. One student came all the way from California and one from Seattle, Washington.

This year's class, all of whom have had a minimum of two years of college, will graduate with a B.S. degree in 1969 when they successfully complete their course of study and training.

Twenty-three students entered the Department of Nursing to undertake study toward a Master's Degree. They are enrolled in two programs—one, maternity nursing including nurse midwifery, and a program new this year, psychiatric-community mental health nursing.

*The Stethoscope* welcomes these young women to the Medical Center and congratulates them on their choice of a noble profession.

Newly arrived nursing student Wendy Earl (right) from Southport, Conn., is in good hands. Third-year seniors Gail Wilcox (left) and Jean Robbie welcome her and give initial instructions to set her on the right path. Miss Earl is one of 131 students in the new first year class.

ton, New York.

Associate Dean George A. Perera, M.D., addressed the group on Sunday evening at a Reception in the Bard Hall Lounge. Greetings were extended by Dr. Robert H. E. Elliott, Jr., Chairman of the P&S Club Advisory Board, and Dr. Lowyd W. R. Ballantyne, President, P&S Alumni Association.

Opening Exercises for the Academic Year 1967-68 were held in the P&S Auditorium on Monday morning, September 11. Dean H. Houston Meritt, Vice President in charge

of Medical Affairs, presided. The address was presented by Dr. Edward W. Dempsey, Ph.D., Chairman, Department of Anatomy. Dr. Grayson Kirk, President of the University, greeted the new students.

These various activities, together with the Sunday morning Catholic and Protestant religious services held in the Pauline A. Hartford Memorial Chapel, and a schedule of social events on the following weekend, filled the first few days of life at P&S for the 133 students who comprise the Class of 1971.

## Launch U.H.F. Drive

The poster for the United Hospital Fund drive has been unveiled before more than 100 community leaders attending a pre-campaign strategy meeting at the Fund's headquarters, 3 E. 54th Street, New York, N. Y. More than 6,000 volunteers are now launching the campaign to raise \$3 million for the 78 Fund member voluntary hospitals.

# Dr. Hoberman Plays Key Role In Wheelchair Athletics

Dr. Morton Hoberman, Clinical Professor of Rehabilitation Medicine, P&S, and Chairman of Medical Advisory Board, National Wheelchair Athletic Association, talks with patient Allan F. Conwill on 8th floor, Neurological Institute.

A surprise package came through the mail a few days ago to Dr. Morton Hoberman, Clinical Professor of Rehabilitation Medicine. It was a medallion mounted on a base of marble, and inscribed:

"Morton Hoberman, M.D. In appreciation of your support and understanding, National Wheelchair Athletic Association."

The award was based on his service to this organization from its inauguration 10 years ago, and on his encouragement

to wheelchair athletics that dates back to the Second World War. It is an interest which has continued to the present time. Dr. Hoberman is presently Clinical Professor, Department of Rehabilitation Medicine, P&S, having been promoted on July 1 of this year from his former position as Associate Clinical Professor.

When the National Wheelchair Athletic Association was organized in 1957, Dr. Hoberman became Chairman of

There's nothing like a game! Dr. Hoberman, shown here with patients Michael Pearson (left) and Melvin C. Stewart, has helped to develop wheelchair athletics so that each person may compete according to his abilities.

its Medical Advisory Board, bringing to this position his experience of working in the Veterans Administration program of physical rehabilitation. He was assigned by V.A. to work with The Joseph Bulova School of Watchmaking, a tuition-free non-profit institution with a program of training the disabled. At this time wheelchair basketball was a growing sport, encouraging disabled persons to summon their courage and skill, and even having a tonic effect upon spectators who watched from wheelchairs but could not participate. It was being proved through basketball and other games that atrophied or unused muscles were immeasurably benefitted.

A program of athletic sports, such as basketball, swimming, racing, and archery, was added to the regular training at the Bulova School—instruction in watchmaking and precision mechanics. The school provided a specially equipped gymnasium and a fine swimming pool with elevator chairs to facilitate getting into and out of the water.

The National Wheelchair Games are held annually at Bulova Park, Long Island, New York. According to Benjamin J. Lipton, Director of the Bulova School, Dr. Hoberman has had an important role from the start, helping to define the rules and set the standards for competition. As participation increased, new games were included, and the range of disabilities of the participants also increased. Added to the list of war-injured paraplegics were post polios, amputees, and other orthopedically disabled individuals.

Games were patterned after the Stoke Mandeville Games in England, and new games were introduced: the 60, 100 and 200 yard dash on a macadam race track, the 220 and 440 yard shuttle relay and, more recently, discus throwing and slalom racing—races against time through a course of obstacles.

These games offered wheelchair patients, in addition to the recognized essentials of physical care and useful employment, a third essential—the stimulating social life that is a by-product of vigorous competitive sports.

Competitions grew from local to national to international proportions. Now, on the heels of the Olympics come the Paralympics. The Paralympics were held in Rome in 1960, following the Olympics; and again in Tokyo in 1964. In 1968 they will probably be held in Israel, paralleling the Olympics in Mexico; and there are already plans for the year after for games in Buenos Aires, Argentina. Latin American countries and Canada have come in on the sport to set up the new Pan-American games, following successful unofficial games in Jamaica and Canada.

Many doctors have helped with the development of this growing field. One of Dr. Hoberman's contributions, according to Ben Lipton, has been to interest other doctors and assist with their education. And all along there has been the time-consuming job of refining the rules.

Dr. Hoberman described the classifications of contestants in relation to the degree of their handicap. Major classifications include those with the least handicap—those who have lost muscular control below knees. The next classification: loss of muscular control below the hips; next, from the trunk down; and next, those who have, in addition, upper extremity handicaps.

"The information on the cards may not be enough," Dr. Hoberman said, in describing the problems of classifying wheelchair athletes for the fairest possible competitions. "It's necessary to test each contestant carefully before the games as to the condition of his muscles."

Dr. Hoberman is the author of more than 50 articles and chapters of books; he is Past President of the American Academy of Physical Medicine

## Resume Thursday Eve. Anesthesia Meetings

The series of Thursday Evening Lectures of the Department of Anesthesiology for the new academic year was opened on September 14 with a lecture by Dr. Leroy D. Vandam, Professor of Anesthesia, Harvard Medical School. Dr. Vandam spoke on Deficient Coronary Blood Flow and the Anesthetic Approach to it.

The lecture of September 21 was given by Dr. Ronald L. Katz, Department of Anesthesiology, P&S; and the September 28 lecture by Dr. Brian Hoffman, Department of Pharmacology, P&S.

The lectures for the four Thursdays in October are:

October 5—Dr. S. H. Ngai, Department of Anesthesiology, P&S; Anesthetics and Biogenic Amines.

October 12—Ellis N. Cohen, Professor of Anesthesia, Stanford University, Visiting Professor of the academic year; Studies with d-Tubocurarine.

October 19—Dr. Robert M. Epstein, Department of Anesthesiology, P&S: The Activity of Peripheral Chemoreceptors.

October 26—Dr. David V. Habib, Professor of Surgery, P&S: Parenteral Therapy and Body Fuel Utilization in Fasting Man.

The Thursday Evening Lectures are held at the Babies Hospital Amphitheatre, Fourth Floor, 167th Street and Broadway, at 7:30 p.m.

## Many Foreign Visitors Pass Through Our Doors

Dr. Julius C. Savarirayan (right) of the Scudder Memorial Hospital, Ranipet, India, and Mrs. Savarirayan (left) toured Presbyterian Hospital with Mrs. Anne Lubrecht, Department of Public Interest, and Dr. John Scudder.

An uncounted number of visitors from foreign countries enter the doors of the Presbyterian Hospital, sometimes only for a brief glimpse, sometimes for tours or interviews.

Approximately 30 doctors from Japan came, during the summer, by pre-arrangement. Later, 25 members of the medical profession in Italy were here for a day of touring; and on another day 50 doctors from France were given guided tours.

Two recent visitors from India were Dr. and Mrs. Julius C. Savarirayan. Their host in New York was Dr. John Scudder, Special Lecturer in

Surgery, P&S, whose grandfather founded the Scudder Memorial Hospital in Ranipet, India. Dr. Savarirayan is the present Director of that hospital.

These visitors from India, according to their tour guide Mrs. Anne Lubrecht of the Department of Public Interest, were greatly interested in the Premature Nursery, information on the Rh factor, and family planning as related to maternity services.

From New York, Dr. and Mrs. Savarirayan traveled across the United States, visiting other hospitals. They have recently returned to India.

## In Memoriam

### Dr. G. Milton Shy

Dr. G. Milton Shy, Professor of Neurology and Chairman of the Department of Neurology, Columbia's College of Physicians and Surgeons, and Director of Service, Neurology, in the Presbyterian Hospital, died suddenly on Monday morning, September 25. He was 47 years old and had just arrived at his new post at the Columbia-Presbyterian Medical Center on September 1 of this year.

Dr. Shy, a native of Colorado, received his B.S. degree from Oregon State College in 1940, his M.D. degree from the University of Oregon Medical School in 1943, and his M.Sc. degree from McGill University, Canada, in 1949.

From 1947 to 1949 Dr. Shy was House Officer and First Assistant to Medical Research Council, National Hospital,

London; 1949-50, Senior Resident and Demonstrator (Neurology and Neurosurgery), Montreal Neurological Institute and McGill University, Canada. From 1955 to 1962 he was Consulting Neurologist, U. S. Naval Medical Center; and since 1962 he has been Professor and Chairman of the Department of Neurology, Schools of Medicine, University of Pennsylvania.

He had served in the U. S. Army from 1944 to 1947, with the rank of Major. He belonged to many professional organizations and has written extensively in the field of Neurology.

He leaves his wife, Mrs. Doreen Henderson Shy; a son Michael; a daughter, Kathleen, and his mother, Mrs. Zella Evett.

### Dr. Robert W. Culbert

Dr. Robert W. Culbert, director of the Bureau of School Health of New York City since the bureau's inception in 1948, died on September 6 after several months' illness. He was 69 years old. His office was at 125 Worth Street, New York.

Through the bureau, over 300 physicians supplied health services to over a million pupils in the New York City public and parochial schools.

Dr. Culbert received an A.B. degree from Columbia College in 1924, a medical degree from the College of Physicians and Surgeons, Columbia Univer-

sity in 1928, and a Master of Public Health degree from Columbia's School of Public Health in 1947.

He interned at Flower Fifth Avenue and Babies Hospitals. He was on the faculty of the College of Physicians and Surgeons as an instructor and an associate in pediatrics, and was on the attending staff at Babies, Columbia-Presbyterian.

Surviving are his widow, Dr. Rhoda Mickey Culbert, who practices pediatrics under her maiden name; three sons, a sister and a brother.

### Dr. Harbeck Halsted

Dr. Harbeck Halsted, an obstetrician and gynecologist and a former clinical professor at the College of Physicians and Surgeons of Columbia University, died in his home at 14 Mill Hill Lane, East Maption, L. I., on September 24.

Dr. Halsted was a former attending surgeon at Sloane Hospital for Women and a consultant at Southampton Hospital and the Margaret Hague Maternity Hospital in Jersey City.

Born in Austin, Texas, in

1890, he studied at Kenyon College and Case Institute of Applied Science. He received his medical degree from P&S in 1911. He was related to William Stewart Halsted of Johns Hopkins University.

He was a diplomate of the American Board of Obstetrics and Gynecology, a member of the New York Academy of Medicine and a Fellow of the American College of Surgeons.

A brother, Dr. Halcyon Halsted, survives.

### Edward Wilson

On Sunday night, September 17, Edward Wilson, age 60, a Registrar, Vanderbilt Clinic 1, died from a heart attack. He had worked here seven years.

His friend and co-worker Peter A. Colona has written the following poem, *To A Departed Colleague*:

Like other countless days, the last day passed—  
You worked awhile, and then you left this place—  
A bit fatigued—slight strain upon your face—  
But free to take the long trip home at last.  
You had your worries—you could understand  
How apprehension gives an extra click  
Inside your chest—But you did not feel sick—  
You drove home, dined, retired to slumber, and—  
Departed in the night—your mortal coil  
You left behind, to say you had stayed here  
A little while—For Death you had no fear,  
But you had done your share of earthly toil—  
No need to question where you are—To grieve  
is only human, But we must believe—

## First Fowler Memorial Lecture

Recipients of the P&S Bicentennial Silver Medallion were (left to right) Dr. A. C. Cracovaner, Dr. Lawrence R. Boies, and Dr. Edwin B. Bilchick. Dr. Daniel C. Baker (right) made the presentations.

Dr. Lawrence R. Boies, an alumnus of P&S, gave the First Fowler Memorial Lecture.

In conjunction with the commemoration of the 200th Anniversary of P&S, the Department of Otolaryngology held a Presbyterian Hospital Alumni Meeting on September 7 at the Alumni Auditorium. This was also the occasion of the First Fowler Memorial Lecture. A number of alumni participated in the scientific sessions.

Approximately 150 members of alumni groups attended. Four Silver Bicentennial Medallions were presented for outstanding contributions in otolaryngology, and a plaque, indicating the establishment of the E. P. Fowler, Jr., Otolaryngology Research Laboratory, was presented to Dr. Juergen Tonndorf, Professor of Otolaryngology, Director of the Laboratory.

The Fowler Lecture was given by Dr. Lawrence R. Boies, an alumnus of P&S,

who has just achieved the status of Emeritus Professor of Otolaryngology at the University of Minnesota. The Edmund P. Fowler Memorial Lectureship was set up through a gift from the Audiology Foundation.

Recipients of the Silver Medallion were Dr. Lawrence R. Boies; Dr. Edwin Bilchick, Assistant Clinical Professor, P&S; Dr. Arthur Cracovaner; and, in absentia, Dr. Girard Oberrender. Dr. Daniel C. Baker, Director of Service, Otolaryngology, made the presentations.

Speakers during the scientific sessions were Doctors Joseph L. Goldman, Juergen Tonndorf, Samuel Rosen, Arthur Cracovaner, Malcolm Schvey, Irwin Ginsberg, Milos Basek, John Conley, Harry Rosenwasser, Franz Altman, Ewald Hager, Irving B. Goldman, and Jules Waltner.

Dr. Juergen Tonndorf, Director of Otolaryngology Research Laboratory, receives plaque from Dr. Daniel C. Baker, Director of Service, Otolaryngology.

Dr. George A. Perera, Associate Dean, P&S, welcomed the return of the alumni at the opening of the program. Luncheon at Harkness Hall provided the opportunity for reminiscing and renewal of acquaintanceship.

## Cells Are Seen Dividing At Frightening Rate In Spectacular Prize-Winning Time-Lapse Film

Described as "rather frightening to watch and has to be seen to be believed" is a time-lapse motion picture of cancer cells dividing—a moving picture which has won first prize as the best urological film of the year. The film is entitled "Time Lapse Photography—A Tool for Studying Human Prostate."

This spectacular motion picture was made by Dr. Myron Tannenbaum, a member of the Department of Pathology, working in Urology, with the help of Dr. Meyer M. Melicow, Given Professor of Urothology, and Dr. John K. Lattimer, Professor of Urology, P&S, and Director of Service, Urology, P.H.

In describing the nature of this spectacular motion picture, the authors write:

"It is a time-lapse motion picture which shows cancer cells from the prostate gland, dividing in tissue culture, at a furious rate, when compared with normal cells, dividing at a normal rate. . . . Even as you

watch this film, taken at a rate of two frames a minute, you see the cells divide so rapidly as to fill up the entire field and pack it solid with cancer cells. By contrast, the normal prostatic tissues grow very slowly in the same type of tissue culture, even though—by this new technique—the cells can be seen reaching out for nutrient medium in a systematic way.

"This research tool provides an opportunity to stimulate normal prostate cells with viruses, hormones and chemicals, to see what might make them behave in a cancerous manner; and for the cancer cells, it provides a way of testing various treatment agents, to see which one is most effective against which cancer. This is similar to drug susceptibility testing for bacteria."

The film, which won first prize at the 1967 meeting of the American Urological Association in New York, has been a subject of much inter-

est at urological meetings in various parts of the world:

Dr. Lattimer delivered the Robert V. Day Memorial Lecture on "Recent Advances in Urology Through the Use of Radioautography, Electron Microscopy and the Time-Lapse Motion Picture" in Honolulu at the annual meeting of the Western Section of the American Urological Education. In Munich, Germany, he presented the motion picture at the meeting of the International Society for Urology. He was elected vice-president of this Society. He next presided at a meeting of the International Society for Pediatric Urology at Starnberg, Germany, where he spoke on urinary diversion in children.

Dr. George Fish, retired professor of Urology and Consultant in Urology, also attended the above-named meetings at Munich and Starnberg, Germany; he spoke on renal hypertension at Munich and also lectured at Starnberg.

# Chaplains' Weekly Messenger Brings Smiles, Refreshing Thoughts

It comes to you each week—four small pages of smiles and thought-matter called *The Weekly Messenger* of the Chaplain's Department of the Presbyterian Hospital.

Whether you are a patient, a doctor, a nurse, a student, or an employee, you probably receive *The Weekly Messenger* regularly, for it gives the people of Columbia-Presbyterian almost blanket coverage. The present circulation is 4,400 per week—3,300 within the Medical Center, and 1,100 through the mails.

It's easy-to-read, easy-to-mail, easy-to-quote. The single folded sheet forms four pages, four inches wide and ten inches deep. The front and back pages contain information from the Chaplain's office. "... Services for all faiths are held regularly in the Pauline A. Hartford Memorial Chapel." (Jewish, Roman Catholic and Protestant.) Radio Bedside Broadcasting services are noted. Information is given on the Hospital's provision for religious ministrations at bedside, library services, Communion, volunteer escorts to Chapel services.

Six chaplains are named: Rev. Robert B. Reeves, Jr., Chaplain; Rev. Guy S. Vinci, Roman Catholic Chaplain; Rabbi Marvin J. Goldfine, Jewish Chaplain; Rev. David B. Maxwell, Associate Protestant Chaplain; Rev. George Gilligan, Associate Roman Catholic Chaplain; Rev. Luther T. Freimuth, Associate Chaplain, Mary Harkness Unit.

The two inside pages, which give *The Weekly Messenger* a personality all its own, contain skillfully selected quotations—gems of humor, philosophy and inspiration.

For example, take the eight items of a recent issue. The first began: "Put fear out of your heart. This nation will survive..." It was a 9-line quotation from William Allen White.

The next was 8 lines of poetry by Henry Van Dyke, beginning, "You'll find where'er you roam..."

And the opening lines of the succeeding items were:

"Forgiveness is a readiness to pay..." (Michael Wilson.) "The most beautiful and profound emotion..." (Albert Einstein.)

"When God takes the measure of a man..." (Marist Sponsor Newsletter.)

"A frog was caught in a deep rut..." (NRTA Journal.) "Just defrosted my refrigerator..." (Carol Cortelyou Cruikshank.)

"According to your faith..." (Matthew 9:29.)

Do these printed words have health-giving qualities? Chaplain Reeves notes that at least 19 physicians apart from this Hospital place *The Weekly Messenger* on their waiting

Chaplain Robert B. Reeves knows that whatever he chooses to appear in *The Weekly Messenger* will go deep with some readers and may travel widely.

Doris Miller, Chaplain's secretary, with the aid of two volunteers, prepares 1,100 copies of *The Weekly Messenger* for mailing. The rest of the 4,400 copies are distributed through various departments in the hospital.

room tables. Twenty-one chaplains of hospitals and other institutions have asked permission to quote from it, and some regularly reprint the entire issue.

More than sixty Ministers, Priests and Rabbis have requested permission to use quotes from it in their church bulletins. A Mother Superior and two Sisters in three institutions frequently write their appreciation. One Sister takes daily mottoes from it and writes them on the blackboard.

These are a few of the known uses of *The Weekly Messenger*. And of course no one can begin to guess the part it may play in the thoughts and emotions of the innumerable patients who receive it. Chaplain Reeves states, "This is for all patients of all faiths. It is edited in behalf of the entire Chaplain's Department."

The history of this little publication goes back almost thirty-five years. It began on January 1, 1933, as the *Sunday Visitor*. The originator was Rev. Nelson B. Chester, who had come with the Medical Center as Chaplain to this location in 1928 and was here for ten years. His *Sunday Visitor* was a flat sheet printed on one side and placed on the patients' breakfast trays on Sunday mornings. From that year the publication has been

tion by messenger within the Medical Center. Scores of clerks, secretaries, nurses and aides have a share in the final distribution.

Materials are gathered from many sources. Two floor clerks, for example, send in clippings regularly, and various readers from time to time send items. Printed materials provide a reliable backlog. Chaplain Reeves makes the final selections, a task which absorbs about two hours each week. The stencil cutting is done by the secretary of the Chaplain's Office, Doris Miller, who also handles all addressing on the machine room addressograph. The mailing list is continually revised; each week a few new names are added.

The printing is done in the Hospital Print Shop under Ralph Samuels. Folding and stuffing are done by Chapel Volunteers, usually Eva Daniel and Mrs. Marion Reeves, the wife of Chaplain Reeves. Folding and stuffing require about five hours a week.

Of the 1,100 copies that are mailed, 400 go to retired employees. Most of the remainder go to former patients and families of patients and to others who, for reasons of its usefulness, have requested it.

It goes to 40 states and to 10 foreign countries: Canada, Ecuador, England, Germany, India, Ireland, New Zealand, Honduras, Saudi Arabia, and several addresses in the British West Indies.

It goes to forty employees who are on military leave, following them as fast as their new addresses can be learned. One of these receives his mail every two months, and always has mail waiting—eight weekly copies of *The Weekly Messenger*.

Chaplain Reeves and his circulation staff can only wonder how far the contents of this publication reach. There have been instances of a printed joke finding its way, via New Zealand, around the world and back to *The Weekly Messenger*.

It's known that a Chinese gentleman in Boston reprints items on rice paper for use in fortune cookies. A superintendent of schools who was a patient here uses quotations in his weekly assembly speeches.

Of the 3,300 Medical Center circulation, 1,500 copies go to the patient floors, and 1,800 to staff personnel. John J. Campbell handles the mailing of copies as well as the circula-

A doctor asked that the publication be sent regularly to an out-patient, saying that it is good medicine. A mother writes that she uses it to keep her daughter on the straight and narrow path. A patient in a mental hospital who helps edit a hospital news sheet uses it as a source of material. A member of Alcoholics Anonymous circulates copies regularly to his group.

Some of the material which is sent in for use, with the best of intentions, unfortunately cannot be used. This is particularly true of homemade poetry which often runs on and on, quite out of proportion with *The Weekly Messenger's* space requirements. Some contributions are usable; others must be put aside because they would not have enough appeal for most readers.

Each week Chaplain Reeves receives at least two or three letters of appreciation for *The Weekly Messenger*—sometimes from patients in the Hospital, sometimes from persons who have kept in touch from a distance. He speaks of a West Virginia woman 90 years old who writes in beautiful handwriting, expressing her gratefulness for this weekly communication.

Here is an excerpt from a letter which came a few days ago, as an example of the mail which *The Weekly Messenger* brings:

"... the first one I received on my arrival contained a message just for me, a quote ending, 'above all, that I may have courage.' I cannot express in words what this did for me. It gave me courage to face whatever was my fate, 'to come to the work of each day with a firm and tranquil mind, fearing nothing.'"

There is one file in Chaplain Reeves' office which his weekly readers are not privileged to see. It is labeled "Not For *The Weekly Messenger*," and it contains—as one may guess—a mixture of literary medicines too caustic to print. If, in the course of his weekly work, the editor of *The Weekly Messenger* finds life becoming too saccharine for robust mental health, he restores his balance by reading from this file.

## A Very Young Lady Volunteers To Help

Here is a letter which came to the Hospital a few weeks ago from a very young would-be volunteer, not quite 8 years old:

Dear Sir,

I am 7 years old. I will be 8 September 25, I want to know whether you would let me come twice a week to take care of and play with babies. I could read to them, cuddle them, and play games with them.

I know how to take care of

babies for there was one living upstairs.

Sincerely,

Melanie Luten

In reply to this letter, Mrs. Marguerite Stein, Director of Volunteers wrote a thank-you note, advising that our volunteers must be 16 years of age or older. "We are afraid that you will have to wait for a few years before we can ask you to become a volunteer... Thank you again for your very kind offer."

Mrs. Lizzie Evans, 544 Georgia Avenue, Brooklyn, a patient at P.H., finds pleasure in reading *The Weekly Messenger*.

# THESE EMPLOYEES RETIRED IN SEPTEMBER

## CHARLES W. POPE

Charles W. Pope, Optician Manager, has fitted approximately 3,000 pairs of spectacles a year for several years. Here he is shown fitting spectacles for staff secretary Dagmar Romero.

"I thought I would be thrilled about retiring," said Charles W. Pope, Optician Manager at the Medical Center's Optical Shop. "But when the time comes, you wonder a little bit."

It is hard to believe that Mr. Pope has reached retirement age, as of September 7, 1967. "Is it good to retire at 65, or not?" he asked. He began here as an Optician in October, 1937. Eventually he advanced to become Optician Manager.

As to his future plans he says that he means to take about six months to think it over. "If I go back to work, it will be for part time, not full time."

Although Mr. Pope is a New Yorker and has been a resident at 185th and Ft. Washington for twenty-two years, he thinks it might be nice to live in a smaller community, maybe somewhere down the Jersey shore. But first—

A trip to Florida is in the air. He likes travel and sports and has vacationed in Florida several times. "My wife is afraid of a plane, but we might take a boat trip."

During his thirty years of employment here, he has probably fitted 90,000 pairs of spectacles. Among his clients were a number of persons of fame, such as Emperor Haile Selassie of Ethiopia; Madam Chiang Kai-Shek; pianist Jose Iturbi; folksinger Burl Ives; and Supreme Court Justice Tom Clark.

His experiences have included some very unusual fittings, too—not of humans but of animals. Here's a quote from *The Stethoscope* of May, 1962:

"When they asked Charles W. Pope of the Optical Shop to design a pair of spectacles for a cat . . . he didn't bat an eyelash . . . The request came from a visiting French ophthalmologist . . ."

And in the same article: "He once made eyeglasses for a faulty-visioned horse . . . In his first race with the new glasses, the horse saw his way and outran all competitors . . . Charlie said he didn't know the horse was running. He had not bet on him at all."

"Unusual things just seem to happen to Charlie, or perhaps he just appreciates them more than other people. One day he fitted a woman with 42 pairs of glasses in a single sitting."

One of Mr. Pope's interests is keeping up on the news of the day, a pastime with a professional value. As he notes, "There's plenty of opportunity for conversation when the client sits across the table from you, and you have to get his mind off the worries over the test."

Mr. Pope states that his associations here have been very pleasant. "When you come to a place expecting to stay for a year and stretch it out to thirty years, that speaks for itself," he said. "I plan to come back and visit."

## Mrs. Frommer Will Send Painting To Hungary

Trying to decide which of her paintings to give to a museum in Budapest, Hungary, is the problem confronting Mrs. Rosette Frommer, secretary of Dr. M. M. Melicow, Uro-pathologist.

Mrs. Frommer has just returned from a three-week vacation in Europe. In Hungary she revisited the very apartment in which she was born. Thirty-one years have passed since she last saw her native country, and some significant changes have taken place. For instance, the palaces which once belonged only to royalty have been converted into public museums.

To one of these museums Mrs. Frommer, a professional

## TIM O'LEARY

When Timothy O'Leary retired from employment at the Medical Center on September 1, the Engineering Department lost a good man with a good sense of humor. The report from the department is, "Everybody misses Timmy."

"Timmy" has been here for 25 years. He began as a worker with the electricians in 1942; later he became assistant floor engineer under Chief Engineer John J. Bolger. At the time of his retirement he was in charge of the crew that cleaned the machinery and the machine rooms throughout the Hospital.

His friends say that Mr. O'Leary will appreciate retirement because he enjoys vis-

Timothy O'Leary and his crew have cared for the machine rooms throughout the hospital.

iting with his family and friends, he likes fishing and sports, and he is fond of racing and baseball on TV. And he gets a lot of pleasure out of reading.

At the O'Leary home there has already been one very special occasion since Timothy's retirement — his daughter's wedding. Mr. and Mrs. O'Leary have four children, three sons and a daughter Mary Ann. The daughter became Mrs. Thomas McDermott on Saturday, September 16. The day brought delight to Mr. O'Leary because many of his friends came to the wedding.

"Timmy" promises to come back and visit his friends at the Medical Center.

## IGNAZ RIESS

Ignaz Riess brought to Presbyterian the fine mechanical skills which he learned as a young man in Europe.

When Ignaz Riess, as a boy in Poland, learned the trades of plumbing, steamfitting and coppersmithing from his father, he never guessed that his knowledge and skills would give him safe passage through a World War and eventually bring him to the United States. After many years of work in many parts of the world, Mr. Riess has reached the time of retirement.

He began working at Presbyterian on May 15, 1957, and will terminate his services here on the 20th of this month.

As a young man he received his license and a Master's Degree to practice his trades in Europe. He had his own business in Poland until the beginning of the Second World War. Then he lost everything and was sent to a concentration camp. His family was protected, in hiding, in a home. Mr. Riess, because of his trade, escaped death in the camp. "I could write a book," he says, "about all that happened."

After the war ended, he stayed in Germany until 1949, and then went to Israel. He was made responsible for the managing and teaching persons working in construction — people who came from all over the world and who spoke many languages. The pressure of the work was very great. For Mr. Riess, the climate of Israel was not agreeable, and he became ill. After more than seven years there, he came to

the United States. Working in this country, he attended school in his spare time; he taught his trade in exchange for language instruction.

Although he might have earned more money elsewhere, he preferred employment in this hospital because it promised peaceful working conditions. Here the conditions were good, and friends have helped him improve his language. He now uses English readily.

Mr. Riess plans to live in Queens, where his children have a home. He has two daughters and four grandchildren. His wife, who works as a bookkeeper, will also retire at the end of this year.

"We'll miss Ignaz very much," said Hans Frohlich, the plumbing foreman. "He's a good man."

## ON THE SHELF

New Books in Milbank Library

### FICTION

**All Men Are Lonely Now**, by Francis Clifford. A new suspense story by the author of "The Naked Runner," featuring a startling change of identity.

**All the Little Live Things**, by Wallace Stegner. A man who wants to retire from life is re-awakened by an odd assortment of neighbors.

**The Anthem**, by Noel Gerson. The history of a French family and its long struggle for religious freedom.

**The Little People**, by John Christopher. For those who enjoyed "Rosemary's Baby," another off-beat suspense story, set in Ireland.

**A Night of Watching**, by Elliot Arnold. A fictitious account of the 1943 evacuation of 8,000 Danish Jews to Sweden; many stories in one.

**Sanctuary**, by Frank Swinnerton. Rebellion arises in a home for elderly ladies in London—an old-fashioned novel by a modern master.

### NON-FICTION

**At Ease**, by Dwight Eisenhower. An autobiography by the former president, written in anecdotal style.

**Down These Mean Streets**, by Piri Thomas. What it meant to one man to be a Puerto Rican in New York City.

**Nicholas and Alexandra**, by Robert Massie. The reign and the personalities of the last Russian royal family.

**"Our Crowd"**, by Stephen Birmingham. The colorful social and financial histories of the great Jewish families of New York.

**The Psychoanalytic Revolution**, by Marthe Robert. A sympathetic portrayal of Freud's life and work.

**Ride a White Horse**, by William Holt. The adventures of an artist-writer while touring Europe astride a horse.

# Stethoscopia

## • WEDDINGS

Carol Davoudian of the EEG Department was married to Lieutenant James R. Henry on October 1.

Linda McKay Stevenson and Theodore Martin Weicker were married on September 16. The bride's father was director of plastic and reconstructive surgery at PH and professor of clinical surgery at P&S.

Joanne Margaret Connor was married to Capt. Joseph Edward Jasaitis on September 23. After an assignment in Japan, the bridegroom expects to complete his plastic-surgery residency at the Columbia-Presbyterian Medical Center.

Audrey Hendee Smith, a graduate of Columbia University Department of Nursing, and Richard Smyth Reed, were married in September.

Carolyn M. Murray, R.N., Staff Nurse, Presbyterian Hospital, and Jaime E. Gill, Night Manager, Presbyterian, were married on September 16 in The Pauline A. Hartford Memorial Chapel. Chaplain Reeves performed the ceremony.

Dr. Joan Caryl Berlin and Dr. James Montgomery Kelly III were married on October 2. Dr. Kelly is a graduate of P&S.

Helen Webster Bryan and Lieut. Roger L. Low, U.S.M.C.R., were married on September 9. Lieutenant Low's father is Dr. Niels L. Low, Associate Professor of Neurology at P&S.

Susan Singer and Dr. William G. Covey, a graduate of P&S, were married in September.

Mary Patricia Rice of Babies Hospital Social Service Department was married to Dr. Cor DeHart, formerly of Pediatric Psychiatry, on September 30.

Dana Ann Lawrence and R. Clark Sullivan were married on September 9. The bride is a member of the class of '68, P&S.

Ann Preston Matheson was married to Thomas Vincent Santulli, Jr. on September 9. The groom's father is professor of surgery at P&S.

## • ENGAGEMENTS

Ruth Ellen Weiss and David R. Musher plan to marry on November 19. Mr. Musher is in his fourth year at P&S.

Lynn Schaffeld, medical secretary of Dr. David L. Andrews, Orthopedic Surgeon, P.H. 5, and John Egan, a student at Boston College, are engaged and will be married on June 22 of next year.

## • WELCOME

To Mrs. Clare Elizabeth Donelan, who began work at the Office of Public Interest on July 25.

To Mrs. Sylvia R. Schier, who came to the staff of the Columbia-Presbyterian Fund, Inc. on July 31.

## • NOTES OF INTEREST

Peter J. Toronto, Console Operator, says the secret medicine is will power. In the past 15 weeks he has reduced his weight from 279 to 204 pounds.

Mr. and Mrs. Hans Egenolf celebrated their 50th Wedding Anniversary in Hawaii a few weeks ago. Mr. Egenolf retired in May of 1954 following more than 18 years of service in the Food Service Department.

Mrs. Gloria Martin is the proud grandmother of her first grandchild, a girl. Mrs. Martin was a registrar in the Vanderbilt Clinic and recently has transferred to the job of a Supervisor in Vanderbilt Clinic.

L/Cp Peter Robertson, Son of Mrs. Ethel Robertson, assistant supervisor, EEG, was discharged from the Marines on September 30 after 4 years of service.

## • CONDOLENCES

To relatives and friends of Mrs. Magdalena Vilanova, who died on September 14.

## Dr. Cronholm of Sweden Will Speak

Professor Borje Cronholm, "Post Eet Amnesia" on October 5, at 9 a.m. in the 8th floor Auditorium of the New York State Psychiatric Institute, Stockholm, Sweden, will speak on

"Post Eet Amnesia" on October 5, at 9 a.m. in the 8th floor Auditorium of the New York State Psychiatric Institute, 722 W. 168th St., N.Y.C.

# DOINGS OF DOCTORS

Dr. SAICHI MISHIMA, Assistant Professor of Ophthalmology, presented two papers on August 17 and 18 at the International Symposium on the Cornea, at Kyoto, Japan: "Water Movement in the Cornea," and "Physiology of the Corneal Endothelium."

Dr. DANIEL C. BAKER, JR., Chief of Otolaryngological Service, will serve as First Vice-President of the American Academy of Ophthalmology and Otolaryngology at Chicago, Illinois, October 30 to November 2.

Dr. WALTER E. BERDON, Assistant Professor of Radiology, P&S, Assistant, Radiology, Babies Hospital, spoke on "Prone Radiography in Infancy and Childhood" at the American Roentgen Ray Society, Washington Hilton Hotel, Washington, D. C., September 28 and 29. He also presented an exhibit and paper on "How to Wire the Premature Infant Properly" at the Pediatric Radiology Society Meeting on September 24 in Washington, D. C.

Dr. EDMUND N. GOODMAN, Associate Clinical Professor of Surgery, lectured at a London meeting, in September, at the Middlesex Hospital, with Dr. AVERY JONES presiding. The topic was "Electrical and Pressure Studies in the Esophagus in Normal and Hiatus Hernia."

Dr. ALFRED GELLHORN, Department of Medicine and Chief of the Medical Service at the Francis Delafield Hospital, participated in an international symposium at Unesco House in Paris on "Biomedical Science Facing the Dilemma of Human Experimentation." This was

a part of the three-day General Assembly of the Council of International Organizations of Medical Sciences (CIOMS). CIOMS, which is sponsored by the World Health Organization (WHO) and UNESCO, coordinates the inter-society activities of international biomedical organizations.

Dr. DAVID H. BAKER, Associate Professor of Radiology, P&S, and Director of Radiology, Babies Hospital, presented a paper, "Radiologic Diagnosis of Childhood Malignancies," at the Symposium of the American Academy of Pediatrics, International Hotel, JFK Airport, New York City, on September 20. Dr. Baker was also one of a teaching team of eleven pediatricians and surgeons sent to Arequipa and Lima, Peru, to give a Postgraduate Course in Pediatrics during the past summer. He attended the American Ray Society in Washington, D. C., on September 26 and presented a paper on "Prone Radiography in Infancy and Childhood," along with his associate Dr. WALTER E. BERDON and Dr. JOHN LEONIDAS, a Fellow in Radiology at Babies Hospital. Dr. Baker has also been elected Secretary of The New York Roentgen Society.

HISTORY OF MEDICINE LECTURE: DONALD FLEMING, Professor of History, Harvard University, will give a lecture on "Watson and Crick in Historical Perspective" at 4:30 p.m. in Hanger Amphitheatre, P&S, sponsored by the Institute for the Study of Science in Human Affairs in collaboration with the P&S Club Medical History Society.

## P&S DOCTORS PARTICIPATE IN ANESTHESIOLOGY '67 MEETING

The American Society of Anesthesiologists held the 1967 Annual Meeting at Las Vegas, Nevada, September 29 to October 3.

Twenty-one doctors from the

Columbia-Presbyterian Medical Center presented papers and participated in the six days of Scientific Meetings and Special Meetings:

DR. EMANUEL M. PAPPER  
DR. RICHARD J. KITZ  
DR. RONALD L. KATZ  
DR. JOHN M. KINNEY  
DR. ROBERT M. EPSTEIN  
DR. MIECZYSLAW FINSTER  
DR. PAUL J. POPPERS  
DR. STUART F. SULLIVAN

DR. RICHARD W. PATTERSON  
DR. JAMES R. MALM  
DR. FREDERICK O. BOWMAN, JR.  
DR. SHIH-HSUN NGAI  
DR. SIDNEY OZERNITSKY  
DR. PEDRO M. DIAZ  
DR. ERMINIO COSTA  
DR. SARA GINSBURG  
DR. JOANNES H. KARIS  
DR. AARON J. GISSEN  
DR. WILLIAM L. NASTUCK  
DR. KENNETH E. EAKINS  
DR. CLYDE O. LORD

## From the Wall of a Doctor's Office

Mounted on the wall near the desk of Dr. Edward C. Curnen, Director of Babies Hospital, is a hand-lettered copy of something unusual.

There was so much interest in this little gem of wisdom among visitors to Dr. Curnen's office that he asked one of his secretaries to run off some mimeographed copies. Here is a copy for each reader of *The Stethoscope*:

### CHILDREN LEARN WHAT THEY LIVE

If a child lives with criticism, he learns to condemn.  
If a child lives with hostility, he learns to fight.  
If a child lives with fear, he learns to be apprehensive.  
If he lives with pity, he learns to feel sorry for himself.  
If a child lives with jealousy, he learns to feel guilty.  
If he lives with encouragement, he learns to be confident.  
If a child lives with tolerance, he learns to be patient.  
If a child lives with praise, he learns to be appreciative.  
If a child lives with acceptance, he learns to love.  
If a child lives with approval, he learns to like himself.  
If a child lives with recognition, he learns to have a goal.  
If a child lives with fairness, he learns what justice is.  
If a child lives with honesty, he learns what truth is.  
If he lives with security, he learns faith in himself.  
If a child lives with friendliness, he learns that the world is a nice place in which to live.

— Family Life Workshop, Negro Elementary School, Efland, N. C. (March, 1959)

## AT DELAFIELD

The Francis Delafield Hospital, 99 Fort Washington Avenue (at 164th Street) announces the following Scientific Program for October, supported by the New York City Division of the American Cancer Society. Meetings will be held in the Delafield Hospital Auditorium, 9:30 a.m.

October 7—*Enzymatic Reactions Sensitive to Penicillins, Cephalosporins and Other Antibacterial Agents*, Jack L. Strominger, M.D., University of Wisconsin Medical Center.

October 14—*Regulation of Nucleic Acids and Enzymes*, Ottavio Barnabei, Ph.D., Istituto di Fisiologia, Italy.

October 21—*Molecular Repair Systems*, Richard B. Setlow, Ph.D., Oak Ridge National Laboratory.

October 28—*Studies on the Epidemiology and Cytogenetics of Leukemia*, Fred W. Gunz, M.D., Ph.D., Christchurch Hospital, New Zealand.

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXII, NUMBER 10

NOVEMBER, 1967

## First Horwitz Award To Dr. Luis F. Leloir

Columbia University has announced that the first recipient of the Louisa Gross Horwitz Prize for research in biology or biochemistry will be Professor Luis F. Leloir of Buenos Aires. The prize of \$25,000 and a citation will be presented to Dr. Leloir at a dinner in the rotunda of Low Library on November 15th.

The Louisa Gross Horwitz Prize was established under the will of the late F. Gross Horwitz through a bequest to Columbia University and is named to honor the donor's mother, who was the daughter of Dr. Samuel David Gross, a noted surgeon of Philadelphia

in the nineteenth century. The award, which it is anticipated will be an annual event, is made to a scientific investigator or group of investigators whose contribution to knowledge in either biology or biochemistry is deemed worthy of special recognition. The awardees are selected by a committee of the Faculty of Columbia University under the chairmanship of Dr. H. Houston Merritt, Vice President in Charge of Medical Affairs.

Luis F. Leloir was born in Argentina in 1906 and completed his medical training there in 1932. An interest in biochemistry began during studies with Professor Bernardo Houssay on the role of the adrenals in regulating carbohydrate metabolism. During subsequent years, he has worked in many laboratories abroad, including Cambridge University, Washington University in St. Louis, and in 1944 with Dr. David E. Green in the Department of Medicine at the College of Physicians and Surgeons. He was appointed Director of the Institute of Biochemistry of the Campomar Foundation in Buenos Aires in 1947 and Head of the Department of Biochemistry at Buenos Aires University in 1962. His most notable scientific contributions have included pioneering studies on angiotensin, the biological oxidation of alcohol and fatty acids, and many aspects of carbohydrate metabolism. The Horwitz Prize is awarded in recognition of his discovery of an entirely new group of compounds, the nucleoside diphosphate sugars, and the demonstration of their crucial importance in the biological synthesis of sucrose, plant

## Dr. Shirley Fisk Returns to P&S From Pentagon

Dr. Shirley C. Fisk resigned as Deputy Assistant Secretary of Defense to return to Columbia-Presbyterian.

The appointment of Dr. Shirley C. Fisk as Associate Dean of Columbia University's College of Physicians and Surgeons has been announced by President Grayson Kirk, Columbia University, and the Trustees of Columbia University. To accept this position, Dr. Fisk resigned, September 2, from the position of Deputy Assistant Secretary of Defense (Health and Medical), Washington, D. C., which he has held since June 1, 1963.

Dr. Fisk will serve as the coordinator, at the College of Physicians and Surgeons, for the heart disease, cancer and stroke programs and community medicine.

Dr. Fisk, born in New York City in 1910, attended the Hill

## A Princess Visits Babies Hospital

Her Royal Highness Princess Alexandra, cousin of Queen Elizabeth II, visited Babies Hospital at the Columbia-Presbyterian Medical Center on the afternoon of Tuesday, October 3.

The Princess, escorted by John S. (Bud) Palmer, New York City's Commissioner of Public Events, was greeted on arrival at the entrance of Babies Hospital by A. J. Binkert, Executive Vice-President of the Presbyterian Hospital.

Young patients at the Hospital gave the Princess a "Yankee Doodle Dandy" welcome. The rhythm band—young musicians under the age of thirteen whose instruments were largely of the percussion variety—provided a concert which had been previously rehearsed for the occasion—and the Princess was obviously delighted.

The dramatic moment of the arrival of Princess Alexandra at the entrance of Babies Hospital. Her escort is "Bud" Palmer.

Her tour included a play room, a school room—P.S. 401 X, a

## World Genetics Symposium And Honors Convocation Commemorate P&S 200th

Two thousand scientists including the world's leading geneticists, six of them Nobel Laureates, attended the Symposium on Genetics and De-

velopment at the Columbia-Presbyterian Medical Center for three days, October 18-20.

This Symposium and an

*Please turn to page three*

Many states and nations were represented at Genetics Symposium.

Following the Symposium program, this panel discussed several points for lay benefit. Left to right: Dr. Paul Marks, Dr. Joshua Lederberg, Dr. George Klein, Dr. Jacques Monod, Dr. Erwin Chargaff, Dr. James V. Neel, Dr. Alexander Bearn.

## Anonymous Gift Of Million Dollars Honors Dr. Stookey

A gift of \$1,000,000 from an anonymous donor has been received by Columbia University's College of Physicians and Surgeons for the creation of a professorship in memory of Dr. Byron Stookey, one of the nation's pioneering neurosurgeons.

The gift is one of the largest donations for an endowed chair ever received by the University.

Dr. H. Houston Merritt, dean of the College of Physicians and Surgeons, announcing the gift, said that the new professorship would be in neurosurgery. Before his death on October 20, 1966, Dr. Stookey was Professor Emeritus of Neurological Surgery at Columbia.

"It is singularly appropriate," Dr. Merritt said, "that this splendid gift will help advance the teaching and practice of neurosurgery, a field to which Dr. Stookey made so many pioneering contributions during his outstandingly productive lifetime."

Dr. Stookey was born in Belleville, Ill., in 1887 and received his M.D. from Harvard in 1913. After service in World War I in both the British and U. S. medical corps, he became an instructor in Neuroanat-

## Weinberg Aid Plan Provides A Way For Hospital Employees to Advance

Twenty-seven candidates to receive tuition assistance through the Sidney J. Weinberg Employees Educational Aid Reimbursement Plan have now been approved for the Fall semester, it was announced by Lillian Oring of the Personnel Department.

Of these 27 candidates, 20 are degree candidates, nine for the A.A.S. degree; seven for the Bachelors degree, three for the Master's degree, and one for the Ph.D. degree. The candidates will attend 15 different universities and colleges.

The following is a list of the approved candidates, their department and the job they now hold:

George Burgess, electrician, Maintenance and Construction; John Campbell, supervisor, Mail Services; Becky Carlton, secretary, Ass't Treasurer's Department; Georgina Cestero, clerk-typist, Maintenance and Construction; Ellen Connolly, clerk, Chemistry Laboratory; Susie Copeland, nursing aide, Nursing; Carmen Davis, infant care technician, Nursing; Luisa de la Campa, laboratory

technician, E E G; Louis DePena, delivery man, Pharmacy; Marlene Espinet, clerk-typist, Nursing; Robert Giuliani, pharmacist, Pharmacy; Frances Johnson, secretary, Medical Data Processing; Pauline Mac Donald, L. P. N., Nursing; Barry McKenzie, laboratory assistant, Clinical Pathology; Frances Menzella, food clerk, Central Food Service; Patrick Moohan, storekeeper, Maintenance and Construction; Michael Morrone, pharmacist, Pharmacy; Letty Pogul Munz, psychometrist, Pediatric Psychiatry; Mary Neacy, patient accounts clerk, Accounting; William O'Hara, attendant, Nursing; Joan Palmer, secretary-technician, Cardiology; Dorothy Rock, nursing aide, Nursing; Marie Terrano, technician, E E G; Ella Troy, receptionist, Vanderbilt Clinic; May Udisky, secretary, Maintenance and Construction; Vincent Vicidomini, pharmacist, Pharmacy; and Ralphina Waithe, L.P.N., Nursing.

The Weinberg Aid Plan will pay as much as half of a student's tuition fee, for one to six academic credits a semester, or the equivalent in courses that do not carry college credit. Miss Oring points out that for a candidate to be eligible for this plan, the person must have been working at the hospital full-time for at least six months; the subjects to be studied must be related to the employees work or to career development with future job responsibilities within the hospital.

If you qualify, why not make your plans right now to return to school during the Spring semester? First, find the college or school that will accept you, then make your application through Miss Oring, in the Personnel Department. Applications must be received in the Personnel Office no later than January 31, 1968, to be considered.

## HORWITZ

*Continued from page one*

starch, liver glycogen and other polysaccharides. Dr. Leloir has received many honors, including the Presidency of the Argentine Association for the Advancement of Sciences, membership in the National Academy of Sciences in the United States and the American Philosophical Society, and invitations to deliver the Dunham Lectures at Harvard and a Harvey Lecture in New York.

Dr. Leloir will deliver a lecture on "Polysaccharide Synthesis—Past and Present" in the Alumni Auditorium at P&S at 4:30 p.m., November 14th, as another occasion of the Bicentennial Anniversary of P&S.

## A Princess Visits Babies Hospital

*Continued from page one*

carpenters' shop and the roof patio.

Among other members of the Hospital staff, the Princess met Elizabeth Callahan, Unit Manager, Babies Hospital; Mrs. Allen F. Maulsby, President, Board of Women Managers of Babies Hospital; and Dr. Edward C. Curnen, Jr., Director of Service, Babies Hospital.

Also present to meet Princess Alexandra and assist with the visit to the Premature Nursery of Babies Hospital were Dr. William A. Silverman and Dr. John C. Sinclair of the Hospital staff.

For the little patients it was all so much fun, they hope the Princess will come back soon.

Elizabeth Callahan, Unit Manager, Babies Hospital, welcomes Princess Alexandra.

Ruth Vickers, Recreational Therapy, displays wonderland of doll houses and toys.

The Princess tours Babies Hospital with A. J. Binkert, Executive Vice-President of Presbyterian Hospital.

Dr. John C. Sinclair and Dr. Lillian Blackman converse with Princess Alexandra.

Dr. Edward C. Curnen, Jr., left, Director of Service, Babies Hospital, with Mrs. Allen F. Maulsby, Princess Alexandra, and Dr. William A. Silverman.

## Demarest, P&S Illustrator, Elected President

Robert J. Demarest, a medical illustrator for the College of Physicians and Surgeons, was elected President of The Association of Medical Illustrators at its 22nd annual meeting, held this year in San Francisco. Emil G. Bethke, a medical illustrator at the College, also attended this meeting. Both Mr. Demarest and Mr. Bethke are members of the Board of Governors of the Association.

More than 200 medical illustrators from the U. S., Canada and Mexico attended this meet-

ing. The program was concerned with multi-media—video tape, film slide presentations, drawing board techniques such as air brush work, lettering and design.

At the Change of Pace Banquet the guest of honor was Charles Schulz of "Peanuts" fame, who talked and drew many of his characters. Mr. Demarest reports that he was able to bring his daughter Nancy the best possible present from California—an autographed picture of Snoopy and his dog Haze.

## Neurosurgeons Honor 200th

Four years ago the Neurosurgical Society of America met with the Society of British Neurological Surgeons in London. Last month, October 10 to 14, the British society returned the visit. It was the Twentieth Annual Meeting for the Neurosurgical Society of America; for the British society, the seventy-sixth.

Headquarters for the meetings was the Biltmore Hotel, New York City; however, the forenoon and afternoon meetings on Wednesday, October 10, were held in the Alumni Auditorium, Columbia-Presbyterian Medical Center, in honor of the 200th Anniversary of P&S.

Thirty-three British neurosurgeons, seventy-five members of the Neurosurgical Society of America, and guests made up the 130 members of the profession who attended.

The Wednesday morning program opened dramatically when Dr. H. Houston Merritt, Dean of the College of Physicians and Surgeons, in presenting an address of welcome, announced that an anonymous donor was giving a gift of one million dollars to establish a Byron Stookey Chair for Neurological Surgery. (See another article in this issue of *The Stethoscope*.) The history of P&S and the Neurological Institute was reviewed in a welcoming address by Dr. J. Lawrence Pool, Professor and Chairman of Neurological Surgery, P&S.

Like the London meeting of 1963, according to Dr. Lester A. Mount, Associate Professor of Clinical Neurological Surgery, P&S, this meeting was of very high calibre in terms of the exchange of ideas. Just

## Genetics Symposium, Convocation, Commemorate Bicentennial

*Continued from page one*

Honors Convocation at Columbia University on Friday evening, October 20, were two recent events commemorating the 200th Anniversary of Columbia University's College of Physicians and Surgeons.

At the convocation, attended by 320 persons, six honorary degrees were awarded to leading figures in medical science and philanthropy. The recipients were William Black, chairman of the board of Chock Full O'Nuts Corporation; Konrad Bloch, Higgins Professor of Biochemistry at Harvard University and a Nobel Laureate; Albert Baird Hastings, former Hamilton Kuhn Professor of Biological Chemistry, Harvard University; Joshua Lederberg, professor of Genetics and Biology at the Stanford University School of Medicine and a Nobel Laureate; William Cole Rappleye, Dean Emeritus of the medical faculty and Vice-President Emeritus for Medical Affairs of Columbia University; and James A. Shannon, Director of the National Institutes of Health. Mr. Black received the degree of Doctor of Humane Letters; the others were awarded the

At the Honors Convocation, left to right: Dr. Albert Baird Hastings, Dean H. Houston Merritt, William Black, President Grayson Kirk, Dr. William Cole Rappleye, Dr. James A. Shannon, Dr. Joshua Lederberg, Dr. Konrad Bloch.

degree of Doctor of Science.

At the Symposium on Genetics and Development, new and important ideas were discussed by a group of the most distinguished scientists from American and European universities.

The content of the program reviewed the present status of knowledge of the coding of genetic information and emphasized the mechanisms by which genetic information is

expressed in normal development and in disease.

At the close of the Symposium a panel discussion among several of the participants focussed upon how the enormous recent advances in genetics may have an impact upon society. The complete description of an individual's genetic makeup would require millions of bits of information. At the present time we have only several hundred biochemical tests

to explore or define these possibilities. However, even our present knowledge of genetics allows us to contemplate the possibility of altering an individual's genetic composition.

There was acknowledgment of growing concern about imminent experiments in "genetic engineering." However, it was pointed out that such genetic intervention is not unlike current practices of vaccination, especially with live

to prove that international boundaries offer no obstructions to this professional community, the Secretary of the Society of British Neurological Surgeons, Joe Pennybacker, is a native of Tennessee who went to England as a Rhodes Scholar and is now a Professor of Neurosurgery at Oxford.

The four days of meetings at P&S and the Biltmore Hotel included addresses and papers by more than sixty members of the profession. President of the Neurosurgical Society of America is Dr. Bertram Sel-

verstone, Professor of Neurosurgery at Tufts University, Boston.

Dr. Mount, chairman of the committee on arrangements was President of the Society, 1961-62. One of his committee members was Dr. Edward B. Schlesinger, Professor of Clinical Neurological Surgery, P&S, who was the first Secretary of the Society.

The arrangements for the Ladies' Program were made by Mrs. Lester A. Mount, Mrs. Edward B. Schlesinger, and Mrs. Irving S. Cooper.

## To Increase Their Abilities, Twenty-three Graduate Nurses Continue Studies

Twenty-three graduate nurses are studying for a Master's degree under the Department of Nursing. They are carrying programs to increase their ability to give patient care.

The students come from the State of Washington, New Mexico, Mississippi, North Carolina, North Dakota, Wisconsin, Minnesota, as well as the middle Atlantic and New England States. Four are married, two are alumnae of the undergraduate program here and one has been a member of the nursing faculty. Their experience in nursing varies, one having practiced for twenty years.

Seventeen of the students are enrolled in the course in Maternity Nursing and Nurse Midwifery directed by Miss Bernice Derby, Assistant Professor, and Assistant Director of Nursing in Sloane. Full

These graduate nurses, who come from several regions of the United States, are enrolled in the course in maternity nursing and midwifery.

time faculty include Mrs. Carole Kaufman, Assistant Professor, and Miss Phyllis Leppert, Associate in Nursing.

A program that is being offered for the first time this year, Psychiatric-Community Mental Health Nursing is

being undertaken by six students. Miss Ann Earle, Assistant Professor, is director of the program. Other faculty include Miss Fern Kumler, Associate in Nursing, and Doctor Ivan Goldberg, Instructor in Psychiatry. The pro-

gram is supported in major part by the Graduate Psychiatric Nursing Division of the National Institute of Mental Health. All of the students are receiving traineeships to assist them in undertaking the studies. The students are:

Graduate Program Maternity Nursing, 1967-1968 — Mrs. Kaarina Abel, Grace M. Allman, Elaine C. Bound, Mary E. Brundage, Rebecca A. Clark, Mrs. Gail N. Doiron, Mary P. Ferguson, Carol A. Hornsby, Mrs. Phyllis M. Jansyn, Marie C. Meglen, Joanne P. Middleton, Nancy M. Mullin, Barbara A. Petersen, Margaret A. Toedter, Mrs. Lucile T. Von Seggern, Matilda C. Wadilton, Laverne A. Werner.

Psychiatric Program, 1967-1968 — Gretchen Camp, Catherine Cyrus, Eva Einstein, Patricia Kane, Mary Knipe, Dale Lehman.

Dean Merritt and William Black

viruses.

Dr. Lederberg expressed the view that we should not be too concerned about possible irreversible effects of "genetic engineering"—that by the time we can do this we should also be able to undo it. If we were able, tomorrow, to remedy diseases by such means, we would hardly be able to resist applying such remedies for the benefit of affected children.

Throughout the discussion there were implications that human social goals are the overall guide. Genetic engineering is not expected to go out on tangents but to work in harmony with the directions which mankind chooses.

## Many Foreign Doctors Visit Corneal Center

The Corneal Center at the Institute of Ophthalmology has attracted a number of distinguished foreign visitors this year: To work with Dr. Zacharias Dische, Professor Emeritus of Biochemistry, Dr. Leslie Robert, Maitre de Recherches of the French National Research Foundation, has come from Paris, and Dr. Gertrud Cremer, member of the Institute of Experimental Eye Research, arrived from Bonn. Dr. Robert is continuing his investigation of corneal glycoproteins and Dr. Cremer is working on the role of pteridines in vision.

Professor of Ophthalmology Dr. Bengt O. Hedbys of Gothenburg, Sweden, is visiting the Corneal Center to collaborate with Columbia's Dr. Saiichi Mishima on physiological problems of corneal swelling. Dr. Teichi Morisue, Instructor in Ophthalmology at the University of Osaka, has arrived from Japan to work with Dr. Mishima. Dr. Anthony Donn and Dr. Gordon Kaye on problems of corneal physiology.

Research Fellows newly arrived at the Corneal Center are: Dr. Frank B. Hoesle, former Head of the Department of Ophthalmology on the U. S. Navy hospital ship Repose; Dr. Sotiris Liaricos, who will return at the end of the year to his native Greece, where he will divide his time between private practice and an academic career at the Athens University; Dr. Zen-Ichi Kubota, who will return as an Instructor in Ophthalmology to the Nagoya University School of Medicine in Japan; and Mr. Yoshinobu Shimizu, a candidate for the doctoral degree from the Tohoku University Medical School at Sendai, Japan.

## OB-GYN Announces "Professors' Day" Bicentennial Event

In commemoration of the 200th Anniversary of P&S, the Department of Obstetrics and Gynecology announces a "Professors' Day" on Thursday, November 30, in the Alumni Auditorium from 2:00 to 5:30 p.m. Talks will be given by the following Professors of Obstetrics and Gynecology: Dr. Gordon W. Douglas, NYU; Dr. Fritz Fuchs, Cornell; Dr. Louis Hellman, Downstate; Dr. Seymour Romney, Einstein; Dr. Martin Stone, N. Y. Medical College; Dr. J. G. Moore, Columbia; and Dr. George E. Moore, Roswell Park Institute, Buffalo, who will discuss "Immunological Aspects of Malignant Disease."

All members of the medical staff are invited.

# THIS MEDICAL CENTER

One of the most active and far-reaching community health services originating at Columbia-Presbyterian Medical Center is the Program of Continuation Education in Public Health and Administrative Medicine, under the direction of Dr. Ray E. Trussell, Delmar Professor and Chairman of the Department of Public Health and Administrative Medicine.

Now in its tenth year, the Program, which began with a small staff and budget, supported by funds from the W. K. Kellogg Foundation, has expanded each year.

At present, the Program is composed of three major sections which reflect the areas of current interest and need in community health. They are: (1) the Administrative Medicine Section, (2) the Public Health Section, and (3) the Center for Hospital Continuing Education.

Dr. Eric R. Osterberg heads the Public Health Section, assisted by Francis C. Lindaman. Dr. Osterberg, now in his seventh year at the Medical Center, was formerly Chief of the Division of Preventive Medicine and Quarantine for the Canal Zone Government and Health Officer for Panama City and Colon, Republic of Panama.

## Dr. E. M. Papper Elected President, Anesthesiologists

Dr. E. M. Papper, Chairman of the Department of Anesthesiology, is the new President of the American Society of Anesthesiologists, elected at the society's October meeting at Las Vegas.

Dr. E. M. Papper, new Anesthesiology President, stresses programmed education.

Dr. Papper said in his inaugural address to the ASA's House of Delegates that his administration will stress three main objectives: (1) improved patient care; (2) collaborative work with other societies who bear a similar responsibility to ours for encouraging physicians to enter anesthesiology; and (3) an improved relationship between anesthesiologists and anesthetic nurses to effect a restoration of the traditional relationship between nurse and physician.

## Emphasis on Improved Learning Methods

Reaffirming the Society's continuing emphasis on education, Dr. Papper told the Delegates that during his administration there will be an emphasis on improving teaching methods, including programmed education. Much effort will be made, he said, to improve undergraduate, intern, and graduate education in collaboration with the AMA Council on Education, the American Association of Medical Colleges, and the American Board of Anesthesiology.

Dr. Ray E. Trussell, Director, Columbia University School of Public Health.

Dr. Eric R. Osterberg, Director, Public Health Section, Program of Continuation Education.

Currently operating on a \$330,000 budget, the Program is partially supported by project funds from the Public Health Service and the Hospital Research & Educational Trust of the American Hospital Association, but the major portion of the budget is provided by Columbia University.

Of recent concern to the Administrative Medicine Section has been the training of state and federal agency personnel responsible for Medicare and Medicaid programs, to better qualify them to work with hospital staffs. Recently, courses have been prepared to improve the quality of medical services in extended care facilities, including a series of advanced seminars for administrators of nursing homes.

Changes and trends in public health are reflected in the content of the short term courses and institutes offered by the Public Health Section of the Program. The need to improve the managerial skills of health professionals stimulated a series of one-week institutes on various aspects of executive development, carried out in cooperation with the Joint Committee on Executive Development, American Public Health Association. Other courses have been developed for top level administrative staff of national voluntary health agencies and of their larger local affiliates.

Harold Baumgarten, Jr., Director, Administrative Medicine Section, Program of Continuation Education.

Sally E. Knapp, Coordinator for Hospital Continuing Education.

Francis C. Lindaman, Assistant Director, Public Health Section.

# SCHOOL SERVES 9-STATE AREA

This is the building at 21 Audubon Avenue, which houses this unit of Columbia's School of Public Health

partment of Health, the School of Public Health and the School of Medicine of the University of Puerto Rico.

The Center for Hospital Continuing Education is a co-operative program between the American Hospital Association's Hospital Research and Education Trust and the School's Program of Continuation Education, made possible by a three-year grant from the W. K. Kellogg Foundation. It is one of seven such centers in the United States. This section is currently active in three major areas: (1) the training of directors of volunteers in health care facilities, (2) the training of assistant administrators and department heads of health care facilities and (3) hospital planning and development.

The courses can be explained in as many as four languages besides English, since Dr. Osterberg is proficient in Spanish and Swedish and Mr. Lindaman in German and French.

Instructors for the various courses may be Medical Center faculty, but often an expert in a particular field may be brought in to cover a specific subject.

The Program continues to grow and to reflect the changing patterns and trends in health work, responding to the needs of health professionals for continued training and advancement in the total community health field. At the right are shown the people responsible for this important Program of Continuation Education.

Alfred Popoli, faculty member Harvard School of Public Health, lecturing to Hospital Administrators.

Polly Vibber, Curriculum Coordinator

Robert L. Tate, Production Clerk

*Columbia-Presbyterian  
Medical Center  
Is People...*

Here are the thirteen members who make up the permanent staff of the Program for Continuation Education.

## Offer Course for Community Physicians 'Psychiatry in Medical Practice'

One of the important new community services originating at Columbia-Presbyterian Medical Center is a post-graduate course in psychiatry for family doctors who practice in the Washington Heights Health District of New York City. In the future, this course will be made available to family doctors practicing in other communities near the Medical Center, including those across the river in New Jersey.

The current course, designated as PSYCHIATRY IN MEDICAL PRACTICE, given at The Psychiatric Institute, under the jurisdiction of Dr. Lawrence C. Kolb, began October 11, and will continue through the middle of June, 1968. Dr. Alexander N. Levay is teaching the course. Fifteen physicians from the Washington Heights District are now enrolled and attend classes at the Psychiatric Institute for six hours each week. Dr. Roger MacKinnon, associate clinical professor of psychiatry, is project director, and Dr. Alexander N. Levay, instructor in psychiatry, is coordinator for the course. Various members of the clinical staff serve as consultants.

The need for such post-graduate training is great. Health authorities estimate that between 50% and 70% of all patients seen by family physicians have complaints that are directly and indirectly

the reflection of emotional problems; these may or may not be combined with physical illness. Until quite recently, medical schools have not provided adequate course instruction to enable graduates to effectively cope with these problems. To compensate for this educational deficit, most family doctors have attempted to educate themselves through reading, discussion with colleagues, and by "trial and error" with their patients. Courses, such as the one now being given at Columbia-Presbyterian Medical Center, are partially financed by grants from the National Institute of Mental Health, and planned to give family doctors both formal training and clinical experience to improve their skills in dealing with emotional problems encountered in general practice. The major objectives of this teaching program are:

1. To enable family physicians and internists to manage selected psychiatric cases in general office practice.
2. To increase their understanding of psychosomatic medicine.
3. To improve their understanding of the emotional reactions of their patients to physical illness and hospitalization.
4. To improve their awareness to the need for psychiatric referral.
5. To increase their ability to

## UNVEIL DR. HENRY ALSOP RILEY PORTRAIT

Shown here with the portrait of Dr. Henry Alsop Riley, shortly after its unveiling, are A. J. Binkert, Executive Vice President, Presbyterian Hospital, Mrs. Margaret Hamilton Riley, and Dean H. Houston Merritt, College of Physicians and Surgeons.

On Thursday, October 5, family and friends of the late Dr. Henry Alsop Riley met in the Zabriskie Auditorium to witness the unveiling of a portrait of Dr. Riley.

This full-color portrait, painted by Robert Oliver Skemp, was presented to the hospital by Mrs. Henry Alsop Riley, and it will be permanently hung in the Zabriskie Auditorium with portraits of Dr. Frederick Tilney and Dr. Edwin G. Zabriskie, who also

served as professors of neurology.

Dr. Riley was associated with the Neurological Institute for more than 40 years before his retirement in 1962. He died November 1, 1966.

Dr. Riley was a graduate of the College of Physicians and Surgeons, class of 1912, and joined the faculty of P&S in 1915. A world authority on the anatomy of nervous diseases, he was a former president of the American Neurological Association, a founder

of the International Neurological Congress, a former president of the New York Neurological Society and of the Association for Research in Nervous and Mental Diseases. He was awarded an honorary Doctor of Science degree by Columbia University in 1959 in recognition of his many achievements.

At retirement, Dr. Riley was attending neurologist at Neurological Institute and Professor of Neurology at the College.

## Symposium Honors Dr. Nachmansohn

Dr. David Nachmansohn, Professor Emeritus and Special Lecturer in Biochemistry, caught by the camera as he was talking to his old friend and guest lecturer at the symposium, Professor Severo Ochoa, Chairman of the Department of Biochemistry at New York University Medical School.

A symposium honoring Professor David Nachmansohn on his appointment as Professor Emeritus and Special Lecturer in Biochemistry was held in the Alumni Auditorium on October 16. More than 150 colleagues and friends attended the symposium, and were welcomed by Dr. H. Houston Merritt, Dean of the College of Physicians and Surgeons.

The morning session, under the chairmanship of Professor Wolf-D. Dettbarn, presented four speakers: Professor David Rittenberg, "The Impact of Physico-chemical Concepts on the Development of

Neurochemistry"; Professor Helmut Kewitz, "Drug Effects on the Metabolism of Acetylcholine"; Professor Fritz Lipmann, "Functions of GTP in Protein Biosynthesis"; and Professor Severo Ochoa, "Translation of the Genetic Message."

The afternoon session, under the chairmanship of Professor Philip Rosenberg, presented seven speakers: Professor Wolf-D. Dettbarn, "The Acetylcholine System in Peripheral Nerve"; Doctor Walo Leuzinger, "Crystallization of Acetylcholinesterase"; Professor Annemarie Weber, "Cal-

culation appropriate community resources for their patients.

Tuition for this course is free, and full credit in the amount of 240 hours is given for the course by The Academy of General Practitioners. Requirements for admission: The applicant must have a (1) license to practice medicine, (2) must be actively practicing medicine, and (3) must be interviewed by the project director.

The course is divided into two 3-hour teaching periods. In the first of these groups of three physicians, the students discuss with one psychiatric consultant special problems encountered in their practices. They are also given help to treat psychotherapeutically and with drugs selected cases in their practices.

The second period is devoted to an informal, seminar type

cium Transport in Muscle"; Professor Sherman Beychok, "Conformational Changes in Proteins"; Professor Arthur Karlin, "Inferences about Proteins in the Membrane of an Electrogenic Cell"; Professor Henry G. Mautner, "Studies on the Acetylcholine Receptors of Excitable Membranes"; and Dr. Nachmansohn gave the closing remarks.

presentation of psychiatric topics particularly suited to the needs of the medical practitioner. These presentations are illustrated with live case interviews from the doctor's own practices. These are videotaped and replayed during the discussion as needed to enhance the overall learning experience.

The second half of the afternoon sessions is given to clinical case conferences.

Physicians interested in enrolling for this course, which is to be repeated during the next five years, should write to the Psychiatric Institute, Columbia-Presbyterian Medical Center, 622 West 168th Street, New York, N. Y. 10032.

## LETTER FROM VIETNAM

Dear Editors,

As a former employee of Presbyterian-Medical Center I can truthfully say your establishment is one of the best if not the best.

Since coming into the armed forces "The Stethoscope" has followed me from New York, Georgia, Virginia, Kentucky and now Vietnam. I've enjoyed reading the informative articles which were very inspiring to a future doctor. Please continue the good work in the name of science and humanity.

See you in the near future.

Respectfully yours, Sp/4 Randolph C. Singleton, 204th Trans. Co. A.D.S., APO 96353 SF Calif.

## Will You Dress A Doll to Help Santa?

Once again the Babies Hospital Nursing Office asks your help as an assistant to Santa Claus. They now have dolls available for dressing during the coming weeks and they should be returned in time to be displayed at the Dolls' Tea Party, just before Christmas.

If you are handy with knitting needles, crochet hook, or a sewing machine, won't you please dress a doll for one of

our little girl patients?

All of the dolls will be on display at the Dolls' Tea Party, and each little girl will select the doll that Santa will deliver to her on Christmas morning.

Dolls may be picked up now at the Babies Hospital Nursing Office (BH-2-221) and should be returned, dressed, by December 15. Please call for the dolls between 9:00 A.M. and 5:00 P.M., Monday through Friday.

## Forty Students of Nursing Visit P. H.

Forty freshman and senior students of nursing from Rockland Community College and two of their faculty, Mrs. A. Reilly and Mrs. M. Bullock, are here at the Presbyterian Hospital two days a week on P.H. 8 and 10. The students are having experience in patient care and will be working in a variety of ways with the

students in our undergraduate program. Dr. Dorothy White, R.N., Ed.D., is chairman of the Nursing Department at Rockland Community College. The college is a demonstration center for associate degree education in nursing and is well known nationally and internationally.

## Four Study Nursing and Liberal Arts

Four nurses who graduated from diploma or associate degree programs are studying toward a baccalaureate degree under the Department of Nursing. They are carrying nursing courses here at the Medical Center and liberal arts courses at the School of General Studies.

Miss Donna Demarest graduated from the Lenox Hill Hospital School of Nursing in 1959. She worked for a year as a staff nurse at Lenox Hill and then became evening supervisor at the New Rochelle Hospital. She left a position with the Rye Visiting Nurse Association to enter the nursing program here.

The Misses Gail Robbins and Mary Wilkinson received Associate in Science degrees from Lasell Junior College in

L. to R., Nurses Donna Demarest, Judith Aronow, Gail Robbins, Mary Wilkinson.

Auburndale, Massachusetts. In addition to studying, these nurses are working in Medicine and Surgery at the Hospital.

Judith Aronow received her nursing preparation at Brooklyn College and until September worked in Medicine and Surgery here at Presbyterian. This semester she has a heavy schedule but she is also working per diem through the Registry.

## For Christmas Joy Give Books, Buy Books

The annual Christmas Book Sale at Milbank Library again offers employees and friends of the hospital a double opportunity to participate in the Christmas spirit.

If you have books at home that you have read and do not want to keep, the Library would be grateful if you would donate them for this book sale. They may be books others would like to own, and they will provide extra funds for purchasing new books for our patients' reading pleasure.

And if you are looking for new books to read, or for that extra Christmas gift, be sure and look over the books that will be available at this sale.

Come to Milbank Library

## Savings Plan

### Buy Freedom Shares

Hospital personnel will shortly have the opportunity to purchase by payroll deduction, the new U. S. Treasury Savings Notes called "Freedom Shares" on a one-for-one combination basis with Series E Savings Bonds. Freedom Shares pay 4.74% interest when held to their full 4½ year maturity, and will be offered in four convenient denominations.

Personnel will be notified through their supervisors of the time and place to enroll for the Freedom Shares.

## INTERNATIONAL RADIOLOGY SYMPOSIUM

The Department of Radiology, Neurological Institute, was excellently represented at the recent VIII Neuroradiological Symposium (International) which was held in Paris, September 25-30, 1967.

Dr. Ernest H. Wood, Professor of Radiology, P&S, Director of Radiology, Neurological Institute, gave lectures on "Neuroradiologic Evaluation of the Results of Surgical Treatment of Extracranial Atherosclerotic Disease" and "Atheromatous Ulceration in Major Neck Vessels as a Cause of Cerebral Embolism." Dr. Wood also presided as Chairman of one of the Scientific Sessions.

Dr. Sadek K. Hilal, Associate Professor of Radiology, P&S, Associate Attending Radiologist, presented two lectures. At a round table discussion, Dr. Hilal spoke on "The Regional Cerebral Circulation Studied by a Radiographic Technique."

Dr. B. Lewis Grossman, Assistant Professor of Radiology, P&S, Assistant Attending in the Radiological Service, spoke on "Evaluation of Cerebrovascular Disease Utilizing a Transcutaneous Doppler Technique."

Other speakers were Dr. Jan N. Safer, Visiting Fellow in Radiology, P&S and P.H., D. Cowen and A. Wolf, P&S (Neuropathology), Dr. Michael S. Tenner, Visiting Fellow in Radiology, P&S and P.H.

The Division of Nuclear Medicine, Department of Radiology, was represented by its Director, Dr. Philip M. Johnson, Associate Professor of Radiology, P&S, who spoke on "Investigation of Cerebral Blood Flow by Isotopic Cine-scintiphography. A Preliminary Report."

with your donations and your gift list!

The Sale will be held December 4 through December 22, on the 20th floor, Presbyterian Hospital.

## Rene Dubos Lectures

Dr. Rene J. Dubos, professor of Environmental Biomedicine at the Rockefeller University, will give a series of four lectures, November 6-9, on "Science in Human Affairs."

The lectures will be given in the Alumni Auditorium at 4:30 each afternoon. The specific titles and dates are: November 6, "The New Pessimism"; November 7, "Science and Social Evolution"; November 8, "Teleology and the Direction of Science"; and November 9, "Science as Knowledge of Consequence."

The lectures will be open to all.

## P. H. Auxiliary Sponsors Fashion Show

Mrs. W. Duane Todd, left, was Chairman of the Benefit. Mrs. Arthur Gerard DeVoe, President of the Auxiliary, presented an award to Arnold Scaasi.

On October 10 at a luncheon on the St. Regis Roof, Arnold Scaasi showed his Fall Collection of Made-to-Order Fashions. The benefit was sponsored by the Women's Auxiliary of The Presbyterian Hospital and featured a reception in the Penthouse at 12:00 noon followed by a luncheon and the private fashion showing. Mr. Scaasi was the guest of honor.

Two tickets for the benefit, at \$8 each, were obtainable by donating \$25 worth of merchandise for the Presbyterian Hospital to the Stuyvesant Square Thrift Shop.

Committee members included Mrs. Arthur Gerard De Voe, President of the Auxiliary;

Mrs. W. Duane Todd, Chairman of the Benefit; Mrs. Richard White, Mrs. H. Clay Frick, Mrs. Hamilton Southworth, Mrs. Robert S. Grinnell, Mrs. Paul Sheldon, Mrs. Rudolph Schullinger, Mrs. John Schullinger, Mrs. George H. Wilkie, Mrs. Philip Wiedel, Mrs. Ralph H. Boots, Mrs. Francis H. Cabot, Jr., Mrs. C. Redington Barrett, Mrs. Leo Heiden.

The Women's Auxiliary of The Presbyterian Hospital cooperates in supporting the Student Nurses Scholarship Fund, Patients' Library, Volunteer Service, Social Service, Occupational Therapy and Patient and Staff Needs.

## Ruth Griffiths, Clinic Supervisor, Retires

"It has been very exciting," said Ruth B. Griffiths on the final day of her work as Supervisor at Vanderbilt Clinic, October 6. "Vanderbilt Clinic is never dull. I'm going to miss the excitement."

Miss Griffiths was given a tea on Monday afternoon, October 9.

Her service began in August, 1928, the first summer of the Medical Center's existence. It was rather a matter of chance that she came here, for she had been employed for a year by the New York Public Library and was planning a library career. However, she was a patient in a hospital for two months. There was much talk about Columbia-Presbyterian as a new concept in medicine. One of the surgeons caring for her asked, "Why don't you go up to Vanderbilt and get a job?"

Miss Griffiths began work as a Clinic Aide; later she was advanced to Registrar, and did financial interviewing. Eventually she became Clinic Supervisor. In this capacity, in addition to other things, she has had responsibility for the receptionists, of whom there are now 65, full time or part time. These receptionists at Vanderbilt are the patients' first contact with the Hospital; they must handle much clerical work accurately, and

Ruth B. Griffiths is interested in new developments at Presbyterian.

they must make certain that the patients understand and carry out the doctors' orders.

Now Miss Griffiths plans to take some time, first of all, for visiting and recreation. She likes outdoor life and camping, and has always enjoyed gardening. Later, she will consider taking another job.

Miss Griffiths states that she will continue to watch the developments at the Presbyterian Hospital. Because of the rapid changes that are going on in medicine, she knows that there are interesting times ahead for Vanderbilt Clinic.

# Stethoscopia

## • WEDDINGS

Susan Murray Parker of Social Service was married October 14 to Frank Donald Proietti, a systems engineer with I.B.M.

## • ENGAGEMENTS

Peggy Gunter, staff nurse P.H. 18th floor recovery room, to John Greeley, a graduate student at City College. A November 18th wedding is planned.

Catherine Sitterley, social worker at Cornell Medical Center, to Dr. Mark Weisler Pasmantier, resident in pathology at P. H.

## • WELCOME

Emily Baruch, Gail Bergman, Linda Fein, Patricia Gilbert, Judith Ginsberg, Betty Kuhn, Frances Hardy, Mrs. Joyce Kuykendall, Arlene Klavans, and Mrs. Karen Kratter—ten students from Columbia University School of Social Work, who will train here three days a week, until the end of May 1968, at which time most will have qualified for the Master's degree in Social Work.

## • CONGRATULATIONS

To Mrs. Estelle Durand, secretary in Operation and Maintenance, on Kerry, her first grandchild, born September 26.

To George Burgess, Maintenance and Construction, on his second daughter, Courtney Lynn, born in Sloane Hospital, October 18.

To Mary Jane Lomanto, on her promotion to assistant head nurse, P.H. 18th floor recovery room.

## • GOOD LUCK AND BEST WISHES

To Mrs. Dorothy Diamond, who resigned her position at the Office of Public Interest to begin an important new job with the Regional Medical Program of the New York Academy of Medicine.

To Mrs. Verna Rose, nurse, 8th floor Harkness, leaving after 10 years of service, to live with her husband in Maine.

To Marjorie Cinciva, assistant head nurse N.I. 8th floor, for whom a farewell tea was held October 12.

To Mrs. Kathleen Martin, nurse's aid P.H. 18th floor recovery room, retiring to her new home in Jamaica, where she was born.

## • NOTES OF INTEREST

Karen Zankos, staff nurse in P.H. 18th floor recovery room, has just returned from a 10-day stay in Portugal, where she was a guest in the home of her roommate, also visiting her home city.

Ten medical students from the Faculty of Medicine, University of Cadiz, Spain, gave an hour-long Spanish Festival of Music at Bard Hall on October 24. Edward Walworth (P&S Class of '70) was concert chairman; he reports that this was among the most enjoyable musical events performed for the P&S Club.

## • CONDOLENCES

To the husband and relatives of Mrs. Emily Fruhbauer Kieffer, who died September 30, in P.H. She was employed in the Allergy Department of Medicine for more than 33 years.

## INTRODUCTION TO MEDICAL COMPUTING

A series of five lectures and demonstrations relating to the use of computers in today's medicine will be given in Vanderbilt Clinic 14, Lecture Room 240, by Dr. William A. Bauman and his staff. The lectures will last one hour and will begin promptly at 4:00 P.M. Staff members, students and all non-professional employees are invited to attend. The latter should obtain permission from their supervisors in writing. For further information call the Data Processing Office No. 2077, Room P.H. 433.

A schedule of the lectures is listed below:

Monday, December	4—Lecture: Applications
Thursday, December	7—Demonstration Lecture: Visit to Service Building to See Machines
Friday, December	8—Lecture: Automatic Machines
Monday, December	11—Lecture: Programming
Tuesday, December	12—Lecture: How the Computer Works

## DOINGS OF DOCTORS

DR. FRANK E. STINCHFIELD, Professor and Chairman of the Department of Orthopaedic Surgery, received a signal honor recently. He was elected to the Board of Regents of the American College of Surgeons in October.

DR. JACK BUDOWSKY, Assistant Attending Dental Surgeon, Associate Clinical Professor, Stomatology, attended an American Dental Association meeting in Washington, D. C., Sunday, October 29th, at which time he was elected President of The American Association of Industrial Dentists.

DR. HAROLD SPALTER, Associate in Ophthalmology was one of twenty-five invited panelists in an international symposium on uveitis sponsored by the Alfred P. Sloan Foundation in Baltimore, Maryland, in October. Dr. Spalter discussed the current status of laser therapy in retinal inflammatory disease.

DR. JULIUS TARSHIS, Associate Clinical Professor in the School of Dental and Oral Surgery, Department of Orthodontics, is standing for election of President-elect of The First District Dental Society. The election takes place at the Statler-Hilton Hotel, Monday evening, November 6th.

DR. RAFFAELE LATTES, Professor of Surgical Pathology at P&S and Attending Surgical Pathologist of PH, has returned from Chicago, where he served as Chairman of the Scientific Assembly on papers on Surgical Pathology at the Joint Annual Meeting of the College of American Pathologists and the American Society of Clinical Pathologists.

DR. GEORGE F. CRICKELAIR, Professor of Clinical Surgery and Director of the Plastic Surgery Service, has recently returned from the International Congress of Plastic Surgeons meeting, Rome, Italy, where he presented a movie on Otoplasty, and paper with Dr. RAFFAELE LATTES entitled "Adequacy of Surgical Resection of Skin Lesions." While in Europe, he lectured in Vienna and London. He visited with Dr. MICHAEL KAMPS of Belgium and Dr. GERHARD FREILINGER of Austria, both of whom previously trained at The Presbyterian Hospital.

## A Painting of P&S, Gift of Squibb, Presented to Dean Merritt

The unveiling and presentation of an original oil painting of the Columbia University College of Physicians and Surgeons (photo, left) was made to DR. H. HOUSTON MERRITT,

DR. SEYMOUR LIEBERMAN, Ph.D., Professor of Biochemistry, assigned to Department of Obstetrics and Gynecology, has been elected Vice President of the Endocrine Society.

DR. LIONEL OVESEY, Clinical Professor of Psychiatry, was visiting professor, October 10-12, at the University of Manitoba Medical School, Department of Psychiatry, in Winnipeg, Canada and guest of the Manitoba Psychiatry Association. He spoke on homosexuality, pseudohomosexuality, and phobic behavior and participate on a panel on sexual psychopathology.

DR. JOHN SCUDDER, Special Lecturer in Surgery, P&S, who is in charge of the Gibson Lectures, announces that Gibson Lecture XIX will be given on Thursday, November 16, 4:30 p.m., at the Alumni Auditorium, by Dr. JON J. VAN ROOD, Lector, Academisch Ziekenhuis Leiden, Netherlands. The title of Dr. Van Rood's address will be "Transplantation Antigens in Man, Their Recognition and Relevance in Clinical Organ Transplantation."

DR. SIDNEY C. WERNER was elected First Vice-President of the American Thyroid Association at the annual meeting of this Association held in Ann Arbor, Michigan, September 14-16.

DR. ANDREW DE ROETH, JR., Assistant Attending Ophthalmologist, presented a paper "Cryosurgery for Glaucoma" at the American College of Surgeons, October 5, in Chicago.

DR. ROBERT S. JAMPPEL, Department of Ophthalmology, has been appointed to the editorial board of *Neurology*. His field of special interest is Neuro-ophthalmology, and his advice will be sought in the review of articles dealing with this specialty.

DR. ANTHONY N. DOMONKOS, Attending Dermatologist, P.H., Clinical Professor of Dermatology, P&S, was recently decorated by President Balaguer of the Dominican Republic and awarded the medal of the "Order of Christopher Columbus" in recognition of his contributions to the control of cancer of the skin in the Dominican Republic.

Dean of the College, at a luncheon in Bard Hall on Friday, October 6. The occasion was one of the official functions celebrating the school's bicentennial. The presentation is part of a long-range plan by E. R. Squibb & Sons, Inc. to create a collection of original oil paintings of the 86 medical colleges of America. This pharmaceutical firm commissioned David Blossom to do the painting. In the photo below, Dean Merritt is shown accepting the gift in behalf of P&S. Artist Blossom sits at extreme left, near the painting.

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXII, NUMBER 11

CHRISTMAS, 1967

To Our Staff and Personnel:

As the Holiday Season approaches may I express my appreciation to all of you who carry on the traditions for which the Hospital was founded.

May you and your family have a Merry Christmas and the happiest of New Years.

*A. J. Binkert*  
A. J. Binkert  
Executive Vice President

## Cause, Cure, Prevention of RHD Discovered by P.H. Researchers

When Mrs. Ellentuck suffered rheumatic fever in 1925, nothing was known by physicians about the infecting agent responsible, or the connection between this often mild illness and the crippling, frequently fatal, rheumatic heart disease that sometimes follows. And until the techniques of open-heart surgery were perfected during the present decade, there were no known ways to correct heart damage due to early RHD.

Now its cause is known and it can be prevented by modern antibiotic drugs; and today, hundreds are being restored to active lives by open-heart surgery. Columbia-Presbyterian

physicians and scientists have played major roles in making possible these defenses against this dread disease.

Mrs. Andre F. Cournaud and Dickinson W. Richards, who were awarded the Nobel Prize in Medicine (1956) for research done at Presbyterian Hospital and Bellevue Hospital, were responsible for the first giant step on the road to successful open-heart surgery. They developed techniques that, for the first time, permitted doctors to explore the heart from within and measure the efficiency of its working parts. Discovery of the cause of rheumatic fever, which led to its prevention, was made by Dr. Alvin F. Coburn, who began working on the puzzle of rheumatic heart disease while still an intern at Presbyterian Hospital.

Since its inception, Columbia-Presbyterian Medical Center has operated under three basic policies: to give the best patient care modern medicine has to offer, to encourage medical research by providing the laboratories and tools necessary to carry it out, and to train future physicians. Outsiders who are not familiar with the activities constantly going on within the Medical

## COURAGE—

This is the story of one patient who, like many, comes to Presbyterian Hospital seeking medical assistance that may require continuity of treatment over a period of years. It is told here because it portrays the indomitable courage of a devoted wife, mother, and teacher who continues to face her problems with fortitude, and because it illustrates the total commitment made by our hospital to each patient accepted for treatment, regardless of ability to pay.

This photograph, recently taken at the Rehabilitation Medicine Unit on the eighth floor at Neurological Institute, shows Mrs. Ellentuck sewing, while Betty Kuhn, social worker, admires her handiwork.

After nine months of continuous hospitalization and extensive rehabilitation treatment following major surgery, Mrs. Beatrice Ellentuck is going home to celebrate the Holiday Season with her husband and son—her eleventh discharge from Presbyterian Hospital since first coming to Vanderbilt Clinic seeking medical treatment 19 years ago.

Mrs. Ellentuck's medical history now fills five thick volumes that have been written by members of almost every medical service at the hospital—Medicine, Surgery, Neurology, Obs-Gynecology, Pathology, Radiology, Rehabilitation Medicine, Nursing, Social Service, and others—but suppose we start at the beginning.

Beatrice Ellentuck was born in New York City, where she has lived all her life. She was educated in its public schools and at Hunter College, following which she attended a theological seminary to qualify as a teacher in her Y's Sunday School. She worked for a time in the personnel department of

left at the end of his first year to enter the Army. He was shipped to North Africa, where his Air Corps unit was attached to the British 8th Army, and he was trained as a cryptographer. Later, he participated in the invasions of Sicily and Italy. Discharged in 1946, Sgt. Ellentuck reentered law school under the G. I. Bill of Rights, graduating to pass the N. Y. Bar Examination. Mrs. Ellentuck continued to work during these years of study and struggle, when her husband's income was precarious and quite low.

Beginning in 1948, Mrs. Ellentuck's health started to fail and she was beset by a wide variety of medical problems. She entered the hospital in 1949 suffering from thrombocytopenic purpura, with a history of petechiae, rash and bleeding gums; a splenectomy was performed with excellent clinical results and she went home in good condition. A short time later she became pregnant and returned regularly to Vanderbilt Clinic for prenatal care. Her son Daniel was born without complication in October, 1950, at Sloane Hospital. Daniel was a beautiful, healthy baby (see photograph), and today, at 17, is a first-year student at Antioch College, in Ohio.

During the middle 1950's and early 1960's, Mrs. Ellentuck's heart condition grew steadily worse and she suffered many infections. She was hospitalized for pneumonia, pyrexia and suspected subacute bacterial endocarditis, perirectal abscess, hemorrhoidectomy, and exhaustion. She was admitted to our Mary Harkness Convalescent Unit

### PICK UP CHRISTMAS WINDOW PAINTS AT CHAPLAIN'S OFFICE DECEMBER 4

Paints and brushes for decorating your Christmas windows should be picked up at the Chaplain's office, starting December 4, between hours of 9:00 a.m. and 5 p.m., Monday through Friday.

Photographs of the most original and appealing windows will appear in the January issue of *Stethoscope*.

## COURAGE

Continued from page one

for periods of rest and recuperation.

Mrs. Ellentuck found that she had to restrict her activities more and more as the years passed. During this period she was followed closely by our Social Service Department. Fatigue and exhaustion resulted from any excessive physical activity, yet Mrs. Ellentuck managed to run her home, and, during these years, supplemented the family's still modest income by tutoring private students in English and remedial reading, many referred to her by the placement service at Hunter College. One of her greatest satisfactions during her present long hospitalization has been the letters of encouragement from former students, including several Japanese adults who came to her for help in English.

During her early years of treatment, Mrs. Ellentuck was an outpatient at Vanderbilt Clinic, and was referred by clinic physicians for hospitalizations. Like all V. C. patients, her fees were based on ability to pay. When family finances improved, Mrs. Ellentuck chose a private physician from the attending staff of Presbyterian Hospital, Dr. John A. Wood, who has directed her treatment during the past eight years.

Early in their relationship, Dr. Wood confirmed the diagnosis made by others: rheumatic heart disease, with mitral stenosis and mitral in-

sufficiency. As her symptoms grew steadily more incapacitating, Dr. Wood encouraged her to consider open-heart surgery to replace the defective heart valves responsible for her severe heart failure.

Mrs. Ellentuck entered Presbyterian Hospital in February with a respiratory infection, and for various tests and cardiac catheterization, and to be built-up physically. She underwent open-heart surgery in April, at which time two defective heart valves were replaced.

During the immediate post-operative period the weakened heart muscle proved inadequate to keep up normal circulation, although the artificial valves functioned well. As a result of low circulation, a progressive thrombosis of vessels in Mrs. Ellentuck's lower extremities occurred—a condition only rarely encountered in patients who undergo open-heart surgery.

Every known treatment was provided for Mrs. Ellentuck, including placement in a hyperbaric pressure chamber, at Mt. Sinai Hospital, in an effort to oxygenate starving tissue, but without success. Gangrene developed in the right and then the left foot. Only amputation could save Mrs. Ellentuck's life. She withstood this additional surgery, and the heart continued to improve. Since that time, Mrs. Ellentuck's progress toward recovery has been steady.

During the past several months, she has been on the rehabilitation medicine unit at the Neurological Institute, un-

dergoing rehabilitation training, carefully graded to her cardiac status, learning to walk with prosthetic limbs, and to do old household tasks in new and easier ways.

This gentle, needed, and courageous woman has won the hearts and respect of all the physicians, nurses and therapists who have helped her through this challenging, often discouraging period of rehabilitation and adjustment. That she is being returned to her family with her hopes high, her courage undiminished, and her heart filled with gratitude to all who have helped her, is an event in

which every person associated with our hospital can take the deepest pride and satisfaction, including those steadfast friends of the hospital who continue to financially support it in its mission of mercy.

Mrs. Ellentuck looks forward to the day when she can resume her tutoring activities, which give her great satisfaction, and she intends to finish the book she is writing about her experiences as a patient at The Presbyterian Hospital.

A letter written by Mrs. Ellentuck just before this issue of *The Stethoscope* went to press, is reproduced in facsimile below.

*Forty-one years ago, I was born in a small town in Ohio. I prepared to leave the hospital after these nine long months of near disaster, a new life opened for me. Though I look forward to a continued close relationship with the staff of the Rehabilitation Center, I am ready to go home. I leave with hope and with great determination.*

*Within the limitations of space, I can only hope to suggest, but never truly express my feelings of indebtedness to the high standards of my hospital, the Columbia Presbyterian Medical Center — to its unique Rehabilitation Center — and to the innumerable teams of men and women, unnamed, but never to be forgotten, who work daily and selflessly to mend the physical and to ease the unendurable.*

*In my personal story one name, above all others, needs to be recorded and will always be remembered with profound gratitude by my family and myself:*

(Name withheld at request of Physician)

*an intern on the staff of this hospital and a Professor at the Columbia Medical School, who gave of his time... unsparingly and whose dedication has saved at least eight of my nine lives.*

*It was, who for twelve periods rendered me devoted service, whose kindness and understanding with the members of my family, nor I shall ever forget. I record with profound respect and deepest appreciation:*

*Dr. Albert Wachter, Surgeon  
Dr. Eugene Glenn, Intern  
Dr. Robert Darling, Director, Rehabilitation Center.*

*Also: Miss Susan Hurlitz, Occupational Therapist  
Mrs. Gene Smalley, Physical Therapist  
Miss Kitzberg and Miss Kahn, Social Workers  
Mrs. Melba DeForest, Aide  
Mr. Walter Barton, Volunteer Clinic Worker  
Also: Nurses: Miss Cove, Miss Lammert, Miss Cincera, Miss Macalester, and Miss others  
Also: Dr. Holzman, Dr. Kaplan, Dr. Lipson, Dr. Friedman, Dr. Ryan, Dr. Boston, Dr. Zimmerman, Dr. Teichman, Dr. George, Dr. Bonello, Dr. Kornfeld*

*Also: Mrs. Fennel (Lab. Tech. - cardiograms), Miss Cyril Heron (student nurse), Miss Keizer (AT), Miss Carpenter (P.T.) and Sister Mary Thaddeus (P.T.)  
Also: Chaplain Robert B. Kewes, Jr.  
And everyone of the paid and Voluntary Staff of the Library*

*Barbara R. Ellentuck*

## RHD RESEARCH

Continued from page one

Center, may not know that the same physician who gives patient care is usually also doing basic research and directing the clinical training of students, interns and residents. Thus, when a person, or foundation, supports one activity, particularly by providing funds for patients unable to pay the full cost of their medical treatment, their gift is really supporting all of the major efforts of the Medical Center. Consider, for example, the case of Dr. Coburn and his search for answers to the puzzle of rheumatic fever and rheumatic heart disease.

While still an intern at Presbyterian Hospital in 1927, Dr. Coburn treated a young patient who complained of sore throat. He had previously successfully treated this child for lobar pneumonia, noting at that time his enlarged rheumatic heart. Now, presented by only a mild case of pharyngitis, Dr. Coburn took a throat culture, and sent the boy home to gargle and remain in bed until the infection cleared up.

A week later the boy returned to the hospital with symptoms of acute rheumatic fever. Soon he was stricken with a fulminating rheumatic attack and died.

It was a humbling experience, Dr. Coburn later recalled, and he began to wonder why this child, whose heart had been strong enough to withstand a severe attack of pneumonia, had died during an attack of rheumatic fever. Why, he asked himself, was the mild pharyngitis followed by a fulminating rheumatic attack? What had caused the pharyngitis that precipitated the fatal illness? What role in the sequence was played by the hemolytic streptococcus bacteria that had appeared in the throat culture he had taken from the child?

These questions sent young Dr. Coburn off on his search for answers. During the next few years he made pertinent observations based on his own research and the collaborative research being carried out by others. He discussed his problems with colleagues, asking them to refer to him those patients suffering from rheumatic fever.

After continued bacteriological studies of rheumatic fever patients, he discovered that the hemolytic streptococcus infection was an inescapable preliminary to rheumatic fever. If a patient with rheumatic fever had a history that did not reveal symptoms of streptococcus infections, Dr. Coburn proved by blood analyses the presence of streptococcal antibodies, which indicated that such an infection had once been present. Persons without demonstrable strepto-

## RHD RESEARCH

Continued from page two

coccal infections rarely, if ever, contracted rheumatic fever.

Dr. Coburn finally published his far-reaching concept: *the hemolytic streptococcus is the factor of infection in rheumatic fever.*

This announcement, corroborated by British researchers, aroused considerable speculation and controversy. Many scientists in the field doubted its validity; others discarded it as pure hypothesis.

Dr. Coburn's concept, now universally accepted, owes its acceptance to the development of the modern anti-bacterial drugs. Independent studies made at the Columbia-Presbyterian Medical Center and at Johns Hopkins Hospital in 1939, produced similar findings: daily doses of sulfanilamide prevented streptococcal infections and recurrences of rheumatic fever in known rheumatic fever patients. Prior to publication of these findings, most of the distinguished investigators of rheumatic fever had favored other concepts.

Then, at the beginning of World War II, Dr. Coburn, who had joined the Navy Medical Research Unit at Rockefeller Institute, was called to active duty. Epidemics of streptococcal infections were appearing at Naval Training Centers, with a rising incidence of rheumatic fever. Because of the urgency of the situation, mass prophylaxis with sulfadiazine was authorized at many large training centers. In some centers, it was possible to make controlled studies in which half of the personnel received sulfadiazine prophylaxis and the other half did not.

These large-scale tests confirmed Dr. Coburn's thesis on the relationship between hemolytic streptococcus and rheumatic fever.

And that is why today, at the first sign of a "strep" infection, the doctor gives the patient prolonged antibiotic treatment to rid his blood of this dangerous bacteria, and why, in the future, few people will have to suffer as Mrs. Ellentuck has suffered.

## B. H. Faculty Annual Dinner Held At Bard Hall On Oct. 31

The Annual Faculty Dinner of the Pediatric Department, honoring the new Resident Staff at Babies Hospital, was held in the Lounge at Bard Hall on Tuesday evening October 31st. Dr. Rustin McIntosh, former Director of Babies Hospital, and Mrs. McIntosh were among the one hundred and twenty guests. Also present was Dr. Estela

# Changing Medical Needs Call For New Concepts In Hospital Facilities And Medical Treatment

Each decade in the history of The Presbyterian Hospital, especially the last two, has brought great changes in the types of patients most often admitted and in the medical needs presented. Much of this is due to the rapid expansion of medical knowledge.

Millions of adults who once died of the quick-killing infectious diseases are now living to fall victim to the chronic diseases of age. Continuity of care is required for such patients. That is one reason why emphasis today is being placed on preventive measures and outpatient treatment to limit the number and duration of hospital admissions. The Modern Facility for Ambulatory Patient Care, now being rushed to completion at the corners of Ft. Washington Avenue and 165th Street, is being provided to help meet this ever-increasing obligation. *Funds are urgently needed to complete the financing of this essential project in the Medical Center's Development Program.*

The changing patterns of medical need are even more apparent at Babies Hospital. Only a few years ago, two-thirds of all patients admitted to the pediatric service were suffering, and often dying, from the infectious diseases—pneumonia, meningitis, tuberculosis, and others. Today, most of these children are successfully treated at home and do not come to the hospital. As a result, our physicians and research scientists are now confronted with the chronic and congenital diseases of childhood which, if not controlled or interrupted, may doom a child to slow death or crippling invalidism. Here, too, continuous treatment and preventive measures are required. The new addition to Babies Hospital, planned for occupancy early in 1968, and the floor-by-floor modernization of the old hospital to follow, were carefully designed to meet the changing patterns of medical need.

Thousands of children are now receiving continuous treatment at Babies Hospital, yet only about 200 are hos-

Hugh Arana, now six, plays Indians with Nurse Susan Bleau, on the fifth floor at Babies Hospital. This is Hugh's sixth hospital admission for surgery, given in progressive stages, to provide him with thumbs not present at birth.

pitalized at any given time. New laboratory techniques, improved clinical and surgical procedures, and drugs are saving an ever-increasing number of handicapped children for useful lives. And as our physi-

*Gifts sent to Presbyterian Hospital may be marked for the use of one hospital, for general purposes, or for individual projects in the Medical Center's Development Program.*

*Funds may also be marked for the Emergency Nursing Funds at Babies Hospital and The Neurological Institute. Such funds provide nursing care for acutely-ill patients who may not be able to pay for such needed services.*

*Those projects in most urgent need of funds at present are Babies Hospital and the new Facility for Ambulatory-Patient Care. However your gift is used, thank you on behalf of the patients who will benefit from it.*

cians and research scientists treat such children, their basic research is uncovering the causes of diseases and, in many disorders, methods of prevention.

For example, many children suffering from cystic fibrosis of the pancreas, considered doomed to death by age nine only ten years ago, are still living, and some are in college. Lack of one enzyme, due to a genetic defect, is responsible. Careful diet and protection from infections are prolonging the lives of such children at present, but great optimism is held for developing a synthetic enzyme that can be given, like insulin in diabetes, to control this genetic disorder. Much that is now known about cystic fibrosis was discovered at Babies Hospital.

Great progress is also being made toward finding answers to leukemia, heart, kidney, liver, and brain disorders in children; allergy, virus in-

fectious; and mental retardation, brain damage and other problems related to birth trauma and premature birth.

New laboratories and medical equipment, unheard of only a few years ago, including computers, are now essential for pediatric treatment and research today.

Thousands of children disabled and crippled by genetic defects, apparent at birth, are now being saved from invalidism, or a handicapped existence, by modern plastic and orthopedic surgery. Such treatments, often started early in infancy, require continuous outpatient care and repeated hospitalizations for surgery that, in most cases, must be carried out in progressive stages. The cost of such treatment is beyond the resources of most families.

Hugh Arana, the six-year-old boy shown here in photographs taken just before this issue of *The Stethoscope* went to press, is typical of many handicapped children who are now being saved for useful lives by surgeons at Babies Hospital.

Hugh's parents, Hugo and Catherine Arana, are well-educated Peruvians. Mr. Arana was graduated from the University of Peru with a doctorate degree in civil engineering and had a bright future in that developing country, but when his son was born without thumbs or radii, that bright future was interrupted: sur-

gical treatment for his otherwise normal son was not available in Peru.

Mr. and Mrs. Arana came to the United States when Hugh was three months old, bringing him to Babies Hospital, where they were told that surgery could provide thumbs for him and give him functional hands.

Hugo and Catherine Arana did not seek charity, but insisted upon paying, to the limit of their ability, for their son's treatment. Both found jobs, but Mr. Arana could not get a license to practice his profession here; instead, he worked in an auto parts company at \$70 a week. Later, our Social Service Department referred him to the Federation Guidance Service and there he was helped to find a position commensurate with his university training. As their finances improved, Mr. and Mrs. Arana immediately began paying to the full extent of their ability, the hospital expenses that had accumulated while they were unable to pay.

Their son, now six, has been admitted to Babies Hospital six times for corrective orthopedic and plastic surgery, and he has been closely followed between admissions at our outpatient clinics.

Mr. Arana and an older brother have now returned to Peru, where Mr. Arana is practicing his profession in a developing country that greatly needs his skills. Mrs. Arana and a younger child have remained in New York to permit Hugh to complete his treatment.

These proud, deserving parents, who have made every sacrifice to save their son from a handicapped future, will be rejoined when Hugh's physicians have completed their reconstructive surgery, which should be soon.

*Babies Hospital now needs to raise \$2 million in capital funds to complete its modernization program. Those who help in this noble endeavor will have the satisfaction of knowing that they have contributed to the needs of present and future generations of children.*

Hugh now feeds himself, as you can see here, and in time should have full use of the thumbs provided him by surgery.

And there were in the same country shepherds abiding in the field, keeping watch over their flock by night. And, lo, the angel of the Lord came upon them, and the glory of the Lord shone round about them; and they were sore afraid. And the angel said unto them, Fear not: for, behold, I bring you tidings of great joy, which shall be to all people. For unto you is born this day in the city of David a Savior, which is Christ the Lord. . .

**M**any decorated windows will be painted by our staff to brighten hospital corridors during the holidays.

**E**ngage in this activity by using your paints and brushes, and exercise your imagination through design.

**R**ealize the joy of Christmas that comes from participating in this holiday merriment.

**R**emember Santa Claus will visit all patients, young and adult, on Christmas morning to offer his greeting.

**Y**ou will see the Hospital's outdoor Christmas trees lighted on December 15.

**C**aroling on the wards by doctors and nurses will begin at 7:00 on December 18.

**H**ousekeeping plans to distribute trees and wreaths on December 18.

**R**eligious services will be held in the Chapel Christmas morning.

**I**nterested friends of the Hospital have dressed dolls for the Dolls' Tea scheduled for 3:30 p.m. December 21.

**S**pecial broadcasts of Christmas music will be heard daily beginning December 15 on our own Channel 1.

**T**rays for patients will be decorated by Food Service for Christmas meals.

**M**ail Christmas cards to Hospital friends at their homes.

**A**nnual Candlelight vespers will be held in the Chapel December 13 at 5:10 p.m.

**S**end contributions to the Emergency Nursing Funds to help acutely ill patients.

## CALENDAR OF CHRISTMAS EVENTS

### *Christmas Parties:*

ORTHOPEDIC CHILDREN'S PARTY: BH-5, 2 p.m. Dec. 15.  
P&S CLUB PARTY: Bard Hall, 7:45 p.m. Dec. 16.  
DOLLS' TEA PARTY, with display of dolls to be given child patients on Christmas: BH Board Room, 3:30 p.m. Dec. 21.

### *Special Religious Service:*

\*CANDLELIGHT VESPER SERVICE: The Pauline A. Hartford Memorial Chapel. Sermon by the Rev. Ernest Gordon, Dean of the Chapel, Princeton University. 5:10 p.m. Dec. 13.

### *In the Wards:*

MELODY QUARTETTE, Caroling on the Wards: 2:30 p.m. Dec. 14.  
VESPER CAROLERS: 5 p.m. Dec. 15.  
BABIES HOSPITAL Children's Pageant on PH-5E: 7 p.m.; on PH-5C: 7:30 p.m. Dec. 12.  
OCCUPATIONAL THERAPY CAROLERS: 4:45 p.m. Dec. 18.  
DOCTORS AND NURSES traditional caroling procession through the hospital: 7:00 p.m. Dec. 18.

SANTA CLAUS will visit patients, young and adult, on Christmas morning.

### *Special Christmas Music over Bedside Broadcasting System (Channel 1):*

\*CHRISTMAS MUSIC: 11:00 a.m. to 1:00 p.m.; and 3:00 p.m. to 4:30 p.m. Daily from Dec. 15 until Dec. 30.

### *Half-Hour Broadcasts:*

\*HOSPITAL MUSIC SERVICE CHRISTMAS BROADCAST: Broadcast from Studio, 3:00 p.m. Dec. 24.  
\*ST. MATTHEW LUTHERAN CHORISTERS: Broadcast from the Pauline A. Hartford Memorial Chapel: 4:30 p.m. Dec. 20.  
\*EQUITABLE LIFE CHORUS: Broadcast from the Pauline A. Hartford Memorial Chapel: 7 p.m. Dec. 27.

### *Christmas Day Religious Services in Chapel:*

\*ROMAN CATHOLIC MASS, 7:00 a.m.  
\*PROTESTANT WORSHIP SERVICE WITH HOLY COMMUNION, 10:30 a.m.  
\*Broadcast over Bedside Broadcasting System—Channel 1.

AN MEDICAL CENTER

BALCONY STACKS  
COLUMBIA UNIVERSITY

JANUARY, 1968

VOLUME XXIII, NUMBER 1

## Presbyterian Hospital Now In 100th Year

It began as a vision in the mind of James Lenox, philanthropist, who brought several prominent New York citizens together one hundred years ago this month and presented plans to them for a new and much needed hospital. On February 28, 1868, the State Legislature passed an Act to found the Presbyterian Hospital. At once it became non-denominational—Presbyterian in name only.

The buildings shown in the photo

were completed in 1872, and the official opening was held in October of that year. Many persons complained because the Hospital was located so far north of the city—at 70th Street and Park Avenue—but time remedied this inconvenience, for the metropolis was spreading northward. In 1928, sixty years after it began, the Hospital moved nearly 100 blocks farther north to its present location at 168th and Broadway. See photos on page 3.

### OBS-GYN "Professors' Day" Is P&S Bicentennial Event

The seven New York City Professors and Chairmen of Departments of Obstetrics and Gynecology, at Bard Hall, November 30, 1967, during "Professor's Day," the Bicentennial Celebration for the Department of Obstetrics and Gynecology at P&S. Seated, left to right, are Drs. Sidney Romney, Albert Einstein Medical Center; J. George Moore, P&S; and Louis Hellman, Downstate Medical Center. Standing, left to right, are Drs. Gordon Douglas, NYU; Martin Stone, New York Medical College; Saul B. Gusberg, Mt. Sinai; and Fritz Fuchs, Cornell.

November 30th was chosen by the Department of Obstetrics and Gynecology as their day to celebrate the Bicentennial of the College of Physicians and Surgeons. That day was designated "Professor's Day," and addresses were given by each of the Professors of Obstetrics and Gynecology heading an active Department

in New York City. In addition, an address was given by Dr. George E. Moore of the Roswell Park Institute in Buffalo.

The afternoon program began with a welcoming speech by Dr. Charles M. Steer, Associate Professor of Clinical Obstetrics and Gynecology at the College of Physicians and Sur-

Please turn to page six

We turn the calendar back a full century to see how the Presbyterian Hospital began in January, 1868.

Describing the hospital situation in New York 100 years ago, Dr. Albert R. Lamb, author of *The Presbyterian Hospital and the Columbia-Presbyterian Medical Center, 1868-1943*, wrote:

"The total beds available could not begin to meet the needs of nearly one million people. Furthermore the population was swelling daily with the incoming waves of immigrants from Europe. Preventive medicine had barely begun, and New York's public health program faced conditions that were all but incredible in sanitation, housing, and food control. There were periodic epidemics of cholera and typhoid and widespread tuberculosis. The incidence of illness of all types was shamefully high. The great majority of those who were seriously sick were never hospitalized at all, but suffered and often died under crude care at home. And home for many was a crowded, unsanitary tenement."

It was at this time that James Lenox, wealthy New York philanthropist, conceived the idea of establishing Presbyterian Hospital.

On January 2, 1868, Mr. Lenox sent copies of a letter to 32 other prominent citizens inviting them to join as Managers in establishing a Presbyterian Hospital in New York. Drafts of an Act of Incorporation and a Constitution had been drawn up for consideration.

In his letter Mr. Lenox wrote: "As soon as those to whom this paper shall be addressed have signified their willingness to act as Managers of the Hospital, a meeting will be called . . . and measures adopted to apply to the Legislature for incorporation. . . ."

"Should such an Act be obtained, or one essentially similar. . . . I am authorized to say a large and eligibly situated plot of ground in this city suitable for buildings, and funds to the amount of one

hundred thousand dollars . . . will be made over to the Managers as soon as practicable."

From Dr. Lamb's history "Mr. Lenox resisted many appeals to have the Hospital named after himself and chose the name of Presbyterian because he thought it wise to enlist the support of a large number of citizens already unified by their religious belief. Soon after the Hospital was founded, however, it embraced a greatly broadened concept of service; 'For the Poor of New York without regard to Race, Creed, or Color.'"

"For many years a number

of his staff . . . repeated the legend . . . that he had founded the Hospital because one of his fellow workers had been killed in an accident . . . existing . . . but Dr. Lamb's history . . . was . . . the accurate account . . .

"Dr. Oliver White . . . called to care . . . a prominent colored family in his neighborhood. He found her in urgent need of hospital care, but because of her race he could not secure a bed for her in any hospital of his choice."

# DR. HUGH AUCHINCLOSS RECALLS

"Project Vietnam" is an undertaking begun in 1965 by the U. S. Agency for International Development with the help and sponsorship of the American Medical Association. The plan of this project is to recruit American physicians to serve on a voluntary basis for a period of two months in one of a number of different provincial hospitals in South Vietnam. This was necessitated by the increasing number of civilian casualties caused by both sides in the war as well as the dwindling number of Vietnamese physicians available for civilian care. In a country of 16,000,000 there are now only about 300 physicians left for this purpose.

Dr. Hugh Auchincloss, Jr. prepared the following article and lent the accompanying pictures to give the readers of The Stethoscope an idea of what it is like to work in one of these hospitals. He states

## 'What I Appreciated Was the Kindness...'

Mr. Alvin J. Binkert  
622 West 168th Street  
New York, New York 10032

Dear Mr. Binkert:

This is just a brief note to express my appreciation to the staff on duty in the emergency room of the Vanderbilt Clinic on the night of October 4.

I was taken there about 7:45 p.m. after a freak accident. A moving picture projector reel had fallen from the balcony of an auditorium to the seat immediately below where I was sitting. It hit me between my eyes and gave me a compound fracture of the nose and a deep cut toward my eye.

Everyone, from the policeman who directed us when we arrived at the hospital to the nurse who gave us the papers for the downstairs office when we checked out at midnight, was most kind.

The formalities of registration, etcetera, always seem to take a long time, but the nurse in charge attended to me just as quickly as possible. The x-ray technician was gentle with my broken face. When I learned that the nose was broken and that the service of a plastic surgeon would be required, I asked to have Dr. David Ju. He was not available at the time, but the resident in charge, Dr. Arkoulakis, very kindly consulted with me and took care of me.

What I appreciated most was the kindness and the solicitude of all the staff—nurses and doctors alike. Even though they were busy with others who came in, they would stop by to see if I was all right or needed

that at least two other doctors from Columbia-Presbyterian have served in South Vietnam under this plan—Dr. Clay Frick, II, Associate Attending Obstetrician and Gynecologist, and Dr. John Grant, Chief Resident, Urology Service, Babies Hospital. (See also the article in this issue on Presbyterian Hospital Alumni Meeting.)

## END OF TOUR REPORT, PROJECT VIETNAM, JANUARY-FEBRUARY 1967

By

HUGH AUCHINCLOSS, JR. M.D.

My tour of duty under Project Vietnam was in Ban Me Thuot, [pron. Ban-May-Too-It] which is the capital of Darlac Province in the Central Highlands of South Vietnam, 175 miles northeast of Saigon and 80 miles from the Cambodian border.

Ban Me Thuot is a town of 65,000 in the semi-mountainous area at an elevation of about 1600 ft. The population includes a mixture of Montagnard tribesmen, mostly from the Rhadé tribe.

These people speak a totally different language from the South Vietnamese and come from a different ethnic background. They are in general larger-boned people, animistic, quite primitive in their outlook on life and in their understanding of the political situation. They are regarded as an inferior race by the Vietnamese, and this has led to recurrent strife and ill-feeling between the two peoples.

In general, Americans and Montagnards tend to get along with each other perhaps better than do Americans and Vietnamese. This may be due, in part, to the fact that the Montagnards are a more open, outgoing race than are the Vietnamese, and Americans find them easier to talk to and to understand. In many ways they are more frank in approach and more responsive to overtures from Americans.

anything. This was very reassuring to me and meant a great deal to the friends who were with me also. I noticed too that this particular crew was kind to all who came in—a young man who couldn't speak English, a derelict who had fallen and was cut, a baby who had been burned.

By the time the doctor had finished the sutures the staff had changed, and I was not able to thank them personally, but I should be glad if you would convey to them my deep appreciation, and also my thanks to those who came on at 11:00 p.m.

Sincerely yours,

Anita M. Bailey  
600 West 165th Street

Civilian patient, South Vietnam, comes to Surgical Ward.

Same patient, after operation, returns to visit her surgeon, Dr. Hugh Auchincloss. In "Project Vietnam" U. S. doctors care for many civilian patients.

During the two months that I was in Ban Me Thuot, the climate was dry but not oppressively warm, and these two months were probably the ideal ones to be stationed in this area.

During the last Emperor's rule, under Bao Dai, Ban Me Thuot had been used as a hunting resort and the Emperor had frequently visited the area with his entourage.

Located in the center of the town is a beautiful enclosed hunting lodge which the Emperor used for himself and close relatives. Next to this were three long buildings, euphemistically called bungalows, in which he housed his retinue and other guests and visitors. It was these three bungalows that the United States had rented for use as quarters.

The three buildings plus some newly constructed barracks housed approximately 250 servicemen and officers who were attached to the 23rd Vietnamese infantry division as an advisory group. I was fortunate in being invited by Colonel Johnson of the advisory command to live in the bungalow in a room close to his. This meant that I was living in luxury compared to many other Project Vietnam doctors who served in other portions of the country. An Army mess had been set up in part of the compound and we ate our meals here almost exclusively. Thus my association with the American military advisory group was extremely close and I had the opportunity to make several very good friends among them.

My working companions consisted of an Army Milphap team (Military Provincial Hospital Assistance Program), made up of three young physicians with the rank of Captain. Each had completed one year of internship. The one in charge was most interested in medicine, another in psychiatry, and a third had intentions of becoming a surgeon. These three men, together with 16 hospital corpsmen and

technicians comprising the Milphap team, were doing an excellent job of running the 200 bed provincial hospital, with virtually no help from Vietnamese physicians. Obviously their ability to perform any type of major surgery was extremely limited, and prior to my arrival all major surgery was performed by one of the Vietnamese army physicians, Dr. Lam. However, the young American doctors were doing a remarkable job on the medical wards treating a wide variety of diseases including malaria, tuberculosis, leprosy, plague, cholera, tetanus, pneumonia, meningitis and the ever-present intestinal parasites.

The hospital in Ban Me Thuot was originally built in 1926 and in 1944 half of it was split off and given over to the military. There are a total of about 212 beds for civilian use, of which perhaps 60 are allocated for surgery. A new surgical suite, built within the last several years, houses two operating rooms and a small recovery room.

This surgical suite is quite adequate and a reasonable supply of surgical instruments existed, although there were some notable gaps, especially in the orthopedic department.

The anesthesia equipment left much to be desired, although towards the end of my tour of duty we were able to put into commission a Japanese model which allowed us to give endotracheal anesthesia. There was one trained nurse anesthetist, and another technician who was able to give anesthesia of sorts. This consisted almost entirely of pentothal, ether and room air or oxygen when available. Local anesthesia and spinal were also occasionally used.

The hospital buildings were long, low single-story structures, wide enough to accommodate two rows of cots which consisted simply of wooden slats on a frame, covered by a straw mat. Crowding was common and frequently two patients occupied one bed.

Very often patients had to lay their straw mats on the floor.

Parents and dependents almost always accompanied patients. The general sanitary conditions of the hospital were poor and there was an inadequate number of toilets and lavatory facilities, and virtually no satisfactory sewage system. Water tended to flow directly from the building and collected and lay on the ground, and there did not seem to be much effort to run waste water into cesspools.

Wards were occasionally cleaned, but here again there was much to be desired. The surgical ward had once been screened but almost all of the screens had been knocked out by the patients and personnel. Toward the end of my tour of duty we were able to replace these screens and cut down on the enormous number of flies which infested the wards. Many rats were present and the buildings in general were in a poor state of repair.

All of the provincial hospitals are supplied and equipped by the United States Agency for International Development. Supplies are delivered to the Vietnamese Ministry of Health in Saigon for redistribution to the hospitals. Here is the great bottleneck, because the Ministry of Health lacks the trained personnel to do the job, and delays of two to four months are common. In addition, unaccountably, drugs and equipment often find their way to the black market.

We did, however, have adequate supplies of intravenous infusions and of antibiotics, which were quite plentiful and were used almost to excess at times. Blood transfusions were almost impossible to administer because the Vietnamese have a tremendous resistance to donating blood and only occasionally could we obtain outdated blood from the American military hospital in Nha Trang, or occasionally from personnel of the Vietnamese 23rd Infantry Division who were ordered to give blood for military use.

# HOSPITAL EXPERIENCES IN VIETNAM

Buildings are constructed on stilts as protection against floods.

Above: Interior of Chronic Disease Medical Ward. Upper right: exterior of same —the scene at the doorway.

Lower four photos: Surgical Ward and Dispensary. Army Hospital Corpsmen care for civilian casualties. At bottom, typical family group. Who is the patient?

Laboratory facilities consisted of blood counts and urinalyses and direct smears of infected cases. There was no facility for formal cultures, and no blood chemistries of any sort could be done. Blood typing was possible but not cross-matching. This laboratory facility was part of the Milphap team. As far as I could tell very little of it was done by the Vietnamese.

There was one X-ray machine and technician for the entire provincial and military hospitals so that it was very difficult to have elective X-rays done, since our surgical allotment was only two days a week unless an emergency case appeared. The X-ray equipment seemed quite inadequate. It was a small unit of 30 milliamperes, with completely inadequate protective screening facilities. Nevertheless some films of excellent quality resulted. The operating room technicians were satisfactory but nursing for daily patient care was almost nonexistent.

The types of cases that I was called upon to treat consisted of about 25% ordinary civilian injuries and 75% war wounds due to high-velocity missiles, shrapnel, bombs and mines. Only the moderately severely injured—usually extremity cases—ever made it to a hospital. The critically injured we rarely saw, since it often took one or two days for the wounded civilian to reach a hospital by cart or litter. In contradistinction to the wounded G.I., medical evacuation by helicopter was only rarely available to the civilian casualty.

I saw no burns caused by military action, though there were a number of ordinary civilian burns that needed grafting procedures when I arrived.

Elective surgery was very sparse and I performed only two or three elective procedures, including two thyroidectomies and one or two minor tumor excisions. A complicated cancer of the face was oper-

ated on during my last several days, during which operation we were able to administer the only endotracheal anesthesia during my entire tour of duty. The excision of the tumor close to the left eye went well. The life expectancy of Vietnamese—in the forties—makes cancer less of an overall problem than here.

Almost all of the emergency surgery which occurred at night was performed by Dr. Lam, whether the patient was a member of the military or a civilian. He asked for my assistance on only one occasion and this was to operate on a gunshot wound of the abdomen in a Viet Cong boy of 14, who promptly was removed to a special ward under guard and handcuffed to his bed. In all, I performed approximately 85 major and minor operations. Fortunately military activity was not too intense around Ban Me Thuot while I was there. We were never really deluged with casualties as were many of the other provincial hospitals in the country.

My associations with the Vietnamese were quite limited. We did have a very excellent young interpreter, a boy about 18 or 19 years old who spoke excellent English and managed to familiarize himself with medical terms. He was invaluable to us and stayed with us the whole time.

I had several discussions on medical subjects with Dr. Niem, the province medicine chief, who was a highly cultivated, intelligent Vietnamese physician. He spoke fluent French and some English, so we were able to communicate without difficulty. He was most friendly to me but clearly was of two minds as far as our American presence in the country was concerned. He recognized the hard fact that it was essential that we remain in the country if Communist subversion was ever to be defeated. However, he did not feel that we should in any way try to take over the running of either the government, the army, or

medical affairs, and merely wished us to supply him, to help in any way that he wished, but to take no active part in the direction of the different activities.

The chief military surgeon, Dr. Lam, was a somewhat volatile, insecure person who was poorly trained in basic medical sciences though he was a competent operating surgeon. He did ask me to assist at several operations on various of the South Vietnamese military personnel, and I was glad to be able to help out in this way.

Serving under Dr. Lam was Dr. Diep, who had had excellent surgical training in Saigon and who was interested in pediatric surgery. We had many long talks together on surgical problems, and he turned out to be very knowledgeable and a fairly good operator.

In general, relations with the Vietnamese were cordial, if occasionally strained, but it was virtually impossible to get new ideas accepted. Even our professional suggestions were largely ignored.

As I have said, nursing was almost nonexistent, and the few nurses that were present spent nearly all their time at administrative chores. Bedside nursing was almost exclusively performed by members of the patient's family. Nursing as a profession in Vietnam lacks status and women of the educated middle class are not attracted to it. Perhaps this will change as a result of the influence of American nurses.

In general, I would say my two months' stay, though at times discouraging, was highly gratifying, certainly for me personally. In addition, it seemed to me that I was able to lend some stability and support to the young Milphap doctors who were working at the hospital. I would hope that the A.M.A. program of sending volunteer physicians to Vietnam will be continued and expanded eventually to include training programs for young Vietnamese physicians.

## Dolls Tea Party, Babies Hospital

'Twas four days before Christmas and a host of dolls were ready for the Dolls Tea Party. This event, given in the John Sherman Hoyt Board Room, is sponsored annually by the Board of Women Managers of Babies Hospital. Scores of people came on the appointed afternoon, December 21, and there they saw the beautiful display of dolls contributed by the Board and arrayed by the staff. These were to be gifts, the following morning, for little patients in Babies Hospital.

The President of the Board of Women Managers, Mrs. Allen F. Mausby is seen, at right, in the above photo, conversing with Dr. Edward C. Curnen, Jr., Director of Service, Babies Hospital, and his daughter Constance ("Cottie") Curnen.

## Visitors From Britain's Health Service

Left to right: Prof. Clement C. Clay; Assistant Prof. Robert R. Lovejoy; Prof. Teddy Chester of University of Manchester, England; and Dr. Ray E. Trussell, Associate Dean and Director, School of Public Health and Administrative Medicine.

Columbia University's Graduate Program in Hospital Administration has been signally honored by visits from all of the leading educators for Britain's National Health Service: Frank Reeves, Director of Education, King Edward's Hospital Fund for London; Donald Macmillan, M.D., Director, Nuffield Center of Hospital Studies, University of Leeds, who told the students about the National Health Service in Britain; and Teddy Chester, Ph.D., Professor of Social Administration, Director of the Program in Hospital Administration at the University of Manchester, who spoke to the

Administrative Residents of our Program in Hospital Administration at their December Seminar.

After the seminar, Professor Chester met with Ray E. Trussell, M.D., Associate Dean and Director of the School of Public Health and Administrative Medicine, Clement C. Clay, M.D., Professor and Director of the Graduate Program in Hospital Administration, and Robert R. Lovejoy, Assistant Professor and Assistant Director of the Program. They discussed Britain's National Health Service and America's changing patterns of Medical Care.

## "Professors' Day"

*Continued from page one*

geons. Seven scientific papers presented by Professors and Department Chairmen were: Dr. Gordon W. Douglas, New York University Medical School, "Effect of Endotoxin in Pregnancy;" Dr. Fritz Fuchs, Cornell University Medical School, "Prevention of Prematurity;" Dr. Louis M. Hellman, Downstate Medical Center in Brooklyn, "Ultrasonics in Obstetrics and Gynecology;" Dr. George E. Moore, Roswell Park Institute in Buffalo, who is now Director of Research of the New York State Department of Health, "Immunological Aspects of the Malignant Diseases;" Dr. J. George Moore, College of Physicians and Surgeons of Columbia University, "Ovarian Tumors in Infancy and Childhood;" Dr. Seymour Romney, Albert Einstein Medical School of Yeshiva University, "Germ Free Surgery;" and Dr. Martin Stone, New York Medical College, "Folic Acid Metabolism in Pregnancy."

That evening the Department of Obstetrics and Gynecology held a reception and dinner in the lounge at Bard Hall. This was attended by members of the Attending

## FAREWELL PARTY FOR DR. ALPERT

Dr. Meyer Alpert

After 13 years of service in Radiology, Dr. Meyer Alpert is leaving Presbyterian to become Director of Radiology at Franklin General Hospital, Valley Stream, L. I.

On December 6 the staff of Dr. William B. Seaman, Director of the Department of Radiology, gave Dr. Alpert a farewell party in the Main Dining Room, complete with speeches and laughter, a buffet dinner, and gifts that are sure to be treasured.

Staff and the Resident Staff of the Department, members of the Post-Graduate Course in progress at that time, and numerous guests from other Departments in the Medical Center, as well as the Professors of Obstetrics and Gynecology of all the Medical Schools in New York City.

During the course of the evening, silver medallions to commemorate the Bicentennial of the College of Physicians and Surgeons were presented to Dr. David N. Danforth, Professor and Chairman of the Department of Obstetrics and Gynecology at Northwestern University; Dr. Donald Hutchinson, Professor and Chairman of the Department of Obstetrics and Gynecology at the University of Pittsburgh; Dr. Saul B. Gusberg, Professor and Chairman of the Department of Obstetrics and Gynecology at Mt. Sinai Medical School; and Dr. D. Anthony D'Esopo, Emeritus Professor of Obstetrics and Gynecology at the College of Physicians and Surgeons. Silver medallions were presented in absentia to Dr. Benjamin P. Watson, Emeritus Professor and Chairman of the Department of Obstetrics and Gynecology at P&S from 1926 to 1946; and to Dr. Howard C. Taylor, Emeritus Professor and Chairman of the Department of Obstetrics and Gynecology at P&S from 1946 to 1966. Other recipients were Dr. Walter Bonney, University of West Virginia Medical School; Dr. Leo Dunn, Medical School of Virginia at Richmond; Dr. William Little, University of Miami Medical School; Dr. Stewart Fish, University of Tennessee Medical School; and Dr. J. Courtland Robinson, Severance Medical College, Seoul, Korea. Doctors Watson, Taylor and D'Esopo have served at the College of Physicians and Surgeons. The other medallion recipients are former Residents who are now Professors and Chairmen of their own Departments.

Bronze medallions to commemorate the Bicentennial were presented to each of the Professors of the Medical Schools in New York City.

The day and evening were marked by the first serious snow storm of the year. Despite this, a good many members and friends of the Department of Obstetrics and Gynecology attended.

## In Memoriam

Dr. Arthur Purdy Stout

Dr. Arthur Purdy Stout died on December 19 in his home in New York City after a long illness. He was 82 years old and had continued to be active as Emeritus Professor of Surgical Pathology at The Columbia-Presbyterian Medical Center until one year ago. Trained first in surgery, he was a pioneer in developing the science of relating the tissues removed at operation to the expected course of an illness, especially in tumor pathology. He became well-known following publication of his first book "Human Cancer" in 1932 and soon developed a large group of disciples, many of whom occupy important university positions throughout this and other countries. He was a prolific and authoritative writer of more than 300 scientific articles, served on ten editorial boards, 16 professional societies, and was consultant to 21 hospitals. He gave nine named lectures and received five medals and three other citations for distinguished contributions in the knowledge and control of cancer. Above all, he was revered as a modest and inspiring teacher.

Dr. Stout was born in New York City on November 30, 1885, the son of Joseph S. Stout and Julia F. Purdy. He graduated from Pomfret School in 1903 and from Yale in 1907. He received his M.D. from The College of Physicians and Surgeons in 1912, interned at Roosevelt Hospital from 1912 to 1914 and was married on June 22, 1914, to Jean Stoddard. He is survived by his daughter Julia Frances Stout.

## PUERTO RICO

*Continued from page one*

This relationship grew out of the plan of the University of Puerto Rico to establish a basic science program in ophthalmology—a training program in which ophthalmologists from Columbia University will participate. The training program is based on a training grant from the National Institutes of Health.

The NIH grant will enable residents in training from various Latin American countries to come to the University of Puerto Rico for four month periods of study, beginning January 15, 1968.

The affiliation has been approved by the faculties of both institutions. Dr. Guillermo Pico is Professor and Chairman of the Department of Ophthalmology of Puerto Rico; Dr. Arthur Gerard DeVoe is Harkness Professor and Chairman of the Department of Ophthalmology, P&S.

Dr. DeVoe, recognizing the importance of inter-American relationships among ophthalmologists, has written the following:

"We are all aware that rivalries and antagonisms can exist between individuals and groups with different ethnic or national backgrounds. With full knowledge of this and equal awareness that those of us living in this hemisphere should learn to live peacefully

and productively with each other, a group of ophthalmologists favored establishing a Pan American Ophthalmological Society. It was hoped that when leaders of this specialty in the various countries met for a scientific discussion, the social associations would lead to better understanding. This proved to be the case.

"In March of 1968 the eighth Pan American Congress will be held in Argentina at which some 800 individuals will probably attend. The Con-

gresses are held every four years in different countries of North, South, and Central America with interim meetings held about every two years. These meetings have stimulated visiting professorships in which well known ophthalmologists from this country have visited throughout Latin America. A return professorship is being planned in which prominent Latin American ophthalmologists will visit the major centers in the United States."

# Christmas Comes To The Presbyterian Hospital

For the beauty of the Hospital at Christmas time—for the enjoyment of patients and personnel—our many artists decorated our windows and doors with paintings—bright, colorful, imaginative, humorous, fanciful, sacred—all contributing

to the Yuletide spirit at Columbia-Presbyterian. Our photos on this page show only a few of the many items of holiday art which adorned every floor and every department throughout the Hospital. Photos by Mrs. Elizabeth Wilcox.

## Doctor Fisk Speaks At Hospital Alumni Meeting

On December 1st the Presbyterian Hospital Alumni met at the Union Club in New York City. Dr. Hilary Holmes contributed a magnificent fresh salmon, as part of the hors d'oeuvres, which he had caught last summer and had kept on ice for the occasion. The meeting was graced with the presence of several lady-alumni. Notice was given of the fact that 1968 would be the 100th anniversary year for

the Presbyterian Hospital and that there would be appropriate festivities during the year.

The speaker of the evening was Associate Dean Dr. Shirley Fisk, who had recently returned to become our Associate Dean in charge of Special Programs, after spending four years as Assistant Secretary for Defense, in charge of medical manpower, at the Pentagon.

Dr. Fisk told of the increas-

ing demands of the doctor-draft, and of all the various options possible, for the young doctor who wishes to receive his training prior to his military service. He indicated that all doctors who were not exempted and who were qualified, might be called upon to serve, this year.

Dr. Fisk then went on to show colorful slides of various medical units in action in Vietnam, where the combination

of mountainous scenery and tropical beaches is somewhat different from the impression one would get from the current newspaper reports. He showed Doctors Wylie and Stinchfield at various medical units, where they were visiting as consultants, and gave a detailed and interesting account of the new developments in medical care for the wounded and the sick, in the military hospitals. Dr. Fisk

noted that several staff members from the Presbyterian Hospital, namely Doctors Frick, Auchincloss and Grant had also spent time in Vietnam as civilian volunteers, serving in civilian Vietnamese hospitals.

Secretary-Treasurer Dr. Hans Neuberger did his usual competent job in arranging the meeting. It was adjourned at 10:30 by Dr. John K. Lattimer.

# Stethoscopia

## DOINGS OF DOCTORS

### • MARRIAGES

Nora Lee Brick, Physical Therapist at Neurological Institute, and Kenneth Cousins, third year medical student at P&S, were married on December 23.

Roda Hale was married on November 23 to David Layton Gillispie, Jr. The bride is a senior student at the Department of Physical Therapy at P&S.

Mary Ann Goglucci, Laboratory Assistant at the Blood Bank, became Mrs. Joseph Silvestri on October 28.

Lili Flug married Nathan Schorr, Maintenance and Construction Department, in a civil ceremony on October 17. A religious ceremony will take place in Israel sometime in April so that both families may be present.

Carolyn Shamroth wed Dr. Arnold J. Kroll on December 10. Dr. Kroll, a graduate of P&S, is an instructor of ophthalmology at the University of Miami School of Medicine.

Marlene Normandin, Staff Nurse, Harkness Pavilion, was married to Albert Woodworth on December 2. They are living in Indianapolis, Indiana.

Kathleen Melton was married on December 19 to Paulo William Barbosa. The bride received a bachelor's degree in Occupational Therapy from The College of Physicians and Surgeons.

### • ENGAGEMENTS

Dr. Helen Ann Service of Sydney, Australia, is engaged to Lt. David H. Brown, MCUSN. Lt. Brown is a P&S graduate. The couple met while both were interning at Queens Hospital in Honolulu, Hawaii. Lt. Brown's father, Dr. Harold Brown, is Professor of Parasitology, Preventive and Administrative Medicine, P&S, and Parasitologist, School of Public Health. A March 14 wedding in Sydney is planned.

Maureen McNee, Staff Nurse, PH 12 East, is engaged to Kenneth Zebrowski, a law student. A June wedding is planned.

Terry Waters, Staff Nurse, PH 12 East, is engaged to James Murphy.

### • BIRTHS

Sharon Shean, former nurse in the Blood Bank, and Dr. Fred Shean, are the proud parents of a bouncing baby boy. Gregory Brett arrived October 3, and weighed 7 lbs. 12 ozs. The Shean family now lives in Boston.

Congratulations to Dr. and Mrs. John Joseph McGroarty on the birth of their first son, Sean Michael. Dr. McGroarty is an ophthalmology resident. His wife, Kathleen, is a Navy nurse, LT., USNR.

Mrs. Margaret Reynolds, of the Blood Bank, is a proud grandmother. Her daughter Mrs. Sheila Munnely, gave birth to a baby girl, Collett Marie.

Mrs. Mary Isenbek, Supervisor of Files, Patients Accounts, is the grandmother of Andrew Joseph Feci, Jr., born on October 19. The baby's mother, Mrs. Annmarie Isenbek Feci, is a former Medical Center employee.

### • WELCOME

To June Panick and Elizabeth Ferguson, new members of the Blood Bank Nursing Staff.

To Harvey M. Chapman, who recently joined the Personnel Department as an interviewer.

### • NOTES OF INTEREST

Vincent Butler, Film File Clerk in the Department of Radiology at PH, left November 10 to begin a new job at the New York Stock Exchange Office.

May Uditsky, secretary in the Maintenance and Construction Department, is spending the Christmas holidays in Israel.

Peter R. Bozzo, Jr., son of Peter R. Bozzo, Purchasing Agent, has been promoted to Lieutenant Commander, USN.

Jean Collard, Associate Director of Social Service, was a member of The Program Committee which planned an All Day Institute on "Health Services Today: Issues for Social Work." The program, held on November 2, was sponsored by the National Association of Social Workers, and was planned in answer to a growing need felt within the profession for opportunity to study more thoroughly the complex developments in health services.

Mrs. Patricia Ann McLean, R.D.H., M.A. Director of Courses for Dental Hygienists, Columbia University, was guest speaker at the 43rd annual session of the Greater New York Dental Meeting held at the New York Statler-Hilton Hotel on December 7. Mrs. McLean is the President-Elect 1968 of the American Dental Hygienist Association.

DR. KARLIS ADAMSONS, JR., Associate Attending Obstetrician and Gynecologist, PH, and Associate Professor of Obstetrics and Gynecology, P&S, presented a paper, "Management of Blood Group Incompatibility," at the Baylor University School of Medicine on October 16. On October 24 and 25, he presented two papers, "Diagnosis and Treatment of the Fetus" and "Intrauterine Transfusion: A Surgical Approach," at the XII Argentine Congress of Obstetrics and Gynecology. On November 1, he presented "Acid Base State as Indicator of Fetal Condition" at the Symposium on the Physiology and Pathology of Reproduction sponsored by the Department of Obstetrics and Gynecology of Wayne State University School of Medicine in Detroit.

DR. JAMES G. MCMURTY II, Assistant Attending in Neurological Surgery, presented a paper, "Ventricular — Direct — Atrial Intrapleural Coil Implant Shunts for Hydrocephalus," on October 13, in Vienna. The meeting was held at the Imperial Castle and sponsored by the Vienna Academy of Medicine. At this meeting the European Congress of Pediatric Neurosurgery was formed.

DR. WILLIAM B. SEAMAN, Professor of Radiology, P&S, and Director of Radiology, PH, participated in the post-graduate course on "Radiology of the Gastrointestinal Tract" at the University of Minnesota from October 30 through November 1. He was also Examiner for Part III of the National Boards of Examiners in Philadelphia on November 2 and 3.

DR. EMANUEL M. PAPPER, Director of Anesthesiology Service, PH, and Professor and Chairman of the Department of Anesthesiology, P&S, was installed as President of the American Society of Anesthesiologists at the Society's annual meeting which was held from September 29 to October 3.

DR. WILLIAM A. BAUMAN, Director, Medical Data Processing, lectured to the Educational Assembly of the American College of Hospital Administrators on October 30, held in Boston. The subject of his talk was "Educational Programs for Medical Data Processing at the Columbia-Presbyterian Medical Center."

DR. ROBERT M. DAY, Associate Attending Ophthalmologist, presented a paper, "Ocular Changes of Graves' Disease" at the Minnesota Ophthalmological and Otolaryngological Society meeting on November 10 and at the Cleveland Ophthalmological Society meeting on November 21.

DR. GABRIEL G. NAHAS, Professor of Anesthesiology, P&S, lectured on October 12 at the Monthly Conference of Biophysics Laboratory of the Department of the Army, Edgewood, Arsenal, Maryland, on "Metabolic Aspects of Shock." On October 19, he presented a paper, "Experimental Evaluation of Plasmagel Following Massive Rapid Hemorrhage," at the Symposium on Fluid Gelatin Plasma Substitutes, held in Bern, Switzerland. On October 24, he lectured at the Faculté de Médecine de Reims, in Reims, France, on "Morphophysiology of Chromaffin Cells: Effects of Acidosis and Angiotensin."

DR. D. KEITH McELROY, Assistant Clinical Professor of Orthopedic Surgery at P&S, and Assistant Attending Surgeon at PH, was Visiting Professor in Madrid in October. He also participated in the program of the British Orthopaedic Association meeting held in London.

DR. HERBERT BARTELSTONE, Assistant Professor of Pharmacology, P&S, spoke at the forenoon session of the Annual Alumni Day program of the New York University College of Dentists, Friday, November 3, in the Grand Ballroom of the Statler Hilton Hotel, New York City. His subject was "Pain Mechanisms and Analgesics."

DR. CYRIL A. L. ABRAMS, M.D., Assistant Professor of Pediatrics, P&S, and Assistant Attending Pediatrician, Babies Hospital, presented a paper, "Intersex Problems in Pediatrics," at the 36th Annual Meeting of the American Academy of Pediatrics, held in Washington, D. C., on October 21. The paper was also read at the Annual Scientific Meeting of the East Orange General Hospital, East Orange, N. J., on October 25. Dr. Abrams lectured on "Chromosomal Disorders in Childhood" at St. Joseph's Hospital, Yonkers, N. Y., on November 21.

## DOCTORS DISCUSS ROLE OF COMPUTERS IN HOSPITALS

A conference on the Uses of Computers in Medical Administration, Education, and Research was held at the Greystone Conference Center in Riverdale, New York, on Sunday afternoon and Monday, November 26 and 27, sponsored by the Institute for the Study of Science in Human Affairs at Columbia University.

With the support of the Commonwealth Fund, the Institute has conducted, over the past year, a series of discussions on the role of computers in the advancement of hospital

administration, patient care, medical education and medical research. Out of these discussions has come the conclusion that computers may play a key role in the advancement of medicine.

Contributing to the discussions at the Greystone conference were co-chairmen Dr. Andre F. Courmand, Professor Emeritus of Medicine, Columbia University's College of Physicians and Surgeons, and Menelaos D. Hassialis, Henry Krumb Professor of Mining, Columbia University; Dr. William A. Bauman, Director,

Medical Data Processing, Presbyterian Hospital; Richard Garwin, Ph.D., Director, IBM Watson Laboratory, Columbia University; Dr. Robert E. Canfield, Associate Professor of Medicine, P&S; Jean Donio, Ph.D., S.A.C.S., Paris, France; Dr. Stanley E. Bradley, Bard Professor of Medicine, P&S; Kenneth King, Ph.D., Director, Columbia University Computer Center; David D. Truman, Vice President and Provost of Columbia University; Dr. H. Houston Merritt, Dean, P&S.

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXIII, NUMBER 2

FEBRUARY, 1968

## Check to Presbyterian Hospital Is a 'First' for U.S. Medicare

James C. Ingram, Vice President of Greater New York's Blue Cross (second from left) hands check for \$182,200 to Alvin J. Binkert, Executive Vice President of The Presbyterian Hospital, New York, (second from right). Joseph Godfrey, regional representative of the Bureau of Health Insurance, Social Security Administration (left) and Miss Marion Cleveland, Director of Nursing Service at the hospital, look on.

THE CHASE MANHATTAN BANK, N.A.  
MAJORS SQUARE BRANCH, MAJORS AVE., 28TH ST.  
NEW YORK, N.Y.

NO.	DATE	PROJECT NO.	PROJECT
1	5	68	330012

PAY TO THE ORDER OF: Presbyterian Hospital

PAY \$182,200.00

ASSOCIATED HOSPITAL SERVICE OF NEW YORK  
FEDERAL HEALTH INSURANCE, MEDICARE, MEDICAID  
FOR HEALTH INSURANCE - FEDERAL, STATE, LOCAL

110240=00024 027=2=003088\*

This check has now played its part in history. On January 9, 1968, James C. Ingram, Vice President of Greater New York's Blue Cross (Associated Hospital Service of New York) made the initial payment of \$182,200 to Alvin J. Binkert, Executive Vice President of the Presbyterian Hospital—the first payment in the United States to a hospital for treatment of Medicare patients under the Social Security Administration's new payment procedure aimed at easing the financial burden on hospitals.

Present at the brief ceremony at the Hospital were Joseph Godfrey, of New York City, regional representative of the Bureau of Health Insurance of the Social Security Administration, and Marion Cleveland, Director of Nursing Service at the Hospital.

"This marks a new era in fiscal relations between hospital and the federally-administered Medicare program," Mr. Binkert said.

"Hospitals, in the past, have continued to meet the needs of Medicare patients, regardless of the inflow of Medicare funds, and have worked closely with Social Security officials to develop this more efficient payment plan."

Mr. Godfrey termed the new procedure "an important first step and we hope that by the end of the year most of the hospitals in the Metropolitan New York area handling Medicare patients will be phased in."

## DR. DAMROSCH BECOMES ASSISTANT DEAN

Dr. Douglas S. Damrosch

The appointment of a P&S Alumnus as a new member of the Administration at the Medical School has been announced by Dean H. Houston Merritt. Dr. Douglas Damrosch has been appointed Assistant Dean to fill the vacancy created when J. Frederick Eagle resigned to become Dean at the New York Medical College. For the past year, Dr. Damrosch had been associated with the Mary Imogene Bassett Hospital in Cooperstown, New York. He formerly prac-

## Chronology of Presbyterian Hospital History Tells

## How Century of Progress Began

Last month *The Stethoscope* glanced backward over the past one hundred years to see how Presbyterian Hospital began.

The story had its beginnings in January, 1868, when New York was a city of one million people, new waves of immigrants were coming in daily, and there was a great need for increased facilities for caring for the sick.

Through the pages of history written by the late Dr. Albert R. Lamb, *The Presbyterian Hospital and the Columbia-Presbyterian Medical Center, 1868-1943*, we are able to relive the experiences of those men of vision, energy and generosity who founded the Presbyterian Hospital.

Here is a brief chronology of the way it all began:

**January 2, 1868:** James Lenox, wealthy New York philanthropist, sent copies of a letter to 32 other prominent New York citizens inviting them to act as Managers of a Hospital which might be formed.

**January 30, 1868:** The group met in the lecture room of the First Presbyterian Church on 11th Street and a committee was appointed to consult with the State Legislature to expedite incorporation.

**February 28, 1868:** The Legislature passed an act "to found a Presbyterian Hospital in the City of New York."

**March 26, 1868:** The Board of Managers accepted the charter and divided themselves by lot into four classes of eight men each; classes were to resign in April, one, two,

three, and four years after-ward, and eight new Managers were to be elected annually to hold office for four years. Mr. Lenox was elected President.

**June 17, 1868:** Mr. Lenox officially conveyed to the Board of Managers the land for the erection of the Hospital and the \$100,000 he had promised. The plot lay between Fourth and Madison Avenues and 70th and 71st Streets.

**November 15, 1871:** Presbyterian's first Medical Board

"FOR THE POOR OF NEW YORK WITHOUT REGARD TO RACE, CREED OR COLOR." Reminiscences of early days at the old Presbyterian Hospital are sure to include references to this famous plaque. It was moved to the new Medical Center in 1928, and now you see it to the right of the entrance of Vanderbilt Clinic on Broadway.

three, and four years after-ward, and eight new Managers were to be elected annually to hold office for four years. Mr. Lenox was elected President.

**June 17, 1868:** Mr. Lenox officially conveyed to the Board of Managers the land for the

erection of the Hospital and the \$100,000 he had promised. The plot lay between Fourth and Madison Avenues and 70th and 71st Streets.

**November 15, 1871:** Presbyterian's first Medical Board

## A New Research Grant From John A. Hartford Foundation

A new award from the John A. Hartford Foundation, Inc., has been announced jointly by Ralph W. Burger, Foundation President, and Dr. H. Houston Merritt, Dean of the College of Physicians and Surgeons. This award is for a medical research project to be headed by Dr. Katherine Sprunt, Assistant Professor of the Department of Pediatrics.

Research on the role of nor-

mal bacterial flora of the human pharynx as a defense mechanism against infection—of particular importance today when increased antibiotic dosages may disturb normal bacterial interrelationships and result in superinfections—will be conducted at the Columbia-Presbyterian Medical Center under a major three-year \$155,244 grant from the

## L. H. Tamplin, Essex, England, Writes of Surgery 35 Years Ago

Shortly before celebrating his 78th birthday last December, L. H. Tamplin, of Essex, England, who underwent surgery at this Medical Center in 1933, wrote an unusually interesting letter to Vanderbilt Clinic, recalling his experiences of nearly thirty-five years ago. Here are excerpts

from the letter, together with the reply by Dr. C. R. Wise, Assistant Vice President of The Presbyterian Hospital.

Dear Sirs,

Going through some old papers I came across an old

Please turn to page three

Good humor is timeless. We go back to last November 3 to catch this echo of a funny story at the Bard Hall luncheon of Neurosurgeons.

Shown in the photo are Dr. Charles A. Fager, Dr. Harry Kaplan, and Dr. J. Lawrence Pool. Dr. Fager, left, is President of the New England Neurological Society; Dr. Kaplan, center, is President of New York Neurological Society. Dr. Pool, Professor of Neurological Surgery, P&S, extended a welcome at the meeting—an observance of last year's Bicentennial of Columbia University's College of Physicians and Surgeons, in which the New York and the New England societies participated.

Major developments in neurological surgery were reviewed before an audience of more than 100 neurosurgeons, including department heads of major universities in New York and Boston and leading personages in neurosurgery in northeastern United States.

## RETIREMENTS

### MRS. GRACE V. BALKE

Mrs. Grace V. Balke has faithfully served Presbyterian Hospital for over twelve years. She came to the Medical Center on October 19, 1955, as a Nursing Aide at Harkness Pavilion 11A, a position she maintained until her retirement on January 12. Of her varied experiences here, she has written the following comments:

"I have thoroughly enjoyed my work, and coming in contact with so many wonderful people is something that one doesn't find published in books. It has been a great test to be able to be of some help to a person who is sick. I know in my heart I did my very best. I also will miss my co-workers and the many friends I made while working at the Medical Center."

Now that she has extra time, Mrs. Balke hopes to devote her energies to her many interests which include gardening, collecting stamps, reading, and enjoying her three grandchildren.

### NELLIE KLOK

After twenty years of service at the Mary Harkness Unit, Nellie Klok is retiring on February 7. Her friends and associates have planned a retirement tea for her on that date.

Miss Klok has worked as a housekeeper and as a Nursing Aide, and has always been ready to give her services where she was most needed. Her retirement from Mary Harkness Unit will mean a new beginning, for Miss Klok plans to seek further employment as a Nursing Aide.

## James Sheridan Speaks on Security

James A. Sheridan, Supervisor of Protective Service at Presbyterian Hospital, was the introductory speaker and moderator at an all day conference on "Security Concepts for Administration," held at the Americana Hotel on December 12, under the auspices of the Greater New York Hospital Association. A highlight of the meeting was the announcement of the imminent publication of a long-awaited manual, "Security Guidelines for Administration."

Arrangements are being made for the showing of a film entitled "Attack," which deals with methods and procedures that can be taken by women in the event that they are ac-

costed. At the time of the film presentation, a pamphlet entitled "Protect Your Life" will be distributed.

Some pointers from Mr. Sheridan concerning the safeguarding of your personal property at the Hospital include:

1. Do not leave your purses or wallets in a conspicuous location, such as a desk or a typewriter well. Use a file drawer or a locked cabinet.
2. Do not leave coats and other outer garments in a location where they are visible. Put them in a closet or other secure location. Do not leave valuables in your outer clothing.

## National Science Foundation Grant For Cell Study By Drs. Marks, Rifkind

Early in January, Grayson Kirk, President of Columbia University, was informed by John T. Wilson, Deputy Director of the National Science Foundation, Washington, D.C., that an additional \$42,700 was granted to the trustees of Columbia University for the continuing support of a research project entitled "Erythroid Cell Differentiation and Maturation."

This research project is under the direction of Dr. Paul A. Marks and Dr. Richard A. Rifkind, Department of Medicine, College of Physicians and Surgeons. The term of the grant is extended to December 31, 1968.

## BACTERIAL FLORA

*Continued from page one*

John A. Hartford Foundation, Inc., New York City.

Dr. Sprunt, in charge of the project, will be assisted by Grace A. Leidy, Research Associate in Pediatrics, and Winifred Redman.

It is known that while some bacteria inhibit bacterial growth, others are growth enhancers. The suppression by antibiotics of inhibiting organisms can result in overgrowth or superinfection by previously inhibited organisms.

When the ability of bacteria normally present in the pharynx to control the growth of other organisms is fully understood, it may be possible to protect patients from superinfection.

Knowledge of the inhibitory mechanism may not only provide a safe means of protection against the adverse effects of antibiotic therapy, but could be applied to control the growth of potentially pathogenic, or disease-causing bacteria, such as meningococci, beta hemolytic streptococci or staphylococci. Dr. Sprunt's analysis of cultures from patients receiving antibiotic therapy indicated that the presence of relative proportions of "inhibiting" bacteria determines the growth of potential pathogens.

Dr. Sprunt proposes to identify the "inhibitors" and de-

3. If wearing a smock, lab coat, or other type of uniform, do not place valuables in the pockets.

4. At nursing stations, reception locations, or other public or semi-public areas, do not leave any valuable property visible.

## Lennox Award To Dean Merritt For Outstanding Contributions

"The William G. Lennox Award for 1967 is presented to H. Houston Merritt, M.D., Professor of Neurology, Dean of the Faculty of Medicine and Vice President in charge of Medical Affairs, Columbia University, College of Physicians and Surgeons, in recognition of his outstanding contributions to the field of epilepsy over the past three decades."

These words are quoted from the Tentative Citation, William G. Lennox Award, 1967.

The Lennox Award is given by the American Epilepsy Society in honor of Dr. William G. Lennox of Boston, Massachusetts. The fund for this Award was made up by friends and associates of Dr. Lennox at the time of his death.

The recipient of the Award is chosen by the Council of the American Epilepsy Society and a special ad hoc committee. The Award in the form of a citation and a check for \$1,000 is given to the recipient annually by the committee to an individual who has made significant contributions to the field of epilepsy.

The citation continues:

"Through research (Dr. Merritt) contributed to the development of a technique, basic to the study and development of anti-convulsive agents. In clinical research he aided in the discovery and evaluation of one of the most important modern anti-convulsants. As chairman of a special committee of the National Institutes of Health, he is still working for the development of new methods of treatment in epilepsy."

"As an astute neurologist, lucid teacher, and outstanding author, he has contributed throughout the years to advance medical and social gains in the field of epilepsy. Through his notable example and leadership he has exerted an incalculable influence on a host of students and colleagues concerned with the problems of epilepsy."

"As administrator and counselor at the highest levels of education, lay organizations and governmental agencies, he has strongly influenced the remarkable progress, which has been achieved in the field of epilepsy over the past two decades."

termine the range of their activity on other organisms in surgery patients treated by antibiotics and in others who are persistent carriers of pathogens. This new information will be significant in the care of patients undergoing open heart surgery who routinely receive large doses of antibiotics. The administration of large doses of antibiotics causes a major change in the bacterial flora which characteristically results in superinfection.

This research will also advance medical knowledge on the influence of bacterial interaction on colonization by pathogens, or disease-causing bacteria. The application of such knowledge may make it possible to maintain established bacterial population equilibrium and control or prevent colonization by pathogenic bacteria.

In the development of this line of research, Dr. Sprunt will compare the pharyngeal flora of persistent carriers of disease-causing bacteria and noncarriers, with emphasis on the presence and relative quantity of inhibitors for the disease-producing agent in question. Individuals who have repeated infections of streptococcal pharyngitis despite apparently successful therapy will be studied to see if their therapy has removed the inhibitors normally present or reduced their numbers to the point of inefficiency. Dr. Sprunt will also seek to determine whether the absence or low relative proportions of inhibitory flora causes type b H. influenzae to result in epiglottitis in some patients while others undergo their initial experience without further ill effect.

# How Our Century of Hospital Progress Began

Continued from page one

was appointed.

1871 and 1872: The Hospital was constructed.

October 10, 1872: The Hospital was formally opened. It was "Presbyterian in its burdens because (it was) founded by Presbyterians; undenominational in its benefits because (it was) for the reception of patients irrespective of creed, nationality, or color."

1872: Many visitors came to see the Hospital, regarded as the most advanced structure of its kind. It consisted of two main buildings, each four stories high. Walls were con-

structed of red brick and gray limestone.

1872: The charge for a bed in a private room was \$30 to \$50 a week. The first floor was given mainly to private rooms. Each of the upper three floors contained two wards capable of holding twelve beds each. The operating rooms, on the third and fourth floors, were among the best of their day.

1875: The "Cottage" (or "Hut" as the nurses called it) was built at a cost of \$279 to house infectious cases which developed in the Hospital. A few years later, in 1888, a

much better isolation unit was provided.

1876: The charge for care in a ward was \$6 or \$7 a week, though records for the following year showed that some 90 percent of the patients were treated at no charge at all.

1876: Surgeons began using the Lister technique in performing operations, probably the first such surgery performed in America.

1878: The Managers voted to reduce the amount of free care; however, even after this modification, approximately 75 percent of the ward patients paid nothing.

1880: At the request of the Medical Board, the Managers of the Hospital established an ambulance service.

April, 1885: The first major expansion of the Hospital was announced when the Managers approved the erection of a Dispensary. Miss Henrietta Lenox, James Lenox's sister, had offered to give \$50,000 for building purposes if other friends of the Hospital would match this sum. The goal was met.

April, 1888: The Managers approved still more expansion. A Chapel Building, to be erected on Madison Avenue

north of the Dispensary, would house the Pathological Department, the ambulance service, a museum, and a chapel. The plans also included a new isolation unit. The buildings were completed and paid for in 1889.

1888: The Hospital cared for 1,832 patients in 47,473 days of treatment, of which 44,313 were wholly free. Some 300 patients were attended by the ambulance service. Again, there was a request for increasing the number of private rooms, which were too few. The Hospital had clearly outgrown its capacity.

## TAMPLIN LETTER

Continued from page one

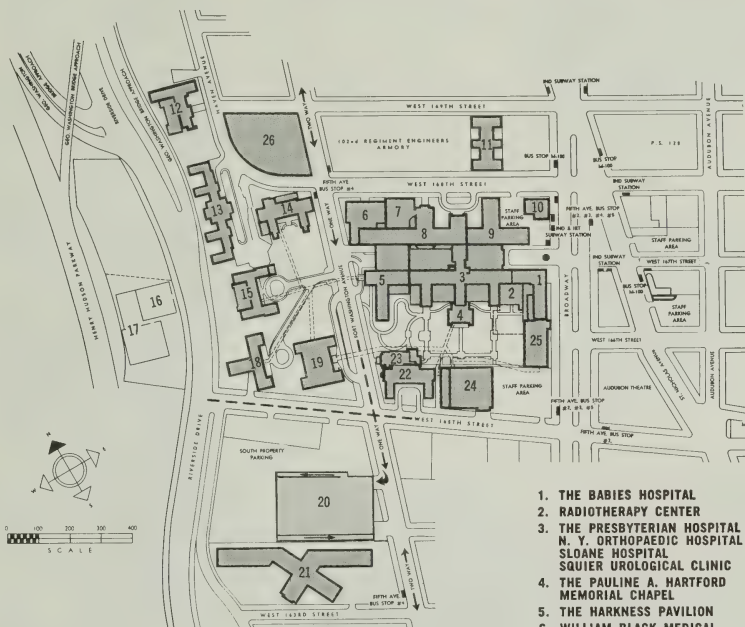

Surgical Follow-up letter dated Sept. 29, 1937 signed by Miss Rita L. Pinney. I thought it would be of interest to let you know that I am still about.

The operation was a Pneumotomy with the incision made in the front of the chest wall by the removal of three ribs. I shall never forget those ribs being knocked out with a hammer and chisel after the electric drill packed up, and the unconcerned way the removed bones were thrown into the bucket. I can still remember several items of the three sessions I had on the operating table and have smiled over them often since, though at the time it was pretty terrible. The operation was done by a Dr. Moore and took place some time around late 1933 though I have lost the exact date. I still have a hole in the chest through which I have to dress the inside with gauze daily. Still, I have not done so badly through the years. . . .

As you no doubt gather, I am fairly well on in years and will be 78 on the 2nd Dec. next. I keep reasonably well and fit . . . a hale and hearty old age pensioner and still managing to enjoy life tho of course I have to take things rather more slowly. . . .

I have rather enjoyed digging into old memories. One picture that stays with me is that of the young nurse who was my "anesthetic" during the operation. She held on to my left hand all through the first operation which took 4½ hours to keep the arm in position and my grip must have been pretty great for she had her arm in a sling for some time afterwards. At that time they could give only local anesthetics, one for the muscle incision, another into the "in-nards" of the three ribs to be removed and that was all. So I was able to observe what was going on around me and also to let the surgeon know

## Here Is Your Guide To The Buildings Of The Columbia-Presbyterian Medical Center. This Map Tells Much About The First 100 Years Of Presbyterian Hospital Progress.

THIS MAP OF THE COLUMBIA-PRESBYTERIAN MEDICAL CENTER will be found in the new edition of the Hospital pamphlet "Information for You," now being printed. The top of the map is toward the north. On the left is the Hudson River; on the right, Broadway, bus lines and subways. Can you identify the buildings with which you are familiar? Can you locate the entrance to Vanderbilt Clinic (on Broadway)? To Babies Hospital (on Broadway)? To the Eye Institute (on 165th Street)?

THE MAIN ENTRANCE TO THE PRESBYTERIAN HOSPITAL is on 168th Street. On the map this entrance is straight above the figure 3, at the center of The Presbyterian Hospital. Most of the buildings have their separate street entrances. Beneath the buildings and streets is a system of tunnels providing short routes, good for all kinds of weather.

Wouldn't the founders of the Hospital have been amazed! In one swift century, Presbyterian Hospital has expanded into a hospital city.

when the "electric knife" got too hot. One funny part of that was when the rectifier in the instrument flashed over a few times and gave me quite a shock, which meant that the rectifier had to be changed. . . . Happy days!

I am still grateful for what was done for me while at your hospital and for the care and attention given me. Let me say another belated "Thank

you" for it all.

Very truly yours,  
L. H. Tamplin.

164 Headley Drive,  
Barkingside, Ilford,  
Essex, England

Dear Mr. Tamplin:

We have received your "follow-up" letter with good in-

terest and pleasure that you are hale and hearty after all these years. I will send your letter on to the Chief of the Surgical Service for his information.

You might like to know that Dr. Moore is now retired, is well, and is enjoying life at his old home in Virginia.

With many thanks, I am

Sincerely yours,  
C. R. WISE, M.D.

## MOTHER GOOSE BALL COMING

Medical Center Nursery School announces the Mother Goose Ball. Be sure to reserve the night of March 31 for fun, frolic and dancing to the beat of Peter Duchin and his Orchestra. For ticket information call WA 8-9507. More details in the March issue of *The Stethoscope*.

# HERE'S A TYPICAL DAY IN THE MICROBIO

There is a unique laboratory on the eighth floor of the Eye Institute—different from other diagnostic laboratories in that the patients from doctors' private offices and Vanderbilt Clinic come here for particularly personal service.

It is called the Microbiology Laboratory of the Institute of Ophthalmology. Here, eye cultures and cytological studies of the ocular exudates are made.

If the terms sound unfamiliar, one need not be frightened, for the people who wait to serve us in this laboratory are very friendly. As soon as we meet the director, Dr. Deborah Locatcher-Khorazo, a bright-eyed and smiling lady of boundless energy, we guess that she and her staff are ready to go the extra mile to help all comers.

Some eye patients cannot come to the laboratory because they are bedridden—in which case a member of the staff will go to any of the hospitals at the Medical Center to take eye cultures at the bedside.

## How Does the Day Begin?

A typical day starts with surprises, just like a Broadway play. The telephone is ringing, and two or three patients without appointments have just walked in. The doctor who brings a tiny infant from his office is accompanied by the child's mother and father and perhaps one or two grandparents.

Meanwhile the regular morning's work is waiting on the table—requisitions for blood work. All preoperative counts must have the hematocrits completed and reported to the operating room before 11:00 a.m.—and if there should be 20 or more new admissions, these orders alone promise a full morning. Soon various bells are ringing—some from tests which have been set up with the time clock—some from stains which have another time clock set—and very frequently the telephone from the eye clinic or the private offices, setting up appointments for this or a later day. Dr. Khorazo and her staff assure us there's never a dull moment.

## How are Diagnoses Made?

When a patient comes to the laboratory, an "on the spot" diagnosis may be possible by making microscopic examination of smears of exudate or scrapings from ocular lesions immediately.

Large numbers of eosinophiles in the exudate of a patient with conjunctivitis suggest an allergic inflammation, perhaps hay fever.

An exudate containing white cells which are predominantly lymphocytes indicate a possible viral infection. Character-

istic bacteria and fungi may be recognized.

One of the pictures illustrates the combination of a spirochete and large bacillus (*Bacteroides fusiformis*) obtained on a direct smear from exudate from an eye which had become infected with these organisms. They are usually found in lesions of the mucous membranes of the mouth, known as Vincent's angina or trench mouth.

## Are Effective Antibiotics Available for the Treatment of Eye Infections?

"Among the most satisfying aspects of the activities of our laboratory," Dr. Khorazo writes, "is that concerned with establishing the sensitivity of the various microorganisms causing eye infections to various antibiotics available for treatment."

Routinely about 12 antibiotics are tested for their ability to inhibit the growth of any bacterium associated with eye infection. Those which are most efficient in laboratory tests are tried out singly or in combination to treat the infection. Prompt application of the correct antibiotic is most important for serious eye infection.

The two important diseases of the eye, trachoma and inclusion conjunctivitis, are susceptible to treatment with the sulphanomides and/or the broad spectrum antibiotics.

The prophylactic use of antibiotics prior to ocular surgery has also proved useful in preventing postoperative infection.

This drawing was made, a few years ago, from a photo of an eyelid. We guess the conversation between the doctor and the patient went something like this:

**PATIENT:** Doctor, I feel fine, all except my eyelid. It feels lousy.

**DOCTOR (after examination):** You are so right. Your eyelid has a louse.

*Pediculus Humanis Capitis* is the name of this particular louse. Until the patient came to the Eye Institute, this small wonder inhabiting his eyelid was perfectly at home. Note the eggs in the follicles and hairs of the lash.

This drawing and that of the Vincent's infection (opposite page) were made by E. G. Bethke, artist of the Institute of Ophthalmology, Presbyterian Hospital.

Dr. Deborah Locatcher-Khorazo, in charge of the Diagnostic Laboratory of the Eye Institute (Institute of Ophthalmology) began her work at this Medical Center when it moved from 59th Street to this location. She has been in the Diagnostic Laboratory of the Institute of Ophthalmology since completing her residency at the Presbyterian Hospital.

## Is Pathogenic Bacteria Found in Non-infected "Normal" Eyes?

*Staphylococcus aureus* is the potentially pathogenic bacterial species most frequently found in the non-infected eyes of normal individuals and pre-operative patients at this Institute.

*Staphylococcus aureus* was found in forty percent of the 900 eyes of second year medical and dental students and young individuals not associated with patients. Thus it is seen that this potential pathogen is widely distributed in normal eyes.

## What Does Research Reveal Concerning the *Staphylococcus Aureus*?

The research on the problems of *Staphylococcus aureus* has been supported by a grant from the National Institutes of Health.

Bacteriophage typing has been used in recent years to differentiate individual strains of the *Staphylococcus aureus*. The purpose of the study has been to apply bacteriophage typing to strains of *Staphylococci* isolated from normal and infected eyes in order to determine (1) the types of staphylococci in non-infected eyes; (2) the types responsible for ocular infections; (3) the identity or dissimilarity of these types to those to be found in areas of the body contiguous to the eye; and (4) the relation between the staphylococci in the patient's eye and those found in the environment.

The persistence of staphylococci makes it difficult to break up the chain by which it clings to man. Ocular infections are caused by one of the phage types which may also be found in the normal eye of the same individual. And repeated ocular cultures from the same individuals have shown that the type first found persisted for months, even when antibiotic therapy was employed.

Antonio Alvarez, B.S., technologist, came from the Philippine Islands in 1964. He is certified as an A.S.C.P.

## May the Eyes Become Infected from Systemic Diseases?

The eye may be involved in many systemic diseases such as tuberculosis, syphilis, tularemia, Malta fever and measles, to mention a few. Such organisms usually infect the eye by spreading from a focus of disease in another organ.

Microorganisms usually present in the intestinal or urinary tract such as the enteric bacilli may be responsible for eye infections also. A number of fungi which previously were considered saprophytes may infect eyes as a result of trauma.

It is thus apparent that the diagnostic laboratory at the Eye Institute must be prepared to identify any of the microorganisms which also would be a diagnostic problem in patients on a medical or surgical ward.

## Does the Laboratory Offer Instruction?

The laboratory serves as a place of instruction in Microbiology in relation to Ophthalmology for the resident group at the Eye Institute. Visiting scholars and residents from

Mrs. Elizabeth Gutierrez, B.A. (magna cum laude), technologist and chief assistant to Dr. Khorazo, has been working in this Diagnostic Laboratory since 1947. She has National Registration in Microbiology and Mycology. Mrs. Gutierrez's hobbies are: "paper craft" and traveling to Spain, the birthplace of her deceased husband—her favorite country.

Dr. Khorazo (seated) and her staff (left to right): Mrs. Elizabeth Gutierrez, Technologist; Antonio Alvarez, Technologist; Mrs. Nabi Sullivan, who worked on Public Health Grant; Mrs. Nora McElligott, Diener.

# GY LABORATORY OF THE 'EYE INSTITUTE'

other units of the Medical Center frequently attend. The 100 kodachromes (5 x 7) and photos (permanently exhibited for teaching), cultures from all important eye pathogens and microscopic slides demonstrating various aspects of

Dr. Khorazo studies the plate to observe antibiotic sensitivity results of the organism isolated from the conjunctival cultures.

Unusual ocular infection—unilateral conjunctivitis and canalculitis due to *Fusospirochetal* infection. A smear taken from the conjunctiva showing the fusiform bacilli and spirochetes.

ocular cytology are presented in this specialized course of instruction. There are also visitors from other institutions here and abroad who come from time to time to observe and study in the laboratory. Gratification by the

Staff has been derived from the number of former residents, now busy with a large practice, who return to the laboratory frequently to use the microscope, study and discuss a case.

*And Again Our Typical Day—How Did It End?*

We conclude by returning to the afternoon of our typical day.

Quietly at the work bench on the sidelines a visiting scholar or doctor from a foreign country may sit at the microscope, carefully studying selected slides and awaiting his opportunity to ask questions. He turns from the scope to watch the technique for taking ocular cultures, smears or scrapings.

Earlier in the day the mail boy brought cultures and slides to be identified—coming from a wide range of territory, from Brooklyn to South America. Before the day is over, the same mail room is handling replies to such requests and also letters written to doctors regarding patients who have been seen in the laboratory.

When the day nears an end, the staff must decide which remaining tasks must be finished before they leave, and which should be held over for another day.

Before the doors close, someone walks in to add a heart-warming note to the busy day—a former patient. He has returned to show how his eyes have improved and to extend, in person, his deep appreciation for the work of this laboratory.

Scrapings of the conjunctiva on a patient with allergic inflammation.

Mrs. Gutierrez and Dr. Khorazo are discussing a slide of suspected trachoma.

*Staphylococcus aureus* on blood agar plate from culture of conjunctiva, as taken in the photo above.

Through a Public Health Grant, Mrs. Nabi Sullivan has studied "Bacteriophage Typing of *Staphylococcus Aureus*."

On a ward, Mrs. Gutierrez is taking cultures from a patient who is not ambulatory.

Dr. Linsy Farris, Resident in Ophthalmology, now an Attending in the Institute of Ophthalmology, makes notes and checks growth of bacteria on blood agar plate with laboratory staff. Patient from Emergency Room with infected eye was cultured the previous evening and culture incubated. Note, in background, the exhibit of kodachromes used for teaching ocular diseases diagnosed with the aid of cultures, epithelial scrapings and ocular exudates.

Dr. Hugh Moss, Attending of Institute of Ophthalmology, shows and explains a lesion and focus of infection.

Twenty-one years of association in work—Dr. Khorazo and Mrs. Gutierrez.

## Dr. Lattimer Gives Medical History Lecture 'The Wound That Killed Abraham Lincoln'

*"Lincoln was shot with a short barreled, rifled, percussion Derringer firing a large (.44 caliber) ball of hard (Britannia) metal, from a distance of about two feet. A one inch disc of bone was driven into the brain three inches, a fragment of the bullet shearing off and lodging partly through the brain. The balance of the ball ploughed seven and a half inches through the brain..."*  
—Dr. John K. Lattimer.

"The Wound That Killed Abraham Lincoln" was the featured speech at the 25th Annual D. J. Davis Memorial Lecture on medical history presented on Wednesday, January 24, at the University of Illinois College of Medicine, Medical Center Campus, Chicago.

Dr. John K. Lattimer, Professor of Urology and Chairman of the Department of Urology, College of Physicians and Surgeons, Columbia University, was the lecturer.

Dr. Lattimer has been an Abraham Lincoln scholar for many years and has written several articles for medical journals concerning Abraham Lincoln and Secretary of State Seward. As part of his collection of Lincoln's artifacts, Dr. Lattimer owns the knife that was used to stab Secretary Seward on the night Lincoln was shot. It was partly through investigating this knife that he became aware of the many interesting medical facets of the Lincoln assassination. He added much to his knowledge when President Kennedy was assassinated under such similar circumstances.

Dr. Lattimer has recently acquired the shirt collar which Lincoln was wearing on the night he was shot, the shawl Mrs. Lincoln was wearing, and bits of the bloodstained bandages used in the attempt to save his life. He also has a duplicate of the Derringer which was used in the fatal shooting and letters from Abraham Lincoln and John Wilkes Booth.

These items were all on display in a glass case in the College of Medicine on the day of the lecture.

In addition to his post at Columbia University, Dr. Lattimer is Director of the Squier Urological Clinic and of Urology Service at Presbyterian Hospital, Babies Hospital, and the Frances Delafield Hospital, New York City. He is Senior Consultant, Urology, Kingsbridge Veterans Administration Hospital and Harlem Hospital, as well as consultant to several hospitals in and around New York City.

Currently he is President for 1967-68 of the New York Section, American Urological Association, Presbyterian Hospital Alumni Association, and

President-elect of the Society of University Urologists. He is also immediate past President of the New York Section of the American Urological Association, a Governor of the American College of Surgeons, Vice-President of the International Society for Urology, Chairman of the Committee for Pediatric Urology of the American Academy of Pediatrics, and a member of the committees of the National Institutes of Health, the National Research Council and the National Academy of Sciences.

Dr. Lattimer at one time represented the United States in the G.I. Olympics in track for the Third and Seventh Armies in Europe, and held the Metropolitan AAU record for the 220 meter hurdles for 12 years.

He received his B.A. in 1935 from Columbia College, New York; his M.D. in 1938 and his Med. Sc. D. in 1943 from Columbia University College of Physicians and Surgeons. Dr. Lattimer resides in New York.

### Kubanka Appointed

A new administrative assistant, E. Kubanka has been added to the staff of Dr. William B. Seaman, Professor and Chairman of the Department of Radiology.

Mr. Kubanka, a native of Rochester, New York, attended X-ray school at Fitzsimmons General Hospital, Denver, Colorado. He saw service as an X-ray technician at the Veterans Administration and U. S. Army service for nine years. He was Chief Technician at the Beth Israel Hospital, Newark, New Jersey, and administrative assistant, radiology department, Bronx-Lebanon Hospital Center. He attended college at the Rochester Institute of Technology and the University of North Carolina.

Mr. Kubanka is married and has one child. His interests are boating, golf, and bowling. He belongs to the Kennel Club, and has exhibited his Shetland Sheep dog in many exhibits.

### NEW MULTIPLE SCLEROSIS FILM

From the National Multiple Sclerosis Society a new film, "Multiple Sclerosis," is available for purchase or loan. It's a color and sound film, 16mm, 26 minutes, of interest to physicians, residents and interns, nurses and physical therapists, medical societies and professional groups. The purpose of the film is to acquaint the medical and allied professions with diagnostic techniques relating to today's foremost neurological disease.

The film is narrated by Drs. Louis J. Rosner and Augustus S. Rose, neurologists at the University of California Center for Health Sciences, Los Angeles. The presentation considers the chemical changes frequently observed in the spinal fluid of MS patients.

Address of the National Sclerosis Society: 257 Park Avenue South, New York, New York 10010.

## HONORS TO DR. HEIDELBERGER

Michael Heidelberg, Ph.D. father of the science of immunochemistry, was the recipient of the 1968 Academy Medal at the annual dinner, January 4, at the New York Academy of Medicine.

Although not a physician, Dr. Heidelberg has received countless honors in the field of medicine. Through his work in developing means for accurate measurement of antigen-antibody reactions to foreign substances, it is now possible for physicians to suppress the chemical reactions of the body, clearing the way for successful organ transplants.

In 1928 Dr. Heidelberg joined the Department of Medicine at Columbia University's College of Physicians and Surgeons. He was ultimately made the first Profes-

Dr. Michael Heidelberg

sor of Immunochemistry at Columbia.

Soon to celebrate his eightieth birthday, Dr. Heidelberg still pursues his scientific investigations as an adjunct Professor of Pathology at New York University.

## Volunteers Serve More Hours

Mrs. Marguerite Stein, Director of Volunteers, reports that, during 1967, a total of 887 volunteer workers donated 113,163 hours of their time to volunteer services at Presbyterian Hospital. This figure includes 530 active and 357 inactive volunteers. The Patients Service Corps received

14,031 calls at PH and 12,862 calls at Neurological Institute. Compared with 1966, there were 66 fewer volunteers; however, a higher number of hours was served. Several new areas of service were covered by volunteers and the requests are constantly coming in for more and more help.

### High School Students Study 'The Living Cell'

Can high school sophomores profit from a concentrated dose of cell biology presented at the research level? Can members of a medical school faculty communicate successfully with youngsters who have had only a few months of biology?

These questions received an affirmative answer during the recent course on "The Living Cell" presented December 27-29 by members of the Institute of Cancer Research of Columbia University in the new research wing at Francis Delafield Hospital. Twenty-five students from six high schools—Cathedral High, High School of Music and Art, Rice High, and George Washington High in Manhattan, and Christopher Columbus High and Junior High School 113 in the Bronx—participated in three full days of activities including lectures, demonstrations, films, laboratory exercises, and hospital tours.

The course was organized by Drs. Alfred Gellhorn, I. Bernard Weinstein, and Erich Hirschberg to provide an introduction to various aspects of modern cell biology and biochemistry and to stimulate interest in the many careers available in the health sciences.

The students exhibited real interest, asked thoughtful questions, and developed an easy relationship with the members of the staff. It was an unusual learning experience.

## Miss Hope (Sandra Gould) Will Speak On Nursing In Statewide Contest

Sandra L. Gould, first year student nurse at the Department of Nursing, Columbia University, will participate in a state-wide speech contest in Buffalo on March 21, representing Franklin County. In the county contest, held in Saranac Lake on January 20, Miss Gould won the title "Miss Hope" of Franklin County. The Contest was based on beauty, intelligence, personality, and a three-minute talk on nursing and some phase of the cancer problem.

In her speech Miss Gould spoke of the psychological problems that come with cancer. "Faith in the progress of medical science and in God," she said, "will provide answers to our hope of the future cure of cancer. Every life is worth our last ounce of effort and devotion. As long as there is life there is hope."

Miss Gould, age 20, is the daughter of Dr. and Mrs.

## Exchange Visitor Program Is Growing

The Exchange Visitor Program of the Nursing Department is growing. A group of 19 new foreign nurses came to Presbyterian Hospital three months ago. This spring another group will arrive.

The Coordinator of the Program, Ruth Alberta Rayner, speaks of the interest which these visiting nurses have in becoming acquainted with friendly Medical Center families. Invitations to American homes can mean much, both to these nurses and to the families desiring contact with other cultures.

Six of the nurses who arrived last fall came from India. They are Leela Kuruvilla, Annamma Mani, Sunderdoss Prema, Donna Ramah Paul, Mrs. Annamma Thomas, and Mariamma Kuruvilla.

Four are from Australia: Elizabeth Cliffe, Alice Job Christine Good, and Katherine Harris.

Two are from Ireland—Margaret McKinney and Annette Horne—and two from Japan Kazuko Mii and Tomiko Sakazume.

And five other countries are represented with one exchange visitor each: Annie Hanselmann, Switzerland; Fahime Rasty, Iran; Lammigje Hadders, Holland; No Chae Park, Korea; Magdalena Advincula, Philippines.

### Travel Information

Information concerning charter flights, group flights, and purchasing or renting a car in Europe is available from the Columbia Student Agencies, Inc., 617 West 115th Street, New York, New York 10025. Ph. 666-2318.

Sandra L. Gould

Richard G. Gould of Saranac Lake. She attended St. Margaret's School in Connecticut and Briarcliff College.

Local business houses presented several gifts to the participants in the Franklin County contest. Miss Gould wears a silver bracelet inscribed with the cancer insignia.

## W. L. Van Atta Becomes Director Of Department of Public Interest

Winfred Van Atta, who has been a member of the Public Interest Department staff for the past two years, and acting director of the department since December, was named Director of the Department, effective February 1, 1968.

Mr. Van Atta will be responsible for internal and public relations for the Medical Center, which includes activities of public interest at both the College of Physicians and Surgeons and The Presbyterian Hospital. His administrative responsibilities will include the Medical Center Development Fund Office, the Office of Volunteer Services, and the various specialty libraries and Milbank Library at Presbyterian Hospital.

Mr. Van Atta, a native of Illinois, began his working career at the Elgin State Hospital, Elgin, Illinois, where he first served in the direct care of mental patients, then as secretary to the clinical director of the hospital. He later spent many years in the book publishing industry, with Doubleday & Company, then as manager of the Sears, Roebuck and Co. book clubs. Prior to his association with the Medical Center, Mr. Van Atta was a medical writer-editor for CONSULTANT, published by Smith, Kline and French Laboratories for family physicians, and THE PSYCHIATRIC REPORTER, published for psychiatrists and clinical psychologists.

Creative writing has been Mr. Van Atta's avocation since his early teens. He has published more than 200 short stories and feature articles in national magazines. One of his true stories from *Reader's Digest*, "The Boy Nobody Wanted," was given a full-hour TV production on the old DuPont Theatre. Mr. Van Atta has collaborated with physicians on the preparation of two medical books and he is the author of three published novels. His first suspense novel, *SHOCK TREATMENT*, was based on his early experiences as an employee in a mental hospital, and was given an Edgar Allen Poe Award by the Mystery Writers of America in 1961. It was produced under the same title as a motion picture by 20th Century-Fox in 1964 and starred Lauren Bacall and Roddy MacDowell. Mr. Van Atta says that it should be appearing on TV soon, but he does not advise his Medical Center friends to wait up too late for it, because the movie people made his villain a woman instead of a man, sick rather than evil, and treated his brain child and psychiatry generally in a most shocking manner.

When asked about future plans for the Department of

Winfred L. Van Atta

Public Interest, Mr. Van Atta said that he and his talented staff will seek to apply their skills in communications on behalf of the Medical Center with the same dedication that our physicians, nurses and other hospital and college employees apply to their special fields of endeavor. He invites physicians, researchers and departments to solicit the help of the Office of Public Interest when they have problems dealing with internal or public relations.

## APPOINTMENT TO MAURICE RAPPORT

Professor Maurice Rapport has been appointed Chief of Psychiatric Research, Pharmacology, New York State Psychiatric Institute, and also Professor of Biochemistry in the College of Physicians and Surgeons. He was formerly an American Cancer Society Professor of Biochemistry at the Albert Einstein College of Medicine.

Dr. Rapport is credited with the discovery of serotonin and the identification of a chemical structure while on the faculty of Columbia University in 1949. For the past 15 years Dr. Rapport has been engaged in the studies of substances that play an important role in the function of cell membranes. His pioneering efforts have provided a new approach to the detection of membrane alterations that may occur under the influence of hormones and drugs during malignant growth. Thus, the tranquilizers and hallucinogens, drugs which affect behavior, are believed to modify the properties of these membranes and in this way to interfere with substances normally involved in stimulation and propagation of electric signals in the brain—the neurotransmitters.

Dr. Rapport is a member of the American Society of Biological Chemists, the American Association of Immunologists, the Biochemical Society of London, the American Association for the Advancement of Science, the American Association for Cancer Research, and the American Chemical Society.

## MILBANK LIBRARY

More than 1200 books and 300 magazines were circulated from the Milbank Library to patients of the Hospital during the final month of last year, according to the report of Myra Monahan, the librarian at Milbank.

Most of the recipients were patients in The Presbyterian Hospital, Neurological Institute, Orthopedic Hospital and Harkness Pavilion. A few books were taken to other departments, and a few special services were provided—book racks and prism glasses.

In addition to patient borrowings, more than 300 staff members used 562 books during December.

New books are continually being added through gifts and purchases, and the worn and outdated books are regularly withdrawn from circulation.

Miss Monahan reports that the year closed with another very satisfactory book sale which netted \$250.

## Columbia U. Funds

The Columbia University campaign to raise \$200,000,000 in capital funds reached \$71,416,000 at the end of 1967.

The year-end total announced by Grayson Kirk, President of Columbia, is believed to be the largest amount ever raised by an American university in this period of time.

Columbia's campaign, the first all-university fund appeal in the institution's 213-year history, is the most intensive ever conducted by an American university, and one of the largest.

Its objectives include \$75,000,000 for construction of 14 new buildings and an extensive program of campus modernization; \$75,000,000 for endowment of 100 professorial chairs; \$25,000,000 for expansion of scholarship and fellowship funds; and \$25,000,000 for general support. The campaign will allow Columbia College, the liberal arts school for men, to increase in enrollment from the present 2,700 to 4,000 by 1974.

## Dr. Arlow To Speak

Columbia University's Psychoanalytic Clinic for Training and Research has announced that Jacob A. Arlow, M.D., will deliver the John B. Turner Visiting Professorship Lecture on Friday, March 1. His topic will be "Reflections on Memory and Reality Testing." The lecture is set for 8:30 p.m. in Hosack Hall at the New York Academy of Medicine Building.

Dr. Arlow, in addition to his Turner Visiting Professorship at Columbia, is President of the New York Psychoanalytic Institute and Chairman of the Board on Professional Standards of the American Psychoanalytic Association.

## Plan Tentth Annual Card Party For Nursing Student Assistance

They're making plans for the Tenth Annual Benefit Card Party, coming on April 24. Left to Right, Elizabeth S.

Gill, Chairman, Department of Nursing; Brooke Serpe, Student Nurse; Mrs. Frank E. Stinchfield, Chairman of the Committee.

Miss Helen Hayes is Honorary Chairman of the Tenth Annual Benefit Card Party, to be held on April 24, 1968. Honorary sponsors are Mrs. Van Alan Clark, Mrs. H. Houston Merriitt, Mrs. Alvin J. Binkert, Mrs. Grayson L. Kirk, and Mrs. Augustus C. Long.

Mrs. Frank E. Stinchfield, Chairman, is assisted by Mrs. Robert H. E. Elliott, Jr., Vice Chairman; Mrs. Russell N. Carhart, Secretary; Mrs. J. Ward McLaughlin, Treasurer; and Mrs. Arthur L. B. Richardson, Corresponding Secretary.

Committee Chairmen are Mrs. Alfred Steiner, Sponsors; Mrs. Milton B. Phillips, assisted by Mrs. Charles Neer II, Prizes; Mrs. Stanley M. Bysshe, Printing; Florence Vanderbilt, Hospitality; Laurie Verdisco, Publicity. Also serving on the Committee

are Mrs. DeWitt Bleeker, Mrs. Everett Bragg, Mrs. Walter Cantwell, Cecile Covell, Mrs. Edwin Cox, Mrs. Clayton DeHaan, Mrs. S. J. Fondiler, Mrs. George Hennig, Mrs. Robert MacKenzie, Mrs. Robert Mulreany, Mrs. William Ranck, Mrs. John Rearden, Mrs. E. Ryan, Mrs. Ernest Satir, Mrs. Edward Self, Mrs. Anthony Serpe, and Mrs. A. J. Tillman.

The Faculty of the School of Nursing is represented by Elizabeth Gill and Helen Pettit.

Student nurses serving on the Committee are Brooke Serpe and Doris Cabeche.

Assistance for as many as twenty students annually has been made possible by the proceeds from this benefit throughout the past nine years.

## IN MEMORIAM

### Dr. Albert A. Plentl

Dr. Albert A. Plentl, Associate Professor of Obstetrics and Gynecology, at Columbia University's College of Physicians and Surgeons, and Associate Attending Obstetrician and Gynecologist, Columbia-Presbyterian Medical Center, died of cancer on January 11 at the Hospital's neurological center. He was 54 years old and lived at 225 Central Park West.

Dr. Plentl received his early education in Austria. He attended Amherst College and Princeton University in the '30's. He entered the graduate school of Columbia University in 1938 and was E. R. Squibb and Sons research fellow until he received his Ph.D. degree in organic chemistry in 1940. He then was appointed associate in the department of biochemistry at Columbia's College of Physicians and Surgeons.

He received his medical degree from Cornell in 1948. He was later appointed to the staff of the Columbia-Presbyterian Medical Center, where he served as assistant resident, resident and chief resident. His writings on chem-

istry have appeared in leading journals.

A memorial service for Dr. Plentl was held on Thursday, February 1, at the Pauline A. Hartford Memorial Chapel.

### Dr. John Newbold Robinson

Dr. John Newbold Robinson died on November 28, after a long illness, at his home in Easton, Maryland. He was 64 years old. Interment was in Easton.

He received his M.D. from Harvard Medical School. He took his internship and residency at Presbyterian Hospital, served until 1959, and became Associate Clinical Professor, P&S, and Assistant Attending Urologist, PH.

Dr. Robinson was a member of the 2nd General Hospital (PH) Unit in World War II, and rose to be the Senior Consultant in Urology for the European Theater of Operations of the U. S. Army. He later served as the Senior Urological Advisor for the Veterans Administration at their Washington Headquarters. Dr. Robinson's son, John, Jr., is now a United States District Attorney in New York City.

# Stethoscopia

## • MARRIAGES

Frances Cruickshank, Head Nurse on HP 5, was married to Lewis P. Mason, a New York City attorney, on December 30. Chaplain Robert Reeves performed the ceremony in The Pauline A. Hartford Memorial Chapel.

Catherine Mennona, a Medical Secretary in the Medical Information Department, was married on January 13 to Frank MacMillan, who works in a bank on Wall Street.

Lee E. Worfold, R.N., Orthopedic Unit, was married to George S. Peters, Jr., on December 23 in Hillsdale, N. J.

Mary Iwamish, R.N., Vanderbilt Clinic, was married to Anthony Cerciello on January 21 in Passaic, N. J.

Frances White, Head Nurse, BH, was married on December 30 to Walter Thurber, a graduate student in Urban Planning at Columbia University.

Priscilla Jane Choate and Eugene Pool plan to be married on February 24. Mr. Pool, an English teacher, is the son of Dr. J. Lawrence Pool, Professor of Neurosurgery at P&S and Director of the Department of Neurosurgery at the Neurological Institute.

## • ENGAGEMENTS

Anne Damosch, a student at Chatham College, and Andrew Krottinger, a senior at the Harvard University Law School, are planning a summer wedding. Miss Damosch's father, Dr. Douglas Damosch, is Assistant Dean and Associate Professor of Pediatrics at P&S.

Andrea Dickson, a graduate of the School of Occupational Therapy at P&S, is engaged to Michael P. Coyle, Jr., a fourth year student at P&S.

Phoebe A. Sherman and Roger T. Sheftel are engaged. Miss Sherman's father, Dr. William Bowen Sherman, is Director of the Institute of Allergy at Roosevelt Hospital, and Associate Clinical Professor of Medicine at P&S and Associate Attending Physician at PH.

Mary Clarke Kolb and Ernest Lathan Estes III plan to marry next June. Miss Kolb's father, Dr. Lawrence C. Kolb, is Chairman of the Department of Psychiatry at P&S, and Director of the Psychiatry Service at PH and The New York State Psychiatric Institute. Dr. Kolb is president-elect of the American Psychiatric Association.

## • BIRTH

Frank Thyssen of the Maintenance and Construction Department welcomed his fourth daughter, Barbara, born January 13.

## • CONGRATULATIONS TO

The following nurses who have been promoted to Head Nurse: Mary Cuff, Medical Surgical Unit; Linda Upton, BH; Margaret Shea, VC 10; and Jean Tierney, VC 4.

## • NOTES OF INTEREST

Adelaide Vrooman, Social Worker at BH, spoke on January 10 to the Westchester Division of the Delta Kappa Gamma Society on *Changing Trends in Dealing with the Exceptional Child*.

## DR. PEARLMAN WILL RECEIVE COLUMBIA U. DENTAL AWARD

Dr. Sholom Pearlman, one of the dominant figures in the rapid growth of dental research, is the recipient of the 1967 Research Medal Award of the Association of Dental Alumni of Columbia University. The Medal, awarded to honor individuals who have distinguished themselves in dental research and to serve as a stimulus for young people to enter the field, will be presented on February 9 at Alumni Day ceremonies at Columbia's School of Dental and Oral Surgery. Dr. Pearlman is being cited for his activity in promoting the objectives of dental research at the American Dental Association and in

many national and international endeavors.

A native of Canada, Dr. Pearlman received his dental degree from the University of Toronto and a Master of Science Degree from Western Reserve University, where he served as assistant professor of biochemistry.

In 1965 he served as advisor to the World Health Organization's Scientific Group on Research in Dental Health. He has presented lectures throughout the world. He is co-editor of *Frontiers of Dental Science*, a booklet interpreting the challenges of dental research for high school students.

## DOINGS OF DOCTORS

DR. DONALD P. SWARTZ, Clinical Professor of Obstetrics and Gynecology, P&S, has been appointed to the Obstetric Advisory Committee of the City of New York. He will be serving as a member for a three-year period ending December 31, 1970.

DR. ANTHONY N. DOMONKOS, Attending Dermatologist, PH, and Clinical Professor of Dermatology, P&S was Guest Discussor at the meeting of the Chicago Dermatological Society, held on November 15.

DR. LOWELL M. GREENBAUM, Associate Professor of Pharmacology, P&S, presented a paper, "The Inflammatory Response and Vasoactive Polypeptides," at the 6th annual meeting of the Career Scientists of the City of New York held on December 14 at the New York Academy of Medicine.

DR. RALPH J. VEENEMA, Associate Professor of Clinical Urology, P&S, Associate Attending Urologist, PH, and Chief of Urology, Delafield Hospital, presented a paper, "Bladder Cancer and Renal Tumors," in October, at the Argentina-Uruguay Urological Society, Buenos Aires, Argentina; at the Peru Urological Society, Lima, Peru; and at The University of Chile Medical School, Santiago, Chile.

Dr. Ralph Veenema

Dr. Phillip Polatin

DR. PHILLIP POLATIN, Professor of Clinical Psychiatry at P&S, Attending Psychiatrist at H, and Clinical Director of Psychiatric Institute, received notification that his book, "A Guide to Treatment in Psychiatry," was made the main selection of the Psychiatry and Social Science Book Center, for November.

DR. WILLIAM A. BLANC, Professor of Pathology, P&S, and Director of Department of Pathology, BH, was a discussant at a meeting devoted to "Diagnosis and Treatment of Disorders Affecting the Intrauterine Patient" held in Puerto Rico, October 29-31.

DR. ROBERT J. HOEHN, Assistant Professor of Surgery, Department of Plastic and Reconstructive Surgery, was initiated as a Fellow of the American College of Surgeons at the College's recent Chicago meeting. Dr. Hoehn presented a paper, "Synergistic and Antagonistic Actions of Immunosuppressive Agents with Antilymphocyte Serum," at the Clinical Congress of the American College of Surgeons. Co-authors of this work are DR. RICHARD L. SIMMONS, Instructor in Surgery, and DR. RICHARD WEIL III, Assistant Resident in Surgery. Dr. Hoehn also attended the IV International Congress of Plastic and Reconstructive Surgeons in Rome, where his paper, "Renal Homotransplants in Mongrel Dogs Treated with Combined Busulfan and Azathioprine," was included in the proceedings of the Congress. Co-authors of this paper were DR. G. F. CRICKLAIR, Professor of Clinical Surgery and Director of Plastic Surgery Service, and DR. D. S. DANOFF, Visiting Fellow in Urology.

DR. DAVID H. BAKER, Associate Professor of Radiology, P&S, and Director of Radiology, Babies Hospital, participated in a Film Reading Panel before 2,000 radiologists and gave a course on Bone Dysplasia at the meeting of the Radiological Society of North America held in Chicago from November 26 to 30. Dr. Baker, along with DR. WALTER E. BERDON, Assistant Attending Radiologist, Babies Hospital, presented an exhibit, "Prone Radiography in Infants and Children," which won second prize. DR. JOHN LEONIDAS, Fellow in Pediatric Radiology at Babies Hospital, was a co-author of the exhibit.

DR. GEORGE F. CRICKLAIR, Professor of Surgery and Director of the Plastic Surgery Service, talked on "Care and Treatment of the Burned Child" over WNYC radio on November 29, as part of the continuing educational program of the Medical Society of the County of New York.

DR. WALTER E. BERDON, Assistant Attending Radiologist at Babies Hospital, presented a paper entitled "Microcolon in Newborns with Intestinal Obstruction: Its Correlation with the Level and Time of Onset of Obstruction" at the meeting of the Radiological Society of North America, which was held from November 26 to 30 in Chicago. Dr. Berdon also gave a course on the Newborn Chest.

DR. JOHN J. LUCCA, Professor of Dentistry and Director of the Section of Prosthodontia, was installed as President of the Greater New York Academy of Prosthodontics for the year 1968.

DR. JOHN G. GORMAN, Director of the Blood Bank, appeared on the TODAY television show on October 23, and spoke about "Prevention of Rh Sensitization." He presented a paper, "The Epidemiology of Rh Disease," at the 20th Anniversary Convention of the American Association of Blood Banks, which was held at the Americana Hotel in New York and for which he acted as Chairman.

DR. RAFFAELE LATTES, Professor of Surgical Pathology at P&S and Attending Surgical Pathologist at Presbyterian Hospital, conducted a course on "Tumors and Pseudo-Tumors of the Soft Tissues" at the VI Latin American Congress of Pathology and First Pan-American Re-Union of the International Academy of Pathology which was held in San Juan, Puerto Rico, December 10 to 17.

DR. GURSTON D. GOLDEN, Associate Attending Psychiatrist, Vanderbilt Clinic, and Assistant Attending Psychiatrist, New York Psychiatric Institute, has been appointed by Mayor Lindsay to membership in the New York City Community Mental Health Board. The swearing-in ceremony was held December 11 at City Hall.

DR. EQUINN W. MUNNELL, Associate Professor of Clinical Obstetrics and Gynecology, P&S, and Associate Attending Obstetrician and Gynecologist, PH, presented a paper entitled "Ovarian Carcinoma" at the Fifth World Congress of the International Federation of Gynecologists and Obstetricians in Sydney, Australia, in September. He visited the departments of obstetrics and gynecology in the Tokyo University Medical School and Kyoto University Medical School in Japan, and the Yonsei Medical College in Seoul, Korea, on the way to the Sydney meeting.

# The Stethoscope

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXIII, NUMBER 3

MARCH, 1968

## Now In Our 100th Year, We Recall . . .

The Presbyterian Hospital is now in its Centennial year. For the past 100 years it has played its role in helping to meet the evergrowing needs of the great City of New York.

This Hospital began in 1868, Presbyterian in name but non-denominational in its ideal of service—"for the poor of New York, without regard to race, creed or color."

The first twenty years were sketched in a brief chronology in *The Stethoscope* of last month. Our source for these items is the book of history by the late Dr. Albert R. Lamb: *The Presbyterian Hospital and the Columbia-Presbyterian Medical Center, 1868-1943*. With the assistance of Dr. Albert R. Lamb, Jr., Associate Attending Physician, Presbyterian Hospital, son of the author, we borrow freely from this work to continue our chronology.

We ended last month with the year 1888—a year when the Hospital cared for 1,832 patients in 47,473 days of treatment, of which 44,313 days were wholly free. The dramatic event just ahead was a hospital fire.

December 19, 1889: On this night the Ward building was destroyed by fire, and thirty or forty persons narrowly escaped. At first the smoke was unnoticed because people in the Hospital were accustomed to incoming smoke and gas from the New York Central trains running under Park Avenue. A member of the Board of Trade, General

C. H. T. Collis, who was riding by the Hospital in a Madison Avenue horsecar, saw flames and ran to spread the alarm. The wards were cleared just in time. There was no loss of life. Some patients were shifted to undamaged buildings of the Hospital and many were taken to Mt. Sinai, St. Luke's, and the German Hospitals.

December 20, 1889: The day after the fire, the Board of Managers held a special meeting and appointed a committee "to confer with the Medical Board and to make such arrangements as would enable the Hospital to continue its work to the utmost extent possible in its present crippled condition." The cost of reconstruction was estimated at \$40,000 to \$50,000. Within a week, many of the patients

When James Lenox, wealthy New York philanthropist, invited 32 other prominent citizens of New York to a meeting 100 years ago, the organization of the Presbyterian Hospital was begun. Mr. Lenox, as first President, contributed much money, time, and organizational talent.

ABOVE: The late Dr. Albert R. Lamb, author of the history of the Presbyterian Hospital, wrote an amusing account of his own experiences in the Hospital ambulance service. (See page 3.)

LEFT: Ambulance service began in 1880 when friends of the Hospital contributed a horse and the cost of a vehicle.

who had been transferred were brought back.

December 26, 1889: John Stewart Kennedy, who had been elected President of the Hospital in 1884, donated \$250,000 to be matched by an equal sum, for rebuilding. The board concluded that the wisest plan would be to erect durable fireproof buildings to enlarge the Hospital to some 300 beds, fulfilling recommendations of the Building Committee of three years earlier.

April 29, 1890: The Board of Managers authorized the President to execute contracts for the new buildings.

1890: During this year, in spite of the setback from the fire of the previous December, Presbyterian was able to care for more patients than in any previous year. This was accomplished by keeping the patients a shorter time—perhaps one of the first instances of "early ambulation." All applicants for private rooms were referred to other hospitals.

October 11, 1890: A training school for nurses was promised. John Kennedy, President of the Hospital, wrote to Dr. W. Gilman Thompson, who had been urging the school for three years: "As soon as the new buildings are completed, I hope we shall have a training school for nurses. I intend that the Presbyterian shall be the best hospital in every respect in this city and in this country."

## New Practical Nursing School Planned for Medical Center

In a joint action, Columbia University and Presbyterian Hospital have approved a plan, endorsed by the Committee on Administration of the Faculty of Medicine, to establish a School of Practical Nursing at Columbia-Presbyterian Medical Center.

Elizabeth S. Gill, Director of Nursing, and Marion D. Cleveland, Director of Nursing Service, under whose jurisdiction the new school will operate, are at present formulating plans to be submitted to the New York State Department of Education for official approval. Every effort is being made to find a director/coordinator for the new program. Although it is not possible at this time to set a definite date for the new school's opening, it is hoped that it can be in operation sometime this fall.

The number of students expected to enter the first class will not exceed 20. Once the school is in operation, however, it is hoped that two classes can be graduated each year. The projected educational program will be for 12 months. Upon graduation, students will receive a certificate from the hospital and be eligible to take the licensing examination of New York State. After passing the examination, the graduate can then use the

Please turn to page six

## Powerful Laser Used for Surgery At Institute of Ophthalmology

Dr. Francis L'Esperance, Assistant Attending Ophthalmologist, demonstrates the use of the new powerful laser to be utilized in eye surgery.

On Wednesday, February 14, another first in medical progress was scored at Columbia-Presbyterian Medical Center, when a new powerful argon-ion laser, with a unique delivery system, was first used in a surgical procedure within a human organ.

The patient, an eight-year-old child, born with eye deformities, had lost the use of one eye shortly after birth. The other eye was covered by a congenital cataract, which was removed. However, a membrane fed by abnormal blood vessels had formed behind the pupil of the eye and had obliterated vision. Conventional surgery could not be

carried out to permanently remove the membrane because of the danger of excessive bleeding from the enlarged blood vessels.

On Wednesday, February 14, Dr. Francis L'Esperance, assistant attending ophthalmologist at the Institute of Ophthalmology, and Dr. Gordon R. Kelly, resident in ophthalmology, used the new laser to cauterize these blood vessels located deep within the eye. The membrane obscuring vision will now be incised and is not expected to offer further obstruction to vision. The young patient, with the aid of the proper lens,

# Some Echoes From Last Year's Hospital Art Show

The annual spring Art Show is only two months away, and the artists who have participated in previous years are no doubt looking forward to this 1968 event. And perhaps there will also be many new artists this year.

By way of recalling the enjoyment afforded by last year's Art Show, the editors of *The Stethoscope* sent a little letter to most of last year's exhibitors — we lacked a few addresses, and so our letter missed a few — asking these artists if they would please answer a question or two for the benefit of our readers.

We offered these three questions for a choice:

1. What interesting comment was made concerning your art exhibit last year?

2. How did you get your idea for one of your best works?

3. If you had more time for art, what would you like to do?

Here are the replies which *The Stethoscope* received:

**DORIS LAGERGREN**, Recreational Therapist. Orthopedics:

1. I had many requests for my clown from personnel and visitors.

2. From the circus.

3. Make more dolls of all nations.

**MARGARET F. LAWRY**, Research Assistant to Dr. Henry Clay Frick, Dept. of Obstetrics and Gynecology, P&S 16:

2. Painting the landscape has always fascinated me during summer vacations. Woods, farmlands, the rocky seacoast or the rolling hills of the Berkshires and Green Mountains furnish the greatest source of inspiration whether the medium used is oil or watercolor.

**DR. MEYER M. MELICOW**, Department of Urology:

The exhibit is on the 20th floor, only one or two people were there when I attended,

so that I have no idea what comments were made. (FOOTNOTE: Suggest exhibit be on the ground floor—but where?)

2. I am usually inspired by some interesting outdoor scene when on vacation or during my travels.

3. This is indeed a \$64,000 question. Please tell me how I can get more time—if I did have it I would paint and study.

**MARIAN E. HUNTER**, Clerk, P.H. 1, Presbyterian Hospital Information Desk:

1. Very few comments except one or two liked them for realism. I just paint occasionally for my own diversion, no training with oils.

2. I haven't a "best work" not having painted that much or often. I try to reproduce on blank canvas by trial and error some subject that appeals to me. It is fun but I am no artist by training.

3. If I had more time for art—I can't imagine what I would do. I dabble in sewing, knitting, raising house plants, snapshots on vacation and an occasional try at oil painting. Each one is gratifying in its own way.

**MARION SMITH, R. T., P.H.** X-ray, 3rd Floor:

3. If I had more time for art, I'd like to own a studio and have an art and craft exhibit displaying all of my works, oil painting, sculpturing, and needle work.

**MARLIESE ROEHRIG, V.C. 7**, Oral Surgery, Surgical Assistant:

1. "Why don't you look or act like a painter?"

2. While traveling in Spain the beautiful coast and Mediterranean Ocean inspired me.

3. I would like to visit more museums, have a little studio space and work with different media (art forms and materials) other than oil paint.

**HANNELI (LEE) PLEMMONS**:

1. "This looks familiar. Where is it?" (It was called "Labyrinth.")

2. Walking through the tunnel to visit a sick fellow employee.

3. Devote my time to creative photography and sculpture.

**ROSETTE FROMMER**, Secretary, Uropathology:

1. People were surprised when finding out that I was once a professional artist and I deserted my profession. They admired my style, color, and aspect.

2. Ideas come when I am inspired and in this way I express my feelings. Most of the time I see a mental picture and all I do is to reproduce it in actuality.

3. I would like to paint in the open air summer and winter, all day long — whatever catches my eyes.

I am very grateful to the Columbia-Presbyterian Medical Center that makes it possible to exhibit our pictures giving us the feeling we all are a "big family."

**DR. E. B. MASUROVSKY**, Department of Anatomy:

2. The inspiration for my entries in the 1967 Columbia-Presbyterian Art Show came one Sunday afternoon in Milan as I tried to capture the color and essence of the warm, tranquil and sun-filled atmosphere of that refreshing summer's day. In a broader sense, I seek to record impressions of people and places with the photographic arts that the beholder could reflect upon and from which he could derive yet another view of the nature of the world and its inhabitants.

**DR. CLAUDIO GERBI**, Babies Hospital 1:

1. An interesting comment about my paintings was given

by a person, who said that my landscapes are "visual tranquilizers."

2. Indeed, I am trying to convey the order and clarity, the beauty and serenity of nature.

3. If I had more "time for art," I am afraid I would paint more and larger canvases!

**PHYLLIS M. DRUMMOND**, Secretary to Dr. David Ju, H.P. 431:

1. One viewer wanted to move the red bench in my landscape to a corner of the picture from where I had placed it.

2. The beach on the island of Kauai, where part of "South Pacific" was filmed, is dominated by the fantastic Napali Cliffs. I was compelled to paint this scene—it was unforgettable.

3. If I had more time, I would like to study landscape painting further.

**DR. FRED ROTHENBERG**, Faculty of the Dental School, Oral Surgery Division:

I started to do sculptures and collages about three years ago, using brass and aluminum.

1. Going to galleries and museums, you get ideas from some of the work you see, and this is an inspiration for your own work, and you feel you can do something similar. Some of my ideas come from works of Jean Arp and Brancusi's and Gabo's work.

3. I like dentistry; but I spend one or two months on each piece and then when I like it, it is completed.

**RUTH J. BOGAN**, Supervisor, Blood Bank:

Last year I had in the show, besides my water colors, some paperweights made by casting in plastic miniature flowers from my garden.

1. The interesting comments ranged from "How do you get the flowers inside the glass?" to "Will you sell them?"

The second comment was quite gratifying, especially since I hope to augment my pension by sale of my work after my retirement this spring when I should have more time for hobbies.

**HOWARD K. LIPAN**:

1. I heard one girl explain how the photograph "Dog" compelled her to visually fill in the deleted features of the dog's head in order to set her at ease. The photograph presented, in dense black, the isolated essential features of the dog's face against a stark white background.

2. I got the idea for the photograph "Mermaid" from an exclusive east side department store window displaying bathroom fixtures.

3. If I had the courage to dare, I would travel the world as a free-lance photographer.

## ART SHOW MAY 7-17

Entry blanks for the 18th Annual Arts, Crafts and Photography Exhibit will be available at *Stethoscope* distribution points and at the Chaplain's Office on April 1.

Medical Center staff and personnel are invited to participate in this annual Spring event.

## POWERFUL LASER

*Continued from page one*

is expected to have vision restored to the remaining eye.

The new argon-ion laser, manufactured by the Raytheon Corporation, and made available to the Medical Center by a grant from the John A. Hartford Foundation, Inc., is so named because it produces light by the degradation of

channels the light to a fountain-pen-like handle, containing a focusing lens. The beam is then focused upon the target tissue, which can be cut or cauterized. The arm can also be attached to the biomicroscope to deliver light into the pupillary area under high magnification.

2. Other delivery systems to channel the light beam into the patient's eye have also

### Patient Takes in TV Show of Own Operation

Dr. Frank Field, Science Editor for the National Broadcasting Company, was at the Medical Center with an NBC camera crew to do a TV-film story of the new laser on the day that it was first used on a human. It was shown as part of the NBC news program at 6:00 p.m. on the following day. The young patient, caught by the TV camera in the recovery room following the operation, was able to see herself on television the following day and hear the details of her unusual operation, the eleventh in her young lifetime.

ions from a high energy state to a lower state. This is in contrast to atoms (ruby laser) and molecules (CO<sub>2</sub> laser) stimulated in other systems.

The new laser, located in a surgical laboratory on the 9th floor of the Eye Institute, is believed to be the most powerful argon laser in existence, other than certain experimental models at the Raytheon Corporation. It is 12 feet long, 12 inches wide, and 18 inches high, and weighs 550 pounds. The inner discharge tube is 4 millimeters in diameter and 60 inches long, and is cooled by a water jacket that conducts five gallons of ultra-pure water, at a pressure of 100 pounds/sq. inch. The cooling and purifying system alone required about six months of design and construction time, since the tremendous amount of heat generated by the laser in 20 minutes would heat a house for an entire day, and a cooling system had to be designed to dissipate heat quickly. The laser's discharge tube is made from hand-blown quartz and is extremely fragile, so that the laser mirrors must be precisely aligned; all hardware is mounted on a large construction-type "I" beam base to prevent any vibration.

The argon beam behaves like any other light beam and can be reflected and diffracted, but is so perfectly collimated and unidirectional, that a small beam would occupy a spot less than a half mile, if projected from earth upon the moon.

#### A Unique Delivery System

The Bell Telephone Laboratories, Inc., Murray Hill, New Jersey, have helped immeasurably in the planning of this unique surgical tool and in designing and constructing the following optical instruments:

1. *Light-knife:* This articulated-arm solves one of the main problems encountered in laser surgery: how to get the beam to the patient. A sophisticated system of prisms

been designed and are the only ones of their kind in existence.

The potential medical applications of this type laser are most exciting, both in ophthalmologic applications and in other areas of surgery.

Diseases of the blood vessels of the eye are considered one of the leading causes of blindness. At present, these vascular abnormalities can be treated only by broad retinal coagulations produced by a machine known as a xenon-arc photocoagulator, or by systemic medications. A major fault of the xenon-arc photocoagulator is that it produces broad coagulations that may destroy large areas of the retina surrounding the abnormal target vessel. The argon laser can be focused to a tiny beam and has many advantages over any other system now employed: argon radiation is absorbed by blood, at least five times more effectively than any incandescent light and eight times more effectively than any other laser source. This high absorption of argon light by blood permits the blood to be coagulated within the vessel without extensive surrounding retinal damage; permits abnormal, weak and fragile vessels to be cauterized with much less energy transmitted through the delicate central portions of the eye (cornea, lens, vitreous); and offers a completely new approach to vascular therapy of the eye by re-routing of blood flow in the eye in areas where increased oxygen and nutrient supplies are needed.

In explaining the potential of the argon laser, Dr. L'Esperance said that it may promise an effective therapy for diabetic, hypertensive, arteriosclerotic and various hemodynamic retinopathies. The power, intensity, and focusing capability of the argon light allows the beam to cut through any human tissue, including teeth and bone. Certain ophthalmic operations require the creation of a small hole in an

## Now In Our 100th Year, We Recall...

*Continued from page one*

December 19, 1891: Exactly two years after the fire, the new ward buildings were opened for inspection. They extended between Madison and Park Avenues on the north side of the plot. The buildings provided room for 332 ward beds and 17 private beds. The cost came to almost exactly the amount estimated — \$875,000.

December 31, 1891: A meeting was held to organize the Society of the Alumni of Presbyterian Hospital.

January 1, 1892: Anna C. Maxwell, distinguished in nursing and nursing education, became Director of the Presbyterian Hospital School of Nursing, a position she would hold for 29 years, until her retirement in 1921.

May, 1892: The School of Nursing opened. Six nurses, already employed by Presbyterian, were admitted to the School for a two-year course which included instruction and practice in medical, surgical, and obstetrical nursing. In her first annual report, Miss Maxwell announced an enrollment of 23 students and 5 probationers. The standards were very high. The main aim of the School, declared Miss Max-

well, was "to inspire the students with a reverence for their work . . . and the true love of humanity which makes the helpful and successful nurse."

1892: The new pavilions opened. Because of the increased capacity of the Hospital, the staff was enlarged and the Medical Board was increased from 10 members to 21.

The Hospital's ambulance service began in 1880 and terminated in 1912. Dr. Lamb's account of his personal adventures in this service is a revelation of strong learning experience seasoned with humor.

"A somewhat amusing side to the ambulance service," Dr. Lamb wrote, "was the detection of fakers who made a practice of feigning illness to get free shelter and food. I remember one experience when I was on the House Staff. As I reconstructed events later, the tramp limped conspicuously up Fifth Avenue to 68th Street. He suddenly dropped to the sidewalk in a fit. A patrolman came running, saw blood and froth on the tramp's mouth, and flashed an ambulance call to headquarters. Within two minutes I had swung myself aboard the am-

bulance. Off we went behind the galloping horses with the gong clanging.

"Arriving at the corner, I jumped off, knelt by the grovelling man, and looked at his face. It was the third time that I had been called to tend the same faker. To the horror of the gawking bystanders, I hauled him abruptly to his feet and told him to move along before I had him arrested. He blurted out apologetically that he had not known that I would be on duty and then dodged off through the crowd. He had produced the impressive epileptic fit by putting a piece of soap under his tongue and by biting his lower lip. If he had been successful, he would have gone to Bellevue for a few days of leisure and then to Welfare Island for awhile longer."

The Hospital's ambulance service began in 1880, when friends contributed a horse and the cost of a vehicle. An average of one patient a day came by ambulance the first year, but later, when there were many accidents among workers constructing new buildings east of Central Park, 43 percent of all admissions came by ambulance. The unit expanded to three horse-drawn ambulances—later changed to three electric automobiles.

For interns, ambulance service provided a valuable experience. The so-called "ambulance surgeon" must decide whether to treat the patient on the spot for a minor ailment or bring him to the accident ward to be checked by a more experienced doctor. If the case turned out to be insignificant, the young doctor suffered the gibes of his fellows. On the other hand, if the patient died en route—well, turn to page 33 in Dr. Lamb's book and see what penalty the intern had to pay.

By the turn of the century the ambulance service was answering 2,500 calls a year. Manager John Sloane donated an electric automobile. In 1910 the Hospital replaced the Sloane gift and two horse-drawn ambulances with three new electric automobiles.

eye tissue by surgical intervention, in order to treat some types of glaucoma, blocking membranes, and some tumors. Potentially, according to Dr. L'Esperance, the argon system has the power to produce these drainage channels, open optical pupils in membranes, and destroy tumors or abnormal tissue formations. This would result in "non-cutting" surgery, eliminating the need for an actual incision in the eye.

The potential uses of the argon laser in other areas of the body are also promising. Since the intense light beam coagulates as it cuts, it could be used to excise diseased portions of the liver, kidney, heart, or brain where bleeding is a major problem. The power of the laser also allows a broad beam to be used for coagulation purposes without

cutting, thus providing a new method of hemostasis.

In order to explore possibilities in non-ophthalmic procedures, Dr. L'Esperance and his associates, working with Bell Laboratories, are at present engaged in building the

first entirely portable high-power argon laser, which can readily be transported to any surgery within the Medical Center. When completed, the smaller unit will provide an opportunity to explore many new areas of photon-surgery.

Dr. L'Esperance demonstrates on an employee how the argon laser beam can be channeled into patient's eyes. The jointed arm delivery system leads from laser to be used with microscope.

# NEW NEUROSURGICAL OPERATING ROOM, R

In almost every brain operation, whether for tumors, Parkinson's disease, or other illnesses, the surgeon gains new knowledge about the functions of specific tissues and cells. What unforeseeable benefits, then, may be brought about by an improvement in operating facilities! Each new advance in terms of equipment is a promise of an increase in the knowledge and skills of neurosurgery.

On Friday afternoon, February 2, a new neurosurgical operating room was opened on the tenth floor of the Neurological Institute at the Columbia-Presbyterian Medical Center. A tea was held in honor of the occasion, and approximately 75 persons attended.

Believed to be unequalled in its excellence of equipment, this operating room, the result of nearly seven years of planning and effort, had been completed only two days earlier. Now it was ready for service — and the following

Dr. J. Lawrence Pool, Professor of Neurosurgery and Chairman of the Department, sees new operating room as aid to advancing research in stereotaxic and vascular surgery.

week it became the scene of a brain operation—a lobotomy—shown in the accompanying photographs.

This operation, although not unique, served as a demonstration of the very great convenience and flexibility of these new facilities. The operation was performed by Dr. J. Lawrence Pool, Professor of Neurosurgery and Chairman of the Department, and

Dr. Edgar M. Housepian, Associate Attending Neurosurgeon, assisted by a number of staff members.

Students and teachers watched through windows from the new amphitheater which has been built into the eleventh floor, one level above the floor of the operating room. What these overhead viewers saw—from a vantage point that will greatly facilitate the teaching of neurosurgery—was more than a successful operation: they witnessed the initial use of operating equipment which has come into existence through the closest possible cooperation between the Medical Center neurosurgeons, the builders and the Picker X-ray Corporation. Here is the product of years of dreams, plans, drawings, patient work toward the necessary funds, and finally, in recent months, actual construction.

Planners and builders working together have given this

Dr. Edgar M. Housepian and other members of Dr. Pool's staff participated in work of drawing plans and seeking support to bring about this new operating room.

operating room these unique features:

The X-ray tubes are ceiling suspended. All possible floor space has been left unobstructed.

The motor controls of equipment are operated from recessed wall switches.

The shockproof X-ray cables have been arranged so that they do not loop down as obstructions, but are supported aloft by trolleys.

A foot control has been provided to activate the camera for instant filming whenever the surgeon wishes.

Most unique of all—perhaps the starting point of the original plan for the building of this sophisticated complex of equipment—the X-rays, surgical microscope, and television and motion picture cameras, supported from ceiling mounts, have complete flexibility of motion—vertical, horizontal and transverse. X-rays and camera can thus be applied at any angle.

This equipment permits films to be taken at any distance within a range of from three feet to eight feet from the patient.

The wall X-ray panels provide views from which the patient's brain can be immediately charted on the headpiece that serves as a guide, matching the headpiece which has been placed over the patient's skull.

Magnified views of the surgeon's work with the patient are transmitted not only to the wall-mounted TV screens in the operating room, but also to the amphitheater overhead for observation by students. And the operating surgeon may also create a filmed record of any or all parts of the operation.

The accompanying photos tell, better than words, the story of the operation. The photographer, Mrs. Elizabeth Wilcox, talked with the patient before the operation and described him as wonderfully cooperative throughout. She took pictures, with his written consent, of the careful preparation for the operation, the constant attention which a Resident Surgeon and a nurse gave to the patient on the trip

to the operating room, the work of the instrument nurse, the anesthesiologist and others of the staff, and the waking of the patient after the operation.

And there were several photos, omitted here, which Mrs. Wilcox described as "meanwhile back at the ranch"—showing many types of work going on back of the scenes, not only during the hours of the operation, but on into the night. Many staff members not shown here are continually making their essential contributions to the team effort of the department.

## X-Rays and Other Equipment Are Mounted from the Ceiling

This is the new neurosurgical operating room as it appeared at the dedication tea on February 2. Visitors were at once impressed by the feeling of open space around the operating table. To achieve this advantage, it was planned that X-rays and other equipment be mounted from the ceiling.

Not visible in the picture is a massive superstructure high above the room, from which the equipment is supported.

To understand what we are seeing in this photo, we need first to distinguish three large instruments, each supported from above.

The largest of these, on the left, directly above the operating table, is the overhead X-ray. It is motor controlled from one of the recessed switches to the right of the illuminators at the rear. The Picker X-ray Corporation, builders of this equipment, describes this as a hi-speed rotating anode X-ray tube with a remotely operated motor driven collimator of the very latest design.

The instrument occupying the central position in the photo, attached to a special articulated arm, is actually several instruments in one—a surgical microscope and television and motion

picture camera. This tube mount, like the one on the left, is motor driven and operated by remote control.

On the right is seen the lateral X-ray. Supported by a manually operated ceiling tube mount, this is another hi-speed rotating anode X-ray tube, with manually operated collimator.

The X-ray generator used to power these tubes is a 700 MA 3-phase unit. Shockproof X-ray cables supported by trolleys in uni-strut tracks provide short permanent loops.

Photo by Werner J. Kuhn Photography.

1. Patient being anesthetized. He gave his consent, in writing, to being photographed.

2. Patient is wheeled down the corridor to the operating room.

# RECENTLY COMPLETED, GOES INTO SERVICE

3. In the operating room the anesthesiologist gives continuous attention to the patient before, during and after the operation. Ample floor space gives him a private working area at one side.

4. Adjusting the stereotaxic frame before placing it on the patient's head.

5. Doctor donning lead apron.

6. Taking X-rays, overhead and lateral, from any desired angle.

7. ABOVE: Studying the X-rays. Throughout the operation, shown in the photos below, magnified projections of the brain may be seen on the illuminator screens.

8. LEFT: From the X-rays, three-dimensional or stereotaxic charting is done on this head frame, a duplicate of the one over the patient's head. The stereotaxic method was formulated nearly 100 years ago. It began to be used on human brains in 1947.

Photos  
by  
Elizabeth Wilcox

9. Electronic apparatus for completing treatment.

10. Brain has been exposed.

11. Stereotaxic apparatus is applied.

12. Room has been darkened. Lights are on operation field only.

13. ABOVE: View of operating room in action. Note students' amphitheater overhead.

The mortality rate in brain surgery, contrary to public impression, is not high. For non-stereotaxic brain surgery it is about 5%. For stereotaxic surgery it is less than 1%.

14. The wound is being closed. Through careful charting, surgeons can enter the brain at the most convenient point to reach specific tissues, and to avoid damage to other vital tissue.

15. Waking the patient immediately after the operation. He made an excellent recovery.

16. In this photo Dr. Pool is seen, following the operation, talking with a few staff members.

## 'The Stethoscope' Goes to Thousands

Several doctors and nurses around the globe receive copies of *The Stethoscope* each month. Some statistics on circulation came to the attention of the staff during the mailing of the Christmas issue. About 40,000 copies of this issue were circulated.

As usual, many copies were given out to the employees and patients here at the Columbia Presbyterian Medical Center. In addition, numbers of copies were mailed to persons who have had an association with the Hospital within the last two or three years.

And a few copies—approximately 400, or one percent of the December total—were sent to doctors, nurses and other persons outside the United States.

Ninety-five doctors in Canada receive *The Stethoscope* regularly. Nineteen doctors in England are on the regular list, as are 43 doctors in other European countries.

Thirty-seven doctors in various parts of Asia receive *The Stethoscope* through the mail each month; 30 doctors in South American countries and 14 in Central America and Mexico are regular recipients.

Seventy-one nurses in various parts of the world are on the circulation list—12 in Africa, 6 in South America, 25 in various European countries.

Occasionally *The Stethoscope* receives a surprise letter from another part of the globe, from a serviceman, a doctor or other reader, who enjoys this regular contact with the Medical Center. Such letters are always appreciated.

### "It's so great to keep in touch..."

Dear Mr. Brodersen,

I've received my second *Stethoscope*, and I want you to know how much I enjoy reading it! It's so great to keep in touch with my old alma mater from so far away. Keep them coming!

We've been in Bogota since March (this year) and will stay till March '68—then move to Sao Paulo, Brazil. We have two little girls—one is a Colombianita, born in May. We're very much at home here—enjoying the life, people, and the lovely climate!

Are there any PH's here now? Or do any PH's have friends here? We'd love to get in contact with them if there are.

Many thanks again.  
Sincerely,  
Sarah Sargent Leisea  
Nursing School '63  
Grace Y Cia  
Apartado Aereo  
Bogota, Colombia

## Doctors Complete Film 'Fetal Blood Sampling'

Dr. Mieczyslaw Finster, Assistant Professor of Anesthesiology, and Dr. Edward T. Bowe, Instructor of Obstetrics and Gynecology, have completed a film, in color, entitled "Fetal Blood Sampling in the Assessment of Fetal Condition."

This film is to be a part of the closed circuit television presentation on new developments in obstetrical anesthesia and management of the newborn, which will be given at the annual meeting of the American Society of Anesthesiologists at Washington, D. C., this October.

## Gibson Lectures

The forthcoming XXth Gibson Lecture will be given by Dr. Arthur E. Mourant, Director of the Serological Population Genetics Laboratory of St. Bartholomew Hospital, London, England. He is also the Lay Director of the Blood Group Reference Laboratory in London, and the Medical Research Council of Great Britain.

Time: April 18, 4:30—5:30 p.m.

Place: Alumni Auditorium, 630 West 168th Street.

Subject: "The Population Genetics of Blood Factors."

Reception: Harkness Hall, 6:00—7:00 p.m.

## Dr. Coburn Receives Letter of Memories

Many letters were received by Dr. Alvin F. Coburn following the appearance, in the recent Christmas issue of *The Stethoscope*, of an article about his remarkable work with rheumatic fever.

Dr. Coburn has consented for us to print some excerpts from the letter of Anne Ashe, who retains some vivid memories from the old Presbyterian Hospital at 70th Street.

Presbyterian Home  
Summerville, S. Carolina  
January 8, 1968

Dear Dr. Coburn:

Soon after I graduated in 1924 as a registered nurse in the School of Nursing of the Presbyterian Hospital in New York City, I was appointed as head nurse in Ward I of the old Hospital at 70th Street.

One day there appeared at the door of that ward a young intern, fair haired, slim, full of fun, who immediately won the hearts of the Head Nurse and all the little patients—for he flapped his stiffly starched white coat and crowed like a rooster. The children all laughed! From that moment he was the ward's favorite, free to do anything he wished with and for the children, with the run of the pantry at any hour. Ever since I came to know that intern I have followed his work with pleasure and interest.

At one time as Resident Nurse in the Out-of-Door School at Sarasota Florida, I took care of one of his patients, young Richard Sears...

Today when *The Stethoscope* arrived I read the thrilling account of the result of the research done by Dr. Alvin F. Coburn since the year 1925, and I am impelled to write to tell you how happy I am that success has crowned your efforts.

I remember that you once sat at my head nurse's desk and told me that you, too, were from South Carolina's low country—from Summerville

## New Practical Nursing School Planned for Medical Center

Continued from page one

official designation of Licensed Practical Nurse, and may practice as such.

Entrance requirements for the new school are tentative, but students acceptable must be eighteen years of age or older, and a high school graduate, or its equivalent. The tuition fee to students has not yet been determined, but scholarship funds will be available to qualified students who need financial assistance.

Although most of the students entering the new school will be anxious to qualify as Licensed Practical Nurses and immediately enter practice, all who enroll will be made aware of the possibility of progressing academically in their nursing careers. Graduates of the new school who are qualified and so inclined will be encouraged to continue their nursing education.

Employment opportunities at the Medical Center will be available to graduates, but the educational program will qualify them to serve in many important health facilities—in nursing homes, community hospitals, community mental health centers, and extended care units.

Further announcements about the School for Practical Nursing will appear in *The Stethoscope* as plans are finalized.

while I had been born in Camden and reared in York, South Carolina. Not long after your arrival, another intern by name Robert Turner Allison, also of York, South Carolina, came to the Presbyterian Hospital. I had taught him in the Seventh Grade of York Public School—and he now practices medicine in Cleveland, Ohio.

Four years ago I came here as a resident in the Presbyterian Home of the Synod of South Carolina. I made inquiry of several Summerville friends concerning you and your family but could learn only that all of those you left behind you had moved to Charleston.

I hope that the years have brought you great personal happiness as well as success in your particular research. Your picture shows some of the changes that come with the years, but I trust that the light-hearted fun you made as our Santa Claus in the Children's Ward at our Grand Christmas Party, December, 1925, continues as part of your life today.

May God bless you and keep you and lead you to further knowledge of the way in which rheumatic fever may be pre-

vented. My continued love and all best wishes.

Sincerely,  
(Miss) Anne Ashe, R.N.  
P.H. Class of 1924.

## Prize to Dr. Schuh

Dr. Fredric D. Schuh

Dr. Fredric D. Schuh, Assistant Resident in Plastic Surgery at Presbyterian Hospital, spoke on *Consideration in the Placement of Abbe Flap in Post Cleft Lip Deformity* at the Residents' Night meeting of the Section on Plastic and Reconstructive Surgery of the New York Academy of Medicine on January 17. The paper was awarded first prize in the junior residents category.

## Dance to the Strains of Peter Duchin

Final plans for the Mother Goose Ball to be held Saturday evening, March 30, at the Columbia University Men's Faculty Club are under way.

This gala function is a benefit for the Medical Center Nursery School which serves the children of medical students and others in the Hospital community.

Everyone is invited. For ticket information call Mrs. Richard Koenigsberger, 927-4972. Tickets may also be purchased at the door. (\$10 a couple.) It should be a lively evening with Peter Duchin's orchestra providing the music, as well as raffle, balloon and door prizes galore.

Black tie or dark suit, please!

## 'INFORMATION FOR YOU' IS NOW AVAILABLE IN SPANISH

A revised edition of The Presbyterian Hospital Information booklet "Information For You," is now being printed and copies will be available soon.

Also, for the first time a Spanish edition has been prepared, entitled "Información Para Usted."

The Spanish translation was made by Mrs. Hilda Diez, a member of the staff of the Office of Public Interest.

The purpose of the booklet is to help the patient feel at home with the Hospital and its personnel, to understand the Hospital regulations, and to make the most of the services which are available.

Mrs. Hilda Diez, translator of the Spanish version of "Information For You," came from Cuba to the United States, with her husband and daughter, in 1961. Mrs. Diez has been working in the Office of Public Interest, Presbyterian Hospital since October, 1966. She was recently promoted to office manager.

An excerpt in English:

If in the opinion of your physician you are in need of private day nurses, he will initiate a request for them.

He understands that many of our private duty nurses are licensed practical nurses and that hospital-trained aides or attendants are also available for your care. He understands, too, that very often a private duty nurse takes care of more than one patient.

Your doctor will help us by releasing your nurses just as soon as you no longer require their care.

Un extracto en Español:

Si su médico considera que usted necesita los cuidados de una enfermera privada, él se ocupará de hacer la solicitud.

El médico sabe que muchas de nuestras enfermeras privadas son practicantes con licencia y que los ayudantes y personal de servicio están entrenados para ayudarlo. Su médico sabe también que, casi siempre, las enfermeras privadas tienen a su cargo más de un paciente.

Su médico nos ayudará mucho cancelando el servicio de enfermera privada tan pronto usted deje de necesitarla.

## MRS. STEIN PRAISES WORK OF GRACE DODGE HIGH VOLUNTEERS

Grace Dodge Vocational High School Volunteers include, left to right, front row: Therese Bert, Maria Mirabal, Carmen Mirabal, Doris Hoey; middle row: Ingrid Pons, Barbara Woodley, Theresa Bryant, Diane Dattoli, Patricia Harris, Sharon Jackson; and, back row: Helen Barbosa, Elba Benitez, Carol Worthy, Denise Savage.

For several years Practical Nursing Students at Grace Dodge Vocational High School have gained invaluable field work and training experience working with patients at the Medical Center. This year the group of 24 students has been assigned to the Orthopaedic Hospital and Neurological Institute from 9 until 2 on Saturday.

Mrs. Marguerite Stein, Director of Volunteers, remarks, "Their assistance has been of

great help to the staff and patients, and the experiences they have derived from their exposure to hospital care has been of benefit to these volunteers. We have found them a most cooperative group, regular in attendance, prompt, extremely neat in appearance, and a real asset. With so many young people being maligned because of misdeeds, we would like to give credit and to praise these young people."

## Dr. Gellhorn Named Dean at Pennsylvania

Dr. Alfred A. Gellhorn has been named Dean of the University of Pennsylvania School of Medicine, effective July 1, 1968. Dr. Gellhorn, Professor of Medicine at the College of Physicians and Surgeons at Columbia University, will succeed Samuel Gurin, Ph.D., who has held the post since 1962.

Dr. Gellhorn also has been named Professor of Medicine and Director of the University of Pennsylvania Medical Center.

Dr. Gellhorn, 54, has been on the Columbia University medical faculty since 1943. His research in the field of cancer led to his appointment as Director of Cancer Research in 1952 and Chief of the Medical Service at the Francis Delafield Hospital.

A native of St. Louis, Missouri, Dr. Gellhorn received his M.D. degree there in 1937 from Washington University.

During the war years, Dr. Gellhorn was assigned to research on traumatic shock and the treatment of parasitic diseases in the Office of Scientific Research and Development under the direction of the late Dr. Alfred Newton Richards, a University of Pennsylvania professor of pharmacology.

His first appointments at Columbia University were as Assistant Professor of Physiology, 1943-44, and Assistant Professor and Associate Professor of Pharmacology, 1944-

Dr. Alfred A. Gellhorn

49, before he was named Associate Professor of Medicine. He attained the rank of Professor of Medicine in 1958. That same year he was named Clinical Professor of Medicine at Albert Einstein College of Medicine.

During his career at Columbia University, Dr. Gellhorn was on the staff of The Presbyterian Hospital, and in addition served as visiting physician or consultant to Bronx Veterans Administration Hospital, Bronx Municipal Hospital Center and Harlem Hospital, New York City; and U. S. Naval Hospital, St. Albans, New York; Englewood Hospital, Englewood, New Jersey; and Riverview Hospital, Red Bank, New Jersey.

## Student Nurse Scholarship Fund Raffle on April 24

A trip for two from New York to Barbados plus a week's stay at the Benston Beach Hotel is the top prize in this year's raffle for the Student Nurses Scholarship Fund. Arrangements for these accommodations were made through the Barbados Tourist Board in association with the Barbados Hotel Association and Mr. J. L. Parrish, Manager.

Other prizes include a portable G. E. color television, Magnovox portable television, Natural Great Lakes Mink Caplet donated by John O. Morris Furs, Natural Sandalwood Mink Boa donated by Fredreika, \$100 Lord & Taylor Gift Certificate, Steuben olive dish, two piece matched set of men's luggage, Osterizer and Spin Cookery, Clairol Kindness Instant Hair Setter, and many other valuable prizes.

Tickets will be available this month, and the drawing for the trip and other prizes will take place April 24 at the Annual Student Nurses Benefit Card Party in Maxwell Hall. The Scholarship Fund provides assistance for about twenty students annually, which is made possible by the proceeds from Benefits held over the past nine years.

## Neurological Institute Auxiliary Plans April 19 Benefit

Plans are being completed by the members of the Neurological Institute Auxiliary of Columbia-Presbyterian Medical Center for a benefit performance of the new musical, "George M," on Tuesday, April 9.

Mrs. Irving Kingsford, Jr., Chairman of the Auxiliary, announced that proceeds from the benefit will help support the Social Service Department of the Hospital and patient care needs.

Honorary Chairmen of the benefit are Mrs. Donald David and Mrs. Roger Blough. Mrs. Carter Burgess and Mrs. John Weinberg are Co-chairmen and the members of their committee include Mrs. Edward Gardner, Jr., Mrs. Carl T. Chadsey, Jr., Mrs. Hart Fessenden, Mrs. Rollo Masselink, Mrs. Edward Schlesinger, Mrs. Sydney J. Weinberg, Jr.

The musical based on the life of George M. Cohan and starring Joel Gray will be preceded by dinner parties given by Auxiliary members at the Harvard Club.

A few tickets are still available and may be ordered by calling the Advance Theater Party Service, 234 West 44th St., LA 4-1185.

## Dr. Nachmansohn Gets NSF Grant

The National Science Foundation has awarded a \$64,000 grant to The Trustees of Columbia University for support of research entitled "Properties and Structure of Acetylcholinesterase." This research is to be under the direction of Dr. David Nachmansohn, Professor of Neurology and Professor of Biochemistry at the College of Physicians and Surgeons. The grant became effective January 1 for a period of approximately 30 months.

Dr. David Nachmansohn

## Dr. Bauman Addresses Seminar, Plans Course

At the Columbia University Seminar on Computers, January 22, Dr. William A. Bauman, Assistant Clinical Professor of Pediatrics, P&S, Assistant Attending Pediatrician, Babies Hospital, and Director of Medical Data Processing, surveyed the role of the computer at the Columbia-Presbyterian Medical Center and at other major hospitals.

Dr. Bauman pointed to the increasing value of automated data processing in research and patient care.

"Brain scan analysis in our Department of Neurosurgery is greatly assisted by computer analysis," Dr. Bauman said. "Dr. Mellin's studies on the relation of prenatal events to infant defects depend on automated data processing procedures. Our jointly sponsored computer education program is intended to extend computer methods into many other medical and medical-administrative activities."

*Introduction to Computers*, a short course for all Medical Center personnel, sponsored jointly by the Medical Data Processing Department of the Hospital and the Columbia University Computer Center, will start on March 11. The course will cover applications of computers and principles of computing for the medical and administrative areas. There will be 4 one-hour lectures and 1 one-hour demonstration to be held on March 11, 13, 15, 18 and 20.

All students and members of the Medical Center staff who have permission of their supervisor, department chairman or appropriate faculty advisor, are eligible to attend. No previous knowledge of computing is assumed. Class will be limited to 30 students. Registration forms must be obtained and returned to Medical Data Processing, PH 4-83, prior to March 6.

## DENTAL HYGIENE CAPPING CEREMONY

Junior dental hygiene students who received their caps are seated, left to right: Bonnie Sauer, Judith Nelson, Linda Salsbury, Gayle Salsbury; and, standing, left to right: Deborah Harbach, Lin Hann, Jeannie Morrow, and Janice Ishida.

Eleven junior dental hygiene students of the School of Dental and Oral Surgery received their caps at the Capping Convocation held on February 18 in the Pauline A. Hartford Memorial Chapel. These students have completed the first term of professional study. Thirteen senior students, who will be graduating

in June, received stripes on their caps signifying advanced level of study. These seniors are: Joanne Cicala, JoAnne Kitlas, Mary Decker, Marjorie Healey, Janet Kuczma, Mary Marchioli, Jeanette Parker, Susan Rod, Joan Roemer, Janice Stewart, Andrea Tryon, Marion Wheeler, and Charlotte Wiederhorn.

# Stethoscopia

## • MARRIAGES

Patricia Urff, Ward Clerk on HP 7 Annex, was married to Mr. Ronald Malienko on December 17.

Myney Alice Roof and Pietr Hitzig were married on February 3. Mr. Hitzig is a student at P&S. His father, Dr. William Hitzig, is on the attending staff of Mount Sinai and Doctors Hospital and is Assistant Clinical Professor of Medicine at P&S.

## • ENGAGEMENTS

John Beveridge and Betty Slane are engaged. Mr. Beveridge is Photocopying Clerk in Medical Information and is also in charge of the maintenance of machines in the Machine Room.

Lolita Ann Dawson and Raymond Smith Pfeiffer are engaged. Mr. Pfeiffer's father, Dr. Raymond L. Pfeiffer, is Attending Ophthalmologist at P.H. and Associate Professor of Clinical Ophthalmology and Radiology at P&S.

Joan Tillman and Jeremy McCay are engaged. Miss Tillman's father, Dr. Alvin Tillman, is Associate Attending Obstetrician and Gynecologist at P.H. and Associate Professor of Clinical Obstetrics and Gynecology at P&S.

Dr. Peter Frank Cohn and Joan Ellen Kirschenbaum are engaged. Dr. Cohn was graduated from P&S and is now Chief Medical Resident at Montefiore Hospital and also Assistant Clinical Instructor of Medicine at Albert Einstein College of Medicine.

Dr. Thomas Moore is engaged to Celina Kellogg. Dr. Moore, a P&S graduate, is now Director of Pediatric Research at St. Luke's Hospital Center in New York.

## • BIRTH ANNOUNCEMENT

Dr. and Mrs. Michael L. Gelfand are the proud parents of Elizabeth Lee, born on January 9. Dr. Gelfand is a resident in Surgery.

## • WELCOME

To Gail Cord, a new employee in The Development Fund Office.

## DOINGS OF DOCTORS

DR. WILLIAM A. BLANC, Director of the Department of Pathology at Babies Hospital, and Professor of Pathology at P&S, gave a course on "Pathology of the Placenta" at the Pan American meeting of pathologists, held in San Juan, Puerto Rico, on December 13. DR. MARTINEZ-TELLO, Cystic Fibrosis Research Foundation Fellow, and Dr. Blanc presented a paper entitled "The Production of Immunoglobulins in the Bronchial Mucosa."

Dr. Blanc

Dr. Lattimer

DR. JOHN K. LATTIMER, Director, Squier Urological Clinic, and Professor and Chairman, Department of Urology, P&S, delivered three papers at the annual combined meeting of the Detroit Pediatric and Urological Associations, held on January 10, at the Children's Hospital of Detroit. The papers presented were "Wilms' Tumors in Children," "Treatment of Exstrophy of the Bladder," and "Current Concepts in Management of Undescended Testis." On February 14 and 15, Dr. Lattimer delivered two invitational lectures at the Washington University Medical School and the City of St. Louis Health Division in cooperation with the Tuberculosis Program of the National Communicable Disease Center, United States Public Health Service, as part of a symposium on Tuberculosis control. The lectures were "Diagnostic and Public Health Aspects of Renal Tuberculosis" and "Modern Treatment of Renal Tuberculosis."

DR. GEORGE M. HOWARD, Assistant Ophthalmologist, has presented the following papers recently: "Diagnosis and Treatment of Lacrimal Gland Tumors," October 28, at the American Society of Ocularists in Chicago; "Retinal Hold in an Eye with Choroidal Metastasis: A Clinicopathologic Case Report," November 1, at the Chicago meeting of the American Academy of Ophthalmology and Otolaryngology; and "Congenital Ocular Malformations," January 25, 1968, at the Montreal Ophthalmological Society in Montreal, Canada.

DR. ARTHUR GERARD DEVOE, Director, Institute of Ophthalmology, and Professor of Ophthalmology, P&S, presented a paper entitled "Complications of Cataract Surgery" on February 8 at the Wills Eye Hospital in Philadelphia.

DR. HAROLD H. TARA, Assistant in Urology, P&S, and Assistant Attending Urologist, Delaware Hospital, participated in an NBC-TV research project program, "Photography in Urology," presented on February 11. The program covered the use of photography through a cystoscope for research and training. Various important problems in urinary bladder including cancer, stones, inflammation, tuberculosis, and prostate gland were illustrated in 35 mm. slides and motion pictures. The program lasted 30 minutes.

PROFESSORS NICHOLAS A. DI SALVO and MELVIN L. MOSS, of the School of Dental and Oral Surgery, recently presented a two-day seminar to the Greater Miami Academy of Orthodontists on "The Oro-Facial Musculature: Its Role in the Development of Normal Occlusion and in the Etiology and Treatment of Malocclusion."

DR. JOHN D. RAINER, Associate Attending Psychiatrist, and Associate Clinical Professor of Psychiatry, P&S, directed the National Conference on Mental Health Services for Deaf People, held in Houston, Texas, on February 14-17. The Conference was attended by 150 people in the fields of psychiatry, psychology, social work, education, rehabilitation, religion, audiology, and government. Workshop groups drew up guidelines for better handling of psychiatric difficulties of persons profoundly deaf since birth or early childhood. The Conference was sponsored by the New York State Psychiatric Institute and supported by the United States Social and Rehabilitation Service, Department of Health, Education and Welfare.

DR. J. LAWRENCE POOL, Director of Service, Neurological Institute, and Professor of Neurosurgical Surgery, P&S, presented two papers on January 12 and 13 as guest of honor of the Neurosurgical Society of the Virginias, at Hot Springs, Virginia. The papers were "Intracranial Aneurysms" and "Treatment of Brain Tumors."

DR. EMANUEL M. PAPPER, Director of the Anesthesiology Service, P.H., and Professor and Chairman of the Department of Anesthesiology, P&S, presented a paper, "Therapeutic Nerve Block and Pain Problems," on January 10, at the Post-Convention Seminar, sponsored by the Universities of Florida and Miami, and held in Nassau, the Bahamas.

Dr. Papper

Dr. Curnen

DR. EDWARD C. CURNEN, JR., Carpenter Professor, P&S, and Director of Pediatric Service, P.H., attended and participated in a conference sponsored by the Brookings Institution at Sea Island, Georgia, from December 3 to 7. The purpose of this conference was to focus attention on some of the major political, economic, and social issues relating to health and medical care, and to provide a forum for discussion of these issues.

DR. CLEMENT C. CLAY, Professor of Administrative Medicine, School of Public Health, has been appointed by the Pan American Health Organization as Consultant to the New Latin American Center of Medical Administration in Buenos Aires. Dr. Clay will be in Buenos Aires for five months while on sabbatical from the University.

DR. SHIH-HSUN NGAI, Attending Anesthesiologist, P.H., and Professor of Anesthesiology, P&S, was Visiting Professor at the Department of Anesthesiology of the Albert Einstein College of Medicine in New York from January 8 to 10. On January 9 he presented a paper entitled "Anesthetics and Central Regulation of Respiration."

APRIL, 1968

## Sidney J. Weinberg Aid Plan Assists Several Employees Of This Hospital

Twenty-four applicants have been approved for study at 12 schools and universities under the Sidney J. Weinberg Employees Educational Aid Reimbursement Plan. This plan, which permits full-time Presbyterian Hospital employees of six months or longer to pursue job-related studies at accredited schools, reimburses up to 50 per cent of the tuition fee for 1 to 6 credits per semester, or the equivalent in non-credit courses, upon satisfactory completion of courses. This Spring, there are 18 degree candidates, including 8 for the A.A.S., 7 for the Bachelor's, and 3 for the Master's degree.

The participating employees, representing many departments within the Hospital, are: Joseph Adderley, Radio Technician, Maintenance & Construction; George Burgess, Electrician, Maintenance & Construction; Ellen Connolly, Clerk, Clinical Chemistry; Benjie Crouch, Attendant, Food Service; Luisa de la Campa, Technician, EEG; Louis De Pena, Delivery Man, Pharmacy; James Duffy, Registrar, Vanderbilt Clinic; Joyce Egan, Clerk, Food Service; Luis Figueroa, Lampman, Maintenance & Construction; Melba Guzman, Clerk, Record Room; Austin Letren, Radioisotope Technician, Nuclear Medicine; Christine Leyden, Medical Transcriber, Neuro X-Ray;

## P & S Alumni Anniversary, April 27 Will Feature Medicine in Tropics

Billed as a double header, this year's Alumni Day is scheduled for Saturday, April 27th. In charge of the events are Dr. Herbert B. Wilcox, Jr. '34, Chairman of the Alumni Day Committee, and Dr. Charles F. Schetlin '40, Chairman of the Entertainment Committee.

This is the 109th Anniversary of the Alumni Association of Columbia University's College of Physicians and Surgeons and the 18th Anniversary of its fourth year students' Elective Course: "Medicine in the Tropics".

Many of the more than 200

P & S Alumni who have participated in this globe wide program will hold their first reunion at this time. Dr. Harold W. Brown, Professor of Parasitology, who originated and directs this project, will preside at that part of the Saturday morning program in the Alumni Auditorium which relates to this celebration. Among the speakers he will present is Dr. John H. Bryant who, as a student in 1953, served two months in Surinam and is presently establishing a new medical school in Bangkok under the auspices of the Rockefeller Foundation. Other

speakers will be Drs. Irving M. London, Baruch M. Blumberg, David B. Davidson. The program will be preceded by registration in the Alumni Office at 9 a.m. and a coffee hour. Luncheon, which will include an annual business meeting, will be held at Bard Hall at one o'clock. A reception and dinner dance will take place at the Plaza Hotel that night. The fiftieth year class (1918) and the graduating class (1968) will be guests of the Association.

There will be a special feature for the returning members of the "Medicine in the Tropics" alumni at Bard Hall on Friday night preceding Alumni Day. Cocktails and dinner will be followed by an informal showing of pictures

Dr. Harold W. Brown

and swapping of adventure stories from this interesting and popular program.

### QUIET, PLEASE...

The *Stethoscope* has been requested to ask your help in reducing unnecessary noise in all patient areas throughout the Medical Center. Most of us, it seems, are guilty of creating excessive noise at times—physicians, nurses, aides, attendants, students, housekeepers, and members of the maintenance staff. Patients and their visitors are also guilty.

None of us do this intentionally. We simply forget that we are in a hospital, and that some ill people are more sensitive to noise than most of us. In a short time, small cards reading "Quiet Please" will appear in conspicuous places throughout patient areas. When you see them, remember to keep your voice down and do your jobs with as little extra noise as possible.

We have also been requested to ask you to refrain from discussing patients and medical cases in the elevators.

Thank you for your cooperation.

## John A. Hartford Foundation Grant Supports Unusual Project in Medicine

A three-year bioengineering study of energy exchange in critically ill patients will be carried out at Columbia Presbyterian Medical Center, using facilities and advanced techniques developed by the Surgical Metabolism Unit of the College of Physicians and Surgeons. This important study in a relatively neglected area of metabolism research will be made under a \$366,338 grant from The John A. Hartford Foundation, Inc., New York City.

The award, jointly announced by Ralph W. Burger, Foundation President, and Dr. H. Houston Merritt, Dean of the College of Physicians and

Surgeons, will be shared by the Department of Surgery and the School of Engineering and Applied Science, both of Columbia University. Co-directors of the research are Dr. John M. Kinney, Professor of Surgery and Director of the Surgical Metabolism Unit, and Edward F. Leonard, Professor of Chemical Engineering and Director of the Bioengineering Program.

Multiple benefits, immediate and long-range, are expected from the study: 1) improved methods for acquiring and quickly analyzing physiological and biochemical information from critically ill pa-

## 'Medicine in the Tropics'

A reunion on Friday evening, April 26, the day before P & S Alumni Day, will bring together for the first time a group of doctors who, as 4th year P & S students, participated in the two-month elective course, "Medicine in the Tropics."

Dr. Harold W. Brown, Professor of Parasitology at Columbia University's College of Physicians and Surgeons, initiated the course in 1950 and has promoted and developed it during the past 18 years.

More than 200 P & S students have taken the elective, each spending two months in medi-

cal service at one of the designated hospitals in a tropical region of a foreign country.

### Dr. Brown's Program Goes Around the Globe

These are some of the hospitals that have come into the "Medicine in the Tropics" program:

Aluminum Company of America Hospital, Surinam; Pfeiffer Memorial Hospital, La Paz, Bolivia; Firestone Plantations Company Hospital, Liberia; Methodist Mission Hospital, Ganta, Liberia; Curran Memorial Hospital, Zor Zor, Liberia; Awo Omamma Hospital, Nigeria; Pokwo Hospital, Nigeria; American Mission Hospital, Ethiopia; Pebe Hospital, Liberia; Mennonite Christian Hospital, Hwalien, Taiwan.

In the early years of the program new hospitals were sought to be added to the list; in recent years hospitals have requested admission. Hospitals are selected by Dr. Brown, who arranges the program personally with the administration of each. The staff doctors of each hospital are responsible for the Columbia

# These Persons Are Retiring From Columbia-Presbyterian

## DOROTHY KURTZ

Dorothy Kurtz, director of the Records Department, retired on April 1. A retirement tea was held on March 29th in the Doctors' Dining Room, attended by many members of the administrative staff, doctors, and Medical Center personnel.

In her 39 years of work here Miss Kurtz has made notable contributions not only to Columbia-Presbyterian but also to many other hospitals both in and out of the United States. She came to this Medical Center directly from the statistical department of the Metropolitan Life Insurance Company. She was selected as a person highly qualified to organize into a unified and workable system the diverse records files from the several hospitals which were being welded into the world's first and largest medical center. This was in 1929.

"The Records Department here was in great confusion at that time," she recalls, "Departments from several hospitals had just been thrown together. The doctors initiated the move to reorganize the department, and this was the challenge I faced. We were forced to pioneer."

As a result of Miss Kurtz's pioneering, the Records Department now has available to doctors and researchers the individual medical records of more than two million patients. A patient's record can be ordered by telephone and often delivered within a matter of minutes. In any 24 hour period, 5,000 to 6,000 individual records must be pulled, delivered and then refilled.

The department operates 24 hours a day and employs approximately 120 part and full time employees.

Miss Kurtz initiated the terminal digit filing system, modern shelf filing, and many other innovations in the medical record field. She published a book, *Unit Medical Records*, describing the record system here including the terminal digit filing. What ingenuity this invention must have required! Miss Kurtz, in a re-

Dorothy Kurtz

cent interview, made it sound simple. "Yes, I dreamed it up," she said. Then, tersely, she related its history:

"We set it up. When we had it running, we wrote it up. I took it to Remington Rand to see if they were interested, and I found that one of their people had devised an identical system. Only after ours was published and had aroused great interest in the hospital field did Remington Rand begin to push it.

"At about the same time we put in the shelving which was made to our specifications, with some unique features." This was also written up and widely copied in hospitals.

Miss Kurtz has received many requests to act as consultant at other hospitals, in several parts of the United States, twice in Canada, and even in Iran. She has traveled, lectured and published numerous articles. For the American Association of Medical Record Librarians she served as president and seven years on their executive board. As a result of long term association with the U. S. Public Health Service in connection with diagnostic classifications, she headed the work party which developed ICDA in 1960. She also served on the national subcommittee concerned with the eighth revision of the International Classification of Disease.

Miss Kurtz spoke of the great need for people to qual-

## MARION WALLACE

Miss Marion Wallace, Supervisor of the Compensation and Liability Department of the Comptroller's Office, retired on March 1, 1968.

During the ten years she has been with the Hospital, Marion has been known as a tireless worker who has successfully negotiated many complicated accounts and established herself as an excellent representative between the Hospital and attorneys and insurance companies.

A dinner for her was given at Luigi's Restaurant on February 8, 1968 by some forty friends and associates at which time she was presented with an inscribed wristwatch and other gifts. Marion was further feted with a Tea and Reception on February 12, 1968.

Because she is not yet ready to be "turned out to pasture," Marion has accepted full-time employment with an agency specializing in the collection of hospital accounts. Good luck and best wishes to a truly dedicated lady.

ify for work in the field of medical records.

"We have retained many of our clerks through the years," she said, "They like the work and they feel an allegiance to the department. I recall one who was here before I came, who left to have her family, and later, after she became a grandmother, returned to resume her job."

As to Dorothy Kurtz's plans after retirement, she said she had no doubt that she would go right on consulting in this field.

## FROM THE MAILBAG

I am writing you this letter because I cannot leave this hospital without showing in some small way my deepest appreciation for the wonderful service you offer here.

We brought our son here from Chicago for a very serious operation.

The nurses here are unbelievably kind, sweet, and thoughtful in every way. As a matter of fact, everyone has treated us just wonderfully.

The food is excellent, the rooms are very comfortable, and I could go on and on.

I do not want to take up anymore of your valuable time but please accept our most grateful appreciation for the compassion shown us at a time when it was very much needed.—*From the Mother of a Former Patient at the Eye Institute.*

## ELIZABETH CULBERT

A reception was held on February 28th in honor of Elizabeth Culbert on the occasion of her retirement as Librarian at the Eye Institute.

Miss Culbert recalls that when she began her work here six years ago, the field of ophthalmology was so new to her that she didn't even know how to spell the word.

"I want to express my appreciation for the friendliness here," Miss Culbert said recently to a reporter from *The Stethoscope*. "It has been one of the happiest experiences of my life."

Miss Culbert first became interested in general library work in her city of Atlantic City. There she had charge of a branch of the general library and also organized the medical library. She came to New York to attend library school. Following this, she made two applications—one to the New York Academy of Medicine and the other to the New York Public Library to

## MRS. KATHERINE BLACKWELL

On April 1, Mrs. Katherine Blackwell retired after 21 years of service in the Social Service Department of Babies Hospital. A quiet, unassuming woman, with a quick sense of humor, Mrs. Blackwell has served as secretary to the busy staff with loyalty, devotion, and a dedication to the needs of the patients served by the Department.

On Thursday, March 28, a party was given in her honor, and attending were former members of the Social Service staff, including Miss Mildred Stilwell, retired Director of the Department, who returned to honor Mrs. Blackwell and to recall the memories they all share.

Elizabeth Culbert

be children's librarian. Both offers came to her, and she chose the children's librarian-ship.

This became her career for thirty years—working with children, young people and adults, story-telling, reviewing books and giving book talks. She took up Spanish as a second language, and was able to work with Spanish-speaking people. She was called to Mexico City to be in charge of children's work at the Benjamin Franklin Library. Again in New York, her services extended to the Puerto Ricans in the East Bronx, who were coming into New York in great numbers.

She retired early, only to begin a new career for the National Recreation Association—and still another at the Columbia-Presbyterian Medical Center.

"I've had a very happy six years here," Miss Culbert said at the time of her retirement tea. "I feel as if I'm graduating from a university instead of a hospital. I think when a person retires from Columbia-Presbyterian he should have a cap and gown."

## Hospital Centennial Observed on WCBS-TV

On Saturday, March 9, the 100th Anniversary of The Presbyterian Hospital was noted on the 6:30 p.m. newscast on WCBS-TV. Mr. Earl Ubell, Science Editor for CBS, spent two days filming various areas of the Medical Center, comparing still photographs of the original hospital with similar scenes of the hospital today. Dr. Albert R. Lamb, Jr., whose father wrote the history of our Hospital and the Medical Center, was interviewed by Mr. Ubell.

## Weinberg Aid Plan Serves Hospital Employees

Continued from page one

Frances Keegan, File Clerk, Record Room; Pauline Macdonald, LPN, Nursing; Barry McKenzie, Laboratory Assistant, Clinical Pathology; Frances Menzella, Clerk, Food Service; Patrick Moohan, Storekeeper, Maintenance; Michael Morrone, Pharmacist, Pharmacy; Mabel Moussouris, Clerk, Food Service; William O'Hara, Attendant, Nursing Service; Joan Palmer, Secretary-Technician, Cardiology; Dorothy Rock, Nursing Aide, Nursing; Vincent Vicdomini, Pharmacist, Pharmacy; and

Ralphina Waithe, LPN, Nursing.

The various schools and universities and the number of students at each are: Bronx Community College, 6; Brooklyn College of Pharmacy, 2; Borough of Manhattan Community College, 1; Chase Secretarial School, 2; Columbia University, 3; Fairleigh Dickinson University, 1; Iona College, 1; Latin American Institute, 1; New York Institute of Technology, 2; New York City Community College, 1; R.C.A. Institute 3; and St. Francis College, 1.

## You Too May Take a Child to the Circus

Each year about forty young clinic patients from the Squier Urological Clinic are treated to an afternoon at the circus. One adult sponsor, a volunteer from within the Hospital — medical student, nurse, secretary, and other — accompanies one child. They meet at the Pharmacy in Vanderbilt Clinic at 12:30 and, from there, proceed to a subway car, hired from the New York Transit Authority, which takes them to Madison Square Garden. This year's circus is scheduled for Saturday, May 4.

Elsie Coffin, a former employee, began this annual event on a volunteer basis thirteen years ago. When she retired, she established a fund to provide spending money for the children. Each volunteer sponsor pays for himself and one child, and the additional donated money permits

Betty McCarthy with circus goes at last year's Squier Clinic fun day.

the child to feast on cotton candy and to buy some souvenirs.

Anyone interested in participating in this rewarding program is urged to call Betty McCarthy, a secretary at the 10th floor offices of the Squier Clinic and who is in charge of the program, at Extension 1941 or 6018.

## John A. Hartford Foundation Grant

*Continued from page one*

tients; 2) the utilization of such information to assure timely care and maximum support of the energy exchange capabilities of the patients being studied; 3) to evolve a more fundamental understanding of human energy exchange and how this knowledge might assist in diagnosis and therapy of seriously ill patients wherever they are undergoing treatment; and 4) to demonstrate the effectiveness of a completely integrated physician-engineer team, working simultaneously in an atmosphere of intellectual equality and applying their combined skills to challenging problems of great interest to each discipline.

In the final analysis, acute illness or injury threatens life because of the threat to energy exchange. Thus, a better understanding of the processes and mechanisms of energy exchange in critically ill patients can, it is believed, lead to improved methods of treatment that can save certain patients who now die.

The Surgical Metabolism Unit at the Medical Center has been developing methods and techniques over the past three years for the quantitative study of tissue fuels by model development, the correlation of ventilation with hypermetabolism, and the influence of heat production on the mechanisms of heat loss. Much of this new information has been unavailable in the management of patients for lack of facilities to analyze, store, manipulate and quickly display results of studies made. In several cases, rapid availability of information that was eventually analyzed only after the death or discharge of the patient might have materially improved his management.

Weeks, and in some studies months, have been required for the physician-engineer team to properly evaluate results.

Funds provided by this John A. Hartford Foundation grant will permit the addition of engineers to the Surgical Metabolism Unit team and will support the team's work with flexible, quickly accessible proximate data processing facilities and a data processing staff for immediate on-line and retrospective in-depth analysis.

The Surgical Metabolism Unit is located on a surgical floor of The Presbyterian Hospital. It has attracted many visitors from this country and Europe because of its advanced design and equipment for both intensive patient care and patient research.

During the past two years the Unit has developed a team of specially trained nurses, technicians and physicians for the care and study of critically ill patients. The original equipment has been tested under diverse clinical conditions, and procedures for intensive care, including specialized monitoring methods, have been developed as experience has grown with the care of a variety of patients in critical condition because of injuries or acute illnesses. These patients — about 50 a year — have come to the Unit from the emergency ward, the post-anesthesia recovery room, and the services of orthopedic, neurosurgical and general surgery. A physician-engineer team has developed a system that permits accurate measurement of  $O_2$  consumption and  $CO_2$  production in critically ill patients. A major contribution expected from the new research will result from the physician-engineer team, working together to develop

## 'Medicine in the Tropics' Holds Reunion

*Continued from page one*

medical students. The association is proving mutually beneficial. Frequently, staff members of these hospitals decide to come to the United States for a year of study at Columbia.

### Over 200 Students— And More This Year

This year 32 students accompanied by their wives, will take part, traveling to hospitals in Africa, South America, Central America and Formosa.

By way of preparation, the student studies reports which have been written by former students at his selected hospital. He has a conference with Dr. Brown, who has visited all the hospitals. He does not need to pack his medical books for the trip, for such books await him at the hospital. One student has suggested that a refresher course in parasitology is an important item of preparation. On arrival at the foreign hospital, the student is treated to a brief cultural orientation of the country.

Now the more than 200 students from the past years of this program, who have similar experiences but who have not previously come together as a group, have been invited to this first reunion. A few, unable to attend, have sent letters indicating that they will be present in spirit.

### Hospitals in the Tropics Offer Contrasts

The facilities of the hospitals in the tropics vary greatly.

mathematical models which relate body composition, tissue fuels, gas exchange and thermal balance.

Addition of needed engineering personnel and data processing equipment and staff will now permit a stepped-up research effort and immediate clinical evaluation of information received from studies such as the following:

**Glucose Metabolism.** An understanding of carbohydrate metabolism in critically ill patients is basic to understanding the whole complex of the energy transforming processes essential to life. Carbohydrate metabolism, of course, is closely related to the metabolism of fatty acids and amino acids. Studies of these processes are complicated by the fact that measurements are necessarily indirect, requiring sophisticated data collection and analysis. A technique used at the Unit involves the injection of  $C_{14}$  tagged glucose, which is monitored over long periods of time to determine rates of  $CO_2$  production, oxygen consumption, and the specific activity of  $C_{14}O_2$  in the breath.

**Heat Exchange.** Heat loss from the body, by several paths, is an important com-

The leprosy ward at the Ganta Methodist Mission is a village of straw roofed mud huts set a mile or so from the hospital itself. Here the patients with leprosy live with their families (contradicting the old theory of the untouchables). Physical therapy, in this case concentrated exercise drills for hands that have been rubbed in palm oil, prolongs the use of joints which soon may be distorted as a result of the disease.

Two distinct types of hospitals are involved in the program; the company financed hospital, such as Alcoa and Firestone,

and the missionary hospitals. The company hospital is usually large, with perhaps 200

*Please turn to page six*

can, with the aid of computers, be made simultaneously with gas exchange and with balances on food intake and waste excretion, then integrated into a meaningful pattern of energy utilization.

In summing up the goals and prospects of this new research, Dr. John M. Kinney stressed the importance of the contributions to be made by engineering members of the team. The study of energy exchange, he explained, especially heat transfer in and from the body, offers many problems to which engineering techniques, well established in the engineering analysis of non-living systems, can be applied. However, the complexity of the human body and its mechanisms for controlling energy exchange will call for the closest collaboration between medical researchers, engineers, and other members of the multidisciplinary team.

Other grants from the John A. Hartford Foundation, Inc., support medical research in many areas at Columbia-Presbyterian Medical Center, including the Departments of Ophthalmology, Urology, Neurology, Radiology, Immunology, and other special fields of investigation.

# HOW WE SEE THE HEART'S INAUDIBLE SOUNDS

For some time now, various research centers have been carrying out experiments to try to reproduce accurate visual pictures of sounds. Bell Laboratories, for instance, have been trying "visible speech" as a means of communication between deaf people. Voice prints—the visual portrayal of the audio-frequency spectrum—are used in acoustics and speech studies, seismology and vibration analysis. They are even used in detective work, as shown in a TV series recently where the villain was caught because they could prove that his voice print corresponded to that recorded inside the murder room. The word picture patterns are shown as levels separated by contour lines, like those on an ordinary geographic map.

Dr. William Rogers, Associate Professor of Anatomy, Dr. James Harrison, Instructor in Anatomy, and Dr. Kent Ellis, Professor of Radiology, Columbia Presbyterian Medical Center, have succeeded in applying this technique, calling it contour spectral phonocardiography, in the analysis of cardiovascular sounds. For the first time anywhere, a three-dimensional method is being used in the assessment of heart defects and the special machine which they have built can analyze and display data of frequency timing and intensity with an accuracy previously unobtainable by other methods. Dr. Rogers compares it to walking up steps as opposed to wandering up a ramp.

This is the culmination of several years' work by him and other physicians on methods of recording various heart phenomena in such a way that they can be evaluated more or less objectively.

Most congenital and acquired defects of the heart are first detected by the physician with his stethoscope. They produce abnormal sounds and murmurs and he evaluates them according to his knowledge and experience, but essentially it is a subjective assessment, one man's opinion.

Three years ago, in January, 1965, the New York Academy of Sciences published an account of a big step forward in the diagnosis of cardiac defects which had been worked out by Drs. Rogers, Harrison and Ellis. The method was not so much a new technique as a combination of two different techniques. The name coined for it was descriptive of the procedures involved: PHONOCINE-FLUOROCARDIOGRAPHY — combining synchronized sounds with cinefluoroscopy of the heart. It was now possible to see the heart, its size, its shape, its dynamics, while listening to and watching the

DID YOU THANK HIM

1. "Voice prints" are word picture patterns which visualize the harmonics which give special character to each voice. The loudest tones are shown as the blackest.

3. The stethoscope in the esophagus, behind the heart. The attached microphone is shown lower left.

sounds on a track and checking which areas of the heart they were produced by.

An esophageal stethoscope was used, a semirigid tube which resembles an ordinary stethoscope in that the column of air in the tube transmits the sound either directly to earpieces or, as in this case, to a microphone. The stethoscope is inserted through the nostrils or the mouth and lowered until it is behind the heart while it is being observed under the fluoroscope. This method has the added advantage of being more acceptable to the patient than other methods of obtaining information about the heart.

In order to have a complete record of the processes involved, a sound movie was made of the procedure. A 16 mm. Auricon Cine-Voice camera was mechanically and optically adapted directly to a Philips X-ray fluoroscope with an image intensifier. The cardiac sounds were recorded simultaneously on an optical sound track of the same film. The vascular pulse and elec-

trocardiogram were monitored on an oscilloscope and recorded on an oscilloscopic camera and a four-channel magnetic tape recorder. The esophageal stethoscope was connected with two transducers. One of these converted lower frequencies into pressure pulses, the other converted audio frequencies into sounds.

Now it was possible for doctors to obtain information about cardiac lesions which had previously been inaccessible. Fluoroscopy is the ideal method for detecting calcification in mitral and aortic valves and studying their associated sounds. A woman patient, for instance, had an aortic murmur so loud that it masked a mitral valve deficiency. The valve was so calcified that it hardly moved. The murmur was almost silent and could not be detected in chest wall records. Once the esophageal stethoscope was dropped behind her heart,

4. These three pictures are of the same heart murmur. Above is the conventional phonocardiogram. Although useful it has shortcomings. Of the three physical parameters, time, intensity and frequency, only time is adequately represented.

5. A spectrophonocardiogram shows the harmonics in musical heart murmurs very well and gives a useful concept of the frequency.

6. This contour spectrophonocardiogram, on the other hand, makes it possible to measure the intensity very accurately. The amplitude dynamic range is 42 decibels with seven contour lines, 6 decibels apart.

however, the calcification was detected on the fluoroscope and both the mitral and aortic valves were replaced.

In addition to developing into a more efficient diagnostic tool, this use of sound and film has, of course, enormous potential in medical teaching. The combination of the patient himself, his X-ray films, fluoroscopy, phonocardiograms, pulse tracings, electrocardiograms and other material recorded on cine film, accompanied by the appro-

priate commentary, can be of great help to student and physician alike.

A great deal of information can be obtained from direct phonocardiographic recordings from the heart and great vessels. It is possible to localize and interpret the various components of heart sounds and murmurs which cannot be detected by the ear which, although an excellent analyzer in the range of the human voice, is one hundred times less sensitive in the range of most cardiovascular sounds.

All phonocardiograms present objective information regarding heart sounds and murmurs. However, the conventional ones have certain shortcomings. An oscilloscopic phonocardiogram can only give a rough estimate of frequency, never the whole spectrum. The dynamic intensity range is so limited that the loudest and weakest sounds cannot be presented simultaneously on the same record.

In contour spectrograms, on the other hand, frequency and time scales remain unchanged, but the intensity is shown distinctly as gray levels separated by contour lines which can be accurately measured. The highest level is jet black, the lowest level is white. The black contours outlining each gray level enable even the faintest murmur to be clearly displayed.

And so, by the adapting of audio-visual methods to the special needs of the physician, we are another step closer to accuracy in the detection and diagnosis of heart defects.

2. Dr. William Rogers, Associate Professor of Anatomy, with part of the equipment he uses for phonocine-fluorocardiography. The esophageal stethoscope goes through either the mouth or the nostril of the patient. It is connected to the crystal microphone she holds on her lap and to a pres-

sure transducer. The electrocardiograms are recorded simultaneously with the pressure pulses and the sounds. On the screens of the monitor recorder to the right of the patient the electrocardiogram can be seen as well as sounds and pulses from the transducer signal. Next to Dr. Rogers is a four channel tape re-

order on which can be recorded the sounds, pulses and electrocardiogram, with the fourth channel left available for commentary and note-taking. On the left of the picture is the fluoroscope, with a 16mm camera with sound track and amplifiers hooked up to the 9" image intensifier.

Shown with Dr. H. Houston Merritt, Dean, P&S, in a planning session for the Neurological Auxiliary Benefit Performance of "George M" are: Mrs. Irving B. Kingsford, Jr., standing; Mrs. Edward B. Schlesinger, left; and Mrs. Carter L. Burgess. This Benefit for Social Service and patient care needs will be held on Tuesday, April 9.

Almost all tickets have been sold.

## Mrs. Wilkens Appointed Housekeeping Super

Mrs. Marjorie Wilkens

It was recently announced that Mrs. Marjorie Wilkens was appointed Supervisor of Housekeeping Services for the Columbia Presbyterian Medical Center.

Mrs. Wilkens has been employed at the hospital since August 1965. Her first position was as Housekeeper of Maxwell Hall. In April 1966 she was promoted to the position of Assistant Supervisor, Housekeeping Services. Prior to employment here, Mrs. Wilkens worked as a Department Head for 18 years with Schraffts.

Originally from Los Angeles, she holds a Bachelor of Science degree from New York University.

## Maybe Miss Empire State?

Mrs. Barbara Bobo

By the time this *Stethoscope* is printed, Mrs. Barbara Bobo, nurses' aide, Neurological Institute 4-East, will have had a whirl at competing for the title of Miss Empire State. The contest, sponsored by Ophelia De Vore Associates, Inc., is based on beauty, personality, popularity and talent.

DR. MELVIN YAHR, Associate Dean and Professor of Neurology at P&S and Attending Neurologist at PH, and DR. RUDOLPH FRIEDRICH, Carr Professor of Oral Surgery at the school of Dental and Oral Surgery, have been named to the Advisory Committee of the New York Metropolitan Regional Medical Program for Heart Disease, Cancer, Stroke and Related Diseases. This is a federally funded program established by Congress

## Enzyme May Reduce Risk For Smokers

Do cigarette smokers develop an enzyme which tends to give them protection against cancer-producing tars found in tobacco smoke? The answer to this question is beginning to appear in the findings of a research project that is now in progress.

In this investigation, Dr. Paul J. Poppers and Dr. M. Finster, both assistant professors in the Department of Anesthesiology, are the collaborators of Dr. Richard M. Welch, Miss Y. E. Harrison, and Dr. A. H. Conney from the Wellcome Research Laboratories in Tuckahoe, New York.

The *New York Times* and the international edition of the *New York Herald Tribune*, appearing in Paris, recently gave some advance publicity to this project. A paper describing this investigation will be presented by Drs. Welch and Poppers on April 15 at a meeting organized by the Federation of American Societies of Experimental Biology in Atlantic City, N. J. This presentation is one of the features of the FASEB program designated to be of special public interest. Soon the early research data will be published in *Science*, the journal of the American Association for the Advancement of Science.

What have the scientists been able to do in their attempt to discover whether the body produces enzymes that defend it against tobacco-tars? The research cannot be described in popular terms, but the general reader will catch a glimpse from the following, greatly simplified, description:

Polluted air, certain smoked foods, and tobacco smoke contain carcinogens, including "BP"—an abbreviated name for 3, 4-Benzpyrene. This compound can be broken down by an enzyme, called benzpyrene hydroxylase. Since the hydroxylated metabolites of BP are less carcinogenic than the parent molecule, the en-

Dr. Paul J. Poppers

zymatic hydroxylation of BP is a detoxification mechanism.

Administration of BP to rats induces a several-fold increase in BP hydroxylase activity in their tissues—and it is likely that this adaptive response in rats provides some measure of protection from the carcinogenic effect of BP.

It seemed important to determine whether the exposure of people to BP and other environmental carcinogens increases the level of enzymes that detoxify such compounds.

The problem of securing human tissue for such tests was solved when sections of human placentas were obtained, immediately after normal childbirth.

Tissue assay revealed that the placentas of women who smoked cigarettes had appreciable BP hydroxylase activity, whereas those of non-smokers showed none.

Dr. Poppers now believes that compounds in cigarette smoke can induce in human tissue an enzyme which is capable of metabolizing the carcinogen, BP. Induction of carcinogen-metabolizing enzymes such as BP hydroxylase might very well be a mechanism by which people and their fetuses are protected from environmental carcinogens. It remains to be elucidated whether the determination of BP hydroxylase activity in the tissues of smokers and others who are exposed to polycyclic hydrocarbons is of value in predicting the carcinogenic risk.

This study is supported by the National Institute of General Medical Sciences, National Institutes of Health.

## "above all it had great human interest . . ."

Dear Mr. Binkert:

In the January 1968 issue of *The Stethoscope* an article appeared entitled "What I Appreciated Was the Kindness. . ."

The Nursing students of George Washington High School would like to tell you the use to which we put this article.

Each week throughout the term the teacher requires us to clip and outline medical information articles. . . Most medical information articles are not interesting or contain language too technical for us. Many Home Nursing students also have language difficulties because we arrived from other countries only recently. Students of all high school levels are in this course. . .

Your article was used advantageously in all classes. It could be understood by all, it contained sound medical information, and above all it had great human interest. Perhaps the Emergency Room patient,

Anita M. Bailey, who wrote so kindly of her October 4th experience, would be interested to learn that fifty Home Nursing girls from George Washington High School relived her Emergency Room hours moment by moment.

Sincerely,  
Launa F. Sween  
George Washington High School  
192nd St. & Audubon Ave.  
New York, N. Y. 10040  
c/o Mrs. Audrey Richardson

Dear Miss Sween:

Thank you for your kind letter to Mr. Binkert, Executive Vice President of the Hospital. It is very reassuring to learn that *The Stethoscope* has been of help to the nursing students of George Washington High School. We will be pleased to send a copy of your letter to Miss Anita M. Bailey.

Sincerely,  
C. R. Wise, M.D.

## IN MEMORIAM

### DR. L. BEVERLEY CHANEY

Dr. L. Beverley Chaney, Consultant in Neurology, died on March 12, at the age of 77, in New York. Dr. Chaney, who retired in 1953, had also been attending neurologist and chief of service at the Neurological Institute, in addition to being a consultant at Flushing Hospital and maintaining a private practice.

Dr. Chaney received his medical degree in 1918 from the Medical College of Virginia, and was a Diplomate of the American Board of Psychiatry and Neurology. He was president and trustee of the Joseph Collins Foundation which was established as a result of a bequest of the late Dr. Joseph Collins, a founder of the Neurological Institute. The foundation awards medical scholarships to worthy and needy medical students.

He was a member of many professional organizations, including the New York Academy of Medicine, the American Medical Association, the Neu-

rological Society, and the Association for Research in Nervous and Mental Diseases.

Dr. Chaney is survived by his wife, son, daughter, one sister, and three grandchildren.

### MRS. OTTO BEREND REIMER

Mrs. Otto Berend Reimer, who was active in charitable work, died on March 13, at her home in Scarsdale, New York. She was 62 years old.

Mrs. Reimer, the former Ursula Squier, was the daughter of the late Dr. J. Bentley Squier of the College of Physicians and Surgeons and the Squier Urological Clinic that bears his name. Dr. Squier was one of the foremost surgeons in urology, and was a founder of the American College of Surgeons and its president in 1932-33.

Mrs. Reimer leaves her husband, a member of the New York Stock Exchange for 40 years and a retired partner of Reimer & Co., a son and daughter, and 5 grandchildren.

in October 1965. The Committee is involved in the review, guidance, and evaluation of planning for the region and in the operational program as it develops. DR. YAHR will serve as Chairman of the Subcommittee on Stroke of the Advisory Committee. DR. FRIEDRICH, who is now studying the application of dental care in the treatment of stroke patients, will serve as Chairman of the Subcommittee on Dentistry of the Advisory Committee.

# 'Medicine in the Tropics' — An Avalanche of Experience

*Continued from page three*

beds. The missionary hospital has 30 to 100 beds, and all are filled, sometimes with two patients.

At Phebe Hospital in Liberia, students' living quarters depend upon missionary vacancies at the time. At the Awo Omamma Hospital in Nigeria, students usually live with the doctor's family or in a staff home.

From his experience at the Firestone Medical Center in Liberia a student reported:

"We were given a large air-conditioned room in the hospital. We were served three hot meals a day in our room. Maid service was provided, as well as daily laundry service. In addition, we were provided with a car and free gasoline. We were permitted to go to the Firestone Staff Club, where we could swim in a pool, play golf, go to a salt water beach, or play tennis."

In the mission hospitals, students at times bought their own food which was then prepared by their wives. At Phebe it was possible to buy from the mission pantry. Here students also enjoyed dining with the missionary doctors and their families.

## Doctors Swiftly Acquire Wide Experience

Medical experience comes like an avalanche to the young doctors who serve in these hospitals. Two months may be compared to years at home as to variety of illnesses encountered.

Among many people of the world the hospital is a place to go only when one is seriously ill. Programs of preventive medicine, launched hopefully, may be defeated by indifference. Immunization, important to healthy people in any country, is not easily sold to Africans whose life expectancy is between 30 and 40 years.

However, the situation at Firestone offers a contrast to some of the other hospitals, for the people who work on the plantation are expected to be

vaccinated. In one day, a medical student vaccinated 2,000 persons against smallpox at Firestone.

It is a vital experience to leave the protected environment and serve as a member of a medical team working with extensive populations. Here the student is faced with the challenge to achieve Dr. Brown's four basic goals: to serve as an intern in various hospitals; to work not only with diseases peculiar to the tropics but also with the cosmopolitan diseases; to appreciate public health facilities which aid in the control of water and excreta borne disease; and to participate in a planned and continuing research project.

## Wives Gain Appreciation Of Medical Problems

Wives who accompany their husbands on these trips, according to Dr. Brown, gain much in understanding and appreciation of medicine as a profession. The wife has many opportunities to assist, according to her interests and abilities.

"My wife and I spent about seven weeks at the Pfeiffer Memorial Hospital in La Paz, Bolivia," we read in one of the reports. "She had ample opportunity, although not a nurse, to do nursing work, and helped run the emergency room. We both felt that she had gained a great deal of insight that she could not have obtained in the United States as to how a doctor works."

## Travel Opportunities Are an Added Benefit

Students may take their month of vacation following the two months of service in the tropics, and thus are able to do some traveling in remote parts of the world. Climbing Kilimanjaro becomes a vacation goal of many who go to Africa.

And the medical experience itself may involve unique travel, as in the case of the students in Surinam who voy-

aged up the river into Brazil to collect blood from primitive Indians.

## Depth of Experience Reflected in Letters

Letters from students express how highly they have valued "Medicine in the Tropics." They often speak of it as having been the most valuable part of their medical training.

Here are excerpts from a recent letter to Dr. Brown from Dr. Bernard Talbot:

"Dear Dr. Brown . . . I want to thank you again for the Medicine in the Tropics program which was one of the most valuable experiences of my life. . . . From my stay in Liberia, I acquired a yen for international cooperation and international living—and would be very interested in spending some of my future time together with some developing nation helping with their medical science program. I would like to speak with you some more about this in the future. . . . Sincerely yours, Bernard Talbot."

And from Dr. Edward Harrow:

"Dear Dr. Brown . . . (Our boat) was more like a raft with a roof and outboard motor, and we went two days upriver to hold clinic. At each of two villages we saw about eighty patients, most of whom were children with malnutrition, parasites, and URIs. . . . We charged minimal fees (four cents a visit), but some people could not afford that and came with grapefruits or eggs instead. . . . On one stretch of the river the water got so low that the motor was of no use . . . and we got out and pushed—nine hours' worth. We were told that the river had crocodiles and piranhas, but as far as I can tell when I look at my toes, I still count ten. . . . You really cannot appreciate how other people live and think and feel until you are right there with them. If for no other reason, this type of experience is sufficient to make this trip and the whole program of tropical medicine really worthwhile. Sincerely, Edward Harrow."

## "These Were Not Prepaid Junkets"

Dr. Brown states that the medical students undertake this experience on a shoestring, and many of them pay their own way, and, of course, they save the two months of room and board in New York as the hospitals provide this.

During the first eight years, the program had no financial help at all. "These were not prepaid junkets," Dr. Brown said.

The transportation is the chief cost to the student, although there are the usual

In nursing it's the quality of care, not the uniform, that counts.

Waiting for a clinic visit can be a three or four hour job . . . but there is no complaining, and the line moves in an orderly fashion.

miscellaneous items which he must pay for. If the student cannot pay his transportation, he may receive assistance through a Smith, Kline and French scholarship or through Dr. Brown, who now has an N.I.H. grant for the purpose of training professional people in tropical medicine. Some assistance can be given the student from this fund.

## How Did It All Begin?

It all began because Dr. Brown, whose field is tropical medicine, saw that the two-month elective course for fourth year students lent itself to such a program. He knew the Alcoa Company hospital, at Moengo, Surinam. "I asked the president of Alcoa if we could send students."

Soon there were more applicants than the hospital had room for, and Dr. Brown had to branch out and find more hospitals.

Dr. Brown has just returned

from Surinam. He makes a trip every two or three years to the hospitals which participate. His son David, P&S 1965, took his elective in medicine in the tropics at the Firestone Hospital in Liberia. As he plans to become an ophthalmologist, his research projects was on the relationship of onchocerciasis to glaucoma. (There is none.—Dr. H.W.B.)

## And Now—The First Reunion

Coming together as a group for the first time on the evening of April 26 at Bard Hall, the doctors who have participated in "Medicine in the Tropics" have been asked to bring three or four of their most interesting slides from this experience abroad.

A part of the Saturday morning program of Alumni Day, at the Alumni Auditorium, April 27, will be a "Medicine in the Tropics" program at which Dr. Brown will preside.

Dr. Newell Augur examines a patient at the Ganta leprosanarium.

## Dr. King Presents P&S Medallions

On Friday evening, February 28, the Men's Faculty Club at Morningside Drive was the scene of a formal dinner where several eminent pathologists were presented with silver medallions for the renown they have brought to the name of Columbia University.

Earlier in the day there had been a review of the coming year's teaching program in Pathology, a buffet lunch at Bard Hall for guests, staff, and students, and an oral examination in the afternoon for second year medical students.

Dr. Donald West King, Professor of Pathology and Director of Service, presented the medallions to the following nine special guests who had all at one time or another been connected with Columbia University: Dr. Jacob Furth, Professor Emeritus, Delafield Hospital; Dr. Hans Smetana, Professor, University of California at Los Angeles; Dr.

Dr. Donald West King

Maurice Richter, Good Samaritan Hospital, Phoenix, Arizona; Dr. William Von Glahn, Wilmington, North Carolina; Dr. Richard Naeye, Pennsylvania State University; Dr. Fred Lucas, University of Missouri Hospital; Dr. Wellington Stewart, University of Kentucky; Dr. Robert Coon, University of Vermont; Dr. William Carnes, University of Utah Medical Center.

## LIBRARY BOOK SALE, MAY 7-17

The Milbank Library, PH 20, will once again hold its annual Spring Book Sale. Used books will be on sale at reduced prices from Tuesday,

May 7, through Friday, May 17.

Donations of books, both hardcover and paperback, will be gratefully accepted.

## Two Books Now Available From Nursing School

Two books, printed as part of the 75th anniversary celebration of the School of Nursing, are available to hospital personnel and others. A cookbook, with all recipes contributed by nurses, is \$2.00. *Neighbors*, by Eleanor Lee, is a lovely history book of the School of Nursing with many pictures of the hospital, and costs \$3.00. Can be purchased in the Nursing Office, PH 4.

## "Triangle Girls" Entertain at BH

A group of three adults and thirteen girls, "The Triangle Girls," gave an entertainment for young patients on the sixth floor of Babies Hospital on Saturday, February 10. The Triangle Girls, who are daughters of the Masonic Order of Eastern Star, go to hospitals on Saturdays to entertain children.

They came during visiting hours. They brought valentines, candies, finger puppets and a guitar, and they sang folk songs.

This group was organized by Mrs. John Adaway, 29 Oak Tree Court, Albertson, New York, whose eleven-year-old daughter died of cancer at Babies Hospital on New Year's Eve three years ago.

Permission was given by Marjorie Peto, Babies Hospital, for the Triangle Girls to bring their entertainment to this sixth floor audience of children patients. According to Mrs. R. Burns, assistant head nurse, the program was well received.

## Fortran Course Begins May 7

An advanced course in Fortran programming for those who have had the first Fortran course or equivalent will be given to administrative and medical personnel starting May 7, 1968, Tuesdays and Thursdays. It will consist of six 1 hour lectures.

The lectures will be held in Presbyterian Hospital on the 4th floor, Room 4, from 5 to 6 p.m.

Registration cards may be obtained in PH 4-33, and must be returned by April 25.

For more information, contact Dr. William A. Bauman, Director, Medical Data Processing, at Extension 2077.

## Nurse Fund Raffle

The Student Nurse Scholarship Fund Raffle will be held on April 24 at the Annual Student Nurses Benefit Card Party in Maxwell Hall. First prize includes a trip for two from New York to Barbados plus a week's stay at the Benton Beach Hotel. There are many other valuable prizes.

## P&S Ophthalmologists at University of Puerto Rico

From January 15 through March 11, members of the Ophthalmology Research staff gave a course in Basic Sciences at the University of Puerto Rico at San Juan. Staff members spent from 3 to 5 days, each, in this teaching program, which consisted of 20 hours per week of lectures and laboratory demonstration. Arrangements for the P&S staff to teach the residents at the University of Puerto Rico were initiated 3 years ago by Dr. George K. Smelser, Professor of Anatomy, assigned to Ophthalmology, who is the Director of Eye Research at P&S, and Professor Guillermo Pico, Chairman and Head of the Department of Ophthalmology at San Juan. This year the scope of teaching was enlarged to include 20 additional doctors from many Latin American countries. A report of this arrangement appeared in *Stethoscope* in January.

The staff members taking part in the program, and their area of instruction are: Dr.

Dr. George K. Smelser

Smelser, Embryology and Histology; Dr. Saiichi Mishima, Physiology; Dr. Laszlo Bito, Physiology; Dr. Paul Witkovsky, Physiology of Vision; Dr. Kenneth Eakins, Pharmacology; Dr. Abraham Spector, Biochemistry; and Dr. Wladyslaw Manski, Immunology. The last series of lectures was given by Dr. A. G. DeVoe, Chairman of the Department of Ophthalmology.

## Public Health Announces Two Summer Courses

Columbia University's School of Public Health and Administrative Medicine, Program of Continuation Education, announces two summer courses. *The Voluntary Health Agency in the Community* is offered exclusively for employees of the voluntary health agencies and is limited in enrollment to eighteen. The initial session is scheduled from June 10-21 at the School's campus. The other institute, *Ex-*

*ecutive Development: Planning as a Community Function*, is designed for executives of voluntary and official health agencies and other professional organizations. The course is planned from July 14-19 at Nassau Inn, Princeton, New Jersey. Inquiries should be addressed to: Program of Continuation Education in Public Health, 21 Audubon Avenue, New York 10032, telephone 568-4334.

## Two New Writers at Public Interest

Christina McDougall

Naomi Wollins

Two writers have joined the staff of the Office of Public Interest. In addition to writing for *Stethoscope*, they will be working with outside publications and the broadcasting media in reporting news of the Medical Center.

Christina McDougall, a Scot from Aberdeen, has come to New York via Paris, France, and Toronto, Canada. She came to the States in January of this year and, before that, worked for ten and a half years with the Public Affairs Department of the Canadian Broadcasting Corporation, first as a radio producer, then as a program organizer in radio and television. She specialized in adult education and helped plan conferences and seminars

on public and international affairs. In Paris she worked for the European Movement, translating and writing articles and reports and organizing meetings about the Common Market, Coal and Steel Community, et cetera, for youth and adult education groups in various European countries.

Naomi Wollins, whose home is Akron, Ohio, comes to New York from Madison, Wisconsin, where she attended the University of Wisconsin and received a Bachelor of Science degree with a 'major in psychology in 1966. She has also done graduate work in English at Wisconsin and, prior to that, was a social worker.

## VOLUNTEER AWARDS TEA, MAY 8

The Volunteers Awards Tea will be held on Wednesday, May 8, from 4 to 7 p.m., in Maxwell Hall. A program will be presented between 5 and 6 p.m. All active volunteers and those who served during 1967 and are eligible for the Presbyterian Hospital and United Hospital Awards are invited to attend.

## Front Office Employees Complete Course

Mr. Morton Engstrom, Front Office at HP, receives special citation for outstanding work as a student from Mrs. Virginia B. Smith, RN, Unit Manager of HP. At Mrs. Smith's left is Mr. Don Carroll, Chairman, Education Committee, Hotel Front Office Managers Association of New York City.

Four employees in the Front Office and Information Services have successfully completed the course in Front Office Procedure sponsored by The Education Institute of the American Hotel and Motel Association and given by Mr. Don Carroll, Chairman, Education Committee, Hotel Front Office Managers Association, New York City.

The students included Mr. Ralph Escheveste of the Neurological Institute Front Office, and the following from the Harkness Pavilion Front Office: Mr. John Kennedy, on leave in the Armed Forces, Mr. Thomas Stewart, and Mr. Morton Engstrom.

Mr. Engstrom received a special citation for his work as an outstanding student.

## • ENGAGEMENTS

*Joan Podorny*, Nurse Technician in the Radiotherapy Department, is engaged to *Robert Harrison*. They are to be married on April 20 and will reside in Englewood Cliffs, New Jersey.

*Jane Mills* and *John Glick* plan to be married on May 25. Mr. Glick is a third year medical student at P&S.

*Penny Lewis* and *Lawrence Bernstein* plan a June wedding. Miss Lewis is a senior student at the School of Occupational Therapy at P&S.

## • MARRIAGES

*Kathy Kevortian*, Technician in Clinical Pathology, Neurological Institute, was married to *Antranik der Ohannesian* on February 18. The couple honeymooned in Jamaica.

*Madelyn Pacella* and *Robert Temko* are planning a June wedding. Miss Pacella's father, *Dr. Bernard Pacella*, is Associate Attending Psychiatrist at PH and Associate Clinical Professor of Psychiatry at P&S.

*Catherine Hollings* and *William White* were married on February 17. Miss Hollings's father, *Joseph Hollings*, is a member of the Protective Department.

*Catharine Sitterley* and *Dr. Mark Pasmantier* were married on February 17. Dr. Pasmantier is a resident in surgical pathology.

## • BIRTHS

*Dr. and Mrs. Robert Lefkowitz* are the proud parents of a daughter, *Cheryl Renee*, born on February 10. Dr. Lefkowitz is a medical resident at PH.

A baby girl was born to *Selina Wynruit*, Technician in Clinical Pathology, HP, on March 2. The baby has been named Ruby.

*Lydia Sciba*, Technician on VC 4, Pediatrics, welcomed her first child, named *Natalie*, born February 18.

*Mr. and Mrs. Carmine Dolce* welcomed a son, *Thomas Carmine*, on February 19. Mr. Dolce is Mason Foreman, Maintenance and Construction Department.

## • FAREWELL

To *Tubal Graham*, who has gone from Housekeeping at PH to a superintendent's job at Jewish Memorial Hospital.

## Delafield Lectures for April

Francis Delafield Hospital, 99 Fort Washington Avenue, announces the two following lectures in their Scientific Program for April: *Intracellular Events Underlying Immunoglobulin Synthesis and Secretion*, presented by Dr. Johnathan W. Uhr, of the New York University School of Medicine, on April 5; and *Isolated Perfused Liver: A System for*

*Studying Net Protein Synthesis*, given by Dr. Leon L. Miller, of the University of Rochester School of Medicine, on April 26. All lectures will be held from 4-5 p.m. in the Delafield Hospital Auditorium. No lectures will be offered on April 2 and 9. The Scientific Program is supported by the American Cancer Society, New York City Division, Inc.

## NSF Grants to Drs. Benesch, Cizek and Nocenti

The National Science Foundation has granted an additional \$30,000 to the Trustees of Columbia University for continuation of a research project entitled *The Role of Subunit Interactions in the Combination of Hemoglobin with Ligands*. This research project is under the direction of Dr. Reinhold Benesch, Associate Professor, and Dr. Ruth Benesch, Assistant Professor, Department of Biochemistry, P&S, and will continue until March 31, 1969. Funds for this research now total \$90,000.

The NSF has also informed

the University that an additional \$11,500 has been granted to Dr. Louis Cizek, Associate Professor, and Dr. Mero Nocenti, Assistant Professor, Department of Physiology, P&S, for continuing support of a research project entitled *Influence of Estrogens and Other Hormones on the Electrolyte and Water Exchanges in Normal and Salt Deficient Rabbits*. This grant also is extended to March 31, 1969, and is in addition to a previous \$33,000 grant. Funds provided for this project now total \$44,900.

## DOINGS OF DOCTORS

DR. ANDRE COURAND, Professor Emeritus of Medicine, participated on April 1 in a program titled *Science, Scientists and Political Boundaries*, presented under the auspices of Columbia University's International Alumni Programs, with the joint sponsorship of the Institut Universitaire des Hautes Etudes Internationales and the Columbia University and Barnard College Executive Committee of Switzerland. The panel of Columbia University scholars examined the role of science in bridging cultural and political divisions within the world community at a public conference-debate held at the Hotel Intercontinental Geneva. Dr. Courand dealt specifically with the code of science and its relevance to other areas of human endeavor.

DR. HAJIME INOMATA, of the Department of Ophthalmology, spoke on "*Fine Structural Alteration in Experimental Keratitis*" at the meeting of the Eastern Section of the Association for Research in Ophthalmology, held on March 8 at New York University.

DR. RONALD L. KATZ, Associate Professor of Anesthesiology, P&S, and Associate Attending Anesthesiologist, PH, recently lectured at the University of Utah Postgraduate Course in Anesthesiology. His lectures were: "*Central Nervous System Control of Respiration*," "*Mechanisms and Treatment of Cardiac Arrhythmias During Anesthesia*," "*Respiratory Problems Associated with the Use of Neuromuscular Blocking Agents*," "*Effects of Local Anesthetics on Neuromuscular Transmission*," and "*The Rational Use of Muscle Relaxants*." Dr. Katz was also interviewed on Television Station KUED, which serves Utah and neighboring states.

DR. SALICHI MISHIMA, Assistant Professor of Ophthalmology, P&S, left the Corneal Center in March to return to Japan where he will be Associate Professor of Ophthalmology at the Tokyo University Medical School. The Corneal Center welcomes Dr. K. C. BHUYAN of India, who will work at the Center as a Research Biochemist.

DR. JOHN K. LATTIMER, Director, Squier Urological Clinic, and Professor and Chairman, Department of Urology, P&S, and DR. MYRON TANNENBAUM, Assistant Pathologist, PH, and Associate in Pathology and Urology, P&S, appeared on NBC's program, *Research Project*, on February 18, moderated by Dr. Frank Field. A motion picture of the cancer cells dividing and growing was shown through the use of a special photographic technique and development of a process enabling the doctor to watch the growth of cells in tissue culture. Dr. Lattimer explained the importance of these methods to evaluate the addition of various medications, X-ray, and hormones, in the war against cancer. The electron microscope (a gift of the Irene Heinz Given and John La Porte Given Foundation to Dr. Meyer M. Melicow of the Department of Urology) and the time-lapse photographic equipment (from a grant by the John A. Hartford Foundation to the Department of Urology) made this research possible.

DR. GEORGE W. FISH, Consultant in Urology, PH, and Professor Emeritus, Department of Urology, P&S, presided as President at the Annual Meeting of *The Clinical Society of Genito-Urinary Surgeons*, held at the Bowman Gray School of Medicine, Winston-Salem, North Carolina, February 22 and 23.

Dr. Fish

Dr. Ngai

DR. H. S. NGAI, Professor of Anesthesiology, P&S, and Attending Anesthesiologist, PH, was the principal speaker at the Annual Symposium of the Massachusetts Society of Anesthesiologists, which met in Boston on March 1 and 2. Dr. Ngai spoke on "*Anesthetics and Monoamines*."

DRS. HERNANDO CARDONA, ANTHONY DONN, and HAROLD F. SPALTER, of the Department of Ophthalmology, participated in the VIII Meeting of the Pan-American Congress of Ophthalmology that met from March 24 to 31 in Mer del Plata, Argentina. DR. CARDONA spoke on "*A New Binocular Ophthalmoscope*" and discussed two papers about keratoprostheses. DR. DONN, Assistant Attending Ophthalmologist, PH, and Associate in Ophthalmology, P&S, was a member of the panel discussing "*Treatment of Complications in Corneal Surgery*." DR. SPALTER, Assistant Ophthalmologist, PH, and Instructor in Ophthalmology, P&S, was also a guest panelist and spoke on "*Complications of Laser Photocoagulation*." In addition, Dr. Spalter spoke in Lima and Santiago on similar subjects.

DR. KARLIS ADAMSONS, Associate Attending Obstetrician and Gynecologist, PH, and Associate Professor of Obstetrics and Gynecology, P&S, served as Visiting Professor at the Department of Obstetrics and Gynecology at Western Reserve University during the week of February 12 through 16, and delivered the Fifth Rosenblum Memorial Lecture on "*Assessment of Fetal State*."

DR. DAVID H. BAKER, Director of Radiology, BH, and Associate Professor of Radiology, P&S, presented a course on "*Diseases of the Chest in Children*" at the Joint Meeting of the Latin American Association of Pediatrics and the Venezuelan Tuberculosis Society, held in Caracas, Venezuela, from March 11 to 15. Dr. Baker also presided at the Children's Hospital Alumni Association's Annual Meeting on March 29 at Arden House, Harriman, New York. On April 1, Dr. Baker presented a paper entitled "*Introduction to the Radiological Problems of the Lower Urinary Tract in Children*" at the meeting of the Uro-Radiology Eastern Radiological Society, held in Bermuda.

## P&S ALUMNI DAY AWARDS

Dr. Louis M. Rousselot

Jack W. Spitzberg

On Saturday, April 27, Dr. Louis M. Rousselot was awarded the Gold Medal for distinguished achievement in medicine by the Association of the Alumni of the College of Physicians and Surgeons, Columbia University in the City of New York. This is the highest honor that the Alumni can bestow on a graduate. There have been four previous recipients: Dr. Arthur Purdy Stout, Dickinson Richards (a Nobel Prize winner), Robert Berliner and John Adriani.

Dr. Rousselot graduated A.B. from Columbia College in 1923 and M.D. from the College of Physicians and Surgeons of Columbia University in 1927. He held various appointments at Presbyterian Hospital, Babies Hospital and Vanderbilt Clinic until 1948, when he became Director of Surgery, St. Vincent's Hospital and Medical Center of New York, Professor of Clinical Surgery, New York University School of Medicine. In February, 1968, Dr. Rousselot was

Dr. Girard Oberrender

appointed Deputy Assistant Secretary of Defense (Health and Medical).

He was president of the Physicians and Surgeons Alumni Association from 1952-1954 and named "Distinguished Alumnus" member of Alpha Omega Alpha Chapter of Columbia University's College of Physicians & Surgeons, 1966.

Among Dr. Rousselot's special honors are the Equestrian Order of the Holy Sepulchre of Jerusalem in 1956; the Knights of Malta in 1958; the Legion of Merit, U.S.A. and the Legion of Honor (Chevalier), French. In 1967 he was awarded the Bicentennial Medal commemorating the founding of the Medical School of Kings College, The College of Physicians and Surgeons, of Columbia University.

Dr. Girard Oberrender was awarded the Silver Medal, presented each year to an alumnus who has given meritorious service to the College of Phy-

## BUSY ALUMNI DAY FOR BABIES HOSPITAL

An eventful Babies Hospital Alumni Day, Friday, April 26, included an election of new officers, a conference, a symposium, and the dedication of two rooms of the new addition to Babies Hospital. These features, together with an open house, a luncheon, and a reception, added up to a full day for the 150 Babies Hospital alumni who attended.

The guest of honor was Dr. Rustin McIntosh, Professor

Emeritus of Pediatrics, who was the Director of Babies Hospital from 1932 to 1960. At the luncheon Dr. Edward C. Curnen, Director of the Pediatric Service at Columbia-Presbyterian Medical Center, gave an address dedicating, in the name of Dr. McIntosh, two rooms in the new addition, the library and a conference room.

The day's program began at 9:30 in the morning with an

*Please turn to page three*

Guest of Honor Dr. Rustin McIntosh, left; Mrs. McIntosh, former president of Barnard College, and Dr. Edward C. Curnen.

## PETER CASS MEMORIAL LABORATORY BACKED BY DAUGHTERS OF PENELOPE

THIS LABORATORY WAS DONATED IN MEMORY OF PETER CASS BY HIS FAMILY AND FRIENDS.

You can read this plaque on the third floor of the William Black Research Building. Peter Cass was ten years old when he died in 1961 in Babies' Hospital of a rare neurological disorder. In *The Stethoscope* of October 1964 an article described how a group of Peter's neighborhood friends had a club which used to meet regularly in his home. When he died, they emptied the club

treasury and donated \$46.35 to his memory.

Peter's mother, Mrs. William Cass, sent the money to Dr. Melvin Yahr, now Professor of Neurology and Associate Dean of the Faculty of Medicine. She was so touched by his acknowledgement of

her gift that she decided to try to do something more positive for medical research. Through the Peter Cass Memorial Fund, friends and neighbors and business associates contributed toward one of the laboratories in the Black Building. It was opened in 1964.

But the story goes on. At a recent convention in Dallas, Texas, THE DAUGHTERS OF PENELOPE, of which Mrs. Cass is a member, decided that the Peter Cass Memorial Labora-

## \$5 Million Is Pledged For Nursing Department

Over a period of fifty years the Columbia-Presbyterian Medical Center has provided medical care to four generations of the family of Mr. and Mrs. Van Alan Clark. They came to know the hospital well and were aware of many of its problems. This interest was expressed in a very practical fashion. In 1964 they donated \$1 million to the Department of Nursing to help it expand its educational facilities.

For long the School of Nurs-

ing had cried out for more nurses and increased enrollment but, more than that, the need for a different kind of training for these nurses. Money has usually been available for those who wanted to become supervisors or teachers and it was always assumed that the better educated nurse, the more likely she was to enter administration and be rather detached from the actual patient. But the cultural

*Please turn to page four*

## Edith Ankers Will Direct School of Practical Nursing

The Columbia-Presbyterian School of Practical Nursing, headed by Miss Edith Ankers, who was appointed Director on Monday, April 29, is now scheduled to open in September. Active recruitment of students will begin immediately. Employees of the Medical Center are invited to inform relatives and friends who might be interested in preparing for a career in practical nursing, about the new school.

Miss Ankers is uniquely qualified to prepare the courses of study and to direct the school. She graduated from the St. Luke's School of Nursing, New York City, in 1951, and served as staff nurse and as a head nurse in the Obstetrical Clinic of Presbyterian

Edith Ankers

Hospital until 1959, when she left to get her baccalaureate degree at Teachers College, Columbia University. Since

### ART IS HERE

All Medical Center staff and personnel are invited to view the Annual Art Show, Library Annex, PH 20, from 10 until 5, Monday, May 7, through Friday, May 17.

## From the Mailbag

"... in saving the life of my partner, Patrolman Burke..."

The City of New York  
Police Department  
New York, N. Y. 10013  
March 26, 1968

Mr. A. J. Binkert  
Executive Vice President  
Columbia Presbyterian  
Hospital  
622 West 168th Street  
New York, New York

Dear Sir:

I am writing this letter to bring to your attention the magnificent work done by the staff of the 14th floor Surgical Metabolism Unit of your hospital.

As you know, on February 28, 1968, at 1:05 a.m. Patrolman Paul Burke of the 34th precinct, while investigating a report of a disorderly man in the basement of 214 Audubon Avenue at West 176th Street, was shot in the stomach and critically wounded. Within minutes Patrolman Burke was removed from the scene and brought to the Emergency Room in your Hospital. From there he was taken to the Operating Room, where he remained for several hours, and was then placed in the 14th floor Surgical Metabolism Unit, where he lay in critical condition for several days.

Since then I have become a regular visitor in the Surgical Metabolism Unit where I have had an opportunity to observe the dedicated work and determined effort displayed by Nurses Laurie MacGibbon, Glenda Pullin, Susan Klein, Kathryn Shanahan, Maxine Van Wagner, Jane Downey, Margaret Griffin, Kathleen Knights, and Melanie Johnson.

I am sure that Patrolman Burke would not be as well on the road to recovery as he is, if it were not for the skillful and knowledgeable training which these nurses display in their everyday care. It is a pleasure for me, and Patrolman Burke's family to be greeted always by a cheerful hello and a warm smile. For this reason I write this letter. So often people take dedication too much for granted. I being a Police Officer thought my line of work was dedicated until I had an opportunity to observe the nurses in the Surgical Metabolism Unit. Now I can appreciate the true meaning of the word dedication. It is nurses like these that make the Columbia Presbyterian Hospital the great hospital it is.

I can only say thank you very much for the exceptional skill displayed by all in saving the life of my partner, Patrolman Paul Burke.

Sincerely,  
Robert G. Benz  
Patrolman  
34th Precinct

*Editor's Note:* According to the Surgeon, a medal should go to Patrolman Benz for getting Patrolman Burke to the hospital within minutes after the shooting. If there had been a delay of even a few minutes, it would have been too late.

"I could just feel  
that I was back again."

Dept. of Public Interest  
Presbyterian Hospital

Dear Sir:

I was very thrilled to read your article on "A Typical Day in Dr. Khorazo's Laboratory."

Those of you who rise with the sun now that spring is here and summer on the way may like to get your education the easy way over orange juice and coffee.

Beginning Monday, May 20, 6:30-7:00 a.m., the CBS is broadcasting a thrice-weekly Summer Semester in color on TRENDS AND ISSUES—HEALTH, EDUCATION AND SOCIAL WELFARE TODAY. It will continue until Friday, September 20. Other parts of the country will see it on the same days as New York but the times may be different. Check local listings.

The whole series is a collaboration between Columbia University and the U. S. Department of Health, Education and Welfare. The Wednesday morning programs will deal with EDUCATION TODAY and were prepared in cooperation with Teachers' College; the Friday programs, SOCIAL WELFARE TODAY, prepared with the School of Social Work. The Monday broadcasts on HEALTH TODAY had the collaboration of the College of Physicians and Surgeons and the

I was a Volunteer worker for eight years at the Hospital and everything said about the staff was so true. I could just feel that I was back again. How happy my days were in the lab, but I am now doing volunteer work at home. . . . I could not help but write to you.

Sincerely yours,  
Anna Kastle  
500 Kappock Street  
Riverdale, N. Y.

"I'm very grateful..."

The Presbyterian Hospital  
New York, N. Y.

Dear Mr. Saker:

I want to express my profound gratitude and my sincere admiration to the Presbyterian Hospital and to Dr. Peter DeSanctis and his assistants. I'm feeling healthy today after the treatment at Presbyterian Hospital, the best in the world, because of its magnificent organization, doctors, technicians, nurses, etc.

I'm always remembering that my son George Gonzalez was working 16 years with excellent record at the Presbyterian. My two grandchildren were born there. I'm very grateful toward this great and philanthropic institution.

My best regards and my best wishes.

Yours very truly,  
Alejandro Gonzalez  
(Cuban newspaperman)  
New York, New York

Please excuse my broken English. My teacher in this language is MYSELF!

—A. G. (Age 80)

## COLUMBIA U. AND H. E. W. COLLABORATE TO OFFER THRICE WEEKLY 'TRENDS, ISSUES'

School of Public Health and Administrative Medicine. The following is a rundown of the topics:

May 20—Health Trends and Issues—Introduction, Dr. Douglas S. Damrosch, Assistant Dean, College of Physicians and Surgeons, Columbia University.

May 27—Comprehensive Planning of Health Services, Dr. Damrosch; Edward H. Van Ness, Executive Director, New York State Health Planning Council; James R. Kimmey, M.D., Regional Health Director, Region II, U. S. Public Health Service.

June 3—Physician Manpower, Dr. Damrosch.

June 10—Manpower for the Health Professions, Dr. Damrosch.

June 17—Hospitals, Present and Future, Dr. Ray E. Trussell, M.P.H., Director, School of Public Health and Administrative Medicine, Columbia University.

June 24—Nursing Homes—The Old and the New, Dr. Trussell.

July 1—Community Mental Health, Dr. Damrosch; Dr. Lawrence C. Kolb, Professor of Psychiatry and Chairman, Department of Psychiatry, P&S; Dr. Marvin E. Perkins, Professor of Psychiatry, Mt. Sinai Hospital and Director of Psychiatry, Beth Israel Medical Center.

July 8—Comprehensive Personal Health Care, Dr. Damrosch.

July 15—The Cost of Personal Health Care, Dr. Trussell.

July 22—Meeting the Cost of Personal Health Care, Dr. Trussell.

July 29—The Quality of Medical Care, Dr. Trussell.

Aug. 5—The Control of Communicable Disease, Dr. Damrosch; Dr. David J. Sencer, Director, National Communicable Disease Center, U. S. Public Health Service.

Aug. 12—The Control of Chronic Disease, Dr. Damrosch; Dr. Donald Chadwick, Director, National Center for Chronic Disease Control, U. S. Public Health Service.

Aug. 19—The Control of

Burns in Children, Dr. Damrosch; Dr. George F. Crikela, Professor of Clinical Surgery, P&S; Dr. Richard A. Prindle, Director, Bureau of Disease Prevention and Environmental Control, U. S. Public Health Service.

Aug. 26—Smoking and Health, Dr. Damrosch; Dr. Chadwick; Daniel Horn, Ph.D., Director, National Clearinghouse for Smoking and Health, U. S. Public Health Service.

Sept. 2—Health Care in the Ghetto, Dr. Trussell.

Sept. 9—Recent Developments in the Treatment of Narcotic Addiction (including interview with two participants in the methadone maintenance treatment program for heroin addicts), Dr. Trussell.

Sept. 16—Research: Medicine for the Future, Dr. Damrosch; Dr. John V. Taggart, Professor of Physiology and Medicine, and Chairman, Department of Physiology, P&S.

A bibliography covering the three parts of the series will be sent on request to TV Summer Semester, School of Journalism, Columbia University, New York, N. Y. 10027.

Dr. Hans H. Zinsser, Associate Professor of Clinical Urology at Columbia College of Physicians and Surgeons, was a participant in the recent invitational seminar on medical education sponsored by the American Geriatrics Society at the Ponte Vedra Club, Ponte Vedra Beach, Florida. Dr. Zinsser is Program Chairman of the Annual Meeting of the American Geriatrics Society to be held in New Orleans, Louisiana, April 25-26, 1968, and President-Elect of the Board of Directors of the Society.

## NATIONAL HOSPITAL WEEK MAY 12-18

**YOUR HOSPITAL—PEOPLE CARING FOR PEOPLE** is the theme of the 1968 National Hospital Week Program, May 12-18. What makes a hospital different from any other large building? It is the people in it . . . people caring for . . . and about people. Now, during National Hospital week we salute these people for their dedication to the goal of high quality health care for all the nation's people.

## BABIES HOSPITAL ALUMNI DAY

*Continued from page one*

open house, visiting, and a coffee hour.

At 11:00 a Staff Conference was held in the Fourth Floor Amphitheatre. Dr. Louis Levy, Assistant Resident at Babies Hospital, presented a patient with osteopetrosis. Discus-  
sants were Dr. Arnold P. Gold,

Assistant Professor of Clinical Neurology, P&S, and Dr. John F. Rosen, a former assistant resident at Babies Hospital, now a Research Associate, Department of Endocrinology, Rockefeller Institute.

The luncheon and business meeting took place at Harkness Hall from 12:00 to 2:00. Dr. William S. Langford, Chairman of the Nominating Committee, presented the following new officers for the year 1968-69:

President, Dr. Walter R. Kessler; Vice President (President-Elect), Dr. Rustin McIntosh; Secretary, Dr. William A. Bauman; Treasurer, Dr. Joseph A. Silverman.

The outgoing President, Dr. Ruth C. Harris, presided.

At the afternoon symposium, from 2:15 to 4:15, Dr. William A. Silverman served as moderator. The topic was "Perinatal Medicine." On the panel were Drs. R. A. Amoury, W. A. Blanc, E. T. Bowe, E. C. Cur-  
nen, Jr., M. Finster, M. J. Jesse, L. S. James, J. C. Sinclair, and J. A. Wolff.

The day closed with a reception held at 4:30 in the newly dedicated Rustin McIntosh Conference Room.

It was noted, during the business meeting, that death had claimed five members during the past year. One of these

Alumni Day guests paused before a bulletin board to see what Babies Hospital will look like in the future. The white line divides the present building from the planned construction.

was Dr. Alton Goldbloom, pediatrician, who attended here 50 years ago, and whose son is also a pediatrician and Professor of Pediatrics at Dalhousie University Medical School in Halifax, Nova Scotia. Dr. Goldbloom was a member of the class of 1919. Others were Dr. John B. Ahouse, class of 1927; Dr. Robert Culbert, '31; Dr. Philip Kilbourne, '51; and Dr.

John N. Robinson, P.H. Staff (G.U. Service).

The members of the house staff who will be leaving in July were taken into membership at this time. The new members are:

GRADUATING RESIDENTS: Drs. William Arnold, Henry Balfour, Sidney Brodsky, John Costa, William Davis, Gloria

Edis, Michael Gruber, Frank Hubby, Michael Lapkin, Larry Lassinger, Joan Mathews, Jeffrey Roth, Arnold Rothner, Franklin Stroud, and Robert Thompson.

ATTENDING STAFF: Drs. Jacob Boris, Carl Dubovy, and Burton Feinsmith.

FELLOWS: Drs. Gabriel Duc, Lillian Blackmon, Stella de-Silva, and Yvonne Driscoll.

## P&S ALUMNI DAY AWARDS

*Continued from page one*

sicians and Surgeons and its Alumni Association over a period of many years. Dr. Oberender graduated M.D. from the College of Physicians and Surgeons in 1919 and has been active in Alumni Affairs for over twenty years, serving as President 1962-63. He was awarded the Alumni Federation Medal in 1960 by Columbia University and is currently a Director of the Alumni Association.

Mr. Jack W. Spitzberg, originally from Flushing, New York, but raised in Tyler, Texas, graduated from Harvard University magna cum laude in social relations and was on the Dean's List all four years. At Columbia University College of Physicians and Surgeons he was president of the freshman and sophomore class and is now president of the P & S club. He will receive his M.D. in June of this year and will intern in medicine at the Palo Alto-Stanford Hospital Center in California.

Mr. Spitzberg was awarded the Bronze Medal and a check for \$100 in recognition of his leadership and demonstrated interest in his medical school.

The awards were presented at the Annual Dinner of the Alumni Association of the College of Physicians and Surgeons at the Plaza Hotel.

## Greater N. Y. Fund Kick-Off Rally

The 1968 campaign for the Greater New York Fund will begin on Thursday, May 9, at 10 a.m. with a kick-off rally in the 4th floor amphitheater at Babies Hospital.

Dr. C. R. Wise, chairman of the campaign at the Hospital, will review results of last year's campaign and discuss the goals for 1968.

Mr. A. J. Binkert will be present to address the rally and to encourage our workers to continue their all-out efforts to keep Presbyterian Hospital at the top in this year's campaign.

A representative of the Fund will be present to answer your questions and to present a most interesting film that will demonstrate how effectively our contributions are used to help 425 individual Health and Welfare Agencies.

## John A. Hartford Foundation Holds May 16 Conference

On Thursday, May 16, the John A. Hartford Foundation Conference will be held at the Auditorium of the New York University School of Medicine. The topic is "New Teaching Techniques in Medical Education."

The program will begin at 9:00 a.m. and end at 4:30 in the afternoon. The co-chairmen are Dr. Jacobus Potter, Associate Dean, New York University School of Medicine, and Dr. James Lieberman, Director, National Medical Audiovisual Center.

Keynote Speaker: The Honorable Benjamin S. Rosenthal, Congressman, U. S. House of Representatives, Democrat, New York.

The speakers are Dr. Herbert Karp, Neurology Section, Grady Clinic, Emory University Medical School; Dr. Dale Groom, Coordinator Medical ETV, Medical College of South Carolina; Dr. H. Thomas Balentine, Assistant Clinical Professor of Surgery, Harvard Medical School; Dr. Richard Judge, Television Coordinator, University of Michigan School of Medicine; Dr. Basil I. Hirschowitz, Professor and Director of Gastroenterology, University of Alabama Medical Center.

## Daughters of Penelope Choose Peter Cass Laboratory

*Continued from page one*

tory was to be its new national project which will be carried on from year to year. Founded forty-five years ago to encourage American women of Greek origin to participate actively in the life of their country, it is one of the many voluntary organizations abounding in the United States without whose aid and enthusiasm medical research would be much the poorer. Peter Cass' mother and the members plan to carry

## THIS LABORATORY WAS DONATED IN MEMORY OF PETER CASS BY HIS FAMILY AND FRIENDS

on campaigns throughout the country to raise funds and arouse interest in the neurological research being carried out in Columbia-Presbyterian Medical Center.

Mary Georgioui and Georgia Anthros are chairman and co-chairman of one of the New York auxiliaries of the organizations. They say that contributions can be sent to Daughters of Penelope, Peter Cass Research Fund, c/o National Headquarters, 1422 K Street, N.W., Washington, D. C.

Day after day the scientists are whittling down to the causes and nature of neurological disease. This is the indispensable prelude to any kind of real cure. Often when a scientist has obtained proof through his experiments of the existence of some new truth, he finds that it is contrary to accepted views, often indeed unacceptable to many people inside and outside the

medical profession, who have rather rigid ideas, and fear the impact of something completely new into their lives.

Organizations like THE DAUGHTERS OF PENELOPE are helping to break down worn-out concepts and are creating a receptivity to new truths among their members and the general public by keeping them aware of what is going on. And they can win the undying gratitude of the researcher by not crying out for immediate results in the shape of a miracle "cure" but by providing a framework of sympathetic understanding and financial support so that the daily grind of fundamental research can inch its way forward to positive results.

In an early issue of *The Stethoscope* we shall give an account of some of the research into neurological disorders that is in progress in the Black Building.

If Peter Cass had been born fifteen years later he might have lived. In any case, there will be others like him who will benefit from the research being carried forward in the Peter Cass Laboratory.

The William A. Black Medical Research Building, where more than 600 medical research projects are now in progress. The Peter Cass Laboratory is on the third floor.

## BEFORE THE MOTHER GOOSE BALL

Dr. Virgil Damon, Mrs. Seymour Whyman, Dr. Jerome Webster and Mrs. Frank R. Smith, left to right, met recently to discuss plans for the Mother Goose Ball which was held on Saturday, March 30, at the Men's Faculty Club, Columbia University. Dr. Damon and Dr. Webster were Honorary Chairmen of this year's party which benefits the Medical Center Nursery School.

## Hippocrates in Marble, Gift of Dr. Richards

Dr. Dickinson W. Richards, Lambert Professor of Medicine Emeritus, with marble bust of Hippocrates of Ostia, which he commissioned in Italy and presented to the Department of Medicine. The bust, an exact copy of a portrayal of Hippocrates discovered in 1940 during excavations in Ostia Antica, will preside over the activities of the new Richards Departmental Research Library, on the 8th floor of Presbyterian Hospital, 8-436.

## Dr. Mourant Gives XX Gibson Lecture

Glances from the XX John G. Gibson, II, Lecture and Reception, April 18. Dr. Arthur E. Mourant, M.D., F.R.C.T., F.R.S., of London gave the lecture in Alumni Auditorium, photo, upper right. He is shown, lower left photo, with Dr. Porter; lower right photo, with Sanobar Qureshi, Pakistan, Dr. Scudder, and Mrs. Mourant.

## Edith Ankers Will Direct New School of Practical Nursing

*Continued from page one*

1960, Miss Ankers has taught in the practical nurse program at the Jane Addams Vocational High School in the Bronx. During the current year she has been program chairman for the entire school. In 1964, she obtained a master of science degree from Hunter College, and she holds a teacher's license from New York City Board of Education.

Miss Ankers will assume her new position as Director of the Columbia-Presbyterian School of Practical Nursing in July.

It is hoped that a full class of at least 20 students can be enrolled to begin their studies in September. Once the school is in full operation, it is hoped that two classes can be enrolled and graduated each year. Applicants must have a genuine liking for people and a desire to care for patients. The course of study will be for 12 months, including three weeks vacation. Entrance requirements for student practical nurses will include the following:

**AGE:** Between 17 years and a maximum age that will be determined by the fitness of the applicant.

**EDUCATION:** High school graduate, or the equivalent, plus a satisfactory scoring on a pre-entrance aptitude test.

**HEALTH:** Good physical and emotional health, which will be determined by a pre-entrance physical examination.

**EXPENSE TO THE STUDENT:** Scholarship aid will be available to qualified students. The fee for a pre-entrance aptitude test will be \$6.00. Tuition for the course will be \$300, and room and board for resident students will be \$300.

Graduates of the new school will receive a certificate from the Presbyterian Hospital and be eligible to take the licensing examination of New York State. Upon passing the examination the graduate can then use the official designation of Licensed Practical Nurse, and may practice as such.

Employment opportunities at the Columbia-Presbyterian Medical Center will be available to graduates.

Those interested in applying for enrollment in the new school should address inquiries to:

Miss Edith Ankers  
Director, Columbia-Presbyterian School of Practical Nursing  
Columbia-Presbyterian Medical Center  
622 West 168th Street  
New York, N. Y. 10032

## LILLIAN HANSEN IS NEW LIBRARIAN AT INSTITUTE OF OPHTHALMOLOGY

Lillian Hansen, who for the past three and a half years has worked in the Department of Public Interest of The Presbyterian Hospital, has been appointed librarian at the John M. Wheeler Library of Ophthalmology. She replaces Elizabeth Culbert, who recently retired.

"Miss Culbert has been a very fine teacher," Miss Hansen told a reporter for *The Stethoscope* recently. "She has given me training at this library for the past two months."

Listening to Miss Hansen's description of her new work and noting the ease with which she has become familiar with many scientific terms unknown outside her new field, one is convinced that she is adapting swiftly and naturally to this esoteric realm.

"I can't think of anything I'd rather do," Miss Hansen said. "I feel that I've come back home, now that I'm handling books again."

For a number of years Miss Hansen worked with a publishing company, and she has also done library work. She expresses gratefulness "to persons in Administration for remembering my library experience. When this opportunity arose, they approached me and asked if I would like to apply."

One of her new responsibilities is to be on the lookout for new books and the contents of professional journals. Book selections are made through consultation with the library committee. The library has a liberal policy in its choice of books, and this is highly important in maintaining a standard of excellence. There are many books in

Lillian Hansen is "back home" in her new library job.

foreign languages, some of them—a matter of curiosity for Miss Hansen—are printed entirely in the characters of Oriental languages. Doctors from many different lands make use of this library.

There are also numbers of what Miss Hansen describes as "quite ancient" books—but this does not mean that they have become obsolete. She has observed, for example, that a discovery of 1909 has only recently found its way through the channels of research to become useful to modern ophthalmologists.

Miss Hansen considers it a privilege to work in such a library, whose services are an indispensable part of ophthalmological research. She considers it an honor and a significant responsibility to be associated with doctors who are carrying on a wonderful service to mankind. However, she does not expect success to come instantly. "I realize," she said, "that it takes years to be a good librarian, particularly in a special field."

## \$5 MILLION FOR NURSING DEPT.

*Continued from page one*

basis of our society has been changing rapidly. Not only do many girls think it quite natural to come to bedside nursing after college, but with the development of new concepts in medical services, nurses directly involved in patient care require broader and more professional education than is available at the moment. When Mrs. Van Alan Clark was a patient in Presbyterian Hospital a few years ago she came to realize how important this was.

When the Nursing Faculty managed to catch its breath after learning about Mr. and Mrs. Van Alan Clark's magnificent gesture, they lost no time in drawing up plans for the future. Land was available between Maxwell Hall and Riverside Drive. A five floor nursing educational unit would be built there.

On this basis the School of Nursing was eligible to apply for a grant of \$2,330,000 in federal funds under the Nurse

Training Act. On April 10th Miss Gill received word that the proposal had been approved and funding recommended but that final action was contingent upon the Nursing School raising matching funds.

The amount required was just under a million.

When Mr. and Mrs. Van Alan Clark heard about this they went into action again. They promised a further gift, either personally or through the foundation in their name, to finish the building of the education unit. And so the matching of the federal grant is well on the way to accomplishment.

But the nursing faculty are not waiting for their new building before putting their educational ideas into practice. This spring the Presbyterian Hospital rented four rooms in the armory to provide temporary teaching space. No matter what, the nurses are going to get their education.

## The Nurse-Midwife—A New Kind of Specialist

A new kind of specialist is emerging these days—the nurse-midwife. The name has a pioneer ring to it, conjuring up memories of our grandmother in the frontier lands far from any doctor, being delivered of her babies by the woman at the next farm. But the definition given by the American College of Nurse-Midwifery firmly sets such romantic notions aside: "... a Registered Nurse who by virtue of added knowledge and skill gained through an organized program of study and clinical experience recognized by the American College of Nurse-Midwifery, has extended the limits (legal limits in jurisdiction where they pertain) of her practice into the area of management of care of mothers and babies throughout the maternity cycle so long as progress meets criteria accepted as normal."

Nine schools in the United States grant certificates in mid-wifery and six of them—Catholic University, Yale, Johns Hopkins, New York Medical College, the University of Utah and Columbia—prepare the student for a Master's degree.

In other words, the new breed of nurse-midwife is a highly skilled specialist, working in close consultation with the doctor at all times, but able to take over completely the routines of normal birth. The obstetrician has more free time to concentrate on complications and deviations from the normal.

These women have had to fight a certain amount of prejudice from the medical profession. Some doctors seem to see their appearance as a threat, others as a step backwards to the Dark Ages of medicine. What it really means, of course, is a development of the modern idea of teamwork.

The one year course is under the Department of Nursing and is conducted in cooperation with the Department of Obstetrics and Gynecology at Columbia-Presbyterian University School of Public Health and Administrative Medicine, and Harlem Hospital Center of Obstetrics and Gynecology. The courses include biostatistics, epidemiology, public health, mental health, anatomy and physiol-

ogy, obstetrics and pediatrics, but the emphasis throughout the academic year is placed on maternity nursing, and the importance of focusing on the family as a unit is stressed.

This is immensely valuable later because much of the nurse-midwife's job will be concerned with following through the mother on prenatal problems, giving guidance when necessary. At Harlem Hospital, for instance, there is a nurse-midwifery service where students get experience during the program. The patient is examined by the resident and if everything seems to be normal she is turned over to the nurse-midwife, who often also acts as instructor to the students. At Harlem the students have the opportunity of participating in all stages of prenatal care, examination of the mother, preparing her for the hospital stay and the actual labor and delivery.

If anything seems to be in the least abnormal the resident will be consulted immediately but otherwise the responsibility for the course of labor and delivery of the infant belongs to the nurse-midwife. She starts intravenous fluids, copes with pudendal blocks, local infiltrations and episiotomies. She resuscitates and examines the newborn, writes up delivery and does the follow-up examinations while the mother is in the hospital. After four weeks, the nurse-midwife does a complete post-partum check and pelvic examination and reports any problems to the resident. She also is equipped to give advice on all methods of family planning.

The serious shortage of skilled doctors is one of the nagging problems that every community in the country has to face. It cannot be solved just by building new medical schools. Time is too short. But one practical solution is the creation of new types of skilled specialists who relieve the physician of part of his burden. Before long the nurse-midwife will be so much a natural part of our medical services that we will wonder, as we always do after the event, however we did without her all these years.

## Alumnae Cookbook: Please Note Corrected Price

The Columbia-Presbyterian Alumnae Cookbook offers a choice collection of delicious recipes from many of the best cooks among our gourmet nurses! Cecile Covell's delightful drawings appear on the cover and introduce each category (appetizers, casseroles, fish, meats, desserts, etc.). A unique feature is the section on Camp Cookery by Harriet Mantel Deleuran.

This 75th Anniversary publication, compiled by the Connecticut Alumnae Group, may soon be a collector's item. It may be purchased in the Medical School Bookstore; or orders may be sent to Mrs. Carl P. Bausch, 98 Waterside Lane, West Hartford, Conn., 06107. Make checks for mail orders (\$2.50 per copy) payable to Columbia University School of Nursing 75th Anniversary Fund.

## P&S Students Take Neighborhood Youngsters to Circus

P&S Club members treated neighborhood children to a day at the circus. At left, Bernard Schachtel, P&S '70, who organized this year's event, confers with one of the guests for the day. In the center, a youngster intently watches the show. At right, Jerry Liebowitz, P&S '69, provides a better view for a young spectator.

On Saturday, April 20, 87 neighborhood youngsters shared a day of fun and excitement at the circus with 115 medical students from Columbia University's College of Physicians and Surgeons.

The P&S Club, the organization of medical students, has taken keen interest in children living near the medical campus. In an effort to develop friendships, the students have

visited these children and have met with their parents in their homes.

Last April a group of students treated some of these children to a day at the circus. Each student paid for himself and for one child. Any additional money went for candy and souvenirs. The event was greeted with such great popularity that last year's graduating class established a

special fund to insure continuance of the program.

This year's response was even more enthusiastic. The children met with the students at 1:30 at Bard Hall, the medical residence on Haven Avenue, and proceeded by subway to the 3:00 performance of the Barnum & Bailey Circus at Madison Square Garden. It was a day spent in harmonious, cheerful company.

## To Dial Toll Calls Or Long Distance

NEW DIALING INSTRUCTIONS in effect May 15, 1968, at Medical Center:

Third Party Billing for PERSONAL long distance or toll calls made by staff and patients:

Dial 8.

Give the operator the number desired together with YOUR NAME, HOME TELEPHONE NUMBER AND AREA CODE or CREDIT CARD NUMBER. The toll charges will now appear on your home telephone or credit card statement. You will not be billed by the Hospital Accounting Department.

## Many P&S Doctors On Channel 4 "Research Project"

Anyone in the New York area who has a special interest in medical research or what is new in science probably does not need to be told to watch Channel 4 television on Sundays from 2:00 to 2:30. The series "Research Project" recently celebrated its hundredth program (on heart transplant operations) by holding a reunion of all those who had appeared on the show during that time.

The medical profession is noted for its wariness in dealing with the mass media, often with good cause. There have been occasions when sensationalism and bad taste have taken precedence over the sober conveying of information. But NBC producer-director Jay Miller and host Frank Field, with the cooperation of the eminent physicians and medical researchers

## A Tribute to Dr. Martin Luther King, Jr.

On April 8, the staff and personnel of the Medical Center expressed their grief at the loss of the Rev. Dr. Martin Luther King, Jr., when they gathered about noon in front of Vanderbilt Clinic in an orderly, silent procession to pay tribute to him.

who are their guests, have succeeded in putting the facts first and conveying the feel of what research involved in a credible yet often exciting way to the viewers.

Many of the experts have come from Columbia-Presbyterian Medical Center, among them: Dr. Charles Christian, Associate Professor of Medicine at Columbia; Dr. Robert Carroll, Associate Professor of Orthopedic Surgery, in charge of hand surgery; Dr. Charles L. Fox, Professor of Microbiology; Dr. William Silverman, Professor of Pediatrics; Dr. Irwin Clark, Associate Professor of Biochemistry; Dr. Charles Ryder, Associate Professor of Clinical Orthopedic Surgery; Dr. Emanuel M. Papper, Professor and Chairman of the Department of Anesthesiology;

Dr. Melvin Yahr, Associate Dean and Professor of Neurology; Dr. Vincent J. Freda, Assistant Clinical Professor of Obstetrics and Gynecology, Columbia University; Dr. Karlis Adamsons, Jr., Associate Professor of Obstetrics and Gynecology; Dr. John G. Gorman; Director of the Blood Bank; Dr. G. F. Crikelair, Professor of Clinical Surgery; Dr. John K. Lattimer, Professor of Urology; Dr. Myron Tannenbaum, Assistant Attending Pathologist and Associate Director of Urological Research; Dr. Harold H. Tara, Assistant Urologist.

Dr. Francis L'Esperance, Assistant Attending Ophthalmologist at the Eye Institute, will appear Sunday, May 19, on a program in the "Research Project" series called THE LASER AND EYE.

# These Employees Are Retiring From Columbia-Presbyterian

## George Longbottom

On the last day of April, George Longbottom, who has been employed in the House-keeping Department for the past 39 years, reached the time of retirement.

Mr. Longbottom, born in England, came to the United States when he was four. He spent his early years in Plymouth, Massachusetts, but came to New York as a young man and immediately found his life's work at The Presbyterian Hospital. He started at a salary of \$90 a month. Throughout the years his

work record has been one of the best.

During the war, because of a severe shortage of help, Mr. Longbottom volunteered to work from 4 p.m. to midnight, and this has continued to be his shift through most of his years of service. As a porter, he has had varied work, not only cleaning but also delivering equipment and supplies when needed. For many years he has worked at Vanderbilt Clinic. In cases of fire calls or other emergencies he is always among the first to answer.

Mr. Longbottom's great interest in opera is well known among his many friends and acquaintances at The Presbyterian Hospital. He attends operas at every opportunity, and he possesses a fine collection of good records. He knows the great composers and is a student of their lives as well as their music.

Mr. Longbottom will now reside in Plymouth, Massachusetts, with his sister. He plans to attend opera in Boston. He will also do sightseeing when in New York City and will, of course, visit with his former colleagues in Vanderbilt Clinic.

George Longbottom

## Parking Construction Will Affect Approximately 425 Cars This Summer

Heavy construction involved in extending the parking facility at 165th Street and Fort Washington Avenue will begin on July 1 of this year. At that time large pieces of equipment will be brought on the job site to begin the erection of a 51-foot westerly addition to the existing garage. This will take about one month and will extend five stories upward.

Approximately 550 additional parking spaces will be provided.

During construction, it will be necessary to shore up the center bay on all levels of the garage so that on Aug. 1 this equipment can be brought to the upper deck to start the easterly erection of the three new tiers. Erection of the pre-stressed members will continue until December 1.

During the period from July 1 to December 1 it will be necessary to restrict parking not only in the parking stalls but also in the traffic lanes where presently there is double parking.

Approximately 275 parking spaces will have to be taken out of service and, at the present time, there are some 150 cars being double parked. This means that about 425 parkers will be affected by this cut-back.

Then, as the work progresses, parking spaces will be returned to service as rapidly as possible.

Preliminary work will necessitate more crowded parking, but it will not be necessary to withdraw any permits until the major construction work begins on July 1.

The model in the photograph shows the construction planned for the Medical Center parking facility. The top of the model is toward the south; 165th Street in the foreground extends from Fort Washington Avenue on the left to Riverside Drive on the right.

## Ursula Corning

Ursula Corning, therapist, Department of Physical Therapy, retired on May 1, after twenty-two and a half years of service to Neurological Institute.

"I have been very happy in my work at Columbia-Presbyterian," Miss Corning said, "and I will greatly miss being here."

However, she has some very interesting plans for the immediate future. She will go to Europe this summer and spend a leisurely vacation in Italy, an ideal environment

Ursula Corning

for her interests in mountaineering, music, languages, photography and travel. She speaks four languages.

Born an American citizen, Miss Corning spent several years of her early life in Switzerland, where her father was a teacher of anatomy at the University of Basel. Because he was a doctor and an author of medical works used extensively in Europe, Miss Corning grew up with an interest in medical education. She had a strong desire to become a doctor; however, her father took a dim view of women entering such professions. Nevertheless, her services at Neurological Institute have been, to a great degree, a fulfillment of this earlier dream.

And in all probability this career has not ended, for Miss Corning states that after her vacation she hopes to continue with more work in physical therapy.

## Advanced Fortran Course

An advanced course in Fortran programming for those who have had the first Fortran course or equivalent will be given to administrative and medical personnel starting May 7, Tuesdays and Thursdays. It will consist of six 1-hour lectures.

The lectures will be held in Presbyterian Hospital on the 4th floor, Room 4, from 5 to 6 P.M.

Registration cards may be obtained in P.H. 4-33.

William A. Bauman, M.D. Director

Medical Data Processing Tel: 579-2077

## Ruth Vickers

At her retirement tea, Ruth Vickers, right, is photographed with Helen Williams.

On Friday, April 19, Ruth Vickers, Director of Recreational Therapy at Babies Hospital, was given a retirement tea in the main dining room of Presbyterian Hospital.

"If I do all the things I want to do after retirement," Miss Vickers said, "the pension department will think it's Ruth Methuselah Vickers."

Miss Vickers came to Babies Hospital thirteen years ago, serving first as an assistant in Recreational Therapy, then as Director. She brought to her work an unusual background of experience and study, plus a natural versatility for working creatively with children. Anyone who has visited the bright, artistic world on 12th floor, Babies Hospital, can guess how much it means to young patients to come to such an environment for their daily play and study.

Miss Vickers majored in art at Teachers College, Columbia University, and studied stage designing under such teachers as Norman Bel Geddes and Robert Edmond Jones. She had practical experience with theaters in both the United States and England, but felt that the results of time and energy thus spent were quite transient.

Later, after teaching art in public and private schools, she discovered the interesting challenge of service at Babies Hospital. Her understanding of children is implied in her passing remark related to establishing woodworking in her department:

"There comes a time when

a boy doesn't want to make pink rabbits."

The Women's Board provided the money for this project, and so woodworking became a valuable part of the varied program, for girls as well as boys. Miss Vickers mentioned that "one of our girls competed with Grand Rapids in making furniture!" Although the children are patients, with the handicap of illness, they are at a learning age, and usually are able to find ways of creating things when given the opportunities. Miss Vickers is confident that this good work will go on, under the direction of Cynthia LaPorte, who has been her assistant.

Although some people dread retirement, Miss Vickers says that she is looking forward to it, for there are many things she wants to do—and she recited a whole catalog of interesting plans.

"I have very much enjoyed this position, which has given me such scope and latitude. It has been very harmonious here, and I hate to leave my friends." She mentioned her gratitude to Miss Peto, Miss Callahan, and others with whom she has worked.

One can only imagine the unmeasured gratefulness of patients who have enjoyed hours of recreation in Miss Vickers' department. Many of these have had no comparable contact with such opportunities or with such buoyant spirit for learning, creating, and working together.

## Second Group of Exchange Visitor Nurses

A reception was held on the afternoon of March 13 for 10 nurses of the Exchange-Visitors Program, the second group to complete their year at Presbyterian Hospital.

Ruth A. Rayner is the director of the program, and is assisted by Mrs. Doris M. Kiess. The nurses selected for this program come from various foreign countries and have had previous experience in hospitals back home. Some of this group will now return

home, while others will continue in further study in the United States.

The Exchange-Visitors in this group are:

Elizabeth Burton, Diane Cranley, Elenita Cruz, Karen Eide, Robin Kerr, Young Ja Lee, Daphne Momoh, Marija Plavetic, Annamma Verghese, Nobuko Yamahata.

These nurses have earned high praise during their year of participation in the Exchange-Visitor Program.

## Highly Successful Party For Student Nurse Fund

An estimated \$12,800 for nursing education was realized from the annual card party and raffle for the benefit of the Student Nurse Scholarship Fund.

The party, held April 24th, in Maxwell Hall, was attended by approximately 175 persons. Winning raffle tickets were drawn at this time.

Top prizes, first a trip to Barbados for two, went to Dr. Frederick Darby, Rochester, Michigan; G.E. portable color T.V., Mrs. Ward McLoughlin; Magnavox portable T.V., Mrs. Carl Ewis; natural Great Lakes mink capelet, Mrs. Ann De Angeles, Pelham Manor, New York; natural sandalwood mink boa, Ellen Wobbekind, Fort Lee, New Jersey; \$100 Lord and Taylor gift certificate, Jean Metzger; Steuben olive dish, Hester Ann Brown; two-piece men's matched luggage, Paula Domhek; G.E. can opener, Fran Andrews, New York; osterizer and spin cookery, Mrs. A. Domonkos, New York; Fieldcrest electric blanket, Mrs. Charles Graham, New York; Clairol Kindness instant hair setter, Mr. & Mrs. F. Heyner, Northwood, N. H.; loungee bathrobes, Mr. M. Pagnillo, Tuckahoe, New York; fruit of the month (three months), Mrs. G. Sallee, Biscayne, Fla.

Also taking prizes were Mrs. W. Ranck, case of scotch; Mrs. W. Byrne and Mrs. E. Self, Revlon make-up kits; Mrs. J. Piekarski, Pennycrest vacuum cleaner; Mrs. W. Lewin, china lamp; Mrs. J. MacKenzie, Proctor citation toaster; Mrs. Doonan, stained glass candle holder; Mrs. D. Bogert & Mrs. Reardon, Andrew Geller \$25 gift certificates; Mrs. V. Owen, Cornwell Thermo tray; C. Pace, G.E. grill and waffle iron; Mrs. R. B. Cannaday, portrait sitting; Mrs. S.

Mrs. A. J. Binkert, center, and Elizabeth Gill, Dean of Nursing.

Mrs. Frank Stinchfield, left, Chairman of the Benefit, and Mrs. Stanley Byshe.

McCain, electric wall clock; Nora Grien, Abercrombie & Fitch \$10 gift certificate; Mary R. Wier, dinner for two at Tappan Hill Restaurant.

Prizes to student nurses selling raffle books went to Brooke Serpe, Abercrombie & Fitch \$10 gift certificate, and Doris Cabeche, dinner for two at Tappan Hill Restaurant. Mrs. Gallagher in Babies Nursing office received a make-up case for selling party raffle books.

The Committee wishes to thank all who helped to make this event such a splendid success.

Mrs. Edward Self is served by Nurse Virginia Meyers.

### Dr. Cochran Honored

Dr. George V. B. Cochran, Department of Orthopedic Surgery, P&S, recently received the Kappa Delta Orthopaedic Award from the national alumnae meeting of the American Academy of Orthopaedic Surgeons in Chicago. The Award, carrying a \$1,000 grant, was for Dr. Cochran's thesis, "Electromechanical Characteristics of Moist Bone."

### New Members of 25-Year Club

On May 22 the following Medical Center employees will become new members of the 25 Year Club:

Mrs. Nora Alexander, Nursing; Dr. Eli Bauman, Medicine; Janice Blauvelt, Medical Information; Mrs. Adeline Blitch, Medicine, P&S; Mrs. Charlotte Breitung, Anatomy, P&S; Dr. Thomas Bridges, Jr., Neurology; Germaine Bufat, Registry; Mrs. Anne Christock, X-ray; Stephen Chruscz, Mary Harkness Unit; Dr. Clarence D'Alton, Medicine; Joseph DiCaro, Barber Shop; Dr. Zacharias Dische, Biochemistry, P&S; Mrs. Mary Dunn, Registry; Mrs. Jessie Gelly, Registry; Emilio Gonzalez, Pharmacology, P&S; Mrs. Mary Anne Greene, Nursing; Joseph Guidotti, House-

keeping; Klara Jacoby, Registry; Mrs. Katherine Johann, Radiology, P&S; William King, Elevators; Dr. Bertram Klat-skin, DOS; Reva Kravat, Nursing; Harry Lequeux, Physiology, P&S; Dr. William Miller, DOS; Mrs. Margaret Muccilli, Maintenance & Construction; James O'Flaherty, Housekeeping; Dr. Bernard Pacella, Psychiatry; Doro-theda Pease, Food Service; Laura Ponticorvo, Biochemis-try, P&S; Mrs. Edith Reich-ert, VC; Dr. Charles Ryder, Orthopedic Surgery; Mrs. Vir-ginia Smith, Unit Manager, HP; Mary E. Sullivan, Nurs-ing; Very Jane Walker, Regis-try; Dr. Melvin Brent Wat-kins, Orthopedic Surgery; Mrs. Zenaida Watkins, Food Service; and Alice White, Registry.

## News of Nursing

ELIZABETH KITTLE, Charge Nurse, Neurosurgical Adult Intensive Care Unit, N1 9W, has been accepted into membership of the American Association of Neurosurgical Nurses affiliated with the American Association of Neurological Surgeons. She participated in the organizational meetings of the newly formed Nursing Association on April 9, held at the Hilton Hotel in Chicago, Illinois, and also attended the scientific meetings of the American Association of Neurologic Surgeons, known as the Cushing Society, held from April 8 through 11.

TERESITA MAXWELL, Supervisor-Instructor, PH 9, and DAWN MOMROW, Assistant Head Nurse, Surgical Cardiac ICU, PH 18, are co-authors, along with DR. DONALD S. KORNFIELD, Associate Attending Psychiatrist, VC, and Associate in Psychiatry, P&S, of an article on "Psychological Hazards of the Intensive Care Unit—Nursing Care Aspects" appearing in the March 18 issue of *Nursing Clinics of North America*.

DARYL DRURY, Assistant Head Nurse, N1 8, was accepted in the course entitled *Rehabilitation Aspects of Nursing* offered by the New York Medical College Graduate School of Nursing at Bird S. Coler Hospital from March 25 to April 5. Miss Drury was also recipient of a United States Public Health Service grant which covered full tuition for the program.

JUNE PANICK, Head Nurse in the Blood Bank, just returned from a three week vacation trip during which time she visited St. Anton, Austria, Rome, Florence, and Milan.

VIRGINIA ATWOOD, Head Nurse, N1 9, and HAROLD BARNES are engaged. A June wedding is planned.

A Jamaican dinner, prepared by staff nurses UNA WHITE, PH 10, GRETA CAMPBELL, PH 10, DOROTHY DAVIS, IOPH, and DAPHNE WYNTER, IOPH, was held in Harkness Hall on February 20. Most exciting dish served was the curried goat! Another dinner, prepared by Philippine staff nurses, was held in Harkness Hall on March 28. Entertainment consisted of Philippine dances.

MRS. CYNTHIA KINSELLA, Director of Nursing, Mount Sinai Hospital, spoke to a large group of nurses from Presbyterian Hospital who met on March 13 at Sturges Auditorium, Maxwell Hall. Her topic was *Professionalism in Nursing*.

CAROL ANN LOTTHAMMER, of the Medical-Surgical Unit, was married to LIEUT. DANIEL CARL, U. S. Army, on March 9, in Jamaica, New York. Lieut. Carl is stationed at Fort Ord, and they are living in Monterey, California.

MARY CRAWFORD, Research Associate of the Department of Nursing, presented a paper at the Convention of The American College of Nurse-Midwifery meetings, held April 4 to 6 at the Park-Sheraton Hotel in New York City. Her paper was entitled *Physiological and Behavioral Cues to Disturbances in Child-birth*. Other members of the Department of Nursing attending the meeting included Bernice Derby, Assistant Director of Nursing; Dorothy Robinson, Supervisor; Carole Kaufmann, Assistant Professor of Nursing; Phyllis Lepert, Associate in Nursing; Ruth Helmick, Associate in Nursing; and Julia D'Amico, Supervisor.

Welcome to DIANA DUFFY, a new nurse on the Blood Bank staff.

### M. S. Degree Offered in Occupational Therapy

The Faculty of Medicine, Columbia University, announces a new program in Occupational Therapy leading to a Master of Science degree. Applicants who possess a baccalaureate degree from an acceptable college or university will be accepted in September, 1968.

The two-year course of studies incorporates basic professional education and is directed towards the development of master clinicians and

leaders by providing an opportunity for students to specialize in either the physical or psychiatric areas of occupational therapy; by development of basic concepts of administration, supervision and education; by development of concepts and techniques in the scientific method.

For additional information contact Occupational Therapy Courses, College of Physicians and Surgeons, 630 West 168th Street, New York, N. Y. 10032.

### • ENGAGEMENTS

Carol Hesse, Medical Technician, Department of Microbiology, and Charles Stackhouse are planning a June 29 wedding.

Catherine Munnell and Lieut. Richard Smith, Jr., U.S.A.F., are engaged. Miss Munnell's father, Dr. Equinn Munnell, is Associate Attending Obstetrician and Gynecologist, PH, and Associate Clinical Professor of Obstetrics and Gynecology, P&S.

Camille Aversa, a Medical Technician in the Department of Microbiology, will be wed to Louis Lombardo on July 20.

Francine Chelos, Secretary in the Department of Microbiology, will be married on June 22 to Carlos Bernard.

Mary Lynne Van Atta and Gerard Kelly are planning a fall wedding. Miss Van Atta is a case worker in the Department of Social Service, assigned to surgery.

### • MARRIAGES

Mary Clarke Kolb and Ernest Lathan Estes III were married on April 13 in the Sarah P. Duke Memorial Garden, Duke University, Durham, North Carolina. The bride's father, Dr. Lawrence Kolb, is Director of the Psychiatric Institute and Professor of Psychiatry, P&S.

Hector Medina, of the Maintenance and Construction Department, and Dagmar Romero, Secretary in the Eye Institute Optical Shop, were married on March 23.

### • BIRTHS

Carlos Alvarado, of the Maintenance and Construction Department, and Mrs. Alvarado, welcomed a second grandchild, Jaqueline Alvarado, born in Sloane Hospital on April 9.

Mrs. Catherine Hart, Medical Transcriber in the Record Department, became a proud grandmother when her daughter, Mrs. Donald Ryan, formerly on the nursing staff of the Orthopedic Service, gave birth on March 31 to a baby girl.

Mrs. June Rutkowsky, Open Heart Secretary in the Blood Bank, welcomed her second grandchild on March 8. The baby girl has been named Dawn Ann.

### • WELCOME TO

Mrs. Lisa Jantzen, a new member of the Volunteer Department, who began her duties on April 1.

Myra R. Enkelis, the new Chief Medical Record Librarian.

### • FAREWELL TO

Mrs. Jo Anne Duggan, Secretary in the Volunteer Department, who resigned on March 15.

### • CONGRATULATIONS TO

The following members of the Housekeeping Department who have received promotions: Clarence Hill, from Head Porter to Assistant Housekeeper, BH; Julius Webb, from Porter to Head Porter, BH; and Linford Bailey, from Porter to Head Porter, PH.

### FISHERS AND HUNTERS

For anyone who is interested in hunting, fishing, archery, or trap shooting, there is a club which was recently formed at the Medical Center, "The Medical Center Sports Club."

It has begun its organization with seventeen members: Michael Granato, Dr. F. S. Craig, Carole A. Leahy, Aldo Armati, Hector Andujar, John Ansbro, Angel Centeno, Arcadio Colon, Carmine Dolce, Charles Faughnan, Kenneth Koester, Arthur LePore, Frank Nichols, Stephen Petri-

anyk, Vincent Romanelli, Russell Suck, and Gil Franco.

The president is Michael Granato.

It is hoped that recreation rights will be obtained from farm lands adjacent to the city for club's use.

Meetings are held at Bard Hall, south basement, the first Wednesday of each month at 5:30 p.m. to discuss topics of interest to all sportsmen. Anyone interested is welcome to come. For information, contact Mike Granato, President, Service Building, Ground Floor. Telephone OL 2-4425.

DR. GERALD COHEN, Assistant Professor of Biochemistry and Psychiatry, P&S, has been awarded the Claude Bernard Science Journalism Award in the magazine category for an article entitled "The Riddle of the Dangerous Bean" appearing in the June 1967 issue of *Harper's*. Co-author of the work was Mrs. Judith Marcus, a former Medical Center employee. The Award was presented to Dr. Cohen at the Science Writers Luncheon during the annual meeting of the Federation of American Societies for Experimental Biology, held in Atlantic City, New Jersey, on April 17.

DR. DAVID BAKER, Director of Radiology, BH, and Associate Professor of Radiology, P&S, was Visiting Professor of Radiology at the joint meeting of the Kentucky Academy of Pediatrics and the Kentucky Chapter of the American College of Radiology, held at the University of Kentucky Medical Center in Lexington, Kentucky, from April 22 to 26. During that week, Dr. Baker delivered lectures on "Hirschsprung's Disease," "Respiratory Disease in the Newborn," "Bone Dysplasias in Dwarfism," and "Roentgen Characteristics of Chromosome Abnormalities." Dr. Baker was also Visiting Professor at Boston City Hospital on May 2 and 3, and presented a course on "Pediatric Radiology."

DR. EDWARD V. ZEGARELLI, Attending Dental Surgeon and Professor of Dentistry, DOS, and Director, Division of Stomatology, has been honored by the Academy of General Dentistry. In recognition of Dr. Zegarelli's interest and hard work in furthering continuing education of the general practitioner, the Academy conferred on him Honorary Fellowship in the Academy. Convocation took place at the Academy's annual meeting in Philadelphia on April 27.

DR. ROBERT WINTERS, Professor of Pediatrics, P&S, and Attending Pediatrician, BH, presented a lecture on "Problems with Body Fluids" on March 12 at the Phelps Memorial Hospital in North Tarrytown, New York.

DR. SIDNEY BLUMENTHAL, Attending Pediatrician, PH, and Professor of Clinical Pediatrics, P&S, has been named to the American Heart Association's Committee on Ethics. The committee, whose members include fifteen eminent representatives of the medical, legal, religious, and educational fields, will serve as a fact-finding unit on the nature and extent of ethical problems in the cardiovascular field and would act as a consultant to the Heart Association and to individual scientists. Also it will interpret and try to extend ethical principles and standards.

DR. PAUL J. POPPERS, Assistant Professor of Anesthesiology, P&S, and Assistant Attending Anesthesiologist, PH, presented a paper, "Conduction Block in Isolated Nerve by Local Anesthetics," at the Annual Meeting of the Federation of American Societies of Experimental Biology, Section of Physiology, held in Atlantic City, New Jersey, on April 16.

DR. ALBERT KETLER, Assistant Professor of Microbiology, Assigned to Ophthalmology, spoke on "Character of Antibody-Mediated Hemadsorption to Herpes Simplex Infected Cells" at the American Society for Microbiology, on May 8, in Detroit, Michigan.

DR. MEYER M. MELICOW, Given Professor Emeritus in Urology, lectured on "Tumors of the Testis" and "Periodic Table of Sexual Anomalies" at the University of Vermont, School of Medicine, Burlington, Vermont, on March 22.

Dr. Melicow

Dr. Santulli

DR. THOMAS SANTULLI, Attending Surgeon, PH, Chief, Pediatric Surgical Service, and Associate Professor of Surgery, P&S, spoke on "Intestinal Obstruction in the Newborn Infant" at the Memphis Pediatric Society and visited St. Jude's Children's Research Hospital in Memphis, Tennessee, where he participated in the tumor board meeting, on March 12. On March 14 he presented a paper, "Acute Necrotizing Enterocolitis in Infants" at the Willis J. Potts Seminar at the Nassau County Society in Garden City, Long Island.

DR. JOHN K. LATTIMER, Professor of Urology, P&S, and Director, Squier Urological Clinic, was at the University of Missouri, Kansas City General Hospital and Medical Center from March 26 to 28 as Visiting Professor. He delivered lectures on "Exstrophy, Cryptorchidism and Cryoprostectomy," "Growth of Tumor Cells from Wilms Tumors," "New Concepts in Prostatic Cancer," "Basic Research in the Fields of Cancer and Modern Treatment of Renal Tuberculosis," and "Vesico-Ureteral Reflux." Dr. Lattimer also lectured at the University of Kansas Department of Pathology Seminar on "Cancer of the Prostate."

## FROM THE MAILBAG

Presbyterian Hospital  
New York, N. Y.  
Gentlemen:

Thank you so very much for your patience. . . . I had to make many emergency payments, having to fly Perry back by stretcher to New York, with a doctor, so that Dr. Pool could perform the operation . . . but the wonder-

ful fact is that the operation was a success and my son (22 years old) is now well and happy, and this makes everything worthwhile—thanks to the wonderful staff and Dr. Pool's surgery, in your great hospital.

My sincere thanks go to you and the staff of doctors and nurses who so ably assisted

in this operation.

After 5 surgeons had diagnosed this as "inoperable" you must know how grateful I am for all you have done.

Sincerely,

Jean Chung-Hoon,  
mother of Perry J. White,  
5707 Diamond Head Road,  
Honolulu, Hawaii 96815.

## Dr. Dana W. Atchley Receives Double Honors

MEDICAL LIBRARY

Two signal honors have come to Dr. Dana W. Atchley, Emeritus Professor of Clinical Medicine, College of Physicians and Surgeons of Columbia University and Consultant in Medicine, The Presbyterian Hospital.

Dr. Atchley has been named as recipient of the Kober Medal to be awarded in the spring of 1969. This is the highest distinction that can be awarded to a physician by the Association of American Physicians. News of this award was presented to Dr. Atchley at the recent meeting of the Association of American Physicians in Atlantic City, May 7th.

The other honor relates to the naming of the new doctors' office building at the Medical Center, which will be completed by December of this year. The Executive Committee of the Board of Trustees has designated this the "Dana W. Atchley Pavilion."

Dr. Atchley has given fifty years of service to the medical profession. At this Medical

Center he was named Attending Physician, Service of Medicine, in 1939. His M.D. degree was received at Johns Hopkins in 1915, and he interned at that hospital in 1915-1916.

Dr. Atchley's book, "Physician: Healer and Scientist," was written because Dr. Charles Cole, President of Amherst College, conceived the idea of having highly placed doctors write on different phases of medical science for the benefit of students, and asked Dr. Atchley to write the work on medicine. "Physician: Healer and Scientist" was published in October, 1961, by Macmillan.

Various translations followed the publication of this work. Recently in his office, Dr. Atchley picked up one of these, and said with a twinkle, "Don't mention this, but this one is entirely in Arabic. I don't spend much time reading it."

His long career has been eventful with achievements,

Dr. Dana W. Atchley

both scientific and literary; his works on the advances of medicine are written with keen insight and a gift of expression. Speaking at a nurses' graduation, he stressed scientific knowledge—not at the expense of tender loving care, but to bring about what he phrased as "enlightened tenderness."

His articles have appeared  
*Please turn to page three*

Dana W. Atchley Pavilion

This beautiful and functional new building will be completed this Fall at the corners of Fort Washington Avenue and 165th Street, and is one of the essential projects in the Medical Center's Development Program. To be dedicated as THE DANA W. ATCHLEY PAVILION, it will enhance the effectiveness of the Medical Center by providing facilities for thousands of ambulatory patients. All who know and admire him will be pleased that

the Trustees of Presbyterian Hospital have chosen this means of honoring Dr. Dana W. Atchley.

Since 1928 when the Medical Center was first established, a section of the Hospital has continuously been used for private doctors' offices. This concept has been found beneficial to both the doctor and the patient, since all the facilities for consultation, diagnosis and treatment are centered

### MARY CRAWFORD APPOINTED ASSOCIATE DEAN, NURSING

Mary Crawford has been appointed Associate Dean, School of Nursing, Faculty of Medicine, Columbia University and Director of Nursing, Presbyterian Hospital, effective July 1st. She succeeds Elizabeth Gill who is retiring.

From Lakewood, Ohio, Miss Crawford earned a Bachelor of Science degree in education from University of Michigan and a degree in nursing from Western Reserve University. She was affiliated with that medical center for five years, serving as head nurse at University Hospitals and as instructor in the School of Nursing. In 1952 she received a Master of Arts degree from

Mary Crawford

Teachers College, Columbia University, and spent one summer teaching at Yale University. After being awarded a

## Graduation Week at Columbia-Presbyterian

### PHYSICIANS

"If you will be true to this, your oath, may prosperity and good repute be ever yours; the opposite, if you shall prove yourselves forsworn."

This is the sentence which winds up the Hippocratic Oath. Many graduates at the ceremonies of June 4th had it administered twice over, once in the Cathedral Church of St. John the Divine and once again in the garden of the Medical Center. Dean Houston Merritt explained that he was repeating it for the benefit of those few graduates who were not present throughout the Morningside Campus graduation ceremony.

It was a glorious summer afternoon, the roses and geraniums splashed color against the dull blue robes as the new M.D.'s walked up the path in procession to receive their accolade as physicians.

After the invocation by the Reverend Edwin Barton, Dean George Perera gave greetings to the new doctors, bidding

### NURSES

The seventy-fourth commencement exercises of the School of Nursing, Faculty of Medicine, Columbia University, were held on June 5th in the garden of the Columbia-Presbyterian Medical Center. Augustus C. Long, President of the Presbyterian Hospital, honored the 163 members of the class of '68 and paid special tribute to Elizabeth Gill, retiring as Director of Nursing.

*Please turn to page three*

### DENTISTS

Twenty-nine students of the School of Dental and Oral Surgery were graduated on Wednesday afternoon, June 5th, at Bard Hall. Dr. Gilbert P. Smith, Dean of the School, presided over a ceremony that was friendly and unpretentious.

After the invocation by the Reverend Robert B. Reeves, Jr., Chaplain, the awards of achievement were presented.

*Please turn to page two*

A beautiful afternoon for the nurses' graduation.

## PHYSICIANS

*Continued from page one*

them give loyal support to their profession, to medical education, and to the Columbia University College of Physicians and Surgeons. He exhorted them always to put the patient first and to keep abreast of the newest discoveries in science. He ended by saying how much the faculty had enjoyed sharing the last four years with them.

Dean Houston Merritt warned the graduating class that they were in for a period of life-long study because of the accelerating complexities of the medical profession.

Some people, he added, had been saying recently that deans were less necessary in a university but he felt himself that there might still be a place for them to do some good. He made reference to the fact that people had also been saying that Columbia University would probably not survive and quoted a report which talked of students going on a rampage and that the seat of learning where it took place no longer existed for all practical purposes. Dean Merritt then pointed out that this quotation was dated February 15, 1802 and the place in question, William and Mary College in Williamsburg, was still very much alive. Columbia too would survive because it was dedicated to greater issues than those being discussed currently.

The Dean ended by citing

three qualities which he felt were essential to a physician. First, integrity, which was reflected in their very choice of career. Secondly, equanimity, which was needed in everyday dealings with patients. A doctor should keep a firm hand on his emotions and hide any feelings of anger or hostility. Then there was empathy, getting into the feelings of another person and having respect for the dignity of the individual.

Dean Houston Merritt handed every new doctor a medallion in commemoration of the two hundredth anniversary of the College. Prizes were awarded as follows:

*Joseph Garrison Parker Award*  
Virginia Utermohlen, New York, New Jersey.

*Walter Winchester Prize*  
Thomas Andrew Brackbill, Chatham, New Jersey.

*Alumni Association Senior Student Award*  
Jack W. Spitzberg, Tyler, Texas.

*Borden Undergraduate Research Award*  
Anthony Nowels, Manasquan, New Jersey.

*William Perry Watson Prize in Pediatrics*  
John Calvin Garrett, Columbus, Ohio.

*Helen M. Sciarrra Prize in Neurology*

Faye C. Natanblut, New York, New York.

*Alvin Behrens Memorial Prize in Ophthalmology*  
David Anthony Newsome,

## DENTISTS

*Continued from page one*

Dr. Stephen R. Katz was the recipient of the Rowe-Wiberg Medal, presented by Professor John J. Lucca. He also won the Van Woert Award, presented by Dr. Alexander N. Lifschutz, and the Alpha Omega Fraternity Prize, presented by Mr. Ephraim E. Shulman.

Dr. Charles A. Rogers received the Prize for Excellence in Operative Dentistry, presented by Professor Edward A. Cain, Jr., and also the Award of the International College of Dentists—United

Winston-Salem, North Carolina.

*Urology Prize*

Douglas L. Brand, Eastford, Connecticut.

Ronald Li, Lake Success, New York.

Barry I. Liskow, Cincinnati, Ohio.

A. John Rush, Jr., Short Hills, New Jersey.

*Merck Manual Award*

Michael P. Coyle, Jr., Hackensack, New Jersey.

Anthony Nowels, Manasquan, New Jersey.

John J. Daly, New York, New York.

With congratulations and good wishes ringing around them, the new doctors went their ways prepared, we hope, to cope with the challenging profession ahead of them.

## Charles Young Becomes Supervisor Of Food Service

Charles Young

It was recently announced that Mr. Charles L. Young was appointed Head Supervisor of Central Food Service for the Columbia-Presbyterian Medical Center.

Mr. Young graduated from Michigan State University, School of Hotel, Restaurant and Institutional Management, with a Bachelor of Arts degree.

He has been employed at the hospital since January, 1964. Prior to his employment here he was a supervisor of the School Lunch Program of the Board of Education for the City of New York.

Mr. Young resides in Uniondale, Long Island, with his wife, Loretta, and their two daughters, Kimberly and Karen.

States Section, presented by Professor Clifford L. Whitman.

Dr. William E. McManus received the Certificate for Excellence in Pedodontics, presented by Professor Solomon N. Rosenstein, and the Ella Marie Ewell Medal, presented by Professor Rudolph H. Friedrich.

Dr. Richard A. Greenberg won the Psi Omega Fraternity Award, presented by Mr. Michael Fidler.

Dr. William J. Pite was the recipient of the William Bailey Dunning Medal, presented by Professor George L. O'Grady,

who also welcomed the group into the Alumni Association.

Omicron Kappa Upsilon Keys were presented by Professor Ennio L. Uccellani to Drs. Richard A. Greenberg, Stephen R. Katz, Joseph F. Metzger, and Steven I. Munk.

During the presentation of diplomas by Dean Smith, he invited the dentist-fathers of graduating students to receive the diplomas and then present them to their own sons. In two instances, Dean Smith called upon mothers, whose late husbands had been dentists, to award the diplomas to their sons.

Dr. Gilbert P. Smith, Dean, presides at friendly, informal graduation of dentists.

## MARY CRAWFORD

*Continued from page one*

certificate in nurse-midwifery at the Maternity Center in 1953, she went to Johns Hopkins University, where she remained one year, instituting the first hospital nurse-midwifery program in this country. She spent another year working with Margaret Hogan and Ann Noli as staff members of the Maternity Center Association, exploring possible roles of the nurse-midwife here at the Presbyterian Hospital.

She joined the Sloane Hospital staff in 1955 as assistant director and assistant professor of nursing, becoming coordinator of maternal and child health and associate professor in 1958.

In 1964 Miss Crawford began her doctoral studies at Teachers College and has been recommended for the degree of Doctor of Education. Her dissertation is entitled *Physiological and Behavioral Cues to Disturbances in Childbirth*. In

this research she designed a two-part test yielding a score which is a measure of degree of anxiety. The first part, a questionnaire relating to symptoms of muscle tension, is administered to expectant mothers during pregnancy. The second part is a rating made by nurses of the physiological and behavioral symptoms of anxiety exhibited by mothers at the time of their admission in labor. In the final study group of 500 subjects, it was found that mothers with high scores, suggesting greater anxiety, are more likely to develop uterine dysfunction or their babies are more apt to develop symptoms of hypoxia during labor.

Last year she received a joint appointment at Teachers College and the Department of Nursing exploring the possibility of setting up a joint program in maternity nursing and nurse-midwifery leading to a Master of Arts degree.

## ATCHLEY PAVILION

*Continued from page one*

tered at the Hospital. Over the years the office space has grown. It is this growth that has led to the erection of the new Pavilion.

It has also been recognized that with proper ambulatory facilities, many chronically ill patients who once required long hospitalization can now be effectively managed as outpatients, leaving needed hospital beds for the acutely ill.

The urgent need for this modern facility is so great that construction will be completed this fall, even though its financing is still incomplete. It will cost an estimated \$8,900,000. A total of \$1,966,000 for the project has now been received, leaving a balance of about \$7,000,000 to be raised. Those who provide funds for this modern facility

for ambulatory-patient care will have the satisfaction of knowing that they have contributed to the health needs of present and future generations.

THE DANA W. ATCHLEY PAVILION will provide the following benefits:

Assure the future recruitment and continued services of outstanding physicians who will devote a large part of their time to teaching, medical research, and to the care of ambulatory and hospitalized patients.

Make it possible to care for more than 100 additional bed-patients in areas now occupied by the doctors' offices now located in the Presbyterian Hospital.

Provide modern offices for consultation to an increasing number of patients who wish to take advantage of the modern diagnostic and therapeutic services available at the Medical Center.

## DOUBLE HONORS

*Continued from page one*

in such magazines as *Harpers*, *Atlantic*, *New Yorker* and *Saturday Review* as well as professional journals. A few years ago he was honored at the Gold-Headed Cane Ceremony, for the graduating class of the University of California School of Medicine. His address was "The Uses of Elegance."

It is said that the various addresses of those who have received the Kober Medal over the years would form a sequence which in itself would give a thrilling story of the progress of medical science. The Kober Medal bears the words, "Awarded for Research in Scientific Medicine." It has

been awarded annually since 1924 when the tradition of honor was established. It was conceived and established by Dr. George Martin Kober of the Association of American Physicians, who took deep satisfaction in being a member of that organization. Dr. Kober came to the United States from Germany in 1867 when he was seventeen, rose spectacularly in the medical profession, and became deeply engrossed in medical education and research. From 1924 until the year of his death, 1931, he presented the medals personally.

The Association of American Physicians was formed in 1885 with a nucleus of seven doctors dedicated to scientific excellence. The quality of the

scientific papers at its annual meeting were such that the organization soon attracted international attention. In the intervening years it has grown to a membership of 250 physicians.

In 1958, Dr. Atchley's high achievements were described by Dr. Robert Loeb, Director of Service of Medicine (who received the Kober Medal in 1959), saying, "Dr. Atchley became a recognized leader in basic research in the field of electrolyte physiology and his studies of the electrolyte disturbances in diabetic acidosis stand as a classic in clinical investigations. . . . His wisdom, integrity, warmth . . . made it inevitable that he would be recognized as one of the great physicians."

## NURSES

*Continued from page one*

ing, for her "compassion, kindness and inspiration as a teacher."

Dr. Lawrence C. Kolb, Professor and Chairman, Department of Psychiatry, Columbia University, Director of Psychiatry Service, Presbyterian Hospital, Director of the New York State Psychiatric Institute, and President-Elect, American Psychiatric Association,

delivered an eloquent commencement address.

He told the graduating nurses that the application of their education is just beginning. Our society, complex and unequal, is engaged in a profound revolution demanding that we "must take stock of our values, the values that pertain to human life." This massive unrest has been manifested in many ways, including student demonstrations. These forceful tactics can be considered constructive only when peaceful methods to achieve desired ends are blocked. In many schools, including Columbia's School of Nursing, peaceful change has occurred because the goals of the nursing candidates in pursuit of their worthy profession have been recognized. Close faculty-student relationships have resulted in mutual faculty-student respect. This warm, mature approach carries over to nursing-patient contact which also fosters tolerance and understanding. "In spite of the agonies of our changing society the role and function of the nurse remain constant. All of you will be sought for and the opportunities open to you are bound to expand, both in terms of responsibilities and varieties of careers. One thing is certain—as our

## Rh Vaccine by Drs. Gorman, Freda and Pollack

This month of June brings news that about 300,000 American mothers have been waiting for . . . though they may not have known it. The vaccine Rh Immunoglobulin — RhoGAM — has been licensed for general use by the U. S. Public Health Service and this means that it will be safe for these mothers to have more than one child. These are the 300,000 women per year with Rh negative blood married to men who are Rh positive and who produce an Rh positive child.

Rh positive and Rh negative people are equally healthy. Only 15% of the population is Rh negative and the danger occurs to the unborn Rh positive baby only if the blood of the Rh negative mother contains Rh antibodies. When this happens the baby may be still-born or die soon after birth from hemolytic disease of the newborn — "erythroblastosis fetalis." Its characteristics are anemia, heart failure, jaundice and occasionally brain damage.

Rh antibodies are protein substances in the blood which can destroy Rh positive but not Rh negative blood cells. When the Rh factors in the baby's blood enters the mother's

Dr. Vincent Freda (left) and Dr. John Gorman.

er's bloodstream through the placenta her body begins manufacturing antibodies to fight off the foreign material. This does not happen, however, until after this particular baby is born healthy, but the antibodies remain in the mother's system for life and threaten all future children. There is a ten per cent chance that the next baby will have hemolytic disease and the risk increases ten per cent with each additional child. It is a game of Russian roulette, all a matter of luck. A mother in Toronto, Canada had fourteen healthy children and the fifteenth had the disease.

RhoGAM is a specially prepared concentrate of anti-Rh antibody, identical to that produced by an Rh negative mother. If this substance is injected into the mother before she is immunized she becomes unable to produce it herself. The vaccine was developed by Dr. John Gorman, Director of the Blood Bank at Columbia-Presbyterian Medical Center and Dr. Vincent Freda, Assistant Clinical Professor of Obstetrics and Gynecology, College of Physicians and Surgeons, together with Dr. William Pollack of the Ortho Research Foundation, Raritan, New Jersey, which sponsored the research project.

Canadian doctors have proved that RhoGAM can safely be given to the mother during pregnancy, but at present it is recommended that it should be given within twenty-

four hours of delivery. The injection must be repeated every time she delivers an Rh positive baby.

Mothers who have already become sensitized cannot benefit from the vaccine but they can help many future mothers by becoming blood donors themselves. In this way they can save the lives of other children.

As far as the procedure at Columbia-Presbyterian is concerned, Dr. Gorman explained that the vaccine will be available in the blood bank for the use of obstetricians from the first week in June. The charts of all Rh negative mothers coming into the hospital for delivery are marked with a stamp. When she delivers, blood samples from both mother and baby should be sent to the blood bank. The bank will inform the obstetrician if the baby is Rh positive and therefore that Rh Immunoglobulin is needed. The obstetrician will then decide if it should be given to the mother.

It is important that obstetricians all over the country should be aware of the availability of the vaccine and where their nearest source of supply will be.

The work of Dr. Freda and Dr. Gorman has been recognized by the award of the first Maternity Center Association medal for distinguished service to their profession and in recognition of their efforts in developing RhoGAM.

Augustus C. Long

Dr. Lawrence C. Kolb

Elizabeth Gill receives standing ovation.

## Social Service Tea

Mrs. Shirley Fisk (left), New York Orthopedic Hospital Women's Auxiliary, Miss Elizabeth Prichard (center), Director of Social Service, and Mrs. Marold Harvey (right), Chairman, Social Service Committee of The Presbyterian Hospital Women's Auxiliary, are shown above at the tea following the "Patient Planning Program" held on May 2 at Maxwell Hall.

Dr. George H. Humphreys II, Professor of Surgery and Director of the Department of Surgery, who was the principal speaker at this special program devoted to planning for patients and community resources, spoke on "The Medical Social Worker in The New Society." Dr. Humphreys traced the changing role of social service over the years and stressed the expanded role and contribution of the social worker in meeting increased demands in a changing environment.

Dr. Carl Wise, Assistant Vice-President for Professional Service, Presbyterian Hospital, greeted the audience, which included representatives of cooperating community agencies. Miss Prichard briefly presented the need for increased home-maker services and the necessity for careful evaluation by the community of the respective merits of all post-hospital services.

The meeting, which was chaired by Mrs. Harvey, was sponsored by the Social Service Department, the Cribside Committee of the Board of Women Managers of the Babies Hospital, The Neurological Institute Women's Auxiliary, the New York Orthopedic Hospital Women's Auxiliary, and the Social Service Committee of the Presbyterian Hospital Women's Auxiliary.

## Big Family Dinner for 25-Year Club

The 25-Year Club is the Medical Center's proof that its personnel are just one big happy family. This year the annual dinner was held on May 22nd. Following the six o'clock social hour in the Bard Hall lounge, the group moved down to the dining room, where places were set for 355 persons.

The Reverend Robert B. Reeves, Jr., Chaplain, gave the invocation. Mrs. Edna Husband, vocalist, and Mrs. Frieda Dankwerth, accompanist, provided music.

The toastmaster, Dr. Hamilton Southworth, President of the Club, had arranged to balance admiral's salt with western drawl: he introduced Dr. Gordon Bruce, who extended greetings, and Dr. Charles T. Ryder, who responded on behalf of new members. Beatrice Langmuir, Vice President and Mrs. Dorothy Barry, Secretary, presented certificates to the incoming members. To the 763 names on the membership list, 39 new ones were added. (New members' names were

printed in last month's *Stethoscope*.)

Dr. Jose M. Ferrer, Jr., Chairman of the Nominating Committee, announced a slate of the new year's officers, who were then elected by a unanimous vote:

President, Dr. Robert H. E. Elliott; Vice Presidents, Mrs. Frederic F. deRham, Helen Scott; Secretary, Albert Sakar; Assistant Secretary, Marjorie Peto; Treasurer, J. G. McCullough.

The benediction was given by the Reverend Guy S. Vinci, Chaplain.

Twenty waiters, a captain, and—back of the scenes—three cooks did their share to make the dinner a success. The captain of the waiters, who caters for many business and political dinners, spoke highly of this group: "Wonderful . . . just family type people . . . it was nice."

The dining room manager, Charlotte Borresen and her assistant Diane Mackern agreed that it was a good day, recalling that it had begun at six o'clock that morning.

Countless reminiscences enlivened the dinner conversations. Such as "You know, I retired four years ago, but always look up at the window where I worked, when I pass the Hospital, and if the shade isn't straight, I call in."

Or: "During World War II

we could have had more lucrative jobs, but my wife and I talked it over and remembered that the Hospital had stayed with us through the Depression, so we stuck, and we never regretted it."

## Volunteers Honored at Annual Tea

Twenty-three volunteers who have consistently done outstanding work in the same department for ten or more years were honored on May 8 at the Presbyterian Hospital Annual Award Tea for Volunteers.

Mrs. George A. Perera, Acting Chairman, Volunteer Committee, Presbyterian Hospital Auxiliary, presided at the program held in Maxwell Hall. Mr. A. J. Binkert, Executive Vice-President of the Hospital, extended greetings to the more than 350 people who attended. Mrs. Edna Husband, accompanied by Mrs. Frieda Dankwerth, sang several selections, and the P&S Club 1968 presented a scene from "Guys and Dolls."

Dr. Carl Wise, Assistant Vice President of the Hospital, presented the Volunteers, who include:

Helen Bonaitu, PH Information Desk; Mrs. Ralph Boots, PSC and PH Thrift Shop; Edith Brooks, PH Nursing Aide; Mrs. Stella Brown, Sloane Nursery; Mrs. Royall Cannaday, NI Thrift Shop; Mrs. Frieda Dankwerth, BH Recreational Aide; Mrs. Bess Goodman, PH 10 Floor Clerk; Mrs. Helen Harris, Speech and Hearing Receptionist; Mrs. Ethel Herrmann, BH X-ray Clerk; Mrs. Herman Hoops, BH Thrift Shop; Mrs. Betsy Koenigsberg, VC Clinic Administration Clerk; Mrs. Anna Kredel, Adult Recreational Aide; Elsie Mitsch, VC, Sloane and Eye Clinic Aide; Mrs. William Moss, Chapel Escort; Mr. Aaron Naimark, Public

Mrs. Howard Bruenn pours tea for Mrs. Marguerite Stein, Director of Volunteers, with Monserrate Noriega and Mrs. Joeritha Wester.

Mrs. Edna Husband sings at Volunteers' Tea.

Otto Sonnenfeld and Anderson Lewis

Helen Coxhead and Richard Kerst

## Children Enjoy Squire Clinic Circus Day

THE ANNUAL SQUIRE CLINIC CIRCUS event was held on the afternoon of May 4. A group of children, patients at Squire Urological Clinic, attended the circus at the new Madison Square Garden. Each child was accompanied by an adult sponsor from the Hospital. For these adult volunteers, no thank-you could be more sincere than the children's joy.

# "Heights House"—A Step Toward Good Community Relations

The scarlet curtains struck a gay, almost defiant, note in the comfortable room of the four-story house on 173rd Street. All the rooms were pleasantly furnished—divan beds with colorful bedspreads, washand basin, mirror, chest of drawers. Bare, of course, until a few personal possessions were scattered about. This was Wednesday, May 8th, and the official opening of "Heights House," a transitional home for former patients of the Washington Heights Community Service of New York State Psychiatric Institute. Eight men and women live there while they begin a new job or go back to school. There is a fair-sized kitchen where they cook their own food and clean up afterwards. They take care of their own rooms and in general prepare themselves for the often difficult experience of moving back into ordinary day to day living.

It had once been a private house and was renovated by the New York State Mental Hygiene Facilities Fund. In the basement-turned-recreation room city officials and representatives of the various psychiatric services of Columbia-Presbyterian Medical Center present at this opening talked about the stages which the Community Service had passed through before "Heights House" came into existence, and expressed their high hopes for the future.

There was optimism in the air about this project linking Columbia-Presbyterian to the surrounding community, an optimism worth noting in these days when the upheaval and distress besetting Columbia University's relations with the neighborhood tend to overshadow the positive elements that have been growing up over the years.

In the New York State Psychiatric Institute, situated on 168th Street, a service was set up in 1965 at the instigation of the State and with a grant of \$100,000 a year for five years, under the Hospital Improvement Program of the National Institute of Mental Health. Fifty-five beds on one floor were set aside at the Institute to study and treat the psychiatric illnesses of the local population. This became the Washington Heights Community Service headed by Dr. Alvin Mesnikoff. Over the past three years much interesting and some experimental work has been done, culminating in the establishment of "Heights House."

Before this Mental Health Service was set up, the Emergency Room and Outpatient Department of the Presbyterian Hospital had provided psychiatric services to the local population but, although the Psychiatric Institute is a part of the Columbia-Presby-

terian Medical Center, its inpatient facilities were not necessarily available to the neighborhood because the Institute's policy was to admit selected patients from the whole of New York State. The Washington Heights Community Service was an attempt to meet the specific needs of the local people. It was established with its own staff and facilities so that it could provide a wide range of treatment—inpatient, partial hospitalization and aftercare. It takes all patients above fourteen who require hospital care in the area stretching from 165th to 181st Streets.

It had been hoped to extend it to 158th Street but this would have made the project too unwieldy for the available facilities. If comprehensive hospital care was to be given to everyone who needed it (and the project already covered 50,000 people) it was not possible to extend the area served. The bed capacity and aftercare programs were insufficient. In the year ending March, 1968, two hundred and forty-six patients were admitted to the service. The estimated number was one hundred and forty, so that facilities had to be stretched to accommodate more than one hundred extra people.

The care of the patients is continuous from the moment they enter until they leave, and carries on afterwards too, for as long as it is needed. The treatment team, consisting of a supervising psychiatrist, residents, nurses, social workers and occupational therapists, work together with the newly admitted patient and he remains with them through all phases of care. This eliminates moving the patient around according to administrative sub-divisions in terms of inpatient, outpatient, day care and so on. The Community Service mixes all diagnostic and age groups, short, medium and long-term patients in the same ward.

Every effort is made to encourage a warm relationship between staff and patients. Members of the family who are visiting talk with the social workers, patients and staff meet every morning to consider any problems that have arisen in the group. They discuss how patients get on with each other, and with the staff, privileges and passes are granted and group activities planned. Working with other people is an important part of the treatment and the activities in which they participate must be meaningful for a person functioning healthily as well as for one in need of therapy.

Many of the patients come from poor homes where coping with the day to day social needs of life has never been learned. The Service therefore

Dr. Alvin Mesnikoff

teaches the women about home-making and child care. They are taken shopping at supermarkets and learn to evaluate the quality of the goods there. There is also a birth control program in conjunction with the Planned Parenthood Association of America, the first time the organization has worked in this way with a mental hospital in this country.

Some services which are not available through other agencies are provided through a home care program with family aides who also serve as hospital attendants. They take people to the welfare office, look after children, and help elderly folk with shopping. Patients whose native language is not English can attend classes to help them with conversation and lessons are also given in basic reading and writing. In addition to their illness many patients are unemployed or have serious job problems. Many have just not had the opportunities to utilize their intelligence and capacities in any constructive way. The Community Service offers graduated occupational therapy and opportunities for working at jobs within the hospital which helps the patient to function at increasingly higher levels. This in itself has a salutary effect. Patients can then go on to other vocational training through community agencies like the Division of Rehabilitation of New York State.

Within the self-contained Community Service there is an eight-bed intensive care unit for acutely disturbed patients. But even here, the unit is part of the ward and the patients take part in regular group activities whenever possible. They are not isolated and made to feel that they are in a different category from the others.

One point made by Dr. Mesnikoff was that they have been able to demonstrate that some clichés of psychiatry are just not valid, for instance, the idea that it is impossible to do psychoanalysis with people of limited education because they cannot easily articulate their thoughts.

"We have proved that all forms of treatment are cutting across social, economic or ethnic background. We feel that we are gaining a great educational experience working together with the people of this community and the superficial things that separate us—different customs or educational background—become unimportant."

But the staff of the Community Mental Health Service must be careful not to allow their enthusiasms to run away with them. As Dr. Mesnikoff went on to explain: "Because of the comparatively limited resources at our disposal here in the Community Service we're restricted in what we can cover in a hospital comprehensive care system. We've chosen to work with individual patients and through them to establish relationships with their church, school, the welfare departments and other community institutions. This is a small pilot project and it's important to keep our goals and program within the limits of what we can do properly so that, for instance, we don't stint in providing high quality continuous care from inpatient right through aftercare for the patient when he's left the

hospital."

But those pilot arrangements are establishing a pattern of collaboration in the community which can be developed later into broader programs which would include the less seriously ill.

There are in fact many research possibilities in this mental health service which will provide information of great value when a more ambitious mental health program is established for the Washington Heights area. There is the chance to study the difference between patients and non-patients living in the same community, the incidence of serious mental illness in a defined urban area, the problems of dealing with people who are poor and do not have status in the community, as well as the opportunity of finding out the best kinds of treatment appropriate to individuals with specific problems related to a specific neighborhood.

Let us hope that "Heights House" is only another step forward in establishing good community relations between the Columbia-Presbyterian Medical Center and its neighbors, both in the field of psychiatry and in other health programs.

## Two Cricket Players—Dyal and Parson

Jim Parson

Eric Dyal

For Eric Dyal, who works for Housekeeping in Babies Hospital, cricket is going to make this summer a memorable one. He is leaving on July 17th for a five weeks tour which the U. S. Cricket Association is sponsoring in England. Seventeen players have been selected from all the teams in America and the Association is paying all travel and accommodation expenses. In England they will play at Lords and the Oval, two of the great bastions of world cricket.

Mr. Dyal comes from Barbados and started playing cricket when he was eleven years old. It is of course the national game of the West Indies. He developed into a useful fast bowler.

When he came to New York in December 1963 and began work with the Hospital in January 1964 he joined the Cameron team, a member of the Interstate Cosmopolitan League. In 1966 the team headed the League championship, Mr. Dyal took most wick-

ets and won a trophy.

Jim Parson is an account representative of the Outpatient Collection Department on the sixth floor of the Service Building. He is also from the West Indies, the island of Montserrat. He played cricket in England before coming to the States in 1965 and is now captain of the Montserrat Cricket Club in New York. Recently he captained the New York League against the Australian Old Collegians of Staten Island. He plays every weekend, sometimes in Boston or Philadelphia but usually in Van Cortlandt Park.

There are games coming up on Sundays, June 23, June 30, July 21 and July 28, and visitors are welcome. If you are interested in going to watch and cheer from the sidelines, telephone Jim Parson at extension 2281.

Let him know too if you are a cricketer yourself. Who knows, we might be able to form a Columbia-Presbyterian Cricket Team yet.

# These People are Retiring From the Medical Center

## Florence Vanderbilt

Florence Vanderbilt retired at the end of May after more than forty years of service to the Department of Nursing. She was Director of Residence and in charge of Student Health Service.

In a recent interview she reminisced a bit about the old Hospital where she began as a student of nursing in 1923. "We were sad about leaving the old hospital (in 1928). We were very devoted to it. But this Medical Center was new and modern and we all came up together. That was forty years ago."

Many positions were available at that time and there was a need for head nurses and supervisors. Miss Vanderbilt served as head nurse on women's medical, women's surgery, gynecology and then 6th floor private, of Harkness. From there she went into the teaching of—as it was then called—"nursing arts."

"In 1947 the Director of Residence left and asked if I didn't want to come to Maxwell Hall."

And so this became Miss Vanderbilt's responsibility, in which she was to become deeply involved in the years that followed.

"I'm just amazed that there have been so few real problems. Part of the reason, of course, is that student nurses are carefully selected. They come here with the intention of graduating. And of course the atmosphere is favorable."

With retirement in prospect, Miss Vanderbilt has entered a new realm of experience. She

Florence Vanderbilt

is discovering the joys of owning a home and buying furniture. "Miss Gill and I have a typical little Cape Cod house in Massachusetts. We had it built after studying magazines. It's ranch style—all on one floor. This is new to us—a house, furniture, a fireplace—and outside the windows, bird feeders and a bird bath. We have half an acre of land and lots of birds. . . . Yes, we are looking forward to retiring, to living calmly and peacefully, away from worries—in an environment where there are no fears when going out at night."

And there will be more of travel, too. "Miss Gill and I have made nine trips across the country. She has done all the driving—I've been the navigator. Among our favorite vacation areas are Estes Park and Grand Tetons."

Miss Vanderbilt spoke of photography as an interesting hobby which she and Miss Gill enjoy. "We have enough pictures of places we've been to wallpaper our house."

## Elizabeth S. Gill

A retirement luncheon was held on May 24th, and a tea on May 27th, in honor of Elizabeth S. Gill, Associate Dean, Nursing, Department of Nursing, Faculty of Medicine, Columbia University, and Director of Nursing, Presbyterian Hospital.

"From the time I came to the Presbyterian Hospital I have never left home," Miss Gill said. However, she is now looking forward to living in a new home, one of her own which she and Florence Vanderbilt have purchased together in Chatham, Massachusetts. Miss Vanderbilt, Director of Residence at Maxwell Hall and in charge of Student Health Service, is also retiring at this time.

Born in Belmont, near Boston, Miss Gill came to the Columbia - Presbyterian Medical Center as a student in 1934 and was graduated in 1937.

That she should find this career in nursing so congenial was surprising in view of the fact that her family tried to dissuade her from such a course. Following her graduation from Elmira College, she had spent 7 years as a Y.W.C.A. Supervisor. In this

work she had experience with many age groups, even 5th graders. But all along she continued in her hope to become a nurse.

"At last I applied and was accepted under Miss Helen Young. I think if I were doing it again I would do the same thing." She did 7 weeks of staff nursing at Harkness Pavilion and then for 15 months was night director of Ophthalmology. For 3 years she was head nurse on 8th floor East, then in 1941 she began her 20 years of teaching which she describes as especially happy years. She was Instructor in Nursing from 1941 to 1954; Associate in Nursing, 1955-1958; Assistant Professor of Nursing, 1959-1961.

On July 1, 1961, she received a dual appointment: Associate Dean (Nursing), Faculty of Medicine, Columbia University, and Director of Nursing, The Presbyterian Hospital. This dual appointment came as a surprise; Miss Gill had not known, until a short time before the announcement was made in March, 1961, that this was in the air.

Inevitably such responsibilities involve some difficult problems; however, in a recent

Elizabeth S. Gill

interview, Miss Gill spoke only lightly of this side of her experience. "Problems—yes. They have been managed with the help of my colleagues. Each experience has been new."

She referred to the changes in medicine, and to the new groups of students. Each job was different. As she glanced back over the years at Columbia-Presbyterian Medical Center she said "I feel that people I have worked with have been my friends as well as my colleagues."

As to some of her varied experiences: she gave a course in pharmacology to graduate nurses at Hunter College who were B.S. candidates; she also taught graduate nurses in the in-service program; and she worked on integrated tests with the committee on tests and measurements of the National League for Nursing Education.

She has held membership in many professional organizations, including American Nurses' Association; National League for Nursing; Elmira College Club of New York; Women's University Club, and Columbia University (Men's) Faculty Club.

Her articles have appeared in various professional journals; she wrote a part of the revision of "Quick Reference Book for Nurses," Lippincott, 1951; and she is co-author, with Dr. James T. Culbertson, of "Laboratory Manual of Microbiology for Nurses," G. Putnam & Sons, 1947 (revised 1950); also a textbook "Pharmacology for Nurses" with Dr. Charles Solomon.

Now retiring, Miss Gill is confident that she is leaving the school in excellent hands. She now looks forward to social life in Massachusetts and to vacation enjoyments, including some travel and photography. She and Miss Vanderbilt have traveled extensively in the West and Northwest, in the Rockies and in Canada. According to Miss Vanderbilt, all the driving on these trips is done by Miss Gill. As to their photography, Miss Gill says, "We are rank amateurs but we take a great deal of pleasure in photography and slides."

## Mrs. Harriet Deleuran

After 38 years at the Medical Center, Mrs. Harriet Deleuran plans to retire from the Department of Nursing in June. Her title is Assistant Professor of Nursing, Department of Nursing, Faculty of Medicine, Columbia University.

This year not only marks Mrs. Deleuran's 35th reunion year as a graduate of the Presbyterian School of Nursing (as it was called then) but also her 27th year in Columbia University's Faculty of Medicine.

"My early years as Head Nurse in the Operating Room or on 14 West are indeed nostalgic memories," Mrs. Deleuran has written in a recent newsletter. "Time out to complete a B.S. in Nursing Education and an M.A. in Student Personnel and Guidance at Columbia's Teachers College prepared me for joining the faculty in 1941."

"Here I found myself wearing many hats—teaching in the courses of Anatomy, Physiology and Surgical Nursing, a role which included being counselor and friend to hundreds of students—coordinating and administering parts of the curriculum then more familiarly known as Freshman, Junior and Senior Classes—and planning and assisting with courses offered in the first year curriculum."

More recently Mrs. Deleuran has been concerned with Admissions and Financial Aid

Mrs. Harriet Deleuran

Programs of the School, and has been developing a recruitment program "to reach the college bound high school student as well as students already enrolled in junior and senior colleges and universities throughout the country." (See article on recruitment elsewhere in this issue.)

Mrs. Deleuran and her husband, residents of Bronxville, Westchester County, are now planning a wilderness canoe camping trip in Quebec for this summer.

"My years as a member of the Medical Center Family have meant a great deal to me. I know I shall miss my daily contacts with students, colleagues and friends," Mrs. Deleuran wrote at the conclusion of her newsletter article. "I do, however, look forward to retirement and to enjoying my many interests and hobbies including climbing mountains, canoeing rivers, and photographing wild flowers and wildlife."

## Myra Enkelis Named Medical Records Librarian

Myra Enkelis is the new Chief Medical Records Librarian, succeeding Dorothy Kurtz, who retired on April 1.

A native of Portland, Oregon, Miss Enkelis was graduated from Stanford University with a major in social sciences, and took her professional training at the School of Medical Records Science of the University of Pennsylvania Graduate Hospital in Philadelphia.

Her first experience as a librarian was most unusual. She was asked to establish the medical records department of Fairfax Hospital in Falls Church, Virginia. Because the department was non-existent, she and seven colleagues worked at organizing it by meeting for four months in a room above a drug store. She remained at that hospital for five and one-half years, serving as director of the department. From Virginia she went to Watertown, Massachusetts, as a staff member of MEDINET, a division of General Electric, creating computer systems for hospitals. She stayed there

Myra Enkelis

for two years until coming to the Columbia - Presbyterian Medical Center.

Miss Enkelis is a member of the American Association of Medical Records Librarians, serving in the past as Chairman of the Education Committee and presently a member of the Planning and Budget Committee. Recently she joined the New York State Association of Medical Record Librarians.

In late May and early June, Miss Enkelis will travel to Europe where she will attend the Fifth International Congress of Medical Records in Stockholm, Sweden, and will tour Scandinavia.

Mrs. Harriet Deleuran demonstrates that nursing graduates from this Medical Center serve all over the world.

Recruitment of nursing students during these times is a task that calls for ingenious planning and vigorous follow-through. This responsibility has been in the hands of Mrs. Harriet Deleuran, Assistant Professor of Nursing, Department of Nursing, Faculty of Medicine, Columbia University. She has worked full time with the admissions office and, besides her role as Director of Financial Aid, has directed an extensive recruitment plan for the school.

Although Mrs. Deleuran is now retiring (see retirement article elsewhere in this issue) the systematic plan which she has set in motion will continue to operate.

"Nursing has changed. Newer techniques do require greater skills and application of scientific knowledge afforded by advancement in science and technology." So wrote Mrs. Deleuran in the Spring, 1968, issue of The Alumnae Magazine.

"Our curriculum has changed markedly. It is especially designed to meet today's patterns of health education and health care.

"Opportunities for our graduates have changed dramatically. They are sought as mem-

bers of health teams by hospitals, schools and public health agencies throughout the world. They can continue their graduate study in numerous fields as clinical specialists, team leaders, teachers, researchers or administrators.

"We are now in the second year of our newly designed 2-year program. June 1968 marks the first graduation for students thus enrolled. Since we are also phasing out our former 3-year program, this year will mark one of the largest graduating classes in the history of our school.

"Our total enrollment has for years been close to 400 students, with yearly admissions totaling 125-135. With the phasing out of our three year program, we must increase our annual admissions to upwards of 200 students.

"The most important task of the admissions committee is to select qualified students. Our students should not only have a genuine interest in nursing and in people, but must also have an intellectual curiosity which will enable them to probe into the many problems with which they must deal. Needless to say, we would like to select our classes from as large and as varied a group as

possible.

"In order to attract a continual flow of qualified applicants, we have expanded our recruitment efforts considerably. Our Sight and Sound filmstrip, 'The Baccalaureate Program in Nursing,' is receiving wide circulation and acclaim. Our recent pictorial brochure, 'When you Choose Nursing,' is being circulated nation-wide."

Mrs. Deleuran states that posters are being designed to be sent to schools; flyers are being prepared for distribution; Open House programs are held annually each spring semester.

"Recruitment is a continuous process. Many a career plan is made early and we are therefore as interested in reaching the college bound student in high school as the college graduate who may be a late decider. She must be sought out and informed about nursing, and especially nursing as a career for her!"

Mrs. Deleuran's article in the Alumnae magazine appealed to the alumnae to help. The personal approach is always more effective. An alumna may contact guidance counselors and send names of students who should be supplied with up-to-date literature.

"We will especially welcome your visit to our recruitment office the next time you return to Maxwell Hall."

## Medical Data Processing Announcement

### FORTTRAN IV COURSE

A course in Fortran for administrative and medical applications will start July 1, 1968 from 5:00 p.m. to 6:00 p.m. in V.C. 14-240. The course consists of 18 one-hour lectures. Registration forms, obtained from Medical Data Processing P.H. 4-33, must be

returned no later than June 21. A prerequisite is the course in "Introduction to Computers."

William A. Bauman, M.D.  
Director, Medical Data Processing  
Presbyterian Hospital  
4th floor, Room 33  
622 West 168th Street,  
New York, N. Y. 10032

## NEWS OF NURSING

### Philippine Dinner A Popular Event

The cost was \$2.00 per dinner and the enjoyment was priceless. It was a typical Philippine dinner put on at Harkness Hall by the Social Committee of the Department of Nurses and the Staff Nurses from the Philippine Islands. There were delicious exotic dishes such as chicken relleño, sumpia and leche flan.

During the program that followed, two dancing groups presented Philippine dances—the Ilanco Peasant Dance and the Bamboo Dance. Amusement was added when a visitor from the United Nations and a Japanese doctor tried dancing the samba.

In the photo above, left to right, are L. Guiao; R. Guerrero; Margaret Wells, Assistant Director of Nursing; Mr. Ernesto Estrellado, Advisor, Legal Affairs, Philippine Mission to the United Nations; J. Eco; J. Villafraña.

Guests were Mrs. Maria Osmeña-Charnley, Cultural Officer, Philippine Mission to the United Nations; Mr. Ernesto Estrellado (see above); Nelly Burgos, Director, East Coast Philippine Tourist and Travel Association.

### Speed Reading Courses Will Be Given

Speed reading courses have attracted the attention of many Medical Center staff and personnel. A nine-week course offered last March created such great interest that a new and

larger class is being planned. The course is presented by the Better Reading Center under the instruction of its director, George Flagel. Students have been able to increase from two to four times their previous reading speed. No machines are used, no homework is required, and you are permitted to select your own reading material. The technique used may be applied in any language. Cynthia White, Coordinator of Staff Development, Nursing Service, has more information about the summer course to be offered, and her extension is 3181.

## In Memoriam

### Dr. William A. Horwitz

Dr. William A. Horwitz

Dr. William A. Horwitz, Professor of Clinical Psychiatry at the College of Physicians and Surgeons, Attending Psychiatrist at Presbyterian Hospital, and Associate Director of the New York Psychiatric Institute, died on May 15 at the age of 64.

Dr. Horwitz's eminence as a clinical psychiatrist brought him an extensive practice that

included many well-known persons. He worked with the general staff of the Columbia-Presbyterian Medical Center, and was called as consultant by the medical and nursing students and by the staff of all medical services. His participation in each new major development within psychiatry ranged from being active in the Children's Service at the Psychiatric Institute, which was the first of its kind in New York City, to his deep interest in every form of therapy. He was trained in psychoanalysis at the New York Psychoanalytic Institute, and continued to review the various psychological and psychopharmacological therapies over his lifetime as each one in turn appeared, being able to test out and evaluate each.

Distinguished in clinical research and teaching, Dr. Horwitz was deeply involved in the development of the resi-

dency training program at the Psychiatric Institute and in effecting its closer liaison with State Hospitals to provide ongoing postgraduate education for staff. It was his inspiration which led certain supporters to contribute to the Department of Psychiatry funds aiding special projects, such as foreign trainees. Dr. Horwitz published voluminously on varied topics, and in past years enjoyed lecturing in foreign countries on the modern management and treatment of depressions.

In 1927 Dr. Horwitz was graduated from Albany Medical College in Albany, New York, did his internship at Jewish Hospital in Cincinnati, Ohio, and took his residency in neurology at Montefiore Hospital in the Bronx. In the early 1930's he joined the staff of Manhattan State Psychiatric Hospital at Ward's Island. About that time the

New York State Psychiatric Institute was opened in its present location and he became a member of its staff. At the time of his death, Dr. Horwitz was Associate Director of the Psychiatric Institute and had been on its staff longer than any other of its current members. Also in the early 1930's, Dr. Horwitz became affiliated with the teaching staff of Columbia University. In 1935 he received a Doctor of Medical Science degree from Columbia.

He was certified by the Board of Psychiatry and Neurology in both psychiatry and neurology and was a member of many national medical societies. Among them were the American Psychiatric Association, American Psychopathological Association, AAS, and American Psychosomatic Society. He served on numerous committees and councils. He was one of the key figures in

the formation of the New York County District Branch of the American Psychiatric Association, of which he was President from 1957-58, and in the New York State Association of District Branches, of which he was a member for many years. Locally, he was a member of the New York Society for Clinical Psychiatry and the Vidonian Club.

In 1938 he was married to Dr. Henriette Klein, Clinical Professor of Psychiatry at the College of Physicians and Surgeons. In addition to his wife, he is survived by his two children, Susan, a medical resident at St. Luke's Hospital in New York City, and William Robert, a member of the teaching staff of Harvard University International Center. On June 11 at two o'clock a memorial service was held for Dr. Horwitz at the Medical Center in The Pauline A. Hartford Memorial Chapel.

### • ENGAGEMENTS

Deborah Randall and Robert Santulli are engaged. Mr. Santulli is the son of Dr. Thomas Santulli, Attending Surgeon, PH, and Professor of Surgery, P&S.

Andrea Grebien, from Panama, working in Sloane Social Service, is being married to Christopher Nye, of Connecticut, an English Professor at Adelphi University. They plan a July wedding.

Nancy Stutsman and Albert Richard Lamb III are planning a September wedding. Mr. Lamb's father, Dr. Albert Lamb, Jr., is Associate Professor of Clinical Medicine, P&S, and Associate Attending Physician, PH.

### • MARRIAGES

Anne Damrosch, daughter of Dr. Douglas S. Damrosch, Assistant Dean, Faculty of Medicine, to Andrew Stephen Krotinger on June 1st. Her sister, Eloise Damrosch, to Frank Goodnow MacMurray, Jr. on June 8th.

Ila Mae Schmidt and Edward V. Cox III were married on May 25. Mrs. Cox is a public health nutritionist and teaches in the Department of Nursing. Mr. Cox is a 4th year medical student at P&S.

Dr. Richard Zipf, IOPH Resident, and Mary Maurer were married on April 7 in Santa Ana, California. Mrs. Zipf is a new OPD employee.

### • BIRTHS

On June 3rd a baby daughter to Dr. John G. Gorman and his wife, who, as Carol Rutgers, was a former resident in Pathology at Presbyterian Hospital.

Mr. and Mrs. Clarence S. Davis are the proud parents of a son Kevin Vannance, born on March 27. Mr. Davis is an Attendant on NI 12.

Dr. Emil Wiroszko, Assistant Ophthalmologist, and his wife, Barbara, welcomed a son, William, born on Mother's Day, May 12.

Catherine Heckman, of Personnel, and Robert Heckman, of the Protective Department, welcomed their second grandchild, David Blackburn, born in Vermont on March 26.

### • WELCOME TO

Mrs. Lucy Lazzopina and Barbra Turitz, new members of the Office of Public Interest. Mrs. Lazzopina has been affiliated with the Medical Center since 1935, leaving in 1962 and returning to work in March of this year.

### • CONGRATULATIONS TO

Mrs. Erika Awer, who has been promoted to Supervisor in the Blood Bank.

Eileen Tallyday, who has been promoted to Assistant Supervisor in the Blood Bank.

### • FAREWELL TO

James Carrigan who resigned from his job as gardener in the Maintenance & Construction Department to return to Ireland where he expects to work his land. He has been with the Hospital since 1954.

### • CONDOLENCES TO

The family of Robert Purdy, a gardener in Maintenance & Construction, who died April 30th after a brief illness. He was 52 years old. Condolences to Mrs. Purdy, a receptionist at Maxwell Hall.

DR. HELEN O. CURTH, Special Lecturer in Dermatology, is Chairman of the Section on Dermatology and Syphilology, New York Academy of Medicine, for 1968-69. Dr. Curth has been with the Department of Dermatology since 1931.

DR. GEORGE CRICKLAIR, Professor of Clinical Surgery, P&S, and Director of Plastic Surgery Service, PH, and DR. FREDERIC SCHUH, Assistant Resident-Plastic Surgery, presented a paper entitled "A Critical Appraisal of Abbe Flap in Secondary Cleft Lip Deformity" at the meeting of the American Cleft Palate Association in Miami, Florida.

DR. RONALD L. KATZ, Associate Professor of Anesthesiology, PH, has been awarded a Guggenheim Fellowship for study at The Royal Postgraduate Medical School of the University of London. He will work in the Clinical Cardiovascular Research Unit at Hammersmith Hospital.

DR. ZACHARIAS DISCHE, Professor Emeritus of Biochemistry and Special Lecturer in Biochemistry, spoke on "Changes in Dynamic Equilibria of Lens Proteins in Cataract" at a seminar in the Department of Ophthalmology, Tulane University, New Orleans, Louisiana, on April 25. On the next day, Dr. Dische also presented a paper, "The Role of Protein Linked Carbohydrates in the Organization of Connective Tissue," to the Department of Biochemistry at Tulane University.

DR. DAVID JU, Associate Clinical Professor of Surgery, P&S, and Associate Attending Surgeon, PH, attended the Head and Neck meeting in Los Angeles and presented a paper entitled "Salivary Gland Tumors Following Radiation of the Head and Neck Areas." Dr. Ju also attended the American Association of Plastic Surgeons meeting in Houston and was on a panel discussing "Management of Parotid Tumors."

DR. HERNANDO CARDONA, Research Associate in Ophthalmology, as reported in the April Stethoscope, participated in the VIII Meeting of the Pan-American Congress of Ophthalmology that met from March 24 to 31 in Mar del Plata, Argentina, where he presented two papers and a scientific exhibit about keratoprosthesis. Dr. Cardona won first prize for his exhibit among thirty-five exhibitors.

DR. KENNETH E. EAKINS and DR. LASZLO BITO, Assistant Professors in Ophthalmology, Department of Ophthalmology Research, presented a paper, "The Effect of Anesthetic Agents on the Composition of Blood Plasma and Aqueous Humor," on April 29 at the Annual Meeting, The Association for Research in Ophthalmology, held in Tampa, Florida. At the same meeting, Dr. Bito and DR. NELSON BANKS presented a paper on "Further Characterization of the Pharmacological and Physiological Behavior of the Iris of the Cholinesterase Inhibitor Treated Eye." The paper was actually delivered by Dr. Banks who, at that time, was a 4th year medical student at P&S.

DR. GABRIEL G. NAHAS, Professor of Anesthesiology, P&S, and Attending Anesthesiologist, PH, attended the International Conference on Resuscitative Medicine, held in Nancy, France, from April 25 to 27. On April 25 Dr. Nahas presented a paper entitled "The Use of Titrated Electrolyte Solutions in Parenteral Therapy."

DR. MIECZYSLAW FINSTER, Assistant Professor of Anesthesiology, P&S, and Assistant Attending Anesthesiologist, PH, was Visiting Professor in the Department of Anesthesiology at the University of Texas, Southwestern Medical School at Dallas, on April 25 and 26. He was also a guest speaker at the meeting of the Dallas County Anesthesiology Society, where he discussed "Uptake of Anesthetic Agents by Fetal Tissues and the Placenta." On April 30, Dr. Finster addressed the annual meeting of the Kansas Medical Society in Topeka, speaking on "Fetal Asphyxia and Resuscitation of the Newborn."

DR. EDWARD T. BOWE, Instructor in Obstetrics and Gynecology, P&S, and Assistant Attending Obstetrician and Gynecologist, PH, presented a paper entitled "Fetal Blood Sampling in Labor: Maternal-Fetal Relationships" on May 1 at the Annual Meeting of the American Pediatric Society, held in Atlantic City, New Jersey. From May 6 to 8, Dr. Bowe attended the Annual Meeting of the American College of Obstetrics and Gynecology, held in Chicago, Illinois, and participated in a Round Table and Symposia on "Fetal Monitoring in Labor."

DR. RUTH C. HARRIS, Assistant Professor of Pediatrics, P&S, and Assistant Attending Pediatrician, BH, participated in a discussion on the problem of "Obstructive Jaundice" on April 19 at Brooklyn Cumberland Hospital, Brooklyn, New York.

DR. ERICH HIRSCHBERG, Assistant Professor of Biochemistry and Medicine, P&S, has been named to the administrative post of Associate Dean for Research at New Jersey College of Medicine and Dentistry. Dr. Hirschberg joined the college staff part-time on May 1 and will assume full-time responsibilities in September. He also will be an Associate Professor in the Department of Biochemistry.

DR. LESTER C. MARK, Professor of Anesthesiology, P&S, and Attending Anesthesiologist, PH, served as Visiting Professor in the Department of Medicine at Emory University, School of Medicine, Atlanta, Georgia. On April 25 he appeared on the local educational TV channel while addressing the Noon Clinic on the subject "New Vistas in Barbiturate Metabolism." On April 28 Dr. Mark spoke to the Kentucky Society of Anesthesiologists at its spring meeting in Owensboro, Kentucky, on "Current Therapeutic Concepts in Barbiturate Poisoning."

DR. ROBERT M. DAY, Assistant Clinical Professor of Ophthalmology, P&S, and Associate Attending Ophthalmologist, PH, participated in a panel discussion on "The Ocular Changes of Graves' Disease" at the Ophthalmology Section Meeting, Ontario Medical Association, Toronto, Canada.

### Seven Promoted to V. C. Floor Supervisors

CONGRATULATIONS to seven former Vanderbilt Clinic receptionists recently promoted to VC floor supervisors. They were photographed with Mrs. Eleanor Birge, Supervisor, VC. Seated, left to right, are Mrs. Gloria Martin, Assistant Supervisor, VC; Mrs. Birge; Mrs. Catherine McCormick, First Floor Supervisor; Mrs. Mona Yocum, Fourth Floor. Standing, left to right, are Mrs. Jeanne Kuller, Fifth Floor; Mrs. Rosalind Simoni, Tenth Floor; Mrs. Sylvia Haber, Second Floor; Mrs. Susan Casamassima, Third Floor; and Mrs. Stella Castagna, Fourth Floor.

## John A. Hartford Foundation Adds Grant of \$613,928 For Further Cancer Studies

A three year grant totalling \$613,928 has been made to The Presbyterian Hospital by the John A. Hartford Foundation, Inc., New York City, to continue studies on the prevention and control of the prostatic enlargement, by new methods, and the continuing study of cellular growth in men and animals. Hopefully, new ways can be found to prevent abnormal cell growth and the survival of cancer cells in the human prostate.

The grant was jointly announced by Ralph W. Burger, President of the Foundation, and Augustus C. Long, President of the Hospital.

In expressing the gratitude of the Hospital and its Board of Trustees, Mr. Long cited the generosity and continued interest in health research by

the John A. Hartford Foundation, which to date has awarded more than \$7,000,000 in grants to Columbia-Presbyterian Medical Center.

Malignant and benign growths of the prostate gland frequently occur in men during their most productive years. "These abnormal growths occur at a time when there is an alteration in the hormonal content of the extra-cellular fluid which continually bathes the prostatic cells and their supporting fibromuscular stroma," according to Dr. John K. Lattimer, Director of the Service of Urology at the Hospital.

Dr. Lattimer, chief investigator in this important study, said that prostatic cancer "has now become the leading cause

## Dr. Melvin Moss Named New Dean Of Dental School

Dr. Melvin L. Moss

For the first time in its history the School of Dental and Oral Surgery will have a Columbia alumnus as its Dean. Melvin Lionel Moss received the D.D.S. in 1946 and his Ph.D. in 1954. His academic career began in 1952, not, however, in dentistry, but in the Department of Anatomy. He remained there until 1967 when he became Professor of Oral Physiology in the School of Dentistry.

During those years he was closely associated with the work of the Division of Plastic Surgery at P&S and is a past vice president of the American Society for Cleft-Palate Rehabilitation. He is one of the few non-clinical members of the Plastic Surgery Research Council. He has taught summer sessions at Columbia and at the School of General Studies and gives Postgraduate courses for the School of Dental and Oral Surgery. He also taught a summer session at Harvard and has lectured widely in Europe and Central America.

He was a University Fellow from 1951-1953, a post-Doctoral Fellow, U.S.P.H.S., from 1953-1954 and received the Lederle Medical Faculty Award for 1954-1956. In 1967 he was a participant in the Nobel Symposium in Stockholm and this year gave the Northcroft Memorial Lecture before the British Society for the Study of Orthodontics.

The list of Dr. Moss' publications between 1948 and 1968 takes up eleven pages and he has an impressive array of research grants to his name. When asked about his present

## Additional \$1.5 Million Gift Received From Commonwealth Fund For Institute of Ophthalmology

An additional \$1,500,000 grant to help build and equip an extension to the Institute of Ophthalmology at Columbia-Presbyterian Medical Center has been made by The Commonwealth Fund, New York City, increasing the Fund's total gifts and pledges for this project to \$4,000,000.

The addition, upon which construction began early in 1967, is expected to be completed in the summer of 1969, at an estimated cost of \$5,150,000, and will provide modern facilities for research into eye defects and diseases and for an enlarged out-patient clinic.

The Eye Institute, which became a unit of the Presbyterian Hospital in 1933, was made possible by the generosity of Edward S. Harkness, whose philanthropy and foresight were responsible for the establishment of the Columbia-Presbyterian Medical Center.

Mr. Malcolm P. Aldrich, a friend of Edward S. Harkness, and a trustee of the Presbyterian Hospital, has continued to carry out the purposes of the Harkness Family through the philanthropies of The Commonwealth Fund of which he is Chairman of the Board. Elected a trustee of Presbyterian Hospital in 1928 he has been active on the Joint Administrative Board, as a Trustee of the Columbia-Presbyterian Medical Center Fund, Inc. and on numerous commit-

Malcolm Aldrich

tees. He is a graduate of Yale University, A.B., 1922, where he served as a member of the University Council. During World War II he was a Captain in the U. S. Navy. In addition he is prominent in the field of business and philanthropic endeavors serving as a director of many corporations and institutions.

How did the Institute of Ophthalmology come into being? The account given by the late Dr. Albert R. Lamb, Hospital historian, goes back to the summer of 1930 when President Dean Sage gave Mr. Harkness a memorandum on Hospital needs from which he, Mr. Harkness, singled out the last project on a list of fifty—an eye hospital.

Figures were prepared and a plan made for a new building to be erected on the northeast

## Dr. Masland Appointed Professor of Neurology And Chairman of Department

Grayson Kirk, President of Columbia University, and Augustus C. Long, President of The Presbyterian Hospital, announce the appointment of Dr. Richard L. Masland as Professor of Neurology and Chairman of the Department of Neurology, Columbia University College of Physicians and Surgeons, and Director of the Neurological Service, Neurological Institute, The Presbyterian Hospital. The appointment became effective on June 15, 1968.

To accept this position, Dr. Masland leaves the Directorship of the National Institute of Neurological Diseases and Blindness, National Institutes of Health, Bethesda, Maryland, where he has been since 1957.

Dr. Masland, a native of Philadelphia, Pennsylvania, received his A.B. degree from Haverford College in 1931 and his M.D. from the University of Pennsylvania School of Medicine in 1935.

Dr. Masland was associated with the Pennsylvania Hospital, Philadelphia, and the University of Pennsylvania from 1935 to 1946, except for two years in the United States

Dr. Richard L. Masland

Army, 1943-45, as Director of the Department of Physiology, School of Aviation Medicine, Randolph Field, Texas.

From 1947 to 1957, he was on the faculty at Bowman Gray School of Medicine, Wake Forest University, Winston-Salem, North Carolina, advancing to the position as Professor of Psychiatry and Neurology, in charge of Neurology, and Associate in Physiology in 1955. From 1955 to 1956 he was on leave of absence from Bowman Gray to serve as Research

This architect's rendering shows how the Eye Institute will appear when the new addition is completed. Ft. Washington Avenue is in the foreground, 165th Street at right.

1. Hi, I'm PRINCESS. Don't you think my ears are truly regal?

2. I was brought into the world by an eminent pediatrician, DR. STANLEY JAMES. He had won the MEAD JOHNSON AWARD for Pediatric Research into respiration. And funnily enough I couldn't breathe when I was born—respiratory distress syndrome they called it—but he managed to revive me.

3. Grandma brought me up in a way, but . . .

4. This is my real mother. She's called ADELINE ELIA and we live in Animal Husbandry at the Institute of Comparative Medicine.

5. You meet such unusual people in a hospital . . .

7. Yesterday there was a delicious memo in here . . .

8. No, I think this one's tastier . . .

9. But Mama, I'm always good . . . and I promise to chew up only your old memos in the future.

6. But really quite charming.

### National Science Foundation Grant

Recently, the National Science Foundation made a grant of \$36,000 to the Trustees of Columbia University for research entitled "Mechanism of Transcription of E. coli DMA." This grant is under the direction of Ann Roller, Department of Biochemistry, College of Physicians and Surgeons. It became effective April 1, 1968, for a period of approximately two years.

The grant was announced jointly by John T. Wilson, Deputy Director, National Science Foundation, Washington, D. C. and Grayson Kirk, President, Columbia University.

### Employee Safety Committee at Medical Center

At the Columbia-Presbyterian Medical Center there are many individuals concerned with the well-being of all our employees. Most active among these are the members of the Employee Safety Committee. The membership includes a representative from every department in the Hospital, a coordinator and chairman, and representatives from the Hospital insurance groups.

The committee meets once every month to review all aspects of employee safety: incidents that have occurred, programs of prevention being carried out, fire drill and inspection reports, and continuous evaluation of the safety program. Also, there are subcommittees which meet individually, once a month, to maintain their responsibilities. The subcommittees include: Fire Prevention and Control, Inspection, Training and Safety Promotion, Analysis and Steering.

The effectiveness of the Employee Safety Committee is best measured by the response and support of every employee in the Columbia-Presbyterian Medical Center, and we urge you to contact your representative with any problems or recommendations regarding safety in our hospital.

Here is a list of the depart-

ments, representatives and locations:

Chairman of the Committee—Mr. C. D. Auty, B.H. B-7. Comptroller, Accounting, D.P.O., Receiving—Mr. K. Tuxbury, S.B. 2, Safety Coordinator.

Engineering—Mr. J. Bolger, P.H. Tunnel.

Food Service—Miss M. Iles, P.H. 14-46.

Housekeeping—Mrs. M. Wilkens, P.H. B-448.

Laundry—Mr. J. Nelan, S.B. 3.

Maintenance/Grounds—Mr. W. Fleck, S.B.G.

Nursing Service—Mrs. B. Torstenson, P.H. 4-129.

Nursing Safety Committee—Miss M. Eddington, P.H. 12-40.

Personnel—Mr. W. Duffy, B.H. B-7.

Professional Services, X-ray, Labs, Public Interest—Mrs. G. Covolo, N.I. 13-1323.

Professional Services, O.T., P.T.—Mrs. E. Shelly, B.H. 5-532.

Protective—Mr. J. Sheridan, P.H. B-33A.

Purchasing, Stores, Print Shop—Mr. G. Walker, S.B. 5.

Unit Managers/Communication, Telephone, Mail, Elevators—Mr. J. Kiernan, H.P. M-1.

V.C. Administration, Record Room, Pharmacy, Admitting—Mr. A. Saker, V.C. 1-102.

### Medical Center Basic Policy On Picture Taking in Hospitals

Recently, various departments within the Medical Center have brought professional photographers in to take photographs within patient areas. *The Stethoscope* takes this opportunity to clarify and restate a basic policy of the Medical Center with reference to picture-taking within any of the hospitals.

A member of the Department of Public Interest must be with any photographer from the outside who may be carrying out an assignment for a department or a physician, and this person will be responsible for getting signed releases from patients who may appear in such photographs.

The reason for this policy is sound. A commercial photographer is apt to take any interesting picture he sees and that picture may be sold later to appear in a commercial ad. If such should happen—and it has recently in another hospital—the patient can sue the hospital as well as the magazine or advertiser for invasion of his privacy and the use of his picture without his consent.

When a photographer is to come in, simply call the Department of Public Interest and one of its members will be glad to escort the photographer on his assignment.

**Dr. John J. Sciarra**  
**Heads Obstetrics and**  
**Gynecology Department**  
**At U. of Minnesota**

Dr. John J. Sciarra has been appointed Professor and Head of the Department of Obstetrics and Gynecology at the University of Minnesota Medical School, effective July 1, 1968. Dr. Sciarra, Assistant Professor of Obstetrics and Gynecology at the College of Physicians and Surgeons of Columbia University, will succeed John L. McKelvey, M.D., C.M., who retired from this position in 1967.

Dr. Sciarra, 36, has been associated with Columbia University and the Columbia-Presbyterian Medical Center since 1953. He currently holds an appointment as Assistant Attending Obstetrician and Gynecologist at the Presbyterian Hospital and Assistant Visiting Gynecologist at Francis Delafield Hospital.

A native of Connecticut, Dr. Sciarra received his B.S. degree from Yale College in 1953 and his M.D. degree from the College of Physicians and Surgeons of Columbia University in 1957. Following an internship in surgery at the Yale-New Haven Medical Center he returned to the Columbia-Presbyterian Medical Center in 1958 to begin his residency in Obstetrics and Gynecology at the Sloane Hospital for Women. In 1960 he received a fellowship from the Josiah Macy, Jr. Foundation for postgraduate study in reproductive physiology and worked for three years in the Department of Anatomy at Columbia University, receiving the Ph.D. degree from the Faculty of Pure Science, Columbia University, in 1963. At the completion of his residency Dr. Sciarra was awarded a Special Fellowship from the Institute of Child Health and Human Development, National Institutes of Health. He was named Assistant Professor of Obstetrics and Gynecology at Columbia University in 1965.

Dr. Sciarra's research interests relate to the biology of the placenta and the hormones produced by this organ. In 1965 he received the Carl G.

Dr. John J. Sciarra

Hartman Award of the American Fertility Society for his immunohistochemical studies on the localization of protein hormones within the human placenta. His present research is concerned with the assay of placental hormones in normal and abnormal pregnancy and with the evaluation of placental function. Dr. Sciarra's clinical interests are in the fields of gynecologic endocrinology, fertility, and infertility.

Dr. Sciarra is a Fellow of the American College of Obstetricians and Gynecologists and a member of the American Fertility Society. He is also a member of the American Association of Anatomists, the Society for Gynecological Investigation, and the Society for the Study of Reproduction.

## HARTFORD

*Continued from page one*

of cancer death in men over 60." Surgical removal is still the treatment of choice in such cancers, but there is hope that medications can be found to control prostatic cancers in those men who because of age or other factors are poor surgical risks. There is also a need for new diagnostic tests to determine early the presence or threat of cancer before it reaches the invasive stage. Hopefully, this study will provide new and better tests.

A previous three-year grant from the John A. Hartford Foundation for research in this area has provided new tools and techniques that will be used to advantage in this continuing study. "Using the tools of tissue culture and

time-lapse photography, which have been laboriously but successfully developed, it is our hope," Dr. Lattimer said, "to be able to determine whether viruses do indeed cause benign prostatic cells to act in an over-stimulated manner, as in cancer, acting either alone or in combination with various hormones or hormone deprivation states. Secondly, it is hoped that the detailed techniques of tissue culture which have been applied so successfully to cancer of the prostate can be developed further, so that very precise measurements of the effect of various medications and treatment modalities can be determined, when cancer cells in tissue culture are treated with these agents. In this way we would hope to be able to determine which medicines might be best for which cancers, much as we do with drug susceptibility tests on various bacteria, at the present time. For the benign prostatic enlargements we hope to demonstrate that various medications will cause benign enlargements to come to a halt, and perhaps even regress in some patients."

Dr. Alexander first received world-wide recognition for the development of a rabbit antiserum for the first effective treatment of meningitis caused by hemophilus influenzae, a hitherto highly fatal disease of children. Throughout her career she continued to be a leading authority on the treatment of bacterial meningitis and thousands of afflicted children were saved as a result of her research and teaching. Her work in meningitis led to studies on the mechanisms of bacterial resistance to antibiotics and this in turn resulted in productive research in bacterial genetics. She and her research associate, Grace Leidy, were the first to demonstrate transformation of Hemophilus influenzae and to show that this ac-

tivity was attributable to desoxyribonucleic acid. Subsequently, she and her associates studied the genetics of polio-virus and demonstrated the infectivity for cells in tissue culture of specific ribonucleic acid extracted from the virus. Dr. Alexander was actively pursuing her studies on bacterial genetics until a few weeks before her death and was co-author, with Dr. Irene Stachura, of a report on the use of the electron microscope for this purpose. This was presented at the annual meeting of the American Pediatric Society in May of this year. It was her hope that the results of her studies on the inheritance of genetic traits in microorganisms might prove applicable to the understanding of traits in human cells.

One of the few women ever to head a major medical society, Dr. Alexander was president of the American Pediatric Society in 1964. She was the author of many articles for medical journals here and abroad, including some 70 papers on meningitis, poliomyelitis, tuberculosis and other infectious diseases. She was a superb teacher and a compassionate physician with personal concern for her students and her patients.

She was born in Baltimore, Maryland on April 5, 1901. She attended Goucher College in Baltimore, receiving her A.B. degree in 1923. In 1930 she received her M.D. degree from The Johns Hopkins Medical School, Baltimore, and interned there, 1930-31, completing another year of internship at Babies Hospital, New York, in 1932. From the beginning of her internship at Babies Hospital she served a succession of appointments at the Columbia-Presbyterian Medical Center throughout her life. From 1951 she was an

so fragile. A final objective of the study will be to define the precise usefulness and limitations of cryosurgery in relieving prostatic obstruction, particularly to be sure that no ill-effects result, after a few years. This phase of the study has become most important," Dr. Lattimer said, "in view of the persistent appearance of overactivity of the cells in the healing areas, after freezing."

In summing up the past three years of work supported by the John A. Hartford Foundation, and the studies to be done under this new grant, Dr. Lattimer said, "We have now developed the tools and techniques for a far more intensive attack on the basic question of what causes these cancers and how we may better detect and treat them."

Dr. Hattie Elizabeth Alexander, Emeritus Professor of Pediatrics, College of Physicians and Surgeons of Columbia University, and Consultant in Pediatrics, The Presbyterian Hospital, died of cancer on June 24th in Harkness Pavilion, Presbyterian Hospital, at the age of 67.

Dr. Alexander was a member of many professional societies, including The American Academy of Pediatrics, The American Board of Pediatrics, The American Pediatric Society, The American Association for the Advancement of Science, The Harvey Society, The Infectious Disease Society of America, and several others.

Dr. Hattie Elizabeth Alexander

Attending Pediatrician both at Babies Hospital and Vanderbilt Clinic. Some of her several academic appointments at Columbia University were Holt Fellowship in Diseases of Children, 1932-34; Associate in Pediatrics, 1936-1943; Assistant Professor of Pediatrics, 1943-1948; Associate Professor of Pediatrics 1948-1958; and thereafter, Professor of Pediatrics.

From 1941 to 1945 she served as Consultant to the Secretary of War: Influenza Commission. In the years that followed, she received numerous special appointments in the field of her specialty.

She was the recipient of many awards, among them the Columbia-Presbyterian Medical Center Distinguished Service Medal, presented at the 75th Anniversary celebration of Babies Hospital; the E. Mead Johnson Award for Research in Pediatrics; the Elizabeth Blackwell Award for Women in Medicine, and the first medal awarded by the Children's Hospital of Philadelphia on the bicentennial of the University of Pennsylvania. Among other honors, she received the Heart Award of the Variety Club in 1966; an honorary degree, Doctor of Science, from Wheaton College, 1967; she was made an Alumnae Trustee of Goucher College in July, 1967.

Dr. Alexander's parents were William Bain Alexander and Elsie M. (Townsend) Alexander, both deceased. Her sisters and brothers are living: Mrs. Elsie M. Norfolk of Deerfield Beach, Florida; Mrs. Mary L. Wilkins of Washington, D. C.; Mrs. Dorothy B. Gibson, Baltimore, Maryland; Mrs. Mildred M. Ridings, Columbia, Maryland, and William B. Alexander, Baltimore. There are three nephews and one niece.

## DR. MASLAND

*Continued from page one*

Director, Scientific Research Advisory Board, National Association for Retarded Children.

Dr. Masland is author of more than 40 publications in neurology, physiology and related fields. He is a member of the American Neurological Association, American Academy of Neurology and many other professional societies. He has served on national boards and advisory committees of many lay and professional groups. He has re-

ceived several notable professional honors.

His research interests are mental retardation, higher cerebral functions, epilepsy, cerebral palsy, electroencephalography, clinical neurophysiology, epidemiological investigations and prenatal morbidity, and the investigation of human growth and development. He is a diplomate of the American Board of Psychiatry and Neurology.

Dr. Masland is 58 years of age. Dr. and Mrs. Masland will be residing at 118 East Hamilton Avenue, Englewood, New Jersey. The Maslands have four children.

# HERE ARE A FEW OF THE X-RAY TECHNICIANS

"The field for good X-ray technicians is wide open. The limits on what they can do are up to them and responsibility is there if they want to assume it. The job is expanding in all directions and later they have every chance of having highly paid jobs with equipment or film manufacturers who choose most of their executives from the ranks of technicians."

These were the rosy possibilities put forward by Dr. Guy Potter, radiologist on the third floor of Presbyterian Hospital. But, despite the opportunities which seem to be available, there is a grave shortage of X-ray technicians throughout the country.

In fact, this lack of manpower permeates the whole sphere of radiology.

Dr. William Seaman, Professor and Chairman of the Department, points this up in

Dr. William B. Seaman  
Professor and Chairman of the  
Department of Radiology

the 1967 Annual Report: "It has been estimated that within the next decade there will be a need for as many as 25,000 radiologists which would require one-fifth of medical school graduates to specialize in radiology. Since it is safe to predict that this is an unlikely goal, some other solution must be sought." Dr. Seaman goes on to advocate that the training of radiology technicians be upgraded and expanded. "The question has been raised as to what extent certain diagnostic procedures could be turned over to highly trained technicians. . . . This problem in a microcosm is the same problem that is facing the entire medical profession. Aggressive and imaginative steps are required."

Such steps are now underway with the setting up of a school this Fall within the Medical Center which will provide a regular flow of suitable technicians for the future and alleviate some of the difficulties almost immediately because even in training the students can be helpful to the department.

New York State is so far the only state in the Union to license technicians. To get the license they must be graduates of a two year approved school. Previously some schools turned out technicians after a

If you go to the third floor of PH for an X-ray, the first person you will probably see is Miss Mahoney. She receives the patients, and makes sure they know where to go and what to do.

Helen Kosik, a senior technician, is X-raying a foot. The patient lies on a floating top table which can be easily adjusted to various positions without discomfort to the patient.

Another useful instrument is this new portable X-ray machine which staff technician Jack Lewis is pushing down the corridor. It operates on 110 volts, rather than 220, and can be taken to the patient at the bedside where more outlets are available.

Staff technician Russell Goodwine taking an X-ray of the skull using a unit specially designed for head X-rays.

6-8 months' course. Although this New York decision will presumably raise standards in the long run, at present it causes several problems. For instance, Connecticut and New Jersey have a one-year re-

Mrs. Catherine Greene, registered nurse, is talking to X-ray aides Lily Platt, Lydia Santos, Mae Brigman and Helda Loew in the Radiology Department.

In the administration office, supervisor of 3rd floor X-ray technicians, James Brown, and administrative secretary, Lois Varcariolis.

On the right, George Taus is preparing a patient for a chest X-ray. He has taken her chest measurement to judge the correct exposure. Ken Lewis, on the left of the picture, has adjusted the square lead shield which protects against radiation. This is especially important to this woman because she is pregnant, but it is given to everyone who can stand up. It is not possible to use it if the patient is in a chair or bed.

## Columbia-Presbyterian Medical Center Is People . . .

Dr. Kent Ellis, radiologist, and Dr. Richard Auerbach, second year resident, above, discussing one of the X-rays in the chest room.

Above, Lester Thornton, Xomat technician on the 3rd floor of Presbyterian, waits for the completely processed film to come out of the Xomat machine. In the right he picks up the requisition and checks the identification of the patient.

Above, Rhea Epstein is placing the cassette containing the X-ray film in the film holder in preparation for an X-ray of the rib cage. She will get the patient into position after placing an identification tape on the cassette. Below she selects the factors on the X-ray machine—time, milliamperes and kilovolts—for the correct exposure to be used, while observing the patient through the door.

Barry Lipschitz, film file clerk, making sure the X-rays are readily available whenever required.

Dr. Frieda Feldman, assistant professor of radiology, reading the X-rays, and dictating notes.

quirement which means that technicians from there are no longer available to New York State.

What makes a good radiology technician?

Compassion in dealing with

patients and carefulness seem to be the prime necessities. Dr. Potter says, "No matter how good a radiologist is, he cannot read bad films. He is very dependent upon the technician and the quality of his

work." Teamwork is important and anyone who does not cooperate cheerfully and does not make every effort to check and assess what he is doing inevitably effects the work of all the others.

# S SERVING MANY AREAS OF THE HOSPITAL

This patient is having an intravenous cholangiogram for an examination of the common ducts, the gall bladder, etc. On the right is Mrs. Esther Goldstein, supervisor of X-ray technicians at Harkness and on the left, X-ray technician, Mrs. Lilo Flatow.

There is only one Department of Radiology but it has multiple divisions, Neurology, Babies, Harkness, Squier, the Eye Institute all have their own radiology apart from the main section on the third floor of PH. It is obviously not practical to have X-rays too centralized because of distance and convenience for patients. Expansion is planned and in the new wing there will be four rooms of specialized equipment for cardio-vascular radiology. In addition there is radiotherapy, nuclear medicine using radioactive isotopes and a radiation research laboratory. Radiology, in fact, casts its net widely throughout the Medical Center. Although the number of patients has probably not increased during the past ten years, the work load has gone up about 6% annu-

On the left, Dr. Ralph Schlaeger, professor of radiology, with a patient undergoing a gastro-intestinal series in Harkness cineradiography unit. Nursing aide, Christine Shatarian, gave the patient a cup of barium before helping him on the fluoroscope table, now partly tilted. In the adjoining room, see right, Dr. Schlaeger watches the TV monitor of the machine while at the controls of the fluoroscope, as the patient on the table

gradually assumes a vertical position.

ally and is increasing. New techniques and more complicated equipment are being developed all the time. Radiology is becoming one of the most important and interesting branches of medicine with almost unlimited horizons opening up for those who work in it.

ography is a relatively new medical procedure records the radiant heat emitted by the skin. It uses a high resolution scanning device records skin temperature and presents the data graphically. Above, Regina Witzig, a thermographer, is photographing a patient. A hard print and negative are immediately available (see below). The cool areas of the face—nose, ears, corneas—come out as a dark pattern, the warm areas as light. The thermogram is checked by Dr. Charles Geiffuss, a fellow in neuroradiology (see photograph).

These three pictures show processes in the taking of a cerebral angiogram. Above, Dr. Ervin Hansen, the neurosurgeon, inserts an angiogram needle into the patient's carotid artery. Staff technician Beverly Korom, who is with him, will then develop the Polaroid X-ray film which is part of the angiogram. Upper right, Dr. Michael Tenner, assistant professor of radiology, checks the Polaroid result with Dr. Hansen for the placement of the needle. Right, Beverly Korom sets up the X-ray tube for a cerebral angiogram.

Above in the pneumoencephalogram room a patient is lying in the special chair designed by Dr. Gordon Potts, formerly with the Department of Radiology. Drs. Raymond Brust and Michael Tenner watch while staff technician Michael Anselmo sets the chair for a lateral view of the brow-up position, in readiness for the X-ray. Upper right, the air inside the patient's head is being monitored on the TV set. To right, Michael Anselmo changes the patient's head position by maneuvering the rotating chair.

Film clerk Ed Montero taking the developed angiogram out of the Xomat. The film comes in a big roll, there is an automatic developer device and it goes through the complete process in 3½ minutes. He then, see right, sets up the completed angiogram on the viewbox and marks it. The first 6 films are the arterial phase, at 3 per second; the others, the venous phase at 1 per second.

# 52 Students Spend Summer As Aides To Occupational Therapists

Some are looking a little apprehensive, as well they might. This is an important summer in their lives. They are part of a group of 52 students who have been accepted to work for two months as aides to occupational therapists. They are being placed in 32 hospitals in the greater New York Metropolitan area. The upper photograph was taken at the orientation meeting in the Black Building on June 14th.

It all began ten years ago, when it was found that enrollment for occupational therapy in professional schools was far down all over the country. Yet the need for services was becoming greater all the time. Professors Marie Louise Franciscus and Adelaide Deutsch of the Columbia University School of Occupational Therapy decided to do something about it.

Professor Deutsch went into colleges and talked to undergraduates in psychology and biology classes, explaining how their interests could tie in with occupational therapy. The summer of 1959 saw the beginning of the experiment "Summer Experience," with seven students from seven colleges going to seven hospitals. The legendary luck of that num-

ber must have been working because the venture was a great success. Hospitals which had been chary about the whole idea were converted to enthusiastic supporters and now many of them pay the students for their work.

Mrs. Deutsch went on to explain, "The students work as aides and leave the therapists free to concentrate on the treatment of patients. Of course we get the cream of the crop now — out of 250 applicants this year we chose 52. It's an educationally-structured experience. They read, attend lectures, have assignments and are closely supervised. They must write a paper afterwards and attend three meetings — an orientation before the course, one in the middle and an evaluation afterwards. And of course, these students do the grassroots recruiting themselves. If it's been a good experience they go back to their campuses and talk about it."

Students are only accepted for the summer project if they are undecided what they are going to do about their graduate education, but 60% of all who have participated have gone into occupational therapy.

The orientation meeting was

The group at the orientation meeting held in the basement of the Black Building on June 14th.

opened by Professor Marie Louise Franciscus, Director of Courses in Occupational Therapy at Columbia, who called the purpose of occupational therapy a creativity for the future, rather than something emerging from skills or procedures. She described it as a means of standing up in the midst of confusion and uncertainty of our society to affirm life through an experience based on reality. It helps physically or psychologically handicapped patients to overcome limitations and to develop their abilities. This enables them to function at their maximum potential.

After the showing of an excellent film called "A Way of Life," which used still photographs and a wild sound track to show the work unsentimentally as it really is, Mrs. Deutsch talked about what the students should expect during the summer.

She gave some very practical advice. "Look out for your appearance. Give patients pleasure looking at you. Miniskirts are inappropriate in the treatment setting. Don't assume responsibility unless it has been given to you. When in doubt, go to the supervisor." She also explained that this was an opportunity to explore a career, that the best way to make an intelligent decision about a career is to try working in it. And for the instructors it was a chance to find out if students had potential. "A hospital is a specific community. The privilege of working there carries responsibilities to patients, staff and the whole community."

The afternoon sessions dealt with the practical role of occupational therapy in a hospital. Mrs. Ruth Knippenberg, Director of Occupational Therapy at Blythedale Children's Hospital in Valhalla, talked about pediatrics and Mrs. Susan Fine, Supervisor of Education in occupational therapy at New York State Psychiatric Institute about the use in psychiatry.

General medicine and surgery was covered by Mrs. Eleanor Shelly, Director of Occupational Therapy at Presbyterian. She fascinated the group with adaptive devices she had developed for patients to help

On the left, Miss Flanders, Executive Director of the Women's Committee of the United Hospital Fund, and on the right, Professor Marie Louise Franciscus, Director of Courses in Occupational Therapy, look pleased as the students leave after a successful morning session.

Professor Adelaide Deutsch, of the Columbia University School of Occupational Therapy, preparing the students for their "summer experience."

them feed, groom and dress themselves.

She shared some of her successes with the students, like the man with quadriplegia who had only shoulder movement and for whom she contrived a special sling so that he could use an electric toothbrush and a shield for his electric razor. He is now working half days in his law firm, writes, eats and shaves without adaptive equipment, but still uses his toothbrush in a sling because he has become attached to it.

But the special attraction of the day came at the end.

Miss Josephine Cohen, Director of Occupational Therapy in the Department of Physical Medicine and Rehabilitation at Mount Sinai, began by describing how patients are helped to go about the normal activities of daily living with adaptive devices and various functional activities to increase strength, the range of motion, coordination and the ability to stand. She then went on to talk about prosthetics and said that she was going to demonstrate their use with a patient.

One of Miss Cohen's colleagues at Mount Sinai, Mrs.

Gibbs, brought in the patient — Melvin, aged three, curly hair and huge brown eyes lighted up with curiosity and delight at being the centre of attention. For he was a show-off, and soon realized that every female in the room was adoring him.

Melvin had short stumps instead of arms, a congenital amputation from birth, and needed prosthesis in order to be able to do anything for himself. He manipulated his plastic arms and hooks very agilely indeed when he felt like it, when there was a piece of chocolate to eat, for instance. He was not going to be pushed around, and showed his independence, but could not resist an audience and soon was skittering along the desk showing how mobile he was on his strong legs.

Looking at the rapt faces of the young students you could see that they were already captured by the idea of a career that would help the young Melvins of this world become self-sufficient members of society. The Occupational Therapy school of Columbia University has reason to be well satisfied with the summer experience program.

## DR. MOSS

*Continued from page one*

work he said that he intends to continue his research into the growth and development of the head and the study of the comparative biology of calcified tissues. He added that he would also carry on with pertinent aspects of his teaching.

As for his plans for the School of Dental and Oral Surgery, Dr. Moss replied, "The appointment signifies that the School is about to move into the more biological

areas of dentistry. As the curriculum is revised there will be greater emphasis on the correlation between the clinical and the biological aspects of the profession. I would hope too for increased cooperation between the School, the College and The Presbyterian Hospital so that the Dental School will become a more integral part of the Medical Center complex."

The new Dean will obviously bring not only a widely ranging experience but also enthusiasm and imagination to his appointment.

## Klotz is Office Manager at Public Interest

Carl H. Klotz, Manager of the Columbia - Presbyterian Medical Center Fund, Inc., has recently been given additional responsibility as Office Manager of the Office of Public Interest.

The decision to combine the managership of the two offices was made as a move to increase the efficiency of both, according to Mr. W. L. Van Atta, Director of the Office of Public Interest.

Mr. Klotz has been with the Development Fund since 1960. Two years ago the offices were moved from midtown to the Hospital and at that time Mr. Klotz was named Fund Manager.

Previous to his employment by the Medical Center, Mr. Klotz spent five years with the Pan-American Guided Missile Range Division. He was in charge of Down Range Per-

Carl H. Klotz

sonnel and responsible for establishing the Missile Tracking Stations through the Caribbean Islands, South America, and the South Atlantic Ocean.

# These People Are Retiring From Columbia-Presbyterian

## Mrs. Ruth Bogan

Mrs. Ruth Bogan

Having chosen early retirement, Mrs. Ruth Bogan, Supervisor of the Blood Bank, was given a very pretty farewell tea on Friday, May 10th.

To Mrs. Bogan it was a matter of chance, twenty-two years ago, that she began work at Columbia-Presbyterian. Previously she had worked with the Red Cross Blood Bank for three years. A friend asked her to come here for two weeks to help out, and she did so reluctantly, for she was very busy. Then she was urged to stay on, and promotions followed. Six years ago she was made Blood Bank Supervisor.

Mrs. Bogan states that the Blood Bank has grown enormously. Earlier there were two units in two separate buildings; later they were combined into the present Blood Bank. "Formerly we took blood only from our donors," she said. "Now much of our supply comes through the Blood Assurance program."

The art work of Mrs. Bogan attracted much attention during the recent Art Show. Making plastic ornaments is something which she says she has learned by trial and error. She grows her own flowers, dries them, and casts them in plastic. Art has always been a part of her life, though she has had no formal training. She loves music, especially symphonic.

She has a son who is an architect, who recently completed a theater and auditorium on the Berkeley Campus in California. Her husband died in 1946. He had been in Army Ordnance.

Mrs. Bogan, who lives in Port Washington, Long Island, now finds herself busier than ever. One of her chief projects is winterizing her home in Martha's Vineyard. "I have really enjoyed all my years at Presbyterian," Mrs. Bogan said at the time of retirement. "It's like a family. And there's always a good

## Mrs. Mary Ryan

Mrs. Mary Ryan has retired after twenty-two years of service as a nursing aide on the eleventh floor of Presbyterian Hospital.

A retirement party was held in her honor on May 8. In a special note to *Stethoscope*, she has said: "Thanks to Dr. Daniel Baker, Mrs. Janet Monroe, Miss Hagner, Mrs. Magnone, Mrs. Hagan, the nursing staff, the attendants, the residents, and all the others who made my retirement party a huge success. I can't reach them all individually, so may this be a small way to thank you all."

Mrs. Ryan was born in County Tipperary, Ireland, and came to this country in 1930. She has two daughters and six grandchildren, and she is an enthusiastic bingo player. She hopes to return for awhile to Ireland, probably

Mrs. Mary Ryan

around New Year's, and will use part of the generous gift she received at her party to finance her trip.

She will not leave the Medical Center for she has joined the Volunteer Department and will soon assume volunteer duties on the eleventh floor.

## Additional Gift from Commonwealth Fund

*Continued from page one*

corner of 165th Street and Fort Washington Avenue. This was to be the Eye Institute under the professional direction of Dr. John M. Wheeler, who had been associated with the Department of Ophthalmology since 1928. Mr. Harkness had greatly admired Dr. Wheeler's ability.

Having reviewed plans and estimates, Mr. Harkness announced his decision in May 1931:

"For the construction and endowment of this Institute I willing to obligate myself to the total sum of \$5,000,000."

Work started at once, and Dr. Wheeler began assembling his staff. On January 10, 1933, the Institute was opened for patients.

It was a nine-story building with 96 beds for private, semi-private, and ward patients and with a separate ward for children. Every detail had been painstakingly thought out by Dr. Wheeler, and it was a remarkably well planned building. There were recreation rooms, solarium and a library. Over the operating rooms were sealed galleries equipped with opera glasses permitting students, interns and residents to witness close-up views of eye operations. There were ample facilities for personnel, offices for staff doctors, a department of X-ray and an optical shop. Laboratories, too, were provided for.

In the first year 1,619 pa-

patients were admitted and 1,421 operations were performed. In the X-ray service, 294 patients were examined. From the beginning the Institute operated on the \$2,450,000 endowment which Mr. Harkness had provided. Later Mr. Harkness gave \$963,000 more to the endowment.

In 1939 negotiations were completed for the integration of the Herman Knapp Memorial Eye Hospital, one of the pioneer institutions in that field, with the Institute of Ophthalmology and the College of Physicians and Surgeons.

In 1941 a new laboratory for research in physiological optics was completed. Funds for construction had been given by Mrs. Edward S. Harkness. It was equipped and operated by the Knapp Memorial Foundation.

From its earliest origins, the Eye Institute has been a world leader in ophthalmologic research, medical teaching, and in the development of improved clinical techniques and ophthalmologic instruments. Its three directors, Dr. John M. Wheeler, Dr. John H. Dunnington and Dr. Arthur G. DeVoe, have placed emphasis on finding better ways to diagnose and treat diseases of the eye. As a result, the Institute now enjoys an international reputation for excellence. Among the advancements made during the past three decades have been the establishment of a children's eye clinic at Vanderbilt Clinic; new research laboratories; the establishment of the Retinoblastoma Clinic; the development of a large study of the retinal diseases, with emphasis on photo-coagulation and laser techniques, and the transplanta-

## Helen L. Scott

Helen L. Scott, Assistant Director of Nursing, Harkness Pavilion, retired on July 1st.

She was born in Troy, New York. In 1927 she was graduated from the old Presbyterian Hospital School of Nursing, the last class to be graduated from the downtown hospital. Upon graduation, she was appointed Head Nurse of Ward 8—Women's Surgical Ward. When the hospital moved to our new Medical Center in 1928, she helped to open Floor L—the surgical floor—now known as P.H. 14 Surgical. She remained there as Head Nurse until 1930 when she toured Europe with friends for four months.

On her return, she did private duty nursing for a few months for valuable experience before she rejoined the staff in 1931 as Head Nurse on Harkness, 7th Floor.

She has served in Harkness Pavilion as Head Nurse, Supervisor and Assistant Director for the past 37 years. She has a B.S. in Nursing Education and an M.A. in Student Personnel and Guidance from Columbia University.

Her years at the Hospital have been wonderfully happy and contented years, mainly because she has been in

Helen L. Scott

"Nursing Service"—service whose aim was to give the best possible nursing care to patients. She gives great credit to her loyal Supervisors, Head Nurses, Staff Nurses, Private Duty Nurses and auxiliary personnel who have taken great pride in trying to uphold the standards—and the "esprit-de-corps" which have made Harkness a happy home! She says, "Loyalty is the key which opens the door to happiness in your work."

Now retiring, Miss Scott is happy knowing that she is leaving Harkness Nursing Service in the competent hands of Miss Andrée L. Powell, P.H. '47, as Assistant Director of Nursing, and Miss Ellen Gubler as Senior Supervisor, P.H. '46.

tion of corneas.

The Institute of Ophthalmology, presently under the leadership of Dr. Arthur G. DeVoe, Edward S. Harkness Professor of Ophthalmology in the College of Physicians and Surgeons and Director of the Service of Ophthalmology in the Hospital, now has 102 beds, in which 3,869 patients received 29,247 days of Hospital care last year. There were 27,697 visits to the Institute's out-patient clinics. The present expansion will permit many more patients to receive eye care at the Medical Center than in the past, and will bring together in one location the various research activities of the Department of Ophthalmology.

Of the \$4,000,000 now given, or pledged by the Fund, \$1,500,000 has been earmarked for endowments related to the new facilities, of which the Presbyterian Hospital will receive \$1,000,000 and Columbia University's College of Physicians and Surgeons will receive \$500,000. A total of \$650,000 is still needed to meet construction costs of the new facility.

In referring to these gifts, Mr. Quigg Newton, President of the Commonwealth Fund, said, "The Fund's appropriations in support of the construction and maintenance of the new research facility reflect the crucial importance of

the Eye Institute's continuing role in the prevention and cure of eye defects and diseases." He also stated that the grants are "in memory of Edward S. Harkness, in recognition of his deep and abiding interest in the Institute's development and his wish to have it become and remain the outstanding institute of its kind in the country."

The gifts to Columbia-Presbyterian Medical Center were accepted jointly by Mr. Augustus C. Long, President of the Presbyterian Hospital, and Dr. Grayson Kirk, President of Columbia University.

In expressing appreciation, Mr. Long said, "This generous additional gift makes it possible to continue uninterrupted the completion of this essential facility, which in years to come will play a major role in helping the Presbyterian Hospital in its obligation to provide the best treatment and care for patients with diseases and defects of the eye."

Dr. Kirk stated, "The Commonwealth Fund's truly generous assistance makes possible the expansion of what we regard, as did Mr. Harkness, the particularly significant work of the Eye Institute, where in expanded quarters we are confident the Institute's present standards of excellence in teaching, research, and patient care may become further enhanced."

### • ENGAGEMENTS

Susan Kovage and Richard Ratzan plan a December wedding. Both are students at P&S.

Angela Ramirez, who is a Registrar in VC, became engaged to Nicholas Pierce on May 29. A wedding is planned for August 17. Mr. Pierce is a teacher in a high school in New York City.

Phyllis M. Antipas, Secretary in Medical Personnel, is engaged to George Stravakian of Riverdale, New York.

### • MARRIAGES

Viola Peart, Staff Nurse, PH, and Trevor Vernon were married on June 8 in The Pauline A. Hartford Memorial Chapel at the Medical Center.

Carol Wing and Theodore Shen were married at the Dwight Memorial Chapel at Yale University on June 13. Mr. Shen's father, Dr. Shih-chang Shen, is Associate Professor of Anatomy at P&S.

### • WELCOME

To Mrs. Nancy Scotton, a new receptionist in the Purchasing Department.

### • FAREWELL

To Fred Hermann of the Protective Department who, for 18 years, was assigned to the midnight to 8 a.m. tour at Maxwell Hall. Two separate farewell parties were given for Mr. Hermann by the nursing faculty and the undergraduates. Mr. Hermann, whose last day at work was June 5, contemplates visiting his brother in Florida, and perhaps remaining there.

To Mrs. Jeanne Bellenger, Assistant Supervisor in the Medical Information Department, VC, who is moving to Florida with her family.

### • CONGRATULATIONS

To Jane Smelser, Administrative Assistant in the Department of Otolaryngology, who received the degree of Master of Library Science from Columbia University on June 4.

To the following members of the Food Service Department who have received promotions: Jeremiah Matthews, who is now Assistant Belt Supervisor; Roscoe Charles, Assistant Belt Supervisor; Percy Chaney, Kitchen Attendant; and Eulogio Negron, Cook's Helper.

To Mrs. Mary Ledwith, Medical Secretary in the Medical Information Department, VC, who has been promoted to Assistant Supervisor in that department.

### • CONDOLENCES

To the family and friends of L. Mary Prowse, formerly with Sloane Hospital, who died on May 19.

### • NOTES OF INTEREST

Billie Jean Sims, Nursing Aide in the Department of Urology, was the soprano soloist who performed with the Harlem Youth Symphony Orchestra in June at the Central Park Mall. Miss Sims sang two Puccini arias.

DR. HARRY M. ROSE, Chairman, Department of Microbiology, P&S, has been appointed Editor-in-Chief of the "Journal of Immunology" and will succeed Dr. John Y. Sugg in that position on July 1.

DR. MEYER M. MELICOW, Given Professor Emeritus in Urology, lectured on "Tumors of the Kidney" at the Meeting of the Association of Clinical Scientists which was held in Little Rock, Arkansas, on May 17-18. Dr. Melicow partook in a Symposium on the "Epidemiology and Etiology of Human Bladder Cancer" sponsored by the Cancer Research Institute, New England Deaconess Hospital and Department of Pathology, Boston University School of Medicine, held in Boston, Massachusetts. He presented the experiences of over 900 cases of bladder cancer at the Squier Urological Clinic.

DR. VINCENT J. FREDA, Assistant Attending Obstetrician and Gynecologist, attended The American College of Obstetricians and Gynecologists' Sixteenth Annual Clinical Meeting held in Chicago. Dr. Freda took part in a Colloquium on "The Management of the RH Sensitized Patient" on May 6 and in a Round Table on "Prevention of Rh Sensitization" on May 7.

DR. FRANK E. STINCHFIELD, Professor and Chairman of the Department of Orthopaedic Surgery, spoke on "Modern Concepts of Arthroplasty of the Hip" on May 22 in Athens, Greece. As President of The American Board of Orthopaedic Surgery, Dr. Stinchfield met with the British Board of Orthopaedic Surgery in Ditchley, England, for a period of two weeks, during which time comparable training programs were identified and discussed. It was the ultimate hope of this group that reciprocity could be given to orthopaedic surgeons trained in the United States and England.

DR. SOTIRIS LIARICOS and DR. ZEN-ICHI KUBOTA, Research Ophthalmologists, left in June to return to their homes. Dr. Liaricos returned to Greece, and Dr. Kubota to Japan, each after working in Ophthalmological Research at the Corneal Center for one year. Both doctors will continue their ophthalmological work in their native countries.

DR. RALPH J. VEENEMA, Associate Attending Urologist, PH, Associate Professor of Clinical Urology, P&S, and Chief of Urology, Delafield Hospital, presented two papers at the May 13 Annual Meeting of the American Urological Association. The papers were entitled "Observations on RNA in Prostate and Bladder Neoplasms" and "Thio-tepa Bladder Instillations: Therapy and Prophylaxis for Superficial Bladder Tumors." Dr. Veenema won third prize for Laboratory Research for his exhibit on "Experimental Studies on Benign Prostatic Hypertrophy."

DRS. GEORGE SMELSER, LINSY FARRIS, and FRANK HOEFLE participated in a Symposium on Contact Lenses presented by The Institute of Ophthalmology of the Americas on May 19. Dr. Smelser, Professor of Anatomy, spoke on "The Metabolism of the Cornea and the Effect of Contact Lenses on the Structure and Function of the Cornea." Dr. Farris, Assistant in Ophthalmology, presented a paper on "Corneal Effects of Contact Lens Wearing." Dr. Hoefle served as moderator of one of the sessions of the New York Eye Institute program.

DR. JOHN K. LATTIMER, Director, Squier Urological Clinic, and Professor and Chairman, Department of Urology, delivered the Meredith Campbell Memorial Lecture on "Ways to Improve Pediatric Urology" at the annual meeting of the American Urological Association, May 12, in Miami, Florida. On May 12 and May 16 he spoke on "The Improvement of Undergraduate Teaching of Urology" and "Current Treatment Renal Tuberculosis" and served on the National Executive Committee. He was the guest of "The Larry King (Miami) Radio Show" for one and a half hours of commentary on "Medical and Sociological Problems of the Day." At the annual meeting of the American Association of Genito-urinary Surgeons, May 9, Dr. Lattimer spoke on "Cryosurgery of the Prostate." He served on the Committees for the Genitourinary System of the National Research Council, of the Editorial Board of the Journal of Urology, and presided at the Alumni Luncheon of the Columbia Urology Alumni graduates at the Fontainebleau Hotel at which 60 Urology Alumni attended.

## Annual Art Show Was Great Success

Eighty artists contributed 159 exhibits to make the 18th Annual Arts, Photography and Crafts Exhibition at the Columbia-Presbyterian Medical Center a great success.

A preview of the exhibit was held on May 6th when exhibitors and their guests gathered for tea at four o'clock at the Milbank Library, on the twentieth floor of Presbyterian Hospital, where the exhibit was held. About 350 persons attended. Mrs. H. Houston Merritt and Mrs. A. J. Binkert served as hostesses. Chaplain Robert Reeves, Jr., was Chairman of the Art Committee.

The entries varied from photographs to oil paintings, from collages to sculptures,

from hand-crafted leathers to a psychedelic craft. All artists shared one thing in common:

they were staff and personnel of the Medical Center.

An estimated 1500 visitors

viewed this year's exhibit, and all look forward eagerly to next year's show.

# The Stethoscope

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXIII, NUMBER 8

AUGUST, 1968

## \$500,000 for College of P&S, Gift of Richard King Mellon Charitable Trusts

The College of Physicians and Surgeons is one of 30 medical schools in the nation that will share a \$10 million grant from the Richard King Mellon Charitable Trusts. All are private medical schools and, since there are 45 such schools in the United States, the Mellon grant will go to almost three-fourths of the total.

Ten of the schools, including P&S, will receive \$100,000 each year for the next five years. Twenty others will receive \$50,000 each year for the same period. Selection was made on the combined basis of need, demonstrated excellence and location.

In announcing the grant, the Board of Trustees of the Richard King Mellon Charitable Trusts said:

"One of the most serious problems in our medical schools today is the need for money with which to pay adequate salaries for competent teachers on permanent faculty staffs.

"There are 1,374 unfilled posts today in the faculties of our medical schools, according to the Journal of the American Medical Association. This is

the highest number on record."

The letter of announcement to the deans of the medical schools states, "You may allocate the grant within your discretion and need. We hope it will help to attract some of the most promising young physicians to your faculty as full-time teachers in medicine."

In his letter thanking Mr. George Taber of the Mellon Trusts, Dr. H. Houston Merritt, Dean of the College, acknowledged that the next five years would be crucial ones in medical schools. He went on to say, "Many of the programs of the federal government will be curtailed for the next few years but we have hopes that before the five-year period is up the federal government will become active in assisting the medical schools in this country in a more substantial manner."

This type of grant is a particularly valuable one because the quality of a medical school depends to a great extent on its ability to attract and hold good teachers and researchers in competition with private industry and scientific research institutions.

## Dr. John V.B. Dean Appointed Director of Emergency Services

Dr. John V. B. Dean

Dr. John V. B. Dean, a graduate of Columbia University's College of Physicians and Surgeons, Class of '41, and who served his internship and residency in medicine at Presbyterian Hospital, has been appointed Director of

Emergency Medical Services at Vanderbilt Clinic, Columbia-Presbyterian Medical Center, effective September 1, 1968.

Dr. Dean is an attending physician at Vanderbilt Clinic

*Please turn to page two*

## PARKING SPACES FOR EMPLOYEES ARE COMING BACK SOON

Parking spaces for Hospital employees are coming back soon. During the six or eight weeks following Labor Day it is expected that the Hospital will gain back its former parking capacity of 730 parking spaces. And by January, 1969, the new facilities will be completed to add 620 more spaces, a total of 1350.

Observers have commented that the construction appears as clean-cut as building a model from an Erector set. The reason is that the sections are precast prestressed concrete members which are being made up in New Haven by the Blakeslee Prestressed Corporation. Trucks bring the members from New Haven—sections 65 feet long and each weighing 15 tons.

Mr. Eugene Cleary, Administrative Assistant of Projects, states that the completed garage will receive an architectural treatment which it has not previously had, for more pleasing appearance.

Approximately fifteen months of work have gone into the planning and working out of designs, which include not only the construction of expanded facilities but also improved plans for the flow of traffic. Two major improvements in the traffic flow are:

First, the planners have created a new exit ramp from the Delafield property line to the Riverside Service Drive. This will be open during the peak exodus to permit more convenient egress from the parking areas.

Second, the west bound lane on 165th Street to Riverside Drive will be widened and parking restricted to permit

The photo above shows the progress, at mid-summer, of the construction of expanded parking facilities for Presbyterian Hospital employees at 165th Street and Ft. Washington Avenue.

This photo is a model showing the project as it will appear when finished. Complete in detail, the model shows, in addition to expanded parking facilities with an increase of 620 new spaces, the improvements planned for the flow of traffic: a widened 165th Street, a radial turn at the entrance to Riverside Drive, and a new exit lane to Riverside Service Drive at the Delafield property line.

three moving lanes. The design will enable right hand northbound traffic to turn with the Riverside Drive traffic. An extended island and traffic controls at the Riverside Drive and service drive will do away with the hazards of entering from 165th Street, whether the

driver wishes to make a left, go straight ahead, or make a right.

The new traffic flow has been worked out in cooperation with Commissioner Barnes of the City Traffic Department and Mr. Erstoff, Commissioner of Highways.

## Two Awards Received by Dr. Carolyn R. Denning

Six out of every 100 children in the United States—a total of three million children—suffer from chronic respiratory disease. There is now reason for renewed hope for these children in our metropolitan area because of two awards recently received by Dr. Carolyn R. Denning, assistant professor of pediatrics of the Columbia University College of Physicians and Surgeons and Director since 1962

of the Babies Hospital Cystic Fibrosis Care, Research and Teaching Center.

In July of this year, Dr. Denning was awarded \$781,305 for a three-year period to establish a Pediatric Pulmonary Disease Center at Babies Hospital as a pilot project for the New York Metropolitan Regional Medical Health Program. This project aims to extend the use of specialized procedures in the diagnosis

and management of chronic respiratory disease in children to small institutions in this area and will endeavor to bring about a closer working relationship with family and hospital physicians and their supporting staffs who refer patients to the Pediatric Pulmonary Disease Center for consultation. The grant will provide for additional salaries (physicians, nurses, inhalation

## High School Student Writes Comments On Two Weeks of Volunteer Work Here

The two weeks for my senior project was spent working as a volunteer at Columbia-Presbyterian Medical Center.

It was interesting to compare the same illness in different stages, but at the end of the day, I was emotionally exhausted from the feeling one has for these people.

I learned about radiology, electroencephalography, electrocardiography, occupational and physical therapy and visual aids. As many of the people knew of my interest in medicine, they took the time to explain to me the functions of their specialized fields.

While there was no opportunity to observe an operation, we were able to see the set-up with the scrubroom for sanitizing doctors and nurses before operating on one side of OR and the recovery room on the other side. The eighteenth floor also has rooms for

sterilizing the equipment. Only authorized personnel are permitted on this floor.

Neonatal in pediatrics was particularly interesting to me. Here, the premature babies are kept in isolation in incubators and respirators.

One part of the work which has affected me most deeply is working with small children. There are a number of kids in the Intensive Care Unit on 9W. I remember what I felt like when I was five and in the hospital with polio. I can understand how these kids would feel the same way.

All in all I learned a lot from working in the medical center for two weeks. I felt that it was profitable both for its educational aspects and because it made me all the more certain that I want to go into medicine.

—David Sandel Warman.

## Patients' Reactions Measured on Scale

How does a patient accept the crisis situation of being in hospital and undergoing radical treatment? How far does the way in which he accepts it influence the healing process? We know, of course, that man is a multi-dimensional being and what happens to his body cannot be separated from his attitude of mind. If life is meaningful for him, part of the healing process has already begun.

In a research project recently carried out, an attempt was made to put this in terms which can be measured scientifically. A patients' "Acceptance Scale" was created where the rating was compared to the surgeon's rating of healing. Dr. Graham Clark, of the Eye Institute, and former Chaplain Randall Mason took five years setting up a testing mechanism and preparing an appropriate questionnaire. Two groups of 54 and 56 patients who had been operated on for detached retina were tested. Two sets

of professional psychologists supervised the proceedings and five people tested each patient and recorded their results separately.

The "Acceptance Scale" has five degrees ranging from total acceptance to rejection. The patient's reactions to the surgery and to people like the surgeon or chaplain are tabulated, as well as his image of himself and his philosophy of life. The scale provides a new method for any observer to record under a broad range of categories his impressions of how a patient behaves when confronted with the complete upset of equilibrium caused by his illness.

Dr. Clark and the Rev. Dr. Randall Mason are shortly going to publish a paper on their findings. The word is that remarkable correlations have been found between the acceptance score and the healing time and that the test may be tried out again, this time with cardiac patients at the Mayo Clinic.

## APPRECIATES MILBANK LIBRARY'S TALKING BOOKS

One of the many services of the Milbank Library, P.H. 20, is a program of reading for the blind, "Talking Books."

The appreciation which patients may feel for this service is expressed in the following letter:

Milbank Library  
The Presbyterian Hospital  
Greetings:

I would like to take this opportunity personally to express my sincere appreciation to your fine staff and especially to Mrs. Gordon, Miss Monahan, and Mrs. Modick for the kind services I have received as a patient here in the Eye Hospital (Room 317). The Talking Book library recordings were both enjoyable

and edifying and have made my hospital stay all the more purposeful. Moreover, it was a delight to receive the cheerful visits of each one of you, respectively, and I commend you for your helpful and thoughtful services.

May God bless you one and all . . . and keep up the good work! My very best wishes to each of you—

Gratefully yours,  
A former patient of

## Dr. John V.B. Dean Appointed

Continued from page one

and assistant clinical professor of medicine at the College of Physicians and Surgeons. He has been in private practice in Glen Cove, L. I. for the past 20 years. Following completion of his resident training, he was associated with Dr. Everett C. Jessup, of Glen Cove, for two years. He then joined with two other internists to form a group family practice. He is on the attending staff of the Community Hospital of Glen Cove, and has served as physician for the Green Vale School and the Brookville School, Glen Head, L. I. He was certified by the American Board of Internal Medicine in 1951, and is a member of the Nassau County Medical Society, The New York State Medical Society, The American Medical Association, and the New York Society of Internists.

In announcing Dr. Dean's appointment, Dr. Joseph E. Snyder, assistant vice president for Vanderbilt Clinic and Other Services, stated that this new position, long needed, has been created to provide an experienced, full-time physician to coordinate and supervise all emergency services at Vanderbilt Clinic, where an average of over 1,500 outpatients were seen during each work day of 1967. Dr. Snyder hailed Dr. Dean's appointment as a great forward step in improving the clinic's ability to provide medical care for the community which it has so long served.

Dr. Dean will carry out his duties in accordance with the principles and policies of the Medical Board. In further explaining the new Director's specific duties, Dr. Snyder stated that Dr. Dean will have responsibility for the expeditious evaluation and disposition of all patients who are referred or present themselves to the various emergency services at Vanderbilt Clinic, which include the Emergency Admitting Clinic, The Emergency

Admitting Ward, and the Emergency Service. Working jointly with the various department heads, Dr. Dean will supervise all persons working in the emergency areas, including those attending physicians who screen patients; he will maintain the professional staff in accordance with strength and tables of organization established jointly with each clinical service; he will arrange with the house staff for evening, night, weekend and holiday coverage of the various services; he will orient new members of the house staff and new personnel assigned to emergency areas, providing a continuing educational program of practical instruction to assigned house officers, such instruction designed to develop their skills in dealing with emergency medical situations; and he will

## Eye Tumor Clinic Moved to 7th Floor Of Eye Institute

Effective July 15, 1968, the Eye Tumor Clinic was moved to the Eye Institute, 7th Floor, from the Eye Institute Basement.

The telephone extension for the Clinic has been changed to Extension 6080.

A. J. BINKERT,  
Executive Vice President  
The Presbyterian Hospital

be responsible for keeping referring physicians informed regarding disposition of their patients.

Dr. Dean, in accepting his new responsibilities, said that his years of private family practice have been most rewarding, and that he leaves his many patients with regret. However, he is excited and pleased to return full-time to teaching and hospital practice.

## FROM THE MAILBAG

Dr. Carl R. Feind  
Presbyterian Hospital

Dear Dr. Feind:

During my recent five day sojourn at Harkness thirty-eight different members of the staff personally contributed to my speedy recovery. Of course, many more in service, technical and staff work did their jobs behind the scenes.

A sick person is just naturally difficult to satisfy. Knowledge, skill and competence are taken for granted all the way from the first to the 18th floors. My home was at #1024.

What impressed me in all my contacts was a something-plus that contributed to the comfortable way I felt. A "get well card" from a friend reminded me—"Relax and enjoy their hospitality!" That was it—the spirit of friendliness throughout.

This impressed me because of a background of over sixty years in personnel work—selecting, training, supervision, administration—(Western Electric, 40 years; War Manpower Training Within Industry Service, 5 years; Volunteer Work in Summit, N. J. Community Services, 20 years.)

My hospital mini-nightie is off to those whose policies and

on-the-job practice made this result so tangible and real.

Many thanks to you and your co-workers.

Sincerely,  
A former patient at  
Harkness Pavilion

Dear Sir:

I was hospitalized for over two weeks at the Presbyterian Hospital (Medical Center) for gall bladder and appendix trouble. I went through a grave operation and I am now on the way to a complete recovery.

I want to write and thank all the surgeons, doctors and nurses who have looked after me so wonderfully. I do not know if it is ethical to mention their names, but I can assure that all the medical personnel of the 12th floor (west wing) deserve my everlasting gratitude.

I shall always be thankful to them for their care and all the attention they gave me during my stay.

Congratulations to the Presbyterian Hospital and again all my thanks.

Gratefully,  
A former patient at  
Presbyterian Hospital

# Dr. Crikelair Initiates Information Council on Fabric Flammability

One calamity most people hope never to experience is injury from fire, yet each year thousands are burned when their clothing is accidentally ignited. It is known that ordinary clothing fabric generates enough heat when burning to produce severe third degree burns. Burns suffered this way are not infrequently fatal; if not fatal, they are usually very extensive and the treatment is long and costly. Development of flame-retardant fabrics could offer an effective way to alleviate this condition, and public demands to bring about such a preventive measure could significantly alter these brutal statistics.

Dr. George Crikelair, Professor of Clinical Surgery at Columbia University's College of Physicians and Surgeons, and Attending Surgeon and Director of Plastic Surgery Service at The Presbyterian Hospital, became keenly interested in this problem several years ago when two child patients died of burns resulting from their flaming clothes. As a plastic surgeon who treats these cases, he has noted, "Most patients with burns of over 50% of the body surface are still dying; my personal observations and those of my colleagues are that most of the severe burns in children continue to be caused by flammable clothing."

The idea of prevention led him to investigate flame-retardant clothing for children. Initially, Dr. Crikelair found a scarcity of facts. He sought opinions from other concerned parties who approached the predicament with different perspectives. One of the first major breakthroughs was the formation of a subcommittee of the New York and Brooklyn Trauma Committee of the College of Surgeons. Dr. Alexander Garcia, Associate Professor of Clinical Orthopaedic Surgery at the College of Physicians and Surgeons, and Associate Attending Orthopaedic Surgeon at The Presbyterian Hospital, was then President of the Trauma Committee and an active member of this subcommittee. Into this group, Dr. Crikelair invited doctors and people from industry and government.

The action of this group led eventually to a Conference on Burns and Flame-Retardant Fabrics, held on December 2-3, 1966, at the New York Academy of Medicine. This was sponsored jointly by the New York and Brooklyn Trauma Committee of the American College of Surgeons, the Section on Plastic and Reconstructive Surgery of the New York Academy of Medicine, the National Fire Protection Association, and the Division of Accident Prevention of the United States Public Health Service. Here, rep-

resentatives from government, industry, medicine, and safety groups met to discuss the problem.

At that time it was decided to form a permanent association which was later called the Information Council on Fabric Flammability, and Dr. Crikelair was elected temporary Chairman. At its first meeting, held on December 14, 1967, in New York City, its purpose was made clear: "To work for the reduction of morbidity and mortality from burns caused by flammable fabrics and related materials by encouraging the exchange and dissemination of information concerning injury statistics, research findings, testing methods, and public information programs, to and from the varied disciplines desiring to participate; and to encourage experts in these various areas to participate in the Council's activities and meetings, and to appraise the developments in their fields." Five committees, encompassing injury statistics, production and marketing, testing, education and legislation, and research, were established. Dr. Crikelair was elected the first Chairman of the new organization.

## Statistics

Reviewing recently published figures, it is noted that clothing fires cause an estimated 2,000 deaths and 150,000 non-fatal burn injuries per year. Further examination of these statistics reveals that fire is the leading cause of accidental nontransportation deaths in children under age 4 and in adults over 65 years of age. Thus, the very young and the very old suffer extremely.

Dr. Crikelair, Dr. Francis Symonds, Jr., Associate Professor of Clinical Surgery, College of Physicians and Surgeons, and Associate Attending Surgeon, The Presbyterian Hospital, and Dr. Ronald Ollstein, Instructor in Surgery, College of Physicians and Surgeons, compiled statistics of cases seen at the Burn Service, Division of Plastic Surgery, Department of Surgery, Harlem Hospital Center, from January 1966 until May 1968. Of the 216 burn cases, 20 (9%) were fatal; of the 216 hospital cases, 85 (39%) were flame burns. These flame burns were responsible for the greatest morbidity and the greatest mortality of all burn cases. Of the 85 flame burns, 56 (66%) were due to clothing ignition, 14 (16%) were fatal, and 9 (66%) of all the fatal burns occurred in victims of clothing fires.

## Production and Marketing

Several countries, including the United States, have flammability standards and regulations that must be observed in public gathering places,

Dr. George Crikelair

England perhaps has enforced the tightest regulations. Since October 1964, when Parliament passed the Children's Nightdresses Regulations, the sale of nightdresses suitable for girls under 13 years old has been prohibited unless the fabric of which it is constructed passes special flammability tests; even then, warning labels and laundry restrictions are attached. This law was later extended to include adult nightdresses. A problem has arisen because the law does not regulate fabric sold by the piece or yard, so mothers may buy the less expensive but flammable fabric to make into night garments for their children. Although statistics are still incomplete, it appears that these flame-retardant regulations have reduced fatal burns in children by 50 percent.

## Testing

There are numerous methods available for testing the flammability of fabrics. The most common is that now prescribed by law in the United States; small strips of material are burned under controlled conditions, and the time of burning must meet a certain standard. Dr. Crikelair, in his presidential address to the Information Council on Fabric Flammability, stated that, "Clothing, in order to be properly tested concerning its flammability, must be tested under the circumstances under which it is to be used, and I therefore disagree with the present process of testing."

Dr. Frederic Agate, Associate Professor of Anatomy at the College of Physicians and Surgeons, in conjunction with Drs. Crikelair, Symonds, and Ollstein, and Mr. John Newman, a P&S medical student, is conducting experiments in his laboratory to evaluate the testing and hazards of burning fabrics by measuring the amount of heat transferred from the burning fabric to the body. Also under study is the effect of flammable fluids on flammable and non-flammable garments.

## Legislation and Education

Legislation passed in 1953 in this country resulted in highly flammable fabrics being removed from the market and

in protecting the public from non-wearing apparel by controlling fabrics used in specified areas. For example, draperies in public buildings are flame-retardant. Enactment of the Federal Flammable Fabrics Act of 1953 was directly related to public outrage against "torch sweaters" which were highly flammable. This bill had several deficiencies, and in December 1967 amendments to the original law were passed with the unanimous vote of the House of Representatives and of the Senate. The purpose of the Federal Fabrics Act Amendments, as described by the Senate, is "to transform the limited terms of the Flammable Fabrics Act into a comprehensive fire safety law for all household and personal fabrics. This bill will

(1) give the Secretary of Commerce authority to promulgate flammability standards or other appropriate regulations whenever he finds that such action is needed in the public interest, (2) extend the scope of the Federal Fabrics Act to include all fabrics and related products, (3) direct the Secretary of Health, Education, and Welfare to conduct a comprehensive and continuing investigation of the deaths, injuries, and economic losses resulting from accidental burns, and (4) authorize the Secretary of Commerce to conduct research into the flammability of fabrics and related subjects."

Dr. Crikelair has testified before the House of Representatives Appropriations Committee on behalf of the United States Public Health Service for flame-retardant clothing research; and he also has testified before Senator Warren Magnuson's Senate Commerce Committee prior to the passage of the new bill in 1967.

Education remains the key to the acceptance of preventive measures in flammable clothing as in the prevention of all other accidental injuries. Public educational programs have been undertaken by many groups, including The American College of Surgeons, Fed-

eral Fire Council, Fire Marshal Association of North America, National Safety Council, United States Public Health Service, Injury Control Program, and the National Fire Protective Association, to name a few.

## Research

While it would seem simple to make clothing flame-retardant, it must be realized that much research has been going on for years. Initial efforts were directed at chemically treating cotton materials. Heavier materials can easily be treated, but lighter materials lose their "hand" and "breathing" qualities. Many chemical and textile companies are developing new processes that hopefully will overcome these problems.

The introduction of man-made fabrics and combinations of cotton and man-made fabrics complicates the problem. At present, flame-retardant fabrics for specialty markets, such as clothing for high risk occupation groups, bed linens for selected studies in nursing homes done by the Public Health Service, tenting, and mattresses are a reality. The public is now being made aware of the problem of burning clothing and is coming to realize that potentially everyone can benefit from its use.

Production of flame-retardant fabrics may increase fabric costs initially, but like all new products, supply and demand should lower the cost. For example, one 10 cc. vial of penicillin costing \$75 in 1943 can be bought today, in an improved state, for 17 cents. The analogy should hold for flame-retardant fabrics. Co-operation among textile manufacturers, consumer and government representatives, and doctors may lead to the creation of an ideal fabric that will not support burning and that will not be excessive in cost. As expressed by Dr. Crikelair, "Hopefully in the foreseeable future, a label in clothing, *this garment is flame-retardant*, may be as common as the label *sanforized*."

The Executive Committee of the Information Council on Fabric Flammability is shown in the photograph above at its May meeting held at the College of Physicians and Surgeons. Seated members, from left to right, include Dr. Giuliana Tesoro, J. P. Stevens & Co.; John Severance, American Textile Manufacturers Institute, Inc.; Chester Babcock, National Fire Protection Association; Dr. George Crikelair, Professor of Surgery and Director of Plastic Surgery Service, Columbia-Presbyterian Medical Center, and Chairman of the IFCC; William White, National Commission on Product Safety; and William Segall, Cotton Council of America. Standing, from left to right, are: Steve Remias, U. S. Public Health Service; Joseph Hoels, American Textile Manufacturers Institute, Inc.; Richard Stimson, The Wool Bureau, Inc.; Richard Feis, Cone Mills, Inc.; and Sidney Ascher, U. S. Public Health Service.

## EVENTS OF A BUSY CENTURY

Because the Presbyterian Hospital is now in its 100th year, *The Stethoscope* has been presenting, in several of its 1968 issues, some items from the eventful years of our century of history.

In the March issue we covered only three years—from the date of the Hospital fire, in December, 1889, through the rebuilding, to the opening of the new pavilions in 1892.

At this time the School of Nursing was opened, and Anna C. Maxwell began her long and distinguished career as Director of the School of Nursing.

We continue our chronology with other items from the year 1892.

**1892:** The nurses had no separate residence. They lived on the top floors of the ward pavilions, and the Board of Managers realized that they needed to be completely removed from the environment of the Hospital when off duty. (See 1895, 1900, and 1904, below.) At this time, nurses worked 12 hours a day.

**1892:** Jessie B. Smillie, Matron, helped to give a homey atmosphere to the Hospital. Almost every evening members of the staff gathered around the piano at her apartment. Opera scores would be played in advance of attending operas.

**1893:** The Medical Board pointed out that the Hospital's accommodations for private patients, 17 rooms, were insufficient. At this time all physicians on the staff were in private practice and were severely handicapped because they were forced to care for their patients elsewhere.

**May 9, 1893:** The new \$50,000 operating pavilion, completely modern in design and equipment, was opened. It was located on the north-west corner of 70th Street and Park Avenue.

**1895:** The Board of Managers procured a site for the proposed nurses' residence opposite the Hospital on 71st Street. Members of the Board contributed \$40,000 for the down payment. Money was needed for the balance and for construction. The following year the nurses arranged a benefit concert and turned over the proceeds of approximately \$1,000 to the Treasurer. Other contributions accumulated. (See 1900 and 1904, below.)

**1898:** During the Spanish American War, the Hospital assumed a serious extra burden. The Dispensary Building was converted into a military ward of 40 beds which were almost constantly filled, many with cases of typhoid fever. Typhoid vaccine had not yet been introduced.

**1900:** John Stewart Kennedy, President of the Presbyterian Hospital, offered to give the cost of a building suitable for a nurses' residence. Construction was delayed, and the site was changed to another corner opposite the Hospital. (See 1904, below.)

**1901:** An X-ray and photographic department was instituted. Six years later it was enlarged and given a director.

**1903:** A survey in this year revealed that in the first ten years in the rebuilt Hospital, a total of 20,770 more patients had been treated than in the previous decade.

**1903:** By this time the Hospital was beginning to show itself lacking in two respects: (1) Accommodations for private patients were insufficient. (See 1893, above.) (2) It was becoming clear that eventually the Hospital plant would not be able to provide space for all the new medical techniques that were constantly evolving. Although the Hospital was regarded as one of the best in the world, more room was needed for instruction, new laboratories, the isolation of patients, and modern therapeutic methods. Also there was the lack of a roomy, modern Administration Building. The old one, part of the original structure, was cramped for space and was not fireproof. (See 1908, below.)

**July 28, 1904:** The new nurses' residence was opened—a six story building which contained, in addition to sleeping quarters and living rooms, a kitchen, dining room, and gymnasium. A tunnel under 71st Street connected it with the Hospital. The total cost was \$410,000. John Kennedy refused to have it named after himself. It became the Florence Nightingale Hall, a name which Mr. Kennedy said expressed the purpose to which it was devoted.

**1904:** The Visiting Nurse Program, which was the beginning of the Hospital's Visiting Nurse and Social Service Department, was begun through an initial donation by Mrs. William K. Vanderbilt. (See 1906, below.)

**1905-1906:** In the new buildings, several services which had been suspended for lack of space were renewed. Open air wards on medical roofs were opened. "Give me fresh air every time," said a physician who had recovered from pneumonia twice. Patients could be seen warmly wrapped in blankets, covered by snow, sleeping peacefully and getting well. Travel to the roof was by slow elevator, manipulated by rope.

**1906:** The Visiting Nurses cared for 4,088 patients in

14,100 visits, mainly between 79th and 100th Streets on the East Side; and they cared for some 350 tuberculosis patients each month.

**1908:** In October, John Kennedy informed the Managers that he was giving the Hospital \$1,000,000 to construct a new fireproof Administration Building and to make changes that this would require in other buildings. He observed that the needs, however, were great, and he hoped that his gift would encourage others to make contributions.

**1908-1909:** At the direction of Mr. Kennedy, a special committee undertook a critical appraisal of the overall needs of the Hospital. On November 6, Dr. McCosh submitted a forceful committee report declaring that in 16 years obsolescence had crept in, and that 19 major improvements were needed. His list included new buildings, new children's wards, rooms for various types of study and research, a new kitchen, and a new laundry. "If we desire to have a modern Hospital of the highest type, it will be necessary to make these extensive and expensive alterations and additions. . . . It would not be economically practicable to construct such a Hospital out of our present plant." The Medical Board, therefore, unanimously recommended the removal of the Hospital from its present site, and its entire reconstruction on a larger and more adaptable plot of ground.

**1908-1909:** New sites for a larger Hospital were considered.

**1909:** The new position of Consultant in Anesthesia was created—a timely action since the process was attracting increasing interest.

**1910:** Three new electric automobiles took the place of older equipment for the Hospital's ambulance service. (See article in *The Stethoscope* for March, 1968.)

**1910:** The Building Committee considered questions related to a projected new Hospital. Affiliation with a medical school was seen as desirable. Such a step would enable the Hospital to give its patients the most advanced care and the best medical and surgical talent. The Hospital preferred affiliation with Columbia University's College of Physicians and Surgeons. The two institutions already shared the services of several prominent doctors. Again, P&S was anxious for affiliation, and Edward Harkness stood ready to contribute handsomely to it. P&S had become one of the foremost medical schools in America.

Florence Nightingale Hall, the nurses' residence at 71st Street, was opened in 1904 and served for 24 years.

**1910:** By the latter part of this year Columbia was negotiating with Presbyterian Hospital toward a possible affiliation.

**1910:** Edward S. Harkness resigned from the Board at Roosevelt Hospital when his offer of a plan of affiliation and an endowment was rejected, and soon joined the Presbyterian Managers and made to the Presbyterian

Board precisely the same offer he had made to Roosevelt.

**1911:** The Managers of Presbyterian Hospital gratefully accepted Edward Harkness' offer. The actual affiliation with the Medical School of Columbia University took the form of an agreement dated April 25, 1911, which was approved by the governing boards of both institutions and executed on April 28, 1911.

### HOW DR. THOMPSON RAIDED THE PHARMACY

"Dr. W. Gilman Thompson, who had been active in founding the School of Nursing, had been attending physician since 1887. . . . He was a bluff, engaging personality to whom the staff and the nurses were devoted. . . .

"In 1904 he raided the Pharmacy and caused a large number of stale and obsolete drugs to be thrown out. Among the latter were fluid extract of matico, chirata, enpatarium, lobelia, lupuline, and indisslor. Also, at Dr. Thompson's insistence, every bottle drawn from the Pharmacy was stamped with the date of issue. Thereafter, once or twice a year, he marched to

the medicine cabinet just below the middle of the ward, called for a large wastebasket, and proceeded briskly to discard useless medicines.

"Dr. Thompson took pride in claiming that he never signed anything without reading it. On the desk of the head nurse in the ward were always three routine papers that he signed each time after making rounds. One day the nurse overlapped them so that only the places for signatures appeared. . . . Dr. Thompson hurriedly endorsed (them) . . . The nurse and staff were delighted: he had signed three copies of the Lord's Prayer. . . .

*From the late Dr. Albert R. Lamb's History of The Presbyterian Hospital.*

### Practical Course on Emergency Care To Be Given Here on October 11-12

The third annual practical course on emergency care and transportation of the sick and injured, sponsored by the American Academy of Orthopaedic Surgeons, will be held in New York City, October 11-12, at the Alumni Auditorium, Columbia University's College of Physicians and Surgeons.

In the photo, nurse model in auto extrication demonstration is being examined by Dr. David L. Andrews, left, who will direct the course this year, and Dr. Charles S. Neer II, who directed the courses for paramedical personnel in 1966 and 1967.

For information and registration forms, write to Dr. David L. Andrews, 180 Ft. Washington Avenue, New York, New York 10032.

## Eminent Danish Anesthesiologist

An interesting visitor dropped into the Department of Anesthesiology at the beginning of June to visit his old friend Dr. Emanuel Papper. Dr. Ole Secher is head of the Department of Anesthesiology at the University of Copenhagen, and in fact was the first Professor of Anesthesiology ever to be appointed in Denmark. He had been invited to Canada to address the Canadian Association of Anesthesiologists in Ottawa about the Protective Action of Anesthetics to Anoxia and decided to take the opportunity of revisiting old friends in other parts of North America.

Dr. Papper had mentioned that Dr. Secher had been a resistance fighter during the war and we were curious to hear more about this.

It seems that when Denmark was occupied by the Germans, Ole Secher became a member of the Resistance while still a medical student at the university. They established contact with the countries fighting Hitler through parachutists who came over from Britain. When the Germans forced the Danish government to resign and demanded that the 6,000 Jews in Denmark be handed over, the Resistance went to work.

They managed to ship 5,500 Jews across the narrow Ore Sound where the Swedish coast almost touches Denmark. Dr. Secher was personally involved in saving 800 refugees, delivering every one safely to Sweden.

After the war the United Nations was set up and sprouted various agencies, among them the World Health Organization. The Medical Faculty at the University of Copenhagen, including Dr. Ole Secher, convinced WHO that it needed help in setting up an Anesthesiology Center and this was agreed upon provided the Center would be open to people from all over the world. Several American doctors helped set it up—Dr. Papper himself went as an instructor in 1955—and, as he says, "This Center was a Marshall Plan which changed the face of Anesthesiology in Europe. Its importance in medical teaching throughout the world cannot be overemphasized. Many students went back to start educational programs in their own countries. Another Center has been set up in Caracas for Latin America and Dr. Secher is travelling throughout the Pacific area at the end of this year to advise where the Asian Center should be set up."

The trainees, 400 in all, have come from 52 different countries. In the beginning they were mostly from western Eu-

rope but now they come from all over the world, including the communist countries. It has served, in fact, as a meeting ground between the east and west of Europe.

Professor Secher has done a great deal of travelling, beginning with a year's study in Philadelphia in 1951/52. He was in Korea with a Danish hospital ship under the United Nations in 1952/53 and saw action there. Half his patients were American and half Korean. He went back to Korea again in 1958 to a Scandinavian hospital in Seoul which had been in operation for ten years.

In 1956 Dr. Secher set out with an ambulance for the Hungarian Revolution. They arrived too late to cross the border and had to remain in Austria and treat the refugees there after they had fled across the frontier. Later the ambulance was handed over to the Hungarians.

But most of his travels have been for WHO. This has involved spending two months in Cairo and Alexandria giving lectures, two weeks touring Bulgaria, and two months in Pakistan helping to establish a chest hospital.

In 1966 the Second European Congress of Anesthesiology was held in Copenhagen and Dr. Secher presided over the 1500 people who came from all over the world for the five days it lasted.

He confessed, "I find visiting the United States both stimulating and depressing. There is so much going on in the fields of medicine and research which is exciting but I get envious of your resources here which of course are so much greater than in a small country like Denmark."

"On the other hand," he added, "with medicine in Denmark being socialized it means that we don't have to worry in our treatment about whether the patient can afford it or not. Medical care is free and all doctors are on fixed salaries. If we want any special facilities for the hospital we don't have to do any fund-raising. We just have to convince parliament that it's necessary and we get the money."

Few of the, approximately 250 hospitals in Denmark are private and most of these are run by religious groups. The others are under the direction of the state, county or municipality.

In the Department of Anesthesiology at the University of Copenhagen there are 18 doctors and 35 nurses. These nurses are trained to administer anesthetic and Professor Secher said that without them the doctors could not hope to cover all the work. Midwives

## Two Awards Received by Dr. Carolyn R. Denning

*Continued from page one*

and physical therapists, social worker, and technicians) and for specialized pulmonary function equipment. The program will benefit children with asthma, cystic fibrosis and other chronic non-tuberculous lung diseases.

One of the objectives of the project is to establish, with Dr. Denning as Director, a pulmonary disease center of sufficient size and capability to service the metropolitan area with efficiency. The Center will conduct a series of training and teaching programs emphasizing the need for increased case finding, early diagnosis and proper management of chronic respiratory problems in children. Exemplary patient care will be demonstrated and stressed, providing valuable training experience in its many aspects essential to the pediatric patient with chronic lung disease.

Dr. Martin I. Lifschitz, associate in pediatrics, College of Physicians and Surgeons, will be program coordinator and will be responsible for organizing the formal aspects of the teaching program. It is hoped that physicians and paramedical personnel (nurses, physical and inhalational therapists) from all over the metropolitan area will attend special courses, lectures and patient demonstrations and that this group, plus the patients and their parents, will all have the opportunity of receiving expert training and guidance in the management of chronic lung disease. Many other staff members of the Department of Pediatrics and Babies Hospital will assist Drs. Denning and Lifschitz in the program.

Consultation services will be provided on request to community health agencies, other hospitals and clinics, and to practicing physicians. A new system of patient referral and evaluation will enable the referring physician to continue active contact with his patient's treatment wherever the child is hospitalized. A computer will record data from all aspects of the problem.

also practice professionally in Denmark as they do elsewhere in Europe.

We wished Dr. Secher a safe journey on his return trip to Denmark and hoped that his travels around Asia and the Antipodes at the end of the year would have a successful conclusion. The establishment of another Anesthesiology Center in that part of the world would mean a great deal to the people there and would certainly bring a sense of accomplishment to Professor Secher himself.

On May 7 last, Dr. Denning received a check for \$2,000 from Mrs. Burton Kossoff, Trustee of the National Cystic Fibrosis Research Foundation and President of the New York Cystic Fibrosis Chapter. Presented by Mrs. I. Jack Fisher, New York Chapter board member and mother of a two-year old child with cystic fibrosis under treatment at the Babies Hospital Center, this check brings contributions by the New York Chapter over the past decade to a total of \$14,000.

The New York Regional Medical Program, which is sponsoring the Pediatric Pulmonary Disease Center, is responsible to a board of trustees, composed of the director of the New York Academy of Medicine and the deans of seven medical schools in the metropolitan area. These trustees act as grantees for this region under the corporate title of Associated Medical Schools of Greater New York. Dr. Shirley C. Fisk is RMP coordinator for the College of Physicians and Surgeons. Grant funds originate from the Division of Regional Medical Programs, National Institutes of Health, Bethesda, Maryland.

There has been a Cystic Fibrosis Care, Research and Treatment Center at Babies Hospital for many years, originally under the directorship of the late Dr. Dorothy Andersen, head of the Department of Pathology at Babies Hospital until her death in 1962. This Center has been supported in large part by the National Cystic Fibrosis Research Foundation, and to a more modest degree by the untiring efforts of members of the Manhattan Chapter of this organization who, last spring, contributed \$2,000. The money has been used to

purchase additional laboratory equipment for the new Cystic Fibrosis laboratory in the Babies Hospital Addition.

Dr. Carolyn R. Denning, Director of the new Pediatric Pulmonary Disease Center with the Program Coordinator, Dr. Martin I. Lifschitz.

## FROM THE MAILBAG

Comptroller's Office Staff  
The Presbyterian Hospital  
Gentlemen:

May I take this opportunity to again thank your staff for the many past favors granted to my wife and myself . . . and especially the check as an additional refund for Medicare benefits . . . on the recent siege of Mrs. S. up at

that Hospital several months ago.

The cooperation of everyone we had occasion to be in contact with up there is a great reflection of Brotherhood in action. . . .

Sincerely,

A former patient at  
The Presbyterian Hospital

# These Persons Are Retiring From Columbia-Presbyterian

Dr. Dorothy Reilly

Dr. Dorothy Reilly

Dr. Dorothy Reilly, Associate Professor of Nursing will leave the Medical Center this summer to join the graduate faculty as Associate Professor, College of Nursing, at Wayne State University in Detroit, Michigan, effective September 18th. She has been associated with the Department of Nursing of Columbia University for 17 years and, during the current year, served as consultant to the Curriculum Committee of the faculty of the Harlem Hospital Center School of Nursing.

Last January, as consultant at Wayne State, Dr. Reilly presented her doctoral dissertation, *Selected Non-Intellective Characteristics of College Graduate and Non-college Graduate Women Entering Collegiate Nursing Programs*, and was asked to accept a position on the faculty. The main emphasis in her new position will be to prepare faculty for teaching in schools of nursing throughout the country. From August 12th to September 13th she will be participating in a workshop at the College of Nursing at Wayne to develop a new baccalaureate program for the 750 undergraduate and graduate student nurses who come not only from the Detroit area but from around the world.

Dr. Reilly, an easterner, attended Mount Holyoke College and, in 1942, received a Bachelor of Science degree with a major in nursing from Columbia University's School of Nursing. In 1950 she earned the degree of Master of Science in nursing education from Boston University's School of Nursing and, in 1967, she was awarded the Doctor of Education degree from New York University, Department of Higher Education. At Founder's Day Convocation in April of this year, she received an award as an honor scholar at New York University. Her working experience includes clinical, research, and teaching duties at Boston University School of Nursing, Holyoke Hospital

John Rohrer

John Rohrer

John Rohrer, Electrical Foreman, was honored with John Herring (see accompanying article) at a retirement tea in mid-July, attended by personnel of various departments and many friends. The party, according to Mr. Rohrer, was "out of this world. I couldn't believe it."

Mr. Rohrer came to the Medical Center in 1953 in answer to an ad and was employed as Electrical Foreman. His enjoyment of his work can best be expressed in his own words: "It was a home away from home. I enjoyed every minute of it." He added that he saw many things related to the field of medicine which the average person would never see, and so the working environment was exceptionally interesting.

Now he and Mrs. Rohrer will take the trip to Europe which they have been planning for a long time—a tour through various countries. In his native Switzerland Mr. Rohrer will see members of his own family, some of whom he hardly knows. And there will be visits, also, with Mrs. Rohrer's family. She is a native of Frankfurt, Germany.

But first, before the extended European tour, there'll be a swift trip to Iowa City, Iowa, to see their son, who is working on his Ph.D. there and who will be teaching in a girls' school in LaCrosse, Wisconsin, this fall.

Commenting further on the retirement party, Mr. Rohrer said, "Many friends came in from the outside, and they were so complimentary of me, that it is something I will never forget."

School of Nursing, Orange General Hospital in Orlando, Florida, and The Presbyterian Hospital.

Dr. Reilly is a member of many professional organizations including Sigma Theta Tau, Alpha Kappa Delta, Kappa Delta Pi, American Nurses Association and the National League for Nursing.

She has published extensively, including *Nursing Student Responses to the Clinical*

John Herring

John Herring

When John Herring, Carpenter Foreman, completed his work at the Medical Center on Friday, July 19, he said "Let's put it this way—I'm going to miss it."

Mr. Herring has been working here since September 1945. The retirement tea which was held for him and John Rohrer during their final week was a very happy and warm-hearted occasion.

Following his wartime work at the shipyards, Mr. Herring came here as a carpenter and mechanic. First he noticed an ad in the newspaper; then a friend who was working here advised him to come for an interview. Immediately the new job was his.

For the past twelve years he has been the head of the department. His personnel have remained about the same during these years; in addition he has often had the help of what he calls "lend-lease" men.

Mr. Herring expressed great satisfaction over the working conditions and equipment. When the move to the Service Building was planned, he was asked what space and equipment he would need, and the resulting arrangement has worked out very well.

"It has been a wonderful job," he said as he counted off the final hours of the last week, "not just from the money standpoint, but also the conditions under which I've worked and the people I've worked with."

As to his plans for the future, first he'd like to catch up with some of the work waiting at home—and then there'll be some trips. "There's a Nova Scotia trip on the calendar for this fall," he said, and added, with that certain gleam in his eye, "I expect to do a lot of fishing."

*Field, College Graduates Choose a Nursing Career*, and "Profile of Graduates," a chapter in Eleanor Lee's book, *Neighbors 1892-1967*.

On July 10th the faculty bid farewell to Dr. Reilly at a reception held in Harkness Hall.

Dr. Deborah Locatcher-Khorazo

Dr. Deborah Locatcher-Khorazo

Dr. Deborah Locatcher-Khorazo, Assistant Professor of Microbiology, who is now retiring from her responsibilities as Director of the Diagnostic Laboratory of the Eye Institute, looks back upon forty years of service at the Columbia-Presbyterian Medical Center. She thinks of her experiences as four worlds: science, music, languages and projects with the handicapped.

She considers that her scientific projects with handicapped children have been an important part of her life work. As to languages, her abilities have enabled her to serve as a translator in many situations. The Volunteer Department gave her a pin for 4,000 hours of volunteer work such as translating and other assistance. It was music, however, that gave her a means of earning her livelihood when she first came to the United States from behind the Iron Curtain.

On arrival, she had ten dollars and a gold watch that was good for pawning.

She learned to transpose music, and she was offered a job. She possessed a contralto voice, and was soon singing professionally—first as a soloist at a church, then in oratorios and operas. Eventually she knew seventeen operas, and was able to substitute, on short notice, for other

opera singers. Many publications printed her picture and articles about her versatility.

In science she gives credit to Columbia-Presbyterian Medical Center "for giving me a start" through a grant for colloidal gold for work on syphilis, and to Dr. Beatrice Seegal, "who taught me, advised me, and gave me the backing I needed."

In 1928 she was a Post-Doctoral student in the department of Bacteriology, P&S. From 1928 to 1941 she was an Assistant in Bacteriology, P&S. In 1935 she was assigned to the Department of Ophthalmology. From 1942 to 1946 she was an Instructor, Department of Bacteriology, and after 1946, Associate. She has been in charge of the Diagnostic Laboratory, Institute of Ophthalmology, since 1942; in 1952 she was made

an Associate in the Department of Microbiology, and more recently has been Assistant Professor of Microbiology.

As she advanced in science she kept two objectives before her: always to be on the patient's side, treating him as a patient, not a case; and always to endeavor to please and work for the staff.

In her recent interview with a member of *The Stethoscope* staff she named many persons to whom she feels a debt of appreciation and wished that there might be space to mention all of their names. Among these were her loyal staff, the P&S library, the record room, the nurses' staff and their aides, the engineering department for their devotion in taking care of the laboratory, the protective department for guarding the microscopes, Dr. B. W. Kong in Korea who is helping her with her book manuscript, a patient who provided an air conditioner for the laboratory, the housekeeping department and many others.

Her friends inevitably speak of her almost legendary generosity.

Typical of her resourcefulness was the way in which she made the most of her New Hampshire vacations several years ago. The first year she climbed mountains. The second year she became a guide, and so was able to earn her vacations. And on the mountaintops she gathered specimens of unusual mosses and made a scientific collection.

She is a member of a number of professional societies.

At present she is writing a book, "Microbiology in Relation to Ophthalmology." Although officially retired, she will work for the Department of Microbiology of the College of Physicians and Surgeons.

## CALLING ALL HOUSE STAFF WIVES

House Staff Wives Welcoming Committee invites all wives of the house staff to come to tea on Wednesday, September 4, from 4 to 6 p.m., at Harkness Hall.

## Dr. Dean Honored at Farewell Tea

Dr. Archie Dean was honored at a tea on the tenth floor of Presbyterian Hospital on June 17. Dr. Dean, an Assistant Urologist at Squier Urological Clinic and an Associate Clinical Professor of Urology at P&S, will leave the Medical Center to enter private practice in Plainfield, New Jersey.

At that tea an exhibit by Dr. Meyer Melicow, Given Professor Emeritus in Urology, was opened. Dr. Melicow won first prize for this exhibit on "Evolution of Urology: Some Famous Persons with Urological Disorders" that was shown at the 63rd Annual Meeting of the American Urological Association that was held in Miami Beach, Florida, in May.

Dr. Archie Dean, right, with Dr. John K. Lattimer

Staff and Personnel of the Medical Center are invited to view the exhibit on the tenth floor.

## Contributions Received For Greater N.Y. Fund

Contributions received from the Presbyterian Hospital personnel for The Greater New York Fund 1968 Campaign, totaled \$11,717.22 on July 25, according to the report from the Assistant Treasurer's Department. This includes amounts collected and pledged.

By way of comparison, the contributions for the 1967 Campaign totaled \$12,812.75, and it is hoped that further contributions will bring this year's total up to last year's.

## Computer Classes Scheduled

A series of five lectures including a one-hour demonstration relating to the use of computers in today's medicine will be given in the Armory, Classroom 5, by Dr. William A. Bauman and his staff. The lectures will be from 4:00 p.m. to 5:00 p.m. Staff members, students and all non-professional employees are invited to attend. The latter should obtain permission from their supervisors in writing. For further information call the Data Processing Office, P.H. 4-33, Extension 2077.

The schedule of lectures is listed below:

Monday, September 23, Lecture: Applications. Wednesday, September 25, Lecture: Automatic Machines. Friday, September 27, Demonstration: Service Building, 2nd Floor. Usages of various machines. Monday, September 30, Lecture: Programming. Wednesday, October 2, Lecture: How the Computer Works.

The Fortran IV course will commence October 7. Books for this course may be obtained in due time from the Columbia Book Store in the Black Building. Decima M. Anderson's "Computer Programming" book will be used.

## Nursery School Announces

Several places are still available at the Medical Center Nursery School, 626 West 165th Street, for the school year beginning this September. A morning session for 3 year olds will be held from 9 until 11:30. The afternoon session, for 4 year olds, will meet from 1 until 4. Tuition is \$350. For more information, call the Secretary, Mrs. Rosen, at 568-0564.

## Grows Prize Roses

A retired employee of the maintenance department of the Medical Center is a garden artist. John Forney, now 72, has a backyard that is blooming with prize roses and other flowers. Since leaving the Medical Center in 1961, Mr. Forney has devoted his efforts fulltime to the 36 by 100 foot garden he began 25 years ago at his East Orange, New Jersey home.

# News of Nursing

## "Human Relations: A Challenge to Nursing"

It began last spring on Channel 31—a six-week series of classes vitally interesting to nurses, under the sponsorship of the United Hospital Fund. The title of the course—"Human Relations: A Challenge to Nursing."

During April and May, 120 nurses from The Presbyterian Hospital participated; and when the second series of classes was given, another 90 nurses took the course.

The speaker was Dr. Aaron Levenstein, Professor of Human Relations at the City College of New York. Leaders of discussion groups at this Center were members of the Nursing Staff. The classes, given each Tuesday and Wednesday for a period of six weeks, consisted of the half-hour TV broadcasts followed by an hour's discussion. According to Cynthia White, one of the leaders from the Hospital nursing staff, the groups were very responsive, and the general reaction was, "It was very helpful." Groups composed of nurses from the various specialties were considered advantageous for extending

acquaintance and sharing experiences.

A few of the topics were: handling pressures, handling frictions, relationships, decision making. The classes were recorded on audio-visual tape for later use by graduate staff nurses.

Leaders of the first six-week series were Marion D. Cleveland, Helen Henry, Barbara Ferris, Marion McCormick, Isobel Healy, Cynthia White and Jean Gunn.

Leaders of the second series were Sheila Downs, Marion Thompson, Doris Kiess, Helen Denious, Barbara Torstenson, Dorothy del Bueno and Susan Henderson.

Professor Levenstein was for 20 years the Directing Editor of the Research Institute of America. He is the author of several books in the field of labor relations and management development. He has appeared frequently as a speaker in training programs jointly sponsored by the United Hospital Fund of New York and the Greater New York Hospital Association.

## Philosophy of Nursing Service The Presbyterian Hospital

*Because a philosophy is the basic thinking of a group, it becomes a statement which says, "That is what we believe." A philosophy is developed to assist personnel in coordinating their efforts to work toward a common and stated goal.*

*The following Philosophy of Nursing Service was developed from beliefs submitted by the Nursing Staff on how nursing care should be provided for our patients here at the Medical Center, and about the people who give this care.*

The philosophy of this Nursing Service is based upon a belief in the worth and importance of each individual: patient and staff. We believe that the Nursing Department makes an essential and unique contribution to the overall purpose of this institution and it is our expectation to work with all health services both within the hospital and in the community to restore the patient to health as rapidly as possible. Nursing Service accepts the responsibility of assisting the patient with those tasks which he himself would perform unaided if well, and at the same time preparing him and his family to gradually function independent of such assistance. When restoration to health is not possible we will help the patient to accept his limitations and to function to his utmost capacity within these limitations.

To accomplish these goals for patient care, it is the responsibility of Nursing Service to provide a qualified, competent and motivated staff, capable of appraising patient

needs, both immediate and long-term, and able to take appropriate action to meet these needs. We seek to provide a climate in which support, recognition and self-development are available to each staff member so that she feels a sense of accomplishment in her work and is stimulated to continue the improvement and broadening of her skills.

Furthermore, we believe it is the responsibility of Nursing Service to create and maintain an atmosphere in the clinical area conducive to providing and developing learning experiences for students in the nursing programs.

Because Nursing is a dynamic concept, it necessitates continuous evaluation of methods and goals, a receptive attitude toward new ideas and a willingness to change and experiment. We therefore believe that Nursing Service should initiate and contribute to research in Nursing, which will improve patient care and provide job satisfaction for the nursing staff.

## Where the Contributions Go

The 1967-68 Columbia Committee for Community Services Report of its yearly allocations is of interest to readers of *The Stethoscope* especially because the Medical Center contributors have consistently been one of the largest single groups to participate in this "Community Chest" drive of the University.

It was announced at the spring meeting that \$12,774 had been contributed to the 1967-68 Appeal and that the Board of Directors had approved allocations to these organizations: American Friends Service Committee, American Red Cross, Salvation Army, UNICEF, Morningside Heights Inc., Manhattanville Community Centers, YWCA—Upper Manhattan Branch, Morningside Community Center, Church of the Master—"Off the Street" program, St. Luke's Hospital Center - Community Psychiatry Division, Organized Play Group—Morningside Park, Camp Placement Committee—West Side, Visiting Nurse Service—Riverside Branch, Grosvenor Neighborhood House, Columbia Community Athletic Field, Broadway Presbyterian Church—recreation program, Morningside Junior Library, YMCA—Uptown Branch, Citizen's Care Committee Inc., Little Sisters of the Assumption—Harlem Nursing Program, and St. Luke's Hospital Center—Social Service Department.

## ON THE SHELF

New Books in Milbank Library

### FICTION

**The Camera Always Lies**, by Hugh Hood. A French director changes the life of a Hollywood star after her attempted suicide. **Confessions of Nat Turner**, by William Styron. The life and death of the man who led the last revolt of the slaves.

**The Gabriel Hounds**, by Mary Stewart. A new suspense-adventure story, involving an eccentric aunt and a castle near Beirut.

**Third Girl**, by Agatha Christie. A girl who may have committed murder is the subject of the latest book by the first lady of mystery.

**When She Was Good**, by Philip Roth. How Lucy's marriage is affected by that of her parents.

**A Woman Named Anne**, by Henry Cecil. The mysterious other woman in a divorce suit brings about an unexpected ending to the case.

### NON-FICTION

**Beardsley**, by Stanley Weintraub. A study of the life and friends of the late-Victorian artist and illustrator.

**A Crime of Passion**, by Stanley Loomis. France in the time of Louis Philippe is the setting of the famous Prasin murder case.

**Grizzly Country**, by Andy Russell. The big bears and their territory.

**Ill-at-Ease in Compton**, by Richard Elman. What lies in store for the American suburb of the future.

**The Lawyers**, by Martin Mayer. The inside stories of the members of a numerous profession.

**Time is Short and the Water Rises**, by John Walsh. The dramatic, last minute rescue of hundreds of animals from death by drowning in a South American rain forest.

**To Be Young Was Very Heaven**, by Marian Lawrence Peabody. The diary of a girl growing up in nineteenth-century Cambridge, Mass.

# Stethoscopia

## • ENGAGEMENTS

Margaret Mullane, Assistant Supervisor in the Medical Information Department, is engaged to Daniel O'Connor. A June wedding is planned.

Marilyn Jefferies and Robert Reza plan a September wedding. Miss Jefferies is a graduate of Columbia University's School of Nursing, and Mr. Reza is a medical student at P&S.

Nancy Coe and Daniel Pool are engaged. Mr. Pool, a senior at Harvard College, is the son of Dr. J. Lawrence Pool, Professor of Neurological Surgery at P&S and Director of Neurological Surgery Service at the Medical Center.

Linda Gunther, Evening Head Nurse at Sloane Hospital, is engaged to Ken Anderson, formerly employed in Harkness Pavilion and now working with the Computer Department of Manufacturer's Hanover Trust. They plan a Fall wedding.

Judith Raff and Solomon Lehrhaupt are engaged. Mr. Lehrhaupt is a dental student at the School of Dental and Oral Surgery.

Vivia Louis and Paul Chang plan to be married next summer. Mr. Chang is a third year medical student at P&S.

## • MARRIAGES

Julia O'Shea, VC receptionist, was married May 25 to Martin Ivers, an employee of Metropolitan Life Insurance Company. The couple honeymooned in England and Ireland.

Patricia McLaughlin and Danny Weaver were married on May 25. Mrs. Weaver is an L.P.N. on BH 6. Mr. Weaver is a 2nd Class Boilerman in the U. S. Navy.

Dorothea Shipway and Jerome Webster, Jr., were married on June 22. Mr. Webster's father, Dr. Jerome Webster, is Professor Emeritus of Clinical Surgery at P&S.

Janet Hine, a June 1967 graduate of the School of Nursing, was married on June 15 to Robert Widell, a doctoral candidate at Stanford University, Department of Political Science. Mrs. Widell is working with the San Mateo, California, Visiting Nurse Association.

Gloria Gordon and Franklin Lewis were married on July 27 at The Pauline A. Hartford Memorial Chapel. Mrs. Lewis is a staff nurse at the Medical Center.

## • BIRTHS

Mrs. Magdalen McCarthy, of the Office of Public Interest, is a grandmother for the second time. Her daughter, Mrs. Patricia Sherry, had a son, Kevin Michael, born on July 7.

## • FAREWELL

To Mrs. Argentina Santana, Blood Bank Secretary, who left June 8 to await the birth of her second child.

## • WELCOME

To Adeline Tegnazian, Margild Blank, and Lidia Isidro, new members of the Blood Bank staff.

## • CONGRATULATIONS

To London Stanley, of the Housekeeping Department, who has been promoted to Headporter of the BH Addition.

## Three Students Receive Fellowships From Sandoz and Geigy Foundations

The Department of Pharmacology has in the past received substantial support for graduate training from several pharmaceutical foundations. This year, the Department is pleased to announce that three graduate students have been awarded fellowships from the Sandoz and Geigy Foundations to continue their studies toward the Ph.D. degree in Pharmacology. Jane Chang (left) has been designated as the Rudolph Bircher Fellow (Sandoz Foundation); Peter Chiu and Sadhana Sathe have been chosen as Geigy Fellows (Geigy Foundation).

# DOINGS OF DOCTORS

DR. GEORGE M. HOWARD, Assistant Ophthalmologist, spoke on "Diffuse Neurofibroma of the Choroid" at the Eastern Ophthalmic Pathology Society, held in Montreal, Canada, on May 16. On June 17, at the American Medical Association, San Francisco, California, Dr. Howard and DR. CHARLES J. CAMPBELL, Associate Attending Ophthalmologist, presented a paper on "Surgical Repair of Retinal Detachments Due to Macular Holes."

DR. MELVIN YAHR, Associate Dean and Professor of Neurology, P&S, participated in a Symposium on Epilepsy, held on June 24, and sponsored by the Greater New York Chapter-Epilepsy Foundation of America, in cooperation with The Institute for the Crippled and Disabled, New York. A program on "Planning an Accepting Environment in the Community for the Person with Epilepsy" was presented. Dr. Yahr is Chairman of the Professional Advisory Board of the Greater New York Chapter of the Epilepsy Foundation of America.

Dr. Yahr

Dr. DeVoe

DR. ARTHUR GERARD DEVOE, Professor and Chairman of the Department of Ophthalmology, P&S, and Director, Institute of Ophthalmology, attended the 2nd International Symposium on Microsurgery of the Eye, held in Burgenstock, Switzerland, from June 13 to 15, and participated in free discussions. Previous to that, on June 4, Dr. DeVoe spoke on "Corneal Disease in Children" at the Centennial Symposium, Manhattan Eye, Ear and Throat Hospital.

## From the Mailbag

Dear Sir:

I am presently sitting in my room (911) here in the west wing awaiting the arrival of my physician—so that I may be discharged.

I did not even wish to wait until I arrived home to drop this note to you.

I want to express to you my sincere thanks and deep appreciation for all that has been done for me during my few days stay here—but more than that—I wanted to tell you how marvelous each and everyone of your staff has been. There has not been one person who does not have a cheery word—a pleasant smile—and a helping hand extended.

We all hear so much of

At the spring meeting of the New York Obstetrical Society, Dr. David B. Moore, Assistant Clinical Professor and Assistant Attending Obstetrician and Gynecologist, was elected Second Vice-President. Dr. Equinn W. Munnell, Associate Clinical Professor and Associate Attending Obstetrician and Gynecologist, was elected Secretary. Elected to Active Fellowship as new members from the Sloane Hospital staff were the following: Dr. Orlando J. Miller,

man's inhumanities to man—and hatred amongst all peoples—that it is extremely heartwarming to have been in contact with so many warm, kind people—be they nurses aides—orderlies—etc. I feel

DR. KARLIS ADAMSONS, Associate Professor of Obstetrics and Gynecology, was the guest of honor of the biannual meeting of Obstetricians and Gynecologists of the Mexico Social Security System held in Mexico City from May 16 to 18. He presented two papers, one on "Prophylaxis and Treatment of Erythroblastosis Fetalis," and one on "The Evaluation of Fetal Condition." He was a panelist on "Amniotic Fluid in the Evaluation of the Fetus," and a member of the Round Table on "Maternal-Fetal Isoimmunization." At Temple University, Philadelphia, Pennsylvania, on May 27, Dr. Adamsons spoke at the Postgraduate Symposium on "Intrauterine Monitoring of Fetus." On May 7 Dr. Adamsons was a panelist on "Biochemical Assessment of the Intrauterine Patient" at the annual meeting of the American College of Obstetricians and Gynecologists in Chicago.

DR. ARTHUR B. VOORHEES, JR., Associate Professor of Clinical Surgery, P&S, and Associate Attending Surgeon, PH, attended the Sectional Meeting of the American College of Surgeons held in Munich, Germany, from June 24 to July 1. He presented a paper on "The Late Results of Portacaval Shunts."

DR. ANDREW DEROETH, JR., Assistant Attending Ophthalmologist, presented a paper on "Cryosurgery for Chronic Simple Glaucoma" on May 27 at the annual meeting of the American Ophthalmological Society which met in Hot Springs, Virginia.

DR. JOHN D. RAINER, Associate Clinical Professor of Psychiatry, P&S, and Associate Attending Psychiatrist, PH, received an honorary Doctor of Letters Degree from Gallaudet College, Washington, D. C., the world's only liberal arts college for the deaf, at its 104th commencement. The event was held on June 3. Dr. Rainer is Director of the New York State Mental Health Services for the Deaf.

DR. RICHARD M. EHRLICH, Resident, Squier Urological Clinic, presented a paper on "Experimental Cryosurgery: A Study Utilizing Radioautography and Electron Microscopy" on May 13 at the national convention of the American Urological Association.

## Notes From Obstetrical Society Election

Associate Professor and Associate Attending Obstetrician and Gynecologist; Dr. John J. Sciarra, Assistant Professor and Assistant Attending Obstetrician and Gynecologist; and Dr. W. Duane Todd, Assistant Clinical Professor and Assistant Attending Professor of Obstetrics and Gynecology. Dr. Ralph M. Richart, Associate Professor of Obstetrics and Gynecology and Pathology and Assistant Attending Pathologist, was elected to Associate Fellowship.

most privileged to have shared a few days with all these fine people. You must be indeed proud of your Center—and rightly so.

Sincerely,  
A former patient

SEPTEMBER, 1968

## Mrs. Stein Says Farewell to Hospital Volunteers— New Director is Mrs. Diamond

Mrs. Marguerite Stein

Mrs. Dorothy Diamond

August 5th was the twentieth anniversary of Mrs. Marguerite Stein's coming to Presbyterian Hospital. On August 29th she gave up her job as Director of Volunteers because her husband is planning to retire in October, and she is going down with him to

Fort Lauderdale for three months. During that time, while staying in a house rented from a friend, they will try to decide where to settle down there.

Mrs. Stein began her time with the hospital in the doc-

## Health Research Council, City of New York, Has Helped RhoGAM Research Since 1962

An important part of the support for the research program which led to the development of the vaccine Rh Immunoglobulin — RhoGAM — has come from the Health Research Council of the City of New York.

The Health Research Council has backed the research in amount of \$116,000, plus a four-year Career Scientist award. This backing began in 1962 and has continued through to the present.

The article which appeared in the June 1968 issue of *The Stethoscope*, page 3, entitled

"Rh Vaccine by Drs. Gorman, Freda and Pollack" should be reread in the light of the information presented here on the role of the Health Research Council.

Dr. Vincent J. Freda has written to *The Stethoscope* suggesting that the picture be put in balance by this further note on the sources of support.

"I personally feel that the financial support provided by the Health Research Council was invaluable to me, and therefore also to the development of the Rh vaccine," Dr. Freda wrote.

## You May Inquire About Weinberg Plan

Do you know about the Weinberg Aid plan? If you are an employee of The Presbyterian Hospital, do you know that this plan can help you get more education?

If you have the feeling that you are standing still, read this article thoughtfully. More

education often means more opportunities to advance. An effort on your part can mean a better job, better pay, and a fuller life. Through the assistance of the Sidney J. Weinberg Aid Reimbursement Plan, this may be for you.

## Enrollees in New School of Practical Nursing Make First Appearance in Neat Blue Uniforms

The *Stethoscope* of last March carried the news that Columbia University and The Presbyterian Hospital in a joint action approved the plan to establish a School of Practical Nursing at the Columbia Presbyterian Medical Center. The May issue of *The Stethoscope* announced the appointment of Edith Ankers as director.

The first Practical Nursing class will begin on Monday, September 23.

There are six Presbyterian Hospital employees in the first class: Harnetha Dobey, nurses' aide, Presbyterian Operating Room; Terrella Ivery, nurses' aide, Neurological Institute 7th floor; Alice Owens, nurses' aide, Presbyterian Hospital 8th floor; Pamela Parsons, infant care technician, Sloane Nursery; Nereida Vasquez, nursing attendant, Presbyterian 10th floor, Benjamin Williams, nursing attendant, PH 10.

The majority of the students are from the metropolitan area, however there is a representative from California and another from Canada.

During the first 16 weeks pre-clinical term, the students will study Fundamentals and Principles of Practical Nursing, Personal, Family and Community Health, Pharmacology, Body Structure and Function, Basic Nutrition,

Pamela Parsons, lower right, is wearing the new uniform of the School of Practical Nursing — pinstripe blue with white trim. Other enrollees in the photo are (standing) Mrs. Harnetha Dobey, left, and Mrs. Terrella Ivery, and — lower left — Mrs. Alice Owens. Not shown are Nereida Vasquez and Benjamin Williams.

Vocational Adjustments and Family Living. At the end of the first term there will be a one week vacation.

During the second term there will be classes and clinical practice in Medical Surgical Nursing, Growth and Development, and Maternal and Child Care. Before the start of the 3rd term the students will have a two week vacation.

The third term provides more experience in Medical and Surgical Nursing and a basic introduction to Nursing Care of patients with mental

and emotional conditions. The students will take the State Board Examination for Practical Nursing Licensure. After this we hope to welcome many of them to our staff as Licensed Practical Nurses.

Classes and clinical experience will be supervised by the faculty of the Practical Nursing School. Both of the instructors, Miss Nuha Dabbeek and Mrs. Lea Battiatto, are graduates of the Department of Nursing, Faculty of Medicine, Columbia University.

## Dr. Mount Describes Activities Aboard S. S. HOPE

Dr. Lester A. Mount

Education. Travel. Adventure. These are just some of the many rewarding and varied experiences given and returned to those who offer their services and journey to S.S. HOPE, a ship carrying medical instruction and supplies to underdeveloped nations throughout the world.

This worthy project was begun several years ago by Dr. William B. Walsh with professional staffing by volunteers and financing from the American people. When Dr. Lester Mount, Attending Neurological Surgeon, Neurological Institute, and Associate Profes-

Surgery, College of Physicians and Surgeons, was President of the Neurosurgical Society of America, he channelled his organization's activities toward supporting the project. Dr. Mount established the ship's neurological surgery service in Peru in 1962. He has encouraged many neurological surgeons and others to contribute their time to this project and like those he has recruited, Dr. Mount himself has seen several tours of duty on the ship. The growth of the program since its original voyage has doubled. Presently there is one ship and more are

# These Doctors Have Retired From Columbia-Presbyterian Medical Center

Three of the doctors who have recently retired are presented on this page. Articles on others will appear in an early issue.

## Dr. Maximilian Silbermann

It was in 1943 that Dr. Silbermann began his association with Columbia. In that year he was Associate Attending at the Department of Neurology, Goldwater Memorial Hospital, Columbia University Division. In 1944 he became Associate of Neuropathology under Dr. Abner Wolf and Assistant in Neurology at Vanderbilt Clinic. The following years found him in the Neurological Institute, and in 1950 he was promoted to Assistant Clinical Professor of Neurology.

He is now retiring, after being associated with Presbyterian Hospital for about twenty-five years.

Having been born in Vienna in 1903 and graduated from the Medical School there, Maximilian Silbermann could not escape the influence of his most famous medical compatriot. One of his teachers, Dr. Fritz Wittels, was among the first pupils of Sigmund Freud, and another, Julius Wagner von Jauregg, was the only Nobel prize-winner in psychiatry. Dr. Silbermann was founder and first president of the "Academic Society of Medical Psychology" and became an associate at the Clinic of NeuroPsychiatry at the University of Vienna.

In 1938 he arrived in the United States and became a U. S. citizen in 1944.

In the meantime he was appointed consulting neuro-psychiatrist to the Department of Health in Manila in 1939, visiting physician at Yale in 1941, attending neurologist and professor of neurology at New York Medical College and Executive director of neurology at New York Medical College and executive director of neurology at Metropolitan Hospital in 1942. He was consulting neurologist to the Navy during the war.

Between 1953 and 1965, Dr. Silbermann's experience covered all ranges of the spectrum. He was director of Neuro-psychiatry at the Union Health Center of the International Ladies Garment Workers' Union, psychological consultant to a Wall Street firm and impartial specialist of neurology at the Workmen's Compensation Court. In addition, he was visiting associate professor of neurology at Einstein Medical College from 1961-62, attending psychiatrist at St. Vincent's Hospital and also attending neurologist there.

He published several scientific papers in English and German and among the many meetings where he read papers was the 1949 International

Dr. Maximilian Silbermann

Dr. J. Lowry Miller

Dr. George W. McCormick

Conference of Neurology in Paris.

He has travelled extensively, and not only for pleasure. He has lectured at the University of Zurich, at Antigua, Nassau and Manila. He is founder and counsellor of the Philippine Society of Neurology and Psychiatry and has been called on consultations to Austria, Belgium, Brazil and Switzerland. He has also been teaching nurses, resident physicians and students at the College of Physicians and Surgeons.

He is a fellow of AMA, APA and the New York Academy of Medicine; a member of ANA, the Harvey Society, ANMD and Biological Psychiatry.

In his rare leisure moments, Dr. Silbermann has pursued his interest of music and is a Founder of the New Metropolitan Opera. He has no intention of letting retirement interfere with his work. He plans to continue his clinical activities in neurology and private practice, carry on with his scientific writings and travel even more than he has done in the past.

## Dr. J. Lowry Miller

Dr. J. Lowry Miller, whose affiliation with the Columbia-Presbyterian Medical Center has spanned 33 years, has retired. At the time of his retirement Dr. Miller was Chief of Dermatology Clinic, Vanderbilt Clinic, a position he held for 21 years, and Attending Dermatologist at Presbyterian Hospital and Clinical Professor of Dermatology at the College of Physicians and Surgeons. Dr. Miller came to the Medical Center in 1930, not long after receiving his degree in 1927 from the University of Pennsylvania Medical School.

Dr. Miller's research has focused on *Studies on the Significance of Biologic False-Positive Reaction*, and he has published extensively on this topic. His most recent article was entitled *The TPI and FTA-Abs Tests in Treated Late Syphilis*. Dr. Miller's research has benefited in large part from the generosity of the Robert Sterling Clark Foundation which has annually awarded Dr. Miller ample

funds for the past 18 years.

A Diplomate of the American Board of Dermatology since 1939, Dr. Miller also has served actively in many professional organizations. Some of these include the following:

From 1962-67 he was Treasurer of the American Dermatological Association. He was President of the New York Dermatology Society from 1962-64, and Secretary and Chairman of the Dermatology Section of the New York State Medical Society for the term 1956-58. In 1944 he was Secretary and President of the Metropolitan Dermatology Society, and he has been an honorary member of that organization since 1963. From 1960-64 he was Treasurer of the International Society of Tropical Dermatology. Presently, Dr. Miller serves as the first Treasurer of the Dermatology Foundation, an association which was recently organized to aid in improving the teaching of dermatology in the various medical schools and to serve as a stimulus to the specialty, nationally.

As Chief of Clinic, the most gratifying and rewarding experience over these years has been the fidelity and devotion of his co-workers at Vanderbilt Clinic. In expressing his appreciation, Dr. Miller has said, "Repeatedly, often at personal sacrifice, the vast majority of the doctors, the nurses, the aides have gladly responded to any requests, always living up to the highest traditions of Columbia."

As of July 1, Dr. Miller began responsibilities as Consultant in Dermatology at Presbyterian Hospital and Special Lecturer in Dermatology at the College of Physicians and Surgeons.

## Dr. George W. McCormick

Dr. George W. McCormick, retiring as Instructor in Pediatrics at Columbia University's College of Physicians and Surgeons and Pediatrician at Vanderbilt Clinic, will continue his active professional life as a full time pediatrician at the Willowbrook State School, Staten Island.

Dr. and Mrs. McCormick

and their son live in the Donagan Hills area of Staten Island, a wooded setting ideal for their authentic Cape Cod home.

Dr. McCormick received his A.B. degree from the University of Pennsylvania in 1930 and his M.D.C.M. in 1935 from McGill University, Montreal. He has been on the staff of The Presbyterian Hospital since 1937, after finishing his internships and residencies in Montreal at Children's Memorial Hospital and St. Mary's Hospital.

From 1941 to 1946 he was in the U. S. Navy. He became a Naval Flight Surgeon and had tours of duty in Pensacola, Florida; Newfoundland; Quonset Point, Rhode Island; and as a senior medical officer aboard the aircraft carrier U.S.S. Barnes in the Pacific area. He holds the rank of Commander and is now in the Retired Naval Reserve.

Following the war he became assistant resident at Babies Hospital with the purpose of renewing his knowledge of pediatrics. Both before and after the war he enjoyed association with Dr. Rustin McIntosh, who was then director of Babies Hospital. Among his other associates were Drs. Paul di Sant'Agnes and Jack Brush, and he worked extensively with Dr. Dorothy Anderson in celiac disease and cystic fibrosis of the pancreas.

Dr. McCormick was made Director of Pediatrics at St. Vincent's Hospital, Staten Island, following the war, and also resumed his private practice which he had begun before his entrance into the

Navy. In 1961 he resigned his position in order to give his whole attention to private practice. He is now Director Emeritus of Pediatrics, St. Vincent's Hospital, S. I.

Other appointments have included: Attending Physician in Communicable Diseases at Seaview Hospital, S. I., and Consultant in Pediatrics at several hospitals—U. S. Public Health Service Hospital, Richmond Memorial Hospital, Cerebral Palsy Clinic and Staten Island Hospital. He still serves as Chief of Pediatrics at Doctors' Hospital, S. I.

He has published several articles on such subjects as "The Uses of Novocaine in Sprains," "Encephalitis Associated with Herpes Zoster," and "Cystic Fibrosis of the Pancreas."

As to hobbies, Dr. McCormick enjoys reading, travel and what he describes as "a mild interest in politics." He commented, "I've been so busy over the years that I haven't had much time for hobbying." However, his travels, apart from the Navy, include getting around in Europe, the Caribbean, and especially Canada. "My wife is a Canadian," he explained. "We met at McGill. While I was completing my M.D. she was getting her Master's Degree in Sociology." Their son, George, Jr., is now a senior at Poly Prep Country Day School, Brooklyn, and looks forward toward a career in chemical engineering.

In Staten Island, Dr. McCormick has served on the Borough President's Planning Board and has been President of the Richmond County Medical Society. The Willowbrook School, his present association, is one of the largest schools for mental retardation.

Dr. McCormick has seen many changes in the methods of medical practice. There was a time when a patient might expect the doctor to make a house call at any hour, and all night work was not uncommon. It is significant, he observes, that now a patient will be brought to the doctor's office for preventive care, rather than wait until a medical crisis arrives.

## In Memoriam

### Dr. Franz Altmann

Dr. Franz Altmann, who retired from Columbia-Presbyterian Medical Center in 1966 as Clinical Professor of Otolaryngology and Attending Otolaryngologist, died from a heart attack in Hanover, New Hampshire, on the morning of August 26. He was buried in Woodstock, Vermont, on August 28.

At the time of his death Dr. Altmann was a Special Lecturer in Otolaryngology, Columbia University's College of Physicians and Surgeons, and Consultant in Otolaryngology at the Presbyterian Hospital.

Dr. Altmann was born on April 10, 1901, in Vienna, Austria. There he attended primary and secondary schools as well as medical school. He was graduated from Gymnasium in 1919 and from the University of Vienna in 1923. Post-graduate studies included work in the department of anatomy and pathology at the medical school, 1923-1925. He was a member of the staff of Pathological Institute in Vienna and served as an attending pathologist from 1925 to 1930. He joined the staff of Professor Heinrich Neumann and became an attending physician in the Ear, Nose and Throat department in 1934. By that time he had already published many papers in the field of otolaryngology.

In 1938 he came to the United States and began his association with the staff of Columbia University's College of Physicians and Surgeons which was to continue for 30

years, until his death. He has served as Consultant in Otolaryngology at Bronx Veterans Hospital, and was on the Board of Directors of the New York League for the Hard of Hearing.

He has published more than 100 scientific papers and monographs and has held membership in many professional organizations, including the American Academy of Ophthalmology and Otolaryngology; Triological Society; American Otolological Society; Collegium of Oto-Rhino-Laryngologicum; New York Otolological Society; honorary member of German Ear, Nose and Throat Society; honorary member of Turkish ENT Society. At the time of his death he was President of the ENT Section, New York Academy of Medicine.

Dr. Altmann is survived by his widow, Wilhelmina Altmann, and his nephew Dr. Kurt Altmann.

Dr. Franz Altmann

## COMPUTER COURSES ANNOUNCED

The dates for the Fortran IV Classes offered during October and November are shown in the table below.

Mondays	Wednesdays	Fridays
10/7	10/9	10/11
10/14	10/16	10/18
10/21	10/23	10/25
10/28	10/30	11/1
11/4	11/6	11/11
11/11	11/13	11/15

These lectures will be held

in the Armory from 4 to 5 P.M. in Classroom #5. Fortran IV is oriented for administrative and medical application. There will be 18 one-hour lectures and problems.

Decima M. Anderson's "Computer Programming" may be obtained from Columbia Bookstore in the Black Building shortly. Registration cards may be available at PH 4-33, Extension 2077.

## FROM THE MAILBAG

Miss Elizabeth R. Callahan  
Unit Manager  
Babies Hospital  
Dear Miss Callahan:

Many times words are inadequate to express gratitude for a fine job done. My daughter, L---, was born on June 5 and went immediately into your Intensive Care Unit under Dr. Wolff and his staff, Dr. Costa, Dr. Rothner, Dr. Blackmon, plus several nurses on the floor. . . .

I just want to tell you that the level of medical professionalism practiced there is

extremely high and captured my admiration. . . . The discipline and dedication demonstrated by the nurses and doctors was very noticeable. In addition, they were very polite and considerate to me as a father with a lot of anxiety.

L--- was released in eighteen days. . . . As we left we knew that we had everything going for us. . . . I hope you will take time to compliment (the hospital and staff). They deserve it.

Sincerely,  
(Father of a patient)

## Dr. Mount Describes Activities Aboard S. S. HOPE

*Continued from page one*

planned, as soon as sufficient funds are raised.

Dr. Mount's latest travels took him to Ceylon. Like most underdeveloped nations, Ceylon faces a shortage of medical facilities and supplies, even X-ray films. In this respect its problems are not unique, for it is true in most of the underdeveloped nations. There are some well-trained people, many educated in England, but there are not enough. Ceylon has three medical schools trying desperately to provide physicians for the country, but everyone is overworked. Tropical diseases abound, especially now those caused by filaria, a parasite manifesting itself in several forms, one being elephantiasis, and the number of cases of malaria is now increasing.

Teaching is the primary goal of the project. As an aid project, it is intended to help people to help themselves, and it is not a giveaway. Each year HOPE receives many requests to visit a country. It enters only those countries to which it has received an invitation. Its staff cooperates with local hospitals and public health teams. Not infrequently HOPE technicians, nurses and doctors remain behind in other countries to continue programs they have begun. In Ceylon, Dr. Mount remarks, "although the problems vary in different countries, HOPE is helping to upgrade the level of teaching and patient care as she has done in the past."

Other Medical Center staff members who participated in the Ceylon project include Dr. Joan Leeming, Assistant Pe-

diatrician, Babies Hospital and Assistant Professor of Pediatrics, P&S, and Dr. Jan Safer, Assistant Radiologist, Presbyterian Hospital, and Instructor in Radiology, P&S. HOPE has become a family project for the Mounts. Mrs. Mount works very hard aboard the ship as a volunteer and is engaged in the activities of the New York Committee for Project Hope as well, and lectures extensively to promote fund raising. Their daughter Melinda, who is bilingual in Spanish, served 8½ months as an interpreter while the ship was in Colombia.

Ceylon, Peru, Guinea, Ecuador, Nicaragua, Colombia and Indonesia and South Vietnam are past accomplishments. What is next for Dr. Mount and for HOPE? Tunisia in 1969.

## You May Inquire About Weinberg Aid Plan

*Continued from page one*

Last week a few employees of The Presbyterian Hospital (see photos) were invited to the office of this newspaper to tell us about the courses they are taking. From their visit we caught the impression that the news of this opportunity is getting around. One of our visitors said that he first learned about it through *The Stethoscope*, another through his supervisor.

And so, let us repeat the story for the benefit of all Presbyterian Hospital employees who may be interested:

This plan permits full-time Presbyterian Hospital employees of six months or longer to pursue job-related studies at accredited schools and reimburses up to 50 per cent of the tuition fee for 1 to 6 credits per semester, or the equivalent in non-credit courses, upon satisfactory completion of courses.

Whether you are working toward a bachelor's degree, a master's, a Ph.D., or a certificate in the line of your specialty, the plan is probably available to you.

Why not inquire at once?

Your supervisor can give you details of the plan or you may talk directly with Lillian Oring, Personnel Office, Extension 3215.

Your application for fall courses must be turned in to Miss Oring by September 30.

Last semester 25 applications were approved, and for the recent summer there were 7 who attended summer sessions. Appreciation and enthusiasm for the Weinberg Aid plan have been expressed by these persons.

Here is a sampling chosen at random of some of the persons who are participating in this program:

Luis Figueroa, lampman, Maintenance and Construction—studying for radio and TV servicing.

From left, George Burgess, Patrick Moohan and Luis Figueroa.

James Duffy

George Burgess, electrician, Maintenance and Construction—working toward a bachelor's degree.

Patrick Moohan, storekeeper, Maintenance—working to-

ward a bachelor's degree.

Luisa de la Campa, technician, EEG—taking higher mathematics toward a B.S.

James Duffy, registrar, Vanderbilt Clinic—working toward a B.B.A. degree.

Vincent Vicidimini, pharmacist, Pharmacy—toward a master's in pharmacy.

Joan Palmer, secretary-technician, Cardiology—taking business courses toward an A.A.S. degree.

Why not talk with these or others using the Weinberg plan?

## Contributions Received For Greater N.Y. Fund

Contributions received from The Presbyterian Hospital personnel for The Greater New York Fund 1968 Campaign totaled \$12,325.22 on August 9, according to the report from the Assistant Treasurer's Office. This includes amounts collected and pledged.

By way of comparison, the contributions for the 1967 Campaign totaled \$12,812.75. It is hoped that further contributions will bring this year's total up to last year's.

Joan Palmer

# Presbyterian Hospital Volunteers Say Farewell to Mrs. Marguerite Stein . . .

Continued from page one

tors' private offices, followed by ten years in the Department of Public Interest as tour hostess and assistant office manager, before going to the Volunteers' Office.

"I have mixed emotions about retiring," Mrs. Stein says. "My husband is really looking forward to it more than I am. The twenty years I have worked here at the hospital have been a real pleasure. We've never had to do any recruiting as such for volunteers—it's mostly been by word of mouth. It's a responsible job here though. You have new requests all the time to deal with changing conditions. You meet all kinds of people and get to be a pretty good judge of character. I'll have plenty of nostalgic feelings, it'll be like leaving home."

But Mrs. Stein does not plan to be idle in Florida. Among her plans is one of going back to school to take French and Ancient History . . . and she may even offer her services as a hospital volunteer. "Although I would never tell them of my position here," she added, "it might be too awkward."

Mrs. Stein will be succeeded by Mrs. Dorothy Diamond who left the Medical Center last October after seven years as office manager in the Department of Public Interest. She went to the New York Metropolitan Regional Medical Program but has been lured back once again to Columbia-Presbyterian.

"I'm not too sure yet all that the job entails," she said, "but like everyone else who knows her I've always had a great admiration for Mrs. Stein and the work she did as Director of Volunteers. I'll be happy if I can just carry on in her footsteps."

The number of volunteers in the hospital varies between four hundred and four hundred fifty. Everyone generally agrees that the hospital could not function without them. There is no question of taking over jobs that paid employees can do, though that accusation has been flung at them from time to time. This might happen, say, if someone was on

vacation and the department shortstaffed.

A volunteer needs intelligence, tact and understanding. The job involves smoothing away edges, bridging gaps, giving extra time and care to patients which overworked doctors and nurses and aides cannot supply. Sometimes there are the odd clerical jobs to be done that make the difference between order and chaos during a rush period.

The backgrounds of volunteer workers are very diverse, as we can see.

Aaron Naimark

Aaron Naimark has been a volunteer in the Department of Public Interest for about eight years now. He came to New York from Russia in 1906 and remarked this summer, after returning from a trip to France and Greece and Israel, "The more I travel, the more I come to realize the beauty of the United States."

Mr. Naimark used to be a lithographer—samples of his skill have appeared on hospital posters and bulletin boards—and when he retired he needed an outlet for his energies, which are still considerable. He has had two major operations at Presbyterian Hospital and feels he owes his life to Dr. Jose Ferrer and Dr. Meyer Melicow. When they suggested he apply as a volunteer he did so, and now he comes every Monday, Wednesday and Friday, never forgetting to distribute candy each time to everyone in the office.

"I enjoy it," he says, "I'm not doing it for the hospital but for myself. If the hospital gains, so much the better."

Mrs. Frieda Dankwerth

For eleven years the Recreational Therapy Department on Babies 12 has meant Mrs. Frieda Dankwerth. It was not much of a department when she came but she managed to obtain a new piano and from then on it grew and grew. She wanted to work with children and to use her talents for music and painting, and in fact she found that two half days a week were not nearly enough for all she wanted to do. Now she spends all day Tuesdays and Thursdays on the 12th floor and Wednesday afternoons on 5th floor Orthopedic.

She weaves music into everything, shows pictures of animals while she makes their appropriate sounds on the piano, and gets the children to act out the rhythm. "I encourage the extroverts to sing and dance," she says. "They bring on the others. Many children come to the hospital who have never heard a piece of music or a song. But soon they are playing percussion instruments. I try to make them see color in music."

Mrs. Dankwerth has found that difficult and emotionally disturbed children are often soothed by rhythm and music and she loves working with such children.

"Everything I have learned I can apply here. I get the children to make puppets, I draw murals. . . . It's therapy for everyone because you're satisfying your own desires. You learn that the world is bigger than your own narrow concerns. Often if children come back to the hospital they ask for 'the music lady.' One little girl asked once, 'Do you ever go home?'"

Jennifer Croom, George Simoni

Jennifer Croom and George Simoni both became volunteers for the same reason—they wanted to find out if they really liked hospital work enough to choose it as a career.

Jennifer always wanted to be a nurse and had long decided it must be in Columbia-Presbyterian. She was born in Sloane and has always felt very close to the Medical Center. Still, when she came to

George Simoni and Jennifer Croom

work as a Saturday volunteer in November 1966, she felt very scared and shy. She began as a candystriper in the men's ward and when she saw all the tubes and the difficulties some of the patients had she did not think she could stand it.

"But everyone was so nice to me and helped me, I just stuck it out and I'm so glad now I did. You learn to cope with the patients and understand people better through working with them all the time."

When Jennifer graduated on June 22, 1968, she applied to be a nursing aide. Eventually she hopes to realize her ambition to be a nurse.

George has been a volunteer since February 1967. He comes on Thursdays from 3:00-6:30 during the school year and on Sundays, Tuesdays and Thursdays during the holidays. He has known for some time that he wants to be a doctor but it is only since working in the 14th floor metabolism unit that he has decided to go in for biomedical engineering.

"I was working with Dr. Spencer and a student doing biomedical engineering," he said, "and I found I was more interested in the research side than in the clinical, though there isn't the glamor or lime-light when you're working behind the scenes. Martin Friedlander was also very helpful—he's a research engineer on the 14th floor—and he taught me all the technical aspects of what they do in metabolism. It's a combination of mechanical abilities based on human physiology."

This summer George has been working as an underwriter's assistant and has proved to himself that he does not want to work in an office. He has been accepted for his B.A. at Rhode Island and is going to take electrical engineering there.

We should perhaps add that his interest in Columbia-Presbyterian probably stems from his mother who has been working in the hospital for about ten years and recently was promoted to floor supervisor in Vanderbilt Clinic.

William Logan

William Logan was a patient twice in Presbyterian Hospi-

William Logan

tal, in 1954 and 1960, for two operations. He said that he was treated so wonderfully that he wanted to do something in return and when he retired after thirty-four years with the post office he came to see Mrs. Stein about doing something in the hospital. He also works at another job three days a week, an auto appraisal service for insurance in Wall Street. Volunteer work is not new to him. During the war both he and his wife did it for the Salvation Army, and between 1944 and 1958 Mr. Logan helped in servicemens' and senior citizens' clubs.

Usually he works once a week, on Thursday, but in July he works Tuesdays as well. On Escort Service in Neuro this usually involves taking patients to physical therapy, X-ray and brain scanning. They are mostly wheelchair and stretcher cases, often so ill, perhaps with Parkinson's or cerebral palsy, that they do not know what is happening to them. They need a great deal of assistance and patience. But, as Mr. Logan says, "I just enjoy helping people. I feel we are really needed here."

Mrs. Helen Harris

Originally Mrs. Helen Harris had her own millinery business but when her partner

## Some Facts About Our Volunteers

How many Volunteers are serving The Columbia-Presbyterian Medical Center? Answer: 440.

How many hours of service do they give? Approximately 10,000 per year.

How many different departments are served? Volunteers work in every unit.

Where is the greatest need? In-Patient Service Corps in Vanderbilt Clinic and in Neuro.

What type of service is asked for most frequently by Volunteers? Babies Hospital.

Is there a single volunteer who holds the record for hours served on a yearly basis? Walter Barton holds the record. He gave 1,738 hours of work in 1967.

# Director is Mrs. Dorothy Diamond . . . Volunteers Utilize Many Capabilities

left, her husband did not want her to continue working. She became bored at home with nothing specific to keep her occupied and someone suggested she try volunteer work. That was eleven and a half years ago. She was placed in the Department of Speech and Hearing and has been there ever since.

"My business training came in useful because I was used to interviewing people and I knew about billing. I used to come just two days a week, but since my husband died two years ago I come in five days a week. I also relieve people during the vacation period."

Mrs. Harris has seen girls come and go in the office. She had just received a beautiful bunch of flowers from some of them because, they said, they could not do without her. She is at present engaged on a project of putting all the files from 1948 onwards on tape.

"I think I've really been happier as a volunteer than I was in business," she says. "I've made lots of friends and working as a volunteer is a terrific thing, good therapy for anyone, especially anyone that's lonely."

## Mr. and Mrs. Hanau, Elaine Hanau

Mrs. Edith Hanau was the first of the family to come along. She has been a volunteer for a year and a half in the play room on 12th floor Babies. Usually she comes once a week, but sometimes twice in the summer. "I think it's such a pity," she says, "that so many women waste their afternoons at bridge and other things when they could be gaining so much experience at the hospital."

Eric Hanau felt the same way about men. Last February he took a course with the Red Cross and now works in Vanderbilt Clinic Emergency 3rd Floor one evening a week. He says he has known friends who were brought into Emergency and were so glad to find someone familiar there. "Often I'm able to help the family of an accident victim, for instance. They are too distraught to fill up forms properly and volunteers can help and steady them." Mr. Hanau

is vice president of a financing company and enjoys the complete change from his everyday job.

With such a family background it is not surprising that Elaine Hanau who is sixteen and just going into 12th grade, decided to become a candystriper this summer. At first she did not mean to come in every day, but she got hooked and has been on 5th floor Babies from nine to three, five days a week. She adores working with the children and says they often look upon the volunteers as their mothers.

One thing all three members of the Hanau family agree upon is the enormous satisfaction they feel in doing something positive for their community.

Fred Iradian

A knowledge of several languages, including Armenian, Bulgarian, Russian, Yugoslav and Turkish, has been useful to Fred Iradian as a volunteer in Neuro X-ray. "I've met many sick people who have been so happy when they can speak to me in their own tongue. It's hard when they are exiled from their homeland. And communication is so important between people," he added. "You must speak freely, but with common sense, not dry talk." He says he always has some story ready to tell patients when he is assisting them.

Mr. Iradian was born Armenian, came to the United States when he was ten and became an American citizen. He later went back to live in Bulgaria where the rest of his family were and stayed there thirty-three years. He

returned to the States in order not to lose his citizenship.

He began as a volunteer in September 1963 because his job as receptionist at the Greenpoint YMCA in Brooklyn was from 4:30 to midnight and he had nothing to do in the mornings. He comes five days a week from eleven to two. At the end of 1969 Mr. Iradian will be retiring and then plans to return to Varna, the beautiful Black Sea resort, where his family live just ten minutes from the beach. Someday he hopes to bring his two grandchildren over and show them America.

Benjamin Lefkowitz

When Benjamin Lefkowitz retired from working in a stockbroker's office in June 1964 he felt he had to do something, not just sit around. His wife had been a volunteer in Babies for ten years and so he came along to the hospital to see if he could be useful. He now works with Mrs. Nolan in Admitting, transcribing her interviews from the admitting sheet. He comes in Tuesdays, Wednesdays and Thursdays and is very happy in the work.

Mr. Lefkowitz worries about the amount that New York City is spending on welfare and feels that too many undeserving cases reap the benefit. He sees so much ignorance around and feels that young people today no longer know the difference between right and wrong.

At the beginning of August he went off to California for a holiday with his family and hopes to return refreshed in the Fall with renewed vigor for Admitting.

## Carrie and George Damasky

Mr. Damasky was a patient at PH just over ten years ago and when he came out both decided they would do volunteer work. "I just wanted to repay some of the kindness shown to me," he said.

Mrs. Damasky went first for two days a week, a morning in Surgical Follow-up and an afternoon in the Eye Clinic. Then when Mr. Damasky joined her they both began to come once a week on Monday evenings, Mr. Damasky in the Recovery Room and Mrs. Damasky in fifth floor Ortho-

Carrie and George Damasky

pedic. Both are enthusiastic about the work and always look forward to Monday evenings. In the Recovery Room the work involves entering information from the anesthetics chart into the book, answering the telephone, helping patients on and off stretchers, bringing patients down to their rooms. The Orthopedics floor can mean going to the Blood Bank, changing water and giving nourishment to the patients. Both just do anything they feel can be useful and relieve the professionals for more pressing work.

"You meet so many people running around these days who don't know what to do with themselves," says Mrs. Damasky. When I suggest hospital work they immediately say "Oh, I couldn't do that kind of thing." If they would only try it they would find how satisfactory it can be. You soon get used to things like blood and just take it in your stride."

Now that Mr. Damasky has retired from New York Telephones they are spending four weeks holiday in Vermont before he begins to look for a part-time job. "I just couldn't be satisfied at home doing nothing." Let us hope he finds something that gives him as

Mrs. Josefina Castro-Lopez

much satisfaction as his volunteer work.

## Mrs. Josefina Castro-Lopez

Mrs. Castro-Lopez came to New York from Cuba thirty-nine years ago, and for the last four or five years she has been a volunteer in Pharmacy in the Basement. Since her husband died a year and a half ago she has found her work in the hospital even more necessary than she did before. "You have to do something for another person," she says, "and feel that you are needed." There are many Cubans working in Columbia Presbyterian and she has made friends here. Like so many other volunteers she feels that what she is doing here fulfills something important for her.

## Delafield Lectures

The Scientific Program of Francis Delafield Hospital, Columbia University, College of Physicians and Surgeons, 99 Fort Washington Avenue (at 164th Street) announces the following lectures to be held in the hospital's auditorium from 4 until 5 o'clock on Fridays in September: September 13, *Microadiochemistry—A New Tool in Immunology*, Professor G. J. V. Nossal, F.A.A., Walter & Eliza Hall Institute of Medical Research, Melbourne, Australia; September 20, *Biology of Vaccinia Viruses*, Samuel Dales, Ph.D., Public Health Research Institute of the City of New York; September 27, *Enzymatic Mechanisms in Steroid Metabolism*, Paul Talalay, M.D., Johns Hopkins University School of Medicine. The lectures are supported by the American Cancer Society, New York City Division, Inc.

## From the Mailbag

Miss Moran

Accounting

Dear Miss Moran:

I received your letter and income tax forms, thank you. Miss Moran, I can't find the words to express my feelings of thanks for what you've done for me. You have given me an early "Christmas" and the best present at that, you have relieved me of a good part of my burden. It's people like you that make life more pleasant in this troubled world.

My wife was the first to read your letter, and I noticed tears in her eyes . . . then I was laughing and crying with joy. . . .

My progress is fine, wonderful! I will be down to see Dr. Voorhees on Sept. 30, and will make it a point to thank you personally.

Thanks a million.  
(A former patient.)

Elaine Hanau, center, and her parents, Mrs. Edith Hanau and Eric Hanau.

## Welcome to a Charming, Busy Book Store

This is the season for a scenic tour of the Medical Center Bookstore if you like mountains . . . mountains of books, that is. "There'll be two tons of books on the top of that table next week," said Nicola Russell, Manager of the Bookstore. "Fortunately the tables are sturdy." She added that the prices of the books were sturdy too, for many medical and dental books necessarily range between \$7 and \$25.

The Medical Center Bookstore is in the Black Building near the main entrance, Room 1-126.

The formidable stacks build up early in September and then rapidly erode away as the medical students, dental students, public health people and nurses come in to fortify themselves for their year of study. New mountains appear for the dental hygienists and occupational and physical therapists who come in waves toward the end of the month. All of this requires a faith that moves mountains . . . mountains of books. And Miss Russell has the necessary faith, born of natural ability, enthusiasm and experience.

Miss Russell has six helpers who comprise her regular staff, and a part of their job is to keep on top of the avalanches. They might be overheard to remark, "If people would just quit writing books! Even for a month!" There are thousands of titles today, and more thousands tomorrow.

But books are not the whole of the Medical Center Bookstore. Items of stationery, gifts, records, and other mer-

Your guide to the shelves of good reading, Nicola Russell, manager of the Medical Center Bookstore, invites you to come in and browse.

chandise number in the thousands. For example, seventy types of graph paper are required to meet the customers' needs. There are artists' supplies, phonograph records, books of poetry and drama, history, fiction and general reference—yes, and tennis and badminton equipment, medical coats and some medical instruments, and many attractive gifts for your living room or den. The visitor entering for the first time is struck by the atmosphere of charm as his eyes rove over ship models, primitive masks, bongos, books of art, and a wall adorned with the opening phrase of the Hippocratic Oath in bold Greek letters.

According to Miss Russell, it would be just fine if this store, already rich in books and related merchandise, could expand to many other lines of stock—tape recorders, clocks, cameras, movie equipment, musical instruments, coffee makers, and—well, the possibilities would be endless. However, of primary importance, it is a medical bookstore which offers a choice of medical books in depth, giving the student a chance to know the literature in his chosen field. It is stocked to answer many of the needs for research work. It enables doctors to replenish the shelves of their professional libraries.

"We, as part of the Columbia Presbyterian complex, must feel the changing needs and caprices of our clients," Miss Russell wrote in an article which appeared in *The College Store Journal* of last Christmas, "in order that they need not go outside to get what they want. . . .

"The Medical Center Bookstore was opened in 1932 in a space little bigger than a small closet. Obviously the merchandise consisted of students texts which were handed out through a door. . . . Several moves to larger but still inadequate space preceded locating where we are now.

"Facilities are not large, but adequate . . . twenty-one hundred square feet with sixteen hundred of it for sales and display and five hundred for

stock and shipping needs. About two-thirds of the main area is devoted to books while one third contains the other merchandise stocked."

In planning the present Bookstore facilities at Black Building, Miss Russell recalled, consideration was given to the doctors and medical students who "essentially and everlastingly are physically tired. Their hours are long, their feet become tired, they get weary. So we reserved a small browsing area with tables and chairs in order that they might indulge their basic need to transfer the weight off their feet to another area of their anatomies."

This reading corner—you find it by walking straight down the canyon between the mountains—is greatly appreciated by those who have learned that browsing is an important preliminary to choosing a book for a purchase. In every way possible, this bookstore encourages its student clients to develop the habit of acquainting themselves with the writings of the medical world—not forgetting to buy a phonograph record, a play, a book of art, a bit of costume jewelry, or a bongo.

### Letter From Boys' School To Dr. John K. Lattimer

Dear Dr. Lattimer:

Just a line or two to thank you once more for the wonderful afternoon planned, arranged and conducted Wednesday for us. In five years at The Englewood School for Boys I have not noticed any event which brought about such favorable comment from so many: students, masters and administration.

On behalf of the school, the boys and myself, thank you very much for all you and your very fine staff did to make our visit so successful. Thanks, too, personally, for the inspiration your every move afforded me.

L. O. Speck  
The Englewood School for Boys  
Englewood, N. J. 07631

## NEW CONTRACTS FOR RESEARCH FROM NAT'L HEART INSTITUTE

The illness of President Eisenhower and the efforts made by his doctors to keep his heart beating regularly have heightened public awareness of the advances being made in the control of heart disease. A recent release by the Artificial Heart Program of the National Heart Institute spells out an intensive campaign which they are undertaking. The Institute has awarded 51 new research contracts and extended 48 others for studies on the development of devices and techniques for providing circulatory assistance to damaged and failing hearts.

Columbia University is receiving one of four new contracts awarded for work on new or improved blood oxygenating devices for heart-lung machines. The aim is to develop devices with gentle blood-handling characteristics, which allow rapid diffusion of oxygen and carbon dioxide. They should require minimum amounts of blood for priming, be simple to assemble and operate and be disposable, or else easily cleaned and sterilized prior to re-use. The contract to Columbia is for \$20,000.

The other three contracts in this particular field have been awarded to Abcor, Inc. of Cambridge, Mass. (\$80,000), Dow Chemical Company (\$51,644) and Hauser Research and Engineering Company of Boulder, Col. (\$25,000).

The current group of awards totals \$7,043,309 and brings the total number awarded since June, 1964, when the Artificial Heart Program began operations, to 124 contracts worth \$19 million. The program is designed to supplement grant-supported research on artificial hearts at universities and similar institutions with research con-

tracts attacking specific bioengineering, physiological, biochemical and related problems of artificial heart development. The use of contracts also enables the program to tap the resources and expertise of chemical and engineering companies, electronics corporations, and other elements of private industry whose work, because they are profit-making organizations, cannot be funded through research grants.

Modern medicine is moving towards an ever-closer collaboration among all branches of science and technology and a balanced cooperation between the public and private sections of society, as this particular program demonstrates. Its long-term goal is a completely implantable, permanent heart replacement. In the meantime, however, it is concentrating on devices which can assist, rather than replace, the hearts of patients with acute or chronic heart conditions.

There are three types of devices being considered:

- *emergency-assist devices*, simple to operate, which could be used by ambulance personnel, rescue squads and others in emergency situations;

- *permanent-assist devices*, which would restore to active, productive lives those patients who at present are permanently disabled by massive injury to their hearts;

- *temporary-assist devices*, which would provide circulatory assistance to patients over a period of several weeks.

The emergency and temporary devices are well along in their development. The problems posed by permanent devices are still formidable and the National Heart Institute hopes that this extensive Artificial Heart Program may provide some acceptable solutions.

## FROM THE MAILBAG

Miss Edith Ankers  
Director of the  
Columbia-Presbyterian  
School of Practical Nursing  
622 West 168th Street  
New York

Dear Miss Ankers:

I have recently received a copy of the *STETHOSCOPE*, which I usually circularise in our Hospital. It was my singular honor to be a Fellow in the Paediatric Urological Service at your Hospital in 1967 and I am grateful to the authorities that they still send me your local paper. It certainly brings back many pleasant memories.

I have been requested by Matron Payne of this Hospital, to write to you and ask you if you would be so kind as to send us particulars of the School of Practical Nurs-

ing, as she would very much like to know your views and the type of programme you follow.

I should therefore appreciate it very much if you could see your way clear to furnishing us with these particulars, which you can mail directly to me and I will pass on the information.

If ever you pass by the stem of the Squier Urological Clinic, please give my kindest regards to Harriet Bergman and Co.

Kindest regards,

Yours sincerely,  
P. J. P. Van Blerk  
Department of Urology  
University of the  
Witwatersrand,  
Medical School  
Johannesburg, South Africa

# Children's Art Show Held at Babies Hospital

As seen in a contemporary mural, *Manhattan Skyline*, the Statue of Liberty has long blond hair curled upwards in a flip. What did the critics say? "Adorable," "honest," and "funny" were the comments heard most often at the exhibit, open to Medical Center employees, and held on the roof of the twelfth floor of Babies Hospital on August 21.

Cynthia Lepore

In addition to this piece of work, there were many displays using other media. Potato block printing, collages, and sponge painting were just a few. They all were shown outdoors in a natural setting that even included a turtle pond.

This Children's Art Show was arranged by Cynthia Lepore, Director of Recreational Therapy at Babies Hospital.

Miss Lepore, who has been trained in art, is a graduate of Hunter College. She was aided in organizing the show by Sylvia Netzer, Assistant Recreational Therapist.

All the work was done, individually or in group projects, by child patients at the hospital. Another Children's Art Show is planned for late October.

Block printing

Manhattan skyline

## News of Nursing

The Better Reading Center will offer speed reading courses during the fall to interested Hospital personnel at the Medical Center. An 8 week program and an accelerated 4 week program are planned.

The techniques are easy. There is no homework. The student works on his own material in class. No machines are used. This program has

enjoyed great success at the Hospital.

Course tuition is \$125.00 per student. (Outside courses are far more costly). Groups of 10 or more students starting at the same time will be given a reduced rate. For further information or registration call Cynthia White at Extension 3181.

Members of the nursing staff and private duty nurses welcomed their new Director of Nursing, Mary Crawford, at a tea held in her honor on Wednesday, August 7, from 3 until 5:30 o'clock, in the Recreation Room of Harkness Hall.

We would like to give a special "Thank you" to the new volunteers who have helped to make this summer such a pleasant one—Mrs. Rice and Mrs. Rothman, and junior volunteers Sandra Stegno and Joseph di Pasquale. Our thanks to the Volunteer Department for sending us such fine workers.

Staff member Sophia Katsaris recently returned from a three-week trip to Idaho, and reports that it was very enjoyable.

We continue to receive gifts of both paperback and hard-cover books; we expect to have a very large Christmas book-sale thanks to these generous donors.

### Tryout of Emergency Procedures Held at Vanderbilt Clinic

Corridor in Vanderbilt emergency with staff standing by during the Emergency Operation Procedure.

Dr. Joseph Snyder on the telephone with Dr. Conrad Lattes, far left, and Dr. Kenneth Forde, in center.

On July 24, Dr. Joseph Snyder, Assistant Vice President, Vanderbilt Clinic and other services, directed a tryout of Emergency Operation Procedure. He and other members of the Emergency Committee of the Medical Center had decided upon various cases which might be treated if some unexpected crisis occurred. These were printed on labels and attached to stretchers. Typical cases were multiple gunshot wound in the abdomen, sprained ankle, gunshot wound with chest burn, tear gas exposure with multiple bruises, unconscious man in shock with no visible injuries, one person dead on arrival.

Under actual disaster conditions, the first floor of the clinic would be turned into a Triage or Sorting Area, and cases received in this area would be distributed as follows. Those in very serious conditions would be sent either

to the third floor Emergency Room directly. Ambulatory casualties would be sent to the "walking wounded" area which would be located in the Minor Surgery Clinic on the third floor. Other casualties would be sent to vacant beds on appropriate services throughout the Hospital. In the event of a large number of casualties, a holding area would be established in the Doctors' Dining Room.

# Stethoscopia

## • ENGAGEMENTS

Elizabeth Armstrong and Mark Hammer are engaged. Mr. Hammer is a second year medical student at P&S.

Eileen Curley, VC receptionist, became engaged to Harold Taylor, on August 4.

Linda Ferrer and James Rogers III plan a September wedding. Miss Ferrer, who plans to begin studies at P&S this fall, is the daughter of Dr. Jose Ferrer, Professor of Surgery, P&S.

## • MARRIAGES

Becky Carlton, Secretary to Richard N. Ott, Assistant Treasurer of PH, was married on August 10 to James Russell.

Frances McNiff and Thomas Chagaris were married on July 4 in Fairview, New Jersey. Mrs. Chagaris is a member of the Cystic Fibrosis group at BH.

Mary Lynne Van Atta and Gerard Kelly were married on August 31 in The Pauline A. Hartford Memorial Chapel. Mrs. Kelly, formerly with the Department of Social Service, is the daughter of Winfred Van Atta, Director of the Office of Public Interest.

## • BIRTHS

Mrs. Catherine McCormick, Assistant Clinic Reception Supervisor, VC, is the proud grandmother of a baby girl born on July 18.

Michael Santana, Blood Bank Technician, and Mrs. Santana, former Blood Bank Secretary, welcomed their second child on July 30. The baby boy has been named Robert Anthony.

William Fleck, Supervisor, Maintenance & Construction, welcomed his first grandson, Eric Glen, born on August 3 in San Francisco.

A fifth child for Alfred Haase, of Maintenance & Construction, was born on July 26 in Sloane Hospital. The baby girl has been named Cindy Jean.

Mrs. Gwen Meszaros, former Technician, Radiotherapy Department, gave birth to a boy, named Robert Michael, Jr., on July 29. Mrs. Meszaros now lives in Connecticut.

## • CONDOLENCES

To the family of William F. Smith, a former Medical Center employee, who passed away on July 13.

## • NOTES OF INTEREST

Mrs. Margaret Reynolds, Laboratory Assistant, Blood Bank, and her husband vacationed in England and Ireland, visiting their daughter and grandchild and other family members.

## Emmett Kelly Visits Babies Hospital

The famed "Clown Prince of Pantomime," Emmett Kelly, Jr., has come to town and is visiting today (September 9) at Babies Hospital. His visit is sponsored by the Eastman

Kodak Company. Young patients have been looking forward to this event.

In the photo he is shown with a young friend whom he entertained recently in a children's hospital.

## DOINGS OF DOCTORS

DR. RALPH W. RICHTER, Assistant Neurologist, is preparing two studies for publication, "Transverse Myelitis Associated with Heroin Addiction" and "Pneumococcal Meningitis at Harlem Hospital." Dr. Richter is conducting a review of conditions which are unusual or occur with unusual frequency at Harlem Hospital. He has had unique experience with neurological complications of heroin addiction. In addition he is reviewing for the City Health Department the various forms of meningitis which occur with unusual frequency in the Harlem population.

DR. JOHN HAY, Research Associate, Department of Biochemistry, P&S, discussed "Transfer RNS and Herpes Virus Infection" on July 29 at the University of Colorado Medical Center, Colorado General Hospital, Denver. Dr. Hay was a guest lecturer at one of three special seminars, this one sponsored by the Department of Microbiology of Colorado University School of Medicine.

DR. SHERVERT H. FRAZIER was appointed as Deputy Director of the New York State Psychiatric Institute and as Professor of Clinical Psychiatry, Department of Psychiatry, P&S, and Attending Psychiatrist, PH, as of May 1. Dr. Frazier resigned from his position as Professor and Chairman of the Department of Psychiatry at Baylor University in order to accept these positions.

DR. JOHN K. LATTIMER, Professor and Chairman, Department of Urology, P&S, and Director, Squier Urological Clinic, PH, has been appointed as a Consultant to the World Health Organization under the provisions of a Presidential Executive Order.

DR. JOHN M. MILLER, III, Assistant Attending Psychiatrist of Physical Medicine and Rehabilitation, presented a paper entitled "Cardiovascular Effects of Hypercapnea in Human Quadriplegics and Paraplegics" on August 29 at the Fifth International Congress of Physical Medicine, held in Montreal, Canada, from August 25 through August 31. Also participating in that meeting was DR. PAUL J. CORCORAN, Assistant Attending Psychiatrist. Dr. Corcoran presented two papers, "Experience with a New Plastic Short Leg Brace" and "Locomotion: A Method of Studying Energy Expenditure in Various Locomotor Disabilities Without Using a Treadmill." Dr. Corcoran's papers were presented on August 26 and August 27.

DR. WILLIAM A. BLANC, Professor of Pathology, P&S, and Director, Department of Pathology, BH, participated in a conference on "Low Birth Weight: Gaps in Knowledge" from the Scientific Conference Branch, National Institute of Child Health and Human Development, held in Hollywood Beach, Florida, June 16 through 19. On June 26 Dr. Blanc spoke on "Experimental Fetal Ischemia and Malformation" at the Montefiore Hospital and Medical Center, New York.

DR. MELVIN D. YAHR, Associate Dean and Professor of Neurology, P&S, was chosen President-Elect of the American Neurological Association at its 93rd Annual Meeting. Dr. Yahr is to assume office in June 1969 and had been Secretary-Treasurer of the American Neurological Association for ten years prior to this appointment.

## Merck Foundation Gives \$250,000 for Dr. Richards Professorship

The Trustees of Columbia University have announced a gift of \$250,000 made by the Merck Company Foundation toward the establishment of an endowed professorship in the Department of Medicine in honor of Dr. Dickinson W. Richards, Jr.

Dr. Richards, who received the M.D. degree from Columbia in 1923, joined the faculty in 1928 and was named Lambert Professor of Medicine in 1947, a chair which he held until he became Emeritus in 1961. He had been a devoted and favorite student of the great physiologist, Lawrence J. Henderson of Harvard, and had derived from his association with him the broad concept that lungs, heart and circulation should be thought of as a single apparatus for the transfer of respiratory gases between the surrounding atmosphere and the living tissues. During his long career he became widely recognized as the investigator responsible for the greatest advances in cardio-respiratory physiology during his generation.

During his years as Director of the Columbia University Medical Division at Bellevue Hospital, Dr. Richards

and his colleague Dr. André Cournand made numerous important contributions to knowledge of cardio-pulmonary physiology in a wide variety of disease states and in 1956 they shared the Nobel Prize in Medicine and Physiology with Dr. Werner Forssmann of West Germany for their work in developing cardiac catheterization which revolutionized the diagnosis and treatment of many forms of heart disease.

In making the gift, Dr. Carl M. Anderson, President of the Merck Company Foundation, expressed the gratification of the foundation at the opportunity to recognize Dr. Richards' contributions to medicine, education and the welfare of mankind. He expressed the Foundation's hope that the Dickinson W. Richards Professorship in Medicine will serve as a focal point in the development of an interdisciplinary approach to research in therapeutics.

Dr. Richards has been a medical consultant to the Merck Sharp & Dohme Research Laboratories since 1935. He is also a member of the editorial board of the *Merck Manual of Diagnosis*

Dr. Dickinson W. Richards

and Therapy and for many years was a scientific adviser of the Merck Institute for Therapeutic Research.

The Merck Company Foundation is a non-profit, philanthropic organization supported solely by Merck & Co., Inc., pharmaceutical and chemical firm.

In accepting the gift for Columbia, President Grayson Kirk stated: "I can think of no more appropriate way which to recognize Dr. Richards' distinction. We are all most grateful for the generosity and understanding of Columbia's goals which prompt the Foundation's action."

## Babies Hospital Cosponsors Toy Exhibit

Turn-of-the-century rocking horses and tricycles are among over a thousand antique toys in the Hallmark Gallery exhibition October 16-December 31. Voluntary contributions will be collected for Children's Mercy Hospital of Kansas City and the Babies Hospital, Columbia-Presbyterian Medical Center.

With a nostalgic look back at its own infancy, the Babies Hospital is cosponsoring an exhibit of antique toys in midtown Manhattan. The collection comprises more than a thousand items dating from 1850 to the 1920's. Many of the toys, including horse-drawn fire engines, magic lanterns and early steam locomotives, were in the hands of eager

youngsters in 1887, when the Babies Hospital was itself wrapped in swaddling clothes. There will be no admission charge for the exhibit, to be shown at the Hallmark Gallery, Fifth Avenue and 56th Street, but voluntary donations will be accepted from the public for the Babies Hospital and for the show's other cosponsor. *Please turn to page three*

## New Concept in Brain Exploration Developed by Dr. Hilal and Staff

A new concept in brain exploration has been successfully tested on man for the first time by a trio of scientists at the Columbia-Presbyterian Medical Center. The concept involves the control of flexible catheters in human blood vessels, using magnetic forces. The device, called the POD (para-operational device) catheter, consists of very flexible tubing with a small magnet at the tip. An electric coil, held outside the body, creates a magnetic field, which controls the catheter. The device was developed by researchers of the Columbia - Presbyterian Medical Center and the Riverside Research Institute in co-

operation with The Weizmann Institute of Israel.

Details of the new technique were outlined in a paper to a meeting of the American Roentgen Ray Society in New Orleans, Louisiana, by the senior author of the paper, Dr. Sadek K. Hilal, Associate Professor of Radiology at Columbia University. The co-authors of the presentation are Jack Driller of the Riverside Research Institute, NYC, and Dr. W. J. Michelsen, Chief Resident in Neurosurgery at the Neurological Institute.

Attempts to enter the small blood vessels of the brain with a conventional catheter had *Please turn to page three*

"Hold up that little tube," the photographer for Time magazine seems to be saying as he directs. (from left) Dr. Sadek K. Hilal, Associate Professor of Radiology at Columbia University, Mr. Jack Driller of the Riverside Research Institute, and Dr. W. J. Michelsen, Chief Resident at the Neurological Institute, in a picture-taking session for the magazine's science section.

## New School Year Begins

### NURSES

The bustling activity at Maxwell Hall last September 11 could mean only one thing: this year's 123 newly admitted nursing students were arriving to begin their studies. This is the 77th entering class for the school which began in 1892 as the Presbyterian Hospital School of Nursing.

These enthusiastic young women came to the Medical Center from 15 states and one foreign country. Of this year's class, 24 have college degrees and 99 have had two years of college. In 1970, after they successfully complete their course of study and training, they will receive a B.S. degree from Columbia University, De-

New nursing students are welcomed by Dr. H. Houston Merritt, Dean, P&S, and Mary I. Crawford, Director of Nursing.

partment of Nursing, Faculty of Medicine.

Ten students entered the Department of Nursing to undertake study toward a Master's Degree. They are enrolled in two programs—seven in

maternity nursing including nurse midwifery, and three in psychiatric nursing.

*The Stethoscope* welcomes these young women and congratulates them on their choice of a noble profession.

### DENTISTS

The forty-six members of the incoming freshman class constitute the largest class in recent years at Columbia University's School of Dental and Oral Surgery.

Twenty-six class members are from New York City, ten come from New York State, five are from New Jersey, and one each come from California, Connecticut, Massachusetts, New Hampshire, and Ohio. These young men took their undergraduate studies at 28 different colleges and universities, and 19 were elected to their school's Dean's List or honorary societies.

These students are interested in a variety of extracurricular activities. There are many musicians, including a saxophonist, pianist, several

Dr. Melvin L. Moss, Dean, School of Dental and Oral Surgery, exchanges jokes with students as new year begins.

guitarists, and a jazz trio leader; many are athletes; one is a pharmacist; several are writers, painters, photography buffs, and sculptors; many have participated in youth

counseling and recreational programs.

*The Stethoscope* congratulates the new dental students and welcomes them to the Medical Center.

### DOCTORS

This year's crop of 132 freshmen at the Columbia University's College of Physicians and Surgeons, chosen from 1,778 graduates of 54 colleges from 27 states, is more diverse than any beginning class in recent years. The musical talents of the freshman class, for instance, would supply a symphony orchestra, with representation in woodwinds, brass, and strings. Another group of students might make up a Columbia Olympic

## In Memoriam

### Dr. Albert Ketler

Dr. Albert Ketler, Assistant Professor of Microbiology assigned to Ophthalmology, College of Physicians and Surgeons, Columbia University, died suddenly on Tuesday evening, September 10, of a heart attack at his home at 793 Cherry Street, New Milford, New Jersey. He was 40 years old.

Dr. Ketler was born November 28, 1927, at Philadelphia, Pennsylvania. He attended the Towne Scientific School (College of Engineering) in 1945-46, and continued in the University of Pennsylvania, where he received his A.B. degree in 1951 from the College of Arts and Sciences. Entering the Graduate School of Arts and Sciences, University of Pennsylvania, he received his M.S. degree in June, 1954, in medical microbiology and his Ph.D. degree, June, 1958, in medical microbiology.

As Research Assistant, Henry Phipps Institute, University of Pennsylvania, from 1953 to 1954, he assisted in studies on constitutional fac-

tors in immunity to tuberculosis. He then spent three years as Research Assistant, Department of Microbiology, University of Pennsylvania, assisting in studies of the etiology of minor respiratory illness in family groups. At the Children's Hospital of Philadelphia he continued his studies as Assistant and graduate student, and in 1958 became Instructor, Department of Public Health and Preventive Medicine, University of Pennsylvania, continuing on the Children's Hospital Research Staff.

From 1959 to 1962 Dr. Ketler served as Research Associate, Department of Virus Research, at the Merck Institute for Therapeutic Research, West Point, Pennsylvania, working with Dr. M. R. Hilleman. With V. V. Hamparian, he was responsible for the establishment and general operation of a general virus diagnostic laboratory.

In 1962, Dr. Ketler became Associate, Department of Epidemiology, The Public Health Research Institute of the City

### Dr. Frederick Randolph Bailey

Dr. Frederick Randolph Bailey, Clinical Professor of Medicine, College of Physicians and Surgeons, Columbia University, died Friday, September 20, of a stroke, at Meadow Lakes Infirmary, Heightstown, New Jersey. He was 65 years old.

After 31 years of active service at the Columbia-Presbyterian Medical Center, Dr. Bailey retired July 1 of this year.

He was born on November 8, 1902, at Elizabeth, New Jersey.

Dr. Bailey received his B.A. degree in Princeton in 1924, and his M.D. degree at Johns Hopkins in 1928. He interned at The Presbyterian Hospital from 1928 to 1930 and was a resident in medicine at Bellevue Hospital, 1930-1931. At the College of Physicians and Surgeons he advanced from assistant to assistant clinical professor of medicine, 1931-1945, was associate clinical professor, 1945-1955, and full clinical professor of medicine from 1955 until he became professor emeritus in July, 1968.

He has practiced medicine in New York since 1931, serving in Bellevue Hospital, The Presbyterian Hospital, and Vanderbilt Clinic, and Sharon Hospital, Connecticut. From 1942 to 1946 he was an officer in the U. S. Naval Reserve attaining the rank of Commander.

He was a Fellow of the American College of Physicians, a member of the Century Club, and an associate in the Harvey Society. As a Fellow of the New York Academy of Medicine, he served on the council; he was also a longtime member of the committee on public health and for three

years was chairman.

At the Columbia-Presbyterian Medical Center he was a member of the Medical Board, chairman of the Social Service committee of that board, and a member of the Admissions committee. For many years he was head of the medical clinics in Vanderbilt Clinic.

His home was at 120 East 79th Street, New York City.

There was a memorial service in the Chapel of The Presbyterian Hospital at 5:15 p.m. Wednesday, September 25, conducted by Dr. Arthur Kinsolving, St. James Church, assisted by Mr. Robert B. Reeves, Jr., Chaplain at the Medical Center.

Following cremation, ashes were taken to Woods Hole, Massachusetts.

Dr. Bailey is survived by his wife, Constance G. Bailey, and daughters Thankful (Mrs. Daniel R. Sutherland of Saigon, Viet Nam) and Kendall (Mrs. Robert J. Montgomery of Washington, D. C.), one grandchild, and a sister, Mrs. Halsey T. Tichenor, Jr., of Anna Maria, Florida.

Dr. Albert Ketler

of New York, associated with Dr. J. P. Fox. He had primary responsibility for creating a virus diagnostic laboratory for the isolation of rhinoviruses, in support of epidemiologic studies in viral respiratory disease.

Dr. Ketler transferred his affiliation to Columbia University in 1965. For the past three years he had been working in the Corneal Center of the Institute of Ophthalmology, devoting his time to the study of viral diseases of the eye. His work in this field had attracted wide attention.

Dr. Ketler was in military service during the years 1946-48 and 1951-53.

He is survived by his wife, Claire, nee Tickner, daughter Allison, 8, son, Robert, 5, mother Jennie, sister Gertrude, brothers Sidney Kellman, Morris Kellman and William Ketler.

Interment was on Thursday, September 12, at the Mt. Judah Cemetery, Philadelphia.

### Program of Lectures at Delafield Hospital

Francis Delafield Hospital, P&S, announces the following program of scientific lectures for October, 1968, on Fridays, 4 to 5 p.m.

October 4 — Hormonal Regulation of Erythropoiesis, Albert S. Gordon, Ph.D., N.Y.U. Graduate School of Arts and Sciences.

October 11 — Studies on the Mechanism of Tumor Inhibition by L-Asparaginase, Dr. John D. Broome, N.Y.U. School of Medicine.

October 18 — Joseph H. Burchenal, M.D., Sloan-Kettering Institute for Cancer Research.

October 25 — Recent Advances in Smallpox and Complications of Smallpox Vaccinations, C. Henry Kempe, M.D., University of Colorado Medical Center.

This program is supported by the American Cancer Society, New York City Division, Inc.

run aground on the walls of the many tortuous curves with which these vessels are abundantly supplied. At such bends, the catheter would inevitably stall and press out laterally instead of moving forward. Too much force could easily lead to perforation or damage to the wall. In addition, the problem of guiding the catheter selectively at a branching was previously a very difficult one.

The POD catheter, with its vibrating silastic rubber walls, can literally shake off the problem of friction against the blood vessel walls. As alternating electric current is introduced into the hand-held coil, the magnetized catheter begins to oscillate. The effect of the shaking motion is to free the catheter from contact with the wall. In addition, a small propulsive force is developed at the tip. Unimpeded forward movement can take place at this moment.

At bifurcations, the catheter can be guided either right or left by superimposing direct current over the alternating pattern in the outside coil.

The new catheter was tested in a physiologically true glass model of the small blood vessels, applied to animals, and then finally used in the human brain. The latter intervention appears to have been the first time that a catheter was successfully guided into the middle cerebral artery through a puncture of the carotid artery.

The idea of applying alternating magnetic fields in vascular exploration germinated at the Weizmann Institute. Israeli scientists, led by Dr. Ephraim Frei of the Electronics Department, discovered

that magnetic vibration of the fins of small POD's created a hydraulic effect and made them swim about, much like tadpoles.

Mr. Driller, who was a research fellow at the Weizmann Institute from 1965 to 1966, worked with the POD catheter and introduced modifications in their design and the electronics which produced the external magnetic field. He took the idea of utilizing alternating magnetic fields for vascular exploration by flexible guided catheters with him to this country. At the Riverside Research Institute, where he is a Senior Research Engineer, he met Dr. Hilar. Dr. Hilar, who was graduated with an M.D. from the University of Cairo, was visiting Riverside on other research matters. Then, in a cross-fertilization of ideas between scientists from inimical countries, a significant extension of the idea took place. The details were formulated, and financial support was received from the National Heart Institute to proceed.

Further work undertaken here led to increased sophistication of the catheter and of the electronics of the external coil, and to the development of the percutaneous entry technique, which permits introduction of the flexible catheter despite the outward pressure of arterial blood.

This new catheter offers the prospect of repairing aneurysms and other vascular malformations in the small vessels of the brain without opening the skull. It also offers the possibility of releasing medication at tumor sites without affecting nearby healthy tissue.

## Dr. Carol Ehrlich Is New Director of Speech, Hearing

Dr. Carol Ehrlich

Dr. Carol Ehrlich has been appointed Director of Vanderbilt Clinic's Lt. Lester N. Hofheimer Speech and Hearing Clinic and Assistant Professor of Otolaryngology at Columbia University's College of Physicians and Surgeons, effective September 1.

The challenge for evaluation and therapy of the various speech, language, voice, and hearing problems is everpresent in Dr. Ehrlich's department, which monthly sees between 650 and 850 patients.

All nine staff members in her department hold master's degrees in speech and hearing. All are accredited or have certification pending by the American Speech and Hearing Association, a professional organization imposing stringent academic and clinical requirements on its members. Says Dr. Ehrlich, "With these standards, it means that Columbia may feel proud in that its staff meets these requirements."

Dr. Ehrlich attended Northwestern University, University of Chicago, and University of Denver, where she earned her Ph.D. degree in speech and hearing. Previous to coming to the Medical Center, she was teaching at the University of Denver. Dr. Ehrlich's husband, who is in the food industry, was assigned to a position in New York and her family, which also includes two sons, one a Marine stationed in Vietnam, and one daughter, moved to Rye, New York. Of her new appointment, Dr. Ehrlich comments, "I am enjoying the prospect of working in this institution with such a wealth of clinical material."

## Christmas Dolls Will Arrive Soon

Here is a message from Marjorie Peto, Assistant Director of Nurses, Department of Nursing:

The Christmas Dolls have been ordered. Anyone who is willing to dress a doll for a child in Babies Hospital will be welcomed at the Babies Hospital Nursing Office, Room 221. The dolls should be arriving about October 14, 1968.

## NEW SCHOOL YEAR BEGINS

Continued from page one

team with standout performers in sports disciplines ranging from football and track to karate and weight lifting. Among the future doctors are also a leader of an Antarctic expedition, a sculptor and a cartoonist. Many freshmen have traveled the world over and have served in the developing countries; others have participated in scientific research with publications to their credit.

The number of women in the class of 1972 is close to last year's—11. The number of sons or daughters of physicians in this year's class has gone up by one from 29 last year. The other 102 are the children of accountants, clerks, contractors, grocers, factory workers, firemen, insurance agents, lawyers, merchants,

ministers, printers, professors, salesmen and teachers. Close to a quarter of the class have been awarded scholarship assistance, according to Dr. George A. Perera, Associate Dean of the College.

Under the guidance of a committee of second year students, the entering class was provided with a four-day orientation program, which included a tea, a softball game, a picnic and touch football (a bloody nose the only casualty!) and talks by alumni and the administration and tours throughout the medical center. The opening exercises were held at the Alumni Auditorium, at which time the students were addressed by Dr. Andrew Cordier, acting president of Columbia University, and Dr. Donald W. King, Director of Service, Pathology,

## Anesthesiology Lectures

The customary Thursday evening lecture series will be given this year from 5 to 6 p.m. on Thursday afternoons, Babies Hospital Amphitheatre. The program will commence October 10, 1968. We hope to see you often.

October 10, Herbert Rackow, M.D., Associate Professor of Anesthesiology, "Pulmonary Uptake of Anesthesia."

October 17, Enrico Ciocatto, M.D., Professor and Chairman, Institute of Anesthesiology and Resuscitation, University of Turin, Italy.

October 24, John Nunn,

M.D., University of Leeds, England.

October 31, Mieczyslaw Finster, M.D., Assistant Professor of Anesthesiology, "Placental Transmission and Fetal Uptake of Drugs."

November 7, L. Stanley James, M.D., Professor of Pediatrics, "Barbiturates and Fetal Anoxia."

November 14, Ronald G. Kuntzman, Ph.D., Aspects of Drug Metabolism of Deputy Head, Biochemical Interest to the Anesthesiologist Pharmacology, The Wellcome Research Laboratories.

## Honor to Dr. Woodman

Dr. DeGraaf Woodman, Consultant in Laryngology at The Presbyterian Hospital, was honored recently by being elected first vice-president of the American Laryngological Association at its annual meeting in Hollywood, Florida.

This society is limited to 100 members who are elected on the basis of having made outstanding technical contributions to the specialty.

## Dr. Ray Trussell Goes to New Post

Dr. Ray Trussell has been appointed General Director of the Beth Israel Medical Center, according to an announcement by Charles Silver, President of Beth Israel's Board of Trustees. The new Director will begin his assignment at the downtown institution starting December 1.

In his future post, Dr. Trussell is expected to utilize his expertise and enthusiasm in further promoting Beth Israel's community health care program and its educational program with the Mount Sinai School of Medicine. The center's commitments to community medicine include the mu-

nicipal Gouverneur Health Services Program and the Morris J. Bernstein Institute for the treatment of narcotic addicts.

While heading the School of Public Health and Administrative Medicine of Columbia University, Dr. Trussell made a number of distinguished contributions to public health studies, including a survey of Blue Cross coverage and of the quality of patient care in different types of hospitals.

The Columbia-Presbyterian Medical Center wishes Dr. Trussell continued professional self-fulfillment and much success in his new assignment.

## TOY EXHIBIT

Cycles and cast-iron tricycles from the 1880s form part of "The Toy Collector" exhibition. The toys were collected over some 15 years by Mr. Jerry Smith, a Kansas City, Mo. automobile dealer.

Continued from page one

Children's Mercy Hospital of Kansas City, where the Hallmark home offices are located. Kansas City is also the home town of Mr. Jerry Smith, who collected the toys over a period of some 15 years. The collection grew to become one of the largest and most valuable in the country.

Although Mr. Smith—a car dealer by occupation—has collected a goodly number of early automobiles and trucks, the toy exhibit will not be short on ships, aircraft, dolls, cycles and

circus and fairground models. The display will also feature a continuous showing of early color slides, including a rare Civil War sequence.

The exhibit, entitled "The Toy Collector," will be on public view from October 16 through December 31, daily except Sundays, 9:30 a.m. to 9:00 p.m. The Hallmark Gallery has invited all members of the hospital staff and friends of the hospital to visit "The Toy Collector." The exact address of the exhibit is 720 Fifth Ave.

# HUGH DALY MAKES MOVIES IN NEO-NATAL FOR TEACHING

At left, Dr. William Silverman, Professor of Pediatrics. Above, Dr. Lillian Blackman. At right, Ardis Lewis, RN, and Hugh Daly.

It began last Christmas and one thing led to another. First, Mr. Hugh Daly was asked to make a short film for the Babies Hospital Christmas party, and it was well received.

Next, Mr. Daly, who until his recent promotion was Film Expediter for Babies X-ray, made a film for the Cerebral Palsy Foundation—then one for Babies X-ray—and another on rabbits.

About three months ago he began work on an assignment for Dr. William A. Silverman, Attending Pediatrician, Babies Hospital, making films of work done in Neo-Natal Intensive Care, Babies Hospital. Because Dr. Silverman was moving to San Francisco, he hoped to have a film for use both there and here.

"We eventually took 13,000 feet of film," Mr. Daly said as he described the project, "which is being reduced to 12,000. Everything we shot came out."

He stated that the sound recording is being done on a magnetic track. "Thousands of dollars are saved by this method. It calls for only one

copy of the film instead of the usual six or eight. If a mistake is made, one can go back over it and re-record as desired."

In California at the San Francisco Children's Hospital, Dr. Lillian Blackman is working with Dr. Silverman on the script, and Mr. Daly makes trips to assist with his notes.

This film is Dr. Silverman's parting gift to Babies Hospital. When edited and complete with sound it will be used here as a teaching device, primarily for the nursing staff.

These movies, in color, show

actual, not simulated, procedures. Mr. Daly has done the work in off-hours, on his lunch hours, evenings and weekends, to get the desired pictures when available. The parents were glad to give their consent for their babies to be filmed.

Mr. Daly has recently been promoted to the position of evening registrar at Vanderbilt Clinic, and this, he said, will give him more good time for filming. He believes that The Presbyterian Hospital, as a teaching hospital, will find films increasingly useful.

Upper left, a view from camera angle with Cathy Doherty, RN. At left, a still from the movie. Right, Dr. Burton Grebin and Ardis Lewis, RN, beginning a sequence.

## Columbia University Study of Midwifery Directed by Mary Crawford: Some Quotes

The following paragraphs are quoted from a study published late last year entitled, "Role and Preparation of the Nurse-Midwife in Maternity Care in the United States."

The study was prepared under the direction of Mary I. Crawford, who was subsequently appointed Associate Dean, School of Nursing, Faculty of Medicine, Columbia University, and Director of Nursing, Presbyterian Hospital. This work was sponsored by the Department of Nursing Education, Teachers College, Columbia University, and the Department of Nursing, Faculty of Medicine, Columbia University.

The National Commission on Community Health Services made the following recommendation in their report published in 1966:

"All communities of this nation must take the action necessary to provide comprehensive personal health services of high quality to all people in each community. These services should embrace those directed toward promotion of positive health, application of

established preventative measures, early detection of disease, prompt and effective treatment, and physical, social, and vocational rehabilitation of those with residual disabilities. This broad range of personal health services must be patterned so as to assure full and intelligent use by all groups in the community."

The United States spends much more per person for medical care than any other

country in the world. Yet we do not enjoy the highest health levels.

From the evidence available in the literature it appears that the health professions have an obligation to pool their efforts toward reduction of perinatal mortality and perinatal complications.

The overall supply of physicians in this country is not keeping pace with the population growth.

The obstetrician cannot be tied up providing care which can be done by a less skilled person. This person may be less skilled in treatment of complications but highly skilled in the promotion of positive health, in the application of preventive measures, in the early detection of disease.

The nurse-midwife is capable of making a contribution to each of the objectives of comprehensive care.

In view of the increase expected in the world population in the next few years, and the fact that probably over one-third of the world's births still occur unattended or without prenatal care, it is economically impossible to use doctors (who require six years of medical training) to deliver normal babies and to carry out all routine prenatal care.

The midwife is admirably fitted to carry out normal prenatal care after the first medical examination early in pregnancy. She is well trained to diagnose normal and abnormal pregnancy and act accordingly. She examines the pregnant woman systematically and reg-

ularly, recording results of urine tests, Rhesus group, blood pressure, and other laboratory tests. She is the sentinel of the mother, sorting out the high risk maternity cases for special care by the doctor. She conducts the normal delivery and summons help in the event of an emergency.

In the United States there is every opportunity for the nurse-midwife to function as a member of the health team.

The recruitment and training of talented and dedicated young women for a career in nursing are crucial in providing high quality medical care. This is especially true of medical centers, whose many departments and services create a year-round demand for qualified nurses.

The Junior American Dental Hygienists' Association of Columbia University held the first of eight meetings scheduled for the 1968/69 academic year on September 24 at Bard Hall. The luncheon meeting, chaired by Joanne Hoffman, heard an address by Patricia McLean, President Elect of the American Dental Hygienists' Association, on "Jr. A.D.H.A. Membership: Your Key to Career Progress." Above is a partial view of the luncheon.

### Mr. Sarmi to Be Honored at Hospital Benefit

The Women's Auxiliary of the Presbyterian Hospital is giving a benefit and private showing of fashions by Ferdinando Sarmi. The event will be held on the St. Regis Roof, Wednesday, October 23, starting with a reception at 12:00 noon. Tickets for the White Wine Luncheon are \$8.00 and may be obtained by anyone who donates thrift valued at \$25.00 or more to the Stuyvesant Square Thrift Shop at 1430 Third Avenue (81st Street) in the name of the Presbyterian Hospital. Pick-up services in the Manhattan area may be obtained by telephoning SW 5-3638.

Mr. Sarmi will be presented with an award by the Women's Auxiliary for his contribution of time and talent on behalf of the Presbyterian Hospital. Mrs. Arthur Gerard DeVoe, President of the Auxiliary, will make the presentation.

Mrs. Richard B. White is chairman of the benefit and vice chairman is Mrs. Richard DeL. Simmons, Mrs. Hamilton Southworth, Jr., is in charge of ticket reservations.

The student nurses' scholarship fund, the patient's library, volunteer services, social services, occupational therapy and patient and staff needs benefit from the event.

### Former Patient Raises Money for S.S. HOPE

Carol Lewis of Sea Girt, New Jersey, presents a check for \$95 to Dr. Lester Mount on behalf of the S.S. HOPE. Carol, a former patient of Dr. Mount's, raised the money by arranging a festival in the backyard of her home.

Several years ago Carol Lewis was a patient of Dr. Lester Mount, Associate Professor of Clinical Neurological Surgery at the College of Physicians and Surgeons and Attending Neurological Surgeon at Neurological Institute. In gratitude and appreciation to Dr. Mount, Carol, who is now 13 years of age, decided to do what she could to aid a project in which she knew Dr. Mount was keenly involved. That project is supporting and staffing S.S. Hope, a ship carrying medical instruments and supplies to developing nations throughout the world.

For four years Carol has held a fair in the backyard of her home in Sea Girt, New Jersey. The date for this summer's

event was August 16. Neighbors contribute cakes and cookies to be sold, and other prizes are donated that can be won at games such as pitch penny. All profits benefit HOPE. Sometimes a distinguished guest pays a visit, and this summer Astronaut Russell Schweikert, whose parents live in Sea Girt, dropped by.

The event has gained community interest, and this year Carol's efforts were responsible for raising \$85. Carol and her mother, Mrs. Raymond Lewis, then presented a check for that amount to Dr. Mount at his office. Each year the event's profits have doubled, and Carol looks forward to an even more successful fair next summer.

## Drs. Cohen and Collins Investigate Riddle of Alcoholism

Ever since Noah had too much wine and lay uncovered in his tent, his descendants have idly wondered why alcohol acts the way it does on the brain of man.

In a crowded laboratory some 8,000 miles west of Noah's vineyard, two researchers may now be close to a precise explanation of the DT's and disorientation associated with heavy drinking.

The two scientists are Drs. Michael Collins and Gerald Cohen of the New York State Psychiatric Institute. Dr. Collins, who was graduated from Purdue last year, is completing his first year of postgraduate training as a Fellow in the Post-Doctoral Research Training Program in the Biological Sciences in Relation to Mental Health. Dr. Cohen is Co-Director of the program and Assistant Professor of Biochemistry at the College of Physicians and Surgeons. They are now carrying on their investigations at the Parkinson's Disease Research Center in the William Black Building.

Both Dr. Cohen and Dr. Collins emphasize that they had no prior intent to "solve the riddle of alcoholism." Their hypothesis is the by-product of a test unrelated to this social problem. In other words, an example of creative serendipity at work.

The duo was contemplating a recently developed method for treating nerve tissue to "light up" catecholamines, the biological agents so important in neural transmission. The method is fairly simple: freeze-dried nerve tissue is exposed to formaldehyde vapor, which combines with the catecholamines to form fluorescent alkaloid compounds. The fluorescence can be seen under ultra-violet light. The nuclei of these alkaloid compounds are isoquinoline in type, a chemical structure found in some desert cacti, notably in

Drs. Michael Collins (left) and Gerald Cohen, along with research assistants Dorothy Dembiec and Elisa Dicker (right), seem to anticipate disorderly conduct from a bovine adrenal gland, which they are perfusing with an alcohol compound at a laboratory of the Parkinson's Disease Foundation.

"mescal buttons" and in "peyote." Some of the isoquinoline alkaloids can alter behavior by affecting nerve and smooth muscle cells.

Drs. Cohen and Collins asked the right question at this point: would acetaldehyde—a compound that the body makes from alcoholic beverages—react as readily with a catecholamine to form alkaloid substances in living tissue? A test-tube answer was immediately available: acetaldehyde reacted at normal body temperature with adrenaline, a well-known catecholamine, to form an alkaloid compound. The next step was to try to duplicate the result in mammalian tissue. The two researchers produced "stoned" adrenal glands of cows by perfusing them with a dilute acetaldehyde solution. After 90 minutes of "heavy drinking," the adrenal glands were found to contain traces of alkaloid compounds similar in structure to the alkaloids found in peyote and other desert plants. Since like structures act similarly in different biological systems, it can be suspected that the alka-

loids from the "drunk" adrenals would produce some of the well-publicized nerve reactions of plant alkaloids.

The next research project on the doctors' agenda concerns living animals and man. "Many investigators," said Dr. Cohen, "have looked into this area and have made provocative observations, but a broad research effort has not developed." Now, however, "we know what to look for and when to look," Dr. Collins added. "Using increasingly sensitive testing methods, we are hopeful that the new information could prove useful in the eventual control and prevention of alcoholism."

### NURSERY SCHOOL NOTE

There are still openings in the afternoon session of the Medical Center Nursery School. This session is for four-year-olds and runs from 1 p.m. to 4 p.m., Monday-Friday, September to June. The tuition is \$350 for the year. If interested, please call the Secretary, Mrs. Rosen at LO 8-3023.

### ONE-MAN ART SHOW ON OCT. 4 AT BARD HALL

Come Within and Give the Drummer Some: A Trip into Ecursion of a Mysticism is the provocative title of an art exhibit to be held at Bard Hall

on October 11 under the sponsorship of the P&S Club. The one-man show features the works of Erik Stephenson, and about twenty oils and a num-

ber of pen and ink drawings will be displayed.

Mr. Stephenson, a laboratory technician in neurological research, has an impressive background. A native of Jamaica, he attended the Jamaica School of Art, the Art Students League in New York, and the Edinburgh College of Art in Scotland. In 1965 his art was shown in a group show sponsored by the West Indies Students Association in London. Last year, in a one-man show in Jamaica, he chose to call his exhibit *Where Do I Go From Here?* and the works were primarily realistic. The present show represents the transition of this artist during the past year. What changes have occurred? Judge for yourself on October 11th at 7:00 p.m. at Bard Hall.

# 'Exchange Visitor' Nurses Seek Acquaintance with American Way of Life

October 1968 marks the end of the second complete year of the "Exchange Visitor" program by which a group of graduate nurses from different countries come every six months and stay at Presbyterian Hospital for a year. The two groups which have been here for the past year, of eighteen and fourteen nurses respectively, represent thirteen different countries—Iran, Japan, Korea, Australia, Switzerland, the Netherlands, the Philippines, India, Ireland, England, Spain, Taiwan and Rhodesia. They come here not only to learn about nursing methods in the United States but also to observe, and perhaps absorb, something of the way of life here. They are all experienced nurses and many of them have worked in several countries other than their own.

Ruth Rayner is coordinator of the program for the hospital and Mrs. Doris Kiess assists her and is an instructor. The nurses work four days a week on the floors and have one day devoted to classes. They live in Maxwell Hall. We chatted with nine of them to find out what they feel about the whole experience. They were Annie

Ruth Rayner, Coordinator of Exchange Visitor Program.

Hanselmann from Switzerland, Kazuko Mii from Japan, Tomiko Sakazume also from Japan, Jean Horne from Ireland, Erna Meyer from Austria, Donna Ramah Paul from India, Rhoda Kirk from Rhodesia and Australia, Milagros Segura from Spain and Oak Sue Kim from Korea.

Some of them have managed to travel around quite a bit—to Boston, Washington, Connecticut, North Dakota—usually through friends of friends in their own country. For some, the first six months were difficult. Many were homesick and suffered from a form of cultural shock coming to an environment so very different from their own. This of course happens to anyone who goes to live in a foreign country, but it was especially true for those from the Orient. There life is still formal, younger people stand when someone in authority enters a room, in some countries there is even a different language for the older and younger generations. (Some people might say this latter is also true in the States.) Young people are shy in expressing their thoughts. Voices are quiet and manners gentle and one nurse from the East confessed that, until she became accustomed to the way of speaking here, she thought that people were angry all the time. Meals also present a problem. In oriental countries rice is eaten at least once a day. Any of us who have been abroad on vacation can sympathize, for it is difficult for digestions to acclimatize easily to different food and unusual methods of preparing it.

Although all the nurses had some experience with the English language before they came, they often found it difficult to understand what was being said around them. One of them whose native language was English admitted to being completely baffled at first by American accents when answering the telephone, until her ears grew accustomed to the different pronunciation.

But all this is just part of becoming immersed in another culture and one answer to many of these difficulties is just plain old-fashioned hospitality. A "Big Sister" system has been set up whereby it is hoped that graduate nurses in Presbyterian Hospital will be available to help the visitors and invite them to meals. Sev-

eral of them took part in Thanksgiving parties last year. The Exchange Visitors Office organized three weekends in Cooperstown this summer where they lived in the home of a friend of Miss Rayner. Everyone enjoyed this enormously and appreciated the chance to escape from the city.

All the nurses agreed that they were learning all the time, especially from each other, and that the process was a stimulating one. Each member of the group had discussed hospital practices in her own country and explained some of the habits and customs. They were anxious to share their backgrounds and experience with Americans and, in this age of widespread travel, when so many people study and work outside their own country, the information they have to give could be valuable to other people in the Medical Center.

Several of the Exchange Nurses find the casualness of life here in the States disconcerting. In most Asian countries, for instance, hospitality is not informal but a positive thing with its own rules. You try to forestall any problems your guests might have and they, in turn, would not think of asking directly for your help. In English-speaking countries, on the other hand, people fear to intrude upon strangers and tend to let others alone without either side feeling obligations. Invitations are offered casually but not always followed up. One of the nurses mentioned that someone had asked if she were free the following Sunday, that they would give her a call. She waited by the telephone all day and, when no call came, assumed she had done something to offend the other person.

This implies no blame on either side, just another manifestation of cultural difference. All that is needed is an added sensitivity to another's habits of thinking and behavior.

Any nurse in the hospital who could make herself available for advice, act as guide or talk about professional matters over coffee or a meal, would be doing a service, and would in turn learn a great deal from members of the group.

Families attached to the Medical Center, especially if they have children, might gain a great deal of pleasure and interest for themselves—and incidentally contribute in some small way to international understanding—if they could arrange to meet some of these graduate nurses from other lands. Visits to theatres, concerts, exhibitions, trips around the city or the countryside, or just the chance to get away from the Hospital for a period and relax in an American home mean a great deal when you are a few thousand miles from your own home. Perhaps some of the hospital volunteers would

Arriving and departing Exchange Visitors at reception.

enjoy shopping or sightseeing with the visitors.

Anyone who is interested should telephone Miss Rayner or Mrs. Kiess at extension 1929.

Out of the jumbled reactions, confusion in a big city where our visitors cannot walk as

freely as they can at home, strange customs and language, but also shared professional interests and the warmth of new friendships—out of all this will emerge, we hope, a growth of understanding for the country, each other and for the career they have chosen.

## MEET OUR VOLUNTEERS

### Eva H. Woythaler

Eva H. Woythaler has been a volunteer at The Presbyterian Hospital since 1942. She trained as an American Red Cross Nurses' Aid at Roosevelt Hospital and received such an excellent recommendation that she was interviewed by Helen Young, then Director of Nursing at Presbyterian, because she was to be the first American Red Cross Nurses' Aid to work as a non-professional nurse. She "made the grade" and for the next 13 years she worked in the Eye Institute — children's ward, private duty nurse on 6th floor, and general nursing on all floors. She also served the Sloane Hospital and the Neurological Institute. In 1958, upon the advice of her physician, she volunteered in a less strenuous capacity and worked in the Chemistry Lab, and since 1967 has returned to her nursing duties in Neurological Institute as a volunteer. The

Eva H. Woythaler

Presbyterian Hospital was so impressed by the excellence of her work that it offered her special encouragement to enroll as a student nurse.

In addition to all of her volunteer work, Miss Woythaler holds the position of Office Manager in a business office, 9 to 5, Monday through Saturday! She sums it all up by saying, "As long as I am helping someone, I am rewarded."

### Mrs. Bess Goodman

Mrs. Bess Goodman has been serving as a volunteer at Presbyterian Hospital for 20 years. She has worked in the Eye clinic, the ENT clinic and the Pediatric Allergy clinic. She was particularly happy working in the Pediatric Allergy clinic because this gave her the opportunity to work with children, which she said

was a very wonderful experience. She has also served as a "floor control" in the Neurological Institute on the 3rd floor and is currently working in that same capacity on the 10th floor of Presbyterian. Up until her husband's death, Mrs. Goodman also worked full-time as his secretary in the men's clothing industry.

When asked why she chose Presbyterian for her volunteer work, she said, "It just seemed that all the doctors I went to were from Presbyterian and I feel that I owe them a debt of gratitude that I can never repay." As a matter of fact, it was the late Dr. Louis Bauman of our Dept. of Medicine, the father of Dr. Eli Bauman, Instructor, Dept. of Medicine, P&S, who first instilled the idea of becoming a volunteer here at PH in Mrs. Goodman's mind.

Mrs. Bess Goodman

L to r, Jean Horne, Donna Ramah Paul, Tomiko Sakazume.

Mila Segura and Oaksue Kim.

Kazuko Mii and Mrs. Kiess.

Erna Mayer, Anne Nanselmann.

# These People Are Retiring From Our Medical Center

Barbara Little

Barbara Little

Miss Barbara Little, who has been with the hospital since 1936, retired early on July 1, 1968. She first came to work as a receptionist in Vanderbilt Clinic. Miss Little was one of the first receptionists to work in the newly organized Group Clinic in 1946 and, as such, was one of the key personnel in the successful initiation of this clinic. Following this, she was promoted to Receptionist in Charge of the Information Desk in the Admitting Emergency Clinic. She then served as a registrar.

In 1956 Miss Little was promoted to Supervisor of Clinic Receptionists, a post she held when she was the victim of an unfortunate accident in February of 1967. Because of this, she has elected to retire early and in September plans to move to Vallejo, California. We have all missed her marvelous sense of humor and just her being in the Clinic. From all of us we say, "Good luck and keep well." Barbara's courage and fortitude throughout her illness were deeply respected by everyone.

## Mrs. Helen Rosenberger

Helen Schlesinger Rosenberger retired on September 30, 1968 after forty-six years of service.

In the year 1920, when Presbyterian Hospital was located on 70th Street and Madison Avenue, Helen Schlesinger responded to an ad in the newspaper requesting the services of a secretary at that hospital. She got the job and for the following seven years worked, first in the Purchasing Department, then the Assistant Treasurer's Office, and back to Purchasing Department. In 1926 she thought she would try her hand in the business world and for two years, until 1928, worked in industry. But the lure of the hospital was magnetic enough to attract Miss Schlesinger back and, in September, 1928, she went to work in the Surgical Follow-up Clinic in collaboration with Miss Rhetta L. Pinney, and under the direction of Dr. Hugh Auchincloss, Sr.

In 1931 Helen married Mr. Abraham Rosenberger and their daughter, Johanna, was born in 1934.

In 1945 Helen decided that she would like to try part-time work and accepted a job

with the Dental Clinic but this proved to be full-time part-time and Helen decided to go back to her old love, surgery.

In 1946 she became Departmental Secretary in the Department of Surgery, under Dr. George H. Humphreys, II, where she remained until 1950 when she became secretary to Dr. David Habib who was the Director of Surgical Research at that time. Helen has been with Dr. Habib since then. In her own words Helen speaks of her years in the hospital as having been "a very happy relationship with all the many people I have known and worked with and I feel very sad to leave. It has been heart-warming for me to see all the 'boys' come as residents in Surgery and go on to become Professors and Heads of Departments."

"I thank all my friends for being so good to me."

On September 18th Dr. Habib gave a party for Helen in Harkness Hall and in speaking of this occasion Helen said, "I can only thank Dr. Habib and Dr. Humphreys for making it possible for me to retire comfortably—but I hate to go."

Helen has no immediate plans for the future except to rest, and, she says, "I will probably babysit for my three grandsons, ages 10, 8 and 5."

Helen and her husband are going to live in Stoneham, Massachusetts, near their daughter.

## Mrs. Rose Alvo

Mrs. Rose Alvo, a licensed practical nurse, retired at the end of August after completing sixteen years of service to the Presbyterian Hospital, serving the Orthopedic Clinic in Vanderbilt Clinic, the Eye Institute and the Neurological Institute.

Mrs. Alvo looks back upon her sixteen years at Presbyterian as being "her home away from home." She enjoyed all her various assignments with equal enthusiasm and now that she is retiring, says, "my time will be divided between part-time nursing and spending more time with my family."

A party in her honor was held at the Neurological Institute on August 30, 1968.

Mrs. Rose Alvo

Albert F. Reynaldos

Albert F. Reynaldos

Everyone said it was a good party—the farewell reception for Albert F. Reynaldos held on the afternoon of September 20th in Harkness Hall. Approximately 200 persons attended to say farewell to their soft-spoken friend, Albert, who has worked at Presbyterian for the past 37 years. Mr. Reynaldos was born in Cuba but his family emigrated to the United States and he started his career here at the old hospital on 70th Street and Madison Avenue. He left his job there to take a position at the Bankers Club in N.Y.C. and it was then that a friend asked if he wouldn't like to come up to the new medical center and Mr. Reynaldos did indeed start his career as a painter at Presbyterian in the year 1929, working up to the position of painter-foreman. He stated that he enjoyed his job very much as he had an opportunity to move around a great deal and meet many different people. He says, with a chuckle, that "many I have known are now retiring too."

When asked about his plans for the future, Mr. Reynaldos told us that he has nothing very specific in mind but is "just going to relax for a while—that's what retirement is for." He plans to remain in New Jersey for a while, where he commuted back and forth to his job, and may go down to Florida, and then on to Arizona to settle, where his son is a Lieutenant in the Signal Corps of the U. S. Army. He has a workshop in the basement of his home and many tools and will probably spend some time pleasing his new boss—his wife!—who will undoubtedly have several chores mapped out for him.

Mrs. Reynaldos was present at the farewell reception given for her husband and as someone said to her, "We're very proud of your husband," she said, "Not half as proud as I am."

And so—Mr. Reynaldos will relax for a while and look forward to a happy retirement with the prospect of becoming a grandfather in January of 1969.

## News of Nursing

Mrs. Evelyn Bright, Gloria Steffens, Mrs. Andrea Fisher.

The Columbia-Presbyterian Medical Center has recently taken resolute steps to corner the market of top nursing talent and to keep the education of nurses abreast of the latest advances in medical science and technology. Three steps, to be exact, and their names are: Mrs. Andrea Fisher, Gloria Steffens, and Mrs. Evelyn Bright.

As Director of Nurses' Recruitment, Mrs. Fisher will apply her experience in college admissions work and in contacts with alumni. Columbia University alumni can be a reservoir of tips on potential nurses. The new Director's husband is a fourth-year student at P&S.

Miss Steffens will teach courses in teaching and learning in the School of Nursing at Columbia and will handle education administration as

well. At the University of Miami, where she was Professor of Nursing, Miss Steffens co-ordinated medical and surgical nursing and leadership. The new Assistant Professor of Nursing holds an M.A. in Administration and Education from Columbia and is a Lieutenant Commander in the Navy Nurses Corps Reserve. On Monday evenings she teaches advanced nursing to the medical group at the U. S. Navy and Marine Corps Training Center in New Rochelle.

Mrs. Evelyn Bright, the new Director of Student Affairs for the School of Nursing, will be in charge of Maxwell Hall. A multi-faceted job, running this residence hall requires an expert in personnel relations—an area in which Mrs. Bright has more than a decade of experience.

## Presbyterian Hospital's New Alumni Directory

The third Alumni Directory of the Presbyterian Hospital has been distributed to all doctors listed in it, according to an announcement from the Assistant Secretary's Office, whose staff compiled the work. The Staff Committee of the Medical Board acted as a consultant on the project, completed for the 100th anniversary of the Hospital.

The directory lists doctors currently associated with Presbyterian. It includes not only house staff graduates but visiting fellows and members, past and present, of the attending staff.

A means of maintaining contact with distant M.D.'s, the Directory has already been hailed as "a monumental undertaking." Dr. Thomas A. Devan of St. Petersburg, Florida, wrote, for example: "Let me tell you that these directories are frequently referred to and they never fail to come up with the desired fact." This continued interest in the Alumni of the Hospital is a reflection of the thought in a statement made to him by former President Frederick Sturges, in 1912, "to return to

us for whatever strength we may be able to give you."

Dr. Devan's reaction may be shared by alumni in all parts of the world, including such far-away spots as Iceland and the People's Republic of China. The 58 foreign countries represented in the listing are fairly evenly divided between the Americas, Europe and the Afro-Asian region. Naturally, our alumni work under all climatic extremes—from the austerity of Alaska and Iceland to the humid heat of Dahomey.

Since current appointments are included, New York is the most abundantly represented state in the Directory. In fact, New York, with 2,230 entries, and New Jersey, with 310, comprise more than half of the 4,860 names in the listing. However, California is actually second numerically with 313 names. It may also be of interest that Hawaii has as many alumni, 7, as Idaho, Montana, Nevada, North and South Dakota combined.

The Assistant Secretary's Office will appreciate all communications from doctors on address changes and new appointments.

# Stethoscopia

## • MARRIAGES

Kathy Hubenet, first year student at the School of Nursing, and Franklin Apfel, P&S '71, were married on September 8 in The Pauline A. Hartford Memorial Chapel.

Dr. Sara Kellerman and Dr. David Follett were married on August 24. Dr. Follett is a resident in radiology at PH, and his wife is a resident in psychiatry at Albert Einstein College of Medicine.

Maren Pantan, Staff Nurse, and Fred Barnett, Jr., U. S. Coast Guard, were married on September 7 in The Pauline A. Hartford Memorial Chapel.

Alice Barker and Colin Canham, Jr., were married on August 24. Mrs. Canham is a student at the School of Nursing.

Winifred Baden and Dr. Michael Schinitzky, Intern in Pathology, were married on September 6 in The Pauline A. Hartford Memorial Chapel.

## • BIRTHS

Dr. and Mrs. Stanley Steiner are the proud parents of a son, Andrew Charles, born of September 14. Dr. Steiner is an Instructor in Stomatology, School of Dental and Oral Surgery.

A baby girl, named Andrea Lynn, was born on September 1 to Mrs. Cleo Day of HP Clinical Pathology.

Mrs. Carol DiFusco, of Neuro Clinical Pathology Laboratory, gave birth to a son, Andrew Francis, on August 14. Andrew's maternal grandmother, Mrs. Olga Geer, is Supervisor of the IBM Control Department.

## • CONDOLENCES

To the family of Walter Rhein, employed since 1930 as an electrician in the Engineering Department, PH, who passed away on August 30. Mr. Rhein is survived by his wife, Margaret, and two daughters, Linda and Patricia.

To Mrs. Magdalen McCarthy, of the Office of Public Interest, on the death of her husband, Daniel, who died on September 6. Mr. McCarthy is also survived by a daughter, Mrs. Patricia Sherry, and two grandchildren.

## • NOTES OF INTEREST

The second Children's Art Show will be held from November 1 to November 8 on Babies Hospital 12.

Elmer D. Logan is the name, corrected, of the Volunteer whose photo and story appeared on page 4 of the September, 1968, *Stethoscope*.

The 89th annual campaign of the United Hospital Fund of New York opened with a dinner for 600 guests Monday night, September 30, in the Grand Ballroom of The Plaza Hotel. The fund is seeking \$3 million to help its 78 member voluntary, non-profit hospitals expand their health services to meet the contemporary needs of the entire community.

Douglas T. Yates, campaign general chairman, in his address pointed out the "devastating effects on the budgets of our voluntary hospitals" of the recent across-the-board wage increases. "An even more drastic blow," he said, "is threatening all hospitals. (Recently) . . . the Senate voted to cut federal aid to all state Medicaid

programs by about \$500 million in the current fiscal year. That means, retroactive to July 1. The loss to New York State could amount to \$92 million. The impact of this latest cut will be staggering, for in April federal and state legislation had revised the eligibility standards for Medicaid. In New York City alone about 700,000 people—between the ages of 21 and 64—were cut off from benefits. . . . No provision was made to restore the former government responsibility. . . . These problems, I believe, will force hospitals to scrutinize more sharply their sources of fiscal support. This will make the support which we as volunteers of the United Hospital Fund give to the campaign even more meaningful."

## DOINGS OF DOCTORS

DR. WILLIAM A. BAUMAN, Director, Medical Data Processing, PH, was Chairman of the *Multiphasic Screening Seminar*, part of a discussion on *Community Health Screening Programs*, at the American Hospital Association Convention, held in Atlantic City on September 18.

DR. THOMAS SANTULLI, Attending Surgeon, Professor of Surgery, P&S, and Chief of Pediatric Surgical Service, BH, presented a paper entitled *Necrotizing Enterocolitis in the Newborn Infant* on July 7 at Glasgow University, Scotland. Previous to that, Dr. Santulli attended the British Association of Pediatric Surgeons Annual Meeting in Liverpool from July 14 to 19 and acted as Moderator in one of the sessions.

DR. BRUCE SARLIN, Instructor in Psychiatry, P&S, and staff member, Mental Health Project for the Deaf, Psychiatric Institute, was Guest Lecturer in Psychiatry at a U. S. government-sponsored symposium for teachers of the multiply handicapped and deaf. Dr. Sarlin lectured for three days in August as part of the summer-long training conference in Providence, Rhode Island. The symposium was attended by psychologists and social workers as well as teachers from throughout the New England area. The subjects of the lectures were *The Cognitive Style and Behavioral Characteristics of the Deaf Child*, *Detection and Diagnosis of Psychiatric Disorders in the Multiply Handicapped and Deaf Child*, and *The Role of the Teacher in the Management of the Multiply Handicapped Child*. In July, the *International Journal of Group Psychotherapy* published Dr. Sarlin's article on *Group Therapy of Deaf Adolescents in a School Setting*. In collaboration with DR. KENNETH ALTSCHULER, Assistant Professor of Psychiatry, P&S, Dr. Sarlin presented the paper at the American Group Psychotherapy Association's 25th Anniversary Meeting in Chicago earlier this year.

DR. ARTHUR GERARD DEVOE, Director, Institute of Ophthalmology, participated in a *Symposium on Complications of Cataract Surgery* at the First South African International Ophthalmological Symposium, University of Witwatersrand, Johannesburg, South Africa, from September 2 to 6.

## House Staff Wives Give Welcoming Tea

On September 4 in Harkness Hall from 4 to 6 o'clock the House Staff Wives gave a tea to welcome new house staff wives. Iced tea with lots of delicious homemade cookies was served, thanks to many volunteer cooks and the organization of Cindy Molder. The guests were invited to sign up for a variety of activities. The one working committee for which everyone was asked to volunteer was the Housing Committee, which made its first efforts to help incoming house staff find places to live this year.

House Staff Wives has grown out of a smaller group who got together last winter to try to help in an organized way the perennial problem of housing. The girls who were involved then got in contact

with other wives who were interested in the expansion of the group into one organized for activities. The result was the tea, a roster of officers, and a tentative program for the coming year. All wives of house staff, fellows, or attendings are invited to attend meetings or sign up for special interest groups.

The tentative program for the coming year includes a Children's Christmas Party in December, a Fashion Show in March, and a Picnic in June.

Officers for the coming year are Katie Kennedy, President; Grace Cannon, Connie Michelson, Gwen Smith, and Cary Vitikainen, Vice Presidents; Sue Hughes, Secretary; and Francine Isaacs, Treasurer.

Interest groups which have been organized include cook-

DR. LANDRUM B. SHETTLES, Assistant Attending Obstetrician and Gynecologist, PH, and Assistant Professor of Clinical Obstetrics and Gynecology, P&S, reported on studies of dietary deficiencies in relation to human male fertility before the National Committee of Maternal Health in New York City, just before entering the Army Medical Corps in 1943. Upon return to the U. S. 3 years later, a copy of this report was requested by the Academy of Sciences, Moscow, USSR. Subsequent requests of studies on human fertilization and early development have been received. A recent comprehensive paper with 30 original photos on those studies has been sent on by Professor B. P. Khvatov of the Medical Institute of Simferopol to the editorial office of *Archives of Anatomy, Histology and Embryology* (Leningrad).

PROFESSOR JOSEF MASEK, Director of the Institute of Human Nutrition in Prague, Czechoslovakia, spoke on *Investigations of the Institute of Human Nutrition, Prague*, on August 23rd at the Delafeld Room of the Department of Pathology, College of Physicians and Surgeons. Professor Masek will be the President of next year's International Congress of Nutrition. The schedule for his short visit to the United States was arranged by Professor Charles Glen King of the Institute of Nutrition Sciences. Dr. Hans Kaunitz, of the Department of Pathology, P&S, arranged a seminar at that time in which many Medical Center physicians participated, including Dr. Charles Flood of the Department of Medicine, who had visited with Professor Masek in Prague only a few weeks before. Also attending were visitors from Cornell and Rutgers Universities and even one from the Centre Nationale de la Recherche Scientifique in France.

DR. WILLIAM POLLACK, formerly Ortho Research Fellow at Ortho Research Foundation in New Jersey, has been appointed Assistant Clinical Professor of Pathology at P&S. With two other members of P&S, Dr. John Gorman, Assistant Professor of Pathology, and Dr. Vincent Freda, Assistant Clinical Professor of Obstetrics and Gynecology. Dr. Pollack recently developed a vaccine that prevents Rh hemolytic disease of babies.

## FORTTRAN COURSE OCT. 7

A six-week course in Fortran on administrative and medical applications is open to graduates of the introductory course on computers, according to an announcement by Dr. William A. Bauman, Director of the Medical Data Processing. The course will start October 7 and will be given Mondays, Wednesdays and Fridays from 4 to 5 p.m. in classroom #5 of the Armory. Registration cards may be obtained from the receptionist at PH 4-33.

ing, books and theater, tennis, bridge, sewing and decorating arts, skiing, housing, and calisthenics. For information about joining, call the secretary, Sue Hughes, 795-6311.

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

B.M. CONY STAKES  
COLUMBIA UNIVER.  
LIBRARY

VOLUME XXIII, NUMBER 11

NOVEMBER, 1968

## \$100 MILLION FOR DEVELOPMENT

An updated, long-range master plan for the continued development and modernization of Columbia-Presbyterian Medical Center calls for the expenditure of an additional \$100 million during the next 10 years, it was announced by Augustus C. Long, President of The Presbyterian Hospital on October 9, following approval by the Trustees at their October meeting. Approved also was a \$100 million fund-raising campaign to provide financing for the Program; the campaign will be headed by General Lucius D. Clay.

"The Medical Center is fortunate to have the continued leadership of General Lucius D. Clay," Mr. Long said. "General Clay has headed the Development Program since its inception in 1960. He has worked tirelessly over the years to raise funds for the Program and has been an inspiration to the Trustees and to the many other dedicated men and women who have worked so diligently to make the Medical Center's financial needs known."

Mr. Long stated that foundations, businesses, individuals, and government health agencies will be invited to help provide the facilities needed to permit the Medical Center to render services in keeping with its high reputation.

### Approved New Projects— Immediate and Long-Range

In addition to the projects previously approved, all of which are described in this issue of *The Stethoscope*, the Trustees have approved the following major projects, which are to be completed over a period of 10 years. However, New Emergency facilities at Vanderbilt Clinic, and the Court Building addition to Presbyterian Hospital will start as soon as plans can be completed. These projects represent the first steps in long-range plans to completely modernize and expand Vanderbilt Clinic and all patient-care floors within Presbyterian Hospital.

#### New, Enlarged Emergency Facility

Present emergency facilities, now inconveniently located on the third floor of Vanderbilt Clinic, are inadequate to meet anticipated needs, which have increased three-fold in recent years.

To provide space for an enlarged, modern Emergency Unit and to relieve overcrowding in Vanderbilt Clinic, a new 5-story, air-conditioned building, with basement, will be constructed over the present ambulance court (see architect's rendering), providing 55,000 sq. ft. of new space.

The first floor of the new building will contain the new Emergency Unit, to which emergency patients can be ad-

mitted quickly for what often may be life-saving treatment. The first floor will also provide space for modern admitting and Clinic administrative offices. The upper floors will permit the relocation of several special clinics to relieve the congestion at Vanderbilt Clinic and provide needed space for the Medical Records Department, now cramped for room.

This project has high priority because its completion is the first step in long-range plans to expand and modernize Vanderbilt Clinic. Construction will start as soon as plans can be completed. Estimated cost: \$5,000,000.

#### The Court Building

This new air-conditioned building will adjoin Presby-

This is an artist's rendering of Vanderbilt Clinic when all construction and rehabilitation work has been completed. The first phase will be a 5-story building, with basement, over the present ambulance court. A 15-story addition will be added to the present Vanderbilt Clinic, extending east to Broadway and north to 168th Street.

terian Hospital and extend into the court between the Hospital and College. It will provide 160,000 sq. ft. of new space and is the first step in long-range plans to expand, modernize and air-condition all Patient-care floors in Presbyterian Hospital. It will permit extension of present Hospital floors.

The Court Building will provide needed space for central diagnostic laboratories, departmental offices, classrooms, visitors' areas and patient-supporting ancillary services. The new space will also permit expansion of operating-room, recovery-room, and X-ray facilities.

This project has top priority; construction will start as soon as plans can be completed. Estimated cost: \$12,000,000.

#### Expansion and Modernization of Vanderbilt Clinic

Vanderbilt Clinic is at the very heart of the Medical Center's community health and teaching programs. Here, 400,000 outpatient visits are made each year, and here, interns, residents, medical and nursing students, supervised closely by the attending staff, work directly with every type of medical problem, following many of their patients through surgery, hospitalization and the aftercare period. Their patients, regardless of ability to pay, receive the finest medical care available.

This great outpatient clinic is now meeting its obligations, but under great handicaps imposed by overcrowding. Much of the complex medical equipment now required is incon-

veniently located. Patient waiting areas are congested, resulting in confusion, noise and discomfort. Modern examining rooms and ancillary services are urgently needed. Air-conditioning, improved elevator services, and toilet facilities are also needed.

A new 15-story addition to the present Clinic building will be constructed. It will extend east to Broadway and north to 168th Street (see architect's rendering), and will provide 210,000 sq. ft. of new space. This will permit expansion of the Clinic's outpatient services, provide needed classrooms, examining and treatment rooms, modern patient-waiting areas, and patient-supporting ancillary services.

As soon as the new addition is completed, the existing building will be reconstructed

Please turn to page two

# Approved Projects to Start When Plans Are Completed

The following projects, previously approved, will be started as soon as plans, now in progress, can be completed.

## The Augustus Long Medical Library

The sketch below shows the building site for the new Augustus Long Medical Library. This complete block, enclosed by Haven Avenue, 168th Street and Fort Washington Avenue, is convenient to all areas of the Medical Center, and will be used for the new library. Surrounding areas are to be attractively landscaped.

The medical library of the College of Physicians and Surgeons is one of the world's largest and finest. Its resources include more than 250,000 bound volumes and all medical and scientific journals from around the world. About 8,000 volumes must be added each year to keep abreast of new medical knowledge.

Present library facilities are grossly inadequate to house, in one location, these vast re-

sources. The new library building will provide adequate space for present needs and future expansion. Here, in an attractive setting designed for comfort and privacy, will be deployed all the modern library services and library research facilities that play such an important part in patient care and in the education and research of those who study and work at the Medical Center.

Plans for this project are now being drawn, and construction will start when they are completed. Estimated cost: \$6,000,000, of which \$2,300,000 has been given or pledged, leaving a balance of \$3,700,000 to be raised.

## New Patient-Care Facilities To Be Provided As Soon As Possible

Early detection of disease and immediate intensive treat-

ment, using modern special-care facilities, often can mean the difference between successful and unsuccessful treatment. Many modern diagnostic tests and special treatment units have been pioneered at Columbia - Presbyterian Medical Center. The following advanced patient-care facilities are to be provided as soon as possible:

**AN ENLARGED CARDIAC CATHETERIZATION FACILITY:** The present Cardiac Catheterization Unit, on the third floor of Presbyterian Hospital, is being reconstructed and enlarged. It will provide the most advanced facilities and techniques for internal exploration of the heart and its vascular system, to detect and evaluate acquired and congenital abnormalities of the heart in both adults and children, many of which can now be successfully treated or corrected by open-heart surgery. Estimated cost: \$1,000,000.

**AN ENLARGED CARDIAC MONITORING UNIT:** The present unit on the 9th floor of Presbyterian Hospital is being relocated on the 8th floor. This will be a new, modern facility, greatly enlarged and equipped with the latest electronic devices for the continuous monitoring of patients suffering acute heart attacks and patients who undergo heart surgery. An increasing number of such patients must be served, and many lives can now be saved when a developing crisis is detected early. Estimated cost: \$500,000.

**CENTRAL DIAGNOSTIC FACILITIES FOR THE DEPARTMENT OF NEUROLOGY:** The 13th Floor of Neurological Institute is being reconstructed to provide, in one

location, advanced facilities for Audiographic testing of hearing; for Electroencephalography, Electromyography, and computerized brain-scanning equipment for diagnosing tumors and other abnormalities of the brain. One central waiting room and receptionist can serve all of these diagnostic facilities. Estimated cost: \$450,000.

**AN ENLARGED CENTRAL STERILE SUPPLY FACILITY** is being constructed in the basement area of Presbyterian Hospital. It will be equipped to allow greater efficiency and economies, and will provide sterile supplies for patient-care areas and operating rooms within the Medical Center. Estimated cost: \$1,700,000.

## A New Facility for the School of Nursing

A pressing health need today is for more graduate nurses and qualified teachers of nursing. That is why the School of Nursing, one of the best, is being urged to expand and modernize its facilities; why the U. S. Public Health Service has pledged a match-

ing grant of \$2,330,000 to encourage such expansion. Through the great generosity of Mr. and Mrs. W. Van Alan Clark, long-time benefactors of the School of Nursing, this grant has now been matched, and construction of a 5-story addition to Maxwell Hall will begin when government funds are received. The new addition will provide enlarged, modern classrooms and needed faculty and administration offices, for the School of Nursing. Cost of the project is estimated at \$4,500,000.

## Reconstruction of Presbyterian Hospital's 4th Floor

When the Dana W. Atchley Pavilion is occupied in December, 1968, space now used for physicians' offices on the 4th floor of Presbyterian Hospital will be reconstructed to provide modern patient-care facilities. The 70 beds expected to be added here will permit floor-by-floor reconstruction of Presbyterian Hospital without disruption or curtailment of hospital services. Cost to renovate this floor is estimated at \$2,000,000, of which \$1,204,000 has been received.

# New Projects

*Continued from page one*

and modernized floor by floor. All areas of the enlarged Clinic will be centrally air-conditioned, and its patients will be provided a comfortable and dignified setting in which to receive medical care. This project is expected to be completed by 1978. Estimated cost: \$30,000,000.

## Reconstruction and Modernization of Wards And Semi-Private Rooms at the Medical Center

Adult semi-private and ward patient areas of Presbyterian Hospital, Neurological Institute, and the Institute of Ophthalmology are to be reconstructed and modernized to provide maximum efficiency and the best possible hospital care. Large wards and semi-private rooms will be converted to private, and semi-private rooms with a maximum of 4 beds. Needed doc-

tors' and nurses' stations, treatment rooms, waiting rooms, fire escapes, toilet facilities, and air-conditioning will be provided.

Cost of this reconstruction and modernization program is estimated at \$35,000,000, and the work will be done floor-by-floor over a period of four to five years without curtailment or disruption of services.

## Service Building Addition

Seven floors are to be added to the Service Building, creating 65,000 sq. ft. of new space. This will provide needed storage space for disposable medical supplies, the use of which continues to increase, and for materials used by the Service and Maintenance Departments. Space will also be provided for the growing Data Processing Department, for the financial and other offices to be moved from Presbyterian Hospital.

Estimated cost: \$4,500,000.

# Major Projects Now In Progress

## *Dana W. Atchley Pavilion To Be Occupied in December*

The impressive high-rise building nearing completion at 165th Street and Fort Washington Avenue, was started in September, 1966, and will be ready for occupancy by December of 1968.

Broadened government and voluntary health insurance programs and the great progress made in preventive medicine, make this new facility one of the most important projects in the Development Program. It will serve, in one efficient and convenient location, those thousands of patients who seek the benefits of modern preventive medicine and good outpatient care from the physician of their choice.

The Board of Trustees have designated this new facility the *Dana W. Atchley Pavilion*, to honor one of our great physicians and teachers. Dr. Dana W. Atchley, Emeritus Professor of Clinical Medicine, College of Physicians and Surgeons, and Consultant in Medicine, Presbyterian Hospital, has given 50 years of faithful service to his patients and profession. His great contributions in clinical medicine, in teaching and research have won him the highest honors bestowed by his profession, bringing prestige and honor to the Medical Center. It is therefore appropriate that this new facility should be named for such a man, because it fulfills a need that has evolved from new concepts in health care—concepts that Dr. Atchley has helped so much to develop.

In addition to providing urgently needed outpatient services, *The Dana W. Atchley Pavilion* will assure the future recruitment and services of outstanding physicians who will provide essential medical services for the community, but who will give a greater share of their time to teach-

ing, research, and the care of clinic and ward patients. In addition, it will permit reconstruction and the addition of 70 beds in areas now occupied by outmoded physicians' offices; and provide space in its underground areas for the giant cooling units needed to complete the air-conditioning of the Medical Center.

To be completed at a cost of \$8,900,000, the new Pavilion has now received \$2,000,000 in gifts and pledges, leaving \$6,900,000 to be raised.

This is an artist's rendering of the addition to the Institute of Ophthalmology, which is expected to be ready for occupancy by the summer of 1969.

## Eye Institute Addition Ready by Summer of 1969

Groundbreaking for the 10-floor addition to the Institute of Ophthalmology began in January, 1967. The addition is now completely enclosed and occupancy is expected during the summer of 1969.

This needed facility will provide, in one location, needed space for the clinical services, clinical research laboratories, and basic research activities of the Department of Ophthalmology. It will permit broadened and intensified research programs in infectious diseases of the eye, biophysics,

physiology of vision, genetics and congenital abnormalities involving all tissue of the eye. It will also provide space for the outpatient eye clinic now located in Vanderbilt Clinic. This enlarged, modern clinic will provide ophthalmological services for many more patients than can now be accommodated.

The new addition will cost an estimated \$5,150,000, of which \$4,500,000 has been given or pledged, leaving a balance of \$650,000 to be raised.

## *Babies Hospital to Expand By 10 Additional Floors*

Final plans for the modernization and expansion of Babies Hospital have been approved by the Board of Trustees, and the architectural rendering below shows how Babies Hospital will appear when construction is completed.

The 4-floor addition, started in 1966, has just gone into service, and is shown below the white line. Ten additional floors, shown above the white line, are to be added to the new wing. This construction is expected to start within the next few months.

The completed floors of the new wing now house the extensive pediatric laboratories and staff offices; the 10 floors to be added will provide new facilities for the care of children in private and semi-private rooms. As this space becomes available, patients will be moved into it and the floors of the older building will then be constructed and modernized to provide the advanced special-care facilities so necessary in modern pediatrics—a greatly enlarged and improved neonatal intensive care nursery; an enlarged and improved X-ray suite; a medical intensive care unit, an adolescent unit, an isolation unit, and other special facilities. Nursing stations and ancillary services will be strategically located, and new classrooms will be provided for the teaching program.

When all work is completed, Babies Hospital will be one of the nation's largest and most complete medical centers for children of all ages. These new facilities will provide better care for more children, needed space for broadened research programs in all areas of pediatrics, and permit the training of more physicians, nurses and medical technicians.

Cost of the Babies Hospital Development Program is now estimated at \$20,300,000, of which \$17,200,000 remains to be raised.

Support of this worthy undertaking will benefit children for generations to come.

*Please turn to page four*

This is an artist's rendering of the Dana W. Atchley Pavilion, which will be formally opened on December 5, 1968.

This artist's rendering shows Babies Hospital when all construction and reconstruction work is completed. Work on the new 10-story addition is expected to start by January, 1969.

# BARD HALL ADDITION IS NOW IN PROGRESS

The architectural rendering below shows the first unit of an extensive addition to Bard Hall, which will provide suitable residential facilities for married medical students, interns, residents, and others who play such important roles in patient care and medical education.

When the Medical Center

was opened, few medical students were married. Today, almost half of the medical students are married; most interns and residents are married and have families and now live in widely separated areas. Adequate housing, conveniently located, is a prime consideration of those choosing a medical school or teach-

ing hospital. Another important consideration is the intellectual and social advantages of living in close contact with their peers and the faculty.

Excavation work for this important project is now in progress. When completed, the new residential facilities will be an important factor in attracting students, interns, residents, and others to the Medical Center.

Cost of the construction of this needed addition is estimated at \$15,000,000. A substantial part of its financing will be provided by the New York State Dormitory Authority.

## Expanded Parking Facilities Ready By January

The main parking facility at 165th Street and Fort Washington Avenue is being enlarged, in accordance with long-range plans, to increase the number of parking spaces from 730 to 1,350. In order to meet future parking requirements, the parking capacity of this area can be increased in stages to accommodate a total of 2,500 cars. New exits to 165th Street and Riverside Drive are being provided to eliminate traffic congestion during peak traffic hours.

The architectural rendering below shows how the enlarged facility will appear when completed at the end of the year. It will provide needed parking space for staff, personnel, patients and visitors who travel to the Medical Center by automobile. Cost of this project is estimated at \$2,600,000.

# Basic Installations For Central Air Conditioning Now in Use

A pumping station has been completed at the edge of the Hudson to bring river water to giant heat-exchange units installed in the lower area of the Dana W. Atchley Pavilion, where it is used to cool fresh water. The cool fresh water is then circulated to air-condition the various buildings of the Medical Center.

This basic installation will provide greater efficiency and economy, and eliminate the need for individual water towers. The Dana W. Atchley Pavilion and the Babies Hospital Addition are now air-conditioned from this central system. By the summer of 1969 many of the present air-conditioned areas will be on this new system; other buildings will be connected to it as construction and reconstruction are completed.

Cost of this installation is estimated at \$3,000,000.

This photo was taken in August, 1968, and shows the Hudson River Pumping Station as it was nearing completion.

This artist's rendering shows the first unit of the three units to be added to Bard Hall. Work on this unit is now in progress.

This is an artist's rendering of the new Parking Facility at 165th Street and Ft. Washington Avenue.

# GIFTS AND PLEDGES FOR DEVELOPMENT NOW TOTAL \$65,935,000

*The Stethoscope* takes deep satisfaction in reporting that gifts and pledges totaling \$6,885,000 have been received by the Columbia-Presbyterian Development Fund, Inc. since its report in September, last year. A total of \$65,935,000 in gifts and pledges has been received since the Development Program was announced in 1960.

Credit for this splendid progress is due General Lucius D. Clay, Chairman of the Program since its inception, to the many dedicated men and women who have labored so diligently to make the Medical Center's financial needs known, and to those individuals, foundations, corporations and government agencies that have given so generously to help the Medical Center enlarge and modernize its facilities.

Major contributors during the past year have been the

Commonwealth Fund, U. S. Public Health Service, Mr. and Mrs. W. Van Alan Clark, the Martha and Joseph Thomas Foundation, and Mrs. Flagler Matthews. More than \$1,900,000 has been received in other gifts.

## New Concepts . . . New Goals To Meet Increased Obligations

When the Medical Center opened its doors in 1928, it was acclaimed as the most modern medical facility of its day and was to become a model for similar undertakings throughout the nation.

The dedicated physicians, nurses and laymen who planned the Center were guided by two basic principles: to provide hospital and teaching facilities of a size to permit maximum efficiency

and economies compatible with the finest possible patient care and medical education, and to make available adequate facilities to encourage medical research.

## Quality Always Has Priority

Those basic principles prevail today and their soundness has been proved over the years. The Hospital's reputation is now international; alumni of the Medical and Nursing Schools are serving on the staffs of leading hospitals, medical schools and research centers across the nation; and the research scientists have placed the Medical Center in the vanguard of an era of medical discovery unprecedented in previous centuries.

Although future plans do

not include a sizeable increase in the Medical Center's bed capacity, shorter hospitalizations and the successful treatment of more and more people as outpatients permits the Medical Center to serve an increasing number of patients. Modern medicine, which is responsible for such progress, continues to call for more people, more sophisticated medical instruments, equipment, and special care facilities, and for vastly more space in which to house them.

The Development Program, announced by the Trustees in 1960, was designed to permit the orderly expansion and modernization of the Medical Center to restore it to maximum efficiency. As shown on these pages, many of the original goals have now been realized or are within reach, but new concepts must be applied, new goals set to meet increasing obligations.

## Your Help Is Still Needed

All who have participated in the Columbia-Presbyterian Development Program can take deep satisfaction in the realization of so many of its goals. Each project completed and those under construction have, and are, being accomplished without disruption of medical and educational services.

Although the Medical Center continues to be one of the nation's largest and most complete medical facilities, emphasis today, as in the past, is on quality rather than size. Its professional staff and personnel are dedicated to serve humanity; the facilities provided for their use must be the finest possible to meet the needs of all who receive medical care at Columbia-Presbyterian Medical Center. With the help of its friends, these facilities are being provided.

# \$43.2 Million Worth Of Progress

**1 • The William Black Medical Research Building**, completed at a cost of \$14,600,000, has been in service since January, 1966. Here, hundreds of scientists are engaged in all areas of medical research.

**2 • Rehabilitation of The College of Physicians and Surgeons**, now almost completed, is providing modern laboratories, classrooms, and faculty facilities. Total cost is estimated at \$2,400,000.

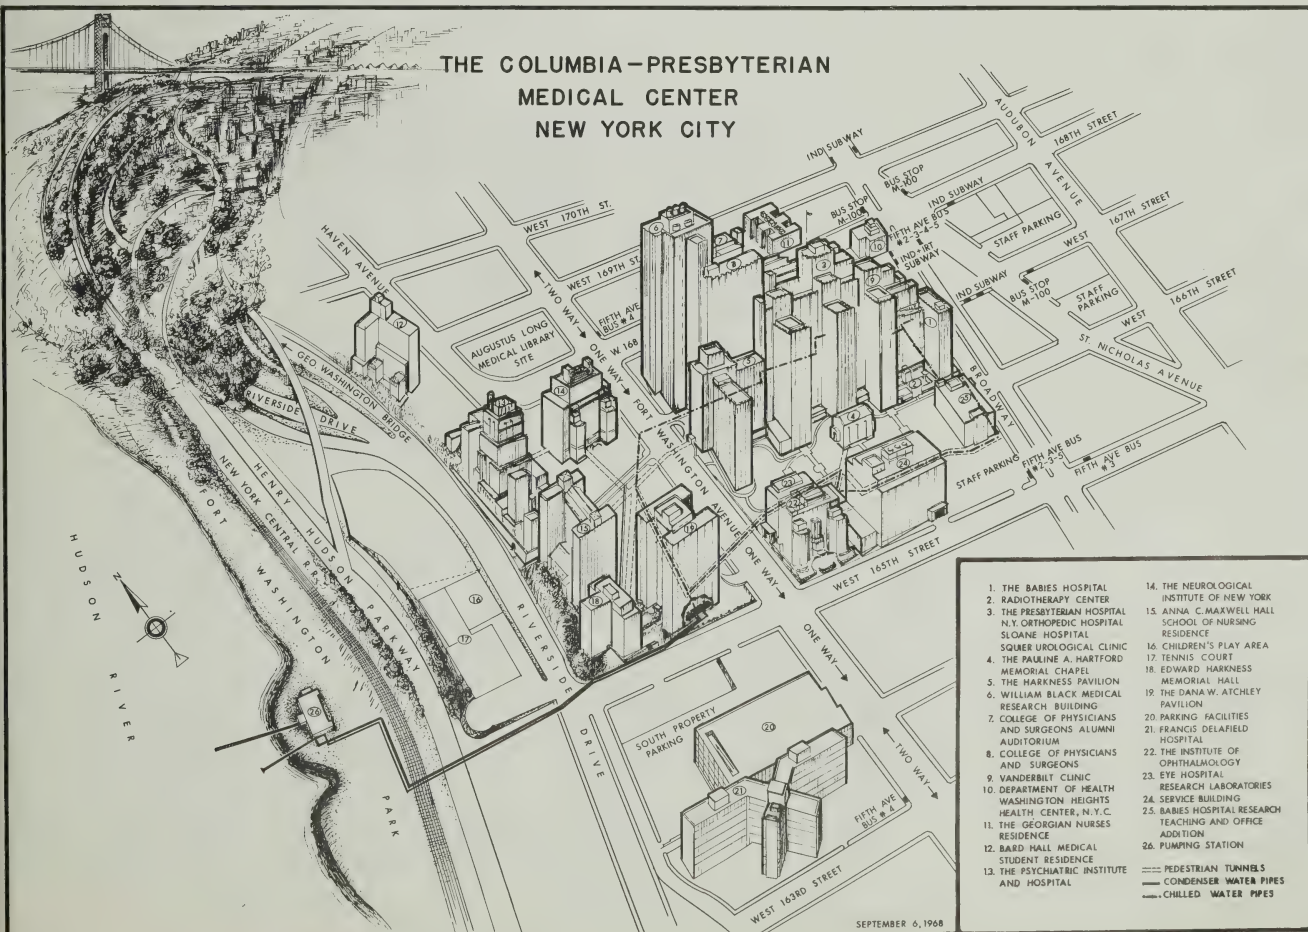

**3 • Radiotherapy Center**, completed at a cost of \$1,500,000, has been in service since June, 1966, and is one of the most advanced facilities of its kind;

it is a major training center for greatly needed radiologists.

**4 • The Alumni Auditorium**, completed at a cost of \$1,100,000, is in regular use for medical meetings, symposia, and student affairs.

**5 • The Service Building**, completed at a cost of \$4,900,000, in 1962, now houses the service and maintenance departments, freeing hospital areas for other uses.

**6 • Endowments Gifts**, totaling \$18,420,000, have now been received, the income from which is being reflected in improved faculty salaries.

# P&S Staff Member Discusses Her Acclaimed Novel

Picking her words with care, Marjorie Kellogg talked of her life, her commitment to art, and of her first, snowballing-best-seller novel, *Tell Me That You Love Me, Junie Moon*, published last month by Farrar, Straus & Giroux. She spoke of F. Scott Fitzgerald and Ernest Hemingway and her discourse sounded deliciously incongruous in a dimly lit utility room of Neuro Eight.

Miss Kellogg, a teaching associate in the Department of Rehabilitation Medicine, P&S, instantly frustrated all attempts by *The Stethoscope* interviewer to link the three major characters of her slender, crisp novel to any patients at Neuro. Taking the viewpoint of an omniscient observer, Miss Kellogg introduces the reader of her book to three handicapped patients, about to be discharged from the hospital. Unwanted by their families, the three decide to stay together. What follows is a touching story of their growth and maturing—a powerful testimonial to the ability of the human will to “make do” under the worst possible circumstances and to survive.

The young men of the three—some are, respectively, a paraplegic and a victim of a progressive neurological disease

of unknown etiology. The girl, Junie Moon, has an ugly facial disfigurement and stumps for fingers.

“It is a disservice to the artist,” Miss Kellogg emphasized, “to deny his creativity and to see his work as a reconstruction or a montage of real-life elements.” Thus, the patients who people her book have sprung forth from her

Marjorie Kellogg

imagination. But Miss Kellogg allowed as how a writer might pick a familiar situation to enable him to achieve greater understanding and compassion.

There is much of that in the novel. There are humor and some spiced bitterness, but mostly the author's approach is tender and compassionate. As a *New York Times* book

reviewer wrote, “It is a tight, engaging and exceptionally nice novel, and if tears come to the reader's eyes, they are a measure of the passion of compassion that it conveys.”

It becomes clear to an observer watching Miss Kellogg formulate her thoughts that she is a writer and that she has the stuff in her to have come up with this warm novel. She talks like a writer, pausing to visibly riffle her mental file for the perfect locution. Her face seems totally committed to express her emotions. Her laughter wells up with a spontaneous, husky resonance, but in another moment her voice turns soft as she talks of the emaciated hippies she saw on Sunset Strip during her recent, eight-week visit to Hollywood.

Miss Kellogg worked hard there, adapting her book to the screen under the tutelage of Otto Preminger, who bought the movie rights to *Junie Moon*. A native Californian, Miss Kellogg spoke with a touch of wistfulness about the decline of Hollywood as the celluloid metropolis of the world. Nine out of every ten American movies are now filmed abroad, and the film studios in Hollywood are now populated with TV crews.

Miss Kellogg and another

writer, less known for his fiction, by the name of Pierre Salinger, started their writing careers at the same time some years ago on the *San Francisco Chronicle*. On her last trip, Miss Kellogg visited San Francisco to see the old neighborhood and to savor the city's sounds again. “I'm a great ear person,” she says of herself, and one knows right away how valuable this talent was in writing the authentic-sounding dialogues in *Junie Moon*.

Miss Kellogg stuck it out on the copy desk of the *Chronicle* for a while, did some publicity writing, then came east to get her M.A. at Smith College. As a writer should, she gravitated to jobs with people contacts—worked at a residential treatment center for emotionally disturbed children, at a community mental health center, and lastly as a social worker at Babies Hospital before transferring to Neuro.

She wrote her book in six months, mostly from 5 to 8 a.m. Her advice to would-be novelists at the Medical Center emphasizes the need for a regular schedule: “Writing is like tennis—if you don't play, you get rusty.” And once a regular schedule is established, “don't get up from your chair.” Miss Kellogg also emphasizes the importance of learning the

form and the technique of a particular writing medium. “Stick with one form—play writing, for example—until you are at home in it. Once you have learned the form, the rest depends on how much artistic drive and what kind of personal interpretation you have.” Miss Kellogg has tested this formula in several media. She wrote plays for the NBC Matinee Theater and for Off-Broadway. Her play “The Oldest Trick in the World” was produced by the old Henry Street Playhouse. But these modest successes are now dwarfed by her first novel, already in its fifth printing and on the road to many more, what with sales of publishing rights to book clubs (Literary Guild), paperback publishers (Popular Library), and publishers in seven foreign countries.

To staff members of the Medical Center, the book is available in the Medical Center Book Store on the first floor of the Black Building at a cost of \$4.95.

## P. I. Nurse in Exhibit

Mrs. Antoinette Schwob will present her first one-man art show at the Far Gallery, 746 Madison Avenue, from November 11 to 23. Mrs. Schwob has been a nurse at the Psychiatric Institute for over thirty years and during that time has developed her painting as an avocation, becoming well known as a “modern primitive.”

## Two Scientists Awarded The Horwitz Prize; Also Selected To Receive The Nobel Prize

Dr. Har Gobind Khorana and Dr. Marshall Warren Nirenberg are the recipients of the 1968 Louisa Gross Horwitz Prize for outstanding research in biochemistry. They share the Prize's \$25,000 award for work in which they have “brilliantly and successfully elucidated the detailed nature of the genetic code.” The award committee recommended in January 1968 that the prize, given by Columbia University, be awarded jointly to the two scientists. It was presented formally at a dinner on October 17 in Low Memorial Library on the University's Morningside Heights campus by Dr. Andrew W. Cordier, acting president of the University.

Columbia University's early decision to honor the two scientists received emphatic concurrence from the Nobel Prize awards committee with the announcement on October 16 that Drs. Khorana and Nirenberg, along with Dr. Robert W. Holley, who did his research at Cornell University, had been selected to receive the 1968 Nobel Prize in Medicine and Physiology for their work in genetics.

The Louisa Gross Horwitz Prize was established under the will of the late S. Gross Horwitz through a bequest to Columbia University, and is named to honor the donor's mother, Louisa Gross Horwitz was the daughter of Dr. Samuel David Gross (1805-1889), a prominent surgeon of Philadelphia, who pioneered in the development of methods for suturing nerves and tendons. He was the author of an outstanding work, “Systems of Surgery,” of the nineteenth

century, and served as President of the American Medical Association.

The prize honors scientific investigators whose contribution to knowledge in biology or biochemistry is deemed worthy of special recognition. The first prize was awarded in 1967 to Professor Luis F. Leloir, the Argentine biochemist.

Dr. Nirenberg, a biochemist with the National Institutes of Health, and Professor Khorana, of the University of Wisconsin, worked independently on the problems of the genetic code. Their efforts are credited with increasing existing knowledge of how genes function and with providing directions for future research on the molecular nature of embryonic development, the important diseases that are genetically determined, and the mechanisms that underlie the malignant transformation of cells.

Dr. Nirenberg demonstrated

Dr. Khorana (left) and Dr. Nirenberg join exclusive mutual admiration society after receiving the Louisa Gross Horwitz Prize from Columbia University.

with a cell-free system from *E. coli* bacteria that a synthetic polynucleotide containing a single type of base, uracil, directed the synthesis of a protein containing a single type of amino acid, phenylalanine. This experiment, together with others in Dr. Nirenberg's laboratory and elsewhere, established that a sequence of three specific nucleotides is required to code for each amino acid in the protein molecule. Dr. Nirenberg, 41, received the Ph.D. in biological chemistry from the University of Michigan in 1957 and holds honorary

degrees from the University of Michigan, Yale University and the University of Chicago.

Dr. Khorana, trained as an organic chemist and presently the Conrad Elvehjem Professor of Life Sciences at the University of Wisconsin, synthesized all sixty-four of the possible trinucleotides and confirmed that the genetic code is read in a linear and consecutive manner and that it is a non-overlapping triplet code. A native of India, Dr. Khorana studied at Punjab University and received the Ph.D. from the University of Liverpool, England, in 1948.

## In Memoriam

Dr. Ralph H. Boots

Dr. Ralph Henderson Boots, former Associate Clinical Professor of Medicine at P&S, died on October 21 in his Manhattan home, four months after his retirement from practice on June 21. The 77-year-old physician also served as a member of the Attending Staff of Presbyterian Hospital from 1928 to 1956 and, subsequently, as a consultant to the Medical Service.

A founder of the Faulkner Arthritis Clinic here and of the Arthritis Foundation, he was respected as an expert on arthritis and rheumatism. His interest in these diseases began with his research at the Rockefeller Foundation in 1919, four years after he received his M.D. from the University of Pittsburgh. During a lifetime of persistent clinical investigation, he received national recognition and awards for his contributions to the study of rheumatic diseases. Dr. Boots is survived by his widow, a son and a daughter, and by two brothers.

## Orthopaedic Surgeons Course Draws Record High Attendance

Slowing traffic on 168th Street, long, thin lines of young men and women in motley civilian garb shuttled between the Alumni Auditorium and the State Armory. Among them were nurses with notebooks, emergency squads in mufti, Civil Defense personnel minus their hard hats, and firemen and policemen disguised as students.

For three days, from October 10 to 12, these marchers indeed were students, registered in the third annual practical course on emergency care and transportation of the sick and injured, sponsored by the American Academy of Orthopaedic Surgeons and hosted by the Columbia-Presbyterian Medical Center. This year's enrollment was a new high—450 attended the course as compared with 350 last year. Relatively few students came

from New York City or from the Medical Center; the vast majority was from neighboring states, upstate New York, as well as from Canada. Divided into classes of 28 students each, they repeatedly crossed 168th Street and Fort Washington Avenue from the classes on theory in the Alumni Auditorium to the demonstration and practice sites in the Armory and the Bard Hall pool.

The faculty and advisors to the course included Drs. David Andrews, course director; William Amols, Frederick Bowman, Leonard Brand, Joseph Buda, Raymond Cole, Harold Dick, Alexander Garcia, Olaf Haroldson, Frederick Hoffmann, William Lovejoy, George Merriam, Charles Neer, Robert Reiss, Charles Steer, Frank Stinchfield, and Luther Strayer.

Members of the New York Police Department demonstrate proper retrieval of an "accident victim" in Bard Hall pool.

## Weinberg Aid Plan Helps 33 Employees To Better Careers

The Sidney J. Weinberg Employees Educational Aid Reimbursement Plan will give tuition assistance to 33 employees studying this fall, according to figures released by the Personnel Department. One half of the 22 degree candidates in this group is studying toward the A.A.S. degree; seven employees are candidates for the Bachelor's degree and four are earning their Master's degrees.

The 33 candidates and their departments are as follows:

Joseph Adderley, Luis Figueroa, Kevin Crowley, Maintenance & Construction; Maureen Budetti, Rupert Mandrew, Dorothy Rock, Nursing; Harvey Chapman, Bettye Watson, Personnel Office; Michael Checinski, Optical Shop; Richard Collias, Frank Regan, Accounting & Collection; Ellen Connolly, Chemistry Laboratory; Luisa de la Campa, E.E.G.; James Duffy, Vanderbilt Clinic; Joyce Egan, Mabel Moussouris, Food Service; Alice Freeman, Georgia Nesbit, Margaret Rosenkranz, Diane Senefelder, Joan Pitzenmaier, Physical Therapy; Adele Gordon, Anesthesiology;

Ernestine Gore, Radiotherapy; Frances Johnson, Medical Data Processing; Charles Kordula, Clinical Pathology; Reeva Kravet, Pauline MacDonald, Operating Rooms; Clayton Leander, Receiving Department; Kenneth Loforte, Out-Patient Billing; Joan Palmer, Cardiology; Wanda Toliver, Doctors' Billing Dept.; Vincent Vicidomini, Pharmacy; Rose Wagschal, Pediatric Psychiatry.

The Weinberg Aid Plan pays one half of the employee's tuition fee for one to six academic credits a semester. A student must have been working at the Presbyterian Hospital for at least six months to qualify for aid under this plan, and the subjects must be related to the employee's work or to career development with future job possibilities at the hospital. Miss Oring of the Personnel Department stated that employees who qualify for aid receive it upon their satisfactory completion of the course that semester. Eligible employees who qualify for study under the Weinberg plan are invited to apply for financial aid for the spring semester. Applications must be made through Miss Oring no later than January 31, 1969 to be considered for that period of study.

## Dr. Curnen Weds

Dr. Mary Godenne McCrea, Research Associate in Medicine at Yale University School of Medicine, was married on October 12 to Dr. Edward C. Curnen, Jr., Carpenter Professor of Pediatrics, College of Physicians and Surgeons of Columbia University and Director of Pediatric Service, Babies Hospital, Columbia-Presbyterian Medical Center. The small private wedding with only the immediate families in attendance took place in Saint Thomas More Chapel at Yale University, New Haven, Connecticut.

The bride's sister, Dr. Ghislaine D. Godenne was the maid of honor, and her daughter, Claire McCrea, was flower girl. Edward C. Curnen III, the groom's son, was his best man. A reception was held at the New Haven Lawn Club.

The bride is the daughter of Dr. Pierre Godenne, of Brussels, Belgium, deceased, and Olive Dudley Short Godenne of England—who went to Belgium as a V.A.D. nurse during World War I and since then has lived in Brussels. Dr. Curnen's parents, deceased, were Edward C. Curnen and Florence Mayer Curnen of New York.

Both the bride and the groom were previously married, death claiming the spouse of each over a year ago. Dr. Mary Godenne Curnen's former husband was Dr. John F. McCrea, a native of Australia, who was Associate Professor in the Department of Microbiology, Yale University. There are four McCrea children—Andrew Falding, Pierre Dudley, Claire Isabelle and John Patrick, all of junior high or elementary school age.

Dr. Mary Godenne Curnen was graduated from medical school in Louvain, Belgium, and had pediatric training in Louvain and at New York University Bellevue Medical Center. She first came to this country in 1949 and worked with Dr. Edward C. Curnen, Jr. in research on poliomyelitis and the then recently discovered Cocksackie viruses. She is now engaged in research on pulmonary disease.

Dr. Edward C. Curnen, Jr. was graduated from Yale University and Harvard Medical School, and following his training at Boston Children's Hospital served on the staff of The Rockefeller Institute for Medical Research. He was subsequently on the faculty of the Yale University School of Medicine and later the University of North Carolina School of Medicine as Professor of Pediatrics and Chief of Pediatric Service.

The Drs. Curnen and family will maintain residences in New York City and in Bethany, Connecticut.

## DR. MASLAND HONORED

### Awarded Citation

Dr. Richard L. Masland, professor and chairman of the Department of Neurology at P&S, has been honored with a national citation from the Easter Seal Society for Crippled Children and Adults. Dr. Masland also heads the Neurological Service at the

Signed, sealed, and delivered: Dr. Masland (left) receives citation.

Neurological Institute, Presbyterian Hospital. Charles McAllister, president of the Society's New York State chapter, made the presentation to Dr. Masland for "nine years of devoted service" as a trustee of the national Easter Seal Research Foundation. Dr. Masland served on the board of the Foundation from January 1959 through 1967. As chairman of the committee on research to be supported by the Foundation, Dr. Masland helped clarify and sharpen the Foundation's role in supporting studies on how to relate basic and clinical research to service problems of the Easter Seal Society affiliates.

Prior to joining the Department of Neurology here last June, Dr. Masland was director of the National Institute of Neurological Diseases and Blindness in Washington, D.C.

### Named To Panel

Two staff members of the Columbia-Presbyterian Medical Center and an education specialist of the Columbia Teachers College are members of a national committee on dyslexia and other reading disorders, according to Secretary of Health, Education, and Welfare, Wilbur J. Cohen, under whose auspices the committee was formed.

The members from Columbia on the Committee are Dr. Richard L. Masland, Professor of Neurology, P&S; Mrs. Katrina A. de Hirsch, Sc.D., Director of the Pediatric Language Disorder Clinic at the Columbia-Presbyterian Medical Center; and N. Dale Bryant, Ph.D., Professor of Psychology and Education, Columbia Teachers College.

They will join 15 other medical specialists, psychologists and educators in making a comprehensive study of dyslexia—a disturbance of the learning ability to read.

The problem of failure to learn to read is one of increasing concern in our industrialized and complex society. The factors responsible for reading failure are many and varied. They include emotional or intellectual disorders, inadequate socio-environmental opportunity, lack of motivation, and inappropriate or inadequate instruction. It is of particular interest that among those who fail to learn to read are many with normal or superior intelligence. With special techniques of instruction many who are now failing could overcome this handicap.

The panel, officially known as the National Advisory Committee on Dyslexia and Related Reading Disorders, will study the current state of research, diagnosis, teacher preparation and corrective education. The Committee's report, expected in 1969, will recommend priorities for a continuing national program.

## GUESTS ENTERTAINED AT FACULTY DINNER

Mrs. Edna Husband, a Floor Control at the Babies Hospital, sings at the annual dinner given on October 24 by the Faculty of the Department of Pediatrics, P&S, for Babies Hospital staff members.

## • ENGAGEMENTS

Theresa Mahoney, Staff Nurse on Neuro 3 East, and daughter of Honora Mahoney, Secretary to Dr. Wise, will become the bride of Joseph Fennick of the New York City Police Department on November 23.

Patricia Peabody and James Davies plan to be married next month. Miss Peabody is a 1962 graduate of the School of Nursing and is now residing in San Francisco.

Sara Craig, second year student at the School of Nursing, is engaged to Percy Ballantine II, a student at the University of Cincinnati Medical School.

## • CONGRATULATIONS TO

William McKenney, of the Engineering Department, who was the lucky winner of \$700.00 in the New York State Lottery.

The following members of the Housekeeping Department who have recently received promotions: Mary Jackson, formerly Central Food Service Attendant, now Diet Aide; Amelia Jackson, formerly Main Dining Room Attendant, now Dining Room Supervisor; and Jose Ramirez, formerly Central Food Service Attendant, now Assistant Belt Supervisor.

## These People Are Retiring From Our Medical Center

### Madeleine E. Walsh

To those who belong to the 25-Year-Club, retirement parties have a special meaning. Memories go back to the early years, even to the days when the Presbyterian Hospital was at East 70th Street. When Miss Madeleine E. Walsh retired on October 7 the patients at the Presbyterian Hospital lost a nurse who for forty-two years was most sensitive to their needs during illness. Every patient was her concern and she had a way of understanding how they felt and what to do about it. She either helped them herself or saw to it that their doctors or someone qualified to help were informed. She did not go off duty until they were promised the help needed.

During the depression years, when she worked in the Vanderbilt Clinic, she was particularly alert to those patients who needed food more than they needed a doctor. Many patients were given food from the hospital larder and car fare home from her own pocket.

At one period Miss Walsh made figurines. She modeled the Presbyterian nurse. The figure stood at attention with her hands behind her back. This was the familiar position of all nurses during the time that Miss Helen Young, her friend and leader, was the Director of Nurses. Miss Young always said that this was respectful and the nurse would pay more attention to the person speaking if she didn't worry about what to do with her hands. Miss Walsh's figurines portrayed this attitude and became very popular. They were sold in the Alumnae Shop

and the proceeds were given to a scholarship fund for student nurses in memory of Miss Walsh's brother, Richard William Walsh. At her retirement party on October 3, many of her friends came to wish her happy years ahead and they expressed a hope that she would find time to do more of her sculpture work.

Those who knew Miss Walsh in the earlier years will have their own recollections of her friendly and outgoing nature. Those who came to know her more recently working at Presbyterian, will miss her wise counsel. The student nurses working in the clinical area of the Eye Institute will miss her interest in their learning to give good care to the patient.

### Janet Dewar Schubert

Miss Janet Dewar Schubert retired on September 30, 1968, after more than thirty years on the staff of the Babies Hospital Social Service Department. A tea was held in her honor on that date, attended by her many friends at the Hospital, as well as many former staff members of Social Service.

During her time here, Miss Schubert worked on every inpatient floor of Babies Hospital and in every out-patient clinic on the Pediatric Service. In most recent years, she had been assigned to Hematology and Tumor Clinics, where she devoted herself to the social and emotional problems of many seriously ill youngsters. Her warmth toward patients and her sincere interest in them, as well as her untiring efforts in their behalf, will be greatly missed. She has made an outstanding contribution to

## DOINGS OF DOCTORS

DR. DANIEL C. BAKER, JR., Professor and Chairman, Department of Otolaryngology, presented a paper, *Headache: Conservative Surgery of the Larynx*, at the Georgia Ophthalmological and Otolaryngological Society, which met in Sea Island, Georgia, on September 5 and 6.

DR. CLEMENT CLAY, Director of the Graduate Program in Hospital Administration, Columbia University, was recently re-elected to the Council of Regents of the American College of Hospital Administrators. The ACHA is a Chicago-based professional society comprising 7,000 health care leaders in the United States and Canada.

Dr. Daniel Baker

Dr. Clement Clay

DR. BERNARD WEINSTEIN, Associate Professor of Medicine at P&S and a member of the Institute of Cancer Research, presented a paper entitled *"Pharmacology and Molecular Biology of Chemotherapy"* at a Plenary Session of the Sixth National Cancer Conference held in Denver, Colorado, from September 18 to 20. This Conference was co-sponsored by the American Cancer Society and the National Cancer Institute of the United States Public Health Service.

DR. PHILIP FEIGELSON, Associate Professor of Biochemistry, P&S and a member of the Institute of Cancer Research, attended the *"Symposium on Regulation of Enzyme Activity and Synthesis in Normal and Neoplastic Tissues"* at the Indiana University School of Medicine in Indianapolis, Indiana, on September 30 and October 1. Dr. Feigelson presented a paper entitled *"Studies on the Allosteric Regulation of Tryptophan Oxygenase Structure and Function."*

patient care in Babies Hospital.

Miss Schubert, a Barnard College graduate, received her training in social work at the Columbia University School of Social Work. She has secured a full-time job at Windham Children's Services. This is a private child-care agency for foster care. She is looking forward to this with enthusiasm and she has the good wishes of all of us here in her endeavors.

### Howard Brandon

Mr. Howard Brandon of the Food Service in Neurological Institute is retiring after twenty years of service to the hospital.

Mr. Brandon is a native of Catskill, New York, but has been all around the United States and finally arrived in

DR. JOHN W. ESPY, Assistant Ophthalmologist, spoke on *"Problems Occurring from Contact Lenses"* and *"Use of Scleral Lenses,"* and participated in a panel discussion on *"Fitting Techniques"* at the Fourth Contact Lens Seminar held at Ohio State University in Columbus, Ohio, from September 26 through 28.

DR. ZACHARIAS DISCHE, Professor Emeritus of Biochemistry and Special Lecturer in Biochemistry, and DR. GERTRUD CREMER of the University of Bonn, participated at the Fifth International Congress on Photobiology at Dartmouth College, held August 26 to 31, where they gave a paper entitled *Influence of Daylight in vitro Metabolism of Bovine Eye-tissues in Presence of Pteridines*. The work for this paper was carried out in Dr. Dische's laboratory at the Corneal Center of the Eye Institute during the summer of 1967.

DR. GEORGE H. HUMPHREYS, II, Director of Surgical Service, presented a paper on *"Surgical Education of Residents in the Future"* to the Alumni Association of the Interns of the Methodist Hospital of Brooklyn, New York, on September 26.

Dr. Zacharias Dische

Dr. George Humphreys

DR. VINCENT J. FREDA, Assistant Attending Obstetrician and Gynecologist, lectured on *"The Use of RhoGAM by Obstetricians"* in two symposia on The Prevention of Rh Hemolytic Disease sponsored by Ortho Diagnostics of Raritan, New Jersey. The first lecture was held on July 13 at Tulane University Medical School, New Orleans, Louisiana, and the second on September 11 at Somerset Hospital, Somerville, New Jersey.

New York City in 1927. He came to work at Presbyterian on July 14, 1948.

Mr. Brandon stated, "I enjoyed my work and shared several friendships with my fellow employees and I only wish I did not have to retire. My wife and I thought the party the Food Service gave me was very nice and we are both grateful." Mr. Brandon further stated, "I only wish I could come back to work part-time and I thank you all so much."

Mr. Brandon has no special plans following retirement but he enjoys hunting small game and will probably pursue this hobby more frequently than he has in the past.

### Mrs. Lillian Holbrook

Mrs. Lillian Holbrook retired on September 24, hav-

ing completed eighteen years of employment at Presbyterian Hospital. She worked as a nursing aide and has served in the Babies Hospital Recovery Room and in the Premature Nursery. Mrs. Holbrook is a native of Cork, Ireland, but has been living in New York City since she came to this country. She has two daughters, both married, one living in Chicago, the other in New Jersey. Between them they have 5 children.

Mrs. Holbrook has no specific plans for her retirement years except to "catch up with her knitting" and she expects to keep busy rotating visits to her two daughters and spending time with her 5 grandchildren, 3 boys and 2 girls. She is also active as a member of the Altar-Rosary Society of the Church of St. Rose of Lima here in Washington Heights.

# *The Stethoscope*

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXIII, NUMBER 12

DECEMBER, 1968

# *Merry Christmas*

BALCON STACKS  
COLUMBIA UNIVER.

DEC 8 - 1968

MEMORIAL LIBRARY

This aerial view of Columbia-Presbyterian Medical Center was taken from a helicopter, at about 1,200 feet, late in September, 1968. The photographer was Eugene T. Cleary, Administrative Assistant and Director of Projects. The George Washington Bridge that spans the Hudson River in the background is one mile wide from shore to shore. Given this perspective, one can better visualize the size of the Medical Center today.

*Babies Hospital was the first hospital in America devoted exclusively to the care of infants. Today, it is a complete pediatric medical center, meeting the medical needs of children of all ages. Here, as in other units of Columbia-Presbyterian Medical Center, emphasis is placed on providing the best possible patient care, medical teaching, and medical research. Patients who come to Babies Hospital are from all walks of life and, like the child described below, may be suffering from rare disorders about which little is known. When such a patient is admitted, the resources of Babies Hospital and the entire Medical Center are mustered to make the diagnosis and evolve a plan of treatment. What is learned at Babies Hospital is made available to physicians everywhere.*

## A Story of Christmas Today—

### Robby Wilson Is Going Home To Auckland, New Zealand

It's three weeks before Christmas and little Robby Wilson is about to leave Babies Hospital for a trip to New Zealand. But this will be no ordinary trip. As medical teams are on standby alert in Los Angeles, Honolulu and Auckland, a relay of specially outfitted jet planes will carry a doctor, a nurse, their tiny patient Robby and the Christmas presents he is receiving from the Hospital. One of the presents is a mechanical res-

piratory center in the brain stem that react to warnings about excessively high carbon dioxide levels in the blood are damaged or missing. Since too much carbon dioxide makes the blood acid, the resulting acidosis can end in coma and death.

Little Robby turned bluish gray soon after he was born at the New Rochelle Hospital on October 9, 1967, but this sign could mean one of a great number of conditions. Nurses also noticed that he could not coordinate swallowing with breathing. The pediatrician who saw the little boy realized that a correct diagnosis and treatment were possible only with the help of the most sophisticated diagnostic equipment of the type used in the Microchemistry Diagnostic Laboratory of Babies Hospital. In fact this blood testing equipment is so ultra-modern that a new term, "ultramicrochemistry," was coined to describe its work. One of its important practical improvements is that multiple blood tests now require only about one one-hundredth of the amount of blood which used to be needed in the older analyzers. Since blood samples for serial tests must often be taken many times a day, the diagnosis and treatment of infants were difficult or impossible with the older equipment, for to do so would seriously deplete the patient of blood. The new equipment makes do with a few drops of blood extracted from a pinprick. To date, for example, Robby has had 500 such tests without ill effect. He frequently needs a couple of samples a day to enable doctors to keep track of his carbon dioxide level.

But when Robby was first admitted to Babies Hospital at the age of 12 days, he was several hundred blood tests away from a final diagnosis. The question was directed at finding the exact cause of his respiratory difficulties. Extensive testing of Robby's vital organs by x-ray, electrocardiograph, electroencephalograph and electromyograph showed none of the common afflictions to be present. A test for myasthenia gravis—a serious neuromuscular disease—was negative. In trying to discover the cause for Robby's bluish-gray condition, the doctors investigated the possibility of a convulsive disorder, but no indications for such a disorder were found after thorough blood and other tests. Likewise, tests of Robby's upper digestive tract did not explain why he kept mixing up his breathing with his swallowing. Dr. Robert W. Winters, Professor of Pediatrics and Attending Pediatrician, deduced that the defect which Robby showed must lie in the control mechanisms for respiration in the brain. A series of tests of

conditions of sleep and wakefulness clinched the diagnosis of Ondine's Curse.

The stubbornly high level of blood carbon dioxide and the constant attempts by his heart to compensate for it by working harder led to its enlargement and even a temporary heart failure. Because of his interest in cardio-respiratory problems, Dr. Robert B. Melins, Assistant Attending Pediatrician, teamed up with Dr. Winters in assuming the overall responsibility for the management and care of Robby.

step after finding evidence of aspirated milk droplets in the boy's lungs.

Further attempts to get at the root of Robby's heart problem took him to the Cardiovascular Laboratory at the Medical Center. Complete pressure and blood gas studies showed very high blood pressure in the lungs when Robby was breathing room air, but a marked decrease in the pressure when oxygen was substituted. But the central problem of reducing the carbon dioxide level still remained. There was a possi-

Hello, I'm Robby Wilson.

pirator, modified to fit Robby's small body. The device admittedly does not have much eye appeal for a 13-month-old boy, but Robby cannot live without it at nap time and nights. For the tiny son of the Manager of the Tours Division of the New Zealand Consulate General in New York City suffers from the "Curse of Ondine," one of the rarest conditions known to medicine. In fact Robby is the

world's first patient in whom this condition has been found to exist at birth. The painstaking diagnostic work and the steps taken to help Robby live with this affliction have made this boy one of the most remarkable and challenging patients ever to be admitted to Babies Hospital. What was done for this child well illustrates the Hospital's pioneering role in medical research and demonstrates the willingness of our physicians, nurses and technicians totally to commit themselves to helping their little patients, regardless of their nationality, background or financial status. Robby Wilson is in no sense a charity case, but contributions from Friends of the Hospital have helped in meeting the staggering costs of complex medical care which he required. Robby needs constant attention because his body does not know when to breathe faster to clear the blood of carbon dioxide, one of the body's principal waste materials. This essentially is the nature of Ondine's Curse. The name is derived from a German legend, according to which a water nymph named Ondine punished her unfaithful husband by robbing him of the automatic function of breathing. He had to constantly remind himself to breathe. When he finally fell asleep, he died. In Ondine's syndrome, the cells of the re-

Two of Robby's best friends, Dr. Robert W. Winters (left) and Dr. Robert B. Melins.

Robby was placed in a respirator, treated with digitalis and diuretics, and improved dramatically. During his stay at Babies Hospital, he also developed a perforated stomach ulcer, a complication that often accompanies blood acidity and stress. Robby suffered a massive hemorrhage and needed transfusions. The lesion was successfully patched by Dr. John Schullinger. In still another surgical procedure, a small opening was made in Robby's stomach wall to feed him until he learns to better regulate his breathing at meal times. The doctors took this

ability that some treatable lung disease might be responsible for it. A biopsy was undertaken, but Robby's lung tissue proved to be free of any such disease.

It is impossible to list everyone who helped with this young patient, for to do so would involve virtually every service, department and laboratory in the Medical Center. But special credit goes to the indefatigable nurses of the intensive care unit who in critical situations watched every breath Robby took around the clock. The thoroughness and persistence shown by staff physicians

Will it be cold? Robby seems to ask upon being shown the pacemaker transmitter.

# S TO THE HOSPITAL HELP MAKE POSSIBLE

in solving the mystery of the little boy's breathing trouble are typical not only of Babies Hospital but of the Columbia-Presbyterian Medical Center as a whole. Having accepted responsibility for a patient, the Medical Center's staff will stay with his medical problems, regardless of the expense involved. For this reason the Medical Center, in order to continue to serve, must count on the financial support of people sympathetic to its goals and philosophy of healing care. After concluding that Robby

of their free moments at his bedside.

will have to be assisted in breathing while he rests, the Babies Hospital team attempted to provide an alternative to his daily sojourn in the respirator. They reasoned that they could make Robby breathe if they could electronically stimulate the nerves leading to his diaphragm. This was no idle dream, since Dr. Gerard Turino of the Department of Medicine had performed extensive experimental studies of this type in animals. With Dr. Turino's help, small radio coils, especially designed by Dr. Lawrence Eisenberg of Rockefeller University, were implanted under the skin. The electrodes for these receiving coils were attached to the nerves controlling the diaphragm. The coils can translate radio signals from a pace-making hand transmitter into electrical impulses and these impulses travel down the nerves, make the diaphragm contract, and cause the lungs to expand.

Outfitted in this fashion and built up with lots of food and Tender Loving Care, Robby is ready to journey to Auckland Hospital where he will continue with his well-regulated

## Ultramodern Intensive Care Unit at Babies Hospital For Acutely Ill

The importance of The Medical Intensive Care Unit, located on the 8th Floor of Babies Hospital, has been underscored by the development of new techniques in the care of the acutely ill infant or child. An increasing number of severely ill infants with congenital heart disease for example, are being admitted to the unit, where cardiac monitors, cardiac pacemakers, respirators and other new electronic devices are available to stabilize these infants before open-heart surgery is undertaken. Children of all ages who suffer from severe medical problems are sent to this unit, where the acute phase of a disease is handled.

The Surgical Intensive Care Unit on Babies 9 is a part of the McAlister Suite, estab-

lished as a memorial to Mr. William McAlister and his daughter Amelie McAlister Upshur. Infants and children whose post-operative care requires close supervision and sophisticated medical care are admitted to this unit.

Children are sent to these two units solely for an urgent medical or surgical reason, without regard of the family's ability to pay. As a consequence, unpaid bills for these services accrue in some cases. Part of these expenses is defrayed by contributions from the Emergency Nursing Fund, which is supported mainly by the Board of Women Managers of Babies Hospital. Contributions from Friends of the Hospital are needed, however, to maintain these units in operation for the benefit of criti-

cally ill children.

The third part of the Hospital's intensive-care trio is the Neonatal Intensive Care Unit on the second floor. It gets most of its patients from the Sloane Hospital for Women. The Neonatal Unit is also the only department at the Columbia-Presbyterian Medical Center that will take in patients without admitting procedures in Vanderbilt Clinic or other parts of Presbyterian Hospital. This is so because the clinic is part of New York City's emergency program for handling prematurely born babies. These miniature patients are brought in by the Premature Transport Service after referral from a central dis-

patching desk. At times, therefore, things are apt to get a bit cramped until the expansion and modernization of Babies Hospital have been completed. These improvements hinge upon the completion of ten additional floors above the present Addition to Babies Hospital. When space is available in the wing extension, the Neonatal Intensive Care Unit will be expanded to include much of the second floor. Funds contributed to this part of the Hospital's expansion program will have an immediate positive effect on the Unit's round-the-clock efforts to ward off mental and physical defects in newborn preemies.

## New Blood Tests For Infants

Before the Microchemistry Diagnostic Laboratory began operations, the correct diagnosis and treatment of Robert Wilson's affliction would have been a hit-or-miss affair. A number of other chemical derangements of infants could not be pinpointed without the sensitive new analyzers in the Microchemistry Diagnostic Laboratory. The main difference, of course, is the ability of the new microanalyzers to make accurate determinations of blood chemistry from a few drops of blood. The volume of blood required for serial testing in the older analyzers was prohibitive for infants. Thanks to support by the National In-

stitutes of Health and now by Friends of the Hospital, the laboratory is helping every day to rehabilitate infants with serious congenital or acquired disorders. Its work is a good example of how donations from individuals actually prevent human misery. Last year the laboratory's technicians completed 80,000 blood tests (see *The Stethoscope*, September 1967). The next step on the laboratory's agenda will be to program a late-model computer for double-checking test results, for prompt reporting of results to the physicians, and for filing the results in its memory banks.

*Your Gift to the Hospital may be used for general purposes, or, if you prefer, you may mark it for the use of one hospital or for an individual project in the Medical Center's Development Program.*

*Funds may also be marked for the Emergency Nursing Funds at Babies Hospital and The Neurological Institute. Such funds provide nursing care for acutely-ill patients who may not be able to pay for such needed services.*

*Those projects in most urgent need of funds at present are Babies Hospital and the new Emergency Facilities at Vanderbilt Clinic.*

*On behalf of the patients who will benefit from your gift—thank you.*

existence.

A recent development has encouraged doctors about Robby's future. About three weeks ago, a repeat cardiac catheterization was carried out by Dr. Welton Gersony of the Cardiovascular Laboratory. The new test established that Robby's heart pressure had returned to normal as the balance of blood gases had returned to normal during the long period of aided respiration. But when he fell asleep, he became dusky and his blood pressure rose to abnormal levels, reinforcing the need for respiratory care. In the words of Dr. Mellins, "as Robby grows older and needs

Robby does not protest as tiny blood sample is taken by Microchemistry Lab technician.

fewer naps, he may require respirator care only at night."

*To Our Staff and Personnel:*

*To each of you, I extend my wish for a Merry Christmas and a Happy New Year.*

*Throughout the year we are aware that each one of us has a part in the cooperative effort to advance the work of our Hospital, and so, at this season, it is fitting that we express our concern for others.*

*Thank you all—most sincerely.*

*A. J. Binkert*  
Executive Vice President

## Detection of Birth Defects

Pediatric radiology was born at Babies Hospital. This simple declarative sentence attests to the long, distinguished record of this discipline at the Columbia-Presbyterian Medical Center. The greatest catalyst of pediatric radiology 40 years ago proved to be the financial gift of Mr. & Mrs. Carl Tucker for the building of an x-ray suite. Since that time Babies Hospital has remained in the vanguard of pediatric radiology in the country. At present, great emphasis is being placed on the early charting of those birth defects that, if untreated, will result in permanent mental or physical handicaps for the child. In this endeavor, the radiologists are collaborating with other units of Babies Hospital, such as the Cystic Fibrosis Laboratory, the Neonatal Intensive Care Unit, the Renal Labora-

tory, and the Cardiovascular Laboratory. The Radiology Laboratory is seriously handicapped, however, by a lack of space. From 80 to 90 children are sent to the Laboratory for x-rays each day. This is four to five times the daily number of patients x-rayed in the present quarters in 1929, when the Tucker Suite began to serve the Hospital. Despite the marked space limitation, the Laboratory continues to contribute to radiology research and manages to cope with the crescendo influx of patients.

The Babies Hospital Development Program, which still seeks \$17,200,000 from interested persons, will directly benefit the Radiology Diagnostic Laboratory because the addition of ten floors to the new wing will allow this laboratory and other special care units to expand and modernize.

### Please Do Not Use Hospital Mailing System for Christmas Mail

Mail your Christmas cards to Medical Center friends by Dec. 16, urges mail room supervisor, Thomas K. Freeman.

Anticipating the holiday mailing rush, he requests all possible cooperation from staff and personnel to ease the annual last-minute overflow of Yule mail.

"If you know the home address of

your Medical Center friends, please send Christmas greetings to them through the Federal mail system. The Hospital mailing system should not be used for the sending of Christmas cards."

Christmas cards this year will require a 6-cent stamp, the same as first-class mail whether they are sealed or not.

## FOR THIS YOUNG PATIENT, RECREATIONAL THERAPY IS A CREATIVE ADVENTURE

The life of an artist, history tells us, is not always an easy one, and Richard Marshall's life would seem to fit that pattern. Ricky suffers from diabetes mellitus, a complex disease involving impairment of carbohydrate metabolism. Approximately two percent of the total American population has this disorder, so it is not uncommon. What is uncommon, however, is Ricky's remarkable artistic talent that was revealed when he spent some time on the twelfth floor of Babies Hospital in the Department of Recreational Therapy.

Ricky is one of about 1,550 patient contacts made monthly by that department, which is staffed by recreational therapists Cynthia Lepore and Sylvia Netzer and nursing aide Delores Burke, with assistance from many volunteers. Patients from all floors of the hospital here find a wondrous and wide-ranging assortment of art supplies that includes sewing, painting, pottery, a playroom, and a woodshop, to name a few. Services on this floor are aimed strictly at the recreational, and the patients select what they like to do. For those unable to come to the floor, a volunteer worker goes daily to other floors throughout the hospital with a cart loaded with sundry items. There is also a library cart available, and all children are invited to borrow books from it. All of these special activities are made possi-

A PORTRAIT OF THE YOUNG MAN AS AN ARTIST—Ricky Marshall, a gifted artist, is shown above, as he sketches in pastels on the twelfth floor of Babies Hospital in the Department of Recreational Therapy.

ble, in part, by gifts to the Hospital.

Ricky is most adept at pastel and pencil drawings, and he has also done fantastic work in the woodshop, where he has made a boat and a chess board. His drawings often depict animals, a reflection of his desire to become a

veterinarian. He is now fifteen and a freshman at Rice High School, but it is uncertain whether he will return there after his release from the Hospital. The history of his illness, which spans the past twelve years, and the difficulty in controlling it have caused

him to miss much school. It is hoped that he may enter another school with a strong art orientation. For Ricky Marshall, an exceptional patient and talent, that would make Christmas especially merry.

### Calendar of Events

#### Monday, December 2

9:00 a.m.-5:30 p.m.

MILBANK LIBRARY Christmas Book Sale through December 20.

#### Monday, December 9

9:00 a.m.-4:30 p.m.

PAINT SUPPLIES for window decorations available after this date at Chaplain's Office.

#### Monday, December 16

\* 11:00 a.m.-1:00 p.m.

\* 3:00 p.m.-4:30 p.m.

\* 10:30 a.m.

PROTESTANT HOLY COMMUNION.

\* Broadcast over Bedside Broadcasting System—Channel 1.

## THREE NEW TRUSTEES ELECTED TO P. H. BOARD

Alvin J. Binkert

Dr. Milton R. Porter

Dr. H. Houston Merritt

Mr. Augustus C. Long, President of the Board of Trustees of the Presbyterian Hospital, has announced the election of three Trustees: A. J. Binkert, Executive Vice President; Dr. Milton R. Porter, President of the Medical Board of Presbyterian Hospital; and Dr. H. Houston Merritt, Dean of the Faculty of Medicine of Columbia University.

### ROBBY WILSON

*Continued from page three*

But now he smiles wistfully from his respirator as people around him are discussing his long trip. Gruff-voiced doctors coo at him and ruffle his shock of blond hair, as if trying to prove to Robby that there is more to life than his brave new world of noisy suction devices and respirators. At the same time, there is a note of sadness in the voices of Babies Hospital staff as they talk of the child. His departure is just around the corner. Robby has been at the Hospital, through thick and thin, for almost a year. It is impossible for the physicians and nurses who fretted over Robby not to feel a sense of loss when he leaves. But plans have been made and, watched by many a pair of moist eyes, Robby will leave Babies

Hospital for JFK Airport. A United Airlines jet, with a special area set aside for his equipment, will whisk him and his New Zealand physician and nurse to Los Angeles. From there they'll fly in an Air New Zealand jet via Honolulu to Auckland.

Robby's stay at the Columbia-Presbyterian Medical Center will prove to have been of great benefit to future patients with breathing problems of many types. An immense volume of information and data has been collected on Ondine's Curse. When properly evaluated, these data will help in the early recognition of this syndrome in other children and in the design of new therapeutic measures to alleviate this condition and allied disorders. The record compiled by Babies Hospital shows that careful evaluation and imaginative therapy are applied to all patients, not only to those with rare

conditions. The Babies Hospital is uniquely qualified to undertake these tasks because of the strides it is taking in making pediatrics a modern, integrated healing art and science. The hospital of the future, it is recognized here, will not be only a workshop of highly trained physicians but also a melting pot of many other sciences, each enhancing the other. Medical doctors of the 1970's will be working hand in hand with biochemists, bioengineers, computer experts, electronics engineers and physicists. As Babies Hospital and, in fact, the whole Medical Center move in this direction, capital funds will be needed to support the modernization program. There is no more opportune time than Christmas to make a remembered contribution to help the Hospital serve the needs of present and future generations of youngsters.

# The Stethoscope

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXIV, NUMBER 1

JANUARY, 1969

## Formal Opening of Dana W. Atchley Pavilion

"We are here today to witness the formal opening of the new facility for ambulatory-patient care. Here, in one hundred thirty modern offices, one hundred seventy-five of the world's finest physicians will have the most advanced diagnostic laboratories and equipment at their disposal, backed by the total resources of the Medical Center. . . . Each of the fourteen floors of this splendid building will serve a specific purpose. . . ."

The speaker was Augustus C. Long, President of The Presbyterian Hospital in the City of New York. The occasion was the formal opening, on the afternoon of December 5, of the new Dana W. Atchley Pavilion. Approximately 600 persons attended.

"I would be remiss if I did not express appreciation to all who made the building possible through contributions, to those who worked on the building," Mr. Long continued,

Dr. Dana W. Atchley

"especially Mr. Frank Rogers of Rogers, Butler and Burgun, the Hospital architects, and builders and various contractors, our own staff headed by Mr. Eugene Cleary, and the professional staff who have cooperated so wholeheartedly. . . ."

"But proud as we might be of the building itself, we are prouder of our dedicated and

world renowned physicians and of the fact that we are today naming this building in honor of a doctor who has literally given his life to the Medical Center. . . . Dr. Dana W. Atchley."

Mr. Long stated that Dr. Atchley's patients, although they come from all walks of life, share one thing in common—the knowledge that he cares deeply about them both as individuals and as patients. It has been estimated that in the fifty-two years since Dr. Atchley came to The Presbyterian Hospital, after finishing his internship at Johns Hopkins, no less than fifteen thousand medical students, interns and residents have been directly influenced by his skills as a teacher and by his example as a clinical physician. Many of these doctors now serve in leading medical schools and hospitals of the nation and the world.

Dr. Atchley's address of response, lively with humor, contained vivid reminiscences of earlier days. He spoke of the day when John D. Rockefeller gave him a shiny time—and

Dana W. Atchley Pavilion, viewed from the employees' parking lot.

he spent it for two subway rides.

"I wish I were beginning again," Dr. Atchley said. "I know this is fantasy. . . . The Presbyterian Hospital has been my life and it has been a good life. . . ."

"And now, at last, this beautiful building," Dr. Atchley said, "is available for those of

us who wish to confine our activities to the Medical Center. . . . In such a centralized office there is economy in time and effort; less traveling in awful traffic; fewer parking problems; unified activities. There are priceless corridors and lunchroom conversations and exchanges and academic ideas

## EYE PATIENTS GET TOWN HOUSE—NEW SERVICE FILLS REAL NEED

Mr. and Mrs. Jerry Morrow and their son, Brian, 2, pose in front of the "retinoblastoma home." The Morrrows traveled to the Eye Institute from Athens, Tennessee.

Tastefully furnished living quarters for patients and relatives at \$1 per day—is this any way to run a hospital?

To follow a popular advertising slogan, you bet it is, if the patient is a child who is ambulatory and who lives in another part of the country. These conditions are met by certain patients of the Eye Institute who come to the Columbia-Presbyterian Medical Center for treatment of retinoblastoma, a malignant tumor of the light-sensitive cells in the eye. These patients are almost exclusively under five years of age and can be treated on an out-patient basis. Youngsters with homes beyond commuting distance from the Medical Center, however, used to be admitted by the Eye Institute and occupied valuable bed space.

Today a renovated three-story town house at 654 West 170th Street is available to them and their parents for a nominal daily registration fee. "The new building helps to al-

*Please turn to page two*

## Christmas Comes To Presbyterian

There could be no doubt that everybody in the Hospital was caught up in the hectic activity that immediately precedes the "big day." Staff and personnel were seen hurrying in and out of the Hospital carrying packages that could only contain Christmas gifts, ribbons and wraps, Christmas cards and all other sundries involved in the business of Christmas shopping—yet the baleful cry heard in the halls,

*Please turn to page five*

## Medical Center Photos

The Stethoscope has received many requests for copies of Mr. Eugene Cleary's color photo of the Medical Center which appeared on the front page of the recent Christmas issue. Extra copies of this photo are now being printed, suitable for framing. If you wish one or more of these, please drop a note to the Department of Public Interest.

## Christmas Dolls at Babies Hospital

Marjorie Peto, Assistant Director of Nursing, arranges display for the Dolls Tea Party. The Board of Women Managers of Babies Hospital sponsors this annual Christmas event, held this year on December 20, and donates the dolls. Hospital staff arrays the dolls that are later distributed to patients. Among this year's interesting collection were five dolls dressed in the native costumes of nurses participating in the Medical Center's Exchange Visitors Program. Spain, Korea, India, and Rhodesia were the nations represented.

# P&S Man Sparks Samaritan M.D.'s

Three hundred years ago captains of slave traders braved the shoals off Ivory Coast to collect live cargo for the North American colonies. Today, Edwin Barton of Columbia-Presbyterian Medical Center in North America is captaining another kind of enterprise in that area of West Africa.

Barton, who is Director of Student Activities at P&S, is in charge of a program to treat and rehabilitate Biafran children in three modern medical camps, constructed for that purpose by the government of Ivory Coast. Plane-loads of these little victims of the 18-month-old Biafro-Nigerian war are being ferried to the former French colony, and just before Christmas three young doctors were briefed at the Medical Center before flying to Africa to help them.

Their three-month sojourn in West Africa, as well as the construction of medical camps, is made possible through the efforts of the Medical Support Program for Biafra-Nigeria, of which Ed Barton is General Director. The project is financed by contributions from individuals and citizens groups throughout the U. S.

The idea for the program originated with Dr. Michael Rees of Peter Bent Brigham Hospital in Boston, but much of the impetus for it snowballed here, during a P&S Club student discussion on Biafra.

Learning of the steps Ivory Coast was taking to help Biafran children, Barton flew to Abidjan in November as an official representative of the

Three young M.D.'s, (from right) Fred Rose and Robert and Carol Master, are being briefed on tropical pathogenic organisms by our Medical Center's Dr. David Davidson, who spent some time in Ivory Coast. The threesome also received advice from Dr. Harold Brown, originator of the P&S course "Medicine in the Tropics," prior to their departure for Ivory Coast.

Support Program. At that time he had received commitments from 30 volunteer M.D.'s to "intern in Samaritanship" in Ivory Coast. The republic's government committed itself to further unstinting support of the program. Asked by Barton why Ivory Coast was doing this, the President of the Republic, Dr. Félix Houphouët-Boigny, replied: "It is a matter of the heart." The President said Ivory Coast could accommodate ten thousand children, instead of the present maximum of 1,000, if only American medical and financial aid would supplement the efforts of the Ivory Coast Red Cross.

Dr. Fred Rose of the Jeffer-

son Medical College Hospital in Philadelphia was the first doctor selected. He speaks French fluently and has served in Africa for two years with the Peace Corps. He was joined on January 1 by Dr. Ronald Levitt of New York's Montefiore Hospital and Dr. Nehe Nwanwko of Harlem Hospital, New York. The latter is a Biafran who was still in training at the University of Chicago Hospital when the Nigerian-Biafran War broke out. A complement of four American doctors will operate this mass hospitalization and rehabilitation enterprise, assisted by a full team of U. S. nurses and medical technicians.

## Careers in Orthoptics For Young Women

Career opportunities for young women abound in the field of Orthoptics, the clinical science of ocular motility and related disorders of the eyes. Those trained as an "orthoptist" are specialized medical assistants working under the direction of medical doctors in the care of eye patients.

Two years of college education are necessary to qualify for training in Orthoptics, although preference is given to college graduates with good academic records. The train-

ing course is offered at several medical centers in the United States, including the Columbia-Presbyterian Medical Center. The course consists of 16 months of clinical training in the Eye Clinic and two months of lecture courses in related subjects given during the summer at various universities throughout the country. There is no tuition for the clinical training. The tuition for the lecture courses is approximately \$300. At the completion of her training the

Orthoptist is eligible to take the certifying examination of the American Orthoptic Council. Once certified she is eligible for employment in a private office, a private hospital, or a medical teaching center.

Any student interested in learning more about the program at Columbia may write to the Orthoptic Department, Box 1, Institute of Ophthalmology, 635 West 165 Street, New York, New York, 10032, or contact Sally Moore, Room 524, IOPH.

## Linguists Given Chance To Help Fellow Man

"The doctor wants you to have some x-rays taken," the chief nurse told a florid, portly gentleman in Vanderbilt Clinic Admitting. The man cleared his throat in embarrassment. "Ya govoryu tolko po russki," he said.

The nurse called us, the Public Interest Department, for help. That time, we just happened to have a Russian interpreter handy. Had the required language been Greek,

Hungarian or Portuguese, however, we would have been of little avail. This is why, in the interest of our patients, the Public Interest Department is compiling a register of Medical Center staff members with knowledge of one or more foreign languages. We are therefore asking all employees who can communicate in a foreign language to volunteer their talents to a language pool. Please call the

Department of Public Interest and let us place your name on a reference sheet, to be distributed to nurses with frequent patient contacts. We have been advised by Vanderbilt Clinic that its staff already has several Spanish interpreters, but translators of all other foreign languages are urgently needed. Their services would be requested by Vanderbilt Clinic only in the direst of emergencies.

## EYE PATIENTS...

*Continued from page one*

leviate the bed problem at the Eye Institute," commented Dr. Algernon B. Reese, Consultant in Ophthalmology to the Presbyterian Hospital and one of the more steadfast proponents of the townhouse idea.

"When retinoblastoma is diagnosed," Dr. Reese went on, "all thoughts of the parents are centered on their child's condition. Previously, the distraught parents had to fend for themselves in a large city where hotels are miles away from the hospital. The Eye Institute's staff would spend hours making arrangements for them."

The new facility has obliterated these chores, and the Institute has gained flexibility in scheduling treatments at the modern Radiotherapy Center. Furthermore, in this type of communal arrangement, parents often find inner strength by sharing experiences and insights.

In addition to offering cooking facilities, the residence provides a laundry, a play room, and a sitting room for seven families at a time. The new addition to the Medical Center is known familiarly as

### ABC-TV

Late in January, beginning on a Monday, the American Broadcasting Company (Channel 7) will begin a 5-part television presentation prepared at Babies Hospital and on the Obstetrical Service of PH, under the direction of Mr. Arthur Brown, medical editor at ABC. The 5-part series is expected to be presented as part of the 6 o'clock news report from ABC-TV, but watch local papers for exact date and time.

This interesting series is entitled **STRESS IN THE NEWBORN CHILD: THE TEAM APPROACH**, and presents an accurate, interesting picture of important pioneer work being done at Babies Hospital to diagnose and correct disorders and abnormalities in the newborn child.

the "retinoblastoma home." It is managed by Mrs. Mary Doyle, housemother.

This latest extension of the manifold services of a medical center may have application at other medical centers that attract ambulatory patients from other parts of the country.

At Columbia-Presbyterian, it is the Eye Institute's Tumor Clinic that draws out-of-town patients—not only from this country but from such exotic places as India and Thailand. The first family to register in the "retinoblastoma home," for example, was from a small town in Minnesota.

The Tumor Clinic has been a mecca to patients with retinoblastoma because the treatment of this malignancy requires the cooperation of half a dozen specialists. On the diagnostic level alone, considerable practical experience is needed to confirm the presence of this relatively rare lesion or of its complications. Secondly, retinoblastoma has to be attacked from several directions for the treatment to be successful. Besides being irradiated with the betatron, selected cases are also treated by light coagulation through the use of the laser or the xenon arc. These approaches are combined with the introduction of specific chemotherapeutic agents through a tiny incision in the carotid artery.

To perform these functions, the Tumor Clinic has formed a specialty squad of top professionals from the Eye Institute and from other parts of the Medical Center. They form a nucleus around Dr. Reese, one of the country's leading ophthalmologists, whose book *Tumors Of The Eye* is a standard reference work in the field. The principal members of the team include Dr. Robert Ellsworth of the Eye Institute; Dr. Patricia Tretter, Assistant Attending Radiologist, PH; Dr. James Wolff, Associate Attending Pediatrician at PH and a specialist in retinoblastoma complications; Dr. Carl Feind; Associate Attending Surgeon, PH; and Dr. George Hyman of Delafeld Hospital, the team's chemotherapist.

# The Formal Opening Of The Dana W. Atchley Pavilion

## Accolades to Dr. Atchley Echoed In Colombia

As friends, colleagues and many leading citizens of New York gathered to honor Dr. Atchley, a group of doctors 2,600 miles south of the building named for him attended the event in spirit.

They were members of the Faculty Council of the Division of Health Sciences of the Universidad de Valle in the city of Cali, Colombia. The Faculty of Medicine of that university is a leading medical institution on the South American Continent.

The Faculty Council re-

solved on November 20 in a formal resolution that December 5, 1968 be declared "Dr. Dana W. Atchley Day" in the Division of Health Sciences at the university. Dr. Atchley was accorded this honor, the resolution stated, for his "singular invaluable services" to the Division, "through his advice, counsel, stimulus and example."

A copy of the resolution was sent to the President and the Board of Trustees of The Presbyterian Hospital.

*Continued from page one*

and even gossip. I would hesitate to practice medicine if I couldn't find out at lunch or while waiting for an elevator how to manage my difficult problems! . . .

"Hospital duties are always just around the corner and lectures, classes and other teaching exercises are done under one roof. Research laboratories are near; libraries are at hand."

And there are broader implications, he noted.

"For many years it has been increasingly apparent that solo practice of medicine—one man by himself—is not efficient in the modern scene. Group practice—an association of physicians with varied specialties including x-ray men and laboratory facilities has been the usual answer to the complexity of today's medicine. . . . Ever since we opened offices in the hospital to be used for private practice there has existed at Presbyterian a de facto group practice with its invaluable scientific and professional interdependence. Now there will be a geographical center which will offer all these advantages."

In his conclusion Dr. Atchley referred to an ingredient in patient care "available at all professional levels. It is the humanistic realization that a patient is first and always, a person, a unique individual whose qualities are different from every other individual and who is always more interesting as a person than as a case."

Dr. Atchley has won many honors. In 1959 Columbia University awarded him the degree of Doctor of Science. A few years ago he was honored at the Gold Headed Cane Ceremony for the graduating class of the University of California School of Medicine. His book, *Physician: Healer and Scientist*, was published by Macmillan in 1961. At the annual meeting of the Association of American Physicians in Atlantic City in May, 1969, he learned that he was to be a recipient, in 1969, of their Kober Medal, "Awarded for Research in Scientific Medicine."

Those who attended the dedication ceremony may well remember it as an event of significance—the fulfillment of a vision which was in the minds of the builders of the Medical Center forty years ago. It was an evening of lively conversations, abundant refreshments, busy cameras, tours of the beautifully furnished offices, an opportunity for distinguished guests to meet other distinguished guests, and an occasion for four generations of the Atchley family to come together to honor the doctor and the man for whom the Dana W. Atchley Pavilion was named.

Mr. Augustus C. Long presents Dr. Atchley.

Dr. Atchley with Mr. & Mrs. Robert Montgomery.

Mr. A. J. Binkert, Mr. Long, Mrs. Binkert with Dr. Atchley.

Study in Concentration: Visitors to Dana Atchley Pavilion select refreshments in lobby before proceeding with inspection of building during open house, held November 26 and 27.

Approximately 600 persons attended this gay formal opening.

## Hospital Needs Blood—\$10 Paid Each Donor

Dr. John G. Gorman, Director of our Blood Bank, and Mrs. Erika Awer, Blood Bank Supervisor, make an urgent appeal to all hospital and college personnel for donations of blood for our patients.

There is a shortage of blood at present, due to the flu epidemic, and it is so great that our blood bank needs blood for our patients.

It takes only a little time for employees to go to the Blood Bank on the 20th floor of Presbyterian Hospital and make a donation of their blood. Mrs. Awer will welcome donors between the hours of 1 p.m. and 6 p.m. Monday through Friday.

All types of blood are needed quickly, so won't you take the time to give a unit? Why not do it today?

An honorarium of \$10 will be paid to each donor.

Catherine Adair, Secretary to Dr. Atchley, wearing white orchid, surrounded by Dr. & Mrs. Atchley and their three sons.

One of its grateful students called it "the last of the non-computerized programs," and it is true that few university courses are as personally structured to each individual's needs as this one for premedical students at Columbia's School of General Studies.

Some people do not decide that they want to become doctors until well beyond undergraduate stage. Sometimes they are already in another job, have family responsibilities. Often they have to give up their dreams of a medical career because of financial reasons or because they have too little premedical training and cannot afford the time and money to take another degree. They do not qualify for federal, state or university scholarship aid.

Two years ago the Esso Education Foundation sponsored the first scholarship program in the nation to help late starters in medicine and funnelled it through the School of General Studies Pre-Medical Office. The program is now in its second year and it is expected that Esso will continue its sponsorship for a third year. The students may apply for funds after they have suc-

cessfully completed a minimum of "six credits in science courses at an undergraduate division of Columbia University.

There are three types of "second chance" students who fit into this pre-medical course. There is the student who has graduated from college and then decides to become a doctor. He probably would not have taken enough pre-medical subjects. Some students have left college without a degree and then return with the idea of entering medical school. The third category are those who were not admitted to medical school for one reason or another but still want to become doctors.

Each of these types needs a different kind of program, in fact, each individual needs a personally-designed course of study. Mrs. Sylvia Bassoff is a Pre-medical Adviser and works out with each student what he requires to supplement the qualifications he already has. It can be seen why it has been dubbed "the last of the non-computerized programs."

John Bourne, assistant dean and chief premedical adviser, is quoted as saying, "Our aim is to help meet the critical na-

tional shortage of doctors by assisting some very highly motivated young people who face unusual financial problems because of their late decision to study medicine."

The General Studies Pre-medical Office not only gives guidance to the students on their course of studies, it also rates their progress and does the secretarial work necessary for them when it comes to applying to medical schools. Information is compiled about each pre-med student during the year and in late spring the Chief Pre-Medical Adviser meets with an Evaluation Committee which reviews the students' grades and assesses the recommendations of the various professors. The dominant factors considered are personality, character, maturity, emotional stability and motivation towards medicine.

There is no doubt that the efforts of the School of General Studies and the financial support given by the Esso Education Foundation are jointly contributing to an imaginative experience in combatting the nationwide shortage of physicians. It is to be hoped that their example is followed in other universities.

The family background of Arsene Eglis and his professional experience seem well suited for his recent assignment as writer for the Department of Public Interest.

As patient, he had minor surgery here 15 years ago. As patient's relative, he acquainted himself with the hospital while his grandfather was here in 1960 and 1961 for a series of major operations by Drs. Bhonslay and Longo. The old gentleman, although 88 years of age at the time, recovered to see his great grandchildren grow from toddlers into brash youngsters.

As free-lance writer, the patient's grandson interviewed staff doctors for articles he wrote for the Medical World News. His science writing experience also includes a two-year stint with Funk & Wagnalls Encyclopedia, free-lance contributions to natural history magazines and monographs to scientific journals.

A one-time amateur boxer, Arsene began his journalistic career as a writer for European boxing magazines. Subsequently, he worked for Hearst's International News Service in New York. He left the wire service after two years, however, to earn a graduate degree in American Literature from New York University in 1960. From 1960 to 1968 he was press and public relations officer for a radio

Arsene Eglis

network in New York.

Asked to join the U.S. Medical Corps for two years in the mid 50's, Arsene was graduated from the Army Medical Service School and served as technician in medicine, in obstetrics and in physical therapy. He ran the public information bureau of an Army medical center in France and edited the center's newspaper. He also captained the medical center's chess team.

Although born in Paris, France, Arsene spent his childhood in Riga, Latvia. He came to this country on a scholarship from Centre College of Kentucky after World War II. A race walker by hobby, he was a member of a U. S. national championship walking team. His walking suffers now, as he is trying to finish his second non-fiction book.

(NOTE: Because many of our readers have praised the story of little Robby Wilson of New Zealand, the feature of the 1968 Christmas issue of The Stethoscope, it should be mentioned that Arsene Eglis was the author of this and the associated articles.)

## HERE ARE TWO OF PRESBYTERIAN'S MANY VOLUNTEERS

Mrs. Stella Brown

Mrs. Stella Brown has been associated with Presbyterian Hospital for 24 years. Most of this time has been devoted to serving as a volunteer, but from 1955, following the death of her husband, until 1964, she worked as an employee in the capacity of secretary on the 10th floor of HP. She retired in 1964 but returned immediately to the Sloane Hospital Nursery where she had served so many years prior to 1955 and to a post for which she had been specially trained by Sloane Hospital. The total of 11,000 volunteer hours over the years is staggering, to say the least. And when we asked Mrs. Brown if she had any hobbies, her quick retort was, "Yes, my work right here as a volunteer in the Sloane Nursery—those babies are my hobby." To further quote Mrs. Brown, "Anyone who can't love babies, well . . ." This pretty, smiling little lady also speaks very proudly of the fact that both her son and her daughter were born in Sloane Hospital and that two of her five grandchildren are also "Sloane Alumni." What does Mrs. Brown do besides volunteering? She visits her son and daughter, both of whom live out of New York City, and babysits for her grandchildren whenever the need arises.

We asked how she happened to start as a volunteer and she told us that in a conversation once with a young but very

Mrs. Stella Brown

wise physician, he told her that so many women, whose children have grown up, spend most of their time gossiping, worrying and otherwise wasting their time, and would be so much happier and doing a service to their community, if they would do something constructive such as volunteering in a hospital. New York born and New York bred, Mrs. Brown had lived in the Washington Heights-Inwood area all her life and decided that Presbyterian was the hospital of choice. We think that 24 years and 11,000 hours are pretty good evidence that it was the right choice.

Mrs. Ida Rosch

Mrs. Ida Rosch has been volunteering her services to the Presbyterian Hospital for the past sixteen years. It all started when Mrs. Rosch, who was a children's wear buyer, suffered a series of hemorrhages to the eye and, following each hemorrhagic episode,

Mrs. Ida Rosch

her eyesight failed a little more. This, of course, made Mrs. Rosch extremely nervous. She eventually had to give up her job because of her failing eyesight. During a visit to her physician, a neurologist here at the Neurological Institute, he asked her if she would like to consider working as a volunteer. He felt this might help her to overcome her nervous state. She told him that she would be delighted and was put on the job in the Sterile Department by Mrs. Voessler, who was the Director of Volunteers at that time.

Mrs. Rosch has been working there ever since and told us in all sincerity that this work "has saved my life." Aside from her day work as a volunteer, Mrs. Rosch also does some "homework" for the Sterile Supply Department. She has a married son and three grandchildren living in Maryland and relaxes with her family whenever the opportunity arises.

## Computer Courses, January, February

Medical Data Processing Course Announcement:

The 9th *Introduction to Medical Computing Course* will be given to administrative and medical personnel starting Monday, January 20. It will consist of five 1-hour lectures.

The lectures will be held in the Armory, (168th Street Entrance), Room 5, 4:00 to 5:00 p.m.

Registration cards should be obtained at PH 4-33 and returned by January 13.

Schedule: Monday, Jan. 20; Wednesday, Jan. 22; Friday, Jan. 24; Monday, Jan. 27; and Wednesday, Jan. 29.

The 9th *Fortran IV Course* will be given to Administrative and Medical Personnel starting Monday, February 3. It will consist of 18 1-hour lectures.

The lectures will be held in the Armory, (168th Street Entrance), Room 5, 4:00 to 5:00 p.m.

Registration cards should be obtained at PH 4-33 and returned by January 27.

Schedule: Monday, Feb. 3; Wednesday, Feb. 5; Friday, Feb. 7 and on consecutive Mondays, Wednesdays and Fridays through March 14.

William A. Bauman, M.D., Director. Telephone 579-2077.

## Lectures at Delafeld

Dr. Rene J. Dubos, Rockefeller University, who last year gave a series of addresses for the 200th anniversary of Columbia University's College of Physicians and Surgeons, will speak on Friday, January 10, 4:00 p.m., at the auditorium of the Francis Delafeld Hospital, 99 Ft. Washington Avenue on the subject "Lasting Biological Effects of Early Influences." This lecture will be sponsored by the American Cancer Society, New York City Division, Inc.

Other lectures announced for this series are: January 17, James G. Hirsch, M.D., Rockefeller University, "Character of the Granules of Polymorphonuclear Leukocytes"; January 24, Melvin Cohn, Ph.D., Salk Institute for Biological Studies, "Specialized Functions Analyzed by the Use of Differentiated Tumors"; January 31, John R. David, M.D., Harvard Medical School, "In Vitro Studies of Delayed Hypersensitivity."

# THESE PERSONS ARE RETIRING FROM COLUMBIA-PRESBYTERIAN

Mrs. May Fahey

Mrs. May Fahey, X-ray Aide in Babies Hospital, retired on November 22 after 22 years of service at Presbyterian Hospital, where she worked with Drs. John Caffey and David Baker. She told us "I have enjoyed working in Babies Hospital these many years and I will miss the many friends I have made here."

Mrs. Fahey, who was born in Tipperary, Ireland, is a music enthusiast and has a large collection of stereo records. She also likes to travel and is planning a trip shortly to visit with family and friends in Ireland.

Mrs. Fahey was honored by her many friends and co-workers at a tea on November 12.

Hester Brown

Hester Ann Brown, R.N., Senior Supervisor on the 5th Floor Orthopaedic Service at Presbyterian Hospital, retired on November 22. She has been with the New York Orthopaedic Hospital since 1936, and when it moved up to the Medical Center from 59th Street in 1950, Miss Brown moved up with it.

She speaks of her many years of association with the New York Orthopaedic Hospital and the Presbyterian Hospital as having been "a very rewarding and inspiring experience."

On November 21 Miss Brown was given a farewell party by her many friends and co-workers, including many of the ladies of the Women's Auxiliary of the New York Orthopaedic Hospital. She was given a beautiful gold flower pin in a leather box handsomely inscribed.

Mrs. Katherine Corcoran

October 31 was the final on-duty day for Mrs. Kathleen Corcoran, who came to the Medical Center in 1958. She worked as a nurses' aide for several months and then moved to the Presbyterian Hospital Information Desk, a post she has retained until her retirement. She enjoyed her job very much, as it has given her an opportunity to "meet many people."

Mrs. Corcoran, a native of Ireland, lives in Washington Heights with her husband, and although they have no children of their own, they take great pride in their nephew, who is currently a captain in the U. S. Air Force, stationed at a base in Ohio.

We asked Mrs. Corcoran how she plans to spend her retirement years and we thought her reply was quite whimsical. "I am going to continue with my painting—painting my apartment that is."

Mrs. Rose Gunning

On October 10 Mrs. Rose Gunning retired from Presbyterian Hospital, having completed 20 years of service. She has worked as a nurses' aide and floor receptionist in Harkness Pavilion. She told us that one of the most exciting "fringe benefits" of her job has been meeting many celebrities whose names are "household words" from many different fields of endeavor, including Hollywood, television, radio, religion and politics.

Said Mrs. Gunning, "My years at Presbyterian have been most rewarding. It was as if I were one small spoke on a large wheel, one small contributing factor to the ultimate goal of the Hospital... serving humanity."

Mrs. Gunning was born in Austria-Hungary but presently lives in Washington Heights. Now that she has retired she looks forward to spending more time at home, doing what most women best enjoy—homemaking. She is also anxiously awaiting her first grandchild—the stork is due shortly at the home of her son, Patrick, a former Presbyterian employee.

Mrs. Alice Lee

"I had the most wonderful retirement party of anyone who ever retired from Presbyterian Hospital because the Department of Radiology and my many other friends turned out in force to wish me luck and instead of being a sad occasion, it was a very happy one." Those were the words of Mrs. Alice Lee, on the occasion of her farewell party, held in PH 1-50 on October 31. Mrs. Lee, Secretary to Dr. William Seaman, Director of Radiology, PH, retired on that date, having completed 15 years of service in the Hospital.

Mrs. Lee was born in New York City and lives in the Washington Heights area. When asked if she had any hobbies, she beamed and quickly replied, "Yes, my son is my hobby." Mrs. Lee does indeed have good reason to be proud of her son. He has been an honor student throughout his academic career, having won scholarships to Regis High School, Fordham University and a NASA Fellowship in Mathematics, before becoming a teacher in the currently controversial Ocean Hill-Brownsville school district.

Mrs. Lee spoke warmly of her years spent at the Medical Center stating that they had been most rewarding and meaningful. "I'm not really retiring though. I am going to work part-time for Dr. Seaman." She will devote the rest of her "spare time" to her "hobby."

## CHRISTMAS...

Continued from page one

elevators and in dining rooms never varied—"I haven't even begun my Christmas shopping!"

Here in the tradition-steeped halls and corridors of the Medical Center, almost every floor boasted beautifully decorated windows, painstakingly created by staff and personnel in spare time; the Bulletin Boards in BH and PH were given that "Christmasy" look with appropriate pictures and gay garlands of holly and poinsettia; the age-old custom of Christmas caroling was carried on by the nurses and doctors who strolled and sang through the wards, halls and corridors of the Hospital. The most delightful of all events was, of course, the distribution of presents to all children in the Hospital at Christmas time, and especially the beautiful dolls donated by the Ladies Auxiliary and carefully and beautifully dressed by members of the staff and personnel; lovely ones this year having been dressed in native costume by nurses who are members of our Exchange Visitors Graduate Nursing Program. Last, but not least, the final absolute touch of Christmas was the magnificence of multi-lighted Christmas trees strategically placed out-of-doors where they could be enjoyed by patients and community alike and by the many gaily decorated, chubby little trees placed throughout the Hospital, in offices, various departments, on wards and other locations.

There were the customary chapel services on Christmas day for the patients—Roman Catholic Mass at 7:30 a.m. and Protestant Holy Communion at 10:30 a.m.—both services broadcast via the bedside broadcasting system for those patients who were unable to attend them physically.

Each and every one of us had something to be thankful for this Christmas and the spirit of Christmas can brighten all our days if all peoples all over the world would but heed a religious leader's Christmas message, "Faith can end mankind's ills."

Continued from page five

Mrs. Margaret Hennessy tries on her money hat.

## Mrs. Margaret Hennessy

Happy Marge Hennessy, Assistant Supervisor of the Compensation and Liability Department, retired from the Hospital December 1, and was a radiant example of "the wearing of the green" at the Tea held in her honor on November 1. Marge's "chapeau vert," designed by the Mesdames McCabe and McNulty, was a veritable garden of green folding money contributed by her many friends acquired during her nearly 25 years of service at the Medical Center.

Eighty co-workers and friends feted Mrs. Hennessy at a Banquet and Dance on October 25 in the Orchid Room of The Trocadero. An inscribed gold bracelet was presented to her, along with many other personal gifts and much love and best wishes for a long, happy and fun-filled retirement.

## Mrs. Josephine Walz

Mrs. J. Walz

Mrs. Josephine Walz, Receptionist in the Orthopaedic Clinic of Vanderbilt Clinic, retired on December 1. She came to work at the Medical Center in 1947, worked in the Blood Bank for two years and then transferred to the job she has held since then. A quiet, soft-spoken little lady, Mrs. Walz told us "the work these doctors do is so truly remarkable." She was referring to Dr. Robert Carroll of the Hand Clinic and Dr. Rosamond Kane of the Children's Foot Clinic. "Some of our patients came here as infants and are now teenagers—and they mostly all remember me . . . it's so rewarding to be remembered." She has affectionately referred to the Hand

Clinic and the Children's Foot Clinic as "my babies."

Mrs. Walz is a native New Yorker but now lives in New Jersey with her husband, also recently retired. The Walzs have one daughter, who is married and also lives in New Jersey. Mrs. Walz loves to sew and enjoys the sometimes neglected art of homemaking. She and her husband plan to do some traveling, now that they are both retired—"Perhaps we'll take a nice cruise."

A tea was given for Mrs. Walz on November 25 and a goodly crowd of friends and co-workers was on hand to bid her farewell.

## Mrs. Margaret Hartnett

Mrs. Margaret Hartnett retired on November 21 after completing 36 years of service at the Presbyterian Hospital. The last 21 years of this service have been spent in the capacity of a technician in the Dermatology Clinic of Vanderbilt Clinic. Some of the doctors have kidded Margaret from time to time, telling her she should have appeared on the TV show "What's My Line?" Her "line" is indeed a provocative one—she is a "scraper." This involves scraping a tiny portion of body skin, culturing it for fungus growth and examining it microscopically. One of the most frequent offenders has an impressive name, "tinea versicolor," and an unimpressive effect on the patient. Under the microscope this fungus growth looks like, and is unofficially called "spaghetti and meatballs." It is non-pathogenic and is easily treated.

We asked Margaret how she felt about retiring and she said, "I'm very sorry I'm leaving such lovely people." She counts among her friends such eminent dermatologists as Drs. Beatrice Kesten, Carl T. Nelson, Paul Gross, J. Lowry Miller, Leo Schweich, A. Domonkos, and M. Silva, plus countless other people, including fellow employees and many patients she has come to know over the years. "I have made so many friends it is almost unbelievable."

Mrs. Hartnett loves to travel, go to the theater and read. She is planning a trip to Boston and then will go on to California to visit with her

# This Computer Is A Fast Brain With Vast Storage

An expert at memory feats who knows his ABCD's and can cope with the biggest LIARS was hired by the Columbia-Presbyterian Medical Center last month. Installed in a new office in the basement of Babies Hospital addition, he is getting his bearings and making contacts with other parts of the building.

As soon as he has contact with nurses' stations and other important points on the floors above, the Presbyterian Hospital's new employee will work on his ABCD's, or Admitting, Bed Control and Discharge System. Later on, he'll address himself to LIARS, or Laboratory Information Acquisition and Retrieval System. Needless to say, the Hospital's new hire is a computer, with plans to save Presbyterian a considerable amount of money and bother. An IBM product, the newcomer is classified as Model 40 in the 360-system category of computers. As yet the computer lacks the ability

Model 30 computer, which has been working for the Accounting Department on two daily shifts and simply does not have enough time to absorb medical-administrative information," said Dr. William A. Bauman, Director of Medical Data Processing. Despite being overworked with strictly financial problems, the Model 30 has occasionally found time for "a few selected medical projects," Dr. Bauman added.

The new computer will first of all build up a "Patient Master File" which will contain all the needed information about each in-patient. The information stored for each in-patient will be roughly that on the first page of the Admission and Discharge Sheet. The content of this file will dynamically change as the in-patient population changes. Another file in the computer's ABCD system will be a Location File ("Bed" File) whose content describes the characteristics of each hospital bed and gives

rector.

The expected saving will materialize with the planned activation of LIARS, several years hence. The current method of recording and reporting laboratory and x-ray test results not infrequently forces skilled technicians, nurses and doctors to act as clerks, telephone operators, and even messengers in obtaining and relaying data. Under the Laboratory Information Acquisition and Retrieval System, the computer would store and distribute all data. How much time and money could be saved on reporting the 1.6 million medical tests annually performed at the Medical Center by converting to LIARS? None on the tests themselves, which are completed promptly thanks to technological advances. Possibly 30 hours, however, could be sliced off the time spent in transmitting the test requisition and the report. A "ball park" estimate of time saved would thus amount to 50 million hours a year. Perhaps as much as 20 per cent of the "cost" of tests arising from cumbersome transmittal procedures could be cut by ordering a computer to take care of them. Equally important is the prospect of reducing the average patient-days per admission because patients occasionally have to be kept in the hospital extra days for laboratory test results.

Dr. Bauman emphasized that the activation of the Patient Master File is a prerequisite of these future plans. The ABCD module incorporating this file is scheduled for completion by the end of 1969. By that time, Medical Data Processing plans to have installed communicating devices in Babies Admitting Office, nursing stations in Babies Hospital, and pediatric nursing stations in Sloane. Through these devices hospital personnel will advise the computer in the basement of Babies Hospital addition of each admission, transfer, and discharge in Babies. The information gathered at admission and stored in the computer, together with additional information accumulated during the patient's stay, will be available through the keyboard printer while the patient is in-house. Certain daily reports will be prepared from this information by the computer.

Paul Gracia, Supervisor of the Computer Room in the basement of Babies Hospital Addition, checks installation of the Model 40. The heavy cables exposed under the floor are comparable to nerves, since they carry messages to-and-fro among the many parts of the computer. The wiring in the cabinet carries and distributes electric power to computer parts, much as the circulatory system distributes blood in a person's body. The two heavy cables leading into the cabinet are analogous to arteries, while the tapeline strips are composed of many tiny wires—arterioles.

to receive messages or to communicate with staff members. It is much like a brain separated from its nerve endings. The new computer's "nerve endings," or "communicating devices," will be of two types: an IBM 1052 Keyboard Printer and an IBM 1092 Programmed Keyboard. The 1052, a typewriter, will be used for both input to and output from the computer. The 1092, a push button device with 16 columns of ten buttons each, will be used for input only.

"The new arrival is expected to take the pressure off our

bed occupancy and availability information. The file will be used to produce a census report. An Activity Report File will summarize the major events of each day: Admissions, Transfers, and Discharges. The file will be used to prepare a daily report and then wiped clean to accumulate the next day's history.

"The primary objective of ABCD, of which these three files are a part, is not so much saving money as a more rapid and more accurate patient service," according to William E. Vanderhaak, Associate Di-

son and six grandchildren. After all this traveling is over, she will return to her native New York City and look for a part-time job. "I couldn't possibly stay home all day long—I must have something to do."

Margaret was honored at a farewell tea on November 19 by her many friends and co-workers.

## Library Book Sale Is Smashing Success

Mrs. Nancy Buehler, librarian at Milbank Library, reports that this year's Christmas sale of books has earned \$589 for the library. This sale, held biannually in December and simultaneously with the Hospital's Art Show in Spring, is dependent on books, records, and related items do-

nated by Hospital personnel. These items are then sold at bargain prices. Milbank Library, which is located on the twentieth floor of The Presbyterian Hospital, provides free book service to patients. Profits from book sales go to a fund for purchasing more books for the patients.

## National Multiple Sclerosis Society Renews Grant For Continuing Research

Basic research into nerve tissue structure, growth, and behavior will continue at the Columbia University's College of Physicians and Surgeons under a two-year grant of \$73,755 from the National Multiple Sclerosis Society. The Society, founded in 1946, is the only nationwide voluntary health agency seeking more effective methods of treatment and the eventual prevention of multiple sclerosis.

The technique of tissue culture, the growing of living matter outside the living body, has played a valuable part in many of the more important advances in medical research in recent years. The researcher working with a culture of living cells can observe with the naked eye or the microscope living processes which, in the whole organism, can be inferred only from studies of their effects or end-products. Although the investigator must always keep in mind that what happens in the test tube may be affected by its unnatural environment, and is therefore not necessarily conclusive proof of what happens *in vivo*, the researcher who can observe nerve growth with direct time-lapse cinematography (photographs taken at regular intervals) is certainly getting a valuable picture of that part of the life process.

Dr. Margaret R. Murray, Professor of Anatomy assigned to Surgery, P&S, an

authority in the field of tissue culture, has developed successful methods for culturing all manner of nerve tissue. With her cultures she is able to observe the growth of myelin, the nerve-insulating substance damaged in multiple sclerosis. She can use these myelinated cultures of nerve cells to test various possible demyelinating agents, including materials from MS patients.

In one current study, for example, Dr. Murray and her associates have been testing gamma globulin from MS and an experimental demyelinating disease of animals (EAE) to see what effect this substance might have on culture nerve cells possessing normal myelin coating. In another project, Dr. Murray and her team have observed the formation *de novo* of nerve-muscle junctions in mixed cultures of spinal cord and skeletal muscle.

On the more technical side, Dr. Murray's team has developed standardized, consistent cultures of mouse hypothalamus and cerebral neocortex, brain tissues that previously could not be studied by tissue culture techniques. They have also worked out a way to induce more rapid, complete, and reproducible myelin growth in mouse cerebellar tissue. Samples produced by this method are already being used in the search for demyelinating materials.

## Weinberg Plan Aids Hospital Employees

If you are a PH employee wishing to study during the spring 1969 semester, you can do so under the Sidney J. Weinberg Employees Educational Aid Reimbursement Plan. Your application must be submitted to Miss Oring of the Personnel Department no later than January 31. The Weinberg aid plan pays one-half of the employee's tuition fee for one to six academic credits per semester. To be eligible to apply, the employee must have been employed at PH for at least six months, previous to making application, and courses must be job-related. Employees who qualify for aid receive it upon satisfactory completion of the course.

## Polatins Publish Practical Volume

Dr. Phillip Polatin, Professor of Clinical Psychiatry, P&S, and Attending Psychiatrist at P.H., has collaborated with his novelist wife, Ellen C. Philtine, in the writing of a book on personality development. Their work, entitled "How To Develop A Well-Adjusted Personality," appeared recently as a paperback under the Essandess imprint of Simon and Schuster publishing company. An examination of emotional problems of every variety and every age, the volume offers professional advice on how to achieve an enduring sense of well-being. Although the book does not offer a disclaimer to that effect, it may be presumed that such a sense of well-being does not include occasional bouts with the Hong Kong flu.

The husband-wife writing team has so far produced several popular books on mental health, a psychiatry textbook, and several novels, written by Miss Philtine.

## Fresh Ads Sought

A memo to Batten, Barton, Durstine & Osborn: for fresh ideas, drop around and read the ads on the Medical Center bulletin boards some time. Here's a recent example, describing a 1956 Volkswagen, offered for \$100:

"Complete heart transplant, 1961. No symptoms of dyspnea on exertion, angina, or regular or irregular irregularity. Extensive localized skin cancer but compatible with long life. Colostomy recently closed—exhaust system in good order. Not only runs but stops, too. (Master cylinder recently replaced.) Comes with and without full heat (nothing in between). Comes with extra key, head lights, radio and my blessing." (Written by Dr. Earl Fogelberg.)

# News of Nursing

## Christmas Tea Given By Nursing Students

The Student Nurses, Department of Nursing, Faculty of Medicine of Columbia University, presented a Christmas Tea on the afternoon of Wednesday, December 18, at Maxwell Hall. Approximately 150 persons attended. As the above photo suggests, there was informal Christmas music around the piano throughout the afternoon. Janet Ott is at the keyboard.

Ann M. Earle, Assistant Professor of Nursing and Director of the Graduate Program, Psychiatric-Community Mental Health Nursing, attended a conference on "The Role of the Nurse in the Comprehensive Mental Health Center" sponsored by the Department of Mental Hygiene, Albany, New York on November 5 and 6. She participated in a panel discussion on Psychiatric-Community Mental Health Nursing.

Mary I. Crawford, Associate Dean and Director of Nursing, Department of Nursing, Faculty of Medicine, C.U., attended the Council of Member Agencies, Department of Baccalaureate and Higher Degree Programs Meetings, National League for Nursing, Annual Meeting, November 13-15 in Phoenix, Arizona. Also attending this meeting were Helen Pettit, Professor of Nursing, and Constance Cleary, Associate Professor of Nursing.

### • CONGRATULATIONS TO

To Kam-Mum Ip, Gloria Link, Bay Baddedly, Maureen Klima and Lynn Froundlich, who were promoted from staff nurse to head nurse, PH Operating Room.

To Mrs. Angela Millward, recently appointed Senior Supervisor of Nurses on Orthopaedic 5, PH.

To Leonie Symonds, recently appointed Head Nurse (evenings), on Orthopaedic 5 West, PH.

## Parties for Private Duty And Night Nurses

The photos above were taken at the Christmas Buffet Party for Private Duty Nurses, held at the Harkness Hall lounge on the afternoon of Tuesday, December 3.

The following morning, at Harkness Hall, a Christmas Breakfast Party was given for the Night Duty Nurses.

At both events Mr. A. J. Binkert, Executive Vice President of The Presbyterian Hospital, spoke, describing the Hospital's development program. He invited questions, and a lively interest in the Hospital's future was evidenced.

## Bronx League's Party For Cerebral Palsy

HOSPITAL CLOAK ROOM—Screened from the darting eyes of curious youngsters, a State Trouper checks his magician's box of tricks prior to astounding children at the annual Christmas party of the Bronx League for Cerebral Palsy in the Attending Doctors' Dining Room on December 8. The State Troupers are an entertainment group of the State House, a social-athletic organization of Queens College.

LAUGH-IN WAS NEVER LIKE THIS—Organizers of the party, children, and Santa mix with entertainers at the close of the program, named after a popular TV show. The menu featured ice cream, and no kid was forced to eat meat and vegetables.

# Stethoscopia

## DOINGS OF DOCTORS

### • MARRIAGES

*Ann Beinecke* and *Dr. Caldwell Hardy Oliver, Jr.*, were married on November 9 in New York City. Dr. Oliver is a resident on the Orthopaedic Service.

*Joan Altoonian*, secretary to *Dr. Harold W. Jacox*, Radiotherapy Center, was married on November 16 to *Bruce Vanetti*, in Harrington Park, N. J.

*Linda Johnston*, evening staff nurse, Babies Hospital, was married on December 21 to *David Habif, Jr.* Mr. Habif is the son of *Dr. David Habif*, Professor, Department of Surgery, P&S.

*George Holmes*, Electrician, Maintenance and Construction, was married to *Maria Oregon* on November 16.

### • ENGAGEMENTS

*Toni Marianne Sailer*, student nurse, is engaged to *Lawrence Eisenhauer*, a medical student at Cornell University. An August wedding is planned.

### • CONGRATULATIONS

To *May Udisky*, secretary, Maintenance and Construction, who won a portable TV set on a raffle for benefit of Veterans of Foreign Wars.

To *Carmine Dolce*, mason foreman, Maintenance and Construction, who won a 5-day vacation in Florida by just listing his name at one of the supermarkets near his home!

To *Mrs. Jane Miller Johnson*, Supervisor in Psychiatric Social Service, whose father, Judge Leon P. Miller, has been elected Judge of the McDowell Criminal Court in McDowell County, West Virginia.

To *Mr. and Mrs. Joseph Hollings*, who welcomed their first grandchild, a grandson, on November 10. Mr. Hollings is a member of the Protective Department.

To *Edward L. Brown*, who was promoted from Porter to Head Porter.

To *Jose Mayorca*, who was promoted from Vegetable Attendant to Kitchen Attendant.

To *Gladys Santa Rosa*, who was promoted from Medical Information Department to secretary to *Dr. John V. B. Dean*, Director of Medical Emergency Services.

To *Mrs. Frances Johnson*, formerly Medical Transcriber in the Department of Radiology, who has become secretary to *Dr. William Seaman*, Director of Radiology, PH.

To *Mrs. Mary Isenbek*, Accounting Department, who became a grandmother for the second time. Her daughter, Mrs. Ann Marie Feci, had a baby girl on November 11, Mrs. Isenbek's second grandchild but first granddaughter.

To *Mrs. Jane Smalley*, former supervisor of Physical Therapy, NI, on the birth of her son, Scott Vincent, on Nov. 3.

To *Linford Bailey*, who was promoted to housekeeper.

To *John Hicks*, who was promoted to head porter.

### • CONDOLENCES

To the family and friends of *Mr. George Vassall*, Supervisor of Housekeeping, who died on November 10.

To the family and friends of *Miss Ruth Busted*, former secretary to *Dr. Robert H. Wylie*, who died on November 29. Miss Busted had been associated with the Medical Center since 1927.

To the family and friends of *Mr. Edmond Corcoran*, carpenter in Maintenance and Construction since 1950, who died on December 10. He is survived by his wife, Margaret, who works in Sterile Supply, five children and nine grandchildren.

### • WELCOME

To *Cathy Crovatto*, who recently joined the Office of Public Interest.

To *Sandra Harvey* and *Nancy Shea*, new members of the Purchasing Department.

### Three Books For Sale By Nursing Alumnae

Three notable books are being offered for sale by the Columbia University-Presbyterian Hospital School of Nursing Alumnae Association. These include cookbooks, which are priced at \$2.50. *Neighbors*, by Eleanor Lee, is a history of the School of

Nursing, and costs \$3.00. A Directory of Names and Addresses of Graduates of the School of Nursing is available for fifty cents. Orders may be addressed to the Alumnae Association, 179 Fort Washington Avenue, New York, New York 10032.

*DR. EQUINN MUNNELL*, Associate Attending Obstetrician and Gynecologist and Associate Clinical Professor, Obstetrics and Gynecology, P&S, read a paper on "Ovarian Carcinoma" at the annual meeting of the American Association of Obstetricians and Gynecologists, held at Hot Springs, Virginia, September 5-7. On October 1, Dr. Munnell again lectured on "Ovarian Cancer" to the Society of Obstetricians and Gynecologists of the Netherlands, presented in Amsterdam, Holland.

*DR. MATA NIKIAS*, Assistant Professor, Division of Sociomedical Sciences, School of Public Health and Administrative Medicine, was recipient of the Kulp Award sponsored by the American Risk and Insurance Association, Inc., given in recognition of outstanding contributions to the literature of insurance with particular emphasis upon those academic studies making original contributions to the field.

*DR. DAVID SCHWARTZ*, Chief Resident, Urology, presented a paper "Portacaval Transposition and Renal Allograft Rejection," at the XVI Biennial Congress of the International College of Surgeons, held in Tokyo, Japan, on October 8.

*DR. AURELIO C. USON*, Assistant Professor of Clinical Urology, was a guest at the 5th International Course in Urology given by the Department of Urology at Medical School of Barcelona, Spain, from October 5-12. During this course, Dr. Uson delivered the following five lectures: "Current Treatment of Wilms's Tumors," "Etiopathogenesis of Bladder Cancer," "The Treatment of Bladder Neoplasms," "The Role of the Urologist in the Management of Intersexual Problems," and "Non-urologic Clues of Underlying Urological Trouble in Infants and Children." In addition, Dr. Uson was given an M.S. degree by the University of Madrid for his work on "Bladder Carcinogenesis" and on October 23 delivered a lecture on the same topic to the Department of Urology at the Madrid Medical School.

*DR. LEWIS B. POSNER*, Attending Obstetrician and Gynecologist and Chief of Maternity Clinics, Harlem Hospital Center, delivered a talk, "I am Young and I am Pregnant—So I don't Have to Worry About Diabetes," over Radio Station WNYC on October 3. This was one of a series of talks on health presented by the Medical Society of the County of New York. Dr. Posner also appeared on a closed-circuit TV program of Districts II & IV of the American College of Obstetricians and Gynecologists in Puerto Rico on October 17-18. He interviewed Dr. Ezra Davidson on "The Use of Heparin in Endotoxic Shock." Dr. Davidson is Assistant, Obstetrics and Gynecology, P&S. Dr. Posner, who has been associated with the Harlem Hospital Center for forty years, is Vice Chairman, District II, The American College of Obstetricians and Gynecologists. He also addressed the staff of the Maimonides Hospital Center on "Face and Brow" on November 8.

*DR. CHARLES FOX, JR.*, Professor of Microbiology (Surgery), presented a paper, "Preliminary Clinical Trials of Silver Sulfadiazine Ointment to Control Infection in Burn Wounds," at the annual meeting of the American College of Surgeons, held at Atlantic City on October 18, and also had a scientific exhibit describing this new drug developed at the Medical Center. The use of the drug in Vietnam was described by Lt. Col. William Stanford and Dr. Fox at

the American Association for the Surgery of Trauma meeting held in Montreal, Canada, on October 17.

*DR. GEORGE CRIKELAIR*, Professor of Clinical Surgery and Director of Plastic Surgery Service, was guest lecturer in the traineeship program supported by the U. S. Department of Health, Education and Welfare at the Cooper Institute, and at the Lancaster Cleft Palate Clinic, on October 15. As guest lecturer, Dr. Crikelair lectured on "The Repair of Cleft Lips," "The Closure of Clefts of the Palate," and "Secondary Operations Including Pharyngeal Flaps and Bone Grafts."

Dr. Crikelair, along with *DR. FRANCIS SYMONDS*, Associate Attending Surgeon and Associate Professor of Clinical Surgery, P&S, attended the meeting of the American Association for the Surgery of Trauma, at which time Dr. Symonds was elected to active membership in the organization.

Dr. Crikelair also attended the semi-annual meeting of the American Board of Plastic Surgery in his capacity as Secretary. He attended the annual meeting of the American Society of Plastic and Reconstructive Surgeons, held in New Orleans, and presented a paper along with *DR. BARD COSMAN*, Assistant Attending Surgeon and Assistant Clinical Professor of Surgery, P&S, on "Midline Branchiogenic Syndrome."

Dr. George Crikelair

Dr. David Baker

*DR. DAVID BAKER*, Director of Radiology, Babies Hospital, is President of the Pediatric Radiology Society, and presided over the 10th annual meeting of this Society, along with the American Roentgen Ray Society in New Orleans, and gave an instruction course on "Bone Diseases in Children." At this same meeting, *DR. WALTER E. BERDON*, Attending Radiologist, Babies Hospital, spoke on "Symphalangism," and *DR. JOHN LEONIDAS*, Fellow in Pediatric Radiology, spoke on "Meconium Ileus." Dr. Leonidas completed his three-year Fellowship in Pediatric Radiology from the Children's Bureau on December 31, and is now Director of Pediatric Radiology at Mount Sinai Hospital in New York City.

Ophthalmology research was well represented at the Association for Research in Ophthalmology meeting in Chicago, October 30, 31, November 1. Mr. Tom Weingeist reported on "The Development of the Ciliary Complex of the Rabbit Eye." Dr. Missotten, a Fellow from Louvain, Belgium, reported his research, "The Synaptic Relations of Visual Cells in Neurons in the Human Retina Studied by Electron Microscopy After Silver Impregnation," and Dr. Hajime Inomata from Fukuoka, Japan, read a paper on "The Fine Structural Changes in the Corneal Endothelium During Graft Rejection."

News of the COLUMBIA-PRESBYTERIAN MEDICAL CENTER

VOLUME XXIV, NUMBER 2

FEBRUARY, 1969

## School of Practical Nursing Holds First Capping Ceremony

"This cap symbolizes your achievements of the past sixteen weeks," remarked Edith Ankers, As Director of the Columbia-Presbyterian School of Practical Nursing, Miss Ankers held the honor of bestowing caps to the students at an impressive capping ceremony held on January 10 in The Pauline A. Hartford Memorial Chapel.

In a brief but significant ceremony a tradition was set at the Columbia-Presbyterian Medical Center. The seventeen members of the first class of the School of Practical Nursing received their caps on January 10 in The Pauline A. Hartford Memorial Chapel. Flowers for the occasion were provided by students at the Department of Nursing, Faculty of Medicine, Columbia University, and they participated in the reception that followed the ceremony.

Dr. Mary Crawford, Director of Nursing at Presbyterian Hospital, welcomed the students and told of the pride the entire Medical Center feels towards them. "You have proven yourselves and you should be proud to reach this point," she commented. "You have more to learn, you know you can do it, and you are well on your way."

Dr. Robert H. E. Elliott, Associate Dean at the College of Physicians and Surgeons

## HONG KONG FLU CAME AND WENT

The A2 Hong Kong 68 virus arrived at the Columbia-Presbyterian Medical Center just before Thanksgiving, having crossed the country in seventy-league boots. The epidemic peaked early—during the first two weeks of December—and the Medical Center was over the top by Christmas.

Reporting on PH and its affiliated institutions, the Personnel Department estimated that absent-rate of employees, excluding nurses and doctors, ranged from 4.5 per cent to 10 per cent from December 15 to January 10, a period when the epidemic was on the wane. The Nursing Department's absent-rate due to the virus averaged 10 per cent in the last two weeks of December.

According to one observer, the epidemic struck Harkness Pavilion first, and spread from there in a wavelike fashion to other parts of the Medical Center. To another observer, the emergency overtime work was reminiscent of the long hours the Medical Center's staff put in during World War II.

In general, the Hong Kong virus beat the flu vaccine manufacturers in a race to the

## Ten Doctors To Peru On Teaching Mission

Dr. Edward C. Curnen, Jr., Carpenter Professor of Pediatrics and Director of Pediatric Services at the Columbia-Presbyterian Medical Center, led a group of ten physicians on a pediatric teaching mission to Peru during the last three weeks in November. Other Medical Center doctors who accompanied Dr. Curnen were Dr. David H. Baker, Professor of Radiology and Director of Pediatric Radiology at Babies Hospital, and Dr. George H. Humphreys, II, Valentine Mott Professor of Surgery and Chairman of the Department of Surgery. Specialists from other institutions who were members of the group included Dr. Alfred N. Bongiovanni (Endocrinology), Professor and Chairman of the Department of Pediatrics, and Dr. John J. Downes (Anesthesiology), Assistant Professor of Anesthesiology and Pediatrics, both at the University of Pennsylvania; Dr. Mary Godenne McCrea Curnen (Diagnostic Virology), Research Associate in Internal Medicine and Pediatrics at Yale University; Dr. Thomas K. Oliver, Jr. (Neonatal Biology), Professor of Pediatrics at the University of Washington; Dr. Alex J. Steigman (Infectious Diseases), Professor of Pediatrics at the Mount Sinai School of Medicine; Dr. Gordon Vawter (Pediatric Pathology), Associate Professor of Clinical Pathology and Pathologist at the Children's Hospital Medical Center in Boston; and Dr. Peter Vlad (Pediatric Cardiology), Professor of Pediatrics at the State University of New York at Buffalo.

This undertaking was the

Dr. Edward C. Curnen, Jr.

Dr. David H. Baker

Dr. George H. Humphreys, II

second sponsored by the Unitarian Universalist Service Committee, Inc., with headquarters in Boston, and a

## Mrs. Byron Stookey Becomes Member of Board of Trustees

Mrs. Byron Stookey

Augustus C. Long, President.

Mrs. Stookey is the daughter of Ethel Phelps Stokes and John Sherman Hoyt; Mr. Hoyt was president of Babies Hospital from 1908 to 1927, and the Board Room of the Hospital is named in his honor. Mrs. Stookey attended the Brearley School and received the A.B. degree from Bryn Mawr, the M.A. degree from Columbia University. She was married to Dr. Byron Stookey on May 11, 1929. Dr. Stookey, formerly Professor of Neurological Surgery, was a member of the Neurological Surgical Staff at the Columbia-Presbyterian Medical Center from 1920 until his death in 1966, having been named Consultant in Neurological Surgery in 1952.

Mrs. Stookey has been a member of the Neurological Institute Auxiliary since 1939,

Chairman from 1949 to 1954; she has been a member of The Presbyterian Hospital Corporation since 1951. She has been on the National Board of the YWCA, the Board of Christodora Settlement House, and now serves in various posts at the United Hospital Fund where she has been Vice-Chairman of the Women's Executive Committee and Chairman of the Committee on Hospital Auxiliaries. She is a member and past-President of the Darien and Millbrook Garden Clubs, a member and former President-General of the Colonial Dames of America and a Governor of the Colony Club.

Mrs. Stookey resides in New York City. She has three sons: John Hoyt Stookey, Lyman Brumbaugh Stookey and Byron Stookey.

## "Robin, Peter, and Darryl"—An Unusual Teaching Film

"I want you to stay here, and I'm going home," says Peter, one of the stars of a new teaching film, "Robin, Peter, and Darryl: Three to the Hospital." His comment epitomizes one of the main problems and sources of confusion for the young child in

the hospital, that of dealing with a strange situation without the constant support of his family.

"Robin, Peter and Darryl" presents the actual experiences of three children, aged 34-35 months, each of whom was ad-

*Please turn to page three*

## THESE CLASSES ENCOURAGE PRACTICAL APPLICATION OF LEADERSHIP SKILLS

Lillian Oring

How would you answer these questions?

If a man of twenty and a man of forty are equally qualified, which would you prefer to employ—and for what reasons?

Who can learn new work better, a younger person or an

older one? Who can learn faster?

What are some of the "laws" of learning?

At a recent class, attended by fifteen persons who are employed by Presbyterian Hospital in a supervisory capacity, these and associated questions, were discussed in a lively fifteen minutes of give-and-take. Some of the answers had to be qualified, but in such matters as the laws of learning, the knowledge is there, waiting to be understood and utilized.

This unusual program of classes was begun a few months ago at Presbyterian Hospital. The course is entitled "Developing Supervisory Leadership Skills." It consists of from 8 to 10 class sessions based on materials carefully prepared and tested by The

Cynthia White

American Management Association.

A typical class may consist of a 30-minute color film, 5-minute filmed case studies, and a conference type session around the table.

The classes of this continuing program are presented

by Lillian Oring of the Personnel Department and Cynthia White of the Nursing Department. Approximately 60 persons have attended to date. Additional persons will have the opportunity to attend in the coming months. Sessions are held in the classrooms of the Armory across the street from the Hospital entrance on 168th Street, and are scheduled for on-duty hours during the day.

The stated objectives of the course are: (1) to present a program of basic management leadership techniques for supervisors, and (2) to present the techniques in a logical and interesting manner so that their application to the everyday work situation is assured. The programmed instruction, the filmed speakers, the filmed case studies, and the leader's guide have all been prepared to present leadership skills in terms of supervisory levels of management.

These subjects are covered

during the eight- or ten-class series:

The nature of leadership; knowing your employees—individual differences; understanding personality and behavior; improving three-way communication; maintaining effective discipline; handling complaints and grievances; guiding and developing employees; building job satisfaction and morale.

It is significant that the course has its own built-in flexibility, so that the character of each class session reflects the experience level of the group involved. Thus, valuable contributions to any given class are sure to come forth from those attending, on the basis of their varied backgrounds. The filmed case studies are tailored to stimulate discussion rather than to give final answers.

As the value of this work becomes known, it is probable that participation will be sought by many.

## School of Practical Nursing Holds Capping Ceremony

At the reception

*Continued from page one*

and Assistant Vice President of Presbyterian Hospital, addressed the class. As he spoke, the history and importance of this milestone event were

During the ceremony

revealed. To meet the urgent and growing demand for qualified medical personnel in the many existing allied health professions, a decision was made in autumn 1967 to give priority to the establishment of a School of Practical Nursing at the Medical Center. Plans were formulated through the hard work, determination, and foresight of Dr. Elliott and members of the nursing department, especially Marion Cleveland, Elizabeth Gill, and Helen Pettit, and their ideas were realized last September when the School was opened.

After the fifteen women in the class received their caps, and the two men received their

pins, each student lit a candle. As the class stood together, they recited in unison the Practical Nurse's Pledge:

*Before God and those assembled here, I do solemnly pledge: To adhere to the code of ethics of the nursing profession. To cooperate loyally with the other members of the nursing team and to carry out faithfully and to the best of my ability the instructions of the physician or the nurse who may be assigned to supervise my work. I will not do anything evil or malicious and I will not knowingly give any harmful drug or assist in mal-*

*practice. I will not reveal any confidential information that may come to my knowledge in the course of my work. And I pledge myself to do all in my power to raise the standards and the prestige of Practical Nursing. May my life be devoted to service, and to the high ideals of the nursing profession.*

After the ceremony the students were congratulated at a lively celebration reception attended by their families and invited guests and staff and personnel from departments throughout the Medical Center.

## Again, Please? . . . Are You Serious?

Some of the requests that come to the Office of Public Interest, based on reliable news tips, for confirmation or denial, truly "stagger the imagination." However, they must be checked out because "truth is sometimes stranger than fiction." Here are a couple of unusual ones that came in recently.

A well-known feature writer whose science and medical articles appear regularly in leading magazines called late in December to check this "news tip" for a possible magazine article: He had heard on good authority that a very wealthy Englishman had just given Columbia-Presbyterian Medical Center \$200,000 to establish a study to prove or deny that overweight is due to a malfunctioning thymus gland. Patients in the study were required to eat one hard-boiled egg each morning and into each egg the patient was to insert some "embryonic cells." Public Interest could find no evidence of such a grant.

Late in January a news reporter from CBS-TV News

called to confirm a "news tip" that is making the rounds in New York under various circumstances. One version is: a young woman went to a leading New York City department store and purchased a hand-knit sweater recently received from India. When she tried it on at home she was bitten on the arm by a tiny cobra that was inside the garment. Her doctor had treated her for everything except snake bite, and she supposedly came to Presbyterian Hospital as an emergency, where her arm "had to be amputated."

Another version tells the same story, except the snake came in a rolled Oriental rug and the victim lost a leg.

We have found no victim of cobra venom.

## TEN DOCTORS . . .

*Continued from page one*

number of Peruvian pediatric organizations, including the Sociedad Peruana de Pediatría, Cuerpo Médico del Hospital del Niño, and the Asociación Médica Peruano-Norteamericana, an organization of Peruvian physicians who had received part of their training in the United States and Canada. The group was also accompanied and aided by Mr. Richard Steckel, program director, representing the Unitarian Universalist Service Committee. Another group of U. S. physicians, led by Dr. L. S. James, Professor of Pediatrics and Attending Pediatrician at Babies Hospital, carried out a similar pediatric program in Peru during June 1967.

The purpose of these missions was to discuss and to demonstrate North-American teaching methods and practices in relation to medical educational needs and problems in Peru. These activities included cases presentations, seminars, lectures, and informal discussions with Peruvian doctors and students. Approximately three hundred Peruvian doctors were enrolled as participants. Throughout the two week period, various members of the teaching group worked in Lima. In the first week, Drs. Baker, Humphreys and Downes represented the group in the northern city of Chiclayo; Drs. Curnen met with Peruvian physicians in the southern mountain town of Arequipa. In the second week, these doctors returned

*Continued from page one*

mitted to Babies Hospital for a minor surgical procedure. It was developed by the faculty of the Department of Nursing and produced and directed by Phyllis Johnson for George C. Stoney Associates.

The premiere performance of "Robin, Peter and Darryl: Three to the Hospital" was held on December 10th at the Alumni Auditorium, College of Physicians and Surgeons.

The audience consisted of professionals from the fields of medicine, psychiatry, nursing, education, and psychol-

to Lima to continue teaching there while members of the group which had been in Lima during the first week visited the other two cities. While in Lima, members of this visiting team had an opportunity to meet with Dr. Maynard B. Wheeler, a 1966 graduate of the College of Physicians and Surgeons who is presently with the Peace Corps, and to observe some of the work being done there.

The mission provided members of the visiting team with an extraordinary opportunity to become acquainted with the medical educational and service activities in a Latin American country and to meet with professional counterparts whose cordial hospitality was warm and inspiring.

At impressive ceremonies upon conclusion of the mission, members of the group were made honorary members of the Peruvian Pediatric Society.

## "Robin, Peter, and Darryl: Three to the Hospital"—An Unusual Teaching Film

ogy. The honored guest speakers included Margaret Mead, Ph.D., Adjunct Professor of Anthropology, Columbia University, and Curator of Ethnology of the American Museum of Natural History; Maurice Friend, M.D., child psychoanalyst; Madeline Petrillo, R.N., M.Ed., pediatric mental health consultant, Cornell University-New York Hospital; and Lincoln Hanson, Ph.D., Professor of Psychology, Rockland Community College.

The film has been made available for distribution through CMC (Center for Mass Communications), the film division of Columbia University Press. Film libraries and individuals may purchase the film from CMC, and several have already done so. The film is also scheduled to be shown at a number of professional conventions. National and international distribution is expected as the film becomes known. It will be reviewed by a variety of professional journals and boards, among them the National League for Nursing-American Nurses Association Film Board for the *American Journal of Nursing*.

"Robin, Peter and Darryl" was filmed in a cinema verité technique—as it actually happened. Through the technical skill of Mrs. Johnson, the children and their families seem oblivious to the camera (even though it was obviously there). They are seen as the natural star actors in this rare study of human behavior. All persons in the film were aware that they were being filmed, and all gave their permission to be included.

"Robin, Peter and Darryl" is a film of considerable emotional impact, and indeed this was one of its major purposes. The faculty which developed the film was interested in creating a new technique for teaching concepts of family centered nursing care of children. They felt that it was difficult to teach these concepts with available materials, and thus determined to make a new tool. The viewer is presented with a 'real' situation, and through a minimum of narration is forced to make his own observations and judgments about what is occurring. The film is not an all inclusive entity—it was designed with the specific purpose of generating discussion about what is happening in the situation.

Although initially intended for use with baccalaureate level student nurses in pediatrics, and because of its reality and minimum noninterpretative narration, the film has been found by the faculty to be useful at a variety of levels for a variety of audiences. It can be used with other levels of student nurses, graduate nurses, medical staff, social workers,

Robin

Peter

Darryl

psychiatrists, child psychologists and family case workers.

The idea for "Robin, Peter, and Darryl" was developed by the multidisciplinary faculty of "Family Behavior in Crisis," a seminar course taught to student nurses during the time they are taking courses in obstetrics and pediatrics. This course is part of a larger series of courses, Psychosocial Aspects of Patient Care. It was supported in part by a grant from the National Institute of Mental Health, Division of Psychiatric Nurse Training Programs. The multidisciplinary faculty for the Department of Nursing are: For Nursing: Sarah L. Sheets, R.N., BSN, Instructor in Nursing; Sarah M. Waldkoetter, R.N., MSN, Associate in Nursing; Judith J. Easterly, R.N., B.S., formerly Instructor in Nursing. For Behavioral Sciences: Mrs. Lois Alksne, M.A., Anthropology, Instructor in Family Behavior in Crisis; Mrs. Sylvia Hunter, M.S.P.H., Sociology and Public Health,

Instructor in Family Behavior in Crisis. For Psychiatry: Dr. Frank S. Jewett, Instructor in Psychiatry.

"Robin, Peter, and Darryl" was filmed in Babies Hospital on the surgical floor, with clearance and support by the Medical Board of the Presbyterian Hospital, Dr. Edward S. Curnen, Jr., Carpenter Professor of Pediatrics, P&S, and Director of Pediatric Service, and Dr. Thomas V. Santulli, Professor of Surgery, P&S, and Attending Surgeon, PH.

### Alumnae Announcement

The regular quarterly meeting of the Columbia University-Presbyterian Hospital School of Nursing Alumnae Association will be held on Thursday, February 20, 1969, at 2:30 p.m. in Maxwell Hall. Program—a film, "ROBIN, PETER AND DARRYL, THREE TO THE HOSPITAL."

Discussion Panel—Sarah Sheets, Sarah Waldkoetter and Marjorie Peto.

# This Beautiful Country Home Called "Mary Harkness," A Unit of The Presb

Mr. K., who had come through a serious illness, was recovering rapidly — however, he was not yet ready to go home. He continued to occupy a bed at The Presbyterian Hospital, and he required some daily care.

"How would you like to spend a couple of weeks at the Mary Harkness Unit?" his doctor asked him. "You'll get the same care that you are getting here in a less institutional setting amid beautiful surroundings. Mary Harkness Unit is a part of our Hospital — out in the country."

On his doctor's recommendation, Mr. K. decided to go to Mary Harkness, making his hospital bed available for someone else who needed it more.

At Mary Harkness in Port Chester, New York, only thirty minutes from New York City, Mr. K. was able, in two weeks' time, to "bridge the gap" comfortably — from hospital to home. The Mary Harkness Unit is designed for

Margaret Del Mar, Manager of the Mary Harkness Unit.

En route to Mary Harkness in a Presbyterian stationwagon limousine which converts to stretcher-carrier, Mr. K. mentally asked himself many questions about what life would be like at this home in the country. The limousine was nearing the New York-Connecticut line when the chauffeur — orderly, Donald Brown, pointed to a colonial mansion through the trees.

"There's the Mary Harkness Unit, where we're going," Donald said. "We're right on the edge of Port Chester."

The gently rolling land surrounding the mansion was like a garden — wide grassy areas and a wonderful variety of trees. This was the 82-acre estate which the late William W. Cook, lawyer and author, had given to The Presbyterian Hospital in 1930 as a setting for a convalescent home. "We have one maintenance man, Kenneth Keller, and three ground keepers to take care of the property," said Donald Brown conversationally. "Stanley — he's in charge — has been working here 28 years. His outside assistants are Lester Frost and Bill Weeks." The limousine followed a winding road and stopped before the entrance of the white-pillared colonial building. Donald helped his passengers to alight, and the next moment Mr. K. was being welcomed by a smiling, soft-voiced woman, Mrs. Ruth Schlierer, who had left her position as head nurse at the United Hospital in Port

Chester for work at the Mary Harkness Unit.

Inside the building there was a feeling of friendly informality — walls of sage-green murals, gleaming floors, a wide fireplace, a grand piano, inviting overstuffed chairs. The doors were open into the dining room, and already the chimes in the hand of a husky lad named Donald McKenzie were sounding the hour for luncheon. The young man told Mr. K. later that his parents worked for the Rockefeller family in nearby Tarrytown.

After Mr. K. was assigned his room, he was told that he might come to the dining room for his luncheon, or, if he was too fatigued or not feeling well enough, his meal could be served in his room. Mr. K. chose to eat in the dining room. At once he began to get the

absence of eight years. She was so happy working for the Unit that she recommended it to her father-in-law, Robert, when he arrived in this country from Scotland about a year ago. If working for Mary Harkness runs in the Perrie family, as it seems, the Unit will have cheerful, dependable employees for years to come: Mr. Perrie has 13 grandchildren.

There are laundry facilities, including automatic washers, dryers and irons. Patients are able to maintain their own washable wearing apparel, and the staff may give assistance as necessary. Mrs. Margaret Larkin, a nurses aide with 13 years of service with the Unit, offered to help Mr. K. as he was leaving for lunch.

Following luncheon, the routine of the day calls for an

The main building of Mary Harkness Unit, featuring trees, including the Japanese ginkgo.

Leer and Mrs. Muriel Stewart, professional cooks, Arnet Johnson and Louise Clenderin, food servers, Roland Soria, whose Tunisian background adds exotic flavor to the Unit's Food Department, Leo Guzzo, who has loyally served the Unit for 12 years, and Stephen Chruscz, a member of the Twenty-Five Year Club.

Mr. K. found the routine of the day comfortable. Recreational facilities, such as cards, chess, miniature ping-pong, books and TV, were at hand. The beauty of the open country was his to enjoy, and there would be hours of resting on the open patio in the sunshine and watching the fidgety wild pheasants. Writing materials and stamps could be purchased from Mrs. Harstein, the Unit's secretary, from Mrs. H. E. Seanor or from other ladies of the Auxiliary, and there was regular mail service. His uneasiness over whether visitors would be able to come had been allayed. They might come by car, via the Hutchinson River Parkway, or by train to Port Chester and on by taxi.

Between thirty and forty

Messrs. Kenny and Shaw (below) demonstrate the variety of poses assumed by patients at Mary Harkness to eat lunch.

feeling of at-homeness in this "home away from home."

His room was on the south side — the men's wing — where he met Gloria Coke, a housekeeper — who is always smiling and will dash off a calypso tune on request. There are three levels of rooms — elevator service is available — and the accommodations vary according to the patients' needs. Single rooms with a shared corridor bathroom are predominant in the female wings; four-bed units sharing corridor bathroom facilities in the male wing. When available, single rooms with connecting bath may be assigned for medical reasons.

Mr. K. was favorably impressed with the attitude of the Unit's staff when he found out, through talking to Mrs. Charlotte Perrie, a member of the Housekeeping Department who was working in his room, that she had returned to Mary Harkness in 1966, after an

hour's rest from two to three in the afternoon. By now many of the questions which the new guest had previously thought of asking were already answered, thanks to an informative briefing he'd received from Mrs. George B. Gibbons, Jr., a member of the Auxiliary. The Mary Harkness dietician, Mrs. Dorothy Pryor, already knew that Mr. K. was on a diet, and she would see that he would get food specially prepared to meet his medical needs. Other members of the "food team" who would help her to accomplish this aim include Mrs. Anna

A warm personal relationship and rapport are important in the homey atmosphere of the Mary Harkness Unit. Checking blood pressure provides Mrs. Maria Ries with an opportunity to exchange pleasantries and to inquire about her patient's well-being.

A gentle slope guides the arriving patient's eye to the front of the main building.

the care of patients who no longer require the immediate daily attention of a physician but who need continued nursing supervision under medical direction, and who may require physical and occupational therapy services. Admission is arranged by the patient's doctor.

Mr. K.'s trip to rustic Port Chester was made possible by a person who is no longer living — Mary S. Harkness — who made the original magnificent gift for the home, following the tradition of her husband, Edward S. Harkness, the great philanthropist.

Members of the grounds crew, from left, William Weeks, Stanley Muzoleski, and Lester Frost, pause in their labors to have their picture taken.

# Hospital, Bridges the Gap For Patients Who Are Preparing to Return Home

ay pine, spruce, and a variety of unusual and a Chinese umbrella tree.

the general hospital but continue to require skilled nursing care under professional supervision subject to the approval of the Unit Manager may be admitted.

"Certification and recertification of each patient's need for extended care will be the responsibility of the Medical Director of the Mary Harkness Unit." The Unit's Medical Director is Dr. John T. Beaty. Dr. William Felch substitutes for him during vacations and emergencies. Both men are medical internists with established private practices. "The Professional Advisory Committee of the Medical Board of the Presbyterian Hospital," to further quote the policy of admission and discharge, "will be responsible for reviewing patient records and arriving

tation in 1967 under the Medicare Program as an extended care unit (see *The Stethoscope*, March, 1967).

Among patients who might appropriately be admitted to the Unit are:

1. Patients in the convalescent stage of severe congestive heart failure or post myocardial infarction whose tolerance ability and potential must be determined before discharge.

2. Post surgical patients following complicated surgery, especially those with draining wounds or sutures or those who require training in colostomy care or other such home care.

3. Orthopedic patients with fractures, amputations, or crippling arthritis who require rehabilitation to reach

The universal language of chess is here practiced by Messrs. Kaplan and Shaw, as Hilde Verburg takes time out to kibitz.

patients are here, but none are permanent for the average stay is about 16 days. Mary Harkness is essentially a facility designed for the patient's preparation for going back home. It does not provide custodial, long term, or terminal care. It is a bridge—it bridges the gap from hospital to home, to use the expression of Margaret Del Mar, dark-haired Administrator of the Unit. Three years ago Miss Del Mar moved from the Medical Center proper to her present challenging and absorbing assignment. "I have never worked with such a wonderful group of staff," she says.

The term "expanded care facility" is useful in describing its function—a facility that has been designed for progressive care for the patient who has come from the hospital and continues on his way to recovery. Medicare and Medicaid legislation have given "extended care" a legal definition with reference to which the Mary Harkness policy of admission and discharge has been formulated:

"Persons over the age of fifteen who no longer require the immediate full services of

Spontaneous bingo games are not infrequent in the Unit's recreation room.

at decisions affecting their continued stay or relocation." Dr. Milovan Rakic is in charge of patients' rehabilitation work.

One of the questions that is asked, when patients are considered for care in Mary Harkness, is, Does the patient need this facility for medical reasons? "We are not a social institution," Miss Del Mar explains, "we're a medical institution—and there has to be a medical reason for the patient to come here."

This unit of The Presbyterian Hospital received accredi-

maximum potential in self care.

4. Patients with metabolic disorders, such as diabetes, who require supervision or diet and/or medication and training in administering their own insulin, checking their own G. A. D. and observing for untoward signs.

5. Patients with neurological disorders such as a stroke who are in the rehabilitative process.

6. Ophthalmological patients requiring medication (for maximum surgical effect) which they cannot self administer.

Under the direction of the Medical Director of the Unit, the nursing department administers the medical needs of the patients, including dressings, medications, treatments, and a teaching program designed to help the individual recognize his special needs and accept his limitations.

To perform these duties, the Department has attracted a nucleus of highly qualified graduate nurses. In addition to Mrs. Schlierer, Mr. K. was introduced to Hilde Verburg, Nursing Supervisor, who has been with the Columbia-Presbyterian Medical Center for 16 years and hails from Am-

sterdam, Holland, and Mrs. Maria Ries, whose main specialty, children's nursing, grounded her with the skills and patience to teach. Later on, Mr. K. met Patricia O'Connor, an RN with years of experience in the intensive care unit of the Miami Heart Institute, a center for open-heart surgery, and many other warm-hearted and skilled staff nurses.

In addition to medical treatment, patients are certain to receive incidental social benefits, for the atmosphere at Mary Harkness is one of community living.

The patient's preparation for return to normal life is greatly aided by the physical and occupational therapy programs. Physical therapy treatments are available to help patients develop, restore and maintain maximum performance through use of exercise, massage, water, heat, light and electricity. An occupational therapist guides the patient in therapeutic creative and self-care activities as well as diversionary therapy. In the rehabilitation kitchen practical instruction in basic kitchen duties for women who have been physically disabled is provided by the occupational therapist, Mrs. Susan Millman, whose social and

Mrs. H. E. Seanor rolls out the mobile shop operated by the Mary Harkness Unit Ladies Auxiliary, giving patients an opportunity to purchase necessities.

professional activities have led to her inclusion in the *Who's Who of American Women*.

Let us return once more to Mr. K., the patient with whom we began. Two and a half weeks after his coming to Mary Harkness, he returned home, and today he is back at work, operating his small business, which is located within a few blocks of the Medical Center.

On being interviewed concerning his experiences at Mary Harkness, Mr. K. said, "My wife visited me there almost daily. We loved the place. The food was good, and abundant. I would like to go back—not as a patient, but for a vacation."

Margaret Del Mar, Manager of the Mary Harkness Unit, adjusts projector for showing of educational movie to the Unit's food service staff. In-service education is an important tool in the Unit's continuing effort to provide the best possible care for its guests and to maintain a high professional standard among its nursing personnel.

With several ex-patients waiting in the limousine, Donald Brown makes final preparations to take them homeward.

ABOVE: Members of the Women's Auxiliary of The Presbyterian Hospital, Mrs. Howard G. Bruen, Mrs. A. Gerard DeVoe, Mrs. Richard D. L. Simmons, Mrs. Richard B. White, decorating the window of the Stuyvesant Square Thrift Shop, 81st Street and Lexington Avenue.

Contributions to the Thrift Shop mean donations to the Hospital. Gifts are tax-deductible, and contributors are invited to a Fall Luncheon and Fashion Show. Last year the designer was Ferdinando Sarmi.

Be sure that your contributions are marked for The Presbyterian Hospital.

AT LEFT: This is Mrs. Gerard DeVoe presenting a plaque of appreciation to Mr. Ferdinando Sarmi at the Fall Benefit Luncheon.

## Raise Your Arms—Turn Your Head—In Spanish

How do you say in Spanish... "Raise your arms... Turn your head... Take three steps...?"

If you work in Rehabilitation Medicine and you chance to have a Spanish-speaking pa-

tient of Rehabilitation Medicine, the plan became reality.

The class began in January with an enrollment of 40 students—therapists, secretaries, nurses and residents. Class sessions are presently held every week for periods of 45 minutes, scheduled for the close of the working day.

Sister Santiago of Sacred Heart School in Manhattan, 1 East 91st Street, has volunteered her time and talents as teacher. The students use a Spanish-English textbook available at the Medical Center Book Store: *English-Spanish Guide for Medical Students*, by Armengol, price \$2.00.

Before this project began, Dr. Corcoran talked with members of the staff and became convinced of the need and interest. It was agreed that each pupil should pay a fee of \$10 to cover such costs as textbook, materials, and the teacher's transportation.

Sister Santiago

tient who doesn't understand English—and there are many such patients—you are of course much better equipped to work efficiently if you can communicate in his language.

This is the reason that Dr. Paul J. Corcoran, Assistant Professor of Rehabilitation Medicine, initiated an idea for the staff members of Rehabilitation Medicine to have access to a Spanish language class especially suited to their needs. Through the cooperation and encouragement of Dr. Robert C. Darling, Professor and Chairman of the Department

## Suggestion Box

Give the Social Club the right of way to create activities that you enjoy: Skiing? Bowling? Dancing? Museum Visiting?

How about payday?

You name it and we will try our best to accommodate.

Drop your suggestions in Box on 4th floor Nursing Department.

## Dr. Sue Buckingham

Dr. Sue Buckingham, Assistant Professor of Pediatrics at Columbia University's College of Physicians and Surgeons and Assistant Attending Pediatrician at Babies Hospital, PH, died on January 22 in her home at 234 Tenafly Road, Englewood, New Jersey. She was 45 years old.

Dr. Buckingham was an authority on hyaline membrane disease of the newborn and other lung disorders. She wrote many articles for professional journals.

She applied her medical knowledge to the cause of civil rights. During her vacation in 1963 she helped with voter registration in Mississippi. Last summer she trained mothers in Harlem as referral

workers in a project which has since received Ford Foundation assistance.

Dr. Buckingham, a native of Minnesota, studied at the University of Kansas and the University of Chicago, and received her degree in 1955 from Harvard Medical School. After an internship at Beth Israel Hospital, Boston, she served residencies at the Children's Medical Center and Boston City Hospital.

From 1958 to 1960 she was an assistant in pediatrics and a fellow of the Boston Medical Foundation. Then she went to the Johns Hopkins Medical School as a research fellow, and returned to Boston City Hospital as an associate in pediatrics, 1962-63. She held a research fellowship from the Massachusetts Heart Association

and an assistant research professorship in pediatrics at the Boston University School of Medicine.

Dr. Buckingham was a diplomate of the American Board of Medicine, a fellow of the Society for Pediatric Research and a member of the Boylston Society of Harvard Medical School, the Harvey Society of Boston and the New York Academy of Medicine.

She is survived by a sister, Mrs. Derbert L. Scott of Casper, Wyoming, and a brother, Rob Roy Buckingham, who is editor-manager of The New York Times news service.

A memorial service was held at 5:15 p.m. on Monday, January 27 at the Pauline A. Hartford Memorial Chapel of The Presbyterian Hospital.

## George Castiner

Everyone at the Medical Center was saddened by the death of George Castiner, who had been a member of the Protective Department since 1930. George, affectionately known to staff and personnel as Mickey, died in December after a long illness.

At his post at HP Mickey dealt with all the celebrities visiting at PH, moving and parking their cars as needed, putting dimes in hungry parking meters, attending to any other little chores that might be necessary... several times

George Castiner

he was responsible for the apprehension and arrest of persons involved in car thefts.

In his later years, Mickey

was sort of "den father" to the student nurses residing at Maxwell Hall—helping them with their cars, their "dates"—getting the right boy to the right girl—escorting the students in and out of MH at night to be certain they were safe, and otherwise keeping an eye on them and lending a helping hand whenever it was needed.

Mr. Castiner is survived by his wife, four children, four grandchildren and his brother, Frederick, also a member of the Protective Department at PH.

## NURSES' BENEFIT CARD PARTY TO BE HELD IN APRIL

Under the chairmanship of Mrs. Frank E. Stinchfield, the eleventh annual Benefit Card Party will be held on April 23, 1969, at 1:30 p.m. in Maxwell Hall. Over the past ten years, financial assistance for as many as twenty nursing students annually has been

made possible by the proceeds of these Benefits.

The Honorary Chairman for the affair is Mrs. Lowell B. Thomas. Assisting Mrs. Stinchfield are Mrs. Alfred Steiner, Vice Chairman; Mrs. Russell N. Carhart, Secretary; Mrs. J. Ward McLaughlin, Treasurer; and Mrs. Arthur L. B. Richardson, Corresponding Secretary.

Committee Chairmen for the event include Miss Cecile Covell, Sponsors' Committee; Mrs. Charles Neer II, Prizes Committee; Mrs. Stanley M. Bysshe, Printing Committee; Mrs. Henry Bright, Hospital-ity Committee; Mrs. Everett C. Bragg, Louisa Kent, and Laurie Verdisco, Publicity Committee.

The Faculty of the School of Nursing is represented by Mary Crawford and Helen Pettit. Students serving on the committee are Doris Cabeche and Madelyn Maniscalco.

The committee is requesting contributions of trading stamp books and stamps of any brand. The books may be sent to Benefit Bridge, c/o Mrs. Henry Bright, Box 335, Max-

Mrs. Frank E. Stinchfield and Mary Crawford talk over plans for Annual Benefit Card Party.

## Elected President

Mrs. Patricia McLean has been elected President of the American Dental Hygienists Association. Mrs. McLean is Director of courses for dental hygienists at Columbia University School of Dental and Oral Surgery. Mrs. McLean and other officers were elected at a meeting in Miami Beach in conjunction with the Association's 109 Annual Session.

well Hall, 179 Ft. Washington Avenue, N. Y., N. Y. 10032. They may also be left with Mrs. Gertrude Barnett in the fourth floor nursing office. Any contributions you can send will be greatly appreciated by the committee, and ultimately by deserving students.

## Two Polish Physicians Are Studying At Columbia-Presbyterian

(L to R) Dr. Nowak, Dr. Szafran, and Dr. Osterberg.

The Pediatric Institute of the Medical Academy of Krakow.

The Medical Center is pleased to welcome Dr. Halina Szafran and Dr. Kazimierz Nowak of the Pediatric Institute of the Medical Academy of Krakow, Poland. They arrived here in November, and will be working and studying through April under a training program sponsored by the Committee on International Exchange of Persons of the U. S. Department of State.

Dr. Szafran and Dr. Nowak are graduates of the Medical Academy of Krakow. Dr. Szafran, a biochemist, is engaged in research here into the problem of purification of antibodies to DNA, under the supervision of Dr. Bernard F. Erlanger, Professor of Microbiology, P&S. Dr. Nowak, a pediatric neurosurgeon and a Visiting Fellow in Surgery, is working under Dr. Thomas V. Santulli, Chief, Pediatric Surgical Services, BH, Attending Surgeon, PH, and Professor of Surgery, P&S. The doctors' goal when they return to Po-

land will be to adapt their studies here to the problems they encounter at the Pediatric Institute, particularly to two of Poland's major health problems, leukemia and congenital defects.

The 325 bed Pediatric Institute in Krakow was built and equipped with proceeds from a sale of U. S. surplus wheat to Poland after World War II. The technological sophistication of the new hospital necessitated special training for many of its key staff members; grants supplied by several agencies in the United States have enabled 12 doctors in different areas of specialization to study in this country within the past three years. Drs. Szafran and Nowak are the first of these to come to Columbia-Presbyterian.

The doctors' training program is administered by the Program of Continuation Education of the Columbia University School of Public

Health and Administrative Medicine under the direction of Dr. Eric R. Osterberg, who acts as personal advisor and "mentor" to our Polish visitors. As an academic consultant to the Pediatric Institute, he interviews prospective candidates for the training program and locates their places of assignment. Dr. Osterberg appears to be enjoying his role in the training program, and especially the opportunity it has given him to travel to Poland.

Dr. Szafran reports that she found the New York subway system a difficult problem at first, but fortunately she enjoys walking; it is a favorite social pastime of her countrymen. Dr. Nowak adds that New York is very different from the European cities he has visited. Both he and Dr. Szafran enjoy spending their leisure time exploring the city, especially its art museums, which they agree are wonderful.

## THESE PERSONS ARE RETIRING

### Mrs. Emma Dill

Mrs. Emma Dill retired in December from her post in the Accounting Department which she held since 1961. She was feted on two separate occasions by her friends and co-workers, first at a dinner party on October 25 at the Trocadero, and on November 18 a reception was held in her honor at PH.

"I enjoyed working in the Hospital and met some very nice people."

Mrs. Dill's hobby is sewing. She told us, "I make all my

own clothes and I enjoy doing this very much." Now that she is retiring she will be able to devote more time to this activity.

To sum it all up, she said, referring to her two parties, "I shall always remember these events," and according to some of the folks who attended the two parties, a grand time was had by all!

### Mrs. Edith Reichert

Mrs. Edith Reichert chose early retirement January 1, having completed almost 26 years of employment at the Medical Center.

She began her long career here as a clinic receptionist in Vanderbilt Clinic "completely bewildered by clinic procedure" and went on to become a Registrar in V.C. She told us she has "many good friendships made at V.C. over the years." She is particularly grateful for the kindnesses shown by Clinic Administration when illness and death overtook her family.

Early in 1968 Edith was made a member of the Medical Center's 25-year-club and also received a lovely gift from her friends and co-workers to commemorate this eventful occasion.

Mrs. Reichert has many interests and hobbies—reading, writing, music, theatre, art

Gloria Gilbert

As Visiting Professor in Orthopaedic Surgery during the week of February 9, Dr. Ian Macnab will conduct grand rounds, service rounds, conference, instruction in the operating rooms, and talk with the resident staff on several subjects. Dr. Macnab, a native of London, England, is now affiliated with the Department of Surgery at the University of Toronto. His major area of interest has been in the surgery of degenerative disc disease.

and "travel with a big T!" December 16, 1968 is a day she will always remember earmarked by "a most appreciated luncheon party with my 'bosses', a gay corsage and a beautiful bracelet from V.C. friends. All this made my last day a most happy one."

Mrs. Reichert, a native of Dover, New Hampshire, resides in New York City with her husband.

Please turn to page eight

## News of Nursing

Five new faculty members add to the School of Nursing not only their nursing skills but also their wide-ranging professional and social interests.

Betty Springer

Weather permitting, Betty Springer bicycles along Riverside Drive to Columbia University where she is working on a master's degree in medical-surgical nursing. As a nursing student at Columbia, she was Student Council President, Alumnae Magazine student editor, and elected to the national nursing honor society, Sigma Theta Tau. After graduation in 1966, she joined the PH 10 nursing staff for ten months. Her hobbies include making modern furniture, and her office is decorated with expressive water colors she has painted.

Gloria Gilbert's office is abundantly adorned with paper flowers she has made. Like Betty Springer, Miss Gilbert teaches Essentials of Nursing. Unlike Miss Springer, whose home is nearby Tenafly, Miss Gilbert hails from Miami. She received her nursing education at Jackson Memorial Hospital before going to University of Maryland where she earned a master's in medical-surgical nursing. In addition to having done extensive coronary care nursing, Miss Gilbert has specialized in shock trauma and hyperbaric oxygen.

Mrs. Geraldine Brown comes to New York via Virginia, Maryland, and New Jersey. She is currently teaching in the master's program for Psychiatric-Community Mental Health Nursing, a field in which she is eminently qualified. In fact, Mrs. Brown serves as consultant in community and human relations for the Department of Hospitals of New York City. Before being awarded a master's in clinical psychology from Columbia, she graduated from

Mrs. Geraldine Brown
